The POWER9 processor registers are listed in the following tables.

Register Name	**Chiplet Control Register 0**
Mnemonic	TP.TCN3.N3.CPLT_CTRL0
Address	0000000005000000 (SCOM) 0000000005000010 (SCOM1) 0000000005000020 (SCOM2)
Description	This register contains the first set of vital chiplet controls.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_OR	WO_CLEAR	CTRL_CC_ABSTCLK_MUXSEL_DC: Select the ABIST clock source for arrays on a chiplet boundary. When set to 1, clocks are used from a chiplet with ABIST.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
1	RW	WO_OR	WO_CLEAR	TC_UNIT_SYNCCLK_MUXSEL_DC: Select the synchronous clock for asynchronous latches. (The initial value is 1.)
2	RW	WO_OR	WO_CLEAR	CTRL_CC_FLUSHMODE_INH_DC: Prevent pipeline latches from going into flush mode. (The initial value is 1.)
3	RW	WO_OR	WO_CLEAR	CTRL_CC_FORCE_ALIGN_DC: Force an alignment signal to be sent. (The initial value is 1. Drop before dropping flushmode_inh.)
4	RW	WO_OR	WO_CLEAR	TC_UNIT_ARY_WRT_THRU_DC: Set the array into write-through mode. Used for LBIST.
5	RW	WO_OR	WO_CLEAR	TC_UNIT_AVP_MODE: Switches from refresh pulse to phase counter.
6	RW	WO_OR	WO_CLEAR	FREE_USAGE_6A: Free usage.
7	RW	WO_OR	WO_CLEAR	FREE_USAGE_7A: Free usage.
8	RW	WO_OR	WO_CLEAR	CTRL_CC_ABIST_RECOV_DISABLE_DC: New signal to disable recovery.
9	RW	WO_OR	WO_CLEAR	FREE_USAGE_9A: Free usage.
10	RW	WO_OR	WO_CLEAR	TC_UNIT_IOBIST_TX_WRAP_ENABLE_DC: Unused.
11	RW	WO_OR	WO_CLEAR	RESERVED_11A: Reserved.
12	RW	WO_OR	WO_CLEAR	TC_SKIT_MODE_BIST_DC: Skitter used functional during BIST. The scan chain is bypassed and scan enable (SE) is degated if 1.
13	RW	WO_OR	WO_CLEAR	TC_UNIT_DETERMINISTIC_TEST_ENABLE_DC: Forces login into deterministic test mode. For example, for LBIST.
14	RW	WO_OR	WO_CLEAR	TC_UNIT_CONSTRAIN_SAFESCAN_DC: Safe scan of N1L latches. Prevents lock when switching SE.
15	RW	WO_OR	WO_CLEAR	TC_UNIT_RRFA_TEST_ENABLE_DC: Enable test only logic and latches to increase test coverage.
16	RW	WO_OR	WO_CLEAR	TC_NBTI_HDR_ENABLE_OVR_DC: NBTI.
17	RW	WO_OR	WO_CLEAR	TC_NBTI_PROBE_GATE_DC: NBTI.
18	RW	WO_OR	WO_CLEAR	RESERVED_18A: Reserved.
19	RW	WO_OR	WO_CLEAR	RESERVED_19A: Reserved.
20:27	RW	WO_OR	WO_CLEAR	TC_PSRO_SEL_DC: PSRO selected.
28	RW	WO_OR	WO_CLEAR	TC_BSC_WRAPSEL_DC: Wrap select for BSC.
29	RW	WO_OR	WO_CLEAR	TC_BSC_INTMODE_DC: INT mode for BSC.
30	RW	WO_OR	WO_CLEAR	TC_BSC_INV_DC: INV for BSC mode.
31	RW	WO_OR	WO_CLEAR	TC_BSC_EXTMODE_DC: EXT mode for BSC.
32	RW	WO_OR	WO_CLEAR	TC_REFCLK_DRVR_EN_DC: Reference clock driver enable.
33	RW	WO_OR	WO_CLEAR	RESERVED_33A: Reserved.
34	RW	WO_OR	WO_CLEAR	RESERVED_34A: Reserved.
35	RW	WO_OR	WO_CLEAR	RESERVED_35A: Reserved.
36	RW	WO_OR	WO_CLEAR	TC_OELCC_EDGE_DELAYED_DC: Allows you to delay the alignment by one fast cycle. Only used in dual mesh chiplets.
37	RW	WO_OR	WO_CLEAR	TC_OELCC_ALIGN_FLUSH_DC: Forces the alignment and odd/even toggling latch into a flush state. For DFT only.
38	RW	WO_OR	WO_CLEAR	RESERVED_38A: Reserved.
39	RW	WO_OR	WO_CLEAR	RESERVED_39A: Reserved.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
40:41	RW	WO_OR	WO_CLEAR	CTRL_MISC_CLKDIV_SEL_DC: Clock divider select: 00 = 1024:1 01 = 64:1 10 = 16:1 11 = 4:1
42	RW	WO_OR	WO_CLEAR	RESERVED_42A: Reserved.
43	RW	WO_OR	WO_CLEAR	RESERVED_43A: Reserved.
44	RW	WO_OR	WO_CLEAR	CTRL_CC_DCTEST_DC: TE = 1 only. Enable DCTEST.
45	RW	WO_OR	WO_CLEAR	CTRL_CC_OTP_PRGMODE_DC: TE = 1 only. OTP ROM program mode.
46	RW	WO_OR	WO_CLEAR	CTRL_CC_SSS_CALIBRATE_DC: TE = 1 only. Sensors calibration.
47	RW	WO_OR	WO_CLEAR	CTRL_CC_PIN_LBIST_DC: TE = 1 only. PIN LBIST mode. The LBIST is controlled by the pin, not by the OPCG.
48	RW	WO_OR	WO_CLEAR	FREE_USAGE_48A: Free usage.
49	RW	WO_OR	WO_CLEAR	FREE_USAGE_49A: Free usage.
50	RW	WO_OR	WO_CLEAR	FREE_USAGE_50A: Free usage.
51	RW	WO_OR	WO_CLEAR	FREE_USAGE_51A: Free usage.
52	RW	WO_OR	WO_CLEAR	FREE_USAGE_52A: Free usage.
53	RW	WO_OR	WO_CLEAR	FREE_USAGE_53A: Free usage.
54	RW	WO_OR	WO_CLEAR	FREE_USAGE_54A: Free usage.
55	RW	WO_OR	WO_CLEAR	FREE_USAGE_55A: Free usage.
56	RW	WO_OR	WO_CLEAR	FREE_USAGE_56A: Free usage.
57	RW	WO_OR	WO_CLEAR	FREE_USAGE_57A: Free usage.
58	RW	WO_OR	WO_CLEAR	FREE_USAGE_58A: Free usage.
59	RW	WO_OR	WO_CLEAR	FREE_USAGE_59A: Free usage.
60	RW	WO_OR	WO_CLEAR	FREE_USAGE_60A: Free usage.
61	RW	WO_OR	WO_CLEAR	FREE_USAGE_61A: Free usage.
62	RW	WO_OR	WO_CLEAR	FREE_USAGE_62A: Free usage.
63	RW	WO_OR	WO_CLEAR	FREE_USAGE_63A: Free usage.

Register Name	Chiplet Control Register 1
Mnemonic	TP.TCN3.N3.CPLT_CTRL1
Address	0000000005000001 (SCOM) 0000000005000011 (SCOM1) 0000000005000021 (SCOM2)
Description	This register contains the second set of vital chiplet controls.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_OR	WO_CLEAR	UNUSED_0B: Unused.
1	RW	WO_OR	WO_CLEAR	UNUSED_1B: Unused.
2	RW	WO_OR	WO_CLEAR	UNUSED_2B: Unused.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
3	RW	WO_OR	WO_CLEAR	TC_VITL_REGION_FENCE: VITL fence. Protect the VITL region logic from pollution by other regions during LBIST, or when the chiplet is not initialized and running yet.
4	RW	WO_OR	WO_CLEAR	TC_PERV_REGION_FENCE: Fence for the PERV region.
5	RW	WO_OR	WO_CLEAR	TC_REGION1_FENCE: Fence for region PB.
6	RW	WO_OR	WO_CLEAR	TC_REGION2_FENCE: Fence for region BR (TP).
7	RW	WO_OR	WO_CLEAR	TC_REGION3_FENCE: Fence for region NP (NPU).
8	RW	WO_OR	WO_CLEAR	TC_REGION4_FENCE: Fence for region MM (NMMU).
9	RW	WO_OR	WO_CLEAR	TC_REGION5_FENCE: Fence for region INT.
10	RW	WO_OR	WO_CLEAR	TC_REGION6_FENCE: Fence for region unused.
11	RW	WO_OR	WO_CLEAR	UNUSED_11B: Unused.
12	RW	WO_OR	WO_CLEAR	UNUSED_12B: Unused.
13	RW	WO_OR	WO_CLEAR	UNUSED_13B: Unused.
14	RW	WO_OR	WO_CLEAR	UNUSED_14B: Unused.
15	RW	WO_OR	WO_CLEAR	RESERVED: Reserved.
16	RW	WO_OR	WO_CLEAR	TC_UNIT_MULTICYCLE_TEST_FENCE: Fence logic that is indeterminate at any frequency.
17	RW	WO_OR	WO_CLEAR	UNUSED_17B: Unused.
18	RW	WO_OR	WO_CLEAR	UNUSED_18B: Unused.
19	RW	WO_OR	WO_CLEAR	UNUSED_19B: Unused.
20	RW	WO_OR	WO_CLEAR	UNUSED_20B: Unused.
21	RW	WO_OR	WO_CLEAR	UNUSED_21B: Unused.
22	RW	WO_OR	WO_CLEAR	UNUSED_22B: Unused.
23	RW	WO_OR	WO_CLEAR	UNUSED_23B: Unused.
24	RW	WO_OR	WO_CLEAR	UNUSED_24B: Unused.
25	RW	WO_OR	WO_CLEAR	UNUSED_25B: Unused.
26	RW	WO_OR	WO_CLEAR	UNUSED_26B: Unused.
27	RW	WO_OR	WO_CLEAR	UNUSED_27B: Unused.
28	RW	WO_OR	WO_CLEAR	UNUSED_28B: Unused.
29	RW	WO_OR	WO_CLEAR	UNUSED_29B: Unused.
30	RW	WO_OR	WO_CLEAR	UNUSED_30B: Unused.
31	RW	WO_OR	WO_CLEAR	UNUSED_31B: Unused.

Register Name	**Chiplet Configuration Register 0**
Mnemonic	TP.TCN3.N3.CPLT_CONF0
Address	0000000005000008 (SCOM) 0000000005000018 (SCOM1) 0000000005000028 (SCOM2)
Description	This register contains the first set of vital chiplet configuration functions.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:5	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE0_SEL_DC: Probe 0 selected.
6	RW	WO_OR	WO_CLEAR	RESERVED_6C: Reserved.
7	RW	WO_OR	WO_CLEAR	RESERVED_7C: Reserved.
8:13	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE1_SEL_DC: Probe 1 selected.
14	RW	WO_OR	WO_CLEAR	RESERVED_14C: Reserved.
15	RW	WO_OR	WO_CLEAR	RESERVED_15C: Reserved.
16:21	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE2_SEL_DC: Probe 2 selected.
22	RW	WO_OR	WO_CLEAR	RESERVED_22C: Reserved.
23	RW	WO_OR	WO_CLEAR	RESERVED_23C: Reserved.
24:29	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE3_SEL_DC: Probe 3 selected.
30	RW	WO_OR	WO_CLEAR	RESERVED_30C: Reserved.
31	RW	WO_OR	WO_CLEAR	RESERVED_31C: Reserved.
32	RW	WO_OR	WO_CLEAR	CTRL_CC_OFLOW_FEH_SEL_DC: Enables ABIST overflow or failure indication.
33	RW	WO_OR	WO_CLEAR	CTRL_CC_SCAN_PROTECT_DC: Enables scan protection and the scan collision error mechanism.
34	RW	WO_OR	WO_CLEAR	CTRL_CC_SDIS_DC_N: Disables the scan diagnostic scan path.
35	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_35C: Reserved for test control.
36	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_36C: Reserved for test control.
37	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_37C: Reserved for test control.
38	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_38C: Reserved for test control.
39	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_39C: Reserved for test control.
40	RW	WO_OR	WO_CLEAR	CTRL_EPS_MASK_VITL_PCB_ERR_DC: Mask VITL PCB errors from CC or chiplet control.
41	RW	WO_OR	WO_CLEAR	CTRL_CC_MASK_VITL_SCAN_OPCG_ERR_DC: Mask VITL errors in CC which are not PCB related.
42	RW	WO_OR	WO_CLEAR	RESERVED_42C: Reserved.
43	RW	WO_OR	WO_CLEAR	RESERVED_43C: Reserved.
44	RW	WO_OR	WO_CLEAR	FREE_USAGE_44C: Free usage.
45	RW	WO_OR	WO_CLEAR	FREE_USAGE_45C: Free usage.
46	RW	WO_OR	WO_CLEAR	FREE_USAGE_46C: Free usage.
47	RW	WO_OR	WO_CLEAR	FREE_USAGE_47C: Free usage.
48:51	RW	WO_OR	WO_CLEAR	TC_UNIT_GROUP_ID_DC: Group ID.
52:54	RW	WO_OR	WO_CLEAR	TC_UNIT_CHIP_ID_DC: Chip ID.
55	RW	WO_OR	WO_CLEAR	RESERVED_ID_55C: Reserved ID.
56:60	RW	WO_OR	WO_CLEAR	TC_UNIT_SYS_ID_DC: System ID.
61	RW	WO_OR	WO_CLEAR	RESERVED_ID_61C: Reserved ID.
62	RW	WO_OR	WO_CLEAR	RESERVED_ID_62C: Reserved ID.
63	RW	WO_OR	WO_CLEAR	RESERVED_ID_63C: Reserved ID.

Register Name	**Chiplet Configuration Register 1**
Mnemonic	TP.TCN3.N3.CPLT_CONF1
Address	0000000005000009 (SCOM) 0000000005000019 (SCOM1) 0000000005000029 (SCOM2)
Description	This register contains the second set of vital chiplet configuration functions.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_OR	WO_CLEAR	UNUSED_0D: Unused.
1	RW	WO_OR	WO_CLEAR	UNUSED_1D: Unused.
2	RW	WO_OR	WO_CLEAR	UNUSED_2D: Unused.
3	RW	WO_OR	WO_CLEAR	UNUSED_3D: Unused.
4	RW	WO_OR	WO_CLEAR	IOVALID_4D: Unused.
5	RW	WO_OR	WO_CLEAR	IOVALID_5D: Unused.
6	RW	WO_OR	WO_CLEAR	IOVALID_6D: Unused.
7	RW	WO_OR	WO_CLEAR	IOVALID_7D: Unused.
8	RW	WO_OR	WO_CLEAR	IOVALID_8D: Unused.
9	RW	WO_OR	WO_CLEAR	IOVALID_9D: Unused.
10	RW	WO_OR	WO_CLEAR	IOVALID_10D: Unused.
11	RW	WO_OR	WO_CLEAR	IOVALID_11D: Unused.
12	RW	WO_OR	WO_CLEAR	TC_LP_RESET:
13	RW	WO_OR	WO_CLEAR	FREE_USAGE_13D: Free usage.
14	RW	WO_OR	WO_CLEAR	FREE_USAGE_14D: Free usage.
15	RW	WO_OR	WO_CLEAR	FREE_USAGE_15D: Free usage.
16	RW	WO_OR	WO_CLEAR	FREE_USAGE_16D: Free usage.
17	RW	WO_OR	WO_CLEAR	FREE_USAGE_17D: Free usage.
18	RW	WO_OR	WO_CLEAR	FREE_USAGE_18D: Free usage.
19	RW	WO_OR	WO_CLEAR	FREE_USAGE_19D: Free usage.
20	RW	WO_OR	WO_CLEAR	FREE_USAGE_20D: Free usage.
21	RW	WO_OR	WO_CLEAR	FREE_USAGE_21D: Free usage.
22	RW	WO_OR	WO_CLEAR	FREE_USAGE_22D: Free usage.
23	RW	WO_OR	WO_CLEAR	FREE_USAGE_23D: Free usage.
24	RW	WO_OR	WO_CLEAR	FREE_USAGE_24D: Free usage.
25	RW	WO_OR	WO_CLEAR	FREE_USAGE_25D: Free usage.
26	RW	WO_OR	WO_CLEAR	FREE_USAGE_26D: Free usage.
27	RW	WO_OR	WO_CLEAR	FREE_USAGE_27D: Free usage.
28	RW	WO_OR	WO_CLEAR	FREE_USAGE_28D: Free usage.
29	RW	WO_OR	WO_CLEAR	FREE_USAGE_29D: Free usage.
30	RW	WO_OR	WO_CLEAR	FREE_USAGE_30D: Free usage.
31	RW	WO_OR	WO_CLEAR	FREE_USAGE_31D: Free usage.

Register Name	Chiplet Status Register
Mnemonic	TP.TCN3.N3.CPLT_STAT0
Address	0000000005000100 (SCOM)
Description	An interrupt is sent out on a bit change if not masked by the Chiplet Mask register. A mask only masks the interrupt, not the status register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SRAM_ABIST_DONE_DC: SRAM and eDRAM ABIST done.
1	ROX	DRAM_ABIST_DONE_DC: Unused in POWER9 DD1.
2	ROX	RESERVED_2E: Reserved.
3	ROX	RESERVED_3E: Reserved.
4	ROX	TC_DIAG_PORT0_OUT: Diagnostic output port.
5	ROX	TC_DIAG_PORT1_OUT: Diagnostic output port.
6	ROX	RESERVED_6E: Reserved.
7	ROX	PLL_DESTOUT: Reserved.
8	ROX	CC_CTRL_OPCG_DONE_DC: Used for LBIST, ABIST, or other OPCG runs.
9	ROX	CC_CTRL_CHIPLET_IS_ALIGNED_DC: Indicates that the chiplet is aligned.
10	ROX	FREE_USAGE_10E: Free usage.
11	ROX	FREE_USAGE_11E: Free usage.
12	ROX	MCS23_TC_0_FIR_HOST_ATTN: Chiplet specific.
13	ROX	MCS23_TC_1_FIR_HOST_ATTN: Chiplet specific.
14	ROX	FREE_USAGE_14E: Free usage.
15	ROX	FREE_USAGE_15E: Free usage.
16	ROX	FREE_USAGE_16E: Free usage.
17	ROX	FREE_USAGE_17E: Free usage.
18	ROX	FREE_USAGE_18E: Free usage.
19	ROX	FREE_USAGE_19E: Free usage.
20	ROX	FREE_USAGE_20E: Free usage.
21	ROX	FREE_USAGE_21E: Free usage.
22	ROX	FREE_USAGE_22E: Free usage.
23	ROX	FREE_USAGE_23E: Free usage.

Register Name	Chiplet Mask Register
Mnemonic	TP.TCN3.N3.CPLT_MASK0
Address	0000000005000101 (SCOM)
Description	This register masks an interrupt when a bit changes in the Chiplet Status register. It does not mask the status itself.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CPLTMASK0: Bitwise masking of the Chiplet Status register.

Register Name	Control Protect Mode Register
Mnemonic	TP.TCN3.N3.CTRL_PROTECT_MODE_REG
Address	00000000050003FE (SCOM)
Description	This register enables read and write protection.

Bits	SCOM	Field Mnemonic: Description
0	RW	CTRL_READ_PROTECT_ENABLE: Enable read protection.
1	RW	CTRL_WRITE_PROTECT_ENABLE: Enable write protection.

Register Name	Atomic Lock Register
Mnemonic	TP.TCN3.N3.CTRL_ATOMIC_LOCK_REG
Address	00000000050003FF (SCOM)
Description	This register enables an atomic lock and an atomic lock counter.

Bits	SCOM	Field Mnemonic: Description
0	RW	CTRL_ATOMIC_LOCK_ENABLE: Enable atomic lock.
1:4	ROX	CTRL_ATOMIC_ID: Atomic ID.
5:7	RO	Constant = 0b000
8:15	ROX	CTRL_ATOMIC_ACTIVITY: Atomic lock counter.

Register Name	PSCOMLE Mode Register
Mnemonic	TP.TCN3.N3.EPS.PSC.PSC.PSCOM_MODE_REG
Address	0000000005010000 (SCOM)
Description	This is the parallel to serial communication light edition (PSCOMLE) mode register.

Bits	SCOM	Field Mnemonic: Description
0	RW	ABORT_ON_PCB_ADDR_PARITY_ERROR: Abort on PCB address parity error.
1	RW	ABORT_ON_PCB_WDATA_PARITY_ERROR: Abort on PCB write data parity error.
2	RW	ABORT_ON_DL_RETURN_P0_ERROR: Unused.
3	RW	ABORT_ON_DL_RETURN_WDATA_PARITY_ERROR: Abort on DL, return write data parity error.
4	RW	WATCHDOG_ENABLE: Enable watchdog.
5:6	RW	SCOM_HANG_LIMIT: 11 = 256 10 = 512 01 = 768 00 = 1023
7	RW	FORCE_ALL_RINGS: Set to a logical 1 if all rings should be enabled independent of the ring address.
8	RW	FSM_SELFRESET_ON_STATEVEC_PARITYERROR_ENABLE: FSM self reset on STATEVEC parity error enable.
9:11	RW	RESERVED_PSCOM_MODE_LT: Reserved.

Register Name	PSCOMLE Error Register
Mnemonic	TP.TCN3.N3.EPS.PSC.PSC.PSCOM_STATUS_ERROR_REG
Address	0000000005010001 (SCOM)
Description	This is the parallel to serial communication light edition (PSCOMLE) error register.

Bits	SCOM	Field Mnemonic: Description
0	RWX	ACCUMULATED_PCB_WDATA_PARITY_ERROR: Accumulated PCB write data parity error.
1	RWX	ACCUMULATED_PCB_ADDRESS_PARITY_ERROR: Accumulated PCB address parity error.
2	RWX	ACCUMULATED_DL_RETURN_WDATA_PARITY_ERROR: Accumulated DL return write data parity error.
3	RWX	ACCUMULATED_DL_RETURN_P0_ERROR: Accumulated DL return P0 error.
4	RWX	ACCUMULATED_UL_RDATA_PARITY_ERROR: Accumulated UL read data parity error.
5	RWX	ACCUMULATED_UL_P0_ERROR: Accumulated UL P0 error.
6	RWX	ACCUMULATED_PARITY_ERROR_ON_INTERFACE_MACHINE: Accumulated parity error on the interface machine.
7	RWX	ACCUMULATED_PARITY_ERROR_ON_P2S_MACHINE: Accumulated parity error on the parallel to serial machine.
8	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Accumulated timeout while waiting for ULCCH.
9	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Accumulated timeout while waiting for DLDCH return.
10	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Accumulated timeout while waiting for ULDCH.
11	RWX	ACCUMULATED_PSCOM_PARALLEL_WRITE_NVLD: Accumulated PSCOM parallel write NVLD.
12	RWX	ACCUMULATED_PSCOM_PARALLEL_READ_NVLD: Accumulated PSCOM parallel read NVLD.
13	RWX	ACCUMULATED_PSCOM_PARALLEL_ADDR_INVALID: Accumulated PSCOM parallel address invalid.
14	RWX	ACCUMULATED_PCB_COMMAND_PARITY_ERROR: Accumulated PCB command parity error.
15	RWX	ACCUMULATED_GENERAL_TIMEOUT: Accumulated general timeout.
16	RWX	ACCUMULATED_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Accumulated satellite acknowledge access violation.
17	RWX	ACCUMULATED_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Accumulated satellite acknowledge invalid register.
18	RWX	TRAPPED_PCB_WDATA_PARITY_ERROR: Trapped PCB write data parity error.
19	RWX	TRAPPED_PCB_ADDRESS_PARITY_ERROR: Trapped PCB address parity error.
20	RWX	TRAPPED_DL_RETURN_WDATA_PARITY_ERROR: Trapped DL return write data parity error.
21	RWX	TRAPPED_DL_RETURN_P0_ERROR: Trapped DL return P0 error.
22	RWX	TRAPPED_UL_RDATA_PARITY_ERROR: Trapped UL read data parity error.
23	RWX	TRAPPED_UL_P0_ERROR: Trapped UL P0 error.
24	RWX	TRAPPED_PARITY_ERROR_ON_INTERFACE_MACHINE: Trapped parity error on interface machine.
25	RWX	TRAPPED_PARITY_ERROR_ON_P2S_MACHINE: Trapped parity error on the parallel to serial machine.
26	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Trapped timeout while waiting for ULCCH.
27	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Trapped timeout while waiting for DLDCH return.
28	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Trapped timeout while waiting for ULDCH.

Bits	SCOM	Field Mnemonic: Description
29	RWX	TRAPPED_PSCOM_PARALLEL_WRITE_NVLD: Trapped PSCOM parallel write NVLD.
30	RWX	TRAPPED_PSCOM_PARALLEL_READ_NVLD: Trapped PSCOM parallel read NVLD.
31	RWX	TRAPPED_PSCOM_PARALLEL_ADDR_INVALID: Trapped PSCOM parallel address invalid.
32	RWX	TRAPPED_PCB_COMMAND_PARITY_ERROR: Trapped PCB command parity error.
33	RWX	TRAPPED_GENERAL_TIMEOUT: Trapped general timeout.
34	RWX	TRAPPED_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Trapped satellite acknowledge access violation.
35	RWX	TRAPPED_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Trapped satellite acknowledge invalid register.

Register Name	PSCOMLE Error Mask Register
Mnemonic	TP.TCN3.N3.EPS.PSC.PSC.PSCOM_ERROR_MASK
Address	0000000005010002 (SCOM)
Description	This is the parallel to serial communication light edition (PSCOMLE) error mask register.

Bits	SCOM	Field Mnemonic: Description
0	RW	MASK_PCB_WDATA_PARITY_ERROR: Mask PCB write data parity error.
1	RW	MASK_PCB_ADDRESS_PARITY_ERROR: Mask PCB address parity error.
2	RW	MASK_DL_RETURN_WDATA_PARITY_ERROR: Mask DL return write data parity error.
3	RW	MASK_DL_RETURN_P0_ERROR: Mask DL return P0 error.
4	RW	MASK_UL_RDATA_PARITY_ERROR: Mask UL read data parity error.
5	RW	MASK_UL_P0_ERROR: Mask UL P0 error.
6	RW	MASK_PARITY_ERROR_ON_INTERFACE_MACHINE: Mask parity error on the interface machine.
7	RW	MASK_PARITY_ERROR_ON_P2S_MACHINE: Mask parity error on the parallel to serial machine.
8	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Mask timeout while waiting for ULCCH.
9	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Mask timeout while waiting for DLDCH return.
10	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Mask timeout while waiting for ULDCH.
11	RW	MASK_PSCOM_PARALLEL_WRITE_NVLD: Mask PSCOM parallel write NVLD.
12	RW	MASK_PSCOM_PARALLEL_READ_NVLD: Mask PSCOM parallel read NVLD.
13	RW	MASK_PSCOM_PARALLEL_ADDR_INVALID: Mask PSCOM parallel address invalid.
14	RW	MASK_PCB_COMMAND_PARITY_ERROR: Mask PCB command parity error.
15	RW	MASK_GENERAL_TIMEOUT: Mask general timeout.
16	RW	MASK_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Mask satellite acknowledge access violation.
17	RW	MASK_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Mask satellite acknowledge invalid register.

Register Name	PSCOMLE Address Trap Register
Mnemonic	TP.TCN3.N3.EPS.PSC.PSC.ADDR_TRAP_REG
Address	0000000005010003 (SCOM)
Description	This is the parallel to serial communication light edition (PSCOMLE) address trap register.

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	PCB_ADDRESS_OF_LAST_TRANSACTION_WITH_ERROR: PCB address of the last transaction with an error.
16	ROX	PCB_READ_NOTWRITE_OF_LAST_TRANSACTION_WITH_ERROR: PCB read, not write, of the last transaction with an error.
17	ROX	RESERVED_ADDR_LAST_TRAP_LT: Reserved.
18:30	ROX	SERIAL2PARALLEL_STATE_MACHINE_AT_TIME_OF_ERROR: Serial to parallel state machine at the time of the error.
31	ROX	SATELLITE_ACKNOWLEDGE_BIT_RETURN_PARITY: Satellite acknowledge bit. This bit is set to 1 if no parity error (parity of the satellite response, excluding read data) is detected.
32	ROX	SATELLITE_ACKNOWLEDGE_BIT_WRITE_PARITY_ERROR: Set if a write parity error is detected by the satellite.
33	ROX	SATELLITE_ACKNOWLEDGE_BIT_ACCESS_VIOLATION: Set if an invalid read or write access is detected by the satellite.
34	ROX	SATELLITE_ACKNOWLEDGE_BIT_INVALID_REGISTER: Set if an invalid register address is detected by the satellite.

Register Name	Ring Lock Enable Register
Mnemonic	TP.TCN3.N3.EPS.PSC.PSC.WRITE_PROTECT_ENABLE_REG
Address	0000000005010005 (SCOM)
Description	This register enables the ring lock.

Bits	SCOM	Field Mnemonic: Description
0	RW	ENABLE_RING_LOCKING: General enable of ring locking on a write to a specific ring.
1	RW	RESERVED_RING_LOCKING: Reserved.

Register Name	Write Protect Rings Register
Mnemonic	TP.TCN3.N3.EPS.PSC.PSC.WRITE_PROTECT_RINGS_REG
Address	0000000005010006 (SCOM)
Description	This register writes ring protect bit maps.

Bits	SCOM	Field Mnemonic: Description
0:15	RW	WRITE_PROTECT_RINGS: Write a protect bit map for each ring.

Register Name	Atomic Lock Mask Register
Mnemonic	TP.TCN3.N3.EPS.PSC.PSC.ATOMIC_LOCK_MASK_LATCH_REG
Address	0000000005010007 (SCOM)
Description	This register provides a bit mask for atomic locking.

Bits	SCOM	Field Mnemonic: Description
0:15	RW	ATOMIC_LOCK_MASK: A bit mask for atomic locking on a ring-by-ring basis.

Register Name	Ring Fence Enable Mask Register
Mnemonic	TP.TCN3.N3.EPS.PSC.PSC.RING_FENCE_MASK_LATCH_REG
Address	0000000005010008 (SCOM)
Description	This register provides a bit mask for ring fencing.

Bits	SCOM	Field Mnemonic: Description
0	RO	Constant = 0b0
1:15	RW	RING_FENCE_ENABLE_MASK: A bit mask for ring fencing on a ring-by-ring basis.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN3.N3.TRA0.TR0.TRACE_HI_DATA_REG
Address	0000000005010400 (SCOM)
Description	This register provides the high trace array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: Trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN3.N3.TRA0.TR0.TRACE_LO_DATA_REG
Address	0000000005010401 (SCOM)
Description	This register provides the low trace array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to the last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN3.N3.TRA0.TR0.TRACE_TRCTRL_CONFIG
Address	0000000005010402 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: Enable store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: Enable unconditional forced write when trace is run.
2:9	RW	EXTEND_TRIG_MODE: Counter value for extended trigger mode.

Bits	SCOM	Field Mnemonic: Description
10	RW	BANK_MODE: Enable bank mode.
11	RW	ENH_TRACE_MODE: Enable enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, the internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B: Unused.
14:17	RW	TRACE_SELCT_CONTROL: Selector for two sets of external trace bus multiplexers, tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: Spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN3.N3.TRA0.TR0.TRACE_TRDATA_CONFIG_0
Address	0000000005010403 (SCOM)
Description	This register contains a trace data compare mask for bits 0 - 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: Trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN3.N3.TRA0.TR0.TRACE_TRDATA_CONFIG_1
Address	0000000005010404 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: Trace data compare mask for bits 64 - 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN3.N3.TRA0.TR0.TRACE_TRDATA_CONFIG_2
Address	0000000005010405 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 - 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN3.N3.TRA0.TR0.TRACE_TRDATA_CONFIG_3
Address	0000000005010406 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 - 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 - 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN3.N3.TRA0.TR0.TRACE_TRDATA_CONFIG_4
Address	0000000005010407 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN3.N3.TRA0.TR0.TRACE_TRDATA_CONFIG_5
Address	0000000005010408 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN3.N3.TRA0.TR0.TRACE_TRDATA_CONFIG_9
Address	0000000005010409 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable trace data compression (store data on every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.

Bits	SCOM	Field Mnemonic: Description
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR . 0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG0_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG1_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND . 0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a trigger: 1000 inverts MATCHA. 0100 inverts MATCHB. 0010 inverts MATCHC. 0001 inverts MATCHD.
32:35	RW	Reserved.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. This must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved.

Register Name	**Trace Array High Data Register**
Mnemonic	TP.TCN3.N3.TRA0.TR1.TRACE_HI_DATA_REG
Address	0000000005010440 (SCOM)
Description	This register provides the high trace array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: Trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN3.N3.TRA0.TR1.TRACE_LO_DATA_REG
Address	0000000005010441 (SCOM)
Description	This register provides the low trace array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to the last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN3.N3.TRA0.TR1.TRACE_TRCTRL_CONFIG
Address	0000000005010442 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: Enable store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: Enable unconditional forced write when trace is run.
2:9	RW	EXTEND_TRIG_MODE: Counter value for extended trigger mode.
10	RW	BANK_MODE: Enable bank mode.
11	RW	ENH_TRACE_MODE: Enable enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, the internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B: Unused.
14:17	RW	TRACE_SELCT_CONTROL: Selector for two sets of external trace bus multiplexers, tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: Spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN3.N3.TRA0.TR1.TRACE_TRDATA_CONFIG_0
Address	0000000005010443 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: Trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN3.N3.TRA0.TR1.TRACE_TRDATA_CONFIG_1
Address	0000000005010444 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: Trace data compare mask for bits 64 - 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN3.N3.TRA0.TR1.TRACE_TRDATA_CONFIG_2
Address	0000000005010445 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 - 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN3.N3.TRA0.TR1.TRACE_TRDATA_CONFIG_3
Address	0000000005010446 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 - 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 - 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN3.N3.TRA0.TR1.TRACE_TRDATA_CONFIG_4
Address	0000000005010447 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN3.N3.TRA0.TR1.TRACE_TRDATA_CONFIG_5
Address	0000000005010448 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN3.N3.TRA0.TR1.TRACE_TRDATA_CONFIG_9
Address	0000000005010449 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable trace data compression (store data on every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG0_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG0.

Bits	SCOM	Field Mnemonic: Description
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG1_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a trigger: 1000 inverts MATCHA. 0100 inverts MATCHB. 0010 inverts MATCHC. 0001 inverts MATCHD.
32:35	RW	Reserved.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN3.N3.TRA1.TR0.TRACE_HI_DATA_REG
Address	0000000005010480 (SCOM)
Description	This register provides the high trace array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: Trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN3.N3.TRA1.TR0.TRACE_LO_DATA_REG
Address	0000000005010481 (SCOM)
Description	This register provides the low trace array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.

Bits	SCOM	Field Mnemonic: Description
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to the last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN3.N3.TRA1.TR0.TRACE_TRCTRL_CONFIG
Address	0000000005010482 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: Enable store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: Enable unconditional forced write when trace is run.
2:9	RW	EXTEND_TRIG_MODE: Counter value for extended trigger mode.
10	RW	BANK_MODE: Enable bank mode.
11	RW	ENH_TRACE_MODE: Enable enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, the internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B: Unused.
14:17	RW	TRACE_SELCT_CONTROL: Selector for two sets of external trace bus multiplexers, tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: Spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN3.N3.TRA1.TR0.TRACE_TRDATA_CONFIG_0
Address	0000000005010483 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: Trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN3.N3.TRA1.TR0.TRACE_TRDATA_CONFIG_1
Address	0000000005010484 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: Trace data compare mask for bits 64 - 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN3.N3.TRA1.TR0.TRACE_TRDATA_CONFIG_2
Address	0000000005010485 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 - 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN3.N3.TRA1.TR0.TRACE_TRDATA_CONFIG_3
Address	0000000005010486 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 - 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 - 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN3.N3.TRA1.TR0.TRACE_TRDATA_CONFIG_4
Address	0000000005010487 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN3.N3.TRA1.TR0.TRACE_TRDATA_CONFIG_5
Address	0000000005010488 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN3.N3.TRA1.TR0.TRACE_TRDATA_CONFIG_9
Address	0000000005010489 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable trace data compression (store data on every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG0_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG1_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a trigger: 1000 inverts MATCHA. 0100 inverts MATCHB. 0010 inverts MATCHC. 0001 inverts MATCHD.

Bits	SCOM	Field Mnemonic: Description
32:35	RW	Reserved.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. This must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN3.N3.TRA1.TR1.TRACE_HI_DATA_REG
Address	00000000050104C0 (SCOM)
Description	This register provides the high trace array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: Trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN3.N3.TRA1.TR1.TRACE_LO_DATA_REG
Address	00000000050104C1 (SCOM)
Description	This register provides the low trace array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to the last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN3.N3.TRA1.TR1.TRACE_TRCTRL_CONFIG
Address	00000000050104C2 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: Enable store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: Enable unconditional forced write when trace is run.
2:9	RW	EXTEND_TRIG_MODE: Counter value for extended trigger mode.
10	RW	BANK_MODE: Enable bank mode.
11	RW	ENH_TRACE_MODE: Enable enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, the internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.

Bits	SCOM	Field Mnemonic: Description
13	RW	UNUSED_13B: Unused.
14:17	RW	TRACE_SELCT_CONTROL: Selector for two sets of external trace bus multiplexers, tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: Spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN3.N3.TRA1.TR1.TRACE_TRDATA_CONFIG_0
Address	00000000050104C3 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: Trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN3.N3.TRA1.TR1.TRACE_TRDATA_CONFIG_1
Address	00000000050104C4 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: Trace data compare mask for bits 64 - 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN3.N3.TRA1.TR1.TRACE_TRDATA_CONFIG_2
Address	00000000050104C5 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 - 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN3.N3.TRA1.TR1.TRACE_TRDATA_CONFIG_3
Address	00000000050104C6 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 - 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 - 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN3.N3.TRA1.TR1.TRACE_TRDATA_CONFIG_4
Address	00000000050104C7 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN3.N3.TRA1.TR1.TRACE_TRDATA_CONFIG_5
Address	00000000050104C8 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN3.N3.TRA1.TR1.TRACE_TRDATA_CONFIG_9
Address	00000000050104C9 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable trace data compression (store data on every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.

Bits	SCOM	Field Mnemonic: Description
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG0_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG1_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a trigger: 1000 inverts MATCHA. 0100 inverts MATCHB. 0010 inverts MATCHC. 0001 inverts MATCHD.
32:35	RW	Reserved.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. This must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN3.N3.TRA2.TR0.TRACE_HI_DATA_REG
Address	0000000005010500 (SCOM)
Description	This register provides the high trace array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: Trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN3.N3.TRA2.TR0.TRACE_LO_DATA_REG
Address	0000000005010501 (SCOM)
Description	This register provides the low trace array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to the last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN3.N3.TRA2.TR0.TRACE_TRCTRL_CONFIG
Address	0000000005010502 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: Enable store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: Enable unconditional forced write when trace is run.
2:9	RW	EXTEND_TRIG_MODE: Counter value for extended trigger mode.
10	RW	BANK_MODE: Enable bank mode.
11	RW	ENH_TRACE_MODE: Enable enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, the internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B: Unused.
14:17	RW	TRACE_SELCT_CONTROL: Selector for two sets of external trace bus multiplexers, tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: Spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN3.N3.TRA2.TR0.TRACE_TRDATA_CONFIG_0
Address	0000000005010503 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: Trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN3.N3.TRA2.TR0.TRACE_TRDATA_CONFIG_1
Address	0000000005010504 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: Trace data compare mask for bits 64 - 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN3.N3.TRA2.TR0.TRACE_TRDATA_CONFIG_2
Address	0000000005010505 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 - 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN3.N3.TRA2.TR0.TRACE_TRDATA_CONFIG_3
Address	0000000005010506 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 - 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 - 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN3.N3.TRA2.TR0.TRACE_TRDATA_CONFIG_4
Address	0000000005010507 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN3.N3.TRA2.TR0.TRACE_TRDATA_CONFIG_5
Address	0000000005010508 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN3.N3.TRA2.TR0.TRACE_TRDATA_CONFIG_9
Address	0000000005010509 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable trace data compression (store data on every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG0_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes to form TRIG1.

Bits	SCOM	Field Mnemonic: Description
22:25	RW	TRIG1_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG1_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a trigger: 1000 inverts MATCHA. 0100 inverts MATCHB. 0010 inverts MATCHC. 0001 inverts MATCHD.
32:35	RW	Reserved.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. This must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN3.N3.TRA2.TR1.TRACE_HI_DATA_REG
Address	0000000005010540 (SCOM)
Description	This register provides the high trace array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: Trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN3.N3.TRA2.TR1.TRACE_LO_DATA_REG
Address	0000000005010541 (SCOM)
Description	This register provides the low trace array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to the last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN3.N3.TRA2.TR1.TRACE_TRCTRL_CONFIG
Address	0000000005010542 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: Enable store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: Enable unconditional forced write when trace is run.
2:9	RW	EXTEND_TRIG_MODE: Counter value for extended trigger mode.
10	RW	BANK_MODE: Enable bank mode.
11	RW	ENH_TRACE_MODE: Enable enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, the internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B: Unused.
14:17	RW	TRACE_SELCT_CONTROL: Selector for two sets of external trace bus multiplexers, tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: Spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN3.N3.TRA2.TR1.TRACE_TRDATA_CONFIG_0
Address	0000000005010543 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: Trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN3.N3.TRA2.TR1.TRACE_TRDATA_CONFIG_1
Address	0000000005010544 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: Trace data compare mask for bits 64 - 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN3.N3.TRA2.TR1.TRACE_TRDATA_CONFIG_2
Address	0000000005010545 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 - 23.

Bits	SCOM	Field Mnemonic: Description
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN3.N3.TRA2.TR1.TRACE_TRDATA_CONFIG_3
Address	0000000005010546 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 - 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 - 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN3.N3.TRA2.TR1.TRACE_TRDATA_CONFIG_4
Address	0000000005010547 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN3.N3.TRA2.TR1.TRACE_TRDATA_CONFIG_5
Address	0000000005010548 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN3.N3.TRA2.TR1.TRACE_TRDATA_CONFIG_9
Address	0000000005010549 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable trace data compression (store data on every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account changes in the error bit for trace data compression (default = 0).

Bits	SCOM	Field Mnemonic: Description
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG0_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG1_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a trigger: 1000 inverts MATCHA. 0100 inverts MATCHB. 0010 inverts MATCHC. 0001 inverts MATCHD.
32:35	RW	Reserved.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. This must be enabled for MCFAST and L2FAST traces.

Bits	SCOM	Field Mnemonic: Description
37	RW	Reserved.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN3.N3.TRA3.TR0.TRACE_HI_DATA_REG
Address	0000000005010580 (SCOM)
Description	This register provides the high trace array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: Trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN3.N3.TRA3.TR0.TRACE_LO_DATA_REG
Address	0000000005010581 (SCOM)
Description	This register provides the low trace array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to the last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN3.N3.TRA3.TR0.TRACE_TRCTRL_CONFIG
Address	0000000005010582 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: Enable store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: Enable unconditional forced write when trace is run.
2:9	RW	EXTEND_TRIG_MODE: Counter value for extended trigger mode.
10	RW	BANK_MODE: Enable bank mode.
11	RW	ENH_TRACE_MODE: Enable enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, the internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B: Unused.
14:17	RW	TRACE_SELCT_CONTROL: Selector for two sets of external trace bus multiplexers, tra_mux0_sel(0:1) and tra_mux1_sel(0:1).

Bits	SCOM	Field Mnemonic: Description
18:21	RW	SPARE_CONTROL: Spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN3.N3.TRA3.TR0.TRACE_TRDATA_CONFIG_0
Address	0000000005010583 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: Trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN3.N3.TRA3.TR0.TRACE_TRDATA_CONFIG_1
Address	0000000005010584 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: Trace data compare mask for bits 64 - 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN3.N3.TRA3.TR0.TRACE_TRDATA_CONFIG_2
Address	0000000005010585 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 - 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN3.N3.TRA3.TR0.TRACE_TRDATA_CONFIG_3
Address	0000000005010586 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 - 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 - 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN3.N3.TRA3.TR0.TRACE_TRDATA_CONFIG_4
Address	0000000005010587 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN3.N3.TRA3.TR0.TRACE_TRDATA_CONFIG_5
Address	0000000005010588 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN3.N3.TRA3.TR0.TRACE_TRDATA_CONFIG_9
Address	0000000005010589 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable trace data compression (store data on every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.

Bits	SCOM	Field Mnemonic: Description
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG0_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG1_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a trigger: 1000 inverts MATCHA. 0100 inverts MATCHB. 0010 inverts MATCHC. 0001 inverts MATCHD.
32:35	RW	Reserved.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. This must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN3.N3.TRA3.TR1.TRACE_HI_DATA_REG
Address	00000000050105C0 (SCOM)
Description	This register provides the high trace array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: Trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN3.N3.TRA3.TR1.TRACE_LO_DATA_REG
Address	00000000050105C1 (SCOM)
Description	This register provides the low trace array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to the last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN3.N3.TRA3.TR1.TRACE_TRCTRL_CONFIG
Address	00000000050105C2 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: Enable store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: Enable unconditional forced write when trace is run.
2:9	RW	EXTEND_TRIG_MODE: Counter value for extended trigger mode.
10	RW	BANK_MODE: Enable bank mode.
11	RW	ENH_TRACE_MODE: Enable enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, the internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B: Unused.
14:17	RW	TRACE_SELCT_CONTROL: Selector for two sets of external trace bus multiplexers, tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: Spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN3.N3.TRA3.TR1.TRACE_TRDATA_CONFIG_0
Address	00000000050105C3 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: Trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN3.N3.TRA3.TR1.TRACE_TRDATA_CONFIG_1
Address	00000000050105C4 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: Trace data compare mask for bits 64 - 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN3.N3.TRA3.TR1.TRACE_TRDATA_CONFIG_2
Address	00000000050105C5 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 - 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN3.N3.TRA3.TR1.TRACE_TRDATA_CONFIG_3
Address	00000000050105C6 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 - 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 - 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN3.N3.TRA3.TR1.TRACE_TRDATA_CONFIG_4
Address	00000000050105C7 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN3.N3.TRA3.TR1.TRACE_TRDATA_CONFIG_5
Address	00000000050105C8 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN3.N3.TRA3.TR1.TRACE_TRDATA_CONFIG_9
Address	00000000050105C9 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable trace data compression (store data on every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG0_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes to form TRIG1.

Bits	SCOM	Field Mnemonic: Description
22:25	RW	TRIG1_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG1_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a trigger: 1000 inverts MATCHA. 0100 inverts MATCHB. 0010 inverts MATCHC. 0001 inverts MATCHD.
32:35	RW	Reserved.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. This must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN3.N3.TRA4.TR0.TRACE_HI_DATA_REG
Address	0000000005010600 (SCOM)
Description	This register provides the high trace array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: Trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN3.N3.TRA4.TR0.TRACE_LO_DATA_REG
Address	0000000005010601 (SCOM)
Description	This register provides the low trace array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to the last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN3.N3.TRA4.TR0.TRACE_TRCTRL_CONFIG
Address	0000000005010602 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: Enable store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: Enable unconditional forced write when trace is run.
2:9	RW	EXTEND_TRIG_MODE: Counter value for extended trigger mode.
10	RW	BANK_MODE: Enable bank mode.
11	RW	ENH_TRACE_MODE: Enable enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, the internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B: Unused.
14:17	RW	TRACE_SELCT_CONTROL: Selector for two sets of external trace bus multiplexers, tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: Spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN3.N3.TRA4.TR0.TRACE_TRDATA_CONFIG_0
Address	0000000005010603 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: Trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN3.N3.TRA4.TR0.TRACE_TRDATA_CONFIG_1
Address	0000000005010604 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: Trace data compare mask for bits 64 - 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN3.N3.TRA4.TR0.TRACE_TRDATA_CONFIG_2
Address	0000000005010605 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 - 23.

Bits	SCOM	Field Mnemonic: Description
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN3.N3.TRA4.TR0.TRACE_TRDATA_CONFIG_3
Address	0000000005010606 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 - 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 - 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN3.N3.TRA4.TR0.TRACE_TRDATA_CONFIG_4
Address	0000000005010607 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN3.N3.TRA4.TR0.TRACE_TRDATA_CONFIG_5
Address	0000000005010608 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN3.N3.TRA4.TR0.TRACE_TRDATA_CONFIG_9
Address	0000000005010609 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable trace data compression (store data on every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account changes in the error bit for trace data compression (default = 0).

Bits	SCOM	Field Mnemonic: Description
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG0_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG1_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a trigger: 1000 inverts MATCHA. 0100 inverts MATCHB. 0010 inverts MATCHC. 0001 inverts MATCHD.
32:35	RW	Reserved.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. This must be enabled for MCFAST and L2FAST traces.

Bits	SCOM	Field Mnemonic: Description
37	RW	Reserved.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN3.N3.TRA5.TR0.TRACE_HI_DATA_REG
Address	0000000005010680 (SCOM)
Description	This register provides the high trace array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: Trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN3.N3.TRA5.TR0.TRACE_LO_DATA_REG
Address	0000000005010681 (SCOM)
Description	This register provides the low trace array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to the last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN3.N3.TRA5.TR0.TRACE_TRCTRL_CONFIG
Address	0000000005010682 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: Enable store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: Enable unconditional forced write when trace is run.
2:9	RW	EXTEND_TRIG_MODE: Counter value for extended trigger mode.
10	RW	BANK_MODE: Enable bank mode.
11	RW	ENH_TRACE_MODE: Enable enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, the internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B: Unused.
14:17	RW	TRACE_SELCT_CONTROL: Selector for two sets of external trace bus multiplexers, tra_mux0_sel(0:1) and tra_mux1_sel(0:1).

Bits	SCOM	Field Mnemonic: Description
18:21	RW	SPARE_CONTROL: Spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN3.N3.TRA5.TR0.TRACE_TRDATA_CONFIG_0
Address	0000000005010683 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: Trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN3.N3.TRA5.TR0.TRACE_TRDATA_CONFIG_1
Address	0000000005010684 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: Trace data compare mask for bits 64 - 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN3.N3.TRA5.TR0.TRACE_TRDATA_CONFIG_2
Address	0000000005010685 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 - 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN3.N3.TRA5.TR0.TRACE_TRDATA_CONFIG_3
Address	0000000005010686 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 - 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 - 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN3.N3.TRA5.TR0.TRACE_TRDATA_CONFIG_4
Address	0000000005010687 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN3.N3.TRA5.TR0.TRACE_TRDATA_CONFIG_5
Address	0000000005010688 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN3.N3.TRA5.TR0.TRACE_TRDATA_CONFIG_9
Address	0000000005010689 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable trace data compression (store data on every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.

Bits	SCOM	Field Mnemonic: Description
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG0_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG1_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a trigger: 1000 inverts MATCHA. 0100 inverts MATCHB. 0010 inverts MATCHC. 0001 inverts MATCHD.
32:35	RW	Reserved.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. This must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN3.N3.TRA5.TR1.TRACE_HI_DATA_REG
Address	00000000050106C0 (SCOM)
Description	This register provides the high trace array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: Trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN3.N3.TRA5.TR1.TRACE_LO_DATA_REG
Address	00000000050106C1 (SCOM)
Description	This register provides the low trace array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to the last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN3.N3.TRA5.TR1.TRACE_TRCTRL_CONFIG
Address	00000000050106C2 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: Enable store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: Enable unconditional forced write when trace is run.
2:9	RW	EXTEND_TRIG_MODE: Counter value for extended trigger mode.
10	RW	BANK_MODE: Enable bank mode.
11	RW	ENH_TRACE_MODE: Enable enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, the internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B: Unused.
14:17	RW	TRACE_SELCT_CONTROL: Selector for two sets of external trace bus multiplexers, tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: Spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN3.N3.TRA5.TR1.TRACE_TRDATA_CONFIG_0
Address	00000000050106C3 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: Trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN3.N3.TRA5.TR1.TRACE_TRDATA_CONFIG_1
Address	00000000050106C4 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: Trace data compare mask for bits 64 - 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN3.N3.TRA5.TR1.TRACE_TRDATA_CONFIG_2
Address	00000000050106C5 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 - 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN3.N3.TRA5.TR1.TRACE_TRDATA_CONFIG_3
Address	00000000050106C6 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 - 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 - 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN3.N3.TRA5.TR1.TRACE_TRDATA_CONFIG_4
Address	00000000050106C7 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN3.N3.TRA5.TR1.TRACE_TRDATA_CONFIG_5
Address	00000000050106C8 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN3.N3.TRA5.TR1.TRACE_TRDATA_CONFIG_9
Address	00000000050106C9 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable trace data compression (store data on every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 00 = Debug bus bits(00:23). 01 = Debug bus bits(24:47). 10 = Debug bus bits(48:71). 11 = Debug bus bits(72:87) | 8 zeroes.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG0_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND: 1XXX selects MATCHA OR. X1XX selects MATCHB OR. XX1X selects MATCHC OR. XXX1 selects MATCHD OR. 0000 selects to not OR any MATCHes to form TRIG1.

Bits	SCOM	Field Mnemonic: Description
22:25	RW	TRIG1_AND_MASK: The AND of the following selected MATCHes is ORed with the result of TRIG1_OR: 1XXX selects MATCHA AND. X1XX selects MATCHB AND. XX1X selects MATCHC AND. XXX1 selects MATCHD AND. 0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a trigger: 1000 inverts MATCHA. 0100 inverts MATCHB. 0010 inverts MATCHC. 0001 inverts MATCHD.
32:35	RW	Reserved.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. This must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved.

Register Name	Debug Mode Register
Mnemonic	TP.TCN3.N3.EPS.DBG.DBG_MODE_REG
Address	00000000050107C0 (SCOM)
Description	This is the debug macro configuration register 0 for the configuration component.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	GLB_BRCST_MODE: global_broadcast_mode (0 to 2): 100 = dbg_trace_run and dbg_trace_freeze. 101 = pc_tcdbg_trace_run_fncd and dbg_trace_freeze. 110 = dbg_triggers_out(0 to 1). 111 = pc_tcdbg_triggers(0 to 1) (from core).
3:5	RW	TRACE_SEL_MODE: Select source for trace_run and bank. 001 = Core trace run and bank. 010 = TP broadcast run and 0. 011 = tc_dbg_inter_brcst latched. 100 = tc_dbg_dbg_sync_brcst_rcv. else = dbg_trace_run and dbg_trace_bank.
6:7	RW	TRIG_SEL_MODE: Select source for tcdbg_trigger(0). 10 = Global broadcast. 11 = pc_tcdbg_trigger (from core). else = dbg_triggers_out(0:1).
8	RW	STOP_ON_XSTOP_SELECTION: Enable trace stop on checkstop.
9	RW	STOP_ON_RECOV_ERR_SELECTION: Enable trace stop on recoverable error.
10	RW	STOP_ON_SPATTN_SELECTION: Enable trace stop on special attention.
11	RW	FREEZE_SEL_MODE: Select freeze source: 0 = Local debug freeze. 1 = Via broadcast: tp_tcdbg_glb_brcst(1).
12:13	RW	SYNC_BRCST_MODE: Originally used for synchronous broadcast mode. Currently unused (obsolete, see trace_sel_mode).
14	RO	Constant = 0b0

Bits	SCOM	Field Mnemonic: Description
15	RO	Constant = 0b0
16:31	ROX	dbg_status: Debug status.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Debug Instance 1 Condition 1 Register
Mnemonic	TP.TCN3.N3.EPS.DBG.DBG_INST1_COND_REG_1
Address	00000000050107C1 (SCOM)
Description	This is debug macro configuration register 1 for front-end component 1.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	INST1_COND1_SEL_A: Multiplexer for cond1_trig_in(0). 000 selects constant 0 . 001 selects constant 1. -- CONDITION FEEDBACK -- 002 selects inst1_dbg_cond1. 003 selects inst1_dbg_cond2. 004 selects inst1_dbg_cond3. 005 selects inst1_dbg_cond2timeout. 006 selects inst2_dbg_cond1. 007 selects inst2_dbg_cond2. 008 selects inst2_dbg_cond3. 009 selects inst2_dbg_cond2timeout. 010 selects inst3_dbg_cond1 - Unused, tied down. 011 selects inst3_dbg_cond2 - Unused, tied down. 012 selects inst3_dbg_cond3 - Unused, tied down. 013 selects inst3_dbg_cond2timeout - Unused, tied down. 014 selects inst4_dbg_cond1 - Unused, tied down. 015 selects inst4_dbg_cond2 - Unused, tied down. 016 selects inst4_dbg_cond3 - Unused, tied down. 017 selects inst4_dbg_cond2timeout - Unused, tied down. 018 selects inst1_dbg_trig_sp. 019 selects inst2_dbg_trig_sp. 020 selects inst3_dbg_trig_sp - Unused, tied down. 021 selects inst4_dbg_trig_sp - Unused, tied down. 022 selects tctrc_tcdbg_trigger_a(0). 023 selects tctrc_tcdbg_trigger_b(0). 024 selects tctrc_tcdbg_trigger_a(0) and tctrc_tcdbg_trigger_b(0). 025 selects tctrc_tcdbg_trigger_a(1). 026 selects tctrc_tcdbg_trigger_b(1). 027 selects tctrc_tcdbg_trigger_a(1) and tctrc_tcdbg_trigger_b(1). 028 selects tctrc_tcdbg_trigger_a(2). 029 selects tctrc_tcdbg_trigger_b(2). 030 selects tctrc_tcdbg_trigger_a(2) and tctrc_tcdbg_trigger_b(2). 031 selects tctrc_tcdbg_trigger_a(3). 032 selects tctrc_tcdbg_trigger_b(3). 033 selects tctrc_tcdbg_trigger_a(3) and tctrc_tcdbg_trigger_b(3). 034 selects tctrc_tcdbg_trigger_a(4). 035 selects tctrc_tcdbg_trigger_b(4). 036 selects tctrc_tcdbg_trigger_a(4) and tctrc_tcdbg_trigger_b(4). 037 selects tctrc_tcdbg_trigger_a(5). 038 selects tctrc_tcdbg_trigger_b(5). 039 selects tctrc_tcdbg_trigger_a(5) and tctrc_tcdbg_trigger_b(5). 040 selects tctrc_tcdbg_trigger_a(6). 041 selects tctrc_tcdbg_trigger_b(6). 042 selects tctrc_tcdbg_trigger_a(6) and tctrc_tcdbg_trigger_b(6).

Bits	SCOM	Field Mnemonic: Description
		043 selects tctrc_tcdbg_trigger_a(7). 044 selects tctrc_tcdbg_trigger_b(7). 045 selects tctrc_tcdbg_trigger_a(7) and tctrc_tcdbg_trigger_b(7). 046 selects tctrc_tcdbg_trigger_a(8). 047 selects tctrc_tcdbg_trigger_b(8). 048 selects tctrc_tcdbg_trigger_a(8) and tctrc_tcdbg_trigger_b(8). 049 selects tctrc_tcdbg_trigger_a(9). 050 selects tctrc_tcdbg_trigger_b(9). 051 selects tctrc_tcdbg_trigger_a(9) and tctrc_tcdbg_trigger_b(9). 052 selects tctrc_tcdbg_trigger_a(10). 053 selects tctrc_tcdbg_trigger_b(10). 054 selects tctrc_tcdbg_trigger_a(10) and tctrc_tcdbg_trigger_b(10). 055 selects tctrc_tcdbg_trigger_a(11). 056 selects tctrc_tcdbg_trigger_b(11). 057 selects tctrc_tcdbg_trigger_a(11) and tctrc_tcdbg_trigger_b(11). 058 selects tctrc_tcdbg_trigger_a(12). 059 selects tctrc_tcdbg_trigger_b(12). 060 selects tctrc_tcdbg_trigger_a(12) and tctrc_tcdbg_trigger_b(12). 061 selects tctrc_tcdbg_trigger_a(13). 062 selects tctrc_tcdbg_trigger_b(13). 063 selects tctrc_tcdbg_trigger_a(13) and ctr_tcdbg_trigger_b(13). 064 selects tctrc_tcdbg_trigger_a(14). 065 selects tctrc_tcdbg_trigger_b(14). 066 selects tctrc_tcdbg_trigger_a(14) and tctrc_tcdbg_trigger_b(14). 067 selects tctrc_tcdbg_trigger_a(15). 068 selects tctrc_tcdbg_trigger_b(15). 069 selects tctrc_tcdbg_trigger_a(15) and tctrc_tcdbg_trigger_b(15). 070 selects tctrc_tcdbg_trigger_a(16). 071 selects tctrc_tcdbg_trigger_b(16). 072 selects tctrc_tcdbg_trigger_a(16) and tctrc_tcdbg_trigger_b(16). 073 selects tctrc_tcdbg_trigger_a(17). 074 selects tctrc_tcdbg_trigger_b(17). 075 selects tctrc_tcdbg_trigger_a(17) and tctrc_tcdbg_trigger_b(17). -- LOGIC (UNIT) TRIGGERS -- EP: 0:3 L3C0, 4:7 L3C1, 8:9 GX, 10 TP (hang), 11 spare, 12:13 MCA, 14:15 spare. ES: 0:4 L4C, 5:6 L4F, 7:8 TPTOD, 9 TP (hang), 10:15 spare. 076 selects logic_trigger_in(0). 077 selects logic_trigger_in(1). 078 selects logic_trigger_in(2). 079 selects logic_trigger_in(3). 080 selects logic_trigger_in(4). 081 selects logic_trigger_in(5). 082 selects logic_trigger_in(6). 083 selects logic_trigger_in(7). 084 selects logic_trigger_in(8). 085 selects logic_trigger_in(9). 086 selects logic_trigger_in(10). 087 selects logic_trigger_in(11). 088 selects logic_trigger_in(12). 089 selects logic_trigger_in(13). 090 selects logic_trigger_in(14). 091 selects logic_trigger_in(15). 092 selects pc_tcdbg_trigger(0). 093 selects pc_tcdbg_trigger(1). 094 selects tctrc_tcdbg_glb_brcst(0). 095 selects tctrc_tcdbg_glb_brcst(1). 096 selects xstop_err. 097 selects recov_err. 098 selects spattn. 099 selects fir_dbg_local_xstop_err. 100 selects tc_dbg_inter_brcst(0).

Bits	SCOM	Field Mnemonic: Description
		101 selects tc_dbg_inter_brcst(1). -- CORE TRIGGERS (EP chip only) -- **Note:** Set core_slave_mode to honor ec[0:5]_tc_trace_run. 102 selects core trigger 0: Any rising edge of ec[0:5]_tc_trace_run(0). 103 selects core trigger 1: Any rising edge of ec[0:5]_tc_trace_run(1). 104 selects core trigger 2: Any falling edge of ec[0:5]_tc_trace_run(0). 105 selects core trigger 3: Any falling edge of ec[0:5]_tc_trace_run(1). 106 selects glb_trig_or_trace_in(0). 107 selects glb_trig_or_trace_in(1). 108 selects core_local_brcst_trc(0). 109 selects core_local_brcst_trc(1). 110 selects glb_freeze_brcst_rec(0). 111 selects trig_2_extern_in(0). 112 selects trig_2_extern_in(1). 113 selects dbg_triggers_out(2). 114 selects dbg_triggers_out(3). 115 selects dbg_triggers_out(4). 116 selects dbg_triggers_out(5). 117 selects dbg_triggers_out(6). 118 selects tcdbg_trigger_in(0). 119 selects tcdbg_trigger_in(1).
8:15	RW	INST1_COND1_SEL_B: Multiplexer for cond1_trig_in(1). Selection as cond1_trig_in(0).
16:23	RW	INST1_COND2_SEL_A: Multiplexer for cond2_trig_in(0). Selection as cond1_trig_in(0).
24:31	RW	INST1_COND2_SEL_B: Multiplexer for cond2_trig_in(1). Selection as cond1_trig_in(0).
32	RW	INST1_C1_INAROW_MODE: Front-end instance 1 counter 1 in-a-row mode.
33	RW	INST1_AND_TRIGGER_MODE1: Front-end instance 1 and trigger mode condition 1.

Register Name	**Debug Trace Mode 2 Register**
Mnemonic	TP.TCN3.N3.EPS.DBG.DBG_TRACE_MODE_REG_2
Address	00000000050107CF (SCOM)
Description	This is the debug macro configuration register 2 for the back-end component.

Bits	SCOM	Field Mnemonic: Description
0:15	RW	RUNN_COUNT_COMPARE_VALUE: Compare value for the RUNN counter used in trace modes RUNN and wait-N.
16	RW	IMM_FREEZE_MODE: Immediate freeze mode.
17	RW	STOP_ON_ERR: Stop and freeze on checkstop.
18	RW	BANK_ON_RUNN_MATCH: Bank switch on RUNN match.
19	RW	FORCE_TEST_MODE: Force RUNN condition to be true.
20	RW	ACCUM_HIST_MODE: Accumulate history mode, do not clear history mode when trace run is active.
21	RW	FRZ_COUNT_ON_FRZ: Freeze condition counters on trace freeze.

Register Name	**CQ_SM Miscellaneous Configuration 0 Register**
Mnemonic	NPU.STCK0.CS.SM0.MISC.CONFIG0
Address	0000000005011000 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG1_RESERVED1: Reserved.
1	RW	CONFIG_MA_DSA_OPT_CLAIM_UR: When set to 1, use Read.RWC/Upgrade.DN for DCLAIM/DCBZ to GPU memory.
2	RW	CONFIG_MA_DSA_OPT_FLUSH_UR: When set to 1, use Read.RWC/Upgrade.DN for DCBF/DCBFC to GPU memory.
3	RW	CONFIG_MA_DSA_OPT_RP_MODE: When set to 1, use DMA/Read-Push for Write.NC to processor memory.
4	RW	CONFIG_ADR_BAR_MODE: Processor bus adr_bar: 0 = Large system mode. 1 = Small system mode.
5	RW	CONFIG_DISABLE_NN_RN: Processor bus scope: 0 = Enable Nn and Rn scopes. 1 = Disable Nn and Rn scopes.
6	RW	CONFIG_DISABLE_VG_NOT_SYS: Processor bus scope: 0 = Enable VG less than system. 1 = Force all VG to system.
7	RW	CONFIG_DISABLE_G: Processor bus scope: 0 = Enable G scope. 1 = Disable G scope.
8	RW	CONFIG_DISABLE_LN: Processor bus scope: 0 = Enable Ln scope. 1 = Disable Ln scope.
9	RW	CONFIG_SKIP_G: Processor bus scope: 0 = Allow G on rty_inc. 1 = Skip G on rty_inc.
10	RW	CONFIG_MA_MCRESP_OPT_WRP: 0 = Increase scope on rty_inc to dma_w. 1 = Use write-read-push on rty_inc to dma_w.
11	RW	CONFIG_MA_MCRESP_OPT_RTY_INJ: On a rty_inj type CRESP: 0 = Keep sending DMA. 1 = Change to _inj.

Bits	SCOM	Field Mnemonic: Description
12	RW	CONFIG_MA_MCRESP_OPT_RTY_DMA: On a rty_dma type CRESP: 0 = Keep sending inj. 1 = Change to _dma.
13:15	RW	CONFIG_INC_PRI_MASK: Mask select for priority increase due to rty_drp: 0 = 100% chance to increase priority. 1 = 50% chance to increase priority. 2 = 25% chance to increase priority. 3 = 12.5% chance to increase priority. 4 = 6% chance to increase priority. 5 = 3% chance to increase priority. 6, 7 = 1.5% chance to increase priority.
16	RW	CONFIG1_RESERVED2: Reserved.
17	RW	CONFIG_MA_RSNOOP_OPT_B: Reserved for future option.
18	RW	CONFIG_MA_RSNOOP_OPT_C: Reserved for future option.
19	RW	CONFIG_MA_SCRESP_OPT_A: Reserved for future option.
20	RW	CONFIG_MA_SCRESP_OPT_B: Reserved for future option.
21	RW	CONFIG_MA_SCRESP_OPT_C: Reserved for future option.
22	RW	CONFIG_RESERVED4: Reserved.
23	RW	CONFIG_MACH_CORRENAB: Disable/enable state machine array ECC correction.
24	RW	CONFIG_MACH_INJECT_ENABLE1: Disable/enable state machine array ECC error inject bit 1.
25	RW	CONFIG_MACH_INJECT_ENABLE2: Disable/enable state machine array ECC error inject bit 2.
26	RW	CONFIG_RXO_CORRENAB: Disable/enable ReqRspOut array ECC correction.
27	RW	CONFIG_RXO_INJECT_ENABLE1: Disable/enable ReqRspOut array ECC error inject bit 1.
28	RW	CONFIG_RXO_INJECT_ENABLE2: Disable/enable ReqRspOut array ECC error inject bit 1.
29	RW	CONFIG_RSI_CORRENAB: Disable/enable PB-Rsp-In array ECC correction.
30	RW	CONFIG_RSI_INJECT_ENABLE1: Disable/enable PB-Rsp-Ine array ECC error inject bit 1.
31	RW	CONFIG_RSI_INJECT_ENABLE2: Disable/enable PB-Rsp-Ine array ECC error inject bit 1.
32:33	RW	CONFIG_MA_RSNOOP_OPT_DCLAIM: 0 = Partial respond to DCLAIM to GPU memory with lpc_ack. 1 = Partial respond to DCLAIM to GPU memory with lpc_ack + rty_lost_claim. 2 = Partial respond to DCLAIM to GPU memory with lpc_ack + rty_lpc + start pocket cache. 3 = Reserved.
34	RW	CONFIG_MA_DSA_OPT_DMA_UPG: 0 = Non-relaxed dma_w use Read.RWC to acquire pocket cache state/data. 1 = Non-relaxed dma_w use Upgrade.DN to acquire pocket cache state/data.
35	RW	CONFIG_EVAPORATE_BY_LCO: 0 = Just free the state machine without LCO. 1 = Evaporate pocket cache entries by LCO.
36	RW	CONFIG_MRBGP_TRACK_ALL: 0 = Master retry back-off group-pump track only this stack's retry responses. 1 = Master retry back-off group-pump track all this chip's retry responses.
37	RW	CONFIG_MRBSP_TRACK_ALL: 0 = Master retry back-off system-pump track only this stack's retry responses. 1 = Master retry back-off system-pump track all this chip's retry responses.
38	RW	CONFIG_ENABLE_PBUS: Disable/enable NPU processor bus RCMD, PRESP, and CRESP interfaces.

Bits	SCOM	Field Mnemonic: Description
39	RW	CONFIG_BRAZOS_MODE: 0 = Non-brazos 4-group; 2-chip mode. 1 = Brazos 2-group; 4-chip mode.
40	RW	CONFIG_ENABLE_SNARF_CPM: Disable/enable Probe.I.MO snarfing a cp_m.
41	RW	CONFIG_PREALLOC2_REQ0: When set to 1, preallocate two state machines to brick 0 CREQ channel.
42	RW	CONFIG_PREALLOC2_PRB0: When set to 1, preallocate two state machines to brick 0 PRB channel.
43	RW	CONFIG_PREALLOC2_REQ1: When set to 1, preallocate two state machines to brick 1 CREQ channel.
44	RW	CONFIG_PREALLOC2_PRB1: When set to 1, preallocate two state machines to brick 1 PRB channel.
45	RW	CONFIG_PREALLOC2_XATS: When set to 1, preallocate two state machines to XATS interface.
46	RW	CONFIG_DISABLE_INJECT: 0 = Enable sending cl,pr_dma_inj. 1 = Disable sending cl,pr_dma_inj. **Note:** To disable sending _inj commands, the following bits must also be set to 0: config_ma_mcresp_opt_rty_inj config_ma_dsa_opt_rp_mode
47	RW	CONFIG_DCACHE_MODE: 0 = Drive data bus DCACHE field in basic mode. 1 = Drive data bus DCACHE field in CAPP mode.
48	RW	CONFIG_DCACHE_REPORTS_PHYSICAL: 0 = In basic mode report local masters as near. 1 = In basic mode report local masters as local.
49	RW	CONFIG_RSI_DISABLE_DATIN_FASTPATH: 0 = Enable RSI PB data in fastpath. 1 = Disable fastpath.
50	RW	CONFIG_PCKT_BLK_PRB: 0 = Valid pocket cache entries, do not block probes. 1 = Probes are blocked.
51	RW	CONFIG_P9P9_MODE: 0 = Normal operation. 1 = Run in special lab bring-up GPUless POWER9-to-POWER9 mode.
52	RW	CONFIG_FORBID_MMIO_READ_GT_32: 0 = Allow GPU to PB MMIOs greater than 32 bytes. 1 = Flag error and brick fence on MMIOs greater than 32 bytes.
53	RW	CONFIG_FORBID_MMIO_ATOMIC: 0 = Allow GPU to PB atomics to MMIO space. 1 = Flag error and brick fence on atomics to MMIO space.
54	RW	CONFIG_OPT_SNOOP_CP: 0 = Snoop POWER9 memory cp_* type commands. 1 = Do not snoop cp_* type commands.
55:63	RW	CONFIG0_RESERVED3: Reserved.

Register Name	**CQ_SM Miscellaneous Configuration 1 Register**
Mnemonic	NPU.STCK0.CS.SM0.MISC.CONFIG1
Address	0000000005011001 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_RANDOM_BACKOFF_DUR_MASK: Mask for the base random duration of a random retry back-off: 0000 = 0 - 15 base random duration. 0001 = 0 - 31 base random duration. 0011 = 0 - 63 base random duration. 0111 = 0 - 127 base random duration. 1111 = 0 - 255 base random duration.
4:7	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_REQ: Mask for the slowdown of NTL CREQ credits during chgrate.hang. 'n' = 1 / ($2^{(n+1)}$) cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
8:11	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_PRB: Mask for the slowdown of NTL probe credits during chgrate.hang. 'n' = 1 / ($2^{(n+1)}$) cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
12:15	RW	CONFIG_ARB_NONCRR_SAFETY: Safety valve for non-CRESP/non-REQIN events going down the arbiter pipe. After n + 1 REQIN events go through the arbiter while a non-CRR event is waiting, REQIN events are blocked to give non-CRR events a chance.
16:27	RW	CONFIG_EPSILON_WLN_COUNT: Epsilon count for Ln scope CP write.
28:31	RW	CONFIG_SCALE_RPT_HANG_POLL: Scaling factor for rpt_hang.poll: 0 = 1:1 processor bus rpt_hang.polls received. 1 = 1:2 processor bus rpt_hang.polls received. ... 15 = 1:16 processor bus rpt_hang.polls received.
32:35	RW	CONFIG_SCALE_RPT_HANG_DATA: Scaling factor for rpt_hang.data: 0 = 1:1 processor bus rpt_hang.datas received. 1 = 1:2 processor bus rpt_hang.datas received. ... 15 = 1:16 processor bus rpt_hang.datas received.
36:63	RW	CONFIG1_RESERVED: Reserved.

Register Name	Power Bus Epsilon Configuration Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.EPSILON_CONFIG
Address	0000000005011002 (SCOM)
Description	Processor bus Epsilon configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_EPSILON_RATE: 0 = Decrement Epsilon count at 1:1 nest_gckn. ... 15 = Decrement Epsilon count at 1:16 nest_gckn.
4:15	RW	CONFIG_EPSILON_W0_COUNT: Epsilon count for Nn/G scope CP write.
16:27	RW	CONFIG_EPSILON_W1_COUNT: Epsilon count for Rn/VG scope CP write.
28:39	RW	CONFIG_EPSILON_R0_COUNT: Epsilon count for Ln scope reads.
40:51	RW	CONFIG_EPSILON_R1_COUNT: Epsilon count for Nn/G scope reads.
52:63	RW	CONFIG_EPSILON_R2_COUNT: Epsilon count for Rn/Vg scope reads.

Register Name	Timer Configuration Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.XTIMER_CONFIG
Address	0000000005011003 (SCOM)
Description	Timer configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	CONFIG_POCKET_RATE1: Rate-1 for the pocket cache with data entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate – 1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate – 1) * $2^{(Rate-3)}$ * 5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
2:7	RW	CONFIG_POCKET_RATE2: Rate-2 for the long timer for the pocket cache entries (2^n cycles).
8:13	RW	CONFIG_POCKET_RATE3: Rate-3 for the short timer for the pocket cache entries (2^n cycles).
14:19	RW	CONFIG_FWD_PROG_RATE2: Rate-2 for the forward progress timer (2^n cycles).
20:25	RW	CONFIG_CTL_TICK: Rate for the CTL timer tick (default 63 = off). **Note:** This field can/should have different values in each instance.
26:31	RW	CONFIG_INH0_TICK: Rate for the SM inhibit timer tick0 (default 63 = off). **Note:** This field can/should have different values in each instance.
32:37	RW	CONFIG_INH1_TICK: Rate for the SM inhibit timer tick1 (default 63 = off). **Note:** This field can/should have different values in each instance.
38:39	RW	CONFIG_NV_RESP_RATE1: Rate-1 for the NV response timer. The timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds, where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
40:45	RW	CONFIG_NV_RESP_RATE2: Rate-2 for the NV response timer (2^n cycles).
46:47	RW	CONFIG_POCKET_ND_RATE1: Rate-1 for the pocket cache dataless entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
48:63	RO	Constant = 0b0000000000000000

Register Name	GPU BAR Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.GPU_BAR
Address	0000000005011004 (SCOM)
Description	Memory BARs. BAR register defining GPU memory addresses serviced by bricks 0 and 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GPU0_BAR_ENABLE: Disable/enable BAR for brick 0.
1:2	RW	CONFIG_GPU0_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 0. **Note:** It is illegal to set this field to 0b11.
3:6	RW	CONFIG_GPU0_BAR_GROUP: Group field of the base address of BAR for brick 0.
7:9	RW	CONFIG_GPU0_BAR_CHIP: Chip field of the base address of BAR for brick 0.
10:21	RW	CONFIG_GPU0_BAR_ADDR: The base address (1 GB address) of the BAR for brick 0. Must be aligned on the size of the BAR mask.
22	RW	CONFIG_GPU0_BAR_RESERVED: Reserved.
23	RW	CONFIG_GPU0_BAR_GRANULE: Hash boundary for brick 0: 0 = Hash on 512 byte boundary (hashbits(0:7) = addr(47:54)). 1 = Hash on 1024 byte boundary (hashbits(0:7) = addr(46:53)).

Bits	SCOM	Field Mnemonic: Description
24:27	RW	CONFIG_GPU0_BAR_SIZE: Size of the base address match for the BAR for brick 0: 0 = 1 GB 1 = 2 GB 2 = 4 GB ... 9 = 512 GB 10 = 1 TB 11 = 2 TB 12 = 4 TB > 12 = Reserved.
28:31	RW	CONFIG_GPU0_BAR_MODE: Hash mode of the BAR for brick 0: 0 = (single) match on all address in address/size. 1 = (dual.0) match if hashbits(7) = 0. 2 = (dual.1) match if hashbits(7) = 1. 3 = (triple.0) match if hashbits%3 = 0. 4 = (triple.1) match if hashbits%3 = 1. 5 = (triple.2) match if hashbits%3 = 2. 6 = (quad.0) match if hashbits(6:7) = 0. 7 = (quad.1) match if hashbits(6:7) = 1. 8 = (quad.2) match if hashbits(6:7) = 2. 9 = (quad.3) match if hashbits(6:7) = 3. 10 = (six.0) match if hashbits%3 = 0 and hashbits(7) = 0. 11 = (six.1) match if hashbits%3 = 0 and hashbits(7) = 1. 12 = (six.2) match if hashbits%3 = 1 and hashbits(7) = 0. 13 = (six.3) match if hashbits%3 = 1 and hashbits(7) = 1. 14 = (six.4) match if hashbits%3 = 2 and hashbits(7) = 0. 15 = (six.5) match if hashbits%3 = 2 and hashbits(7) = 1.
32	RW	CONFIG_GPU1_BAR_ENABLE: Disable/enable BAR for brick 1.
33:34	RW	CONFIG_GPU1_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 1. **Note:** It is illegal to set this field to 0b11.
35:38	RW	CONFIG_GPU1_BAR_GROUP: Group field of the base address of BAR for brick 1.
39:41	RW	CONFIG_GPU1_BAR_CHIP: Chip field of the base address of BAR for brick 1.
42:53	RW	CONFIG_GPU1_BAR_ADDR: The base address (1GB address) of the BAR for brick 1. Must be aligned on the size of the BAR mask.
54	RW	CONFIG_GPU1_BAR_RESERVED: Reserved.
55	RW	CONFIG_GPU1_BAR_GRANULE: Hash boundary for brick 1: 0 = Hash on 512 byte boundary (hashbits(0:7) = addr(47:54)). 1 = Hash on 1024 byte boundary (hashbits(0:7) = addr(46:53)).
56:59	RW	CONFIG_GPU1_BAR_SIZE: Size of the base address match for the BAR for brick 1: 0 = 1 GB 1 = 2 GB 2 = 4 GB ... 9 = 512 GB 10 = 1 TB 11 = 2 TB 12 = 4 TB > 12 = Reserved.

Bits	SCOM	Field Mnemonic: Description
60:63	RW	CONFIG_GPU1_BAR_MODE: Hash mode of the BAR for brick 1: 0 = (single) match on all address in address/size. 1 = (dual.0) match if hashbits(7) = 0. 2 = (dual.1) match if hashbits(7) = 1. 3 = (triple.0) match if hashbits%3 = 0. 4 = (triple.1) match if hashbits%3 = 1. 5 = (triple.2) match if hashbits%3 = 2. 6 = (quad.0) match if hashbits(6:7) = 0. 7 = (quad.1) match if hashbits(6:7) = 1. 8 = (quad.2) match if hashbits(6:7) = 2. 9 = (quad.3) match if hashbits(6:7) = 3. 10 = (six.0) match if hashbits%3 = 0 and hashbits(7) = 0. 11 = (six.1) match if hashbits%3 = 0 and hashbits(7) = 1. 12 = (six.2) match if hashbits%3 = 1 and hashbits(7) = 0. 13 = (six.3) match if hashbits%3 = 1 and hashbits(7) = 1. 14 = (six.4) match if hashbits%3 = 2 and hashbits(7) = 0. 15 = (six.5) match if hashbits%3 = 2 and hashbits(7) = 1.

Register Name	PHY0/PHY1/NPU MMIO BAR Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.PHY_BAR
Address	0000000005011006 (SCOM)
Description	BAR register defining the PHY0/PHY1/NPU MMIO range. Stack 0 PHY_BAR defines a 2MB range mapped to PHY 0 registers. Stack 1 PHY_BAR defines a 2MB range mapped to PHY 1 registers. Stack 2 PHY_BAR defines a 16MB range mapped to all NPU registers. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_PHY_BAR_ENABLE: Disable/enable PHY_BAR.
1:2	RW	PHY_RESERVED1: Reserved.
3:6	RW	CONFIG_PHY_BAR_GROUP: Group field of the 2MB aligned address of this PHY_BAR.
7:9	RW	CONFIG_PHY_BAR_CHIP: Chip field of the 2MB aligned address of this PHY_BAR.
10:30	RW	CONFIG_PHY_BAR_ADDR: The 2MB aligned address of this PHY_BAR's 2MB range. **Note:** In stack two, the low three address bits are reserved (16 MB range).
31	RW	PHY_RESERVED2: Reserved.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Generation ID BAR Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.GENID_BAR
Address	0000000005011007 (SCOM)
Description	ID registers MMIO BAR. BAR register defining Generation ID register for this stack/ramp. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GENID_BAR_ENABLE: Disable/enable this BAR.
1:2	RW	GENID_RESERVED1: Reserved.
3:6	RW	CONFIG_GENID_BAR_GROUP: Group field of the 128KB aligned address of this GENID_BAR.

Bits	SCOM	Field Mnemonic: Description
7:9	RW	CONFIG_GENID_BAR_CHIP: Chip field of the 128KB aligned address of this GENID_BAR.
10:34	RW	CONFIG_GENID_BAR_ADDR: The 128KB aligned address of this BAR's 128KB range.
35	RW	GENID_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	Low Water Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.LOW_WATER
Address	0000000005011008 (SCOM)
Description	Water marks. State machine allocation for low water marks. Each low water mark should be greater than or equal to 1 and the sum of the low water marks must be less than config_max_machines. Low water marks must not be changed after config_enable_machine_alloc is set to 1 and config_enable_machine_alloc must remain at 1 once it is set to 1. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_LOW_WATER_XATS: Low water mark for XTS/MISC processor bus requests. This can only be changed while config_enable_machine_alloc = 0.
6:11	RW	CONFIG_LOW_WATER_PWR0: Low water mark for processor bus RD/DCLAIM/atomic requests (among others). Can only be changed while config_enable_machine_alloc = 0.
12:17	RW	CONFIG_LOW_WATER_PWR1: Low water mark for processor bus CP (castout-push) requests. Can only be changed while config_enable_machine_alloc = 0.
18:23	RW	CONFIG_LOW_WATER_REQ0: Low water mark for NVLink brick 0 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
24:29	RW	CONFIG_LOW_WATER_PRB0: Low water mark for NVLink brick 0 probe requests. Can only be changed while config_enable_machine_alloc = 0.
30:35	RW	CONFIG_LOW_WATER_REQ1: Low water mark for NVLink brick 1 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
36:41	RW	CONFIG_LOW_WATER_PRB1: Low water mark for NVLink brick 1 probe requests. Can only be changed while config_enable_machine_alloc = 0.
42:47	RW	CONFIG_MAX_MACHINES: Maximum number of state machines to be used. Must be ≥ 8 and ≤ 62. Can only be changed while config_enable_machine_alloc = 0.
48:50	RW	LOW_WATER_RESERVED1: Reserved.
51	RW	CONFIG_ENABLE_MACHINE_ALLOC: Enable state machine allocation. This can only be changed from 0 to 1 and must stay at 1 once it is set.
52:63	RO	Constant = 0b000000000000

Register Name	High Water Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.HIGH_WATER
Address	0000000005011009 (SCOM)
Description	Water marks. State machine allocation for high water marks. Each high water mark should be greater than or equal to τηε corresponding config_low_water and config_max_machines. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_HIGH_WATER_XATS: High water mark for XTS/MISC processor bus requests.

Bits	SCOM	Field Mnemonic: Description
6:11	RW	CONFIG_HIGH_WATER_PWR0: High water mark for processor bus RD/DCLAIM/atomic requests (among others).
12:17	RW	CONFIG_HIGH_WATER_PWR1: High water mark for processor bus CP (castout-push) requests.
18:23	RW	CONFIG_HIGH_WATER_REQ0: High water mark for NVLink brick 0 non-probe requests.
24:29	RW	CONFIG_HIGH_WATER_PRB0: High water mark for NVLink brick 0 probe requests.
30:35	RW	CONFIG_HIGH_WATER_REQ1: High water mark for NVLink brick 1 non-probe requests.
36:41	RW	CONFIG_HIGH_WATER_PRB1: High water mark for NVLink brick 1 probe requests.
42:43	RW	HIGH_WATER_RESERVED1: Reserved.
44:63	RO	Constant = 0b00000000000000000000

Register Name	Relaxed Configuration 0 Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.CONFIG_RELAXED0
Address	000000000501100A (SCOM)
Description	Ordering configuration 0 register used to configure relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_SOURCE0_WRENA: Disable/enable relaxed source 0 for write operations.
1	RW	CONFIG_RELAXED_SOURCE0_RDENA: Disable/enable relaxed source 0 for read operations.
2:19	RW	CONFIG_RELAXED_SOURCE0_MATCH: Relaxed source 0 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
20:37	RW	CONFIG_RELAXED_SOURCE0_MASK: Relaxed source 0 tag mask value: 0 = Bit is masked off, and the corresponding match bit must be 0. 1 = Bit must equal the corresponding match bit.
38:39	RW	CONFIG_RELAXED_RESERVED0: Reserved.
40	RW	CONFIG_RELAXED_SOURCE1_WRENA: Disable/enable relaxed source 1 for write operations.
41	RW	CONFIG_RELAXED_SOURCE1_RDENA: Disable/enable relaxed source 1 for read operations.
42:59	RW	CONFIG_RELAXED_SOURCE1_MATCH: Relaxed source 1 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 1 Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.CONFIG_RELAXED1
Address	000000000501100B (SCOM)
Description	Ordering configuration 1 register used to configure relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:17	RW	CONFIG_RELAXED_SOURCE1_MASK: Relaxed source 1 tag mask value.
18:19	RW	CONFIG_RELAXED_RESERVED1: Reserved.

Bits	SCOM	Field Mnemonic: Description
20	RW	CONFIG_RELAXED_SOURCE2_WRENA: Disable/enable relaxed source 2 for write operations.
21	RW	CONFIG_RELAXED_SOURCE2_RDENA: Disable/enable relaxed source 2 for read operations.
22:39	RW	CONFIG_RELAXED_SOURCE2_MATCH: Relaxed source 2 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
40:57	RW	CONFIG_RELAXED_SOURCE2_MASK: Relaxed source 2 tag mask value.
58:59	RW	CONFIG_RELAXED_RESERVED2: Reserved.
60:63	RO	Constant = 0b0000

Register Name	**Relaxed Configuration 2 Register**
Mnemonic	NPU.STCK0.CS.SM0.MISC.CONFIG_RELAXED2
Address	0000000005011000C (SCOM)
Description	Ordering configuration 2 register used to configure relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_CMD_CL_DMA_W: Enable relaxed ordering for cl_dma_w.
1	RW	CONFIG_RELAXED_CMD_CL_DMA_W_HP: Enable relaxed ordering for cl_dma_w_hp.
2	RW	CONFIG_RELAXED_CMD_CL_DMA_INJ: Enable relaxed ordering for cl_dma_inj.
3	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_U: Enable relaxed ordering for armw_cas_imax_u.
4	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_S: Enable relaxed ordering for armw_cas_imax_s.
5	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_U: Enable relaxed ordering for armw_cas_imin_u.
6	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_S: Enable relaxed ordering for armw_cas_imin_s.
7	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_U: Enable relaxed ordering for armwf_cas_imax_u.
8	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_S: Enable relaxed ordering for armwf_cas_imax_s.
9	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_U: Enable relaxed ordering for armwf_cas_imin_u.
10	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_S: Enable relaxed ordering for armwf_cas_imin_s.
11	RW	CONFIG_RELAXED_CMD_PR_DMA_INJ: Enable relaxed ordering for pr_dma_inj.
12	RW	CONFIG_RELAXED_CMD_DMA_PR_W: Enable relaxed ordering for dma_pr_w.
13	RW	CONFIG_RELAXED_CMD_ARMW_ADD: Enable relaxed ordering for armw_add.
14	RW	CONFIG_RELAXED_CMD_ARMW_AND: Enable relaxed ordering for armw_and.
15	RW	CONFIG_RELAXED_CMD_ARMW_OR: Enable relaxed ordering for armw_or.
16	RW	CONFIG_RELAXED_CMD_ARMW_XOR: Enable relaxed ordering for armw_xor.
17	RW	CONFIG_RELAXED_CMD_ARMWF_ADD: Enable relaxed ordering for armwf_add.
18	RW	CONFIG_RELAXED_CMD_ARMWF_AND: Enable relaxed ordering for armwf_and.
19	RW	CONFIG_RELAXED_CMD_ARMWF_OR: Enable relaxed ordering for armwf_or.
20	RW	CONFIG_RELAXED_CMD_ARMWF_XOR: Enable relaxed ordering for armwf_xor.
21	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_E: Enable relaxed ordering for armwf_cas_e.
22	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_U: Enable relaxed ordering for armwf_cas_u.
23	RW	CONFIG_RELAXED_CMD_CL_RD_NC_F0: Enable relaxed ordering for cl_rd_nc(F=0).

Bits	SCOM	Field Mnemonic: Description
24	RW	CONFIG_RELAXED_SOURCE3_WRENA: Disable/enable relaxed source 3 for write operations.
25	RW	CONFIG_RELAXED_SOURCE3_RDENA: Disable/enable relaxed source 3 for read operations.
26:43	RW	CONFIG_RELAXED_SOURCE3_MATCH: Relaxed source 3 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
44:61	RW	CONFIG_RELAXED_SOURCE3_MASK: Relaxed source 0 tag mask value.
62:63	RW	CONFIG_RELAXED_RESERVED3: Reserved.

Register Name	**NTL0/NDL0 MMIO BAR Register**
Mnemonic	NPU.STCK0.CS.SM0.MISC.NDT0_BAR
Address	000000000501100D (SCOM)
Description	BAR register defining the NDL/NTL MMIO range for brick 0 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT0_BAR_ENABLE: Disable/enable BAR for brick 0.
1:2	RW	NDT0_RESERVED1: Reserved.
3:6	RW	CONFIG_NDT0_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT0_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT0_BAR_ADDR: The 128KB aligned address of BAR for brick 0's 128KB range.
35	RW	NDT0_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	**NTL1/NDL1 MMIO BAR Register**
Mnemonic	NPU.STCK0.CS.SM0.MISC.NDT1_BAR
Address	000000000501100E (SCOM)
Description	BAR register defining the NDL/NTL MMIO range for brick 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT1_BAR_ENABLE: Disable/enable BAR for brick 1.
1:2	RW	NDT1_RESERVED1: Reserved.
3:6	RW	CONFIG_NDT1_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT1_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT1_BAR_ADDR: The 128KB aligned address of BAR for brick 1's 128KB range.
35	RW	NDT1_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	Performance Configuration Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.PERF_CONFIG
Address	000000000501100F (SCOM)
Description	Performance event selection register.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	PERF_CONFIG_LATSTART: Latency count start event.
8:15	RW	PERF_CONFIG_LATCANCEL: Latency count abort event.
16:23	RW	PERF_CONFIG_EVENT0: Event 0 selected.
24:31	RW	PERF_CONFIG_EVENT1: Event 0 selected.
32:39	RW	PERF_CONFIG_EVENT2: Event 0 selected.
40:47	RW	PERF_CONFIG_EVENT3: Event 0 selected.
48:55	RW	PERF_CONFIG_LATFINISH: Latency count finish event.
56:62	RW	PERF_CONFIG_RESERVED2: Reserved.
63	RW	PERF_CONFIG_ACT: Enable clock gates for performance monitor latches.

Register Name	Inhibit Configuration Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.INHIBIT_CONFIG
Address	0000000005011010 (SCOM)
Description	This register configures inhibits for CQ_SM.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_INHIBIT_LFREQ0: Base LFSR frequency 0: 0...11 = $1/2^{(n+1)}$ 12 = $1/2^{14}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
4:5	RW	CONFIG_INHIBIT_PFREQ0: Selects pre-frequency 0: 0 = Inhibit timer tick0. 1 = Inverted inhibit timer tick0. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
6	RW	CONFIG_INHIBIT_BLOCKY0: Disable blocky mode / enable blocky mode.
7	RW	CONFIG_INHIBIT_ONESHOT0: 0 = Continuous mode. 1 = One shot mode.
8:15	RW	CONFIG_INHIBIT_DEST0: Selects the destination of the inhibit.
16:19	RW	CONFIG_INHIBIT_LFREQ1: Base LFSR frequency 1: 0...12 = $1/2^{(n+1)}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$

Bits	SCOM	Field Mnemonic: Description
20:21	RW	CONFIG_INHIBIT_PFREQ1: Selects pre-frequency 1: 0 = Inhibit timer tick1. 1 = Inverted inhibit timer tick1. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
22	RW	CONFIG_INHIBIT_BLOCKY1: Disable blocky mode / enable blocky mode.
23	RW	CONFIG_INHIBIT_ONESHOT1: 0 = Continuous mode. 1 = One shot mode.
24:31	RW	CONFIG_INHIBIT_DEST1: Selects the destination of the inhibit.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	CERR Message 0 Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.CERR_MESSAGE0
Address	0000000005011011 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS0: Reserved.

Register Name	CERR Message 1 Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.CERR_MESSAGE1
Address	0000000005011012 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS1: Reserved.

Register Name	CERR Message 2 Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.CERR_MESSAGE2
Address	0000000005011013 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS2: Reserved.

Register Name	CERR Message 3 Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.CERR_MESSAGE3
Address	0000000005011014 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS3: Reserved.

Register Name	CERR Message 4 Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.CERR_MESSAGE4
Address	0000000005011015 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS4: Reserved.

Register Name	CQ_SM Status Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.SM_STATUS
Address	0000000005011016 (SCOM)
Description	Status reporting register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SM_STATUS_CREQ0: This field is set to 1 when brick 0 CREQ allocation is at its idle level.
1	ROX	SM_STATUS_PRB0: This field is set to 1 when brick 0 probe allocation is at its idle level.
2	ROX	SM_STATUS_CREQ1: This field is set to 1 when brick 1 CREQ allocation is at its idle level.
3	ROX	SM_STATUS_PRB1: This field is set to 1 when brick 1 probe allocation is at its idle level.
4	ROX	SM_STATUS_XATS: This field is set to 1 when ATS/MISC allocation is at its idle level.
5	ROX	SM_STATUS_PWR0: This field is set to 1 when processor bus (non-CP*) allocation is at its idle level.
6	ROX	SM_STATUS_PWR1: This field is set to 1 when processor bus (CP*) allocation is at its idle level.
7	ROX	SM_STATUS_CHGRATE: This field is set to 1 when chgrate.hang slowdown is being applied to machine allocation.
8:11	ROX	SM_STATUS_MRBGP: Master retry back-off level for group-pump commands.
12:15	ROX	SM_STATUS_MRBSP: Master retry back-off level for system-pump commands.
16:19	ROX	SM_STATUS_FENCE0: Brick 0 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X = Flushing pocket cache entries prior to exiting fence.
20:23	ROX	SM_STATUS_FENCE1: Brick 1 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X = Flushing pocket cache entries prior to exiting fence.
24	ROX	SM_STATUS_PBLN: This field is set to 1 when the outbound Ln scope processor bus request queue is empty.
25	ROX	SM_STATUS_PBNNG: This field is set to 1 when the outbound Nn/G scope processor bus request queue is empty.
26	ROX	SM_STATUS_PBRNVG: This field is set to 1 when the outbound Rn/VG scope processor bus request queue is empty.

Bits	SCOM	Field Mnemonic: Description
27	ROX	SM_STATUS_N0REQ: This field is set to 1 when the outbound brick 0 CREQ request queue is empty.
28	ROX	SM_STATUS_N0DGD: This field is set to 1 when the outbound brick 0 downgrade request queue is empty.
29	ROX	SM_STATUS_N1REQ: This field is set to 1 when the outbound brick 1 CREQ request queue is empty.
30	ROX	SM_STATUS_N1DGD: This field is set to 1 when the outbound brick 1 downgrade request queue is empty.
31	ROX	SM_STATUS_MMIO: This field is set to 1 when the outbound MMIO/GenId request queue is empty.
32	ROX	SM_STATUS_ATSXLATE: This field is set to 1 when the outbound ATS TCE translation request queue is empty.
33	ROX	SM_STATUS_PBRSP: This field is set to 1 when the outbound processor bus data response/merge operation queue is empty.
34	ROX	SM_STATUS_N0RSP: This field is set to 1 when the outbound brick 0 response queue is empty.
35	ROX	SM_STATUS_N1RSP: This field is set to 1 when the outbound brick 1 response queue is empty.
36	ROX	SM_STATUS_XARSP: This field is set to 1 when the outbound ATS/MISC response queue is empty.
37	ROX	SM_STATUS_SACOLL: This field is set to 1 when the same address collision check queue is empty.
38	ROX	SM_STATUS_FREE: This field is set to 1 when the free state machine queue is empty.
39	ROX	SM_STATUS_RESERVED1: Reserved.
40:63	RO	Constant = 0b00000000000000000000000000

Register Name	CERR First 0 Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.CERR_FIRST0
Address	0000000005011017 (SCOM)
Description	First c_err_rpt register. read-write-1 clears the register.

32	RWX_WCLEAR	IDIAL_SM_FIRST_PBF_0: PBF0 s3. M_WT_CRESP: Error CRESP received for a command.
33	RWX_WCLEAR	IDIAL_SM_FIRST_PBF_1: PBF1 s3. PC_WT_CRESP: Error CRESP received for a command.
34	RWX_WCLEAR	IDIAL_SM_FIRST_PBF_2: PBF2 s3. PC_BK_WT_CRESP: Error CRESP received for a bkill.
35	RWX_WCLEAR	IDIAL_SM_FIRST_PBF_3: PBF3 s3. PC_BK_WT_CRESP: ack_dead CRESP received for a bkill.
36	RWX_WCLEAR	IDIAL_SM_FIRST_PBF_4: PBF4 s3. M_RCV_DATA_PTL: Not all segments/OWs were received.
37	RWX_WCLEAR	IDIAL_SM_FIRST_PBF_5: PBF5 s3. PC_RCV_DATA: Received data, but none is valid.
38	RWX_WCLEAR	IDIAL_SM_FIRST_PBF_6: PBF6 s3. SM_EV_DATIN: Received data with data_stat = poison.
39	RWX_WCLEAR	IDIAL_SM_FIRST_PBF_7: PBF7 (Reserved).
40	RWX_WCLEAR	IDIAL_SM_FIRST_PBF_8: PBF8 (Reserved).
41	RWX_WCLEAR	IDIAL_SM_FIRST_PBF_9: PBF9 (Reserved).
42	RWX_WCLEAR	IDIAL_SM_FIRST_PBF_10: PBF10 (Reserved).
43	RWX_WCLEAR	IDIAL_SM_FIRST_PBF_11: PBF11 (Reserved).

Bits	SCOM	Field Mnemonic: Description
44	RWX_WCLEAR	IDIAL_SM_FIRST_PBC_0: PBC0 s3. PC_WT_CRESP: ATAG contains out-of-range group (HPC or TAG) for NPU +/- brazos mode.
45	RWX_WCLEAR	IDIAL_SM_FIRST_PBC_1: PBC1 s3. PC_WT_CRESP: ATAG contains out-of-range group (LPC) for NPU +/- brazos mode.
46	RWX_WCLEAR	IDIAL_SM_FIRST_PBC_2: PBC2 (Reserved).
47	RWX_WCLEAR	IDIAL_SM_FIRST_PBC_3: PBC3 (Reserved).
48	RWX_WCLEAR	IDIAL_SM_FIRST_PBC_4: PBC4. RCMD TTAG received with illegal group ID.
49	RWX_WCLEAR	IDIAL_SM_FIRST_PBC_5: PBC5. RCMD TTAG received with illegal chip ID.
50	RWX_WCLEAR	IDIAL_SM_FIRST_PBC_6: PBC6. CRESP TTAG received with illegal group ID.
51	RWX_WCLEAR	IDIAL_SM_FIRST_PBC_7: PBC7. CRESP TTAG received with illegal chip ID.
52	RWX_WCLEAR	IDIAL_SM_FIRST_PBC_8: PBC8 (Reserved).
53	RWX_WCLEAR	IDIAL_SM_FIRST_PBC_9: PBC9 (Reserved).
54	RWX_WCLEAR	IDIAL_SM_FIRST_PBC_10: PBC10 (Reserved).
55	RWX_WCLEAR	IDIAL_SM_FIRST_PBC_11: PBC11(Reserved).
56:63	RO	Constant = 0b00000000

Register Name	**CERR First 2 Register**
Mnemonic	NPU.STCK0.CS.SM0.MISC.CERR_FIRST2
Address	0000000005011019 (SCOM)
Description	First 2 c_err_rpt register read-write-1 clears the register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_0: NLG0 s3: RCMD event received, but state machine is not idle.
1	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_1: NLG1 s3: Pocket hit event, but not in M_PCKT_WAIT_HIT state.
2	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_2: NLG2 s3: M_WT_CRESP: ma_scresp table look-up missed.
3	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_3: NLG3 s3: M_WT_CRESP: Start Epsilon, but Epsilon already in progress.
4	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_4: NLG4 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have NV modified data.
5	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_5: NLG5 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have PB modified data.
6	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_6: NLG6 s3: M_WT_CRESP: Bad scenario code from ma_scresp table.
7	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_7: NLG7 s3: Snoop CRESP received, but not in M_WT_CRESP state.
8	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_8: NLG8 s3: MCResp pocket hit event, but not in PC_* state.
9	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_9: NLG9 s3: PC_WT_CRESP: ma_mcresp table look-up missed.

Bits	SCOM	Field Mnemonic: Description
10	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_10: NLG10 s3: PC_WT_CRESP: Write coll state did not match early protection state.
11	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_11: NLG11 s3: PC_WT_CRESP: Start Epsilon, but Epsilon already in progress.
12	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_12: NLG12 s3: PC_WT_CRESP: Bad scenario code from ma_mcresp table.
13	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_13: NLG13 s3: PC_BK_WT_CRESP: Bad next step for bkill (ack-done).
14	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_14: NLG14 s3: PC_BK_WT_CRESP: Bad next step for bkill (retry).
15	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_15: NLG15 s3: PC_BK_WT_CRESP: Bad CRESP for a bkill.
16	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_16: NLG16 s3: Master CRESP received. but not in PC_WT_CRESP/PC_BK_WT_CRESP states.
17	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_17: NLG17 s3: M_IDLE: Invalid DATALEN[3:0] for data command.
18	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_18: NLG18 s3: M_IDLE: Invalid command type received.
19	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_19: NLG19 s3: AT translate response event, but not in wait translate state.
20	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_20: NLG20 s3: AT translate response event had bad translate status, but command not recognized.
21	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_21: NLG21 s3: SA done event, but not in wait SA state.
22	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_22: NLG22 s3: PC_WAIT_DATADONE: Bad next step for PB data transmit.
23	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_23: NLG23 s3: TD_WAIT_DATADONE: Unknown NVLink master command.
24	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_24: NLG24 s3: BuffDone event, but not in PB/PC/MG/NR/XATS/TD_WAIT_DATADONE state.
25	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_25: NLG25 s3: NC_WT_RESP: Unknown NV master command for NVLink response.
26	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_26: NLG26 s3: RSPLN event, but not in RG_WT_RESP or NC_WT_RESP state.
27	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_27: NLG27 s3: Epsilon in progress, but Epsilon counter clock is not the Epsilon clock.
28	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_28: NLG28 s3: Epsilon counter clock is 'epsilon', but epsilon_ip is not set.
29	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_29: NLG29 s3: PC_WT_BK_RBACK: Bad next step for bkill.
30	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_30: NLG30 s3: M/RR_BACK timer expired, but not in PC_WT(_BK)_RBACK state.
31	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_31: NLG31 s3: Bad epclock value.
32	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_32: NLG32 s3: coll_state is POCKET_RCOLL_ND, but master state is not PCKT_WAIT_HIT.
33	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_33: NLG33 s3: Unknown sm_master_state in ESCAN_LCAO event.
34	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_34: NLG34 s3: Unknown event type received.
35	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_35: NLG35 s4: M_EVAL_DIR: ma_dsa table look-up missed.
36	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_36: NLG36 s4: M_EVAL_DIR: Unknown merge opcode from DSA table.
37	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_37: NLG37 s4: Unknown state.
38	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_38: NLG38 s3: coll_state is POCKET_RCOLL_OND, but master state is not PCKT_WAIT_HIT.
39	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_39: NLG39 s3: Unknown sm_master_state in ESCAN_FENCE event.
40	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_40: NLG40 s3: FENCE_WT_RESP_FILL: Unknown NV master command for Fence-Fill-SUE response.

Bits	SCOM	Field Mnemonic: Description
41	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_41: NLG41 s3: M_WT_CRESP: Impossible command/CRESP.
42	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_42: NLG42 s3: PC_WT_CRESP: Impossible command/CRESP.
43	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_43: NLG43 s3: M_EVAL_DIR: Impossible command/CRESP.
44	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_44: NLG44 s4: Unexpected error state (bad sub-sequence return).
45	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_45: NLG45 s3: sfstat-retry, but not in retry-abbks collision state.
46	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_46: NLG46 s3: *cond*-retry, but not in retry-abbks collision state.
47	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_47: NLG47 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.
48	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_48: NLG48 s3: NVLink response timeout, but not in waiting for NV response state.
49	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_49: NLG49 s4: M_EVAL_DIR: Unsupported NVLink command for POWER9-to-POWER9 mode.
50	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_50: NLG50 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.
51	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_51: NLG51 (Reserved).
52	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_52: NLG52 (Reserved).

Bits	SCOM	Field Mnemonic: Description
56:63	RO	Constant = 0b00000000

Register Name	CERR Mask 2 Register
Mnemonic	NPU.STCK0.CS.SM0.MISC.CERR_MASK2
Address	000000000501101C (SCOM)
Description	c_err_rpt mask 2 register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	IDIAL_SM_MASK_NLG_0: NLG0 s3: RCMD event received, but state machine is not idle.
1	RW	IDIAL_SM_MASK_NLG_1: NLG1 s3: Pocket hit event, but not in M_PCKT_WAIT_HIT state.
2	RW	IDIAL_SM_MASK_NLG_2: NLG2 s3: M_WT_CRESP: ma_scresp table look-up missed.
3	RW	IDIAL_SM_MASK_NLG_3: NLG3 s3: M_WT_CRESP: Start Epsilon, but Epsilon already in progress.
4	RW	IDIAL_SM_MASK_NLG_4: NLG4 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have NV modified data.
5	RW	IDIAL_SM_MASK_NLG_5: NLG5 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have PB modified data.
6	RW	IDIAL_SM_MASK_NLG_6: NLG6 s3: M_WT_CRESP: Bad scenario code from ma_scresp table.
7	RW	IDIAL_SM_MASK_NLG_7: NLG7 s3: Snoop CRESP received, but not in M_WT_CRESP state.
8	RW	IDIAL_SM_MASK_NLG_8: NLG8 s3: MCResp pocket hit event, but not in PC_* state.
9	RW	IDIAL_SM_MASK_NLG_9: NLG9 s3: PC_WT_CRESP: ma_mcresp table look-up missed.
10	RW	IDIAL_SM_MASK_NLG_10: NLG10 s3: PC_WT_CRESP: Write coll state did not match early protection state.
11	RW	IDIAL_SM_MASK_NLG_11: NLG11 s3: PC_WT_CRESP: Start Epsilon, but Epsilon already in progress.
12	RW	IDIAL_SM_MASK_NLG_12: NLG12 s3: PC_WT_CRESP: Bad scenario code from ma_mcresp table.
13	RW	IDIAL_SM_MASK_NLG_13: NLG13 s3: PC_BK_WT_CRESP: Bad next step for bkill (ack-done).
14	RW	IDIAL_SM_MASK_NLG_14: NLG14 s3: PC_BK_WT_CRESP: Bad next step for bkill (retry).
15	RW	IDIAL_SM_MASK_NLG_15: NLG15 s3: PC_BK_WT_CRESP: Bad CRESP for a bkill.
16	RW	IDIAL_SM_MASK_NLG_16: NLG16 s3: Master CRESP received, but not in PC_WT_CRESP/PC_BK_WT_CRESP states.
17	RW	IDIAL_SM_MASK_NLG_17: NLG17 s3: M_IDLE: Invalid DATALEN[3:0] for data command.
18	RW	IDIAL_SM_MASK_NLG_18: NLG18 s3: M_IDLE: Invalid command type received.
19	RW	IDIAL_SM_MASK_NLG_19: NLG19 s3: AT translate response event, but not in wait translate state.
20	RW	IDIAL_SM_MASK_NLG_20: NLG20 s3: AT translate response event had bad translate status, but command not recognized.
21	RW	IDIAL_SM_MASK_NLG_21: NLG21 s3: SA done event, but not in wait SA state.
22	RW	IDIAL_SM_MASK_NLG_22: NLG22 s3: PC_WAIT_DATADONE: Bad next step for PB data transmit.
23	RW	IDIAL_SM_MASK_NLG_23: NLG23 s3: TD_WAIT_DATADONE: Unknown NVLink master command.
24	RW	IDIAL_SM_MASK_NLG_24: NLG24 s3: BuffDone event, but not in PB/PC/MG/NR/XATS/TD_WAIT_DATADONE state.
25	RW	IDIAL_SM_MASK_NLG_25: NLG25 s3: NC_WT_RESP: Unknown NV master command for NVLink response.

Bits	SCOM	Field Mnemonic: Description
26	RW	IDIAL_SM_MASK_NLG_26: NLG26 s3: RSPLN event, but not in RG_WT_RESP or NC_WT_RESP state.
27	RW	IDIAL_SM_MASK_NLG_27: NLG27 s3: Epsilon in progress, but Epsilon counter clock is not the Epsilon clock.
28	RW	IDIAL_SM_MASK_NLG_28: NLG28 s3: Epsilon counter clock is 'epsilon', but epsilon_ip is not set.
29	RW	IDIAL_SM_MASK_NLG_29: NLG29 s3: PC_WT_BK_RBACK: Bad next step for bkill.
30	RW	IDIAL_SM_MASK_NLG_30: NLG30 s3: M/RR_BACK timer expired, but not in PC_WT(_BK)_RBACK state.
31	RW	IDIAL_SM_MASK_NLG_31: NLG31 s3: Bad epclock value.
32	RW	IDIAL_SM_MASK_NLG_32: NLG32 s3: coll_state is POCKET_RCOLL_ND, but master state is not PCKT_WAIT_HIT.
33	RW	IDIAL_SM_MASK_NLG_33: NLG33 s3: Unknown sm_master_state in ESCAN_LCAO event.
34	RW	IDIAL_SM_MASK_NLG_34: NLG34 s3: Unknown event type received.
35	RW	IDIAL_SM_MASK_NLG_35: NLG35 s4: M_EVAL_DIR: ma_dsa table look-up missed.
36	RW	IDIAL_SM_MASK_NLG_36: NLG36 s4: M_EVAL_DIR: Unknown merge opcode from DSA table.
37	RW	IDIAL_SM_MASK_NLG_37: NLG37 s4: Unknown state.
38	RW	IDIAL_SM_MASK_NLG_38: NLG38 s3: coll_state is POCKET_RCOLL_OND, but master state is not PCKT_WAIT_HIT.
39	RW	IDIAL_SM_MASK_NLG_39: NLG39 s3: Unknown sm_master_state in ESCAN_FENCE event.
40	RW	IDIAL_SM_MASK_NLG_40: NLG40 s3: FENCE_WT_RESP_FILL: Unknown NV master command for Fence-Fill-SUE response.
41	RW	IDIAL_SM_MASK_NLG_41: NLG41 s3: M_WT_CRESP: Impossible command/CRESP.
42	RW	IDIAL_SM_MASK_NLG_42: NLG42 s3: PC_WT_CRESP: Impossible command/CRESP.
43	RW	IDIAL_SM_MASK_NLG_43: NLG43 s3: M_EVAL_DIR: Impossible command/CRESP.
44	RW	IDIAL_SM_MASK_NLG_44: NLG44 s4: Unexpected error state (bad sub-sequence return).
45	RW	IDIAL_SM_MASK_NLG_45: NLG45 s3: sfstat-retry, but not in retry-abbks collision state.
46	RW	IDIAL_SM_MASK_NLG_46: NLG46 s3: *cond*-retry, but not in retry-abbks collision state.
47	RW	IDIAL_SM_MASK_NLG_47: NLG47 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.
48	RW	IDIAL_SM_MASK_NLG_48: NLG48 s3: NVLink response timeout, but not in waiting for NV response state.
49	RW	IDIAL_SM_MASK_NLG_49: NLG49 s4: M_EVAL_DIR: Unsupported NVLink command for POWER9-to-POWER9 mode.
50	RW	IDIAL_SM_MASK_NLG_50: NLG50 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.
51	RW	IDIAL_SM_MASK_NLG_51: NLG51 (Reserved).

19	RW	CONFIG_MA_SCRESP_OPT_A: TBD, future option bit.
20	RW	CONFIG_MA_SCRESP_OPT_B: TBD, future option bit.
21	RW	CONFIG_MA_SCRESP_OPT_C: TBD, future option bit.
22	RW	CONFIG_RESERVED4: Reserved.
23	RW	CONFIG_MACH_CORRENAB: 0 = Disable state machine array ECC correction. 1 = Enable state machine array ECC correction.
24	RW	CONFIG_MACH_INJECT_ENABLE1: 0 = Disable state machine array ECC error inject bit 1. 1 = Enable state machine array ECC error inject bit 1.
25	RW	CONFIG_MACH_INJECT_ENABLE2: 0 = Disable state machine array ECC error inject bit 2. 1 = Enable state machine array ECC error inject bit 2.
26	RW	CONFIG_RXO_CORRENAB: 0 = Disable ReqRspOut array ECC correction. 1 = Enable ReqRspOut array ECC correction.
27	RW	CONFIG_RXO_INJECT_ENABLE1: 0 = Disable ReqRspOut array ECC error inject bit 1. 1 = Enable ReqRspOut array ECC error inject bit 1.
28	RW	CONFIG_RXO_INJECT_ENABLE2: 0 = Disable ReqRspOut array ECC error inject bit 1. 1 = Enable ReqRspOut array ECC error inject bit 1.

Bits	SCOM	Field Mnemonic: Description
29	RW	CONFIG_RSI_CORRENAB: 0 = Disable PB-Rsp-In array ECC correction. 1 = Enable PB-Rsp-In array ECC correction.
30	RW	CONFIG_RSI_INJECT_ENABLE1: 0 = Disable PB-Rsp-Ine array ECC error inject bit 1. 1 = Enable PB-Rsp-Ine array ECC error inject bit 1.
31	RW	CONFIG_RSI_INJECT_ENABLE2: 0 = Disable PB-Rsp-Ine array ECC error inject bit 1. 1 = Enable PB-Rsp-Ine array ECC error inject bit 1.
32:33	RW	CONFIG_MA_RSNOOP_OPT_DCLAIM: 0 = Partial respond to DCLAIM to GPU memory with lpc_ack. 1 = Partial respond to DCLAIM to GPU memory with lpc_ack+rty_lost_claim. 2 = Partial respond to DCLAIM to GPU memory with lpc_ack+rty_lpc+start pocket cache. 3 = Reserved.
34	RW	CONFIG_MA_DSA_OPT_DMA_UPG: 0 = Non-relaxed dma_w use Read.RWC to acquire pocket cache state/data. 1 = Non-relaxed dma_w use Upgrade.DN to acquire pocket cache state/data.
35	RW	CONFIG_EVAPORATE_BY_LCO: 0 = Just free the state machine without LCO. 1 = Evaporate pocket cache entries by LCO.
36	RW	CONFIG_MRBGP_TRACK_ALL: 0 = Master retry back-off group-pump track only this stack's retry responses. 1 = Master retry back-off group-pump track all this chip's retry responses.
37	RW	CONFIG_MRBSP_TRACK_ALL: 0 = Master retry back-off system-pump track only this stack's retry responses. 1 = Master retry back-off system-pump track all this chip's retry responses.
38	RW	CONFIG_ENABLE_PBUS: 0 = Disable NPU processor bus RCMD, PRESP, and CRESP interfaces. 1 = Enable NPU processor bus RCMD, PRESP, and CRESP interfaces.
39	RW	CONFIG_BRAZOS_MODE: 0 = Non-brazos 4-group; 2-chip mode. 1 = Brazos 2-group; 4-chip mode.
40	RW	CONFIG_ENABLE_SNARF_CPM: 0 = Disable Probe.I.MO snarfing a cp_m. 1 = Enable Probe.I.MO snarfing a cp_m.
41	RW	CONFIG_PREALLOC2_REQ0: 0/1 = Preallocate two state machines to brick 0 CREQ channel.
42	RW	CONFIG_PREALLOC2_PRB0: 0/1 = Preallocate two state machines to brick 0 PRB channel.
43	RW	CONFIG_PREALLOC2_REQ1: 0/1 = Preallocate two state machines to brick 1 CREQ channel.
44	RW	CONFIG_PREALLOC2_PRB1: 0/1 = Preallocate two state machines to brick 1 PRB channel.
45	RW	CONFIG_PREALLOC2_XATS: 0/1 = Preallocate two state machines to XATS interface.
46	RW	CONFIG_DISABLE_INJECT: 0 = Enable sending cl,pr_dma_inj. 1 = Disable sending cl,pr_dma_inj. **Note:** To disable sending _inj commands, the following bits must also be set to 0: config_ma_mcresp_opt_rty_inj config_ma_dsa_opt_rp_mode
47	RW	CONFIG_DCACHE_MODE: 0 = Drive data bus DCACHE field in basic mode. 1 = Drive data bus DCACHE field in CAPP mode.

Bits	SCOM	Field Mnemonic: Description
48	RW	CONFIG_DCACHE_REPORTS_PHYSICAL: 0 = In basic mode report local masters as near. 1 = In basic mode report local masters as local.
49	RW	CONFIG_RSI_DISABLE_DATIN_FASTPATH: 0 = Enable RSI PB data in fastpath. 1 = Disable fastpath.
50	RW	CONFIG_PCKT_BLK_PRB: 0 = Valid pocket cache entries, do not block probes. 1 = Probes are blocked.
51	RW	CONFIG_P9P9_MODE: 0 = Normal operation. 1 = Run in special lab bring-up GPUless POWER9-to-POWER9 mode.
52	RW	CONFIG_FORBID_MMIO_READ_GT_32: 0 = Allow GPU to PB MMIOs greater than 32 bytes. 1 = Flag error and brick fence on MMIOs greater than 32 bytes.
53	RW	CONFIG_FORBID_MMIO_ATOMIC: 0 = Allow GPU to PB atomics to MMIO space. 1 = Flag error and brick fence on atomics to MMIO space.
54	RW	CONFIG_OPT_SNOOP_CP: 0 = Snoop POWER9 memory cp_* type commands. 1 = Do not snoop cp_* type commands.
55:63	RW	CONFIG0_RESERVED3: Reserved.

Register Name	**CQ_SM Miscellaneous Configuration 1 Register**
Mnemonic	NPU.STCK0.CS.SM1.MISC.CONFIG1
Address	0000000005011021 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_RANDOM_BACKOFF_DUR_MASK: Mask for the base random duration of a random retry back-off: 0000 = 0 - 15 base random duration. 0001 = 0 - 31 base random duration. 0011 = 0 - 63 base random duration. 0111 = 0 - 127 base random duration. 1111 = 0 - 255 base random duration.
4:7	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_REQ: Mask for the slowdown of NTL CREQ credits during chgrate.hang. 'n' = $1/(2^{(n+1)})$ cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
8:11	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_PRB: Mask for the slowdown of NTL probe credits during chgrate.hang. 'n' = $1/(2^{(n+1)})$ cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
12:15	RW	CONFIG_ARB_NONCRR_SAFETY: Safety valve for non-CRESP/non-REGIN events going down the arbiter pipe. After n+1 REGIN events go through the arbiter while a non-CRR event is waiting, REGIIN events are blocked to give non-CRR events a chance.
16:27	RW	CONFIG_EPSILON_WLN_COUNT: Epsilon count for Ln scope CP write.

Bits	SCOM	Field Mnemonic: Description
28:31	RW	CONFIG_SCALE_RPT_HANG_POLL: Scaling factor for rpt_hang.poll: 0 = 1:1 processor bus rpt_hang.polls received. 1 = 1:2 processor bus rpt_hang.polls received. ... 15 = 1:16 processor bus rpt_hang.polls received.
32:35	RW	CONFIG_SCALE_RPT_HANG_DATA: Scaling factor for rpt_hang.data: 0 = 1:1 processor bus rpt_hang.datas received. 1 = 1:2 processor bus rpt_hang.datas received. ... 15 = 1:16 processor bus rpt_hang.datas received.
36:63	RW	CONFIG1_RESERVED: Reserved.

Register Name	**Power Bus Epsilon Configuration Register**
Mnemonic	NPU.STCK0.CS.SM1.MISC.EPSILON_CONFIG
Address	0000000005011022 (SCOM)
Description	Processor bus Epsilon configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_EPSILON_RATE: 0 = Decrement Epsilon count at 1:1 nest_gckn. ... 15 = Epsilon count at 1/16 nest_gckn.
4:15	RW	CONFIG_EPSILON_W0_COUNT: Epsilon count for Nn/G scope CP write.
16:27	RW	CONFIG_EPSILON_W1_COUNT: Epsilon count for Rn/Vg scope CP write.
28:39	RW	CONFIG_EPSILON_R0_COUNT: Epsilon count for Ln scope reads.
40:51	RW	CONFIG_EPSILON_R1_COUNT: Epsilon count for Nn/G scope reads.
52:63	RW	CONFIG_EPSILON_R2_COUNT: Epsilon count for Rn/Vg scope reads.

Register Name	**Timer Configuration Register**
Mnemonic	NPU.STCK0.CS.SM1.MISC.XTIMER_CONFIG
Address	0000000005011023 (SCOM)
Description	Timer configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	CONFIG_POCKET_RATE1: Rate-1 for the pocket cache with data entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e -10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
2:7	RW	CONFIG_POCKET_RATE2: Rate-2 for the long timer for pocket cache entries (2^n cycles).
8:13	RW	CONFIG_POCKET_RATE3: Rate-3 for the short timer for pocket cache entries (2^n cycles).
14:19	RW	CONFIG_FWD_PROG_RATE2: Rate-2 for the forward progress timer (2^n cycles).

Bits	SCOM	Field Mnemonic: Description
20:25	RW	CONFIG_CTL_TICK: Rate for CTL timer tick (default 63 = off). **Note**: This field can/should have different values in each instance.
26:31	RW	CONFIG_INH0_TICK: Rate for SM inhibit timer tick0 (default 63 = off). **Note:** This field can/should have different values in each instance.
32:37	RW	CONFIG_INH1_TICK: Rate for SM inhibit timer tick1 (default 63 = off). **Note:** This field can/should have different values in each instance.
38:39	RW	CONFIG_NV_RESP_RATE1: Rate-1 for NV response timer. The timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds, where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
40:45	RW	CONFIG_NV_RESP_RATE2: Rate-2 for the NV response timer (2^n cycles).
46:47	RW	CONFIG_POCKET_ND_RATE1: Rate-1 for the pocket cache dataless entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The Short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
48:63	RO	Constant = 0b0000000000000000

Register Name	GPU BAR Register
Mnemonic	NPU.STCK0.CS.SM1.MISC.GPU_BAR
Address	0000000005011024 (SCOM)
Description	Memory BARs. BAR register defining GPU memory addresses serviced by bricks 0 and 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GPU0_BAR_ENABLE: 0 = Disable BAR for brick 0. 1 = Enable BAR for brick 0.
1:2	RW	CONFIG_GPU0_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 0. **Note:** It is illegal to set this field to 0b11.
3:6	RW	CONFIG_GPU0_BAR_GROUP: Group field of the base address of BAR for brick 0.
7:9	RW	CONFIG_GPU0_BAR_CHIP: Chip field of the base address of BAR for brick 0.
10:21	RW	CONFIG_GPU0_BAR_ADDR: Base address (1G address) of BAR for brick 0. Must be aligned on the size of the BAR mask.
22	RW	CONFIG_GPU0_BAR_RESERVED: Reserved.
23	RW	CONFIG_GPU0_BAR_GRANULE: Hash boundary for brick 0: 0 = Hash on 512B boundary (hashbits(0:7) = addr(47:54)). 1 = Hash on 1024B boundary (hashbits(0:7) = addr(46:53)).

Bits	SCOM	Field Mnemonic: Description
24:27	RW	CONFIG_GPU0_BAR_SIZE: Size of the base address match for the BAR for brick 0: 0 = 1G 1 = 2G 2 = 4G ... 9 = 512G 10 = 1T 11 = 2T 12 = 4T >12 = Reserved.
28:31	RW	CONFIG_GPU0_BAR_MODE: Hash mode of the BAR for brick 0: 0 = (single) match on all address in address/size. 1 = (dual.0) match if hashbits(7) = 0. 2 = (dual.1) match if hashbits(7) = 1. 3 = (triple.0) match if hashbits%3 = 0. 4 = (triple.1) match if hashbits%3 = 1. 5 = (triple.2) match if hashbits%3 = 2. 6 = (quad.0) match if hashbits(6:7) = 0. 7 = (quad.1) match if hashbits(6:7) = 1. 8 = (quad.2) match if hashbits(6:7) = 2. 9 = (quad.3) match if hashbits(6:7) = 3. 10 = (six.0) match if hashbits%3 = 0 and hashbits(7) = 0. 11 = (six.1) match if hashbits%3 = 0 and hashbits(7) = 1. 12 = (six.2) match if hashbits%3 = 1 and hashbits(7) = 0. 13 = (six.3) match if hashbits%3 = 1 and hashbits(7) = 1. 14 = (six.4) match if hashbits%3 = 2 and hashbits(7) = 0. 15 = (six.5) match if hashbits%3 = 2 and hashbits(7) = 1.
32	RW	CONFIG_GPU1_BAR_ENABLE: 0 = Disable BAR for brick 1. 1 = Enable BAR for brick 1.
33:34	RW	CONFIG_GPU1_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 1. **Note:** It is illegal to set this field to 0b11.
35:38	RW	CONFIG_GPU1_BAR_GROUP: Group field of the base address of BAR for brick 1.
39:41	RW	CONFIG_GPU1_BAR_CHIP: Chip field of the base address of BAR for brick 1.
42:53	RW	CONFIG_GPU1_BAR_ADDR: Base address (1G address) of BAR for brick 1. Must be aligned on the size of the BAR mask.
54	RW	CONFIG_GPU1_BAR_RESERVED: Reserved.
55	RW	CONFIG_GPU1_BAR_GRANULE: Hash boundary for brick 1: 0 = Hash on 512B boundary (hashbits(0:7) = addr(47:54)). 1 = Hash on 1024B boundary (hashbits(0:7) = addr(46:53)).
56:59	RW	CONFIG_GPU1_BAR_SIZE: Size of base address match for the BAR for brick 1: 0 = 1G 1 = 2G 2 = 4G ... 9 = 512G 10 = 1T 11 = 2T 12 = 4T >12 = Reserved.

Bits	SCOM	Field Mnemonic: Description
60:63	RW	CONFIG_GPU1_BAR_MODE: Hash mode of the BAR for brick 1: 0 = (single) match on all address in address/size. 1 = (dual.0) match if hashbits(7) = 0. 2 = (dual.1) match if hashbits(7) = 1. 3 = (triple.0) match if hashbits%3 =0 . 4 = (triple.1) match if hashbits%3 = 1. 5 = (triple.2) match if hashbits%3 = 2. 6 = (quad.0) match if hashbits(6:7) = 0. 7 = (quad.1) match if hashbits(6:7) = 1. 8 = (quad.2) match if hashbits(6:7) = 2. 9 = (quad.3) match if hashbits(6:7) = 3. 10 = (six.0) match if hashbits%3 = 0 and hashbits(7) = 0. 11 = (six.1) match if hashbits%3 = 0 and hashbits(7) = 1. 12 = (six.2) match if hashbits%3 = 1 and hashbits(7) = 0. 13 = (six.3) match if hashbits%3 = 1 and hashbits(7) = 1. 14 = (six.4) match if hashbits%3 = 2 and hashbits(7) = 0. 15 = (six.5) match if hashbits%3 = 2 and hashbits(7) = 1.

Register Name	PHY0/PHY1/NPU MMIO BAR Register
Mnemonic	NPU.STCK0.CS.SM1.MISC.PHY_BAR
Address	0000000005011026 (SCOM)
Description	BAR register defining PHY0/PHY1/NPU MMIO range. Stack 0 PHY_BAR defines a 2M range mapped to PHY 0 registers. Stack 1 PHY_BAR defines a 2M range mapped to PHY 1 registers. Stack 2 PHY_BAR defines a 16M range mapped to all NPU registers. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_PHY_BAR_ENABLE: 0 = Disable PHY_BAR. 1 = Enable PHY_BAR.
1:2	RW	PHY_RESERVED1: Reserved.
3:6	RW	CONFIG_PHY_BAR_GROUP: Group field of the 2M aligned address of this PHY_BAR.
7:9	RW	CONFIG_PHY_BAR_CHIP: Chip field of the 2M aligned address of this PHY_BAR.
10:30	RW	CONFIG_PHY_BAR_ADDR: The 2M aligned address of this PHY_BAR's 2M range. **Note:** In stack two, the low three address bits are reserved (16M range).
31	RW	PHY_RESERVED2: Reserved.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Generation ID BAR Register
Mnemonic	NPU.STCK0.CS.SM1.MISC.GENID_BAR
Address	0000000005011027 (SCOM)
Description	ID registers MMIO BAR. BAR register defining Generation ID register for this stack/ramp. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GENID_BAR_ENABLE: 0 = Disable this BAR. 1 = Enable this BAR.

Bits	SCOM	Field Mnemonic: Description
1:2	RW	GENID_RESERVED1: Reserved.
3:6	RW	CONFIG_GENID_BAR_GROUP: Group field of the 128K aligned address of this GENID_BAR.
7:9	RW	CONFIG_GENID_BAR_CHIP: Chip field of the 128K aligned address of this GENID_BAR.
10:34	RW	CONFIG_GENID_BAR_ADDR: The 128K aligned address of this BAR's 128K range.
35	RW	GENID_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	Low Water Register
Mnemonic	NPU.STCK0.CS.SM1.MISC.LOW_WATER
Address	0000000005011028 (SCOM)
Description	Water marks. State machine allocation for low water marks. Each low water mark should be greater than or equal to 1 and the sum of the low water marks must be less than config_max_machines. Low water marks must not be changed after config_enable_machine_alloc is set to 1 and config_enable_machine_alloc must remain at 1 once it is set to 1. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_LOW_WATER_XATS: Low water mark for XTS/MISC processor bus requests. Can only be changed while config_enable_machine_alloc = 0.
6:11	RW	CONFIG_LOW_WATER_PWR0: Low water mark for processor bus rd/dclaim/atomic/etc. requests. Can only be changed while config_enable_machine_alloc = 0.
12:17	RW	CONFIG_LOW_WATER_PWR1: Low water mark for processor bus CP (castout-push) requests. Can only be changed while config_enable_machine_alloc = 0.
18:23	RW	CONFIG_LOW_WATER_REQ0: Low water mark for NVLink brick 0 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
24:29	RW	CONFIG_LOW_WATER_PRB0: Low water mark for NVLink brick 0 probe requests. Can only be changed while config_enable_machine_alloc = 0.
30:35	RW	CONFIG_LOW_WATER_REQ1: Low water mark for NVLink brick 1 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
36:41	RW	CONFIG_LOW_WATER_PRB1: Low water mark for NVLink brick 1 probe requests. Can only be changed while config_enable_machine_alloc = 0.
42:47	RW	CONFIG_MAX_MACHINES: Maximum number of state machines to be used. Must be >= 8 and <= 62. Can only be changed while config_enable_machine_alloc = 0.
48:50	RW	LOW_WATER_RESERVED1: Reserved.
51	RW	CONFIG_ENABLE_MACHINE_ALLOC: Enable state machine allocation. Can only be changed from 0 to 1 and must stay at 1 once it is set.
52:63	RO	Constant = 0b000000000000

Register Name	High Water Register
Mnemonic	NPU.STCK0.CS.SM1.MISC.HIGH_WATER
Address	0000000005011029 (SCOM)
Description	Water marks. State machine allocation for high water marks. Each high water mark should be greater than or equal to the corresponding config_low_water and config_max_machines. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_HIGH_WATER_XATS: High water mark for XTS/MISC processor bus requests.
6:11	RW	CONFIG_HIGH_WATER_PWR0: High water mark for processor bus rd/dclaim/atomic/etc. requests.
12:17	RW	CONFIG_HIGH_WATER_PWR1: High water mark for processor bus CP (castout-push) requests.
18:23	RW	CONFIG_HIGH_WATER_REQ0: High water mark for NVLink brick 0 non-probe requests.
24:29	RW	CONFIG_HIGH_WATER_PRB0: High water mark for NVLink brick 0 probe requests.
30:35	RW	CONFIG_HIGH_WATER_REQ1: High water mark for NVLink brick 1 non-probe requests.
36:41	RW	CONFIG_HIGH_WATER_PRB1: High water mark for NVLink brick 1 probe requests.
42:43	RW	HIGH_WATER_RESERVED1: Reserved.
44:63	RO	Constant = 0b00000000000000000000

Register Name	**Relaxed Configuration 0 Register**
Mnemonic	NPU.STCK0.CS.SM1.MISC.CONFIG_RELAXED0
Address	000000000501102A (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_SOURCE0_WRENA: 0 = Disable relaxed source 0 for write operations. 1 = Enable relaxed source 0 for write operations.
1	RW	CONFIG_RELAXED_SOURCE0_RDENA: 0 = Disable relaxed source 0 for read operations. 1 = Enable relaxed source 0 for read operations.
2:19	RW	CONFIG_RELAXED_SOURCE0_MATCH: Relaxed source 0 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
20:37	RW	CONFIG_RELAXED_SOURCE0_MASK: Relaxed source 0 tag mask value: 0 = Bit is masked off, corresponding match bit must be 0. 1 = Bit must equal corresponding match bit.
38:39	RW	CONFIG_RELAXED_RESERVED0: Reserved.
40	RW	CONFIG_RELAXED_SOURCE1_WRENA: 0 = Disable relaxed source 1 for write operations. 1 = Enable relaxed source 1 for write operations.
41	RW	CONFIG_RELAXED_SOURCE1_RDENA: 0 = Disable relaxed source 1 for read operations. 1 = Enable relaxed source 1 for read operations.
42:59	RW	CONFIG_RELAXED_SOURCE1_MATCH: Relaxed source 1 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 1 Register
Mnemonic	NPU.STCK0.CS.SM1.MISC.CONFIG_RELAXED1
Address	000000000501102B (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:17	RW	CONFIG_RELAXED_SOURCE1_MASK: Relaxed source 1 tag mask value.
18:19	RW	CONFIG_RELAXED_RESERVED1: Reserved.
20	RW	CONFIG_RELAXED_SOURCE2_WRENA: 0 = Disable relaxed source 2 for write operations. 1 = Enable relaxed source 2 for write operations.
21	RW	CONFIG_RELAXED_SOURCE2_RDENA: 0 = Disable relaxed source 2 for read operations. 1 = Enable relaxed source 2 for read operations.
22:39	RW	CONFIG_RELAXED_SOURCE2_MATCH: Relaxed source 2 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
40:57	RW	CONFIG_RELAXED_SOURCE2_MASK: Relaxed source 0 tag mask value.
58:59	RW	CONFIG_RELAXED_RESERVED2: Reserved.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 2 Register
Mnemonic	NPU.STCK0.CS.SM1.MISC.CONFIG_RELAXED2
Address	000000000501102C (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_CMD_CL_DMA_W: Enable relaxed ordering for cl_dma_w.
1	RW	CONFIG_RELAXED_CMD_CL_DMA_W_HP: Enable relaxed ordering for cl_dma_w_hp.
2	RW	CONFIG_RELAXED_CMD_CL_DMA_INJ: Enable relaxed ordering for cl_dma_inj.
3	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_U: Enable relaxed ordering for armw_cas_imax_u.
4	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_S: Enable relaxed ordering for armw_cas_imax_s.
5	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_U: Enable relaxed ordering for armw_cas_imin_u.
6	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_S: Enable relaxed ordering for armw_cas_imin_s.
7	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_U: Enable relaxed ordering for armwf_cas_imax_u.
8	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_S: Enable relaxed ordering for armwf_cas_imax_s.
9	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_U: Enable relaxed ordering for armwf_cas_imin_u.
10	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_S: Enable relaxed ordering for armwf_cas_imin_s.
11	RW	CONFIG_RELAXED_CMD_PR_DMA_INJ: Enable relaxed ordering for pr_dma_inj.
12	RW	CONFIG_RELAXED_CMD_DMA_PR_W: Enable relaxed ordering for dma_pr_w.
13	RW	CONFIG_RELAXED_CMD_ARMW_ADD: Enable relaxed ordering for armw_add.
14	RW	CONFIG_RELAXED_CMD_ARMW_AND: Enable relaxed ordering for armw_and.

Bits	SCOM	Field Mnemonic: Description
15	RW	CONFIG_RELAXED_CMD_ARMW_OR: Enable relaxed ordering for armw_or.
16	RW	CONFIG_RELAXED_CMD_ARMW_XOR: Enable relaxed ordering for armw_xor.
17	RW	CONFIG_RELAXED_CMD_ARMWF_ADD: Enable relaxed ordering for armwf_add.
18	RW	CONFIG_RELAXED_CMD_ARMWF_AND: Enable relaxed ordering for armwf_and.
19	RW	CONFIG_RELAXED_CMD_ARMWF_OR: Enable relaxed ordering for armwf_or.
20	RW	CONFIG_RELAXED_CMD_ARMWF_XOR: Enable relaxed ordering for armwf_xor.
21	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_E: Enable relaxed ordering for armwf_cas_e.
22	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_U: Enable relaxed ordering for armwf_cas_u.
23	RW	CONFIG_RELAXED_CMD_CL_RD_NC_F0: Enable relaxed ordering for cl_rd_nc(F=0).
24	RW	CONFIG_RELAXED_SOURCE3_WRENA: 0 = Disable relaxed source 3 for write operations. 1 = Enable relaxed source 3 for write operations.
25	RW	CONFIG_RELAXED_SOURCE3_RDENA: 0 = Disable relaxed source 3 for read operations. 1 = Enable relaxed source 3 for read operations.
26:43	RW	CONFIG_RELAXED_SOURCE3_MATCH: Relaxed source 3 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
44:61	RW	CONFIG_RELAXED_SOURCE3_MASK: Relaxed source 0 tag mask value.
62:63	RW	CONFIG_RELAXED_RESERVED3: Reserved.

Register Name	**NTL0/NDL0 MMIO BAR Register**
Mnemonic	NPU.STCK0.CS.SM1.MISC.NDT0_BAR
Address	000000000501102D (SCOM)
Description	BAR register defining the NDL/NTL MMIO range for brick 0 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT0_BAR_ENABLE: 0 = Disable BAR for brick 0. 1 = Enable BAR for brick 0.
1:2	RW	NDT0_RESERVED1: Reserved.
3:6	RW	CONFIG_NDT0_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT0_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT0_BAR_ADDR: The 128K aligned address of BAR for brick 0's 128K range.
35	RW	NDT0_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	NTL1/NDL1 MMIO BAR Register
Mnemonic	NPU.STCK0.CS.SM1.MISC.NDT1_BAR
Address	000000000501102E (SCOM)
Description	BAR register defining the NDL/NTL MMIO range for brick 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT1_BAR_ENABLE: 0 = Disable BAR for brick 1. 1 = Enable BAR for brick 1.
1:2	RW	NDT1_RESERVED1: Reserved.
3:6	RW	CONFIG_NDT1_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT1_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT1_BAR_ADDR: The 128K aligned address of BAR for brick 1's 128K range.
35	RW	NDT1_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	Performance Configuration Register
Mnemonic	NPU.STCK0.CS.SM1.MISC.PERF_CONFIG
Address	000000000501102F (SCOM)
Description	Performance event selection register.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	PERF_CONFIG_LATSTART: Latency count start event.
8:15	RW	PERF_CONFIG_LATCANCEL: Latency count abort event.
16:23	RW	PERF_CONFIG_EVENT0: Event 0 select.
24:31	RW	PERF_CONFIG_EVENT1: Event 0 select.
32:39	RW	PERF_CONFIG_EVENT2: Event 0 select.
40:47	RW	PERF_CONFIG_EVENT3: Event 0 select.
48:55	RW	PERF_CONFIG_LATFINISH: Latency count finish event.
56:62	RW	PERF_CONFIG_RESERVED2: Reserved.
63	RW	PERF_CONFIG_ACT: Enable clock gates for performance monitor latches.

Register Name	Inhibit Configuration Register
Mnemonic	NPU.STCK0.CS.SM1.MISC.INHIBIT_CONFIG
Address	0000000005011030 (SCOM)
Description	This register configures inhibits for CQ_SM.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_INHIBIT_LFREQ0: Base LFSR frequency 0: 0 -11 = $1/2^{(n+1)}$ 12 = $1/2^{14}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
4:5	RW	CONFIG_INHIBIT_PFREQ0: Selects pre-frequency 0: 0 = Inhibit timer tick0. 1 = Inverted Inhibit timer tick0. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
6	RW	CONFIG_INHIBIT_BLOCKY0: 0 = Disable blocky mode. 1 = Enable blocky mode.
7	RW	CONFIG_INHIBIT_ONESHOT0: 0 = Continuous mode. 1 = One shot mode.
8:15	RW	CONFIG_INHIBIT_DEST0: Selects the destination of the inhibit.
16:19	RW	CONFIG_INHIBIT_LFREQ1: Base LFSR frequency 0: 0..12 = $1/2^{(n+1)}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
20:21	RW	CONFIG_INHIBIT_PFREQ1: Selects pre-frequency 0: 0 = Inhibit timer tick1. 1 = Inverted Inhibit timer tick1. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
22	RW	CONFIG_INHIBIT_BLOCKY1: 0 = Disable blocky mode. 1 = Enable blocky mode.
23	RW	CONFIG_INHIBIT_ONESHOT1: 0 = Continuous mode. 1 = One shot mode.
24:31	RW	CONFIG_INHIBIT_DEST1: Selects the destination of the inhibit.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	**CERR Message 0 Register**
Mnemonic	NPU.STCK0.CS.SM1.MISC.CERR_MESSAGE0
Address	0000000005011031 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS0: Reserved.

Register Name	CERR Message 1 Register
Mnemonic	NPU.STCK0.CS.SM1.MISC.CERR_MESSAGE1
Address	0000000005011032 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS1: Reserved.

Register Name	CERR Message 2 Register
Mnemonic	NPU.STCK0.CS.SM1.MISC.CERR_MESSAGE2
Address	0000000005011033 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS2: Reserved.

Register Name	CERR Message 3 Register
Mnemonic	NPU.STCK0.CS.SM1.MISC.CERR_MESSAGE3
Address	0000000005011034 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS3: Reserved.

Register Name	CERR Message 4 Register
Mnemonic	NPU.STCK0.CS.SM1.MISC.CERR_MESSAGE4
Address	0000000005011035 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS4: Reserved.

Register Name	CQ_SM Status Register
Mnemonic	NPU.STCK0.CS.SM1.MISC.SM_STATUS
Address	0000000005011036 (SCOM)
Description	Status reporting register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SM_STATUS_CREQ0: Set to 1 when brick 0 CREQ allocation is at its idle level.
1	ROX	SM_STATUS_PRB0: Set to 1 when brick 0 probe allocation is at its idle level.

Bits	SCOM	Field Mnemonic: Description
2	ROX	SM_STATUS_CREQ1: Set to 1 when brick 1 CREQ allocation is at its idle level.
3	ROX	SM_STATUS_PRB1: Set to 1 when brick 1 probe allocation is at its idle level.
4	ROX	SM_STATUS_XATS: Set to 1 when ATS/MISC allocation is at its idle level.
5	ROX	SM_STATUS_PWR0: Set to 1 when processor bus (non-CP*) allocation is at its idle level.
6	ROX	SM_STATUS_PWR1: Set to 1 when processor bus (CP*) allocation is at its idle level.
7	ROX	SM_STATUS_CHGRATE: Set to 1 when chgrate.hang slowdown is being applied to machine allocation.
8:11	ROX	SM_STATUS_MRBGP: Master retry back-off level for group-pump commands.
12:15	ROX	SM_STATUS_MRBSP: Master retry back-off level for system-pump commands.
16:19	ROX	SM_STATUS_FENCE0: Brick 0 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X = Flushing pocket cache entries prior to exiting fence.
20:23	ROX	SM_STATUS_FENCE1: Brick 1 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X = Flushing pocket cache entries prior to exiting fence.
24	ROX	SM_STATUS_PBLN: Set to 1 when the outbound Ln scope processor bus request queue is empty.
25	ROX	SM_STATUS_PBNNG: Set to 1 when the outbound Nn/G scope processor bus request queue is empty.
26	ROX	SM_STATUS_PBRNVG: Set to 1 when the outbound Rn/Vg scope processor bus request queue is empty.
27	ROX	SM_STATUS_N0REQ: Set to 1 when the outbound brick 0 CREQ request queue is empty.
28	ROX	SM_STATUS_N0DGD: Set to 1 when the outbound brick 0 downgrade request queue is empty.
29	ROX	SM_STATUS_N1REQ: Set to 1 when the outbound brick 1 CREQ request queue is empty.
30	ROX	SM_STATUS_N1DGD: Set to 1 when the outbound brick 1 downgrade request queue is empty.
31	ROX	SM_STATUS_MMIO: Set to 1 when the outbound MMIO/GenId request queue is empty.
32	ROX	SM_STATUS_ATSXLATE: Set to 1 when the outbound ATS TCE translation request queue is empty.
33	ROX	SM_STATUS_PBRSP: Set to 1 when the outbound processor bus data response/merge operation queue is empty.
34	ROX	SM_STATUS_N0RSP: Set to 1 when the outbound brick 0 response queue is empty.
35	ROX	SM_STATUS_N1RSP: Set to 1 when the outbound brick 1 response queue is empty.
36	ROX	SM_STATUS_XARSP: Set to 1 when the outbound ATS/MISC response queue is empty.
37	ROX	SM_STATUS_SACOLL: Set to 1 when the same address collision check queue is empty.
38	ROX	SM_STATUS_FREE: Set to 1 when the free state machine queue is empty.
39	ROX	SM_STATUS_RESERVED1: Reserved.
40:63	RO	Constant = 0b000000000000000000000000

Register Name	CERR First 0 Register
Mnemonic	NPU.STCK0.CS.SM1.MISC.CERR_FIRST0
Address	0000000005011037 (SCOM)
Description	c_err_rpt first latches read-write-1-clear register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLEAR	IDIAL_SM_FIRST_NVF_0: NVF0 s3: NV-Rsp to Read.RWC was not a ReqRsp.D.E.128.

Description	Miscellaneous configuration 1 register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_RANDOM_BACKOFF_DUR_MASK: Mask for the base random duration of a random retry back-off: 0000 = 0 - 15 base random duration. 0001 = 0 - 31 base random duration. 0011 = 0 - 63 base random duration. 0111 = 0 - 127 base random duration. 1111 = 0 - 255 base random duration.
4:7	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_REQ: Mask for the slowdown of NTL CREQ credits during chgrate.hang. 'n' = $1/(2^{(n+1)})$ cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
8:11	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_PRB: Mask for the slowdown of NTL probe credits during chgrate.hang. 'n' = $1/(2^{(n+1)})$ cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
12:15	RW	CONFIG_ARB_NONCRR_SAFETY: Safety valve for non-CRESP/non-REGIN events going down the arbiter pipe. After n+1 REGIN events go through the arbiter while a non-CRR event is waiting, REGIN events are blocked to give non-CRR events a chance.
16:27	RW	CONFIG_EPSILON_WLN_COUNT: Epsilon count for Ln scope CP write.

Bits	SCOM	Field Mnemonic: Description
28:31	RW	CONFIG_SCALE_RPT_HANG_POLL: Scaling factor for rpt_hang.poll: 0 = 1:1 processor bus rpt_hang.polls received. 1 = 1:2 processor bus rpt_hang.polls received. ... 15 = 1:16 processor bus rpt_hang.polls received.
32:35	RW	CONFIG_SCALE_RPT_HANG_DATA: Scaling factor for rpt_hang.data: 0 = 1:1 processor bus rpt_hang.datas received. 1 = 1:2 processor bus rpt_hang.datas received. ... 15 = 1:16 processor bus rpt_hang.datas received.
36:63	RW	CONFIG1_RESERVED: Reserved.

Register Name	**Power Bus Epsilon Configuration Register**
Mnemonic	NPU.STCK0.CS.SM2.MISC.EPSILON_CONFIG
Address	0000000005011042 (SCOM)
Description	Processor bus Epsilon configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_EPSILON_RATE: 0 = Decrement Epsilon count at 1:1 nest_gckn. ... 15 = Epsilon count at 1/16 nest_gckn.
4:15	RW	CONFIG_EPSILON_W0_COUNT: Epsilon count for Nn/G scope CP write.
16:27	RW	CONFIG_EPSILON_W1_COUNT: Epsilon count for Rn/Vg scope CP write.
28:39	RW	CONFIG_EPSILON_R0_COUNT: Epsilon count for Ln scope reads.
40:51	RW	CONFIG_EPSILON_R1_COUNT: Epsilon count for Nn/G scope reads.
52:63	RW	CONFIG_EPSILON_R2_COUNT: Epsilon count for Rn/Vg scope reads.

Register Name	**Timer Configuration Register**
Mnemonic	NPU.STCK0.CS.SM2.MISC.XTIMER_CONFIG
Address	0000000005011043 (SCOM)
Description	Timer configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	CONFIG_POCKET_RATE1: Rate-1 for the pocket cache with data entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
2:7	RW	CONFIG_POCKET_RATE2: Rate-2 for the long timer for pocket cache entries (2^n cycles).
8:13	RW	CONFIG_POCKET_RATE3: Rate-3 for the short timer for pocket cache entries (2^n cycles).
14:19	RW	CONFIG_FWD_PROG_RATE2: Rate-2 for the forward progress timer (2^n cycles).

Bits	SCOM	Field Mnemonic: Description
20:25	RW	CONFIG_CTL_TICK: Rate for CTL timer tick (default 63 = off). **Note:** This field can/should have different values in each instance.
26:31	RW	CONFIG_INH0_TICK: Rate for SM inhibit timer tick0 (default 63 = off). **Note:** This field can/should have different values in each instance.
32:37	RW	CONFIG_INH1_TICK: Rate for SM inhibit timer tick1 (default 63 = off). **Note:** This field can/should have different values in each instance.
38:39	RW	CONFIG_NV_RESP_RATE1: Rate-1 for NV-Response timer. The timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds, where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63. f(0b10) = 511. f(0b11) = 4095.
40:45	RW	CONFIG_NV_RESP_RATE2: Rate-2 for the NV-Response timer (2^n cycles).
46:47	RW	CONFIG_POCKET_ND_RATE1: Rate-1 for the pocket cache dataless entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 51 f(0b11) = 4095
48:63	RO	Constant = 0b0000000000000000

Register Name	GPU BAR Register
Mnemonic	NPU.STCK0.CS.SM2.MISC.GPU_BAR
Address	0000000005011044 (SCOM)
Description	Memory BARs. BAR register defining GPU memory addresses serviced by bricks 0 and 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GPU0_BAR_ENABLE: 0 = Disable BAR for brick 0. 1 = Enable BAR for brick 0.
1:2	RW	CONFIG_GPU0_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 0. **Note:** It is illegal to set this field to 0b11.
3:6	RW	CONFIG_GPU0_BAR_GROUP: Group field of the base address of BAR for brick 0.
7:9	RW	CONFIG_GPU0_BAR_CHIP: Chip field of the base address of BAR for brick 0.
10:21	RW	CONFIG_GPU0_BAR_ADDR: Base address (1G address) of BAR for brick 0. Must be aligned on the size of the BAR mask.
22	RW	CONFIG_GPU0_BAR_RESERVED: Reserved.
23	RW	CONFIG_GPU0_BAR_GRANULE: Hash boundary for brick 0: 0 = Hash on 512B boundary (hashbits(0:7) = addr(47:54)). 1 = Hash on 1024B boundary (hashbits(0:7) = addr(46:53)).

Bits	SCOM	Field Mnemonic: Description
24:27	RW	CONFIG_GPU0_BAR_SIZE: Size of the base address match for the BAR for brick 0: 0 = 1G 1 = 2G 2 = 4G ... 9 = 512G 10 = 1T 11 = 2T 12 = 4T >12 = Reserved.
28:31	RW	CONFIG_GPU0_BAR_MODE: Hash mode of the BAR for brick 0: 0 = (single) match on all address in address/size. 1 = (dual.0) match if hashbits(7) = 0. 2 = (dual.1) match if hashbits(7) = 1. 3 = (triple.0) match if hashbits%3 = 0. 4 = (triple.1) match if hashbits%3 = 1. 5 = (triple.2) match if hashbits%3 = 2. 6 = (quad.0) match if hashbits(6:7) = 0. 7 = (quad.1) match if hashbits(6:7) = 1. 8 = (quad.2) match if hashbits(6:7) = 2. 9 = (quad.3) match if hashbits(6:7) = 3. 10 = (six.0) match if hashbits%3 = 0 and hashbits(7) = 0. 11 = (six.1) match if hashbits%3 = 0 and hashbits(7) = 1. 12 = (six.2) match if hashbits%3 = 1 and hashbits(7) = 0. 13 = (six.3) match if hashbits%3 = 1 and hashbits(7) = 1. 14 = (six.4) match if hashbits%3 = 2 and hashbits(7) = 0. 15 = (six.5) match if hashbits%3 = 2 and hashbits(7) = 1.
32	RW	CONFIG_GPU1_BAR_ENABLE: 0 = Disable BAR for brick 1. 1 = Enable BAR for brick 1.
33:34	RW	CONFIG_GPU1_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 1. **Note:** It is illegal to set this field to 0b11.
35:38	RW	CONFIG_GPU1_BAR_GROUP: Group field of the base address of BAR for brick 1.
39:41	RW	CONFIG_GPU1_BAR_CHIP: Chip field of the base address of BAR for brick 1.
42:53	RW	CONFIG_GPU1_BAR_ADDR: Base address (1G address) of BAR for brick 1. Must be aligned on the size of the BAR mask.
54	RW	CONFIG_GPU1_BAR_RESERVED: Reserved.
55	RW	CONFIG_GPU1_BAR_GRANULE: Hash boundary for brick 1: 0 = Hash on 512B boundary (hashbits(0:7) = addr(47:54)). 1 = Hash on 1024B boundary (hashbits(0:7) = addr(46:53)).
56:59	RW	CONFIG_GPU1_BAR_SIZE: Size of the base address match for the BAR for brick 1: 0 = 1G 1 = 2G 2 = 4G ... 9 = 512G 10 = 1T 11 = 2T 12 = 4T >12 = Reserved.

Bits	SCOM	Field Mnemonic: Description
60:63	RW	CONFIG_GPU1_BAR_MODE: Hash mode of the BAR for brick 1: 0 = (single) match on all address in address/size. 1 = (dual.0) match if hashbits(7) = 0. 2 = (dual.1) match if hashbits(7) = 1. 3 = (triple.0) match if hashbits%3 = 0. 4 = (triple.1) match if hashbits%3=1 . 5 = (triple.2) match if hashbits%3 = 2. 6 = (quad.0) match if hashbits(6:7) = 0. 7 = (quad.1) match if hashbits(6:7) = 1. 8 = (quad.2) match if hashbits(6:7) = 2. 9 = (quad.3) match if hashbits(6:7) = 3. 10 = (six.0) match if hashbits%3 = 0 and hashbits(7) = 0. 11 = (six.1) match if hashbits%3 = 0 and hashbits(7) = 1. 12 = (six.2) match if hashbits%3 = 1 and hashbits(7) = 0. 13 = (six.3) match if hashbits%3 = 1 and hashbits(7) = 1. 14 = (six.4) match if hashbits%3 = 2 and hashbits(7) = 0. 15 = (six.5) match if hashbits%3 = 2 and hashbits(7) = 1.

Register Name	PHY0/PHY1/NPU MMIO BAR Register
Mnemonic	NPU.STCK0.CS.SM2.MISC.PHY_BAR
Address	0000000005011046 (SCOM)
Description	BAR register defining PHY0/PHY1/NPU MMIO range. Stack 0 PHY_BAR defines a 2M range mapped to PHY 0 registers. Stack 1 PHY_BAR defines a 2M range mapped to PHY 1 registers. Stack 2 PHY_BAR defines a 16M range mapped to all NPU registers. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_PHY_BAR_ENABLE: 0 = Disable PHY_BAR. 1 = Enable PHY_BAR.
1:2	RW	PHY_RESERVED1: Reserved.
3:6	RW	CONFIG_PHY_BAR_GROUP: Group field of the 2M aligned address of this PHY_BAR.
7:9	RW	CONFIG_PHY_BAR_CHIP: Chip field of the 2M aligned address of this PHY_BAR.
10:30	RW	CONFIG_PHY_BAR_ADDR: The 2M aligned address of this PHY_BAR's 2M range. **Note:** In stack two, the low three address bits are reserved (16M range).
31	RW	PHY_RESERVED2: Reserved.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Generation ID BAR Register
Mnemonic	NPU.STCK0.CS.SM2.MISC.GENID_BAR
Address	0000000005011047 (SCOM)
Description	ID registers MMIO BAR. BAR register defining Generation ID register for this stack/ramp. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GENID_BAR_ENABLE: 0 = Disable this BAR. 1 = Enable this BAR.

Bits	SCOM	Field Mnemonic: Description
1:2	RW	GENID_RESERVED1: Reserved.
3:6	RW	CONFIG_GENID_BAR_GROUP: Group field of the 128K aligned address of this GENID_BAR.
7:9	RW	CONFIG_GENID_BAR_CHIP: Chip field of the 128K aligned address of this GENID_BAR.
10:34	RW	CONFIG_GENID_BAR_ADDR: The 128K aligned address of this BAR's 128K range.
35	RW	GENID_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	**Low Water Register**
Mnemonic	NPU.STCK0.CS.SM2.MISC.LOW_WATER
Address	0000000005011048 (SCOM)
Description	Water marks. State machine allocation for low water marks. Each low water mark should be greater than or equal to1 and the sum of the low water marks must be less than config_max_machines. Low water marks must not be changed after config_enable_machine_alloc is set to 1 and config_enable_machine_alloc must remain at 1 once it is set to 1. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_LOW_WATER_XATS: Low water mark for XTS/MISC processor bus requests. Can only be changed while config_enable_machine_alloc = 0.
6:11	RW	CONFIG_LOW_WATER_PWR0: Low water mark for processor bus rd/dclaim/atomic/etc. requests. Can only be changed while config_enable_machine_alloc = 0.
12:17	RW	CONFIG_LOW_WATER_PWR1: Low water mark for processor bus CP (castout-push) requests. Can only be changed while config_enable_machine_alloc = 0.
18:23	RW	CONFIG_LOW_WATER_REQ0: Low water mark for NVLink brick 0 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
24:29	RW	CONFIG_LOW_WATER_PRB0: Low water mark for NVLink brick 0 probe requests. Can only be changed while config_enable_machine_alloc = 0.
30:35	RW	CONFIG_LOW_WATER_REQ1: Low water mark for NVLink brick 1 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
36:41	RW	CONFIG_LOW_WATER_PRB1: Low water mark for NVLink brick 1 probe requests. Can only be changed while config_enable_machine_alloc = 0.
42:47	RW	CONFIG_MAX_MACHINES: Maximum number of state machines to be used. Must be >= 8 and <= 62. Can only be changed while config_enable_machine_alloc = 0.
48:50	RW	LOW_WATER_RESERVED1: Reserved.
51	RW	CONFIG_ENABLE_MACHINE_ALLOC: Enable state machine allocation. Can only be changed from 0 to1 and must stay at 1 once it is set.
52:63	RO	Constant = 0b000000000000

Register Name	**High Water Register**
Mnemonic	NPU.STCK0.CS.SM2.MISC.HIGH_WATER
Address	0000000005011049 (SCOM)
Description	Water marks. State machine allocation for high water marks. Each high water mark should be greater than or equal to the corresponding config_low_water and config_max_machines. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_HIGH_WATER_XATS: High water mark for XTS/MISC processor bus requests.
6:11	RW	CONFIG_HIGH_WATER_PWR0: High water mark for processor bus rd/dclaim/atomic/etc. requests.
12:17	RW	CONFIG_HIGH_WATER_PWR1: High water mark for processor bus CP (castout-push) requests.
18:23	RW	CONFIG_HIGH_WATER_REQ0: High water mark for NVLink brick 0 non-probe requests.
24:29	RW	CONFIG_HIGH_WATER_PRB0: High water mark for NVLink brick 0 probe requests.
30:35	RW	CONFIG_HIGH_WATER_REQ1: High water mark for NVLink brick 1 non-probe requests.
36:41	RW	CONFIG_HIGH_WATER_PRB1: High water mark for NVLink brick 1 probe requests.
42:43	RW	HIGH_WATER_RESERVED1: Reserved.
44:63	RO	Constant = 0b00000000000000000000

Register Name	**Relaxed Configuration 0 Register**
Mnemonic	NPU.STCK0.CS.SM2.MISC.CONFIG_RELAXED0
Address	000000000501104A (SCOM)
Description	Ordering configuration 0 register used to configure relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_SOURCE0_WRENA: 0 = Disable relaxed source 0 for write operations. 1 = Enable relaxed source 0 for write operations.
1	RW	CONFIG_RELAXED_SOURCE0_RDENA: 0 = Disable relaxed source 0 for read operations. 1 = Enable relaxed source 0 for read operations.
2:19	RW	CONFIG_RELAXED_SOURCE0_MATCH: Relaxed source 0 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
20:37	RW	CONFIG_RELAXED_SOURCE0_MASK: relaxed source 0 tag mask value. 0 = Bit is masked off, corresponding match bit must be 0. 1 = Bit must equal corresponding match bit.
38:39	RW	CONFIG_RELAXED_RESERVED0: Reserved.
40	RW	CONFIG_RELAXED_SOURCE1_WRENA: 0 = Disable relaxed source 1 for write operations. 1 = Enable relaxed source 1 for write operations.
41	RW	CONFIG_RELAXED_SOURCE1_RDENA: 0 = Disable relaxed source 1 for read operations. 1 = Enable relaxed source 1 for read operations.
42:59	RW	CONFIG_RELAXED_SOURCE1_MATCH: Relaxed source 1 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 1 Register
Mnemonic	NPU.STCK0.CS.SM2.MISC.CONFIG_RELAXED1
Address	000000000501104B (SCOM)
Description	Ordering configuration 1 register used to configure relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:17	RW	CONFIG_RELAXED_SOURCE1_MASK: Relaxed source 1 tag mask value.
18:19	RW	CONFIG_RELAXED_RESERVED1: Reserved.
20	RW	CONFIG_RELAXED_SOURCE2_WRENA: 0 = Disable relaxed source 2 for write operations. 1 = Enable relaxed source 2 for write operations.
21	RW	CONFIG_RELAXED_SOURCE2_RDENA: 0 = Disable relaxed source 2 for read operations. 1 = Enable relaxed source 2 for read operations.
22:39	RW	CONFIG_RELAXED_SOURCE2_MATCH: Relaxed source 2 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
40:57	RW	CONFIG_RELAXED_SOURCE2_MASK: Relaxed source 2 tag mask value.
58:59	RW	CONFIG_RELAXED_RESERVED2: Reserved.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 2 Register
Mnemonic	NPU.STCK0.CS.SM2.MISC.CONFIG_RELAXED2
Address	000000000501104C (SCOM)
Description	Ordering configuration 2 register used to configure relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_CMD_CL_DMA_W: Enable relaxed ordering for cl_dma_w.
1	RW	CONFIG_RELAXED_CMD_CL_DMA_W_HP: Enable relaxed ordering for cl_dma_w_hp.
2	RW	CONFIG_RELAXED_CMD_CL_DMA_INJ: Enable relaxed ordering for cl_dma_inj.
3	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_U: Enable relaxed ordering for armw_cas_imax_u.
4	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_S: Enable relaxed ordering for armw_cas_imax_s.
5	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_U: Enable relaxed ordering for armw_cas_imin_u.
6	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_S: Enable relaxed ordering for armw_cas_imin_s.
7	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_U: Enable relaxed ordering for armwf_cas_imax_u.
8	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_S: Enable relaxed ordering for armwf_cas_imax_s.
9	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_U: Enable relaxed ordering for armwf_cas_imin_u.
10	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_S: Enable relaxed ordering for armwf_cas_imin_s.
11	RW	CONFIG_RELAXED_CMD_PR_DMA_INJ: Enable relaxed ordering for pr_dma_inj.
12	RW	CONFIG_RELAXED_CMD_DMA_PR_W: Enable relaxed ordering for dma_pr_w.
13	RW	CONFIG_RELAXED_CMD_ARMW_ADD: Enable relaxed ordering for armw_add.

Bits	SCOM	Field Mnemonic: Description
14	RW	CONFIG_RELAXED_CMD_ARMW_AND: Enable relaxed ordering for armw_and.
15	RW	CONFIG_RELAXED_CMD_ARMW_OR: Enable relaxed ordering for armw_or.
16	RW	CONFIG_RELAXED_CMD_ARMW_XOR: Enable relaxed ordering for armw_xor.
17	RW	CONFIG_RELAXED_CMD_ARMWF_ADD: Enable relaxed ordering for armwf_add.
18	RW	CONFIG_RELAXED_CMD_ARMWF_AND: Enable relaxed ordering for armwf_and.
19	RW	CONFIG_RELAXED_CMD_ARMWF_OR: Enable relaxed ordering for armwf_or.
20	RW	CONFIG_RELAXED_CMD_ARMWF_XOR: Enable relaxed ordering for armwf_xor.
21	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_E: Enable relaxed ordering for armwf_cas_e.
22	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_U: Enable relaxed ordering for armwf_cas_u.
23	RW	CONFIG_RELAXED_CMD_CL_RD_NC_F0: Enable relaxed ordering for cl_rd_nc(F=0).
24	RW	CONFIG_RELAXED_SOURCE3_WRENA: 0 = Disable relaxed source 3 for write operations. 1 = Enable relaxed source 3 for write operations.
25	RW	CONFIG_RELAXED_SOURCE3_RDENA: 0 = Disable relaxed source 3 for read operations. 1 = Enable relaxed source 3 for read operations.
26:43	RW	CONFIG_RELAXED_SOURCE3_MATCH: Relaxed source 3 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
44:61	RW	CONFIG_RELAXED_SOURCE3_MASK: Relaxed source 0 tag mask value.
62:63	RW	CONFIG_RELAXED_RESERVED3: Reserved.

Register Name	**NTL0/NDL0 MMIO BAR Register**
Mnemonic	NPU.STCK0.CS.SM2.MISC.NDT0_BAR
Address	0000000005011040 (SCOM)
Description	BAR register defining NDL/NTL MMIO range for brick 0 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT0_BAR_ENABLE: 0 = Disable BAR for brick 0. 1 = Enable BAR for brick 0.
1:2	RW	NDT0_RESERVED1: Reserved.
3:6	RW	CONFIG_NDT0_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT0_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT0_BAR_ADDR: The 128K aligned address of BAR for brick 0's 128K range.
35	RW	NDT0_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	NTL1/NDL1 MMIO BAR Register
Mnemonic	NPU.STCK0.CS.SM2.MISC.NDT1_BAR
Address	000000000501104E (SCOM)
Description	BAR register defining NDL/NTL MMIO range for brick 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT1_BAR_ENABLE: 0 = Disable BAR for brick 1. 1 = Enable BAR for brick 1.
1:2	RW	NDT1_RESERVED1: Reserved.
3:6	RW	CONFIG_NDT1_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT1_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT1_BAR_ADDR: The 128K aligned address of BAR for brick 1's 128K range.
35	RW	NDT1_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	Performance Configuration Register
Mnemonic	NPU.STCK0.CS.SM2.MISC.PERF_CONFIG
Address	000000000501104F (SCOM)
Description	Performance event selection register.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	PERF_CONFIG_LATSTART: Latency count start event.
8:15	RW	PERF_CONFIG_LATCANCEL: Latency count abort event.
16:23	RW	PERF_CONFIG_EVENT0: Event 0 select.
24:31	RW	PERF_CONFIG_EVENT1: Event 0 select.
32:39	RW	PERF_CONFIG_EVENT2: Event 0 select.
40:47	RW	PERF_CONFIG_EVENT3: Event 0 select.
48:55	RW	PERF_CONFIG_LATFINISH: Latency count finish event.

63	RW	PERF_CONFIG_ACT: Enable clock gates for performance monitor latches.

Register Name	Inhibit Configuration Register
Mnemonic	NPU.STCK0.CS.SM2.MISC.INHIBIT_CONFIG
Address	0000000005011050 (SCOM)
Description	This register configures inhibits for CQ_SM.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_INHIBIT_LFREQ0: Base LFSR frequency 0: 0..11 = $1/2^{(n+1)}$ 12 = $1/2^{14}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
4:5	RW	CONFIG_INHIBIT_PFREQ0: Selects pre frequency 0: 0 = Inhibit timer tick0. 1 = Inverted inhibit timer tick0. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
6	RW	CONFIG_INHIBIT_BLOCKY0: 0 = Disable blocky mode. 1 = Enable blocky mode.
7	RW	CONFIG_INHIBIT_ONESHOT0: 0 = Continuous mode mode. 1 = One shot mode.
8:15	RW	CONFIG_INHIBIT_DEST0: Selects the destination of the inhibit.
16:19	RW	CONFIG_INHIBIT_LFREQ1: Base LFSR frequency 0: 0..12 = $1/2^{(n+1)}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
20:21	RW	CONFIG_INHIBIT_PFREQ1: Selects pre-frequency 0: 0 = Inhibit timer tick1. 1 = Inverted inhibit timer tick1. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
22	RW	CONFIG_INHIBIT_BLOCKY1: 0 = Disable blocky mode. 1 = Enable blocky mode.
23	RW	CONFIG_INHIBIT_ONESHOT1: 0 = Continuous mode 1 = One shot mode.
24:31	RW	CONFIG_INHIBIT_DEST1: Selects the destination of the inhibit.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	CERR Message 0 Register
Mnemonic	NPU.STCK0.CS.SM2.MISC.CERR_MESSAGE0
Address	0000000005011051 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS0: Reserved.

Register Name	CERR Message 1 Register
Mnemonic	NPU.STCK0.CS.SM2.MISC.CERR_MESSAGE1
Address	0000000005011052 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS1: Reserved.

Register Name	CERR Message 2 Register
Mnemonic	NPU.STCK0.CS.SM2.MISC.CERR_MESSAGE2
Address	0000000005011053 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS2: Reserved.

Register Name	CERR Message 3 Register
Mnemonic	NPU.STCK0.CS.SM2.MISC.CERR_MESSAGE3
Address	0000000005011054 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS3: Reserved.

Register Name	CERR Message 4 Register
Mnemonic	NPU.STCK0.CS.SM2.MISC.CERR_MESSAGE4
Address	0000000005011055 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS4: Reserved.

Register Name	CQ_SM Status Register
Mnemonic	NPU.STCK0.CS.SM2.MISC.SM_STATUS
Address	0000000005011056 (SCOM)
Description	Status reporting register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SM_STATUS_CREQ0: Set to 1 when brick 0 CREQ allocation is at its idle level.
1	ROX	SM_STATUS_PRB0: Set to 1 when brick 0 probe allocation is at its idle level.

Bits	SCOM	Field Mnemonic: Description
2	ROX	SM_STATUS_CREQ1: Set to 1 when brick 1 CREQ allocation is at its idle level.
3	ROX	SM_STATUS_PRB1: Set to 1 when brick 1 probe allocation is at its idle level.
4	ROX	SM_STATUS_XATS: Set to 1 when ATS/MISC allocation is at its idle level.
5	ROX	SM_STATUS_PWR0: Set to 1 when processor bus (non-CP*) allocation is at its idle level.
6	ROX	SM_STATUS_PWR1: Set to 1 when processor bus (CP*) allocation is at its idle level.
7	ROX	SM_STATUS_CHGRATE: Set to 1 when chgrate.hang slowdown is being applied to machine allocation.
8:11	ROX	SM_STATUS_MRBGP: Master retry back-off level for group-pump commands.
12:15	ROX	SM_STATUS_MRBSP: Master retry back-off level for system-pump commands.
16:19	ROX	SM_STATUS_FENCE0: Brick 0 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X = Flushing pocket cache entries prior to exiting fence.
20:23	ROX	SM_STATUS_FENCE1: Brick 1 fence sequencing state: 0000 = Idle state, completely unfenced. 0XX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X = Flushing pocket cache entries prior to exiting fence.
24	ROX	SM_STATUS_PBLN: Set to 1 when the outbound Ln scope processor bus request queue is empty.
25	ROX	SM_STATUS_PBNNG: Set to 1 when the outbound Nn/G scope processor bus request queue is empty.
26	ROX	SM_STATUS_PBRNVG: Set to 1 when the outbound Rn/Vg scope processor bus request queue is empty.
27	ROX	SM_STATUS_N0REQ: Set to 1 when the outbound brick 0 CREQ request queue is empty.
28	ROX	SM_STATUS_N0DGD: Set to 1 when the outbound brick 0 downgrade request queue is empty.
29	ROX	SM_STATUS_N1REQ: Set to 1 when the outbound brick 1 CREQ request queue is empty.
30	ROX	SM_STATUS_N1DGD: Set to 1 when the outbound brick 1 downgrade request queue is empty.
31	ROX	SM_STATUS_MMIO: Set to 1 when the outbound MMIO/GenId request queue is empty.
32	ROX	SM_STATUS_ATSXLATE: Set to 1 when the outbound ATS TCE translation request queue is empty.
33	ROX	SM_STATUS_PBRSP: Set to 1 when the outbound processor bus data response/merge operation queue is empty.
34	ROX	SM_STATUS_N0RSP: Set to 1 when the outbound brick 0 response queue is empty.
35	ROX	SM_STATUS_N1RSP: Set to 1 when the outbound brick 1 response queue is empty.
36	ROX	SM_STATUS_XARSP: Set to 1 when the outbound ATS/MISC response queue is empty.
37	ROX	SM_STATUS_SACOLL: Set to 1 when the same address collision check queue is empty.
38	ROX	SM_STATUS_FREE: Set to 1 when the free state machine queue is empty.
39	ROX	SM_STATUS_RESERVED1: Reserved.
40:63	RO	Constant = 0b0000000000000000000000

Register Name	CERR Mask 2 Register
Mnemonic	NPU.STCK0.CS.SM2.MISC.CERR_MASK2
Address	000000000501105C (SCOM)
Description	c_err_rpt mask register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	IDIAL_SM_MASK_NLG_0: NLG0 s3: RCMD event received but state machine is not idle.
1	RW	IDIAL_SM_MASK_NLG_1: NLG1 s3: Pocket hit event, but not in M_PCKT_WAIT_HIT state.
2	RW	IDIAL_SM_MASK_NLG_2: NLG2 s3: M_WT_CRESP: ma_scresp table look-up missed.
3	RW	IDIAL_SM_MASK_NLG_3: NLG3 s3: M_WT_CRESP: Start Epsilon, but Epsilon already in progress.
4	RW	IDIAL_SM_MASK_NLG_4: NLG4 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have NV modified data.
5	RW	IDIAL_SM_MASK_NLG_5: NLG5 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have PB modified data.
6	RW	IDIAL_SM_MASK_NLG_6: NLG6 s3: M_WT_CRESP: Bad scenario code from ma_scresp table.
7	RW	IDIAL_SM_MASK_NLG_7: NLG7 s3: Snoop CRESP received, but not in M_WT_CRESP state.
8	RW	IDIAL_SM_MASK_NLG_8: NLG8 s3: MCResp pocket hit event, but not in PC_* state.
9	RW	IDIAL_SM_MASK_NLG_9: NLG9 s3: PC_WT_CRESP: ma_mcresp table look-up missed.
10	RW	IDIAL_SM_MASK_NLG_10: NLG10 s3: PC_WT_CRESP: Write coll state did not match early protection state.
11	RW	IDIAL_SM_MASK_NLG_11: NLG11 s3: PC_WT_CRESP: Start Epsilon, but Epsilon already in progress.
12	RW	IDIAL_SM_MASK_NLG_12: NLG12 s3: PC_WT_CRESP: Bad scenario code from ma_mcresp table.
13	RW	IDIAL_SM_MASK_NLG_13: NLG13 s3: PC_BK_WT_CRESP: Bad next step for bkill (ack-done).

Bits	SCOM	Field Mnemonic: Description
14	RW	IDIAL_SM_MASK_NLG_14: NLG14 s3: PC_BK_WT_CRESP: Bad next step for bkill (retry).
15	RW	IDIAL_SM_MASK_NLG_15: NLG15 s3: PC_BK_WT_CRESP: Bad CRESP for a bkill.
16	RW	IDIAL_SM_MASK_NLG_16: NLG16 s3: Master CRESP received, but not in PC_WT_CRESP/PC_BK_WT_CRESP states.
17	RW	IDIAL_SM_MASK_NLG_17: NLG17 s3: M_IDLE: Invalid DATALEN[3:0] for data command.
18	RW	IDIAL_SM_MASK_NLG_18: NLG18 s3: M_IDLE: Invalid command type received.
19	RW	IDIAL_SM_MASK_NLG_19: NLG19 s3: AT translate response event ,but not in wait translate state.
20	RW	IDIAL_SM_MASK_NLG_20: NLG20 s3: AT translate response event had bad translate status, but command not recognized.
21	RW	IDIAL_SM_MASK_NLG_21: NLG21 s3: SA done event, but not in wait SA state.
22	RW	IDIAL_SM_MASK_NLG_22: NLG22 s3: PC_WAIT_DATADONE: Bad next step for PB data transmit.
23	RW	IDIAL_SM_MASK_NLG_23: NLG23 s3: TD_WAIT_DATADONE: Unknown NVLink master command.
24	RW	IDIAL_SM_MASK_NLG_24: NLG24 s3: BuffDone event, but not in PB/PC/MG/NR/XATS/TD_WAIT_DATADONE state.
25	RW	IDIAL_SM_MASK_NLG_25: NLG25 s3: NC_WT_RESP: Unknown NV master command for NVLink response.
26	RW	IDIAL_SM_MASK_NLG_26: NLG26 s3: RspIn event but not in RG_WT_RESP or NC_WT_RESP state.
27	RW	IDIAL_SM_MASK_NLG_27: NLG27 s3: Epsilon in progress, but Epsilon counter clock is not the Epsilon clock.
28	RW	IDIAL_SM_MASK_NLG_28: NLG28 s3: Epsilon counter clock is 'epsilon', but epsilon_ip is not set.
29	RW	IDIAL_SM_MASK_NLG_29: NLG29 s3: PC_WT_BK_RBACK: Bad next step for bkill.
30	RW	IDIAL_SM_MASK_NLG_30: NLG30 s3: M/RR_BACK timer expired, but not in PC_WT(_BK)_RBACK state.
31	RW	IDIAL_SM_MASK_NLG_31: NLG31 s3: Bad epclock value.
32	RW	IDIAL_SM_MASK_NLG_32: NLG32 s3: coll_state is POCKET_RCOLL_ND, but master state is not PCKT_WAIT_HIT.
33	RW	IDIAL_SM_MASK_NLG_33: NLG33 s3: Unknown sm_master_state in ESCAN_LCAO event.
34	RW	IDIAL_SM_MASK_NLG_34: NLG34 s3: Unknown event type received.
35	RW	IDIAL_SM_MASK_NLG_35: NLG35 s4: M_EVAL_DIR: ma_dsa table look-up missed.
36	RW	IDIAL_SM_MASK_NLG_36: NLG36 s4: M_EVAL_DIR: Unknown merge opcode from DSA table.
37	RW	IDIAL_SM_MASK_NLG_37: NLG37 s4: Unknown state.
38	RW	IDIAL_SM_MASK_NLG_38: NLG38 s3: coll_state is POCKET_RCOLL_OND, but master state is not PCKT_WAIT_HIT.
39	RW	IDIAL_SM_MASK_NLG_39: NLG39 s3: Unknown sm_master_state in ESCAN_FENCE event.
40	RW	IDIAL_SM_MASK_NLG_40: NLG40 s3: FENCE_WT_RESP_FILL: Unknown NV master command for Fence-Fill-SUE response.
41	RW	IDIAL_SM_MASK_NLG_41: NLG41 s3: M_WT_CRESP: Impossible command/CRESP.
42	RW	IDIAL_SM_MASK_NLG_42: NLG42 s3: PC_WT_CRESP: Impossible command/CRESP.
43	RW	IDIAL_SM_MASK_NLG_43: NLG43 s3: M_EVAL_DIR: Impossible command/CRESP.
44	RW	IDIAL_SM_MASK_NLG_44: NLG44 s4: Unexpected error state (bad sub-sequence return).
45	RW	IDIAL_SM_MASK_NLG_45: NLG45 s3: sfstat-retry, but not in retry-abbks collision state.
46	RW	IDIAL_SM_MASK_NLG_46: NLG46 s3: *cond*-retry, but not in retry-abbks collision state.

63	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_63: NLG63 (Reserved).

Register Name	**CQ_SM Miscellaneous Configuration 0 Register**
Mnemonic	NPU.STCK0.CS.SM3.MISC.CONFIG0
Address	0000000005011060 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG1_RESERVED1: Reserved.
1	RW	CONFIG_MA_DSA_OPT_CLAIM_UR: 0 = Use Read.RWC for DCLAIM/DCBZ to GPU memory. 1 = Use Upgrade.DN for DCLAIM/DCBZ to GPU memory.

Bits	SCOM	Field Mnemonic: Description
2	RW	CONFIG_MA_DSA_OPT_FLUSH_UR: 0 = Use Read.RWC for DCBF/DCBFC to GPU memory. 1 = Use Upgrade.DN for DCBF/DCBFC to GPU memory.
3	RW	CONFIG_MA_DSA_OPT_RP_MODE: 0 = Use DMA for Write.NC to processor memory. 1 = Use Read-Push for Write.NC to processor memory.
4	RW	CONFIG_ADR_BAR_MODE: Processor bus adr_bar: 0 = Large system mode. 1 = Small system mode.
5	RW	CONFIG_DISABLE_NN_RN: Processor bus scope: 0 = Enable Nn and Rn scopes. 1 = Disable Nn and Rn scopes.
6	RW	CONFIG_DISABLE_VG_NOT_SYS: Processor bus scope: 0 = Enable Vg less than system. 1 = Force all Vg to system.
7	RW	CONFIG_DISABLE_G: Processor bus scope: 0 = Enable G scope. 1 = Disable G scope.
8	RW	CONFIG_DISABLE_LN: Processor bus scope: 0 = Enable Ln scope. 1 = Disable Ln scope.
9	RW	CONFIG_SKIP_G: Processor bus scope: 0 = Allow G on rty_inc . 1 = Skip G on rty_inc.
10	RW	CONFIG_MA_MCRESP_OPT_WRP: 0 = Increase scope on rty_inc to dma_w. 1 = Use write-read-push on rty_inc to dma_w.
11	RW	CONFIG_MA_MCRESP_OPT_RTY_INJ: On a rty_inj type CRESP: 0 = Keep sending dma. 1 = Change to _inj.
12	RW	CONFIG_MA_MCRESP_OPT_RTY_DMA: On a rty_dma type CRESP: 0 = Keep sending inj. 1 = Change to _dma.
13:15	RW	CONFIG_INC_PRI_MASK: Mask select for priority increase due to rty_drp: 0 = 100% chance to increase priority. 1 = 50% chance to increase priority. 2 = 25% chance to increase priority. 3 = 12.5% chance to increase priority. 4 = 6% chance to increase priority. 5 = 3% chance to increase priority. 6, 7: 1.5% chance to increase priority.
16	RW	CONFIG1_RESERVED2: Reserved.
17	RW	CONFIG_MA_RSNOOP_OPT_B: TBD, future option bit.
18	RW	CONFIG_MA_RSNOOP_OPT_C: TBD, future option bit.
19	RW	CONFIG_MA_SCRESP_OPT_A: TBD, future option bit.
20	RW	CONFIG_MA_SCRESP_OPT_B: TBD, future option bit.
21	RW	CONFIG_MA_SCRESP_OPT_C: TBD, future option bit.
22	RW	CONFIG_RESERVED4: Reserved.

Bits	SCOM	Field Mnemonic: Description
23	RW	CONFIG_MACH_CORRENAB: 0 = Disable state machine array ECC correction 1 = Enable state machine array ECC correction.
24	RW	CONFIG_MACH_INJECT_ENABLE1: 0 = Disable state machine array ECC error inject bit 1. 1 = Enable state machine array ECC error inject bit 1.
25	RW	CONFIG_MACH_INJECT_ENABLE2: 0 = Disable state machine array ECC error inject bit 2. 1 = Enable state machine array ECC error inject bit 2.
26	RW	CONFIG_RXO_CORRENAB: 0 = Disable ReqRspOut array ECC correction. 1 = Enable ReqRspOut array ECC correction.
27	RW	CONFIG_RXO_INJECT_ENABLE1: 0 = Disable ReqRspOut array ECC error inject bit 1. 1 = Enable ReqRspOut array ECC error inject bit 1.
28	RW	CONFIG_RXO_INJECT_ENABLE2: 0 = Disable ReqRspOut array ECC error inject bit 1. 1 = Enable ReqRspOut array ECC error inject bit 1.
29	RW	CONFIG_RSI_CORRENAB: 0 = Disable PB-Rsp-In array ECC correction. 1 = Enable PB-Rsp-In array ECC correction.
30	RW	CONFIG_RSI_INJECT_ENABLE1: 0 = Disable PB-Rsp-Ine array ECC error inject bit 1. 1 = Enable PB-Rsp-Ine array ECC error inject bit 1.
31	RW	CONFIG_RSI_INJECT_ENABLE2: 0 = Disable PB-Rsp-Ine array ECC error inject bit 1. 1 = Enable PB-Rsp-Ine array ECC error inject bit 1.
32:33	RW	CONFIG_MA_RSNOOP_OPT_DCLAIM: 0 = Partial respond to DCLAIM to GPU memory with lpc_ack. 1 = Partial respond to DCLAIM to GPU memory with lpc_ack+rty_lost_claim. 2 = Partial respond to DCLAIM to GPU memory with lpc_ack+rty_lpc+start pocket cache. 3 = Reserved.
34	RW	CONFIG_MA_DSA_OPT_DMA_UPG: 0 = Non-relaxed dma_w use Read.RWC to acquire pocket cache state/data. 1 = Non-relaxed dma_w use Upgrade.DN to acquire pocket cache state/data.
35	RW	CONFIG_EVAPORATE_BY_LCO: 0 = Just free the state machine without LCO. 1 = Evaporate pocket cache entries by LCO.
36	RW	CONFIG_MRBGP_TRACK_ALL: 0 = Master retry back-off group-pump track only this stack's retry responses. 1 = Master retry back-off group-pump track all this chip's retry responses.
37	RW	CONFIG_MRBSP_TRACK_ALL: 0 = Master retry back-off system-pump track only this stack's retry responses. 1 = Master retry back-off system-pump track all this chip's retry responses.
38	RW	CONFIG_ENABLE_PBUS: 0 = Disable NPU processor bus RCMD, PRESP, and CRESP interfaces. 1 = Enable NPU processor bus RCMD, PRESP, and CRESP interfaces.
39	RW	CONFIG_BRAZOS_MODE: 0 = Non-brazos 4-group; 2-chip mode. 1 = Brazos 2-group; 4-chip mode.

Bits	SCOM	Field Mnemonic: Description
40	RW	CONFIG_ENABLE_SNARF_CPM: 0 = Disable Probe.I.MO snarfing a cp_m. 1 = Enable Probe.I.MO snarfing a cp_m.
41	RW	CONFIG_PREALLOC2_REQ0: 0/1 = Preallocate two state machines to brick 0 CREQ channel.
42	RW	CONFIG_PREALLOC2_PRB0: 0/1 = Preallocate two state machines to brick 0 PRB channel.
43	RW	CONFIG_PREALLOC2_REQ1: 0/1 = Preallocate two state machines to brick 1 CREQ channel.
44	RW	CONFIG_PREALLOC2_PRB1: 0/1 = Preallocate two state machines to brick 1 PRB channel.
45	RW	CONFIG_PREALLOC2_XATS: 0/1 = Preallocate two state machines to XATS interface.
46	RW	CONFIG_DISABLE_INJECT: 0 = Enable sending cl,pr_dma_inj. 1 = Disable sending cl,pr_dma_inj. **Note:** To disable sending _inj commands, the following bits must also be set to '0': config_ma_mcresp_opt_rty_inj config_ma_dsa_opt_rp_mode
47	RW	CONFIG_DCACHE_MODE: 0 = Drive data bus DCACHE field in basic mode. 1 = Drive data bus DCACHE field in CAPP mode.
48	RW	CONFIG_DCACHE_REPORTS_PHYSICAL: 0 = In basic mode report local masters as near. 1 = In basic mode report local masters as local.
49	RW	CONFIG_RSI_DISABLE_DATIN_FASTPATH: 0 = Enable RSI PB data in fastpath.. 1 = Disable fastpath.
50	RW	CONFIG_PCKT_BLK_PRB: 0 = Valid pocket cache entries, do not block probes. 1 = Probes are blocked.
51	RW	CONFIG_P9P9_MODE: 0 = Normal operation. 1 = Run in special lab bring-up GPUless POWER9-to-POWER9 mode.
52	RW	CONFIG_FORBID_MMIO_READ_GT_32: 0 = Allow GPU to PB MMIOs greater than 32 bytes. 1 = Flag error and brick fence on MMIOsgreater than 32 bytes.
53	RW	CONFIG_FORBID_MMIO_ATOMIC: 0 = Allow GPU tp PB atomics to MMIO space. 1 = Flag error and brick fence on atomics to MMIO space.
54	RW	CONFIG_OPT_SNOOP_CP: 0 = Snoop POWER9 memory cp_* type commands. 1 = Do not snoop cp_* type commands.
55:63	RW	CONFIG0_RESERVED3: Reserved.

Register Name	**CQ_SM Miscellaneous Configuration 1 Register**
Mnemonic	NPU.STCK0.CS.SM3.MISC.CONFIG1
Address	0000000005011061 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_RANDOM_BACKOFF_DUR_MASK: Mask for the base random duration of a random retry back-off: 0000 = 0 - 15 base random duration. 0001 = 0 - 31 base random duration. 0011 = 0 - 63 base random duration. 0111 = 0 - 127 base random duration. 1111 = 0 - 255 base random duration.
4:7	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_REQ: Mask for the slowdown of NTL CREQ credits during chgrate.hang. 'n' = $1/(2^{(n+1)})$ cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
8:11	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_PRB: Mask for the slowdown of NTL probe credits during chgrate.hang. 'n' = $1/(2^{(n+1)})$ cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
12:15	RW	CONFIG_ARB_NONCRR_SAFETY: Safety valve for non-CRESP/non-REQIN events going down the arbiter pipe. After n+1 REQIN events go through the arbiter while a non-CRR event is waiting, REQIN events are blocked to give non-CRR events a chance.
16:27	RW	CONFIG_EPSILON_WLN_COUNT: Epsilon count for Ln scope CP write.

Bits	SCOM	Field Mnemonic: Description
28:31	RW	CONFIG_SCALE_RPT_HANG_POLL: Scaling factor for rpt_hang.poll: 0 = 1:1 processor bus rpt_hang.polls received. 1 = 1:2 processor bus rpt_hang.polls received. ... 15 = 1:16 processor bus rpt_hang.polls received.
32:35	RW	CONFIG_SCALE_RPT_HANG_DATA: Scaling factor for rpt_hang.data: 0 = 1:1 processor bus rpt_hang.datas received. 1 = 1:2 processor bus rpt_hang.datas received. ... 15 = 1:16 processor bus rpt_hang.datas received.
36:63	RW	CONFIG1_RESERVED: Reserved.

Register Name	**Power Bus Epsilon Configuration Register**
Mnemonic	NPU.STCK0.CS.SM3.MISC.EPSILON_CONFIG
Address	0000000005011062 (SCOM)
Description	Processor bus Epsilon configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_EPSILON_RATE: 0 = Decrement Epsilon count at 1:1 nest_gckn. ... 15 = Epsilon count at 1/16 nest_gckn.
4:15	RW	CONFIG_EPSILON_W0_COUNT: Epsilon count for Nn/G scope CP write.
16:27	RW	CONFIG_EPSILON_W1_COUNT: Epsilon count for Rn/Vg scope CP write.
28:39	RW	CONFIG_EPSILON_R0_COUNT: Epsilon count for Ln scope Reads.
40:51	RW	CONFIG_EPSILON_R1_COUNT: Epsilon count for Nn/G scope Reads.
52:63	RW	CONFIG_EPSILON_R2_COUNT: Epsilon count for Rn/Vg scope Reads.

Register Name	**Timer Configuration Register**
Mnemonic	NPU.STCK0.CS.SM3.MISC.XTIMER_CONFIG
Address	0000000005011063 (SCOM)
Description	Timer configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	CONFIG_POCKET_RATE1: Rate-1 for the pocket cache with data entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
2:7	RW	CONFIG_POCKET_RATE2: Rate-2 for the long timer for pocket cache entries (2^n cycles).
8:13	RW	CONFIG_POCKET_RATE3: Rate-3 for the short timer for pocket cache entries (2^n cycles).
14:19	RW	CONFIG_FWD_PROG_RATE2: Rate-2 for the forward-progress timer (2^n cycles).

Bits	SCOM	Field Mnemonic: Description
20:25	RW	CONFIG_CTL_TICK: Rate for CTL timer tick (default 63 = off). **Note:** This field can/should have different values in each instance.
26:31	RW	CONFIG_INH0_TICK: Rate for SM-Inhibit timer tick0 (default 63 = off). **Note:** This field can/should have different values in each instance.
32:37	RW	CONFIG_INH1_TICK: Rate for SM-Inhibit timer tick1 (default 63 = off). **Note:** This field can/should have different values in each instance.
38:39	RW	CONFIG_NV_RESP_RATE1: Rate-1 for NV-Response timer. The timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds, where f(Rate-1) is: f(0b00) = 7. f(0b01) = 63. f(0b10) = 511. f(0b11) = 4095.
40:45	RW	CONFIG_NV_RESP_RATE2: Rate-2 for the NV-Response timer (2^n cycles).
46:47	RW	CONFIG_POCKET_ND_RATE1: Rate-1 for the pocket cache dataless entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The Short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
48:63	RO	Constant = 0b0000000000000000

Register Name	GPU BAR Register
Mnemonic	NPU.STCK0.CS.SM3.MISC.GPU_BAR
Address	0000000005011064 (SCOM)
Description	Memory BARs. BAR register defining GPU memory addresses serviced by bricks 0 and 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GPU0_BAR_ENABLE: 0 = Disable BAR for brick 0. 1 = Enable BAR for brick 0.
1:2	RW	CONFIG_GPU0_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 0. **Note:** It is illegal to set this field to 0b11.
3:6	RW	CONFIG_GPU0_BAR_GROUP: Group field of the base address of BAR for brick 0.
7:9	RW	CONFIG_GPU0_BAR_CHIP: Chip field of the base address of BAR for brick 0.
10:21	RW	CONFIG_GPU0_BAR_ADDR: Base address (1G address) of BAR for brick 0. Must be aligned on the size of the BAR mask.
22	RW	CONFIG_GPU0_BAR_RESERVED: Reserved.
23	RW	CONFIG_GPU0_BAR_GRANULE: Hash boundary for brick 0: 0 = Hash on 512B boundary (hashbits(0:7) = addr(47:54)). 1 = Hash on 1024B boundary (hashbits(0:7) = addr(46:53)).

Bits	SCOM	Field Mnemonic: Description
24:27	RW	CONFIG_GPU0_BAR_SIZE: Size of the base address match for the BAR for brick 0: 0 = 1G 1 = 2G 2 = 4G ... 9 = 512G 10 = 1T 11 = 2T 12 = 4T >12 = Reserved.
28:31	RW	CONFIG_GPU0_BAR_MODE: Hash mode of the BAR for brick 0: 0 = (single) match on all address in address/size. 1 = (dual.0) match if hashbits(7) = 0. 2 = (dual.1) match if hashbits(7) = 1. 3 = (triple.0) match if hashbits%3 = 0. 4 = (triple.1) match if hashbits%3 = 1. 5 = (triple.2) match if hashbits%3 = 2. 6 = (quad.0) match if hashbits(6:7) = 0. 7 = (quad.1) match if hashbits(6:7) = 1. 8 = (quad.2) match if hashbits(6:7) = 2. 9 = (quad.3) match if hashbits(6:7) = 3. 10 = (six.0) match if hashbits%3 = 0 and hashbits(7) = 0. 11 = (six.1) match if hashbits%3 = 0 and hashbits(7) = 1. 12 = (six.2) match if hashbits%3 = 1 and hashbits(7) = 0. 13 = (six.3) match if hashbits%3 = 1 and hashbits(7) = 1. 14 = (six.4) match if hashbits%3 = 2 and hashbits(7) = 0. 15 = (six.5) match if hashbits%3 = 2 and hashbits(7) = 1.

Register Name	PHY0/PHY1/NPU MMIO BAR Register
Mnemonic	NPU.STCK0.CS.SM3.MISC.PHY_BAR
Address	0000000005011066 (SCOM)
Description	BAR register defining PHY0/PHY1/NPU MMIO range. Stack 0 PHY_BAR defines a 2M range mapped to PHY 0 registers. Stack 1 PHY_BAR defines a 2M range mapped to PHY 1 registers. Stack 2 PHY_BAR defines a 16M range mapped to all NPU registers. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_PHY_BAR_ENABLE: 0 = Disable PHY_BAR. 1 = Enable PHY_BAR.
1:2	RW	PHY_RESERVED1: Reserved.
3:6	RW	CONFIG_PHY_BAR_GROUP: Group field of the 2M aligned address of this PHY_BAR.
7:9	RW	CONFIG_PHY_BAR_CHIP: Chip field of the 2M aligned address of this PHY_BAR.
10:30	RW	CONFIG_PHY_BAR_ADDR: The 2M aligned address of this PHY_BAR's 2M range. **Note:** In stack two, the low three address bits are reserved (16M range).
31	RW	PHY_RESERVED2: Reserved.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Generation ID BAR Register
Mnemonic	NPU.STCK0.CS.SM3.MISC.GENID_BAR
Address	0000000005011067 (SCOM)
Description	ID registers MMIO BAR. BAR register defining Generation ID register for this stack/ramp. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GENID_BAR_ENABLE: 0 = Disable this BAR. 1 = Enable this BAR.

Bits	SCOM	Field Mnemonic: Description
1:2	RW	GENID_RESERVED1: Reserved.
3:6	RW	CONFIG_GENID_BAR_GROUP: Group field of the 128K aligned address of this GENID_BAR.
7:9	RW	CONFIG_GENID_BAR_CHIP: Chip field of the 128K aligned address of this GENID_BAR.
10:34	RW	CONFIG_GENID_BAR_ADDR: The 128K aligned address of this BAR's 128K range.
35	RW	GENID_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	Low Water Register
Mnemonic	NPU.STCK0.CS.SM3.MISC.LOW_WATER
Address	0000000005011068 (SCOM)
Description	Water marks. State machine allocation for low water marks. Each low water mark should be greater than or equal to 1 and the sum of the low water marks must be less than config_max_machines. Low water marks must not be changed after config_enable_machine_alloc is set to 1 and config_enable_machine_alloc must remain at 1 once it is set to 1. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_LOW_WATER_XATS: Low water mark for XTS/MISC processor bus requests. Can only be changed while config_enable_machine_alloc = 0.
6:11	RW	CONFIG_LOW_WATER_PWR0: Low water mark for processor bus rd/dclaim/atomic/etc. requests. Can only be changed while config_enable_machine_alloc = 0.
12:17	RW	CONFIG_LOW_WATER_PWR1: Low water mark for processor bus CP (castout-push) requests. Can only be changed while config_enable_machine_alloc = 0.
18:23	RW	CONFIG_LOW_WATER_REQ0: Low water mark for NVLink brick 0 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
24:29	RW	CONFIG_LOW_WATER_PRB0: Low water mark for NVLink brick 0 probe requests. Can only be changed while config_enable_machine_alloc = 0.
30:35	RW	CONFIG_LOW_WATER_REQ1: Low water mark for NVLink brick 1 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
36:41	RW	CONFIG_LOW_WATER_PRB1: Low water mark for NVLink brick 1 probe requests. Can only be changed while config_enable_machine_alloc = 0.
42:47	RW	CONFIG_MAX_MACHINES: Maximum number of state machines to be used. Must be >= 8 and <= 62. Can only be changed while config_enable_machine_alloc = 0.
48:50	RW	LOW_WATER_RESERVED1: Reserved.
51	RW	CONFIG_ENABLE_MACHINE_ALLOC: Enable state machine allocation. Can only be changed from 0 to 1 and must stay at 1 once set.
52:63	RO	Constant = 0b000000000000

Register Name	High Water Register
Mnemonic	NPU.STCK0.CS.SM3.MISC.HIGH_WATER
Address	0000000005011069 (SCOM)
Description	Water marks. State machine allocation for high water marks. Each high water mark should be greater than or equal to the corresponding config_low_water and less than config_max_machines. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_HIGH_WATER_XATS: High water mark for XTS/MISC processor bus requests.
6:11	RW	CONFIG_HIGH_WATER_PWR0: High water mark for processor bus rd/dclaim/atomic/etc. requests.
12:17	RW	CONFIG_HIGH_WATER_PWR1: High water mark for processor bus CP (castout-push) requests.
18:23	RW	CONFIG_HIGH_WATER_REQ0: High water mark for NVLink brick 0 non-probe requests.
24:29	RW	CONFIG_HIGH_WATER_PRB0: High water mark for NVLink brick 0 probe requests.
30:35	RW	CONFIG_HIGH_WATER_REQ1: High water mark for NVLink brick 1 non-probe requests.
36:41	RW	CONFIG_HIGH_WATER_PRB1: High water mark for NVLink brick 1 probe requests.
42:43	RW	HIGH_WATER_RESERVED1: Reserved.
44:63	RO	Constant = 0b00000000000000000000

Register Name	**Relaxed Configuration 0 Register**
Mnemonic	NPU.STCK0.CS.SM3.MISC.CONFIG_RELAXED0
Address	000000000501106A (SCOM)
Description	Ordering configuration 0 register used to configure relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_SOURCE0_WRENA: 0 = Disable relaxed source 0 for write operations. 1 = Enable relaxed source 0 for write operations.
1	RW	CONFIG_RELAXED_SOURCE0_RDENA: 0 = Disable relaxed source 0 for read operations. 1 = Enable relaxed source 0 for read operations.

Register Name	CERR Message 3 Register
Mnemonic	NPU.STCK0.CS.SM3.MISC.CERR_MESSAGE3
Address	0000000005011074 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS3: Reserved.

Register Name	CERR Message 4 Register
Mnemonic	NPU.STCK0.CS.SM3.MISC.CERR_MESSAGE4
Address	0000000005011075 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS4: Reserved.

Register Name	CQ_SM Status Register
Mnemonic	NPU.STCK0.CS.SM3.MISC.SM_STATUS
Address	0000000005011076 (SCOM)
Description	Status reporting register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SM_STATUS_CREQ0: Set to 1 when brick 0 CREQ allocation is at its idle level.
1	ROX	SM_STATUS_PRB0: Set to 1 when brick 0 probe allocation is at its idle level.

Bits	SCOM	Field Mnemonic: Description
2	ROX	SM_STATUS_CREQ1: Set to 1 when brick 1 CREQ allocation is at its idle level.
3	ROX	SM_STATUS_PRB1: Set to 1 when brick 1 probe allocation is at its idle level.
4	ROX	SM_STATUS_XATS: Set to 1 when ATS/MISC allocation is at its idle level.
5	ROX	SM_STATUS_PWR0: Set to 1 when processor bus (non-CP*) allocation is at its idle level.
6	ROX	SM_STATUS_PWR1: Set to 1 when processor bus (CP*) allocation is at its idle level.
7	ROX	SM_STATUS_CHGRATE: Set to 1 when chgrate.hang slowdown is being applied to machine allocation.
8:11	ROX	SM_STATUS_MRBGP: Master retry back-off level for group-pump commands.
12:15	ROX	SM_STATUS_MRBSP: Master retry back-off level for system-pump commands.
16:19	ROX	SM_STATUS_FENCE0: Brick 0 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X = Flushing pocket cache entries prior to exiting fence.
20:23	ROX	SM_STATUS_FENCE1: Brick 1 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X = Flushing pocket cache entries prior to exiting fence.
24	ROX	SM_STATUS_PBLN: Set to 1 when the outbound Ln scope processor bus request queue is empty.
25	ROX	SM_STATUS_PBNNG: Set to 1 when the outbound Nn/G scope processor bus request queue is empty.
26	ROX	SM_STATUS_PBRNVG: Set to 1 when the outbound Rn/Vg scope processor bus request queue is empty.
27	ROX	SM_STATUS_N0REQ: Set to 1 when the outbound brick 0 CREQ request queue is empty.
28	ROX	SM_STATUS_N0DGD: Set to 1 when the outbound brick 0 downgrade request queue is empty.
29	ROX	SM_STATUS_N1REQ: Set to 1 when the outbound brick 1 CREQrequest queue is empty.
30	ROX	SM_STATUS_N1DGD: Set to 1 when the outbound brick 1 downgrade request queue is empty.
31	ROX	SM_STATUS_MMIO: Set to 1 when the outbound MMIO/GenId request queue is empty.
32	ROX	SM_STATUS_ATSXLATE: Set to 1 when the outbound ATS TCE translation request queue is empty.
33	ROX	SM_STATUS_PBRSP: Set to 1 when the outbound processor bus dataresponse/merge operation queue is empty.
34	ROX	SM_STATUS_N0RSP: Set to 1 when the outbound brick 0 response queue is empty.
35	ROX	SM_STATUS_N1RSP: Set to 1 when the outbound brick 1 response queue is empty.
36	ROX	SM_STATUS_XARSP: 1Set to when the outbound ATS/MISC response queue is empty.
37	ROX	SM_STATUS_SACOLL: Set to 1 when the same address collision check queue is empty.
38	ROX	SM_STATUS_FREE: Set to 1 when the free state machine queue is empty.
39	ROX	SM_STATUS_RESERVED1: Reserved.
40:63	RO	Constant = 0b000000000000000000000000

Register Name	CERR First 2 Register
Mnemonic	NPU.STCK0.CS.SM3.MISC.CERR_FIRST2
Address	0000000005011079 (SCOM)
Description	c_err_rpt first latches read-write-1-clear register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_0: NLG0 s3: RCMD event received, but state machine is not idle.
1	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_1: NLG1 s3: Pocket hit event, but not in M_PCKT_WAIT_HIT state.
2	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_2: NLG2 s3: M_WT_CRESP: ma_scresp table look-up missed.
3	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_3: NLG3 s3: M_WT_CRESP: Sart Epsilon, but Epsilon already in progress.
4	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_4: NLG4 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have NV modified data.
5	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_5: NLG5 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have PB modified data.
6	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_6: NLG6 s3: M_WT_CRESP: Bad scenario code from ma_scresp table.
7	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_7: NLG7 s3: Snoop CRESP received. but not in M_WT_CRESP state.
8	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_8: NLG8 s3: MCResp pocket hit event, but not in PC_* state.
9	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_9: NLG9 s3: PC_WT_CRESP: ma_mcresp table look-up missed.
10	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_10: NLG10 s3: PC_WT_CRESP: Write coll state did not match early protection state.
11	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_11: NLG11 s3: PC_WT_CRESP: Start Epsilon, but Epsilon already in progress.
12	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_12: NLG12 s3: PC_WT_CRESP: Bad scenario code from ma_mcresp table.
13	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_13: NLG13 s3: PC_BK_WT_CRESP: Bad next step for bkill (ack-done).
14	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_14: NLG14 s3: PC_BK_WT_CRESP: Bad next step for bkill (retry).
15	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_15: NLG15 s3: PC_BK_WT_CRESP: Bad CRESP for a bkill.
16	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_16: NLG16 s3: Master CRESP received, but not in PC_WT_CRESP/PC_BK_WT_CRESP states.
17	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_17: NLG17 s3: M_IDLE: Invalid DATALEN[3:0] for data command.
18	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_18: NLG18 s3: M_IDLE: Invalid command type received.
19	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_19: NLG19 s3: AT translate response event, but not in wait translate state.
20	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_20: NLG20 s3: AT translate response event had bad translate status, but command not recognized.
21	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_21: NLG21 s3: SA done event, but not in wait SA state.
22	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_22: NLG22 s3: PC_WAIT_DATADONE: Bad next step for PB data transmit.
23	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_23: NLG23 s3: TD_WAIT_DATADONE: Unknown NVLink master command.
24	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_24: NLG24 s3: BuffDone event, but not in PB/PC/MG/NR/XATS/TD_WAIT_DATADONE state.
25	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_25: NLG25 s3: NC_WT_RESP: Unknown NV master command for NVLink response.
26	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_26: NLG26 s3: RSPLN event, but not in RG_WT_RESP or NC_WT_RESP state.
27	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_27: NLG27 s3: Epsilon in progress, but Epsilon counter clock is not the Epsilon clock.

Bits	SCOM	Field Mnemonic: Description
28	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_28: NLG28 s3: Epsilon counter clock is 'epsilon', but epsilon_ip is not set.
29	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_29: NLG29 s3: PC_WT_BK_RBACK: Bad next step for bkill.
30	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_30: NLG30 s3: M/RR_BACK timer expired, but not in PC_WT(_BK)_RBACK state.
31	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_31: NLG31 s3: Bad epclock value.
32	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_32: NLG32 s3: coll_state is POCKET_RCOLL_ND, but master state is not PCKT_WAIT_HIT.
33	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_33: NLG33 s3: Unknown sm_master_state in ESCAN_LCAO event.
34	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_34: NLG34 s3: Unknown event type received.
35	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_35: NLG35 s4: M_EVAL_DIR: ma_dsa table look-up missed.
36	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_36: NLG36 s4: M_EVAL_DIR: Unknown merge opcode from DSA table.
37	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_37: NLG37 s4: Unknown state.
38	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_38: NLG38 s3: coll_state is POCKET_RCOLL_OND, but master state is not PCKT_WAIT_HIT.
39	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_39: NLG39 s3: Unknown sm_master_state in ESCAN_FENCE event.
40	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_40: NLG40 s3: FENCE_WT_RESP_FILL: Unknown NV master command for Fence-Fill-SUE response.
41	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_41: NLG41 s3: M_WT_CRESP: Impossible command/CRESP.
42	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_42: NLG42 s3: PC_WT_CRESP: Impossible command/CRESP.
43	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_43: NLG43 s3: M_EVAL_DIR: Impossible command/CRESP.
44	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_44: NLG44 s4: Unexpected error state (bad sub-sequence return).
45	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_45: NLG45 s3: sfstat-retry, but not in retry-abbks collision state.
46	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_46: NLG46 s3: *cond*-retry, but not in retry-abbks collision state.
47	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_47: NLG47 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.
48	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_48: NLG48 s3: NVLink response timeout, but not in waiting for NV response state.
49	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_49: NLG49 s4: M_EVAL_DIR: Unsupported NVLink command for POWER9-to-POWER9 mode.
50	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_50: NLG50 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.

Register Name	**CERR Mask 2 Register**
Mnemonic	NPU.STCK0.CS.SM3.MISC.CERR_MASK2
Address	0000000005011070 (SCOM)
Description	c_err_rpt mask register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	IDIAL_SM_MASK_NLG_0: NLG0 s3: RCMD event received, but state machine is not idle.
1	RW	IDIAL_SM_MASK_NLG_1: NLG1 s3: Pocket hit event, but not in M_PCKT_WAIT_HIT state.
2	RW	IDIAL_SM_MASK_NLG_2: NLG2 s3: M_WT_CRESP: ma_scresp table look-up missed.
3	RW	IDIAL_SM_MASK_NLG_3: NLG3 s3: M_WT_CRESP: Start Epsilon, but Epsilon already in progress.
4	RW	IDIAL_SM_MASK_NLG_4: NLG4 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have NV modified data.
5	RW	IDIAL_SM_MASK_NLG_5: NLG5 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have PB modified data.
6	RW	IDIAL_SM_MASK_NLG_6: NLG6 s3: M_WT_CRESP: Bad scenario code from ma_scresp table.
7	RW	IDIAL_SM_MASK_NLG_7: NLG7 s3: Snoop CRESP received, but not in M_WT_CRESP state.
8	RW	IDIAL_SM_MASK_NLG_8: NLG8 s3: MCResp pocket hit event, but not in PC_* state.
9	RW	IDIAL_SM_MASK_NLG_9: NLG9 s3: PC_WT_CRESP: ma_mcresp table look-up missed.
10	RW	IDIAL_SM_MASK_NLG_10: NLG10 s3: PC_WT_CRESP: Write coll state did not match early protection state.
11	RW	IDIAL_SM_MASK_NLG_11: NLG11 s3: PC_WT_CRESP: Start Epsilon, but Epsilon already in progress.
12	RW	IDIAL_SM_MASK_NLG_12: NLG12 s3: PC_WT_CRESP: Bad scenario code from ma_mcresp table.
13	RW	IDIAL_SM_MASK_NLG_13: NLG13 s3: PC_BK_WT_CRESP: Bad next step for bkill (ack-done).

Bits	SCOM	Field Mnemonic: Description
14	RW	IDIAL_SM_MASK_NLG_14: NLG14 s3: PC_BK_WT_CRESP: Bad next step for bkill (retry).
15	RW	IDIAL_SM_MASK_NLG_15: NLG15 s3: PC_BK_WT_CRESP: Bad CRESP for a bkill.
16	RW	IDIAL_SM_MASK_NLG_16: NLG16 s3: Master CRESP received, but not in PC_WT_CRESP/PC_BK_WT_CRESP states.
17	RW	IDIAL_SM_MASK_NLG_17: NLG17 s3: M_IDLE: Invalid DATALEN[3:0] for data command.
18	RW	IDIAL_SM_MASK_NLG_18: NLG18 s3: M_IDLE: Invalid command type received.
19	RW	IDIAL_SM_MASK_NLG_19: NLG19 s3: AT translate response event, but not in wait translate state.
20	RW	IDIAL_SM_MASK_NLG_20: NLG20 s3: AT translate response event had bad translate status, but command not recognized.
21	RW	IDIAL_SM_MASK_NLG_21: NLG21 s3: SA done event, but not in wait SA state.
22	RW	IDIAL_SM_MASK_NLG_22: NLG22 s3: PC_WAIT_DATADONE: Bad next step for PB data transmit.
23	RW	IDIAL_SM_MASK_NLG_23: NLG23 s3: TD_WAIT_DATADONE: Unknown NVLink master command.
24	RW	IDIAL_SM_MASK_NLG_24: NLG24 s3: BuffDone event, but not in PB/PC/MG/NR/XATS/TD_WAIT_DATADONE state.
25	RW	IDIAL_SM_MASK_NLG_25: NLG25 s3: NC_WT_RESP: Unknown NV master command for NVLink response.
26	RW	IDIAL_SM_MASK_NLG_26: NLG26 s3: RSPL event, but not in RG_WT_RESP or NC_WT_RESP state.
27	RW	IDIAL_SM_MASK_NLG_27: NLG27 s3: Epsilon in progress, but Epsilon counter clock is not the Epsilon clock.
28	RW	IDIAL_SM_MASK_NLG_28: NLG28 s3: Epsilon counter clock is 'epsilon', but epsilon_ip is not set.
29	RW	IDIAL_SM_MASK_NLG_29: NLG29 s3: PC_WT_BK_RBACK: Bad next step for bkill.
30	RW	IDIAL_SM_MASK_NLG_30: NLG30 s3: M/RR_BACK timer expired, but not in PC_WT(_BK)_RBACK state.
31	RW	IDIAL_SM_MASK_NLG_31: NLG31 s3: Bad epclock value.
32	RW	IDIAL_SM_MASK_NLG_32: NLG32 s3: coll_state is POCKET_RCOLL_ND, but master state is not PCKT_WAIT_HIT.
33	RW	IDIAL_SM_MASK_NLG_33: NLG33 s3: Unknown sm_master_state in ESCAN_LCAO event.
34	RW	IDIAL_SM_MASK_NLG_34: NLG34 s3: Unknown event type received.
35	RW	IDIAL_SM_MASK_NLG_35: NLG35 s4: M_EVAL_DIR: ma_dsa table look-up missed.
36	RW	IDIAL_SM_MASK_NLG_36: NLG36 s4: M_EVAL_DIR: Unknown merge opcode from DSA table.
37	RW	IDIAL_SM_MASK_NLG_37: NLG37 s4: Unknown state.
38	RW	IDIAL_SM_MASK_NLG_38: NLG38 s3: coll_state is POCKET_RCOLL_OND, but master state is not PCKT_WAIT_HIT.
39	RW	IDIAL_SM_MASK_NLG_39: NLG39 s3: Unknown sm_master_state in ESCAN_FENCE event.
40	RW	IDIAL_SM_MASK_NLG_40: NLG40 s3: FENCE_WT_RESP_FILL: Unknown NV master command for Fence-Fill-SUE response.
41	RW	IDIAL_SM_MASK_NLG_41: NLG41 s3: M_WT_CRESP: Impossible command/CRESP.
42	RW	IDIAL_SM_MASK_NLG_42: NLG42 s3: PC_WT_CRESP: Impossible command/CRESP.
43	RW	IDIAL_SM_MASK_NLG_43: NLG43 s3: M_EVAL_DIR: Impossible command/CRESP.
44	RW	IDIAL_SM_MASK_NLG_44: NLG44 s4: Unexpected error state (bad sub-sequence return).
45	RW	IDIAL_SM_MASK_NLG_45: NLG45 s3: sfstat-retry, but not in retry-abbks collision state.
46	RW	IDIAL_SM_MASK_NLG_46: NLG46 s3: *cond*-retry, but not in retry-abbks collision state.

Bits	SCOM	Field Mnemonic: Description
47	RW	IDIAL_SM_MASK_NLG_47: NLG47 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.
48	RW	IDIAL_SM_MASK_NLG_48: NLG48 s3: NVLink response timeout, but not in waiting for NV response state.
49	RW	IDIAL_SM_MASK_NLG_49: NLG49 s4: M_EVAL_DIR: Unsupported NVLink command for POWER9-to-POWER9 mode.
50	RW	IDIAL_SM_MASK_NLG_50: NLG50 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.
51	RW	IDIAL_SM_MASK_NLG_51: NLG51 (Reserved).

Register Name	CQ_CTL Miscellaneous Configuration 0 Register
Mnemonic	NPU.STCK0.CS.CTL.MISC.CONFIG0
Address	0000000005011080 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG1_RESERVED0: Reserved. **Note:** This was 1dot0 mode.
1:3	RW	CONFIG1_RESERVED1: Reserved.
4	RW	CONFIG_ADR_BAR_MODE: Processor bus adr_bar: 0 = Large system mode. 1 = Small system mode.

Bits	SCOM	Field Mnemonic: Description
5:9	RW	CONFIG_GEN_HEAD_DELAY: Number of cycles to wait for generation done when reading a generation head register. **Note:** Setting this field to 0 hangs the NPU.
10	RW	CONFIG_MRBGP_DIV2_COUNT_AT_EXP: 0 = Reset the master retry back-off retry count to zero when the sample period expires for group-pump. 1 = Divide the master retry back-off retry count by two when the sample period expires for group-pump.
11	RW	CONFIG_MRBSP_DIV2_COUNT_AT_EXP: 0 = Reset the master retry back-off retry count to zero when the sample period expires for system-pump. 1 = Divide the master retry back-off retry count by two when the sample period expires for system-pump.
12	RW	CONFIG_MRBGP_DIS_DYN_ADJ: 0 = Enable dynamically adjusting the master retry back-off sample period based on level for group-pump. 1 = Disable dynamically adjusting the master retry back-off sample period based on level for group-pump.
13	RW	CONFIG_MRBSP_DIS_DYN_ADJ: 0 = Enable dynamically adjusting the master retry back-off sample period based on level for system-pump. 1 = Disable dynamically adjusting the master retry back-off sample period based on level for system-pump.
14	RW	CONFIG_MRBGP_DIS_DYN_LVL_ADJ: 0 = Enable dynamically adjusting the master retry back-off thresholds based on level for group-pump. 1 = Disable dynamically adjusting the master retry back-off thresholds based on level for group-pump.
15	RW	CONFIG_MRBSP_DIS_DYN_LVL_ADJ: 0 = Enable dynamically adjusting the master retry back-off thresholds based on level for system-pump 1 = Disable dynamically adjusting the master retry back-off thresholds based on level for system-pump.
16:21	RW	CONFIG_MRBGP_THRESH1: Master retry back-off retry-count threshold at which to reduce the level for group-pump.
22:27	RW	CONFIG_MRBGP_THRESH2: Master retry back-off retry count threshold at which to increase the level for group-pump. **Note:** Make sure that thresh2 is greater than thresh1or the back-off level will only increase.
28:33	RW	CONFIG_MRBSP_THRESH1: Master retry back-off retry-count threshold at which to reduce the level for system-pump.
34:39	RW	CONFIG_MRBSP_THRESH2: Master retry back-off retry count threshold at which to increase the level for system-pump. **Note:** Make sure that thresh2 is greater than thresh1 or the back-off level will only increase.
40:43	RW	CONFIG_MRBGP_MAX_LEVEL: Master retry back-off maximum level for group-pump.
44:47	RW	CONFIG_MRBSP_MAX_LEVEL: Master retry back-off maximum level for system-pump.
48	RW	CONFIG_BRAZOS_MODE: 0 = Non-brazos 4-group; 2-chip mode. 1 = Brazos 2-group; 4-chip mode.
49	RW	CONFIG_DISABLE_PBM_ECC_COR: 0 = Enable ECC correction of MMIO store data. 1 = Disable ECC correction.
50	RW	CONFIG_LAB_RANDOMIZE_PE_01: 0 = Do not randomize PE(0:1). 1 = Randomize PE(0:1).
51	RW	CONFIG_LAB_RANDOMIZE_PE_23: 0 = Do not randomize PE(2:3). 1 = Randomize PE(2:3).
52:63	RW	CONFIG1_RESERVED2: Reserved.

Register Name	Future Configuration 1 Register
Mnemonic	NPU.STCK0.CS.CTL.MISC.CONFIG1
Address	0000000005011081 (SCOM)
Description	Currently a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_CONFIG1: Future configuration register.

Register Name	Future Configuration 2 Register
Mnemonic	NPU.STCK0.CS.CTL.MISC.CONFIG2
Address	0000000005011082 (SCOM)
Description	Currently a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_CONFIG2: Future configuration register.

Register Name	Future Configuration 3 Register
Mnemonic	NPU.STCK0.CS.CTL.MISC.CONFIG3
Address	0000000005011083 (SCOM)
Description	Currently reserved a register.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_CONFIG3: Future configuration register.

Register Name	Performance Match Configuration Register
Mnemonic	NPU.STCK0.CS.CTL.MISC.PERF_MATCH_CONFIG
Address	0000000005011084 (SCOM)
Description	Performance event field match register.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	PERF_MATCH_NMCMD: NVLink command.
6:10	RW	PERF_MATCH_NMEXCMD: NVLink ExtReqCmd.
11	RW	PERF_MATCH_BE: NVLink byte enables.
12:17	RW	PERF_MATCH_CS: NVLink CS(0:5).
18:33	RW	PERF_MATCH_AECS: NVLink AECS(0:15).
34:37	RW	PERF_MATCH_PE: PE.
38:39	RW	PERF_MATCH_RESERVED1: Reserved.
40:63	RO	Constant = 0b00000000000000000000000

Register Name	Performance Mask Configuration Register
Mnemonic	NPU.STCK0.CS.CTL.MISC.PERF_MASK_CONFIG
Address	0000000005011085 (SCOM)
Description	Performance event field mask register.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	PERF_MASK_NMCMD: NVLink command.
6:10	RW	PERF_MASK_NMEXCMD: NVLink ExtReqCmd.
11	RW	PERF_MASK_BE: NVLink byte enables.
12:17	RW	PERF_MASK_CS: NVLink CS(0:5).
18:33	RW	PERF_MASK_AECS: NVLink AECS(0:15).
34:37	RW	PERF_MASK_PE: PE.
38:39	RW	PERF_MASK_RESERVED1: Reserved.
40:63	RO	Constant = 0b0000000000000000000000000

Register Name	CQ_CTL Performance Count Register
Mnemonic	NPU.STCK0.CS.CTL.MISC.PERF_COUNT
Address	0000000005011086 (SCOM)
Description	PMULet count values register.

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	IDIAL_PERF_COUNT0: Performance counter 0.
16:31	RWX_WCLRREG	IDIAL_PERF_COUNT1: Performance counter 1.
32:47	RWX_WCLRREG	IDIAL_PERF_COUNT2: Performance counter 2.
48:63	RWX_WCLRREG	IDIAL_PERF_COUNT3: Performance counter 3.

Register Name	Performance Configuration Register
Mnemonic	NPU.STCK0.CS.CTL.MISC.PERF_CONFIG
Address	0000000005011087 (SCOM)
Description	Performance event selection register.

Bits	SCOM	Field Mnemonic: Description
0	RW	PERF_CONFIG_ENABLE: PMULet Enable (clocks enable).
1	RW	PERF_CONFIG_RESETMODE: 0 = Reset on read. 1 = Reset on write.
2	RW	PERF_CONFIG_FREEZEMODE: 0 = Free run mode. 1 = Freeze on any maximum.
3	RW	PERF_CONFIG_DISABLE_PMISC: 0 = Enable PMISC control of counters. 1 = Disable PMISC control of counters.

Bits	SCOM	Field Mnemonic: Description
4	RW	PERF_CONFIG_PMISC_MODE: 0 = Global PMU PMISC no reset. 1 = Global PMU PMISC reset on enable.
5:7	RW	PERF_CONFIG_CASCADE: PMULet cascade configuration.
8:9	RW	PERF_CONFIG_PRESCALE_C0: Prescale configuration for counter 0.
10:11	RW	PERF_CONFIG_PRESCALE_C1: Prescale configuration for counter 1.
12:13	RW	PERF_CONFIG_PRESCALE_C2: Prescale configuration for counter 2.
14:15	RW	PERF_CONFIG_PRESCALE_C3: Prescale configuration for counter 3.
16:23	RW	PERF_CONFIG_EVENT0: Event 0 select.
24:31	RW	PERF_CONFIG_EVENT1: Event 0 select.
32:39	RW	PERF_CONFIG_EVENT2: Event 0 select.
40:47	RW	PERF_CONFIG_EVENT3: Event 0 select.
48:52	RW	PERF_CONFIG_LATSTART: Latency count start event.
53:57	RW	PERF_CONFIG_LATCANCEL: Latency count abort event.
58:62	RW	PERF_CONFIG_LATFINISH: Latency count finish event.
63	RW	PERF_CONFIG_RESERVED: Reserved.

Register Name	**Debug0 Configuration Register**
Mnemonic	NPU.STCK0.CS.CTL.MISC.DEBUG0_CONFIG
Address	0000000005011088 (SCOM)
Description	Configuration register for trace 0 chain.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG0_CONFIG_POD0: Multiplexer control for byte 0 of trace 0.
5:9	RW	DEBUG0_CONFIG_POD1: Multiplexer control for byte 1 of trace 0.
10:14	RW	DEBUG0_CONFIG_POD2: Multiplexer control for byte 2 of trace 0.
15:19	RW	DEBUG0_CONFIG_POD3: Multiplexer control for byte 3 of trace 0.
20:24	RW	DEBUG0_CONFIG_POD4: Multiplexer control for byte 4 of trace 0.
25:29	RW	DEBUG0_CONFIG_POD5: Multiplexer control for byte 5 of trace 0.
30:34	RW	DEBUG0_CONFIG_POD6: Multiplexer control for byte 6 of trace 0.
35:39	RW	DEBUG0_CONFIG_POD7: Multiplexer control for byte 7 of trace 0.
40:44	RW	DEBUG0_CONFIG_POD8: Multiplexer control for byte 8 of trace 0.
45:49	RW	DEBUG0_CONFIG_POD9: Multiplexer control for byte 9 of trace 0.
50:54	RW	DEBUG0_CONFIG_POD10: Multiplexer control for byte 10 of trace 0.
55:62	RW	DEBUG0_CONFIG_RESERVED1: Reserved.
63	RW	DEBUG0_CONFIG_ACT: Enable clock gates for debug trace latches.

Register Name	Debug1 Configuration Register
Mnemonic	NPU.STCK0.CS.CTL.MISC.DEBUG1_CONFIG
Address	0000000005011089 (SCOM)
Description	Configuration register for trace 1 chain.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG1_CONFIG_POD0: Multiplexer control for byte 0 of trace 1.
5:9	RW	DEBUG1_CONFIG_POD1: Multiplexer control for byte 1 of trace 1.
10:14	RW	DEBUG1_CONFIG_POD2: Multiplexer control for byte 2 of trace 1.
15:19	RW	DEBUG1_CONFIG_POD3: Multiplexer control for byte 3 of trace 1.
20:24	RW	DEBUG1_CONFIG_POD4: Multiplexer control for byte 4 of trace 1.
25:29	RW	DEBUG1_CONFIG_POD5: Multiplexer control for byte 5 of trace 1.
30:34	RW	DEBUG1_CONFIG_POD6: Multiplexer control for byte 6 of trace 1.
35:39	RW	DEBUG1_CONFIG_POD7: Multiplexer control for byte 7 of trace 1.
40:44	RW	DEBUG1_CONFIG_POD8: Multiplexer control for byte 8 of trace 1.
45:49	RW	DEBUG1_CONFIG_POD9: Multiplexer control for byte 9 of trace 1.
50:54	RW	DEBUG1_CONFIG_POD10: Multiplexer control for byte 10 of trace 1.
55:62	RW	DEBUG1_CONFIG_RESERVED1: Reserved.
63	RW	DEBUG1_CONFIG_ACT: Enable clock gates for debug trace latches.

Register Name	Brick 0 BDF-to-PE Configuration 0 Register
Mnemonic	NPU.STCK0.CS.CTL.MISC.BDF2PE_00_CONFIG
Address	000000000501108A (SCOM)
Description	Configured BDF-to-PE mapping #0 for brick 0 register. **Note:** Across all six bricks of an NPU, each BDF can map to at most one PE.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_BDF2PE_00_ENABLE: 0 = This BDF-to-PE mapping is disabled. 1 = This BDF-to-PE mapping is enabled.
1	RW	CONFIG_BDF2PE_00_WILDCARD: 0 = This BDF-to-PE mapping matches only this BDF. 1 = This BDF-to-PE mapping matches all BDFs.
2:3	RW	CONFIG_BDF2PE_00_RESERVED: Reserved.
4:7	RW	CONFIG_BDF2PE_00_PE: PE (Partitionable Endpoint) associated with this BDF.

Mnemonic	NPU.STCK0.CS.CTL.MISC.BDF2PE_12_CONFIG
Address	000000000501108F (SCOM)
Description	Configured BDF-to-PE mapping #2 for brick 1 register. **Note:** Across all six bricks of an NPU, each BDF can map to at most one PE.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_BDF2PE_12_ENABLE: 0 = This BDF-to-PE mapping is disabled. 1 = This BDF-to-PE mapping is enabled.
1:3	RW	CONFIG_BDF2PE_12_RESERVED: Reserved.
4:7	RW	CONFIG_BDF2PE_12_PE: PE (Partitionable Endpoint) associated with this BDF.
8:23	RW	CONFIG_BDF2PE_12_BDF: BDF (Bus-Device-Function) mapped to this PE.
24:63	RO	Constant = 0b0000000000000000000000000000000000000000

Register Name	**LPC Threshold Configuration Register**
Mnemonic	NPU.STCK0.CS.CTL.MISC.LPCTH_CONFIG
Address	0000000005011090 (SCOM)
Description	Threshold configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_LPCTH_BUSY_ENABLE: 0 = Disable thresholding. 1 = Enable thresholding.
1:3	RW	CONFIG_LPCTH_WINDOW_SELECT: 001 = 256 cycle window. 010 = 512 cycle window. 100 = 1024 cycle window.
4:13	RW	CONFIG_LPCTH_THRESH_0: Busy counter threshold 0. When this threshold is exceeded, the LPC_th field in the partial response ATAG is set to '01'.
14:23	RW	CONFIG_LPCTH_THRESH_1: Busy counter threshold 1. When this threshold is exceeded, the LPC_th field in the partial response ATAG is set to '10'.
24:33	RW	CONFIG_LPCTH_THRESH_2: Busy counter threshold 2. When this threshold is exceeded, the LPC_th field in the partial response ATAG is set to '11'.
34:35	RW	CONFIG_LPCTH_RESERVED1: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	Inhibit Configuration Register
Mnemonic	NPU.STCK0.CS.CTL.MISC.INHIBIT_CONFIG
Address	0000000005011091 (SCOM)
Description	This register configures inhibits for CQ_CTL.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_INHIBIT_LFREQ0: Base LFSR frequency 0: 0..11 = $1/2^{(n+1)}$ 12 = $1/2^{14}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
4:5	RW	CONFIG_INHIBIT_PFREQ0: Selects pre-frequency 0: 0 = SM0 timer tick. 1 = Inverted SM0 timer tick. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
6	RW	CONFIG_INHIBIT_BLOCKY0: 0 = Disable blocky mode. 1 = Enable blocky mode.
7	RW	CONFIG_INHIBIT_ONESHOT0: 0 = Continuous mode. 1 = One shot mode.
8:15	RW	CONFIG_INHIBIT_DEST0: Selects the destination of the inhibit.
16:19	RW	CONFIG_INHIBIT_LFREQ1: Base LFSR frequency 0: 0..11 = $1/2^{(n+1)}$ 12 = $1/2^{14}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$

Bits	SCOM	Field Mnemonic: Description
20:21	RW	CONFIG_INHIBIT_PFREQ1: Selects pre-frequency 0: 0 = SM1 timer tick. 1 = Inverted SM1 timer tick. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
22	RW	CONFIG_INHIBIT_BLOCKY1: 0 = Disable blocky mode. 1 = Enable blocky mode.
23	RW	CONFIG_INHIBIT_ONESHOT1: 0 = Continuous mode. 1 = One shot mode.
24:31	RW	CONFIG_INHIBIT_DEST1: Selects the destination of the inhibit.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	CQ_CTL Status Register
Mnemonic	NPU.STCK0.CS.CTL.MISC.CTL_STATUS
Address	0000000005011092 (SCOM)
Description	Status reporting register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	CTL_STATUS_SM_MMIO0: Set to 1 when SM slice 0 has an MMIO pending.
1	ROX	CTL_STATUS_SM_MMIO1: Set to 1 when SM slice 1 has an MMIO pending.
2	ROX	CTL_STATUS_SM_MMIO2: Set to 1 when SM slice 2 has an MMIO pending.
3	ROX	CTL_STATUS_SM_MMIO3: Set to 1 when SM slice 3 has an MMIO pending.
4:7	ROX	CTL_STATUS_MRBGP: Master retry back-off level for group-pump commands.
8:11	ROX	CTL_STATUS_MRBSP: Master retry back-off level for system-pump commands.
12:15	ROX	CTL_STATUS_FENCE0: Brick 0 fence sequencing state: 0000 = Idle state, completely unfenced. 1001 = Fenced state, fence sequencing complete. 1100 = Half-fenced state, NTL is not fenced. others = In transition between fenced and not fenced.
16:19	ROX	CTL_STATUS_FENCE1: Brick 1 fence sequencing state: 0000 = Idle state, completely unfenced. 1001 = Fenced state, fence sequencing complete. 1100 = Half-fenced state, NTL is not fenced. others = In transition between fenced and not fenced.
20:21	ROX	CTL_STATUS_LPCTH: LPC threshold value driven in partial responses.
22:26	ROX	CTL_STATUS_PBM_STATE: PB-MMIO/GenId state (0b00000 = Idle).
27	ROX	CTL_STATUS_BRK0_RLX: Set to 1 when brick 0 Gen-Id/relaxed ordering is idle.
28	ROX	CTL_STATUS_BRK1_RLX: Set to1 when brick 1 Gen-Id/relaxed ordering is idle.
29	ROX	CTL_STATUS_BRK0_NVL: Set to 1 when brick 0 NVLink flush is idle.
30	ROX	CTL_STATUS_BRK1_NVL: Set to 1 when brick 1 NVLink flush is idle.
31	ROX	CTL_STATUS_ATS_SYNC: Set to 1 when ATS sync is idle.
32	ROX	CTL_STATUS_NMMU: Set to 1 when the NMMU outbound message is idle.
33	ROX	CTL_STATUS_PBLN: Set to 1 when the outbound processor bus Ln scope queue is empty.

Bits	SCOM	Field Mnemonic: Description
34	ROX	CTL_STATUS_PBNNG: Set to 1 when the outbound processor bus Nn/G scope queue is empty.
35	ROX	CTL_STATUS_PBRNVG: Set to 1 when the outbound processor bus Rn/Vg scope queue is empty.
36	ROX	CTL_STATUS_NVREQ0: Set to 1 when the outbound brick 0 request queue is empty.
37	ROX	CTL_STATUS_NVDGD0: Set to 1 when the outbound brick 0 downgrade queue is empty.
38	ROX	CTL_STATUS_NVREQ1: Set to 1 when the outbound brick 1 request queue is empty.
39	ROX	CTL_STATUS_NVDGD1: Set to 1 when the outbound brick 1 downgrade queue is empty.
40	ROX	CTL_STATUS_ATSREQ: Set to 1 when the outbound ATS TCE translate request queue is empty.
41	ROX	CTL_STATUS_MMIO: Set to 1 when the MMIO/GenId state machine is idle.
42	ROX	CTL_STATUS_PBRS: Set to 1 when the outbound PB response/merge queue is empty.
43	ROX	CTL_STATUS_NVRS0: Set to 1 when the outbound brick 0 response queue is empty.
44	ROX	CTL_STATUS_NVRS1: Set to 1 when the outbound brick 0 response queue is empty.
45	ROX	CTL_STATUS_XARS: Set to 1 when the outbound ATS/MISC response queue is empty.
46	ROX	CTL_STATUS_ATRR: Set to 1 when the outbound ATR response logic is idle.
47	ROX	CTL_STATUS_RESERVED1: Reserved.
48:63	RO	Constant = 0b0000000000000000

Register Name	CERR Message 0 Register
Mnemonic	NPU.STCK0.CS.CTL.MISC.CERR_MESSAGE0
Address	0000000005011098 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS0: Reserved.

Register Name	CERR Message 1 Register
Mnemonic	NPU.STCK0.CS.CTL.MISC.CERR_MESSAGE1
Address	0000000005011099 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS1: Reserved.

Register Name	CERR First 0 Register
Mnemonic	NPU.STCK0.CS.CTL.MISC.CERR_FIRST0
Address	000000000501109A (SCOM)
Description	c_err_rpt first latches read-write-1-clear register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_0: NCF0 SM0 NCF error.

Bits	SCOM	Field Mnemonic: Description
1	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_1: NCF1 SM1 NCF error.
2	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_2: NCF2 SM2 NCF error.
3	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_3: NCF3 SM3 NCF error.
4	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_4: NCF4 (Reserved).
5	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_5: NCF5 (Reserved).
6	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_6: NCF6 (Reserved).
7	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_7: NCF7 (Reserved).
8	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_0: NVF0 SM0 NVF error.
9	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_1: NVF1 SM1 NVF error.
10	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_2: NVF2 SM2 NVF error.
11	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_3: NVF3 SM3 NVF error.
12	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_4: NVF4 Illegal Probe.MO: Probe.MO received with illegal probe state.
13	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_5: NVF5 Illegal Probe.N: Probe.N received with illegal probe state.
14	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_6: NVF6 Illegal Atomic: Illegal atomic command for Atomic.NR with red = 1.
15	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_7: NVF7 Illegal Atomic: Atomic.NR with red = 0.
16	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_8: NVF8 Illegal Atomic: Atomic.NR with atomic size /= 4 or 8 or with non-4/8 byte-enables.
17	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_9: NVF9 Illegal Atomic: Illegal atomic command for Atomic.RR with red = 0.
18	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_10: NVF10 Illegal Atomic: Illegal atomic command for Atomic.RR with red = 1.
19	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_11: NVF11 Illegal Atomic: Atomic.RR with atomic size /= 4 or 8 or with non-4/8 byte-enables.
20	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_12: NVF12 Illegal ExCmd for Cmd = ExCmd-CREQ.
21	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_13: NVF13 Illegal ExCmd for Cmd = ExCmd-ATR.
22	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_14: NVF14 Illegal command or RMW with illegal length.
23	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_15: NVF15 BDF-to-PE look-up failed.
24	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_16: NVF16 Received a 256B FO = 1 write.
25	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_17: NVF17 Received an invalid AddrType field, neither 00 or 11.
26	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_18: NVF18 Received an invalid transaction ID in a NVLink response.
27	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_19: NVF19 Received a rsp_status of target error in an ATSD response.
28	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_20: NVF20 Received a rsp_status of unsupported request in an ATSD response.
29	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_21: NVF21 Received a rsp_status of '11', reserved value, in an ATSD response.
30	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_22: NVF22 Brick 0 NVF error occurred.
31	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_23: NVF23 Brick 1 NVF error occurred.
32	RWX_WCLEAR	IDIAL_CTL_FIRST_RSV1_0: RSV10 (Reserved).
33	RWX_WCLEAR	IDIAL_CTL_FIRST_RSV1_1: RSV11 (Reserved).

13:15	RW	CONFIG1_MRG_IBRD_NBUF: CTL to DAT merge request BE merge/IO loopback/AMO inbound buffer read logic request buffer size.
16:18	RW	CONFIG1_MRG_BBRD_NBUF: CTL to DAT merge request BE merge BE buffer read logic request buffer size.
19:21	RW	CONFIG1_MRG_OBRD_NBUF: CTL to DAT merge request BE merge/OI loopback/AMO outbound buffer read logic request buffer size.
22	RW	CONFIG1_MRG_CR_DIS: Writing a 1 disables CQ_DAT to send credits to CTL for merge operations.
23	RW	CONFIG1_MRG_CTLW_CR_DIS: Writing a 1 disables CQ_DAT to send credits to CTL for inbound buffer write operations.
24:25	RW	CONFIG1_NTLR_PAUSE_THRESH: Specifies the number of outbound buffer NTL port occupation cycles before raising NTL pause request: 00 = 32 cycles. 01 = 16 cycles. 10 = 8 cycles. 11 = Never.
26:27	RW	CONFIG1_CTLR_HP_THRESH: Specifies the number of outbound buffer CTL read wait cycles before giving high priority: 00 = 16 cycles. 01 = 8 cycles. 10 = 4 cycles. 11 = Never.
28:29	RW	CONFIG1_NTLW_PAUSE_THRESH: Specifies the number of inbound buffer NTL port occupation cycles before raising NTL pause request: 00 = 16 cycles. 01 = 8 cycles. 10 = 4 cycles. 11 = Never.
30:31	RW	CONFIG1_CTLW_HP_THRESH: Specifies the number of inbound buffer CTL write wait cycles before giving high priority: 00b = 16 cycles. 01 = 8 cycles. 10 = 4 cycles. 11 = Never.
32	RW	CONFIG1_PBTX_REDUCE_RTAG: Writing a 1 has the CQ_DAT limit number of outstanding RTAGs to 1 on PB transmit interface (default is 2).
33	RW	CONFIG1_PBTX_DELAY_BDONE: Writing a 1 has the CQ_DAT PB transmit logic wait until all the OWs are presented on the PB before raising buffdone to CTL.
34	RW	CONFIG1_PBTX_FLIP_IMIN_BIG: Writing a 1 has the CQ_DAT PB transmit logic flip the endian of the integer minimum value on failed inc/dec when e = 0 is specified.

Bits	SCOM	Field Mnemonic: Description
35	RW	CONFIG1_PBTX_FLIP_IMIN_LITTLE: Writing a 1 has the CQ_DAT PB transmit logic flip the endian of the integer minimum value on failed inc/dec when e = 1 is specified.
36	RW	CONFIG1_ALU_SAFE_LATENCY: Writing a 1 has the CQ_DAT wait for one more cycle for ALU output in case x2 phase detection logic goes wrong.
37	RW	CONFIG1_ALU_FLIP_ENDIAN_BIG: Writing a 1 has the CQ_DAT flip the ALU endian when e = 0 is specified.
38	RW	CONFIG1_ALU_FLIP_ENDIAN_LITTLE: Writing a 1 has the CQ_DAT flip the ALU endian when e = 1 is specified.
39	RW	CONFIG1_PBTX_EARLY_AFTAG: Writing a 1 has the CQ_DAT raise buffdone to CTL earlier for armwf_* operations. CQ_DAT does not wait for fetch data to be presented on the PB. However CQ_DAT does wait for fetch data to leave the inbound buffer that is, the buffer entry can still be safely reused. This bit can be randomized in verification.
40:63	RW	CONFIG1_RESERVED1: Reserved.

Register Name	CQ_DAT ECC Configuration Register
Mnemonic	NPU.STCK0.DAT.MISC.ECC_CONFIG
Address	00000000050110A2 (SCOM)
Description	CQ_DAT ECC configuration register.

Bits	SCOM	Field Mnemonic: Description
0	RW	ECC_CONFIG_PBTX_AMO_IGNORE_XUE: For armwf_inc/dec ttypes, replace PB transmit data with negative maximum value when comparison fails, even if the data has UE or SUE. The negative maximum value will be marked with SUE as long as suedis_pt = 0.
1	RW	ECC_CONFIG_SUE_DIS_BR_PERR: Writing a 1 disables marking merge result data with SUE when BE-buf read data latch has parity error.
2	RW	ECC_CONFIG_SUE_DIS_IR_PERR: Writing a 1 disables marking merge result data with SUE when inbound buffer read data latch has parity error.
3	RW	ECC_CONFIG_SUE_DIS_OR_PERR: Writing a 1 disables marking merge result data with SUE when the outbound buffer read data latch has parity error.
4	RW	ECC_CONFIG_CORR_DIS_PT: Writing a 1 disables ECC correction in Power bus TX.
5	RW	ECC_CONFIG_CORR_DIS_PR: Writing a 1 disables ECC correction in Power bus RX.
6	RW	ECC_CONFIG_CORR_DIS_BR: Writing a 1 disables ECC correction in byte enable buffer read.
7	RW	ECC_CONFIG_CORR_DIS_IR: Writing a 1 disables ECC correction in merge operation inbound buffer read.
8	RW	ECC_CONFIG_CORR_DIS_OR: Writing a 1 disables ECC correction in merge operation outbound buffer read.
9	RW	ECC_CONFIG_SUE_DIS_PT: Writing a 1 disables converting ECC UE to SUE in Power bus TX.
10	RW	ECC_CONFIG_SUE_DIS_PR: Writing a 1 disables converting ECC UE to SUE in Power bus RX.
11	RW	ECC_CONFIG_SUE_DIS_BR: Writing a 1 disables converting ECC UE to SUE in byte enable buffer read.
12	RW	ECC_CONFIG_SUE_DIS_IR: Writing a 1 disables converting ECC UE to SUE in merge operation inbound buffer read.
13	RW	ECC_CONFIG_SUE_DIS_OR: Writing a 1 disables converting ECC UE to SUE in merge operation outbound buffer read.
14:31	RW	ECC_CONFIG_RESERVED: Reserved.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	CQ_DAT Scratch 0 Register
Mnemonic	NPU.STCK0.DAT.MISC.SCRATCH0
Address	00000000050110A3 (SCOM)
Description	CQ_DAT scratch register.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	SCRATCH0_IDIAL: Scratch register.

Register Name	CQ_DAT CERR ECC Hold Register
Mnemonic	NPU.STCK0.DAT.MISC.CERR_ECC_HOLD
Address	00000000050110A4 (SCOM)
Description	CQ_DAT ECC error c_err_rpt status and clear register.

Bits	SCOM	Field Mnemonic: Description

Register Name	**CQ_DAT CERR Logic First Register**
Mnemonic	NPU.STCK0.DAT.MISC.CERR_LOG_FIRST
Address	00000000050110AC (SCOM)
Description	CQ_DAT logic error c_err_rpt first register

Bits	SCOM	Field Mnemonic: Description
0:46	RO	Constant = 0b00000000000000000000000000000000000000000000000
47:63	RWX_WCLEAR	CERR_LOG_FIRST_BITS: CQ_DAT logic error c_err_rpt first error bits.

Register Name	**CQ_DAT RAS Error Message 0 Register**
Mnemonic	NPU.STCK0.DAT.MISC.REM0
Address	00000000050110AD (SCOM)
Description	CQ_DAT RAS error message register.

Bits	SCOM	Field Mnemonic: Description
0:16	RO	Constant = 0b00000000000000000

Bits	SCOM	Field Mnemonic: Description
17:21	ROX	REM0_IBUF_WSRC: Indicates the inbound buffer write requester that caused the read-write conflict: 0 = NTL0 datin immediate write. 1 = NTL1 datin immediate write. 2 = NTL1 datin delayed write. 3 = CTL write. 4 = Merge logic.
22:23	ROX	REM0_IBUF_RSRC: Indicates the inbound buffer read requester that caused read-write conflict. 0 = PBTX transmit. 1 = Merge logic.
24:31	ROX	REM0_IBUF_AIDX: The inbound buffer entry (0 - 255) on which read/write conflict occurred.
32:33	ROX	REM0_IBUF_ABANK: The inbound buffer array bank (0 - 3) on which read/write conflict occurred.
34:35	ROX	REM0_OBUF_WSRC: Indicates the outbound buffer write requester that caused read/write conflict: 0 = PBTX receive. 1 = Merge logic I-O loopback.
36:41	ROX	REM0_OBUF_RSRC: Indicates the outbound read requester that caused read/write conflict: 0 = NTL0 datout immediate read. 1 = NTL1 datout immediate read. 2 = NTL0 datout regular read. 3 = NTL1 datout regular read. 4 = Merge logic. 5 = CTL read.
42:49	ROX	REM0_OBUF_AIDX: The outbound entry (0 - 255) on which the read/write conflict occurred.
50:51	ROX	REM0_OBUF_ABANK: The outbound array bank (0-3) on which the read/write conflict occurred.
52:53	ROX	REM0_BBUF_WSRC: Indicates the BE buffer write requester that caused read/write conflict: bit 0 : NTL datin. bit 1 : Dispalt logic in MISC.
54:55	ROX	REM0_BBUF_RSRC: Indicates the BE buffer read requester that caused read/write conflict: bit 0 : Merge logic. bit 1 : Dispalt logic in MISC.
56:63	ROX	REM0_BBUF_AIDX: The BE buffer entry (0 - 255) on which the read/write conflict occurred.

Register Name	CQ_DAT RAS Error Message 1 Register
Mnemonic	NPU.STCK0.DAT.MISC.REM1
Address	00000000050110AE (SCOM)
Description	CQ_DAT RAS error message register.

Bits	SCOM	Field Mnemonic: Description
0:33	RO	Constant = 0b00000000000000000000000000000000
34:55	ROX	REM1_PBRX_RTAG: The invalid RTAG observed on the PB receive interface.
56:58	ROX	REM1_ALU_ADR: The invalid ALU address in the OW that caused the address error (in unit of 4B, 0 - 7).
59:62	ROX	REM1_ALU_TYPE: The ALU optype with which an address error was detected.
63	ROX	REM1_ALU_SZ: The ALU operand size (0:4B, 1:8B) when an address error was detected.

Register Name	CQ_DAT Debug0 Configuration Register
Mnemonic	NPU.STCK0.DAT.MISC.DEBUG0_CONFIG
Address	00000000050110B0 (SCOM)
Description	CQ_DAT debug 0 configuration register.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG0_CONFIG_POD0: Multiplexer control for byte 0 of trace 0.
5:9	RW	DEBUG0_CONFIG_POD1: Multiplexer control for byte 1 of trace 0.
10:14	RW	DEBUG0_CONFIG_POD2: Multiplexer control for byte 2 of trace 0.
15:19	RW	DEBUG0_CONFIG_POD3: Multiplexer control for byte 3 of trace 0.
20:24	RW	DEBUG0_CONFIG_POD4: Multiplexer control for byte 4 of trace 0.
25:29	RW	DEBUG0_CONFIG_POD5: Multiplexer control for byte 5 of trace 0.
30:34	RW	DEBUG0_CONFIG_POD6: Multiplexer control for byte 6 of trace 0.
35:39	RW	DEBUG0_CONFIG_POD7: Multiplexer control for byte 7 of trace 0.
40:44	RW	DEBUG0_CONFIG_POD8: Multiplexer control for byte 8 of trace 0.
45:49	RW	DEBUG0_CONFIG_POD9: Multiplexer control for byte 9 of trace 0.
50:54	RW	DEBUG0_CONFIG_POD10: Multiplexer control for byte 10 of trace 0.
55:62	RW	DEBUG0_CONFIG_RESERVED1: Reserved.
63	RW	DEBUG0_CONFIG_ACT: Enable clock gates for debug trace latches.

Register Name	CQ_DAT Debug1 Configuration Register
Mnemonic	NPU.STCK0.DAT.MISC.DEBUG1_CONFIG
Address	00000000050110B1 (SCOM)
Description	CQ_DAT debug 1 configuration register.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG1_CONFIG_POD0: Multiplexer control for byte 0 of trace 0.
5:9	RW	DEBUG1_CONFIG_POD1: Multiplexer control for byte 1 of trace 0.
10:14	RW	DEBUG1_CONFIG_POD2: Multiplexer control for byte 2 of trace 0.
15:19	RW	DEBUG1_CONFIG_POD3: Multiplexer control for byte 3 of trace 0.
20:24	RW	DEBUG1_CONFIG_POD4: Multiplexer control for byte 4 of trace 0.
25:29	RW	DEBUG1_CONFIG_POD5: Multiplexer control for byte 5 of trace 0.
30:34	RW	DEBUG1_CONFIG_POD6: Multiplexer control for byte 6 of trace 0.
35:39	RW	DEBUG1_CONFIG_POD7: Multiplexer control for byte 7 of trace 0.
40:44	RW	DEBUG1_CONFIG_POD8: Multiplexer control for byte 8 of trace 0.
45:49	RW	DEBUG1_CONFIG_POD9: Multiplexer control for byte 9 of trace 0.
50:54	RW	DEBUG1_CONFIG_POD10: Multiplexer control for byte 10 of trace 0.
55:62	RW	DEBUG1_CONFIG_RESERVED1: Reserved.
63	RW	DEBUG1_CONFIG_ACT: Enable clock gates for debug trace latches.

Register Name	CQ_DAT Scratch 1 Register
Mnemonic	NPU.STCK0.DAT.MISC.SCRATCH1
Address	00000000050110BC (SCOM)
Description	CQ_DAT scratch register.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	SCRATCH1_IDIAL: Scratch register.

Register Name	NTL Miscellaneous Configuration 2 Register
Mnemonic	NPU.STCK0.NTL0.REGS.CONFIG2
Address	00000000050110C0 (SCOM)
Description	This register is used to control internal NTL function. It contains mode bits, chicken switches, and thresholds.

Bits	SCOM	Field Mnemonic: Description
0	RW	BRICK_ENABLE: When set to 0b1, this NVLink brick is enabled. This configuration bit is used as a general clock gate for latches in the NTL design.
1	RW	RSP_CTL_CRED_SINGLE_ENA: When set to 0b1, NTL only gives CQ_CTL one RSP credit at a time, instead of the normal 2.
2	RW	CREQ_BE_128: When set to 0b1, NTL always sends 128 bytes of data when it needs to send a byte enable (BE) flit to the GPU for a CREQ packet. When set to 0b0, NTL sends the least number of data flits required.
3	RW	DGD_BE_128: When set to 0b1, NTL always sends 128 bytes of data when it needs to send a byte enable (BE) flit to the GPU for a downgrade packet (BE and data flits are sent in the TransDone packet for the downgrade). When set to 0b0, NTL sends the least number of data flits required.
4	RW	WR_SPLIT_UT0_ENA: When set to 0b1, NTL splits up the write requests with UT = 0 from the GPU that maps to MMIO space into the legal processor bus sizes/alignments. When set to 0b0, NTL passes all write requests with UT = 0 as is to CQ.
5	RW	WR_SPLIT_UT1_ENA: When set to 0b1, NTL splits up the write requests with UT = 1 from the GPU into legal processor bus sizes/alignments. This includes both DMA writes and MMIO writes since there is no way for NTL to distinguish between them. When set to 0b0, NTL passes all write requests with UT = 1 as is to CQ.
6	RW	BRICK_DEBUG_MODE: When set to 0b1, NTL ignores all incoming NVLink packets from the GPU and throws away all NVLink requests/responses from CQ destined for the GPU. This mode is used for debug purposes only when the NPU is not connected over NVLink to a GPU.
7	RW	P9_TO_P9_MODE: When set to 0b1, NTL sets UT = 1 for all incoming read, write, and atomic NVLink packets before sending to CQ. This mode is used for debug purposes only when the NPU is connected to another/same NPU over NVLink.
8:9	RW	CONFIG2_RESERVED1: Reserved.
10:15	RW	CAM256_MAX_CNT: This field specifies the number of entries in the CAM that holds information to send responses for 256 byte operations that require a response (maximum value = 48).
16	RW	NDL_RX_PARITY_ENA: When set to 0b1, NTL checks the parity on the incoming NDL RX signals.
17	RW	NDL_TX_PARITY_ENA: When set to 0b1, NTL checks the parity on the incoming NDL TX (that is, TX credits) signals.
18	RW	NDL_PRI_PARITY_ENA: When set to 0b1, NTL checks the parity on the incoming NDL signals.
19	RW	RCV_CREDIT_OVERFLOW_ENA: When set to 0b1, NTL checks for overflows on any received credits from the GPU, NDL, and NDL wrapper.

Bits	SCOM	Field Mnemonic: Description
20	RW	HDR_ARR_ECC_CORR_ENA: When set to 0b1, NTL corrects ECC SBEs when reading the RX header array.
21	RW	DAT_ARR_ECC_CORR_ENA: When set to 0b1, NTL corrects ECC SBEs when reading the RX data array. NTL only corrects ECC on reads of the RX data array that require NTL to update the data before sending to CQ_DAT (for example, BE flit or data flits for atomic CAS ops).
22	RW	TX_DATA_ECC_CORR_ENA: When set to 0b1, NTL corrects ECC SBEs when reading TX data from CQ_DAT.
23	RW	CONFIG2_RESERVED2: Reserved.
24	RW	PARITY_ERROR_SUE_ENA: When set to 0b1, NTL drives SUE on all data transfers to CQ_DAT for a packet that has a parity error on an incoming data flit.
25	RW	DATA_POISON_SUE_ENA: When set to 0b1, NTL drives SUE on all data transfers to CQ_DAT for a packet that receives LMD = data poison.
26	RW	HDR_ARR_ECC_SUE_ENA: When set to 0b1, NTL drives SUE on all data transfers to CQ_DAT for a packet that has an ECC UE/SUE on the header information read from the RX header array.
27	RW	DAT_ARR_ECC_SUE_ENA: When set to 0b1, NTL drives SUE on all data transfers to CQ_DAT for a packet that has an ECC UE/SUE on data read from the RX data array. NTL only checks ECC on reads of the RX data array that require the NTL to update the data before sending to CQ_DAT (for example, BE flit or data flits for atomic CAS ops).
28	RW	TX_ECC_DATA_POISON_ENA: When set to 0b1, NTL sends LMD = data poison for an outgoing NVLink packet that encounters an ECC UE/SUE on data read from CQ_DAT.
29:31	RW	CONFIG2_RESERVED3: Reserved.
32	RW	PRI_STATE_MACHINE_RESET: Reset PRI state machine to idle state (debug use only).
33:63	RW	CONFIG2_RESERVED4: Reserved.

Register Name	NTL Miscellaneous Configuration 3 Register
Mnemonic	NPU.STCK0.NTL0.REGS.CONFIG3
Address	00000000050110C1 (SCOM)
Description	The NTL miscellaneous configuration 3 register is used for future control of internal NTL functions. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CONFIG3_RESERVED1: Reserved.

Register Name	NTL CERR Hold 1 Register
Mnemonic	NPU.STCK0.NTL0.REGS.CERR_HOLD1
Address	00000000050110C2 (SCOM)
Description	c_err_rpt hold latches read-write-clear register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	NTL_HOLD1_0: ERROR - NTL RX - Unsupported command or ExCmd field encode received in an incoming NVLink packet.
1	RWX_WCLRREG	NTL_HOLD1_1: ERROR - NTL RX - AN /= 1 in an incoming NVLink packet where RX Vld = 1 and RX Hdr Vld = 1.
2	RWX_WCLRREG	NTL_HOLD1_2: ERROR - NTL RX - DatLen = 64B and Addr(6:5) = 11 in an incoming NVLink request packet where the address field is valid.

Bits	SCOM	Field Mnemonic: Description
3	RWX_WCLRREG	NTL_HOLD1_3: ERROR - NTL RX - DatLen = 96B and Addr(6) = 1 in an incoming NVLink request packet where the address field is valid.
4	RWX_WCLRREG	NTL_HOLD1_4: ERROR - NTL RX - AddrType = 01 or 10 in an incoming NVLink read, write, atomic, or RMW request packet.
5	RWX_WCLRREG	NTL_HOLD1_5: ERROR - NTL RX - DatLen = Reserved encode in an incoming NVLink request/response packet where the DatLen field is valid.
6	RWX_WCLRREG	NTL_HOLD1_6: ERROR - NTL RX - DatLen = 256B in an incoming NVLink request packet where the DatLen field is valid and not read or write.

Bits	SCOM	Field Mnemonic: Description
41	RWX_WCLEAR	NTL_FIRST1_41: ERROR - NTL RX - New PRB header flit from NVLink received when the PRB header array is full.
42	RWX_WCLEAR	NTL_FIRST1_42: ERROR - NTL RX - New ATR header flit from NVLink received when the ATR header array is full.
43	RWX_WCLEAR	NTL_FIRST1_43: ERROR - NTL RX - A new NVLink header flit was received when NTL was still expecting data flits for the previous packet.
44	RWX_WCLEAR	NTL_FIRST1_44: ERROR - NTL RX - More than one VC tried to write the header and/or data array on the same cycle.
45	RWX_WCLEAR	NTL_FIRST1_45: ERROR - NTL RX - A CQ slice credit was received when one was already valid (overflow).
46	RWX_WCLEAR	NTL_FIRST1_46: ERROR - NTL RX - A CQ ATR credit was received when one was already valid (overflow).
47	RWX_WCLEAR	NTL_FIRST1_47: ERROR - NTL RX - A CQ flush credit was received when 15 were already valid (overflow).
48	RWX_WCLEAR	NTL_FIRST1_48: ERROR - NTL RX - A CQ global credit was received when three were already valid (overflow).
49	RWX_WCLEAR	NTL_FIRST1_49: ERROR - NTL RX - A CQ response credit was received when one was already valid (overflow).
50	RWX_WCLEAR	NTL_FIRST1_50: ERROR - NTL RX - A send SUE on data transfers to CQ_DAT latch was set for a NVLink CREQ packet without data.
51	RWX_WCLEAR	NTL_FIRST1_51: ERROR - NTL RX - A send SUE on data transfers to CQ_DAT latch was set for a NVLink RSP packet without data.
52	RWX_WCLEAR	NTL_FIRST1_52: ERROR - NTL RX - Reserved.
53	RWX_WCLEAR	NTL_FIRST1_53: ERROR - NTL RX - Reserved.
54	RWX_WCLEAR	NTL_FIRST1_54: ERROR - NTL RX - Reserved.
55	RWX_WCLEAR	NTL_FIRST1_55: ERROR - NTL RX - Reserved.
56	RWX_WCLEAR	NTL_FIRST1_56: ERROR - NTL RX - ECC CE on data(0:63) read from the header array.
57	RWX_WCLEAR	NTL_FIRST1_57: ERROR - NTL RX - ECC CE on data(64:127) read from the header array.
58	RWX_WCLEAR	NTL_FIRST1_58: ERROR - NTL RX - ECC CE on data(128:167) read from the header array.
59	RWX_WCLEAR	NTL_FIRST1_59: ERROR - NTL RX - ECC CE on data(0:63) read from the data array.
60	RWX_WCLEAR	NTL_FIRST1_60: ERROR - NTL RX - ECC CE on data(64:127) read from the data array.
61	RWX_WCLEAR	NTL_FIRST1_61: ERROR - NTL RX - CRC error occurred on an incoming NVLink packet.
62	RWX_WCLEAR	NTL_FIRST1_62: ERROR - NTL RX - LMD = Stomp occurred on an incoming NVLink packet.
63	RWX_WCLEAR	NTL_FIRST1_63: ERROR - NTL RX - Reserved.

Register Name	**NTL CERR First Mask 1 Register**
Mnemonic	NPU.STCK0.NTL0.REGS.CERR_FIRST_MASK1
Address	00000000050110C5 (SCOM)
Description	This register mask errors from being captured in the First-1 Error registers and the RAS Error Message registers

Bits	SCOM	Field Mnemonic: Description
0	RW	NTL_FIRST_MASK1_0: ERROR - NTL RX - Unsupported command or ExCmd field encode received in an incoming NVLink packet.

Bits	SCOM	Field Mnemonic: Description
1	RW	NTL_FIRST_MASK1_1: ERROR - NTL RX - AN /= 1 in an incoming NVLink packet where RX Vld = 1 and RX Hdr Vld = 1.
2	RW	NTL_FIRST_MASK1_2: ERROR - NTL RX - DatLen = 64B and Addr(6:5) = 11 in an incoming NVLink request packet where the address field is valid.
3	RW	NTL_FIRST_MASK1_3: ERROR - NTL RX - DatLen = 96B and Addr(6) = 1 in an incoming NVLink request packet where the address field is valid.
4	RW	NTL_FIRST_MASK1_4: ERROR - NTL RX - AddrType = 01 or 10 in an incoming NVLink read, write, atomic, or RMW request packet.
5	RW	NTL_FIRST_MASK1_5: ERROR - NTL RX - DatLen = Reserved encode in an incoming NVLink request/response packet where the DatLen field is valid.
6	RW	NTL_FIRST_MASK1_6: ERROR - NTL RX - DatLen = 256B in an incoming NVLink request packet where the DatLen field is valid and not read or write.
7	RW	NTL_FIRST_MASK1_7: ERROR - NTL RX - BE flit exists in an incoming NVLink request/response with data packet.
8	RW	NTL_FIRST_MASK1_8: ERROR - NTL RX - DatLen = 96B or 128B in an incoming NVLink atomic CAS packet.
9	RW	NTL_FIRST_MASK1_9: ERROR - NTL RX - Compressed responses not populated in the order CR0, CR1, and CR2 in an incoming NVLink response packet.
10	RW	NTL_FIRST_MASK1_10: ERROR - NTL RX - Compressed response with an invalid/reserved TD/IVC combination in an incoming NVLink response packet.
11	RW	NTL_FIRST_MASK1_11: ERROR - NTL RX - Address(63:49) /= 0 in an incoming NVLink request packet where the address field is valid.
12	RW	NTL_FIRST_MASK1_12: ERROR - NTL RX - Address(48:47) /= 0 in an incoming NVLink UT = 0 request packet where the address field is valid and not ATR.
13	RW	NTL_FIRST_MASK1_13: ERROR - NTL RX - DatLen /= 16, 32, 64, or 128B in an incoming NVLink probe packet.
14	RW	NTL_FIRST_MASK1_14: ERROR - NTL RX - DatLen = 96B or 256B in an incoming NVLink request/response with data packet.
15	RW	NTL_FIRST_MASK1_15: ERROR - NTL RX - AtomicSz /= 4B or 8B in an incoming NVLink atomic packet.
16	RW	NTL_FIRST_MASK1_16: ERROR - NTL RX - DatLen and AtomicSz not both 4B or 8B in an incoming NVLink atomic packet where no BE flit exists.
17	RW	NTL_FIRST_MASK1_17: ERROR - NTL RX - Reserved.
18	RW	NTL_FIRST_MASK1_18: ERROR - NTL RX - Reserved.
19	RW	NTL_FIRST_MASK1_19: ERROR - NTL RX - Reserved.
20	RW	NTL_FIRST_MASK1_20: ERROR - NTL RX - Reserved.
21	RW	NTL_FIRST_MASK1_21: ERROR - NTL RX - Reserved.
22	RW	NTL_FIRST_MASK1_22: ERROR - NTL RX - Reserved.
23	RW	NTL_FIRST_MASK1_23: ERROR - NTL RX - Reserved.
24	RW	NTL_FIRST_MASK1_24: ERROR - NTL RX - ECC UE on data(0:63) read from the header array.
25	RW	NTL_FIRST_MASK1_25: ERROR - NTL RX - ECC UE on data(64:127) read from the header array.
26	RW	NTL_FIRST_MASK1_26: ERROR - NTL RX - ECC UE on data(128:167) read from the header array.
27	RW	NTL_FIRST_MASK1_27: ERROR - NTL RX - ECC UE on data(0:63) read from the data array.
28	RW	NTL_FIRST_MASK1_28: ERROR - NTL RX - ECC UE on data(64:127) read from the data array.
29	RW	NTL_FIRST_MASK1_29: ERROR - NTL RX - Parity error on incoming NDL RX Vld and Hdr_Vld signals.

Bits	SCOM	Field Mnemonic: Description
30	RW	NTL_FIRST_MASK1_30: ERROR - NTL RX - Parity error on incoming NDL RX LMD and CRC signals.
31	RW	NTL_FIRST_MASK1_31: ERROR - NTL RX - Parity error on incoming NDL RX header flit signals.
32	RW	NTL_FIRST_MASK1_32: ERROR - NTL RX - Parity error on incoming NDL RX AE flit signals.
33	RW	NTL_FIRST_MASK1_33: ERROR - NTL RX - Parity error on incoming NDL RX data flit signals.
34	RW	NTL_FIRST_MASK1_34: ERROR - NTL RX - An NVLink packet with data received LMD = data poison.
35	RW	NTL_FIRST_MASK1_35: ERROR - NTL RX - New CREQ header flit from NVLink received when the CREQ header array is full.
36	RW	NTL_FIRST_MASK1_36: ERROR - NTL RX - New CREQ data flit from NVLink received when the CREQ data array is full.
37	RW	NTL_FIRST_MASK1_37: ERROR - NTL RX - CREQ data flit was attempted to be read from the CREQ data array when it was empty.
38	RW	NTL_FIRST_MASK1_38: ERROR - NTL RX - New RSP header flit from NVLink received when the RSP header array is full.
39	RW	NTL_FIRST_MASK1_39: ERROR - NTL RX - New RSP data flit from NVLink received when the RSP data array is full.
40	RW	NTL_FIRST_MASK1_40: ERROR - NTL RX - RSP data flit was attempted to be read from the RSP data array when it was empty.
41	RW	NTL_FIRST_MASK1_41: ERROR - NTL RX - New PRB header flit from NVLink received when the PRB header array is full.
42	RW	NTL_FIRST_MASK1_42: ERROR - NTL RX - New ATR header flit from NVLink received when the ATR header array is full.
43	RW	NTL_FIRST_MASK1_43: ERROR - NTL RX - A new NVLink header flit was received when NTL was still expecting data flits for the previous packet.
44	RW	NTL_FIRST_MASK1_44: ERROR - NTL RX - More than one VC tried to write the header and/or data array on the same cycle.
45	RW	NTL_FIRST_MASK1_45: ERROR - NTL RX - A CQ slice credit was received when one was already valid (overflow).
46	RW	NTL_FIRST_MASK1_46: ERROR - NTL RX - A CQ ATR credit was received when one was already valid (overflow).
47	RW	NTL_FIRST_MASK1_47: ERROR - NTL RX - A CQ flush credit was received when 15 were already valid (overflow).
48	RW	NTL_FIRST_MASK1_48: ERROR - NTL RX - A CQ global credit was received when three were already valid (overflow).
49	RW	NTL_FIRST_MASK1_49: ERROR - NTL RX - A CQ response credit was received when one was already valid (overflow).
50	RW	NTL_FIRST_MASK1_50: ERROR - NTL RX - A send SUE on data transfers to CQ_DAT latch was set for a NVLink CREQ packet without data.
51	RW	NTL_FIRST_MASK1_51: ERROR - NTL RX - A send SUE on data transfers to CQ_DAT latch was set for a NVLink RSP packet without data.
52	RW	NTL_FIRST_MASK1_52: ERROR - NTL RX - Reserved.
53	RW	NTL_FIRST_MASK1_53: ERROR - NTL RX - Reserved.
54	RW	NTL_FIRST_MASK1_54: ERROR - NTL RX - Reserved.
55	RW	NTL_FIRST_MASK1_55: ERROR - NTL RX - Reserved.
56	RW	NTL_FIRST_MASK1_56: ERROR - NTL RX - ECC CE on data(0:63) read from the header array.
57	RW	NTL_FIRST_MASK1_57: ERROR - NTL RX - ECC CE on data(64:127) read from the header array.

Bits	SCOM	Field Mnemonic: Description
58	RW	NTL_FIRST_MASK1_58: ERROR - NTL RX - ECC CE on data(128:167) read from the header array.
59	RW	NTL_FIRST_MASK1_59: ERROR - NTL RX - ECC CE on data(0:63) read from the data array.
60	RW	NTL_FIRST_MASK1_60: ERROR - NTL RX - ECC CE on data(64:127) read from the data array.
61	RW	NTL_FIRST_MASK1_61: ERROR - NTL RX - CRC error occurred on an incoming NVLink packet.
62	RW	NTL_FIRST_MASK1_62: ERROR - NTL RX - LMD = Stomp occurred on an incoming NVLink packet.
63	RW	NTL_FIRST_MASK1_63: ERROR - NTL RX - Reserved.

Register Name	**NTL CERR Hold 2 Register**
Mnemonic	NPU.STCK0.NTL0.REGS.CERR_HOLD2
Address	00000000050110C6 (SCOM)
Description	c_err_rpt hold latches read-write-clear register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	NTL_HOLD2_0: ERROR - NTL TX - Parity error on incoming NDL TX credit signals.
1	RWX_WCLRREG	NTL_HOLD2_1: ERROR - NTL TX - ECC UE on data(0:63) read from CQ_DAT.
2	RWX_WCLRREG	NTL_HOLD2_2: ERROR - NTL TX - ECC UE on data(64:127) read from CQ_DAT.
3	RWX_WCLRREG	NTL_HOLD2_3: ERROR - NTL TX - ECC SUE on data(0:63) read from CQ_DAT.
4	RWX_WCLRREG	NTL_HOLD2_4: ERROR - NTL TX - ECC SUE on data(64:127) read from CQ_DAT.
5	RWX_WCLRREG	NTL_HOLD2_5: ERROR - NTL TX - Read or atomic request with a length that is not a power of 2.
6	RWX_WCLRREG	NTL_HOLD2_6: ERROR - NTL TX - New CREQ request received from CQ when one already existed (overflow).
7	RWX_WCLRREG	NTL_HOLD2_7: ERROR - NTL TX - New DGD request received from CQ when one already existed (overflow).
8	RWX_WCLRREG	NTL_HOLD2_8: ERROR - NTL TX - New ATSD request received from CQ when one already existed (overflow).
9	RWX_WCLRREG	NTL_HOLD2_9: ERROR - NTL TX - New RSP request received from CQ when two already existed (overflow).
10	RWX_WCLRREG	NTL_HOLD2_10: ERROR - NTL TX - A data beat was received from CQ_DAT when one was not expected.
11	RWX_WCLRREG	NTL_HOLD2_11: ERROR - NTL TX - More than one type of flit was attempted to be sent to NDL at the same time.
12	RWX_WCLRREG	NTL_HOLD2_12: ERROR - NTL TX - More than one entry in the 256B Ops CAM was hit at the same time.
13	RWX_WCLRREG	NTL_HOLD2_13: ERROR - NTL TX - More than one entry in the CREQ sticky CAM was hit at the same time.
14	RWX_WCLRREG	NTL_HOLD2_14: ERROR - NTL TX - More than one entry in the DGD sticky CAM was hit at the same time.
15	RWX_WCLRREG	NTL_HOLD2_15: ERROR - NTL TX - Reserved.
16	RWX_WCLRREG	NTL_HOLD2_16: ERROR - NTL TX - Reserved.
17	RWX_WCLRREG	NTL_HOLD2_17: ERROR - NTL TX - Reserved.
18	RWX_WCLRREG	NTL_HOLD2_18: ERROR - NTL TX - Reserved.
19	RWX_WCLRREG	NTL_HOLD2_19: ERROR - NTL TX - Reserved.

Bits	SCOM	Field Mnemonic: Description
20	RWX_WCLRREG	NTL_HOLD2_20: ERROR - NTL TX - Reserved.
21	RWX_WCLRREG	NTL_HOLD2_21: ERROR - NTL TX - Reserved.
22	RWX_WCLRREG	NTL_HOLD2_22: ERROR - NTL TX - Reserved.
23	RWX_WCLRREG	NTL_HOLD2_23: ERROR - NTL TX - Reserved.
24	RWX_WCLRREG	NTL_HOLD2_24: ERROR - NTL TX - ECC CE on data(0:63) read from CQ_DAT.
25	RWX_WCLRREG	NTL_HOLD2_25: ERROR - NTL TX - ECC CE on data(64:127) read from CQ_DAT.
26	RWX_WCLRREG	NTL_HOLD2_26: ERROR - NTL TX - Reserved.
27	RWX_WCLRREG	NTL_HOLD2_27: ERROR - NTL TX - Reserved.
28	RWX_WCLRREG	NTL_HOLD2_28: ERROR - NTL TX - Reserved.
29	RWX_WCLRREG	NTL_HOLD2_29: ERROR - NTL TX - Reserved.
30	RWX_WCLRREG	NTL_HOLD2_30: ERROR - NTL TX - Reserved.
31	RWX_WCLRREG	NTL_HOLD2_31: ERROR - NTL TX - Reserved.
32	RWX_WCLRREG	NTL_HOLD2_32: ERROR - NTL REGS - CREQ header credits received from the GPU are greater than maximum value.
33	RWX_WCLRREG	NTL_HOLD2_33: ERROR - NTL REGS - DGD header credits received from the GPU are greater than maximum value.
34	RWX_WCLRREG	NTL_HOLD2_34: ERROR - NTL REGS - ATSD header credits received from the GPU are greater than maximum value.
35	RWX_WCLRREG	NTL_HOLD2_35: ERROR - NTL REGS - RSP header credits received from the GPU are greater than maximum value.
36	RWX_WCLRREG	NTL_HOLD2_36: ERROR - NTL REGS - CREQ data credits received from the GPU are greater than maximum value.
37	RWX_WCLRREG	NTL_HOLD2_37: ERROR - NTL REGS - RSP Data credits received from the GPU are greater than maximum value.
38	RWX_WCLRREG	NTL_HOLD2_38: ERROR - NTL REGS - Replay buffer credits received from NDL are greater than 512.
39	RWX_WCLRREG	NTL_HOLD2_39: ERROR - NTL REGS - Asynchronous buffer credits received from the NDL wrapper are greater than 64.
40	RWX_WCLRREG	NTL_HOLD2_40: ERROR - NTL REGS - Multiple PRI requests active at the same time for different NTLs.
41	RWX_WCLRREG	NTL_HOLD2_41: ERROR - NTL REGS - Multiple PRI requests active at the same time for the same NTL.
42	RWX_WCLRREG	NTL_HOLD2_42: ERROR - NTL REGS - Reserved.
43	RWX_WCLRREG	NTL_HOLD2_43: ERROR - NTL REGS - Reserved.
44	RWX_WCLRREG	NTL_HOLD2_44: ERROR - NTL REGS - Reserved.
45	RWX_WCLRREG	NTL_HOLD2_45: ERROR - NTL REGS - Reserved.
46	RWX_WCLRREG	NTL_HOLD2_46: ERROR - NTL REGS - Reserved.
47	RWX_WCLRREG	NTL_HOLD2_47: ERROR - NTL REGS - Reserved.
48	RWX_WCLRREG	NTL_HOLD2_48: ERROR - NTL REGS - Reserved.
49	RWX_WCLRREG	NTL_HOLD2_49: ERROR - NTL REGS - Reserved.
50	RWX_WCLRREG	NTL_HOLD2_50: ERROR - NTL REGS - Reserved.
51	RWX_WCLRREG	NTL_HOLD2_51: ERROR - NTL REGS - Reserved.
52	RWX_WCLRREG	NTL_HOLD2_52: ERROR - NTL REGS - PHY timeout error indication received on a PRI response.

Bits	SCOM	Field Mnemonic: Description
53	RWX_WCLRREG	NTL_HOLD2_53: ERROR - NTL REGS - NDL error indication received on a PRI response.
54	RWX_WCLRREG	NTL_HOLD2_54: ERROR - NTL REGS - Access to NDL while in reset error indication received on a PRI response.
55	RWX_WCLRREG	NTL_HOLD2_55: ERROR - NTL REGS - Bad address error indication received on a PRI response.
56	RWX_WCLRREG	NTL_HOLD2_56: ERROR - NTL REGS - Parity error indication received on a PRI response.
57	RWX_WCLRREG	NTL_HOLD2_57: ERROR - NTL REGS - Protocol error indication received on a PRI response.
58	RWX_WCLRREG	NTL_HOLD2_58: ERROR - NTL REGS - PRI acknowledgment signal from the NDL wrapper went invalid in the middle of a PRI response.
59	RWX_WCLRREG	NTL_HOLD2_59: ERROR - NTL REGS - Parity error on incoming NDL PRI response signals.
60	RWX_WCLRREG	NTL_HOLD2_60: ERROR - NTL REGS - Reserved.
61	RWX_WCLRREG	NTL_HOLD2_61: ERROR - NTL REGS - Reserved.
62	RWX_WCLRREG	NTL_HOLD2_62: ERROR - NTL REGS - Reserved.
63	RWX_WCLRREG	NTL_HOLD2_63: ERROR - NTL REGS - Reserved.

Register Name	NTL CERR Mask 2 Register
Mnemonic	NPU.STCK0.NTL0.REGS.CERR_MASK2
Address	00000000050110C7 (SCOM)
Description	c_err_rpt mask latches read-only register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	NTL_MASK2_0: ERROR - NTL TX - Parity error on incoming NDL TX credit signals.
1	ROX	NTL_MASK2_1: ERROR - NTL TX - ECC UE on data(0:63) read from CQ_DAT.
2	ROX	NTL_MASK2_2: ERROR - NTL TX - ECC UE on data(64:127) read from CQ_DAT.
3	ROX	NTL_MASK2_3: ERROR - NTL TX - ECC SUE on data(0:63) read from CQ_DAT.
4	ROX	NTL_MASK2_4: ERROR - NTL TX - ECC SUE on data(64:127) read from CQ_DAT.
5	ROX	NTL_MASK2_5: ERROR - NTL TX - Read or atomic request with a length that is not a power of 2.
6	ROX	NTL_MASK2_6: ERROR - NTL TX - New CREQ request received from CQ when one already existed (overflow).

56	ROX	NTL_MASK2_56: ERROR - NTL REGS - Parity error indication received on a PRI response.
57	ROX	NTL_MASK2_57: ERROR - NTL REGS - Protocol error indication received on a PRI response.
58	ROX	NTL_MASK2_58: ERROR - NTL REGS - PRI acknowledgment signal from NDL wrapper went invalid in the middle of a PRI response.
59	ROX	NTL_MASK2_59: ERROR - NTL REGS - Parity error on incoming NDL PRI response signals.
60	ROX	NTL_MASK2_60: ERROR - NTL REGS - Reserved.
61	ROX	NTL_MASK2_61: ERROR - NTL REGS - Reserved.
62	ROX	NTL_MASK2_62: ERROR - NTL REGS - Reserved.
63	ROX	NTL_MASK2_63: ERROR - NTL REGS - Reserved.

Register Name	**NTL CERR First 2 Register**
Mnemonic	NPU.STCK0.NTL0.REGS.CERR_FIRST2
Address	00000000050110C8 (SCOM)
Description	c_err_rpt first error latches read-write-1-clear register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLEAR	NTL_FIRST2_0: ERROR - NTL TX - Parity error on incoming NDL TX credit signals.
1	RWX_WCLEAR	NTL_FIRST2_1: ERROR - NTL TX - ECC UE on data(0:63) read from CQ_DAT.
2	RWX_WCLEAR	NTL_FIRST2_2: ERROR - NTL TX - ECC UE on data(64:127) read from CQ_DAT.
3	RWX_WCLEAR	NTL_FIRST2_3: ERROR - NTL TX - ECC SUE on data(0:63) read from CQ_DAT.
4	RWX_WCLEAR	NTL_FIRST2_4: ERROR - NTL TX - ECC SUE on data(64:127) read from CQ_DAT.
5	RWX_WCLEAR	NTL_FIRST2_5: ERROR - NTL TX - Read or atomic request with a length that is not a power of 2.
6	RWX_WCLEAR	NTL_FIRST2_6: ERROR - NTL TX - New CREQ request received from CQ when one already existed (overflow).
7	RWX_WCLEAR	NTL_FIRST2_7: ERROR - NTL TX - New DGD request received from CQ when one already existed (overflow).
8	RWX_WCLEAR	NTL_FIRST2_8: ERROR - NTL TX - New ATSD request received from CQ when one already existed (overflow).
9	RWX_WCLEAR	NTL_FIRST2_9: ERROR - NTL TX - New RSP request received from CQ when two already existed (overflow).
10	RWX_WCLEAR	NTL_FIRST2_10: ERROR - NTL TX - A data beat was received from CQ_DAT when one was not expected.
11	RWX_WCLEAR	NTL_FIRST2_11: ERROR - NTL TX - More than one type of flit was attempted to be sent to NDL at the same time.
12	RWX_WCLEAR	NTL_FIRST2_12: ERROR - NTL TX - More than one entry in the 256B Ops CAM was hit at the same time.

Bits	SCOM	Field Mnemonic: Description
13	RWX_WCLEAR	NTL_FIRST2_13: ERROR - NTL TX - More than one entry in the CREQ sticky CAM was hit at the same time.
14	RWX_WCLEAR	NTL_FIRST2_14: ERROR - NTL TX - More than one entry in the DGD sticky CAM was hit at the same time.
15	RWX_WCLEAR	NTL_FIRST2_15: ERROR - NTL TX - Reserved.
16	RWX_WCLEAR	NTL_FIRST2_16: ERROR - NTL TX - Reserved.
17	RWX_WCLEAR	NTL_FIRST2_17: ERROR - NTL TX - Reserved.
18	RWX_WCLEAR	NTL_FIRST2_18: ERROR - NTL TX - Reserved.
19	RWX_WCLEAR	NTL_FIRST2_19: ERROR - NTL TX - Reserved.
20	RWX_WCLEAR	NTL_FIRST2_20: ERROR - NTL TX - Reserved.
21	RWX_WCLEAR	NTL_FIRST2_21: ERROR - NTL TX - Reserved.
22	RWX_WCLEAR	NTL_FIRST2_22: ERROR - NTL TX - Reserved.
23	RWX_WCLEAR	NTL_FIRST2_23: ERROR - NTL TX - Reserved.
24	RWX_WCLEAR	NTL_FIRST2_24: ERROR - NTL TX - ECC CE on data(0:63) read from CQ_DAT.
25	RWX_WCLEAR	NTL_FIRST2_25: ERROR - NTL TX - ECC CE on data(64:127) read from CQ_DAT.
26	RWX_WCLEAR	NTL_FIRST2_26: ERROR - NTL TX - Reserved.
27	RWX_WCLEAR	NTL_FIRST2_27: ERROR - NTL TX - Reserved.
28	RWX_WCLEAR	NTL_FIRST2_28: ERROR - NTL TX - Reserved.
29	RWX_WCLEAR	NTL_FIRST2_29: ERROR - NTL TX - Reserved.
30	RWX_WCLEAR	NTL_FIRST2_30: ERROR - NTL TX - Reserved.
31	RWX_WCLEAR	NTL_FIRST2_31: ERROR - NTL TX - Reserved.
32	RWX_WCLEAR	NTL_FIRST2_32: ERROR - NTL REGS - CREQ header credits received from the GPU are greater than maximum value.
33	RWX_WCLEAR	NTL_FIRST2_33: ERROR - NTL REGS - DGD header credits received from the GPU are greater than maximum value.
34	RWX_WCLEAR	NTL_FIRST2_34: ERROR - NTL REGS - ATSD header credits received from the GPU are greater than maximum value.
35	RWX_WCLEAR	NTL_FIRST2_35: ERROR - NTL REGS - RSP header credits received from the GPU are greater than maximum value.
36	RWX_WCLEAR	NTL_FIRST2_36: ERROR - NTL REGS - CREQ data credits received from the GPU are greater than maximum value.
37	RWX_WCLEAR	NTL_FIRST2_37: ERROR - NTL REGS - RSP data credits received from the GPU are greater than maximum value.
38	RWX_WCLEAR	NTL_FIRST2_38: ERROR - NTL REGS - Replay bffer credits received from NDL are greater than 512.
39	RWX_WCLEAR	NTL_FIRST2_39: ERROR - NTL REGS - Asynchronous buffer credits received from the NDL wrapper are greater than 64.
40	RWX_WCLEAR	NTL_FIRST2_40: ERROR - NTL REGS - Multiple PRI requests active at the same time for different NTLs.
41	RWX_WCLEAR	NTL_FIRST2_41: ERROR - NTL REGS - Multiple PRI requests active at the same time for the same NTL.
42	RWX_WCLEAR	NTL_FIRST2_42: ERROR - NTL REGS - Reserved.
43	RWX_WCLEAR	NTL_FIRST2_43: ERROR - NTL REGS - Reserved.
44	RWX_WCLEAR	NTL_FIRST2_44: ERROR - NTL REGS - Reserved.

Bits	SCOM	Field Mnemonic: Description
45	RWX_WCLEAR	NTL_FIRST2_45: ERROR - NTL REGS - Reserved.
46	RWX_WCLEAR	NTL_FIRST2_46: ERROR - NTL REGS - Reserved.
47	RWX_WCLEAR	NTL_FIRST2_47: ERROR - NTL REGS - Reserved.
48	RWX_WCLEAR	NTL_FIRST2_48: ERROR - NTL REGS - Reserved.
49	RWX_WCLEAR	NTL_FIRST2_49: ERROR - NTL REGS - Reserved.
50	RWX_WCLEAR	NTL_FIRST2_50: ERROR - NTL REGS - Reserved.
51	RWX_WCLEAR	NTL_FIRST2_51: ERROR - NTL REGS - Reserved.
52	RWX_WCLEAR	NTL_FIRST2_52: ERROR - NTL REGS - PHY timeout error indication received on a PRI response.
53	RWX_WCLEAR	NTL_FIRST2_53: ERROR - NTL REGS - NDL error indication received on a PRI response.
54	RWX_WCLEAR	NTL_FIRST2_54: ERROR - NTL REGS - Access to NDL while in reset error indication received on a PRI response.
55	RWX_WCLEAR	NTL_FIRST2_55: ERROR - NTL REGS - Bad address error indication received on a PRI response.
56	RWX_WCLEAR	NTL_FIRST2_56: ERROR - NTL REGS - Parity error indication received on a PRI response.
57	RWX_WCLEAR	NTL_FIRST2_57: ERROR - NTL REGS - Protocol error indication received on a PRI response.
58	RWX_WCLEAR	NTL_FIRST2_58: ERROR - NTL REGS - PRI acknowledgment signal from NDL wrapper went invalid in the middle of a PRI response.
59	RWX_WCLEAR	NTL_FIRST2_59: ERROR - NTL REGS - Parity error on incoming NDL PRI response signals.
60	RWX_WCLEAR	NTL_FIRST2_60: ERROR - NTL REGS - Reserved.
61	RWX_WCLEAR	NTL_FIRST2_61: ERROR - NTL REGS - Reserved.
62	RWX_WCLEAR	NTL_FIRST2_62: ERROR - NTL REGS - Reserved.
63	RWX_WCLEAR	NTL_FIRST2_63: ERROR - NTL REGS - Reserved.

Register Name	**NTL CERR First Mask 2 Register**
Mnemonic	NPU.STCK0.NTL0.REGS.CERR_FIRST_MASK2
Address	00000000050110C9 (SCOM)
Description	This register mask errors from being captured in the First-2 Error registers and the RAS Error Message registers.

Bits	SCOM	Field Mnemonic: Description
0	RW	NTL_FIRST_MASK2_0: ERROR - NTL TX - Parity error on incoming NDL TX credit signals.
1	RW	NTL_FIRST_MASK2_1: ERROR - NTL TX - ECC UE on data(0:63) read from CQ_DAT.
2	RW	NTL_FIRST_MASK2_2: ERROR - NTL TX - ECC UE on data(64:127) read from CQ_DAT.
3	RW	NTL_FIRST_MASK2_3: ERROR - NTL TX - ECC SUE on data(0:63) read from CQ_DAT.
4	RW	NTL_FIRST_MASK2_4: ERROR - NTL TX - ECC SUE on data(64:127) read from CQ_DAT.
5	RW	NTL_FIRST_MASK2_5: ERROR - NTL TX - Read or atomic request with a length that is not a power of 2.
6	RW	NTL_FIRST_MASK2_6: ERROR - NTL TX - New CREQ request received from CQ when one already existed (overflow).
7	RW	NTL_FIRST_MASK2_7: ERROR - NTL TX - New DGD request received from CQ when one already existed (overflow).
8	RW	NTL_FIRST_MASK2_8: ERROR - NTL TX - New ATSD request received from CQ when one already existed (overflow).

Bits	SCOM	Field Mnemonic: Description
9	RW	NTL_FIRST_MASK2_9: ERROR - NTL TX - New RSP request received from CQ when two already existed (overflow).
10	RW	NTL_FIRST_MASK2_10: ERROR - NTL TX - A data beat was received from CQ_DAT when one was not expected.
11	RW	NTL_FIRST_MASK2_11: ERROR - NTL TX - More than one type of flit was attempted to be sent to NDL at the same time.
12	RW	NTL_FIRST_MASK2_12: ERROR - NTL TX - More than one entry in the 256B Ops CAM was hit at the same time.
13	RW	NTL_FIRST_MASK2_13: ERROR - NTL TX - More than one entry in the CREQ sticky CAM was hit at the same time.
14	RW	NTL_FIRST_MASK2_14: ERROR - NTL TX - More than one entry in the DGD sticky CAM was hit at the same time.
15	RW	NTL_FIRST_MASK2_15: ERROR - NTL TX - Reserved.
16	RW	NTL_FIRST_MASK2_16: ERROR - NTL TX - Reserved.
17	RW	NTL_FIRST_MASK2_17: ERROR - NTL TX - Reserved.
18	RW	NTL_FIRST_MASK2_18: ERROR - NTL TX - Reserved.
19	RW	NTL_FIRST_MASK2_19: ERROR - NTL TX - Reserved.
20	RW	NTL_FIRST_MASK2_20: ERROR - NTL TX - Reserved.
21	RW	NTL_FIRST_MASK2_21: ERROR - NTL TX - Reserved.
22	RW	NTL_FIRST_MASK2_22: ERROR - NTL TX - Reserved.
23	RW	NTL_FIRST_MASK2_23: ERROR - NTL TX - Reserved.
24	RW	NTL_FIRST_MASK2_24: ERROR - NTL TX - ECC CE on data(0:63) read from CQ_DAT.
25	RW	NTL_FIRST_MASK2_25: ERROR - NTL TX - ECC CE on data(64:127) read from CQ_DAT.
26	RW	NTL_FIRST_MASK2_26: ERROR - NTL TX - Reserved.
27	RW	NTL_FIRST_MASK2_27: ERROR - NTL TX - Reserved.
28	RW	NTL_FIRST_MASK2_28: ERROR - NTL TX - Reserved.
29	RW	NTL_FIRST_MASK2_29: ERROR - NTL TX - Reserved.
30	RW	NTL_FIRST_MASK2_30: ERROR - NTL TX - Reserved.
31	RW	NTL_FIRST_MASK2_31: ERROR - NTL TX - Reserved.
32	RW	NTL_FIRST_MASK2_32: ERROR - NTL REGS - CREQ header credits received from the GPU are greater than maximum value.
33	RW	NTL_FIRST_MASK2_33: ERROR - NTL REGS - DGD header credits received from the GPU are greater than maximum value.
34	RW	NTL_FIRST_MASK2_34: ERROR - NTL REGS - ATSD header credits received from the GPU are greater than maximum value.
35	RW	NTL_FIRST_MASK2_35: ERROR - NTL REGS - RSP header credits received from the GPU are greater than maximum value.
36	RW	NTL_FIRST_MASK2_36: ERROR - NTL REGS - CREQ data credits received from the GPU are greater than maximum value.
37	RW	NTL_FIRST_MASK2_37: ERROR - NTL REGS - RSP data credits received from the GPU are greater than maximum value.
38	RW	NTL_FIRST_MASK2_38: ERROR - NTL REGS - Replay buffer credits received from NDL are greater than 512.

Bits	SCOM	Field Mnemonic: Description
39	RW	NTL_FIRST_MASK2_39: ERROR - NTL REGS - Asynchronous buffer credits received from the NDL wrapper are greater than 64.
40	RW	NTL_FIRST_MASK2_40: ERROR - NTL REGS - Multiple PRI requests active at the same time for different NTLs.
41	RW	NTL_FIRST_MASK2_41: ERROR - NTL REGS - Multiple PRI requests active at the same time for the same NTL.
42	RW	NTL_FIRST_MASK2_42: ERROR - NTL REGS - Reserved.
43	RW	NTL_FIRST_MASK2_43: ERROR - NTL REGS - Reserved.

Register Name	NTL Scratch 2 Register
Mnemonic	NPU.STCK0.NTL0.REGS.SCRATCH2
Address	00000000050110CA (SCOM)
Description	The NTL Scratch 2 register is provided in case a new control function is required in the future. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH2: Scratch register.

Register Name	NTL Scratch 3 Register
Mnemonic	NPU.STCK0.NTL0.REGS.SCRATCH3
Address	00000000050110CB (SCOM)
Description	The NTL Scratch 3 register is provided in case a new control function is required in the future. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH3: Scratch register.

Register Name	NTL Debug0 Configuration Register
Mnemonic	NPU.STCK0.NTL0.REGS.DEBUG0_CONFIG
Address	00000000050110CC (SCOM)
Description	The NTL Debug Trace 0 Configuration register is used to configure what debug information is sent on the debug trace 0 bus outputs of NTL.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG0_CONFIG_POD0: Multiplexer control for byte 0 of debug trace 0: 0x00 = Debug trace 0 byte 0 inputs. 0x01 = Debug trace 0 byte 1 inputs. 0x02 = Debug trace 0 byte 2 inputs. 0x03 = Debug trace 0 byte 3 inputs. 0x04 = Debug trace 0 byte 4 inputs. 0x05 = Debug trace 0 byte 5 inputs. 0x06 = Debug trace 0 byte 6 inputs. 0x07 = Debug trace 0 byte 7 inputs. 0x08 = Debug trace 0 byte 8 inputs. 0x09 = Debug trace 0 byte 9 inputs. 0x0A = Debug trace 0 byte 10 inputs. 0x0B = RX debug group 0. 0x0C = RX debug group 1. 0x0D = RX debug group 2. 0x0E = RX debug group 3. 0x0F = RX debug group 4. 0x10 = RX debug group 5. 0x11 = RX debug group 6. 0x12 = RX debug group 7. 0x13 = RX debug group 8. 0x14 = TX debug group 0. 0x15 = TX debug group 1. 0x16 = TX debug group 2. 0x17 = TX debug group 3. 0x18 = TX debug group 4. 0x19 = TX debug group 5. 0x1A = TX debug group 6. 0x1B = REGS debug group 0.
5:9	RW	DEBUG0_CONFIG_POD1: Multiplexer control for byte 1 of debug trace 0.
10:14	RW	DEBUG0_CONFIG_POD2: Multiplexer control for byte 2 of debug trace 0.
15:19	RW	DEBUG0_CONFIG_POD3: Multiplexer control for byte 3 of debug trace 0.
20:24	RW	DEBUG0_CONFIG_POD4: Multiplexer control for byte 4 of debug trace 0.
25:29	RW	DEBUG0_CONFIG_POD5: Multiplexer control for byte 5 of debug trace 0.
30:34	RW	DEBUG0_CONFIG_POD6: Multiplexer control for byte 6 of debug trace 0.

Bits	SCOM	Field Mnemonic: Description
35:39	RW	DEBUG0_CONFIG_POD7: Multiplexer control for byte 7 of debug trace 0.
40:44	RW	DEBUG0_CONFIG_POD8: Multiplexer control for byte 8 of debug trace 0.
45:49	RW	DEBUG0_CONFIG_POD9: Multiplexer control for byte 9 of debug trace 0.
50:54	RW	DEBUG0_CONFIG_POD10: Multiplexer control for byte 10 of debug trace 0.
55:62	RW	DEBUG0_CONFIG_RESERVED1: Reserved.
63	RW	DEBUG0_CONFIG_ACT: Enable clock gates for debug trace latches.

Register Name	**NTL Debug1 Configuration Register**
Mnemonic	NPU.STCK0.NTL0.REGS.DEBUG1_CONFIG
Address	00000000050110CD (SCOM)
Description	The NTL Debug Trace 1 Configuration register is used to configure what debug information is sent on the debug trace 1 bus outputs of NTL.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG1_CONFIG_POD0: Multiplexer control for byte 0 of debug trace 1: 0x00 = Debug trace 1 byte 0 inputs. 0x01 = Debug trace 1 byte 1 inputs. 0x02 = Debug trace 1 byte 2 inputs. 0x03 = Debug trace 1 byte 3 inputs. 0x04 = Debug trace 1 byte 4 inputs. 0x05 = Debug trace 1 byte 5 inputs. 0x06 = Debug trace 1 byte 6 inputs. 0x07 = Debug trace 1 byte 7 inputs. 0x08 = Debug trace 1 byte 8 inputs. 0x09 = Debug trace 1 byte 9 inputs. 0x0A = Debug trace 1 byte 10 inputs. 0x0B = RX debug group 0. 0x0C = RX debug group 1. 0x0D = RX debug group 2. 0x0E = RX debug group 3. 0x0F = RX debug group 4. 0x10 = RX debug group 5. 0x11 = RX debug group 6. 0x12 = RX debug group 7. 0x13 = RX debug group 8. 0x14 = TX debug group 0. 0x15 = TX debug group 1. 0x16 = TX debug group 2. 0x17 = TX debug group 3. 0x18 = TX debug group 4. 0x19 = TX debug group 5. 0x1A = TX debug group 6. 0x1B = REGS debug group 0.
5:9	RW	DEBUG1_CONFIG_POD1: Multiplexer control for byte 1 of debug trace 1.
10:14	RW	DEBUG1_CONFIG_POD2: Multiplexer control for byte 2 of debug trace 1.
15:19	RW	DEBUG1_CONFIG_POD3: Multiplexer control for byte 3 of debug trace 1.
20:24	RW	DEBUG1_CONFIG_POD4: Multiplexer control for byte 4 of debug trace 1.
25:29	RW	DEBUG1_CONFIG_POD5: Multiplexer control for byte 5 of debug trace 1.
30:34	RW	DEBUG1_CONFIG_POD6: Multiplexer control for byte 6 of debug trace 1.
35:39	RW	DEBUG1_CONFIG_POD7: Multiplexer control for byte 7 of debug trace 1.

Bits	SCOM	Field Mnemonic: Description
40:44	RW	DEBUG1_CONFIG_POD8: Multiplexer control for byte 8 of debug trace 1.
45:49	RW	DEBUG1_CONFIG_POD9: Multiplexer control for byte 9 of debug trace 1.
50:54	RW	DEBUG1_CONFIG_POD10: Multiplexer control for byte 10 of debug trace 1.
55:62	RW	DEBUG1_CONFIG_RESERVED1: Reserved.
63	RW	DEBUG1_CONFIG_ACT: Enable clock gates for debug trace latches.

Register Name	**NTL Performance Configuration Register**
Mnemonic	NPU.STCK0.NTL0.REGS.PERF_CONFIG
Address	00000000050110CE (SCOM)
Description	The NTL Performance Configuration register is used to configure what information is counted by the NTL PMULet.

Bits	SCOM	Field Mnemonic: Description
0	RW	PERF_CONFIG_ENABLE: PMULet enable (clocks enable).
1	RW	PERF_CONFIG_RESETMODE: 0 = Reset on read. 1 = Reset on write.
2	RW	PERF_CONFIG_FREEZEMODE: 0 = Free run mode. 1 = Freeze on any maximum.
3	RW	PERF_CONFIG_DISABLE_PMISC: 0 = Enable PMISC control of counters. 1 = Disable PMISC control of counters.
4	RW	PERF_CONFIG_PMISC_MODE: 0 = Global PMU PMISC no reset. 1 = Global PMU PMISC reset on enable.
5:7	RW	PERF_CONFIG_CASCADE: PMULet cascade configuration.
8:9	RW	PERF_CONFIG_PRESCALE_C0: Prescale configuration for counter 0.
10:11	RW	PERF_CONFIG_PRESCALE_C1: Prescale configuration for counter 1.
12:13	RW	PERF_CONFIG_PRESCALE_C2: Prescale configuration for counter 2.
14:15	RW	PERF_CONFIG_PRESCALE_C3: Prescale configuration for counter 3.
16:23	RW	PERF_CONFIG_EVENT0: Event 0 select: 0x00 = Disable. 0x01 = Cycles. 0x02 = Latency events. 0x03 = Latency cycles. 0x04 = Latency aborts. 0x20 = REGS - NDL PRI request. 0x21 = REGS - NDL PRI write request. 0x22 = REGS - NDL PRI read request. 0x23 = REGS - PHY PRI request. 0x24 = REGS - PHY PRI write request. 0x25 = REGS - PHY PRI read request. 0x40 = TX - Any flit sent. 0x41 = TX - Header flit sent. 0x42 = TX - AE flit sent.

Bits	SCOM	Field Mnemonic: Description

Register Name	NTL RSP Data Array Pointer Register
Mnemonic	NPU.STCK0.NTL0.REGS.RSP_DA_PTR
Address	00000000050110D5 (SCOM)
Description	The NTL RSP Data Array Pointer register is used to change the start and/or end entry in the NTL data array for holding RSP data flits.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	RSP_DA_PTR_RESERVED1: Reserved.
3:11	RW	RSP_DA_PTR_START: Starting data array location for RSP data flits received from the GPU. The data array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
12:14	RW	RSP_DA_PTR_RESERVED2: Reserved.
15:23	RW	RSP_DA_PTR_END: Ending data array location for RSP data flits received from the GPU. The data array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL Private Register Interface (PRI) Configuration Register
Mnemonic	NPU.STCK0.NTL0.REGS.PRI_CONFIG
Address	00000000050110D6 (SCOM)
Description	The NTL Private Register Interface (PRI) Configuration register is used to set up the PRI settings for this NTL. **Note:** This register must be configured before any PRI requests are attempted to NDL or PHY registers.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	PRI_CONFIG_NDL: NDL indication sent in the PRI read/write access: 00 = NDL 0. 01 = NDL 1. 10 = NDL 2. 11 = Disable (this disables the NTL from decoding the NDL register space).
2:3	RW	PRI_CONFIG_PHY: Indicates if this NTL should decode a PHY register space: 00 = Decode PHY0 register space (only one NTL that is connected to PHY 0 must be set to this value). 01 = Decode PHY1 register space (only one NTL that is connected to PHY 1 must be set to this value). 1X = Do not decode any PHY register space.
4:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	NTL Miscellaneous Configuration 1 Register
Mnemonic	NPU.STCK0.NTL0.REGS.CONFIG1
Address	00000000050110D8 (SCOM)
Description	The NVLink transaction layer (NTL) Miscellaneous Configuration 1 register is used to control NVLink packet formatting by the POWER9 processor. It also controls resetting of the POWER9 NTL.

Bits	SCOM	Field Mnemonic: Description
0	RW	COMPRESSED_RSP_ENA: When set to 0b1, NTL attempts to compress responses that it sends to the GPU whenever possible.
1:3	RW	CONFIG1_RESERVED1: Reserved.

Bits	SCOM	Field Mnemonic: Description
4	RW	CREQ_AE_ALWAYS: When set to 0b1, NTL always sends an AE flit when it sends a CREQ packet to the GPU.
5	RW	DGD_AE_ALWAYS: When set to 0b1, NTL always sends an AE flit when it sends a downgrade packet to the GPU.
6	RW	RSP_AE_ALWAYS: When set to 0b1, NTL always sends an AE flit when it sends a response packet to the GPU.
7	RW	CONFIG1_RESERVED2: Reserved.
8:9	RW	NTL_RESET: This field indicates the NTL Reset mode: 00 = Reset disabled. 11 = Reset (fence) both NTL and the processor bus for this brick. 10 = Reset (fence) only the processor bus for this brick, the NTL is operational. 01 = Reserved. **Note:** The only legal sequence is 00 →11 →10 →00. This field should not be changed unless bits 0:1 in the CQ Fence Status register equals the value in this field.
10:63	RW	CONFIG1_RESERVED3: Reserved.

Register Name	NTL Scratch 1 Register
Mnemonic	NPU.STCK0.NTL0.REGS.SCRATCH1
Address	00000000050110DA (SCOM)
Description	The NTL Scratch 1 register is provided in case a new control function is required in the future. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH1: Scratch register.

Register Name	NTL Low Power Configuration Register
Mnemonic	NPU.STCK0.NTL0.REGS.LOW_PWR
Address	00000000050110DC (SCOM)
Description	The NTL Low Power Configuration register is used to enable the NPU to request that the NVLink interconnect be placed into low-power mode. The register also defines the conditions under which the NPU turns its low-power request on or off.

Bits	SCOM	Field Mnemonic: Description
0	RW	LP_MODE_ENABLE: When set to 0b1, this NTL is allowed to activate the low-power requested signal to NDL when the low-power count is less than or equal to the low-power count threshold.
1	RW	LP_ONLY_MODE: When set to 0b1, this NTL activates the low-power requested signal to NDL continuously. This can be used for lab stress or debug.
2:7	RW	LP_TIMER_TICK_CONFIG: Rate for the low-power timer tick (2^n cycles).
8:19	RW	LP_MIN_CRED_THRESH: Whenever the NDL replay buffer credits is less than this threshold, the low-power requested signal to NDL is deactivated. This value must be greater than 0 and less than the maximum credit threshold.
20:31	RW	LP_MAX_CRED_THRESH: Whenever the NDL replay buffer credits is greater than or equal to this threshold and the low-power timer tick is active, then the low-power count is incremented by 1. This value must be greater than the minimum credit threshold.

Bits	SCOM	Field Mnemonic: Description
32:43	RW	LP_CNT_THRESH: Whenever the low-power count is greater than or equal to this threshold, this NTL activates the low-power requested signal to NDL until the NDL replay buffer credits is less than the low-power minimum credit threshold. This value must be greater than 0.
44:63	RO	Constant = 0b00000000000000000000

Register Name	NTL Miscellaneous Configuration 2 Register
Mnemonic	NPU.STCK0.NTL1.REGS.CONFIG2
Address	00000000050110E0 (SCOM)
Description	The NTL Miscellaneous Configuration 2 register is used to control internal NTL function. It contains mode bits, chicken switches, and thresholds.

Bits	SCOM	Field Mnemonic: Description
0	RW	BRICK_ENABLE: When set to 0b1, this NVLink brick is enabled. This configuration bit is used as a general clock gate for latches in the NTL design.
1	RW	RSP_CTL_CRED_SINGLE_ENA: When set to 0b1, NTL only gives CQ_CTL one RSP credit at a time, instead of the normal two.
2	RW	CREQ_BE_128: When set to 0b1, NTL always sends 128 bytes of data when it needs to send a byte enable (BE) flit to the GPU for a CREQ packet. When set to 0b0, NTL sends the least number of data flits required.
3	RW	DGD_BE_128: When set to 0b1, NTL always sends 128 bytes of data when it needs to send a byte enable (BE) flit to the GPU for a downgrade packet (BE and data flits are sent in the TransDone packet for the downgrade). When set to 0b0, NTL sends the least number of data flits required.
4	RW	WR_SPLIT_UT0_ENA: When set to 0b1, NTL splits up write requests with UT = 0 from the GPU that map to MMIO space into legal processor bus sizes/alignments. When set to 0b0, NTL passes all write requests with UT = 0 as is to CQ.
5	RW	WR_SPLIT_UT1_ENA: When set to 0b1, NTL splits up write requests with UT = 1 from the GPU into legal processor bus sizes/alignments. This includes both DMA writes and MMIO writes since there is no way for NTL to distinguish between them. When set to 0b0, NTL passes all write requests with UT = 1 as is to CQ.
6	RW	BRICK_DEBUG_MODE: When set to 0b1, NTL ignores all incoming NVLink packets from the GPU and throws away all NVLink requests/responses from CQ destined for the GPU. This mode is used for debug purposes only when the NPU is not connected over NVLink to a GPU.
7	RW	P9_TO_P9_MODE: When set to 0b1, NTL sets UT = 1 for all incoming read, write, and atomic NVLink packets before sending to CQ. This mode is used for debug purposes only when the NPU is connected to another/same NPU over NVLink.
8:9	RW	CONFIG2_RESERVED1: Reserved.
10:15	RW	CAM256_MAX_CNT: This field specifies the number of entries in the CAM that holds information to send responses for 256 byte operations that require a response (maximum value = 48).
16	RW	NDL_RX_PARITY_ENA: When set to 0b1, NTL checks the parity on the incoming NDL RX signals.
17	RW	NDL_TX_PARITY_ENA: When set to 0b1, NTL check the parity on the incoming NDL TX (that is, TX credits) signals.
18	RW	NDL_PRI_PARITY_ENA: When set to 0b1, NTL checks the parity on the incoming NDL signals.
19	RW	RCV_CREDIT_OVERFLOW_ENA: When set to 0b1, NTL checks for overflows on any received credits from the GPU, NDL, and NDL wrapper.
20	RW	HDR_ARR_ECC_CORR_ENA: When set to 0b1, NTL correctw ECC SBEs when reading the RX header array.
21	RW	DAT_ARR_ECC_CORR_ENA: When set to 0b1, NTL corrects ECC SBEs when reading the RX data array. NTL only corrects ECC on reads of the RX data array that require NTL to update the data before sending to CQ_DAT (for example, BE flit or data flits for atomic CAS ops).

Bits	SCOM	Field Mnemonic: Description
22	RW	TX_DATA_ECC_CORR_ENA: When set to 0b1, NTL corrects ECC SBEs when reading TX data from CQ_DAT.
23	RW	CONFIG2_RESERVED2: Reserved.
24	RW	PARITY_ERROR_SUE_ENA: When set to 0b1, NTL drives SUE on all data transfers to CQ_DAT for a packet that has a parity error on an incoming data flit.
25	RW	DATA_POISON_SUE_ENA: When set to 0b1, NTL drives SUE on all data transfers to CQ_DAT for a packet that receives LMD = data poison.
26	RW	HDR_ARR_ECC_SUE_ENA: When set to 0b1, NTL drives SUE on all data transfers to CQ_DAT for a packet that has an ECC UE/SUE on the header information read from the RX header array.
27	RW	DAT_ARR_ECC_SUE_ENA: When set to 0b1, NTL drives SUE on all data transfers to CQ_DAT for a packet that has an ECC UE/SUE on data read from the RX data array. NTL only checks ECC on reads of the RX data array that requires NTL to update the data before sending to CQ_DAT (for example, BE flit or data flits for atomic CAS ops).
28	RW	TX_ECC_DATA_POISON_ENA: When set to 0b1, NTL sends LMD = data poison for an outgoing NVLink packet that encounters an ECC UE/SUE on data read from CQ_DAT.
29:31	RW	CONFIG2_RESERVED3: Reserved.
32	RW	PRI_STATE_MACHINE_RESET: Reset PRI state machine to idle state (debug use only).
33:63	RW	CONFIG2_RESERVED4: Reserved.

Register Name	NTL Miscellaneous Configuration 3 Register
Mnemonic	NPU.STCK0.NTL1.REGS.CONFIG3
Address	00000000050110E1 (SCOM)
Description	The NTL Miscellaneous Configuration 3 Register is used for future control of internal NTL functions. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CONFIG3_RESERVED1: Reserved.

Register Name	NTL CERR Hold 1 Register
Mnemonic	NPU.STCK0.NTL1.REGS.CERR_HOLD1
Address	00000000050110E2 (SCOM)
Description	c_err_rpt hold latches read-write-clear register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	NTL_HOLD1_0: ERROR - NTL RX - Unsupported command or ExCmd field encode received in an incoming NVLink packet.
1	RWX_WCLRREG	NTL_HOLD1_1: ERROR - NTL RX - AN /= 1 in an incoming NVLink packet where RX Vld = 1 and RX Hdr Vld = 1.
2	RWX_WCLRREG	NTL_HOLD1_2: ERROR - NTL RX - DatLen = 64B and Addr(6:5) = 11 in an incoming NVLink request packet where the address field is valid.
3	RWX_WCLRREG	NTL_HOLD1_3: ERROR - NTL RX - DatLen = 96B and Addr(6) = 1 in an incoming NVLink request packet where the address field is valid.
4	RWX_WCLRREG	NTL_HOLD1_4: ERROR - NTL RX - AddrType = 01 or 10 in an incoming NVLink read, write, atomic, or RMW request packet.

Bits	SCOM	Field Mnemonic: Description
5	RWX_WCLRREG	NTL_HOLD1_5: ERROR - NTL RX - DatLen = Reserved encode in an incoming NVLink request/response packet where the DatLen field is valid.

Register Name	**NTL CERR First Mask 2 Register**
Mnemonic	NPU.STCK0.NTL1.REGS.CERR_FIRST_MASK2
Address	00000000050110E9 (SCOM)
Description	This register mask errors from being captured in the First-2 Error registers and the RAS Error Message registers.

Bits	SCOM	Field Mnemonic: Description
0	RW	NTL_FIRST_MASK2_0: ERROR - NTL TX - Parity error on incoming NDL TX credit signals.
1	RW	NTL_FIRST_MASK2_1: ERROR - NTL TX - ECC UE on data(0:63) read from CQ_DAT.
2	RW	NTL_FIRST_MASK2_2: ERROR - NTL TX - ECC UE on data(64:127) read from CQ_DAT.
3	RW	NTL_FIRST_MASK2_3: ERROR - NTL TX - ECC SUE on data(0:63) read from CQ_DAT.
4	RW	NTL_FIRST_MASK2_4: ERROR - NTL TX - ECC SUE on data(64:127) read from CQ_DAT.
5	RW	NTL_FIRST_MASK2_5: ERROR - NTL TX - Read or atomic request with a length that is not a power of 2.
6	RW	NTL_FIRST_MASK2_6: ERROR - NTL TX - New CREQ request received from CQ when one already existed (overflow).
7	RW	NTL_FIRST_MASK2_7: ERROR - NTL TX - New DGD request received from CQ when one already existed (overflow).
8	RW	NTL_FIRST_MASK2_8: ERROR - NTL TX - New ATSD request received from CQ when one already existed (overflow).
9	RW	NTL_FIRST_MASK2_9: ERROR - NTL TX - New RSP request received from CQ when two already existed (overflow).
10	RW	NTL_FIRST_MASK2_10: ERROR - NTL TX - A data beat was received from CQ_DAT when one was not expected.
11	RW	NTL_FIRST_MASK2_11: ERROR - NTL TX - More than 1 type of flit was attempted to be sent to NDL at the same time.

Bits	SCOM	Field Mnemonic: Description
12	RW	NTL_FIRST_MASK2_12: ERROR - NTL TX - More than one entry in the 256B Ops CAM was hit at the same time.
13	RW	NTL_FIRST_MASK2_13: ERROR - NTL TX - More than one entry in the CREQ sticky CAM was hit at the same time.
14	RW	NTL_FIRST_MASK2_14: ERROR - NTL TX - More than one entry in the DGD sticky CAM was hit at the same time.
15	RW	NTL_FIRST_MASK2_15: ERROR - NTL TX - Reserved.
16	RW	NTL_FIRST_MASK2_16: ERROR - NTL TX - Reserved.
17	RW	NTL_FIRST_MASK2_17: ERROR - NTL TX - Reserved.
18	RW	NTL_FIRST_MASK2_18: ERROR - NTL TX - Reserved.
19	RW	NTL_FIRST_MASK2_19: ERROR - NTL TX - Reserved.
20	RW	NTL_FIRST_MASK2_20: ERROR - NTL TX - Reserved.
21	RW	NTL_FIRST_MASK2_21: ERROR - NTL TX - Reserved.
22	RW	NTL_FIRST_MASK2_22: ERROR - NTL TX - Reserved.
23	RW	NTL_FIRST_MASK2_23: ERROR - NTL TX - Reserved.
24	RW	NTL_FIRST_MASK2_24: ERROR - NTL TX - ECC CE on data(0:63) read from CQ_DAT.
25	RW	NTL_FIRST_MASK2_25: ERROR - NTL TX - ECC CE on data(64:127) read from CQ_DAT.
26	RW	NTL_FIRST_MASK2_26: ERROR - NTL TX - Reserved.
27	RW	NTL_FIRST_MASK2_27: ERROR - NTL TX - Reserved.
28	RW	NTL_FIRST_MASK2_28: ERROR - NTL TX - Reserved.
29	RW	NTL_FIRST_MASK2_29: ERROR - NTL TX - Reserved.
30	RW	NTL_FIRST_MASK2_30: ERROR - NTL TX - Reserved.
31	RW	NTL_FIRST_MASK2_31: ERROR - NTL TX - Reserved.
32	RW	NTL_FIRST_MASK2_32: ERROR - NTL REGS - CREQ header credits received from the GPU are greater than maximum value.
33	RW	NTL_FIRST_MASK2_33: ERROR - NTL REGS - DGD header credits received from the GPU are greater than maximum value.
34	RW	NTL_FIRST_MASK2_34: ERROR - NTL REGS - ATSD header credits received from the GPU are greater than maximum value.
35	RW	NTL_FIRST_MASK2_35: ERROR - NTL REGS - RSP header credits received from the GPU are greater than maximum value.
36	RW	NTL_FIRST_MASK2_36: ERROR - NTL REGS - CREQ data credits received from the GPU are greater than maximum value.
37	RW	NTL_FIRST_MASK2_37: ERROR - NTL REGS - RSP data credits received from the GPU are greater than maximum value.
38	RW	NTL_FIRST_MASK2_38: ERROR - NTL REGS - Replay buffer credits received from NDL are greater than 512.
39	RW	NTL_FIRST_MASK2_39: ERROR - NTL REGS - Asynchronous buffer credits received from the NDL wrapper are greater than 64.
40	RW	NTL_FIRST_MASK2_40: ERROR - NTL REGS - Multiple PRI requests are active at the same time for different NTLs.
41	RW	NTL_FIRST_MASK2_41: ERROR - NTL REGS - Multiple PRI requests are active at the same time for the same NTL.
42	RW	NTL_FIRST_MASK2_42: ERROR - NTL REGS - Reserved.

Register Name	NTL Scratch 2 Register
Mnemonic	NPU.STCK0.NTL1.REGS.SCRATCH2
Address	00000000050110EA (SCOM)
Description	The NTL Scratch 2 register is provided in case a new control function is required in the future. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH2: Scratch register.

Register Name	NTL Scratch 3 Register
Mnemonic	NPU.STCK0.NTL1.REGS.SCRATCH3
Address	00000000050110EB (SCOM)
Description	The NTL Scratch 3 register is provided in case a new control function is required in the future. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH3: Scratch register.

Register Name	NTL Debug0 Configuration Register
Mnemonic	NPU.STCK0.NTL1.REGS.DEBUG0_CONFIG
Address	00000000050110EC (SCOM)
Description	The NTL Debug Trace 0 Configuration register is used to configure what debug information is sent on the debug trace 0 bus outputs of NTL.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG0_CONFIG_POD0: Multiplexer control for byte 0 of debug trace 0: 0x00 = Debug trace 0 byte 0 inputs. 0x01 = Debug trace 0 byte 1 inputs. 0x02 = Debug trace 0 byte 2 inputs. 0x03 = Debug trace 0 byte 3 inputs. 0x04 = Debug trace 0 byte 4 inputs. 0x05 = Debug trace 0 byte 5 inputs. 0x06 = Debug trace 0 byte 6 inputs. 0x07 = Debug trace 0 byte 7 inputs. 0x08 = Debug trace 0 byte 8 inputs. 0x09 = Debug trace 0 byte 9 inputs. 0x0A = Debug trace 0 byte 10 inputs. 0x0B = RX debug group 0. 0x0C = RX debug group 1. 0x0D = RX debug group 2. 0x0E = RX debug group 3. 0x0F = RX debug group 4. 0x10 = RX debug group 5. 0x11 = RX debug group 6. 0x12 = RX debug group 7. 0x13 = RX debug group 8. 0x14 = TX debug group 0. 0x15 = TX debug group 1. 0x16 = TX debug group 2. 0x17 = TX debug group 3. 0x18 = TX debug group 4. 0x19 = TX debug group 5. 0x1A = TX debug group 6. 0x1B = REGS debug group 0.
5:9	RW	DEBUG0_CONFIG_POD1: Multiplexer control for byte 1 of debug trace 0.
10:14	RW	DEBUG0_CONFIG_POD2: Multiplexer control for byte 2 of debug trace 0.
15:19	RW	DEBUG0_CONFIG_POD3: Multiplexer control for byte 3 of debug trace 0.
20:24	RW	DEBUG0_CONFIG_POD4: Multiplexer control for byte 4 of debug trace 0.
25:29	RW	DEBUG0_CONFIG_POD5: Multiplexer control for byte 5 of debug trace 0.
30:34	RW	DEBUG0_CONFIG_POD6: Multiplexer control for byte 6 of debug trace 0.
35:39	RW	DEBUG0_CONFIG_POD7: Multiplexer control for byte 7 of debug trace 0.
40:44	RW	DEBUG0_CONFIG_POD8: Multiplexer control for byte 8 of debug trace 0.
45:49	RW	DEBUG0_CONFIG_POD9: Multiplexer control for byte 9 of debug trace 0.
50:54	RW	DEBUG0_CONFIG_POD10: Multiplexer control for byte 10 of debug trace 0.
55:62	RW	DEBUG0_CONFIG_RESERVED1: Reserved.
63	RW	DEBUG0_CONFIG_ACT: Enable clock gates for debug trace latches.

Register Name	NTL Debug1 Configuration Register
Mnemonic	NPU.STCK0.NTL1.REGS.DEBUG1_CONFIG
Address	00000000050110ED (SCOM)
Description	The NTL Debug Trace 1 Configuration register is used to configure what debug information is sent on the debug trace 1 bus outputs of NTL.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG1_CONFIG_POD0: Multiplexer control for byte 0 of debug trace 1: 0x00 = Debug trace 1 byte 0 inputs. 0x01 = Debug trace 1 byte 1 inputs. 0x02 = Debug trace 1 byte 2 inputs. 0x03 = Debug trace 1 byte 3 inputs. 0x04 = Debug trace 1 byte 4 inputs. 0x05 = Debug trace 1 byte 5 inputs. 0x06 = Debug trace 1 byte 6 inputs. 0x07 = Debug trace 1 byte 7 inputs. 0x08 = Debug trace 1 byte 8 inputs. 0x09 = Debug trace 1 byte 9 inputs. 0x0A = Debug trace 1 byte 10 inputs. 0x0B = RX debug group 0. 0x0C = RX debug group 1. 0x0D = RX debug group 2. 0x0E = RX debug group 3. 0x0F = RX debug group 4. 0x10 = RX debug group 5. 0x11 = RX debug group 6. 0x12 = RX debug group 7. 0x13 = RX debug group 8. 0x14 = TX debug group 0. 0x15 = TX debug group 1. 0x16 = TX debug group 2. 0x17 = TX debug group 3. 0x18 = TX debug group 4. 0x19 = TX debug group 5. 0x1A = TX debug group 6. 0x1B = REGS debug group 0.
5:9	RW	DEBUG1_CONFIG_POD1: Multiplexer control for byte 1 of debug trace 1.
10:14	RW	DEBUG1_CONFIG_POD2: Multiplexer control for byte 2 of debug trace 1.
15:19	RW	DEBUG1_CONFIG_POD3: Multiplexer control for byte 3 of debug trace 1.
20:24	RW	DEBUG1_CONFIG_POD4: Multiplexer control for byte 4 of debug trace 1.
25:29	RW	DEBUG1_CONFIG_POD5: Multiplexer control for byte 5 of debug trace 1.
30:34	RW	DEBUG1_CONFIG_POD6: Multiplexer control for byte 6 of debug trace 1.
35:39	RW	DEBUG1_CONFIG_POD7: Multiplexer control for byte 7 of debug trace 1.
40:44	RW	DEBUG1_CONFIG_POD8: Multiplexer control for byte 8 of debug trace 1.
45:49	RW	DEBUG1_CONFIG_POD9: Multiplexer control for byte 9 of debug trace 1.
50:54	RW	DEBUG1_CONFIG_POD10: Multiplexer control for byte 10 of debug trace 1.
55:62	RW	DEBUG1_CONFIG_RESERVED1: Reserved.
63	RW	DEBUG1_CONFIG_ACT: Enable clock gates for debug trace latches.

Register Name	NTL Performance Configuration Register
Mnemonic	NPU.STCK0.NTL1.REGS.PERF_CONFIG
Address	00000000050110EE (SCOM)
Description	The NTL Performance Configuration register is used to configure what information is counted by the NTL PMULet.

Bits	SCOM	Field Mnemonic: Description
0	RW	PERF_CONFIG_ENABLE: PMULet enable (clocks enable).
1	RW	PERF_CONFIG_RESETMODE: 0 = Reset on read. 1 = Reset on write.
2	RW	PERF_CONFIG_FREEZEMODE: 0 = Free run mode. 1 = Freeze on any maximum.
3	RW	PERF_CONFIG_DISABLE_PMISC: 0 = Enable PMISC control of counters. 1 = Disable PMISC control of counters.
4	RW	PERF_CONFIG_PMISC_MODE: 0 = Global PMU PMISC no reset. 1 = Global PMU PMISC reset on enable.
5:7	RW	PERF_CONFIG_CASCADE: PMULet cascade configuration.
8:9	RW	PERF_CONFIG_PRESCALE_C0: Pre-scale configuration for counter 0.
10:11	RW	PERF_CONFIG_PRESCALE_C1: Pre-scale configuration for counter 1.
12:13	RW	PERF_CONFIG_PRESCALE_C2: Pre-scale configuration for counter 2.
14:15	RW	PERF_CONFIG_PRESCALE_C3: Pre-scale configuration for counter 3.
16:23	RW	PERF_CONFIG_EVENT0: Event 0 select: 0x00 = Disable. 0x01 = Cycles. 0x02 = Latency events. 0x03 = Latency cycles. 0x04 = Latency aborts. 0x20 = REGS - NDL PRI request. 0x21 = REGS - NDL PRI write request. 0x22 = REGS - NDL PRI read request. 0x23 = REGS - PHY PRI request. 0x24 = REGS - PHY PRI write request. 0x25 = REGS - PHY PRI read request. 0x40 = TX - Any flit sent. 0x41 = TX - Header flit sent. 0x42 = TX - AE flit sent. 0x43 = TX - BE flit sent. 0x44 = TX - Data flit sent. 0x45 = TX - Flow control packet. 0x46 = TX - Write.NC. 0x47 = TX - Write.NC 128B. 0x48 = TX - Write.NC 32-96B. 0x49 = TX - Write.NC 1-16B. 0x4A = TX - Write.NC with BE flit. 0x4B = TX - Read. 0x4C = TX - Upgrade. 0x4D = TX - Atomic. 0x4E = TX - Downgrade.

Bits	SCOM	Field Mnemonic: Description
		0x4F = TX - ATSD. 0x50 = TX - Request response, no data. 0x51 = TX - Request response with data. 0x52 = TX - Probe response, no data. 0x53 = TX - Probe response with data. 0x54 = TX - ATR response. 0x55 = TX - TransDone response, no data. 0x56 = TX - TransDone response with data. 0x57 = TX - TransDone response with data 128B. 0x58 = TX - TransDone response with data 32B - 96B. 0x59 = TX - TransDone response with data 1B - 16B. 0x5A = TX - TransDone response with data with BE flit. 0x5B = TX - Not enough CREQ header credits. 0x5C = TX - Not enough DGD header credits. 0x5D = TX - Not enough ATSD header credits. 0x5E = TX - Not enough RSP header credits. 0x5F = TX - Not enough CREQ data credits. 0x60 = TX - Not enough RSP data credits. 0x61 = TX - Not enough replay buffer credits. 0x62 = TX - Not enough asynchronous buffer credits. 0x80 = RX - CREQ header array full. 0x81 = RX - PRB header array full. 0x82 = RX - ATR header array full. 0x83 = RX - RSP header array full. 0x84 = RX - CREQ data array full. 0x85 = RX - RSP data array full. 0x86 = RX - Any flit received. 0x87 = RX - Header flit received. 0x88 = RX - AE flit received. 0x89 = RX - BE flit received. 0x8A = RX - Data flit received. 0x8B = RX - NOP flow control flit received. 0x8C = RX - Write.NC (UT = 0). 0x8D = RX - Write.NC (UT = 1). 0x8E = RX - Write.NC (UT = 0) 128B. 0x8F = RX - Write.NC (UT = 1) 128B. 0x90 = RX - Write.NC (UT = 0) 256B. 0x91 = RX - Write.NC (UT = 1) 256B. 0x92 = RX - Write.NC (UT = 0) 32B - 96B. 0x93 = RX - Write.NC (UT = 1) 32B - 96B. 0x94 = RX - Write.NC (UT = 0) 1B - 16B. 0x95 = RX - Write.NC (UT = 1) 1B - 16B. 0x96 = RX - Write.NC (UT = 0) with BE flit. 0x97 = RX - Write.NC (UT = 1) with BE flit. 0x98 = RX - Write.NC (UT = 0) to MMIO space. 0x99 = RX - Write.NC (UT = 0) to MMIO space and split into multiple requests. 0x9A = RX - Write.NC (UT = 1) and split into multiple requests. 0x9B = RX - Read.NC (UT = 0). 0x9C = RX - Read.NC (UT = 1). 0x9D = RX - Read.NC (UT = 0) 128B. 0x9E = RX - Read.NC (UT = 1) 128B. 0x9F = RX - Read.NC (UT = 0) 256B. 0xA0 = RX - Read.NC (UT = 1) 256B. 0xA1 = RX - Read.NC (UT = 0) 32B - 96B. 0xA2 = RX - Read.NC (UT = 1) 32B - 96B. 0xA3 = RX - Read.NC (UT = 0) 1B - 16B. 0xA4 = RX - Read.NC (UT = 1) 1B - 16B. 0xA5 = RX - Flush. 0xA6 = RX - RMW. 0xA7 = RX - Atomic.NR.

Bits	SCOM	Field Mnemonic: Description
		0xA8 = RX - Atomic.RR. 0xA9 = RX - Probe.I.MO. 0xAA = RX - Probe.I.N. 0xAB = RX - Probe.X.MO. 0xAC = RX - ATR. 0xAD = RX - ReqRsp.ND. 0xAE = RX - ReqRsp.D. 0xAF = RX - DGDRsp. 0xB0 = RX - ATSDRsp. 0xB1 = RX - TransDone.ND. 0xB2 = RX - TransDone.D. 0xB3 = RX - TransDone.D with BE flit. 0xB4 = RX - CREQ non-flush waiting for CQ credit. 0xB5 = RX - CREQ flush waiting for CQ credit. 0xB6 = RX - CREQ waiting for global credit. 0xB7 = RX - CREQ 256B Op waiting for 256B Ops CAM entry. 0xB8 = RX - PRB waiting for CQ credit. 0xB9 = RX - PRB waiting for global credit. 0xBA = RX - ATR waiting for CQ credit. 0xBB = RX - ATR waiting for global credit.
24:31	RW	PERF_CONFIG_EVENT1: Event 1 select (see Event 0 select for encodes).
32:39	RW	PERF_CONFIG_EVENT2: Event 2 select (see Event 0 select for encodes).
40:47	RW	PERF_CONFIG_EVENT3: Event 3 select (see Event 0 select for encodes).
48:50	RW	PERF_CONFIG_LATENCY: Latency select: 0 = Disable. 1 = Read.NC to response. 2 = Write.RR to response. 3 = Atomic.RR to response. 4 = RMW to response. 5 = Flush to response. 6 = Probe to response. 7 = ATR to response.
51:63	RW	PERF_CONFIG_RESERVED: Reserved.

Register Name	NTL Performance Count Register
Mnemonic	NPU.STCK0.NTL1.REGS.PERF_COUNT
Address	00000000050110EF (SCOM)
Description	The NTL Performance Count register holds the performance counts from the NTL PMULet.

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	IDIAL_PERF_COUNT0: Performance counter 0.
16:31	RWX_WCLRREG	IDIAL_PERF_COUNT1: Performance counter 1.
32:47	RWX_WCLRREG	IDIAL_PERF_COUNT2: Performance counter 2.
48:63	RWX_WCLRREG	IDIAL_PERF_COUNT3: Performance counter 3.

Register Name	NTL CREQ Header Array Pointer Register
Mnemonic	NPU.STCK0.NTL1.REGS.CREQ_HA_PTR
Address	00000000050110F0 (SCOM)
Description	The NTL CREQ Header Array Pointer register is used to change the start and/or end entry in the NTL header array for holding CREQ header information.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	CREQ_HA_PTR_RESERVED1: Reserved.
5:11	RW	CREQ_HA_PTR_START: Starting header array location for CREQ headers received from the GPU. The header array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
12:16	RW	CREQ_HA_PTR_RESERVED2: Reserved.
17:23	RW	CREQ_HA_PTR_END: Ending header array location for CREQ headers received from the GPU. The header array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
24:63	RO	Constant = 0b0000000000000000000000000000000000000000

Register Name	NTL PRB Header Array Pointer Register
Mnemonic	NPU.STCK0.NTL1.REGS.PRB_HA_PTR
Address	00000000050110F1 (SCOM)
Description	The NTL PRB Header Array Pointer register is used to change the start and/or end entry in the NTL header array for holding PRB header information.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	PRB_HA_PTR_RESERVED1: Reserved.
5:11	RW	PRB_HA_PTR_START: Starting header array location for PRB headers received from the GPU. The header array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
12:16	RW	PRB_HA_PTR_RESERVED2: Reserved.
17:23	RW	PRB_HA_PTR_END: Ending header array location for PRB headers received from the GPU. The header array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
24:63	RO	Constant = 0b0000000000000000000000000000000000000000

Register Name	NTL ATR Header Array Pointer Register
Mnemonic	NPU.STCK0.NTL1.REGS.ATR_HA_PTR
Address	00000000050110F2 (SCOM)
Description	The NTL ATR Header Array Pointer register is used to change the start and/or end entry in the NTL header array for holding ATR header information.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	ATR_HA_PTR_RESERVED1: Reserved.
5:11	RW	ATR_HA_PTR_START: Starting header array location for ATR headers received from the GPU. The header array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.

Bits	SCOM	Field Mnemonic: Description
12:16	RW	ATR_HA_PTR_RESERVED2: Reserved.
17:23	RW	ATR_HA_PTR_END: Ending header array location for ATR headers received from the GPU. The header array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL RSP Header Array Pointer Register
Mnemonic	NPU.STCK0.NTL1.REGS.RSP_HA_PTR
Address	00000000050110F3 (SCOM)
Description	The NTL RSP Header Array Pointer register is used to change the start and/or end entry in the NTL header array for holding RSP header information.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	RSP_HA_PTR_RESERVED1: Reserved.
5:11	RW	RSP_HA_PTR_START: Starting header array location for RSP headers received from the GPU. The header array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
12:16	RW	RSP_HA_PTR_RESERVED2: Reserved.
17:23	RW	RSP_HA_PTR_END: Ending header array location for RSP headers received from the GPU. The header array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL CREQ Data Array Pointer Register
Mnemonic	NPU.STCK0.NTL1.REGS.CREQ_DA_PTR
Address	00000000050110F4 (SCOM)
Description	The NTL CREQ Data Array Pointer register is used to change the start and/or end entry in the NTL data array for holding CREQ data flits.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	CREQ_DA_PTR_RESERVED1: Reserved.
3:11	RW	CREQ_DA_PTR_START: Starting data array location for CREQ data flits received from the GPU. The data array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
12:14	RW	CREQ_DA_PTR_RESERVED2: Reserved.
15:23	RW	CREQ_DA_PTR_END: Ending data array location for CREQ data flits received from the GPU. The data array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL RSP Data Array Pointer Register
Mnemonic	NPU.STCK0.NTL1.REGS.RSP_DA_PTR
Address	00000000050110F5 (SCOM)
Description	The NTL RSP Data Array Pointer register is used to change the start and/or end entry in the NTL data array for holding RSP data flits.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	RSP_DA_PTR_RESERVED1: Reserved.
3:11	RW	RSP_DA_PTR_START: Starting data array location for RSP data flits received from the GPU. The data array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
12:14	RW	RSP_DA_PTR_RESERVED2: Reserved.
15:23	RW	RSP_DA_PTR_END: Ending data array location for RSP data flits received from the GPU. The data array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL Private Register Interface (PRI) Configuration Register
Mnemonic	NPU.STCK0.NTL1.REGS.PRI_CONFIG
Address	00000000050110F6 (SCOM)
Description	The NTL Private Register Interface (PRI) Configuration register is used to set up the PRI settings for this NTL. This register must be configured before any PRI requests are attempted to NDL or PHY registers.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	PRI_CONFIG_NDL: NDL indication sent in the PRI read/write access: 00 = NDL 0. 01 = NDL 1. 10 = NDL 2. 11 = Disable (this disables the NTL from decoding the NDL register space).
2:3	RW	PRI_CONFIG_PHY: Indicates if this NTL should decode a PHY register space: 00 = Decode PHY0 register space (only one NTL that is connected to PHY 0 must be set to this value). 01 = Decode PHY1 register space (only one NTL that is connected to PHY 1 must be set to this value). 1X = Do not decode any PHY register space.
4:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	NTL Miscellaneous Configuration 1 Register
Mnemonic	NPU.STCK0.NTL1.REGS.CONFIG1
Address	00000000050110F8 (SCOM)
Description	The NVLink transaction layer (NTL) Miscellaneous Configuration 1 register is used to control NVLink packet formatting by the POWER9 processor. It also controls resetting of the POWER9 NTL.

Bits	SCOM	Field Mnemonic: Description
0	RW	COMPRESSED_RSP_ENA: When set to 0b1, the NTL attempts to compress responses that it sends to the GPU whenever possible.
1:3	RW	CONFIG1_RESERVED1: Reserved.

Bits	SCOM	Field Mnemonic: Description
4	RW	CREQ_AE_ALWAYS: When set to 0b1, the NTL always sends an AE flit when it sends a CREQ packet to the GPU.
5	RW	DGD_AE_ALWAYS: When set to 0b1, the NTL always sends an AE flit when it sends a downgrade packet to the GPU.
6	RW	RSP_AE_ALWAYS: When set to 0b1, the NTL always sends an AE flit when it sends a response packet to the GPU.
7	RW	CONFIG1_RESERVED2: Reserved.
8:9	RW	NTL_RESET: This field indicates the NTL reset mode: 00 = Reset disabled. 11 = Reset (fence) both the NTL and the processor bus for this brick. 10 = Reset (fence) only the processor bus for this brick, the NTL is operational. 01 = Reserved. **Note:** The only legal sequence is 00 →11 →10 →00. This field should not be changed unless bits 0:1 in the CQ Fence Status register equals the value in this field.
10:63	RW	CONFIG1_RESERVED3: Reserved.

Register Name	NTL Scratch 1 Register
Mnemonic	NPU.STCK0.NTL1.REGS.SCRATCH1
Address	00000000050110FA (SCOM)
Description	The NTL Scratch 1 register is provided in case a new control function is required in the future. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH1: Scratch register.

Register Name	NTL Low Power Configuration Register
Mnemonic	NPU.STCK0.NTL1.REGS.LOW_PWR
Address	00000000050110FC (SCOM)
Description	The NTL Low Power Configuration register is used to enable the NPU to request that the NVLink interconnect be placed into low-power mode. The register also defines the conditions under which the NPU turns its low-power request on or off.

Bits	SCOM	Field Mnemonic: Description
0	RW	LP_MODE_ENABLE: When set to 0b1, this NTL is allowed to activate the low-power requested signal to NDL when the low-power count is less than or equal to the low-power count threshold.
1	RW	LP_ONLY_MODE: When set to 0b1, this NTL activates the low-power requested signal to NDL continuously. This can be used for lab stress or debug.
2:7	RW	LP_TIMER_TICK_CONFIG: Rate for the low-power timer tick (2^n cycles).
8:19	RW	LP_MIN_CRED_THRESH: Whenever the NDL replay buffer credits is less than this threshold, the low-power requested signal to NDL is deactivated. This value must be greater than 0 and less than the maximum credit threshold.
20:31	RW	LP_MAX_CRED_THRESH: Whenever the NDL replay buffer credits is greater than or equal to this threshold and the low-power timer tick is active, then the low-power count is incremented by 1. This value must be greater than the minimum credit threshold.

Bits	SCOM	Field Mnemonic: Description
32:43	RW	LP_CNT_THRESH: Whenever the low-power count is greater than or equal to this threshold, this NTL activates the low-power requested signal to NDL until the NDL replay buffer credits is less than the low-power minimum credit threshold. This value must be greater than 0.
44:63	RO	Constant = 0b00000000000000000000

Register Name	**CQ_SM Miscellaneous Configuration 0 Register**
Mnemonic	NPU.STCK1.CS.SM0.MISC.CONFIG0
Address	0000000005011100 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG1_RESERVED1: Reserved.
1	RW	CONFIG_MA_DSA_OPT_CLAIM_UR: 0 = Use Read.RWC for DCLAIM/DCBZ to GPU memory. 1 = Use Upgrade.DN for DCLAIM/DCBZ to GPU memory.
2	RW	CONFIG_MA_DSA_OPT_FLUSH_UR: 0 = Use Read.RWC for DCBF/DCBFC to GPU memory. 1 = Use Upgrade.DN for DCBF/DCBFC to GPU memory.
3	RW	CONFIG_MA_DSA_OPT_RP_MODE: 0 = Use DMA for Write.NC to processor memory. 1 = Use Read-Push for Write.NC to processor memory.
4	RW	CONFIG_ADR_BAR_MODE: Processor bus adr_bar: 0 = Large system mode. 1 = Small system mode.
5	RW	CONFIG_DISABLE_NN_RN: Processor bus scope: 0 = Enable Nn and Rn scopes. 1 = Disable Nn and Rn scopes.
6	RW	CONFIG_DISABLE_VG_NOT_SYS: Processor bus scope: 0 = Enable Vg less than system. 1 = Force all Vg to system.
7	RW	CONFIG_DISABLE_G: Processor bus scope: 0 = Enable G scope. 1 = Disable G scope.
8	RW	CONFIG_DISABLE_LN: Processor bus scope: 0 = Enable Ln scope. 1 = Disable Ln scope.
9	RW	CONFIG_SKIP_G: Processor bus scope: 0 = Allow G on rty_inc. 1 = Skip G on rty_inc.
10	RW	CONFIG_MA_MCRESP_OPT_WRP: 0 = Increase scope on rty_inc to dma_w. 1 = Use write-read-push on rty_inc to dma_w.
11	RW	CONFIG_MA_MCRESP_OPT_RTY_INJ: On a rty_inj type CRESP: 0 = Keep sending dma. 1 = Change to _inj.
12	RW	CONFIG_MA_MCRESP_OPT_RTY_DMA: On a rty_dma type CRESP: 0 = Keep sending inj. 1 = kChange to _dma.

Bits	SCOM	Field Mnemonic: Description
13:15	RW	CONFIG_INC_PRI_MASK: Mask select for priority increase due to rty_drp: 0 = 100% chance to increase priority. 1 = 50% chance to increase priority. 2 = 25% chance to increase priority. 3 = 12.5% chance to increase priority. 4 = 6% chance to increase priority. 5 = 3% chance to increase priority. 6, 7 = 1.5% chance to increase priority.
16	RW	CONFIG1_RESERVED2: Reserved.
17	RW	CONFIG_MA_RSNOOP_OPT_B: TBD, future option bit.
18	RW	CONFIG_MA_RSNOOP_OPT_C: TBD, future option bit.
19	RW	CONFIG_MA_SCRESP_OPT_A: TBD, future option bit.
20	RW	CONFIG_MA_SCRESP_OPT_B: TBD, future option bit.
21	RW	CONFIG_MA_SCRESP_OPT_C: TBD, future option bit.
22	RW	CONFIG_RESERVED4: Reserved.
23	RW	CONFIG_MACH_CORRENAB: 0 = Disable state machine array ECC correction. 1 = Enable state machine array ECC correction.
24	RW	CONFIG_MACH_INJECT_ENABLE1: 0 = Disable state machine array ECC error inject bit 1. 1 = Enable state machine array ECC error inject bit 1.
25	RW	CONFIG_MACH_INJECT_ENABLE2: 0 = Disable state machine array ECC error inject bit 2. 1 = Enable state machine array ECC error inject bit 2.
26	RW	CONFIG_RXO_CORRENAB: 0 = Disable ReqRspOut array ECC correction. 1 = Enable ReqRspOut array ECC correction.
27	RW	CONFIG_RXO_INJECT_ENABLE1: 0 = Disable ReqRspOut array ECC error inject bit 1. 1 = Enable ReqRspOut array ECC error inject bit 1.
28	RW	CONFIG_RXO_INJECT_ENABLE2: 0 = Disable ReqRspOut array ECC error inject bit 1. 1 = Enable ReqRspOut array ECC error inject bit 1.
29	RW	CONFIG_RSI_CORRENAB: 0 = Disable PB-Rsp-In array ECC correction. 1 = Enable PB-Rsp-In array ECC correction.
30	RW	CONFIG_RSI_INJECT_ENABLE1: 0 = Disable PB-Rsp-Ine array ECC error inject bit 1. 1 = Enable PB-Rsp-Ine array ECC error inject bit 1.
31	RW	CONFIG_RSI_INJECT_ENABLE2: 0 = Disable PB-Rsp-Ine array ECC error inject bit 1. 1 = Enable PB-Rsp-Ine array ECC error inject bit 1.
32:33	RW	CONFIG_MA_RSNOOP_OPT_DCLAIM: 0 = Partial respond to DCLAIM to GPU memory with lpc_ack. 1 = Partial respond to DCLAIM to GPU memory with lpc_ack+rty_lost_claim. 2 = Partial respond to DCLAIM to GPU memory with lpc_ack+rty_lpc+start pocket cache. 3 = Reserved.
34	RW	CONFIG_MA_DSA_OPT_DMA_UPG: 0 = Non-relaxed dma_w use Read.RWC to acquire pocket cache state/data. 1 = Non-relaxed dma_w use Upgrade.DN to acquire pocket cache state/data.

Bits	SCOM	Field Mnemonic: Description
35	RW	CONFIG_EVAPORATE_BY_LCO: 0 = Just free the state machine without LCO. 1 = Evaporate pocket cache entries by LCO.
36	RW	CONFIG_MRBGP_TRACK_ALL: 0 = Master retry back-off group-pump track only this stack's retry responses. 1 = Master retry back-off group-pump track all this chip's retry responses.
37	RW	CONFIG_MRBSP_TRACK_ALL: 0 = Master retry back-off system-pump track only this stack's retry responses. 1 = Master retry back-off system-pump track all this chip's retry responses.
38	RW	CONFIG_ENABLE_PBUS: 0 = Disable NPU processor bus RCMD, PRESP, and CRESP interfaces. 1 = Enable NPU processor bus RCMD, PRESP, and CRESP interfaces.
39	RW	CONFIG_BRAZOS_MODE: 0 = Non-brazos 4-group; 2-chip mode. 1 = Brazos 2-group; 4-chip mode.
40	RW	CONFIG_ENABLE_SNARF_CPM: 0 = Disable Probe.I.MO snarfing a cp_m. 1 = Enable Probe.I.MO snarfing a cp_m.
41	RW	CONFIG_PREALLOC2_REQ0: 0/1 = Preallocate two state machines to brick 0 CREQ channel.
42	RW	CONFIG_PREALLOC2_PRB0: 0/1 = Preallocate two state machines to brick 0 PRB channel.
43	RW	CONFIG_PREALLOC2_REQ1: 0/1 = Preallocate two state machines to brick 1 CREQ channel.
44	RW	CONFIG_PREALLOC2_PRB1: 0/1 = Preallocate two state machines to brick 1 PRB channel.
45	RW	CONFIG_PREALLOC2_XATS: 0/1 = Preallocate two state machines to XATS interface.
46	RW	CONFIG_DISABLE_INJECT: 0 = Enable sending cl,pr_dma_inj. 1 = Disable sending cl,pr_dma_inj. **Note:** To disable sending _inj commands, the following bits must also be set to '0': config_ma_mcresp_opt_rty_inj config_ma_dsa_opt_rp_mode
47	RW	CONFIG_DCACHE_MODE: 0 = Drive data bus DCACHE field in basic mode. 1 = Drive data bus DCACHE field in CAPP mode.
48	RW	CONFIG_DCACHE_REPORTS_PHYSICAL: 0 = In basic mode, report local masters as near. 1 = In basic mode, report local masters as local.
49	RW	CONFIG_RSI_DISABLE_DATIN_FASTPATH: 0 = Enable RSI PB data in fastpath. 1 = Disable fastpath.
50	RW	CONFIG_PCKT_BLK_PRB: 0 = Valid pocket cache entries, do not block probes. 1 = Probes are blocked.
51	RW	CONFIG_P9P9_MODE: 0 = Normal operation. 1 = Run in special lab bring-up GPUless POWER9-to-POWER9 mode.
52	RW	CONFIG_FORBID_MMIO_READ_GT_32: 0 = Allow GPU to PB MMIOs greater than 32 bytes. 1 = Flag error and brick fence on MMIOs greater than 32 bytes.
53	RW	CONFIG_FORBID_MMIO_ATOMIC: 0 = Allow GPU to PB atomics to MMIO space. 1 = Flag error and brick fence on atomics to MMIO space.

Bits	SCOM	Field Mnemonic: Description
54	RW	CONFIG_OPT_SNOOP_CP: 0 = Snoop POWER9 memory cp_* type commands. 1 = Do not snoop cp_* type commands.
55:63	RW	CONFIG0_RESERVED3: Reserved.

Register Name	**CQ_SM Miscellaneous Configuration 1 Register**
Mnemonic	NPU.STCK1.CS.SM0.MISC.CONFIG1
Address	0000000005011101 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_RANDOM_BACKOFF_DUR_MASK: Mask for the base random duration of a random retry back-off: 0000 = 0 - 15 base random duration. 0001 = 0 - 31 base random duration. 0011 = 0 - 63 base random duration. 0111 = 0 - 127 base random duration. 1111 = 0 - 255 base random duration.
4:7	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_REQ: Mask for the slowdown of NTL CREQ credits during chgrate.hang. 'n' = $1/(2^{(n+1)})$ cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
8:11	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_PRB: Mask for the slowdown of NTL probe credits during chgrate.hang. 'n' = $1/(2^{(n+1)})$ cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
12:15	RW	CONFIG_ARB_NONCRR_SAFETY: Safety valve for non-CRESP/non-REQIN events going down the arbiter pipe. After n+1 REQIN events go through the arbiter while a non-CRR event is waiting, REQIN events are blocked to give non-CRR events a chance.
16:27	RW	CONFIG_EPSILON_WLN_COUNT: Epsilon count for Ln scope CP write.
28:31	RW	CONFIG_SCALE_RPT_HANG_POLL: Scaling factor for rpt_hang.poll: 0 = 1:1 processor bus rpt_hang.polls received. 1 = 1:2 processor bus rpt_hang.polls received. ... 15 = 1:16 processor bus rpt_hang.polls received.
32:35	RW	CONFIG_SCALE_RPT_HANG_DATA: Scaling factor for rpt_hang.data: 0 = 1:1 processor bus rpt_hang.datas received. 1 = 1:2 processor bus rpt_hang.datas received. ... 15 = 1:16 processor bus rpt_hang.datas received.
36:63	RW	CONFIG1_RESERVED: Reserved.

Register Name	**Power Bus Epsilon Configuration Register**
Mnemonic	NPU.STCK1.CS.SM0.MISC.EPSILON_CONFIG
Address	0000000005011102 (SCOM)
Description	Processor bus Epsilon configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_EPSILON_RATE: 0 = Decrement Epsilon count at 1:1 nest_gckn. ... 15 = Epsilon count at 1/16 nest_gckn.
4:15	RW	CONFIG_EPSILON_W0_COUNT: Epsilon count for Nn/G scope CP write.
16:27	RW	CONFIG_EPSILON_W1_COUNT: Epsilon count for Rn/Vg scope CP write.
28:39	RW	CONFIG_EPSILON_R0_COUNT: Epsilon count for Ln scope reads.
40:51	RW	CONFIG_EPSILON_R1_COUNT: Epsilon count for Nn/G scope reads.
52:63	RW	CONFIG_EPSILON_R2_COUNT: Epsilon count for Rn/Vg scope reads.

Register Name	Timer Configuration Register
Mnemonic	NPU.STCK1.CS.SM0.MISC.XTIMER_CONFIG
Address	0000000005011103 (SCOM)
Description	Timer configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	CONFIG_POCKET_RATE1: Rate-1 for the pocket cache with data entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
2:7	RW	CONFIG_POCKET_RATE2: Rate-2 for the long timer for pocket cache entries (2^n cycles).
8:13	RW	CONFIG_POCKET_RATE3: Rate-3 for the short timer for pocket cache entries (2^n cycles).
14:19	RW	CONFIG_FWD_PROG_RATE2: Rate-2 for the forward-progress timer (2^n cycles).
20:25	RW	CONFIG_CTL_TICK: Rate for CTL timer tick (default 63 = off). **Note:** This field can/should have different values in each instance.
26:31	RW	CONFIG_INH0_TICK: Rate for SM inhibit timer tick0 (default 63 = off). **Note:** This field can/should have different values in each instance.
32:37	RW	CONFIG_INH1_TICK: Rate for SM inhibit timer tick1 (default 63 = off). **Note:** This field can/should have different values in each instance.
38:39	RW	CONFIG_NV_RESP_RATE1: Rate-1 for NV-Response timer. The timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds, where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
40:45	RW	CONFIG_NV_RESP_RATE2: Rate-2 for the NV response timer (2^n cycles).

Bits	SCOM	Field Mnemonic: Description
46:47	RW	CONFIG_POCKET_ND_RATE1: Rate-1 for the pocket cache dataless entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
48:63	RO	Constant = 0b0000000000000000

Register Name	GPU BAR Register
Mnemonic	NPU.STCK1.CS.SM0.MISC.GPU_BAR
Address	0000000005011104 (SCOM)
Description	Memory BARs. BAR register defining the GPU memory addresses serviced by bricks 0 and 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GPU0_BAR_ENABLE: 0 = Disable BAR for brick 0. 1 = enable BAR for brick 0.
1:2	RW	CONFIG_GPU0_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 0. **Note:** It is illegal to set this field to 0b11.
3:6	RW	CONFIG_GPU0_BAR_GROUP: Group field of the base address of BAR for brick 0.
7:9	RW	CONFIG_GPU0_BAR_CHIP: Chip field of the base address of BAR for brick 0.
10:21	RW	CONFIG_GPU0_BAR_ADDR: The base address (1G address) of BAR for brick 0. Must be aligned on the size of the BAR mask.
22	RW	CONFIG_GPU0_BAR_RESERVED: Reserved.
23	RW	CONFIG_GPU0_BAR_GRANULE: Hash boundary for brick 0: 0 = Hash on 512B boundary (hashbits(0:7) = addr(47:54)). 1 = Hash on 1024B boundary (hashbits(0:7) = addr(46:53)).

Register Name	PHY0/PHY1/NPU MMIO BAR Register
Mnemonic	NPU.STCK1.CS.SM0.MISC.PHY_BAR
Address	0000000005011106 (SCOM)
Description	BAR register defining the PHY0/PHY1/NPU MMIO range. Stack 0 PHY_BAR defines a 2M range mapped to PHY 0 registers. Stack 1 PHY_BAR defines a 2M range mapped to PHY 1 registers. Stack 2 PHY_BAR defines a 16M range mapped to all NPU registers. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_PHY_BAR_ENABLE: 0 = Disable PHY_BAR. 1 = Enable PHY_BAR.
1:2	RW	PHY_RESERVED1: Reserved.
3:6	RW	CONFIG_PHY_BAR_GROUP: Group field of the 2M aligned address of this PHY_BAR.
7:9	RW	CONFIG_PHY_BAR_CHIP: Chip field of the 2M aligned address of this PHY_BAR.
10:30	RW	CONFIG_PHY_BAR_ADDR: The 2M aligned address of this PHY_BAR's 2M range. **Note:** In stack two, the low three address bits are reserved (16M range).
31	RW	PHY_RESERVED2: Reserved.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Generation ID BAR Register
Mnemonic	NPU.STCK1.CS.SM0.MISC.GENID_BAR
Address	0000000005011107 (SCOM)
Description	ID Registers MMIO BAR. BAR register defining the Generation ID register for this stack/ramp. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GENID_BAR_ENABLE: 0 = Disable this BAR. 1 = Enable this BAR.

Bits	SCOM	Field Mnemonic: Description
1:2	RW	GENID_RESERVED1: Reserved.
3:6	RW	CONFIG_GENID_BAR_GROUP: Group field of 128K aligned address of this GENID_BAR.
7:9	RW	CONFIG_GENID_BAR_CHIP: Chip field of 128K aligned address of this GENID_BAR.
10:34	RW	CONFIG_GENID_BAR_ADDR: The 128K aligned address of this BAR's 128K range.
35	RW	GENID_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	**Low Water Register**
Mnemonic	NPU.STCK1.CS.SM0.MISC.LOW_WATER
Address	0000000005011108 (SCOM)
Description	State machine allocation for low water marks. Each low water mark should be greater than or equal to 1 and the sum of the low marks must be less than config_max_machines. Low water marks must not be changed after config_enable_machine_alloc is set to 1 and config_enable_machine_alloc must remain at 1 once it is set to 1. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_LOW_WATER_XATS: Low water mark for XTS/MISC processor bus requests. Can only be changed while config_enable_machine_alloc = 0.
6:11	RW	CONFIG_LOW_WATER_PWR0: Low water mark for processor bus rd/dclaim/atomic/etc. requests. Can only be changed while config_enable_machine_alloc = 0.
12:17	RW	CONFIG_LOW_WATER_PWR1: Low water mark for processor bus CP (castout-push) requests. Can only be changed while config_enable_machine_alloc = 0.
18:23	RW	CONFIG_LOW_WATER_REQ0: Low water mark for NVLink brick 0 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
24:29	RW	CONFIG_LOW_WATER_PRB0: Low water mark for NVLink brick 0 probe requests. Can only be changed while config_enable_machine_alloc = 0.
30:35	RW	CONFIG_LOW_WATER_REQ1: Low water mark for NVLink brick 1 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
36:41	RW	CONFIG_LOW_WATER_PRB1: Low water mark for NVLink brick 1 probe requests. Can only be changed while config_enable_machine_alloc = 0.
42:47	RW	CONFIG_MAX_MACHINES: Maximum number of state machines to be used. Must be >= 8 and <= 62. Can only be changed while config_enable_machine_alloc = 0.
48:50	RW	LOW_WATER_RESERVED1: Reserved.
51	RW	CONFIG_ENABLE_MACHINE_ALLOC: Enable state machine allocation. Can only be changed from 0 to 1 and must stay at 1 once it is set.
52:63	RO	Constant = 0b000000000000

Register Name	**High Water Register**
Mnemonic	NPU.STCK1.CS.SM0.MISC.HIGH_WATER
Address	0000000005011109 (SCOM)
Description	State machine allocation for high water marks. Each high water mark should be greater than or equal to the corresponding config_low_water and config_max_machines. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_HIGH_WATER_XATS: High water mark for XTS/MISC processor bus requests.
6:11	RW	CONFIG_HIGH_WATER_PWR0: High water mark for processor bus rd/dclaim/atomic/etc. requests.
12:17	RW	CONFIG_HIGH_WATER_PWR1: High water mark for processor bus CP (castout-push) requests.
18:23	RW	CONFIG_HIGH_WATER_REQ0: High water mark for NVLink brick 0 non-probe requests.
24:29	RW	CONFIG_HIGH_WATER_PRB0: High water mark for NVLink brick 0 probe requests.
30:35	RW	CONFIG_HIGH_WATER_REQ1: High water mark for NVLink brick 1 non-probe requests.
36:41	RW	CONFIG_HIGH_WATER_PRB1: High water mark for NVLink brick 1 probe requests.
42:43	RW	HIGH_WATER_RESERVED1: Reserved.
44:63	RO	Constant = 0b00000000000000000000

Register Name	**Relaxed Configuration 0 Register**
Mnemonic	NPU.STCK1.CS.SM0.MISC.CONFIG_RELAXED0
Address	000000000501110A (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_SOURCE0_WRENA: 0 = Disable relaxed source 0 for write operations. 1 = Enable relaxed source 0 for write operations.
1	RW	CONFIG_RELAXED_SOURCE0_RDENA: 0 = Disable relaxed source 0 for read operations. 1 = Enable relaxed source 0 for read operations.
2:19	RW	CONFIG_RELAXED_SOURCE0_MATCH: Relaxed source 0 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
20:37	RW	CONFIG_RELAXED_SOURCE0_MASK: Relaxed source 0 tag mask value: 0 = Bit is masked off, the corresponding match bit must be zero. 1 = Bit must equal the corresponding match bit.
38:39	RW	CONFIG_RELAXED_RESERVED0: Reserved.
40	RW	CONFIG_RELAXED_SOURCE1_WRENA: 0 = Disable relaxed source 1 for write operations. 1 = Enable relaxed source 1 for write operations.
41	RW	CONFIG_RELAXED_SOURCE1_RDENA: 0 = Disable relaxed source 1 for read operations. 1 = Enable relaxed source 1 for read operations.
42:59	RW	CONFIG_RELAXED_SOURCE1_MATCH: Relaxed source 1 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 1 Register
Mnemonic	NPU.STCK1.CS.SM0.MISC.CONFIG_RELAXED1
Address	000000000501110B (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:17	RW	CONFIG_RELAXED_SOURCE1_MASK: Relaxed source 1 tag mask value.
18:19	RW	CONFIG_RELAXED_RESERVED1: Reserved.
20	RW	CONFIG_RELAXED_SOURCE2_WRENA: 0 = Disable relaxed source 2 for write operations. 1 = Enable relaxed source 2 for write operations.
21	RW	CONFIG_RELAXED_SOURCE2_RDENA: 0 = Disable relaxed source 2 for read operations. 1 = Enable relaxed source 2 for read operations.
22:39	RW	CONFIG_RELAXED_SOURCE2_MATCH: Relaxed source 2 tag match value: when config_brazos_mode=0, matches TTAG 2:3,6:21. when config_brazos_mode=1, matches TTAG 3,5:21.
40:57	RW	CONFIG_RELAXED_SOURCE2_MASK: Relaxed source 2 tag mask value.
58:59	RW	CONFIG_RELAXED_RESERVED2: Reserved.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 2 Register
Mnemonic	NPU.STCK1.CS.SM0.MISC.CONFIG_RELAXED2
Address	000000000501110C (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_CMD_CL_DMA_W: Enable relaxed ordering for cl_dma_w.
1	RW	CONFIG_RELAXED_CMD_CL_DMA_W_HP: Enable relaxed ordering for cl_dma_w_hp.
2	RW	CONFIG_RELAXED_CMD_CL_DMA_INJ: Enable relaxed ordering for cl_dma_inj.
3	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_U: Enable relaxed ordering for armw_cas_imax_u.
4	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_S: Enable relaxed ordering for armw_cas_imax_s.
5	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_U: Enable relaxed ordering for armw_cas_imin_u.
6	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_S: Enable relaxed ordering for armw_cas_imin_s.
7	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_U: Enable relaxed ordering for armwf_cas_imax_u.
8	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_S: Enable relaxed ordering for armwf_cas_imax_s.
9	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_U: Enable relaxed ordering for armwf_cas_imin_u.
10	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_S: Enable relaxed ordering for armwf_cas_imin_s.
11	RW	CONFIG_RELAXED_CMD_PR_DMA_INJ: Enable relaxed ordering for pr_dma_inj.
12	RW	CONFIG_RELAXED_CMD_DMA_PR_W: Enable relaxed ordering for dma_pr_w.
13	RW	CONFIG_RELAXED_CMD_ARMW_ADD: Enable relaxed ordering for armw_add.
14	RW	CONFIG_RELAXED_CMD_ARMW_AND: Enable relaxed ordering for armw_and.

Bits	SCOM	Field Mnemonic: Description
15	RW	CONFIG_RELAXED_CMD_ARMW_OR: Enable relaxed ordering for armw_or.
16	RW	CONFIG_RELAXED_CMD_ARMW_XOR: Enable relaxed ordering for armw_xor.
17	RW	CONFIG_RELAXED_CMD_ARMWF_ADD: Enable relaxed ordering for armwf_add.
18	RW	CONFIG_RELAXED_CMD_ARMWF_AND: Enable relaxed ordering for armwf_and.
19	RW	CONFIG_RELAXED_CMD_ARMWF_OR: Enable relaxed ordering for armwf_or.
20	RW	CONFIG_RELAXED_CMD_ARMWF_XOR: Enable relaxed ordering for armwf_xor.
21	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_E: Enable relaxed ordering for armwf_cas_e.
22	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_U: Enable relaxed ordering for armwf_cas_u.
23	RW	CONFIG_RELAXED_CMD_CL_RD_NC_F0: Enable relaxed ordering for cl_rd_nc(F=0).
24	RW	CONFIG_RELAXED_SOURCE3_WRENA: 0 = Disable relaxed source 3 for write operations. 1 = Enable relaxed source 3 for write operations.
25	RW	CONFIG_RELAXED_SOURCE3_RDENA: 0 = Disable relaxed source 3 for read operations. 1 = Enable relaxed source 3 for read operations.
26:43	RW	CONFIG_RELAXED_SOURCE3_MATCH: Relaxed source 3 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
44:61	RW	CONFIG_RELAXED_SOURCE3_MASK: Relaxed source 3 tag mask value.
62:63	RW	CONFIG_RELAXED_RESERVED3: Reserved.

Register Name	**NTL0/NDL0 MMIO BAR Register**
Mnemonic	NPU.STCK1.CS.SM0.MISC.NDT0_BAR
Address	000000000501110D (SCOM)
Description	BAR register defining the NDL/NTL MMIO range for brick 0 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT0_BAR_ENABLE: 0 = Disable BAR for brick 0. 1 = Enable BAR for brick 0.
1:2	RW	NDT0_RESERVED1: Reserved.
3:6	RW	CONFIG_NDT0_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT0_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT0_BAR_ADDR: The 128K aligned address of BAR for brick 0's 128K range.
35	RW	NDT0_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	NTL1/NDL1 MMIO BAR Register
Mnemonic	NPU.STCK1.CS.SM0.MISC.NDT1_BAR
Address	000000000501110E (SCOM)
Description	BAR register defining the NDL/NTL MMIO range for brick 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT1_BAR_ENABLE: 0 = Disable BAR for brick 1. 1 = Enable BAR for brick 1.
1:2	RW	NDT1_RESERVED1: Reserved.
3:6	RW	CONFIG_NDT1_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT1_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT1_BAR_ADDR: The 128K aligned address of BAR for brick 1's 128K range.
35	RW	NDT1_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	Performance Configuration Register
Mnemonic	NPU.STCK1.CS.SM0.MISC.PERF_CONFIG
Address	000000000501110F (SCOM)
Description	Performance event selection register.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	PERF_CONFIG_LATSTART: Latency count start event.
8:15	RW	PERF_CONFIG_LATCANCEL: Latency count abort event.
16:23	RW	PERF_CONFIG_EVENT0: Event 0 select.
24:31	RW	PERF_CONFIG_EVENT1: Event 0 select.
32:39	RW	PERF_CONFIG_EVENT2: Event 0 select.
40:47	RW	PERF_CONFIG_EVENT3: Event 0 select.
48:55	RW	PERF_CONFIG_LATFINISH: Latency count finish event.
56:62	RW	PERF_CONFIG_RESERVED2: Reserved.
63	RW	PERF_CONFIG_ACT: Enable clock gates for performance monitor latches.

Register Name	Inhibit Configuration Register
Mnemonic	NPU.STCK1.CS.SM0.MISC.INHIBIT_CONFIG
Address	0000000005011110 (SCOM)
Description	This register configures inhibits for CQ_SM.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_INHIBIT_LFREQ0: Base LFSR frequency 0: 0...11 = $1/2^{(n+1)}$ 12 = $1/2^{14}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
4:5	RW	CONFIG_INHIBIT_PFREQ0: Selects pre-frequency 0: 0 = Inhibit timer tick0. 1 = Inverted inhibit timer tick0. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
6	RW	CONFIG_INHIBIT_BLOCKY0: 0 = Disable blocky mode. 1 = Enable blocky mode.
7	RW	CONFIG_INHIBIT_ONESHOT0: 0 = Continuous mode. 1 = One shot mode.
8:15	RW	CONFIG_INHIBIT_DEST0: Selects the destination of the inhibit.
16:19	RW	CONFIG_INHIBIT_LFREQ1: Base LFSR frequency 0: 0..12 = $1/2^{(n+1)}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
20:21	RW	CONFIG_INHIBIT_PFREQ1: Selects pre-frequency 0: 0 = Inhibit timer tick1. 1 = Inverted inhibit timer tick1. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
22	RW	CONFIG_INHIBIT_BLOCKY1: 0 = Disable blocky mode. 1 = Enable blocky mode.
23	RW	CONFIG_INHIBIT_ONESHOT1: 0 = Continuous mode. 1 = One shot mode.
24:31	RW	CONFIG_INHIBIT_DEST1: Selects the destination of the inhibit.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	CERR Message 0 Register
Mnemonic	NPU.STCK1.CS.SM0.MISC.CERR_MESSAGE0
Address	0000000005011111 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS0: Reserved.

Register Name	CERR Message 1 Register
Mnemonic	NPU.STCK1.CS.SM0.MISC.CERR_MESSAGE1
Address	0000000005011112 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS1: Reserved.

Register Name	CERR Message 2 Register
Mnemonic	NPU.STCK1.CS.SM0.MISC.CERR_MESSAGE2
Address	0000000005011113 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS2: Reserved.

Register Name	CERR Message 3 Register
Mnemonic	NPU.STCK1.CS.SM0.MISC.CERR_MESSAGE3
Address	0000000005011114 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS3: Reserved.

Register Name	CERR Message 4 Register
Mnemonic	NPU.STCK1.CS.SM0.MISC.CERR_MESSAGE4
Address	0000000005011115 (SCOM)
Description	Error message/capture register

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS4: Reserved.

Register Name	CQ_SM Status Register
Mnemonic	NPU.STCK1.CS.SM0.MISC.SM_STATUS
Address	0000000005011116 (SCOM)
Description	Status reporting register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SM_STATUS_CREQ0: Set to 1 when brick 0 CREQ allocation is at its idle level.
1	ROX	SM_STATUS_PRB0: Set to 1 when brick 0 probe allocation is at its idle level.

Bits	SCOM	Field Mnemonic: Description
2	ROX	SM_STATUS_CREQ1: Set to 1 when brick 1 CREQ allocation is at its idle level.
3	ROX	SM_STATUS_PRB1: Set to 1 when brick 1 probe allocation is at its idle level.
4	ROX	SM_STATUS_XATS: Set to 1 when ATS/MISC allocation is at its idle level.
5	ROX	SM_STATUS_PWR0: Set to 1 when processor bus (non-CP*) allocation is at its idle level.
6	ROX	SM_STATUS_PWR1: Set to 1 when processor bus (CP*) allocation is at its idle level.
7	ROX	SM_STATUS_CHGRATE: Set to 1 when chgrate.hang slowdown is being applied to machine allocation.
8:11	ROX	SM_STATUS_MRBGP: Master retry back-off level for group-pump commands.
12:15	ROX	SM_STATUS_MRBSP: Master retry back-off level for system-pump commands.
16:19	ROX	SM_STATUS_FENCE0: Brick 0 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X = Flushing pocket cache entries prior to exiting fence.
20:23	ROX	SM_STATUS_FENCE1: Brick 1 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X = Flushing pocket cache entries prior to exiting fence.
24	ROX	SM_STATUS_PBLN: Set to 1 when the outbound Ln scope processor bus request queue is empty.
25	ROX	SM_STATUS_PBNNG: Set to 1 when the outbound Nn/G scope processor bus request queue is empty.
26	ROX	SM_STATUS_PBRNVG: Set to 1 when the outbound Rn/Vg scope processor bus request queue is empty.
27	ROX	SM_STATUS_N0REQ: Set to 1 when the outbound brick 0 CREQ request queue is empty.
28	ROX	SM_STATUS_N0DGD: Set to 1 when the outbound brick 0 downgrade request queue is empty.
29	ROX	SM_STATUS_N1REQ: Set to 1 when the outbound brick 1 CREQ request queue is empty.
30	ROX	SM_STATUS_N1DGD: Set to 1 when the outbound brick 1 downgrade request queue is empty.

Register Name	CERR Hold 2 Register
Mnemonic	NPU.STCK1.CS.SM0.MISC.CERR_HOLD2
Address	000000000501111F (SCOM)
Description	c_err_rpt hold latches read-write-clear register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_0: NLG0 s3: RCMD event received, but state machine is not idle.
1	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_1: NLG1 s3: Pocket hit event, but not in M_PCKT_WAIT_HIT state.
2	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_2: NLG2 s3: M_WT_CRESP: ma_scresp table look-up missed.
3	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_3: NLG3 s3: M_WT_CRESP: Start Epsilon, but Epsilon already in progress.
4	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_4: NLG4 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have NV modified data.
5	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_5: NLG5 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have PB modified data.
6	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_6: NLG6 s3: M_WT_CRESP: Bad scenario code from ma_scresp table.
7	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_7: NLG7 s3: Snoop CRESP received, but not in M_WT_CRESP state.
8	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_8: NLG8 s3: MCResp pocket hit event, but not in PC_* state.
9	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_9: NLG9 s3: PC_WT_CRESP: ma_mcresp table look-up missed.
10	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_10: NLG10 s3: PC_WT_CRESP: Write coll state did not match early protection state.

Bits	SCOM	Field Mnemonic: Description
11	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_11: NLG11 s3: PC_WT_CRESP: Start Epsilon, but Epsilon already in progress.
12	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_12: NLG12 s3: PC_WT_CRESP: Bad scenario code from ma_mcresp table.
13	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_13: NLG13 s3: PC_BK_WT_CRESP: Bad next step for bkill (ack-done).
14	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_14: NLG14 s3: PC_BK_WT_CRESP: Bad next step for bkill (retry).
15	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_15: NLG15 s3: PC_BK_WT_CRESP: Bad CRESP for a bkill.
16	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_16: NLG16 s3: Master CRESP received, but not in PC_WT_CRESP/PC_BK_WT_CRESP states.
17	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_17: NLG17 s3: M_IDLE: Invalid DATALEN[3:0] for data command.
18	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_18: NLG18 s3: M_IDLE: Invalid command type received.
19	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_19: NLG19 s3: AT translate response event, but not in wait translate state.
20	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_20: NLG20 s3: AT translate response event had bad translate status, but command not recognized.
21	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_21: NLG21 s3: SA done event, but not in wait SA state.
22	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_22: NLG22 s3: PC_WAIT_DATADONE: Bad next step for PB data transmit.
23	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_23: NLG23 s3: TD_WAIT_DATADONE: Unknown NVLink mster command.
24	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_24: NLG24 s3: BuffDone event, but not in PB/PC/MG/NR/XATS/TD_WAIT_DATADONE state.
25	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_25: NLG25 s3: NC_WT_RESP: Unknown NV master command for NVLink response.
26	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_26: NLG26 s3: RSPLN event, but not in RG_WT_RESP or NC_WT_RESP state.
27	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_27: NLG27 s3: Epsilon in progress, but Epsilon counter clock is not the Epsilon clock.
28	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_28: NLG28 s3: Epsilon counter clock is 'epsilon,' but epsilon_ip is not set.
29	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_29: NLG29 s3: PC_WT_BK_RBACK: Bad next step for bkill.
30	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_30: NLG30 s3: M/RR_BACK timer expired, but not in PC_WT(_BK)_RBACK state.
31	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_31: NLG31 s3: Bad epclock value.
32	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_32: NLG32 s3: coll_state is POCKET_RCOLL_ND, but master state is not PCKT_WAIT_HIT.
33	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_33: NLG33 s3: Unknown sm_master_state in ESCAN_LCAO event.
34	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_34: NLG34 s3: Unknown event type received.
35	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_35: NLG35 s4: M_EVAL_DIR: ma_dsa table look-up missed.
36	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_36: NLG36 s4: M_EVAL_DIR: Unknown merge opcode from DSA table.
37	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_37: NLG37 s4: Unknown state.
38	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_38: NLG38 s3: coll_state is POCKET_RCOLL_OND, but master state is not PCKT_WAIT_HIT.
39	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_39: NLG39 s3: Unknown sm_master_state in ESCAN_FENCE event.
40	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_40: NLG40 s3: FENCE_WT_RESP_FILL: Unknown NV master command for Fence-Fill-SUE response.
41	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_41: NLG41 s3: M_WT_CRESP: Impossible command/CRESP.
42	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_42: NLG42 s3: PC_WT_CRESP: Impossible command/CRESP.

Bits	SCOM	Field Mnemonic: Description
43	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_43: NLG43 s3: M_EVAL_DIR: Impossible command/CRESP.
44	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_44: NLG44 s4: Unexpected error state (bad sub-sequence return).
45	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_45: NLG45 s3: sfstat-retry, but not in retry-abbks collision state.
46	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_46: NLG46 s3: *cond*-retry, but not in retry-abbks collision state.
47	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_47: NLG47 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.
48	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_48: NLG48 s3: NVLink response timeout. but not in waiting for NV response state.
49	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_49: NLG49 s4: M_EVAL_DIR: Unsupported NVLink command for POWER9-to-POWER9 mode.
50	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_50: NLG50 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.

Register Name	**CQ_SM Miscellaneous Configuration 0 Register**
Mnemonic	NPU.STCK1.CS.SM1.MISC.CONFIG0
Address	0000000005011120 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG1_RESERVED1: Reserved.
1	RW	CONFIG_MA_DSA_OPT_CLAIM_UR: 0 = Use Read.RWC for DCLAIM/DCBZ to GPU memory. 1 = Use Upgrade.DN for DCLAIM/DCBZ to GPU memory.
2	RW	CONFIG_MA_DSA_OPT_FLUSH_UR: 0 = Use Read.RWC for DCBF/DCBFC to GPU memory. 1 = Use Upgrade.DN for DCBF/DCBFC to GPU memory.
3	RW	CONFIG_MA_DSA_OPT_RP_MODE: 0 = Use DMA for Write.NC to processor memory. 1 = Use Read-Push for Write.NC to processor memory.

Bits	SCOM	Field Mnemonic: Description
4	RW	CONFIG_ADR_BAR_MODE: Processor bus adr_bar: 0 = Large system mode. 1 = Small system mode.
5	RW	CONFIG_DISABLE_NN_RN: Processor bus scope: 0 = Enable Nn and Rn scopes. 1 = Disable Nn and Rn scopes.
6	RW	CONFIG_DISABLE_VG_NOT_SYS: Processor bus scope: 0 = Enable Vg less than system. 1 = Force all Vg to system.
7	RW	CONFIG_DISABLE_G: Processor bus scope: 0 = Enable G scope. 1 = Disable G scope.
8	RW	CONFIG_DISABLE_LN: Processor bus scope: 0 = Enable Ln scope. 1 = Disable Ln scope.
9	RW	CONFIG_SKIP_G: Processor bus scope: 0 = Allow G on rty_inc. 1 = Skip G on rty_inc.
10	RW	CONFIG_MA_MCRESP_OPT_WRP: 0 = Increase scope on rty_inc to dma_w. 1 = Use write-read-push on rty_inc to dma_w.
11	RW	CONFIG_MA_MCRESP_OPT_RTY_INJ: On a rty_inj type CRESP: 0 = Keep sending dma. 1 = Change to _inj.
12	RW	CONFIG_MA_MCRESP_OPT_RTY_DMA: On a rty_dma type CRESP: 0 = Keep sending inj. 1 = Change to _dma.
13:15	RW	CONFIG_INC_PRI_MASK: Mask select for priority increase due to rty_drp. 0 = 100% chance to increase priority. 1 = 50% chance to increase priority. 2 = 25% chance to increase priority. 3 = 12.5% chance to increase priority. 4 = 6% chance to increase priority. 5 = 3% chance to increase priority. 6, 7 = 1.5% chance to increase priority.
16	RW	CONFIG1_RESERVED2: Reserved.
17	RW	CONFIG_MA_RSNOOP_OPT_B: TBD, future option bit.
18	RW	CONFIG_MA_RSNOOP_OPT_C: TBD, future option bit.
19	RW	CONFIG_MA_SCRESP_OPT_A: TBD, future option bit.
20	RW	CONFIG_MA_SCRESP_OPT_B: TBD, future option bit.
21	RW	CONFIG_MA_SCRESP_OPT_C: TBD, future option bit.
22	RW	CONFIG_RESERVED4: Reserved.
23	RW	CONFIG_MACH_CORRENAB: 0 = Disable state machine array ECC correction. 1 = Enable state machine array ECC correction.
24	RW	CONFIG_MACH_INJECT_ENABLE1: 0 = Disable state machine array ECC error inject bit 1. 1 = Enable state machine array ECC error inject bit 1.

Bits	SCOM	Field Mnemonic: Description
25	RW	CONFIG_MACH_INJECT_ENABLE2: 0 = Disable state machine array ECC error inject bit 2. 1 = Enable state machine array ECC error inject bit 2.
26	RW	CONFIG_RXO_CORRENAB: 0 = Disable ReqRspOut array ECC correction. 1 = Enable ReqRspOut array ECC correction.
27	RW	CONFIG_RXO_INJECT_ENABLE1: 0 = Disable ReqRspOut array ECC error inject bit 1. 1 = Enable ReqRspOut array ECC error inject bit 1.
28	RW	CONFIG_RXO_INJECT_ENABLE2: 0 = Disable ReqRspOut array ECC error inject bit 1. 1 = Enable ReqRspOut array ECC error inject bit 1.
29	RW	CONFIG_RSI_CORRENAB: 0 = Disable PB-Rsp-In array ECC correction. 1 = Enable PB-Rsp-In array ECC correction.
30	RW	CONFIG_RSI_INJECT_ENABLE1: 0 = Disable PB-Rsp-Ine array ECC error inject bit 1. 1 = Enable PB-Rsp-Ine array ECC error inject bit 1.
31	RW	CONFIG_RSI_INJECT_ENABLE2: 0 = Disable PB-Rsp-Ine array ECC error inject bit 1. 1 = Enable PB-Rsp-Ine array ECC error inject bit 1.
32:33	RW	CONFIG_MA_RSNOOP_OPT_DCLAIM: 0 = Partial respond to DCLAIM to GPU memory with lpc_ack. 1 = Partial respond to DCLAIM to GPU memory with lpc_ack+rty_lost_claim. 2 = Partial respond to DCLAIM to GPU memory with lpc_ack+rty_lpc+start pocket cache. 3 = Reserved.
34	RW	CONFIG_MA_DSA_OPT_DMA_UPG: 0 = Non-relaxed dma_w use Read.RWC to acquire pocket cache state/data. 1 = Non-relaxed dma_w use Upgrade.DN to acquire pocket cache state/data.
35	RW	CONFIG_EVAPORATE_BY_LCO: 0 = Just free the state machine without LCO. 1 = Evaporate pocket cache entries by LCO.
36	RW	CONFIG_MRBGP_TRACK_ALL: 0 = Master retry back-off group-pump track only this stack's retry responses. 1 = Master retry back-off group-pump track all this chip's retry responses.
37	RW	CONFIG_MRBSP_TRACK_ALL: 0 = Master retry back-off system-pump track only this stack's retry responses. 1 = Master retry back-off system-pump track all this chip's retry responses.
38	RW	CONFIG_ENABLE_PBUS: 0 = Disable NPU processor bus RCMD, PRESP, and CRESP interfaces. 1 = Enable NPU processor bus RCMD, PRESP, and CRESP interfaces.
39	RW	CONFIG_BRAZOS_MODE: 0 = Non-brazos 4-group; 2-chip mode. 1 = Brazos 2-group; 4-chip mode.
40	RW	CONFIG_ENABLE_SNARF_CPM: 0 = Disable Probe.I.MO snarfing a cp_m. 1 = Enable Probe.I.MO snarfing a cp_m.
41	RW	CONFIG_PREALLOC2_REQ0: 0/1 = Preallocate two state machines to brick 0 CREQ channel.
42	RW	CONFIG_PREALLOC2_PRB0: 0/1 = Preallocate two state machines to brick 0 PRB channel.
43	RW	CONFIG_PREALLOC2_REQ1: 0/1 = Preallocate two state machines to brick 1 CREQ channel.
44	RW	CONFIG_PREALLOC2_PRB1: 0/1 = Preallocate two state machines to brick 1 PRB channel.

Bits	SCOM	Field Mnemonic: Description
45	RW	CONFIG_PREALLOC2_XATS: 0/1 = Preallocate two state machines to XATS interface.
46	RW	CONFIG_DISABLE_INJECT: 0 = Enable sending cl,pr_dma_inj. 1 = Disable sending cl,pr_dma_inj. **Note:** To disable sending _inj commands, the following bits must also be set to '0': config_ma_mcresp_opt_rty_inj config_ma_dsa_opt_rp_mode
47	RW	CONFIG_DCACHE_MODE: 0 = Drive data bus DCACHE field in basic mode. 1 = Drive data bus DCACHE field in CAPP mode.
48	RW	CONFIG_DCACHE_REPORTS_PHYSICAL: 0 = In basic mode report local masters as near. 1 = In basic mode report local masters as local.
49	RW	CONFIG_RSI_DISABLE_DATIN_FASTPATH: 0 = Enable RSI PB data in fastpath. 1 = Disable fastpath.
50	RW	CONFIG_PCKT_BLK_PRB: 0 = Valid pocket cache entries, do not block probes. 1 = Probes are blocked.
51	RW	CONFIG_P9P9_MODE: 0 = Normal operation. 1 = Run in special lab bring-up GPUless POWER9-to-POWER9 mode.
52	RW	CONFIG_FORBID_MMIO_READ_GT_32: 0 = Allow GPU to PB MMIOs greater than 32 bytes. 1 = Flag error and brick fence on MMIOs greater than 32 bytes.
53	RW	CONFIG_FORBID_MMIO_ATOMIC: 0 = Allow GPU to PB atomics to MMIO space. 1 = Flag error and brick fence on atomics to MMIO space.
54	RW	CONFIG_OPT_SNOOP_CP: 0 = Snoop POWER9 memory cp_* type commands. 1 = Do not snoop cp_* type commands.
55:63	RW	CONFIG0_RESERVED3: Reserved.

Register Name	**CQ_SM Miscellaneous Configuration 1 Register**
Mnemonic	NPU.STCK1.CS.SM1.MISC.CONFIG1
Address	0000000005011121 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_RANDOM_BACKOFF_DUR_MASK: Mask for the base random duration of a random retry back-off: 0000 = 0 - 15 base random duration. 0001 = 0 - 31 base random duration. 0011 = 0 - 63 base random duration. 0111 = 0 - 127 base random duration. 1111 = 0 - 255 base random duration.
4:7	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_REQ: Mask for the slowdown of NTL CREQ credits during chgrate.hang. 'n' = $1/(2^{(n+1)})$ cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.

Bits	SCOM	Field Mnemonic: Description
8:11	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_PRB: Mask for the slowdown of NTL probe credits during chgrate.hang. 'n' = 1/(2$^{(n+1)}$) cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
12:15	RW	CONFIG_ARB_NONCRR_SAFETY: Safety valve for non-CRESP/non-REQIN events going down the arbiter pipe. After n+1 REQIN events go through the arbiter while a non-CRR event is waiting, REQIN events are blocked to give non-CRR events a chance.
16:27	RW	CONFIG_EPSILON_WLN_COUNT: Epsilon count for Ln scope CP write.
28:31	RW	CONFIG_SCALE_RPT_HANG_POLL: Scaling factor for rpt_hang.poll: 0 = 1:1 processor bus rpt_hang.polls received. 1 = 1:2 processor bus rpt_hang.polls received. ... 15 = 1:16 processor bus rpt_hang.polls received.
32:35	RW	CONFIG_SCALE_RPT_HANG_DATA: Scaling factor for rpt_hang.data: 0 = 1:1 processor bus rpt_hang.datas received. 1 = 1:2 processor bus rpt_hang.datas received. ... 15 = 1:16 processor bus rpt_hang.datas received.
36:63	RW	CONFIG1_RESERVED: Reserved.

Register Name	Power Bus Epsilon Configuration Register
Mnemonic	NPU.STCK1.CS.SM1.MISC.EPSILON_CONFIG
Address	0000000005011122 (SCOM)
Description	Processor bus Epsilon configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_EPSILON_RATE: 0 = Decrement Epsilon count at 1:1 nest_gckn. ... 15 = Epsilon count at 1/16 nest_gckn.
4:15	RW	CONFIG_EPSILON_W0_COUNT: Epsilon count for Nn/G scope CP write.
16:27	RW	CONFIG_EPSILON_W1_COUNT: Epsilon count for Rn/Vg scope CP write.
28:39	RW	CONFIG_EPSILON_R0_COUNT: Epsilon count for Ln scope reads.
40:51	RW	CONFIG_EPSILON_R1_COUNT: Epsilon count for Nn/G scope reads.
52:63	RW	CONFIG_EPSILON_R2_COUNT: Epsilon count for Rn/Vg scope reads.

Register Name	Timer Configuration Register
Mnemonic	NPU.STCK1.CS.SM1.MISC.XTIMER_CONFIG
Address	0000000005011123 (SCOM)
Description	Timer configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	CONFIG_POCKET_RATE1: Rate-1 for the pocket cache with data entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
2:7	RW	CONFIG_POCKET_RATE2: Rate-2 for the long timer for pocket cache entries (2^n cycles).
8:13	RW	CONFIG_POCKET_RATE3: Rate-3 for the short timer for pocket cache entries (2^n cycles).
14:19	RW	CONFIG_FWD_PROG_RATE2: Rate-2 for the forward-progress timer (2^n cycles).

Bits	SCOM	Field Mnemonic: Description
20:25	RW	CONFIG_CTL_TICK: Rate for CTL timer tick (default 63 = off). **Note:** This field can/should have different values in each instance.
26:31	RW	CONFIG_INH0_TICK: Rate for SM inhibit timer tick0 (default 63 = off). **Note:** This field can/should have different values in each instance.
32:37	RW	CONFIG_INH1_TICK: Rate for SM inhibit timer tick1 (default 63 = off). **Note:** This field can/should have different values in each instance.
38:39	RW	CONFIG_NV_RESP_RATE1: Rate-1 for NV-Response timer. The timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds, where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
40:45	RW	CONFIG_NV_RESP_RATE2: Rate-2 for the NV response timer (2^n cycles).
46:47	RW	CONFIG_POCKET_ND_RATE1: Rate-1 for the pocket cache dataless entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
48:63	RO	Constant = 0b0000000000000000

Register Name	GPU BAR Register
Mnemonic	NPU.STCK1.CS.SM1.MISC.GPU_BAR
Address	0000000005011124 (SCOM)
Description	Memory BARs. BAR register defining the GPU memory addresses serviced by bricks 0 and 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GPU0_BAR_ENABLE: 0 = Disable BAR for brick 0. 1 = enable BAR for brick 0.
1:2	RW	CONFIG_GPU0_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 0. **Note:** It is illegal to set this field to 0b11.
3:6	RW	CONFIG_GPU0_BAR_GROUP: Group field of the base address of BAR for brick 0.
7:9	RW	CONFIG_GPU0_BAR_CHIP: Chip field of the base address of BAR for brick 0.
10:21	RW	CONFIG_GPU0_BAR_ADDR: The base address (1G address) of the BAR for brick 0. Must be aligned on the size of the BAR mask.
22	RW	CONFIG_GPU0_BAR_RESERVED: Reserved.
23	RW	CONFIG_GPU0_BAR_GRANULE: Hash boundary for brick 0: 0 = Hash on 512B boundary (hashbits(0:7) = addr(47:54)). 1 = Hash on 1024B boundary (hashbits(0:7) = addr(46:53)).

Bits	SCOM	Field Mnemonic: Description
24:27	RW	CONFIG_GPU0_BAR_SIZE: Size of the base address match for the BAR for brick 0: 0 = 1G 1 = 2G 2 = 4G ... 9 = 512G 10 = 1T 11 = 2T 12 = 4T >12 = Reserved
28:31	RW	CONFIG_GPU0_BAR_MODE: Hash mode of the BAR for brick 0: 0 = (single) match on all address in address/size. 1 = (dual.0) match if hashbits(7) = 0. 2 = (dual.1) match if hashbits(7) = 1. 3 = (triple.0) match if hashbits%3 = 0. 4 = (triple.1) match if hashbits%3 = 1. 5 = (triple.2) match if hashbits%3 = 2. 6 = (quad.0) match if hashbits(6:7) = 0. 7 = (quad.1) match if hashbits(6:7) = 1. 8 = (quad.2) match if hashbits(6:7) = 2. 9 = (quad.3) match if hashbits(6:7) = 3. 10 = (six.0) match if hashbits%3 = 0 and hashbits(7) = 0. 11 = (six.1) match if hashbits%3 = 0 and hashbits(7) = 1. 12 = (six.2) match if hashbits%3 = 1 and hashbits(7) = 0. 13 = (six.3) match if hashbits%3 = 1 and hashbits(7) = 1. 14 = (six.4) match if hashbits%3 = 2 and hashbits(7) = 0. 15 = (six.5) match if hashbits%3 = 2 and hashbits(7) = 1.
32	RW	CONFIG_GPU1_BAR_ENABLE: 0 = Disable BAR for brick 1. 1 = Enable BAR for brick 1.
33:34	RW	CONFIG_GPU1_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 1. **Note:** It is illegal to set this field to 0b11.
35:38	RW	CONFIG_GPU1_BAR_GROUP: Group field of the base address of BAR for brick 1.
39:41	RW	CONFIG_GPU1_BAR_CHIP: Chip field of the base address of BAR for brick 1.
42:53	RW	CONFIG_GPU1_BAR_ADDR: The base address (1G address) of the BAR for brick 1. Must be aligned on the size of the BAR mask.
54	RW	CONFIG_GPU1_BAR_RESERVED: Reserved.
55	RW	CONFIG_GPU1_BAR_GRANULE: Hash boundary for brick 1: 0 = Hash on 512B boundary (hashbits(0:7) = addr(47:54)). 1 = Hash on 1024B boundary (hashbits(0:7) = addr(46:53)).

Bits	SCOM	Field Mnemonic: Description
60:63	RW	CONFIG_GPU1_BAR_MODE: Hash mode of the BAR for brick 1: 0 = (single) match on all address in address/size. 1 = (dual.0) match if hashbits(7) = 0. 2 = (dual.1) match if hashbits(7) = 1. 3 = (triple.0) match if hashbits%3 = 0. 4 = (triple.1) match if hashbits%3 = 1. 5 = (triple.2) match if hashbits%3 = 2. 6 = (quad.0) match if hashbits(6:7) = 0. 7 = (quad.1) match if hashbits(6:7) = 1. 8 = (quad.2) match if hashbits(6:7) = 2. 9 = (quad.3) match if hashbits(6:7) = 3. 10 = (six.0) match if hashbits%3 = 0 and hashbits(7) = 0. 11 = (six.1) match if hashbits%3 = 0 and hashbits(7) = 1. 12 = (six.2) match if hashbits%3 = 1 and hashbits(7) = 0. 13 = (six.3) match if hashbits%3 = 1 and hashbits(7) = 1. 14 = (six.4) match if hashbits%3 = 2 and hashbits(7) = 0. 15 = (six.5) match if hashbits%3 = 2 and hashbits(7) = 1.

Register Name	PHY0/PHY1/NPU MMIO BAR Register
Mnemonic	NPU.STCK1.CS.SM1.MISC.PHY_BAR
Address	0000000005011126 (SCOM)
Description	BAR register defining the PHY0/PHY1/NPU MMIO range. Stack 0 PHY_BAR defines a 2M range mapped to PHY 0 registers. Stack 1 PHY_BAR r defines a 2M range mapped to PHY 1 registers. Stack 2 PHY_BAR defines a 16M range mapped to all NPU registers. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_PHY_BAR_ENABLE: 0 = Disable PHY_BAR. 1 = Enable PHY_BAR.
1:2	RW	PHY_RESERVED1: Reserved.
3:6	RW	CONFIG_PHY_BAR_GROUP: Group field of the 2M aligned address of this PHY_BAR.
7:9	RW	CONFIG_PHY_BAR_CHIP: Chip field of the 2M aligned address of this PHY_BAR.
10:30	RW	CONFIG_PHY_BAR_ADDR: The 2M aligned address of this PHY_BAR's 2M range. **Note:** In stack two, the low three address bits are reserved (16M range).
31	RW	PHY_RESERVED2: Reserved.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Generation ID BAR Register
Mnemonic	NPU.STCK1.CS.SM1.MISC.GENID_BAR
Address	0000000005011127 (SCOM)
Description	ID Registers MMIO BAR. BAR register defining Generation ID register for this stack/ramp. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GENID_BAR_ENABLE: 0 = Disable this BAR. 1 = Enable this BAR.

Bits	SCOM	Field Mnemonic: Description
1:2	RW	GENID_RESERVED1: Reserved.
3:6	RW	CONFIG_GENID_BAR_GROUP: Group field of the 128K aligned address of this GENID_BAR.
7:9	RW	CONFIG_GENID_BAR_CHIP: Chip field of the 128K aligned address of this GENID_BAR.
10:34	RW	CONFIG_GENID_BAR_ADDR: The 128K aligned address of this BAR's 128K range.
35	RW	GENID_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	**Low Water Register**
Mnemonic	NPU.STCK1.CS.SM1.MISC.LOW_WATER
Address	0000000005011128 (SCOM)
Description	State machine allocation for low water marks. Each low water mark should be greater than or equal to 1 and the sum of the low water marks must be less than config_max_machines. Low water marks must not be changed after config_enable_machine_alloc is set to 1 and config_enable_machine_alloc must remain at 1 once it is set to 1. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_LOW_WATER_XATS: Low water mark for XTS/MISC processor bus requests. Can only be changed while config_enable_machine_alloc = 0.
6:11	RW	CONFIG_LOW_WATER_PWR0: Low water mark for processor bus rd/dclaim/atomic/etc. requests. Can only be changed while config_enable_machine_alloc = 0.
12:17	RW	CONFIG_LOW_WATER_PWR1: Low water mark for processor bus CP (castout-push) requests. Can only be changed while config_enable_machine_alloc = 0.
18:23	RW	CONFIG_LOW_WATER_REQ0: Low water mark for NVLink brick 0 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
24:29	RW	CONFIG_LOW_WATER_PRB0: Low water mark for NVLink brick 0 probe requests. Can only be changed while config_enable_machine_alloc = 0.
30:35	RW	CONFIG_LOW_WATER_REQ1: Low water mark for NVLink brick 1 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
36:41	RW	CONFIG_LOW_WATER_PRB1: Low water mark for NVLink brick 1 probe requests. Can only be changed while config_enable_machine_alloc = 0.
42:47	RW	CONFIG_MAX_MACHINES: Maximum number of state machines to be used. Must be >= 8 and <= 62. Can only be changed while config_enable_machine_alloc = 0.
48:50	RW	LOW_WATER_RESERVED1: Reserved.
51	RW	CONFIG_ENABLE_MACHINE_ALLOC: Enable state machine allocation. Can only be changed from 0 to 1 and must stay at 1 once it is set.
52:63	RO	Constant = 0b000000000000

Register Name	**High Water Register**
Mnemonic	NPU.STCK1.CS.SM1.MISC.HIGH_WATER
Address	0000000005011129 (SCOM)
Description	State machine allocation high water marks. Each high water mark should be greater than or equal to the corresponding config_low_water and less than the config_max_machines. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_HIGH_WATER_XATS: High water mark for XTS/MISC processor bus requests.
6:11	RW	CONFIG_HIGH_WATER_PWR0: High water mark for processor bus rd/dclaim/atomic/etc. requests.
12:17	RW	CONFIG_HIGH_WATER_PWR1: High water mark for processor bus CP (castout-push) requests.
18:23	RW	CONFIG_HIGH_WATER_REQ0: High water mark for NVLink brick 0 non-probe requests.
24:29	RW	CONFIG_HIGH_WATER_PRB0: High water mark for NVLink brick 0 probe requests.
30:35	RW	CONFIG_HIGH_WATER_REQ1: High water mark for NVLink brick 1 non-probe requests.
36:41	RW	CONFIG_HIGH_WATER_PRB1: High water mark for NVLink brick 1 probe requests.
42:43	RW	HIGH_WATER_RESERVED1: Reserved.
44:63	RO	Constant = 0b00000000000000000000

Register Name	**Relaxed Configuration 0 Register**
Mnemonic	NPU.STCK1.CS.SM1.MISC.CONFIG_RELAXED0
Address	000000000501112A (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_SOURCE0_WRENA: 0 = Disable relaxed source 0 for write operations. 1 = Enable relaxed source 0 for write operations.
1	RW	CONFIG_RELAXED_SOURCE0_RDENA: 0 = Disable relaxed source 0 for read operations. 1 = Enable relaxed source 0 for read operations.
2:19	RW	CONFIG_RELAXED_SOURCE0_MATCH: Relaxed source 0 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
20:37	RW	CONFIG_RELAXED_SOURCE0_MASK: Relaxed source 0 tag mask value: 0 = Bit is masked off, corresponding match bit must be zero. 1 = Bit must equal corresponding match bit.
38:39	RW	CONFIG_RELAXED_RESERVED0: Reserved.
40	RW	CONFIG_RELAXED_SOURCE1_WRENA: 0 = Disable relaxed source 1 for write operations. 1 = Enable relaxed source 1 for write operations.
41	RW	CONFIG_RELAXED_SOURCE1_RDENA: 0 = Disable relaxed source 1 for read operations. 1 = Enable relaxed source 1 for read operations.
42:59	RW	CONFIG_RELAXED_SOURCE1_MATCH: Relaxed source 1 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 1 Register
Mnemonic	NPU.STCK1.CS.SM1.MISC.CONFIG_RELAXED1
Address	000000000501112B (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:17	RW	CONFIG_RELAXED_SOURCE1_MASK: Relaxed source 1 tag mask value.
18:19	RW	CONFIG_RELAXED_RESERVED1: Reserved.
20	RW	CONFIG_RELAXED_SOURCE2_WRENA: 0 = Disable relaxed source 2 for write operations. 1 = Enable relaxed source 2 for write operations.
21	RW	CONFIG_RELAXED_SOURCE2_RDENA: 0 = Disable relaxed source 2 for read operations. 1 = Enable relaxed source 2 for read operations.
22:39	RW	CONFIG_RELAXED_SOURCE2_MATCH: Relaxed source 2 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
40:57	RW	CONFIG_RELAXED_SOURCE2_MASK: Relaxed source 2 tag mask value.
58:59	RW	CONFIG_RELAXED_RESERVED2: Reserved.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 2 Register
Mnemonic	NPU.STCK1.CS.SM1.MISC.CONFIG_RELAXED2
Address	000000000501112C (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_CMD_CL_DMA_W: Enable relaxed ordering for cl_dma_w.
1	RW	CONFIG_RELAXED_CMD_CL_DMA_W_HP: Enable relaxed ordering for cl_dma_w_hp.
2	RW	CONFIG_RELAXED_CMD_CL_DMA_INJ: Enable relaxed ordering for cl_dma_inj.
3	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_U: Enable relaxed ordering for armw_cas_imax_u.
4	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_S: Enable relaxed ordering for armw_cas_imax_s.
5	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_U: Enable relaxed ordering for armw_cas_imin_u.
6	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_S: Enable relaxed ordering for armw_cas_imin_s.
7	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_U: Enable relaxed ordering for armwf_cas_imax_u.
8	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_S: Enable relaxed ordering for armwf_cas_imax_s.
9	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_U: Enable relaxed ordering for armwf_cas_imin_u.
10	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_S: Enable relaxed ordering for armwf_cas_imin_s.
11	RW	CONFIG_RELAXED_CMD_PR_DMA_INJ: Enable relaxed ordering for pr_dma_inj.
12	RW	CONFIG_RELAXED_CMD_DMA_PR_W: Enable relaxed ordering for dma_pr_w.
13	RW	CONFIG_RELAXED_CMD_ARMW_ADD: Enable relaxed ordering for armw_add.
14	RW	CONFIG_RELAXED_CMD_ARMW_AND: Enable relaxed ordering for armw_and.

Bits	SCOM	Field Mnemonic: Description
15	RW	CONFIG_RELAXED_CMD_ARMW_OR: Enable relaxed ordering for armw_or.
16	RW	CONFIG_RELAXED_CMD_ARMW_XOR: Enable relaxed ordering for armw_xor.
17	RW	CONFIG_RELAXED_CMD_ARMWF_ADD: Enable relaxed ordering for armwf_add.
18	RW	CONFIG_RELAXED_CMD_ARMWF_AND: Enable relaxed ordering for armwf_and.
19	RW	CONFIG_RELAXED_CMD_ARMWF_OR: Enable relaxed ordering for armwf_or.
20	RW	CONFIG_RELAXED_CMD_ARMWF_XOR: Enable relaxed ordering for armwf_xor.
21	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_E: Enable relaxed ordering for armwf_cas_e.
22	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_U: Enable relaxed ordering for armwf_cas_u.
23	RW	CONFIG_RELAXED_CMD_CL_RD_NC_F0: Enable relaxed ordering for cl_rd_nc(F = 0).
24	RW	CONFIG_RELAXED_SOURCE3_WRENA: 0 = Disable relaxed source 3 for write operations. 1 = Enable relaxed source 3 for write operations.
25	RW	CONFIG_RELAXED_SOURCE3_RDENA: 0 = Disable relaxed source 3 for read operations. 1 = Enable relaxed source 3 for read operations.
26:43	RW	CONFIG_RELAXED_SOURCE3_MATCH: Relaxed source 3 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
44:61	RW	CONFIG_RELAXED_SOURCE3_MASK: Relaxed source 0 tag mask value.
62:63	RW	CONFIG_RELAXED_RESERVED3: Reserved.

Register Name	**NTL0/NDL0 MMIO BAR Register**
Mnemonic	NPU.STCK1.CS.SM1.MISC.NDT0_BAR
Address	000000000501112D (SCOM)
Description	BAR register defining the NDL/NTL MMIO range for brick 0 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT0_BAR_ENABLE: 0 = Disable BAR for brick 0. 1 = Enable BAR for brick 0.
1:2	RW	NDT0_RESERVED1: Reserved.
3:6	RW	CONFIG_NDT0_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT0_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT0_BAR_ADDR: The 128K aligned address of BAR for brick 0's 128K range.
35	RW	NDT0_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	NTL1/NDL1 MMIO BAR Register
Mnemonic	NPU.STCK1.CS.SM1.MISC.NDT1_BAR
Address	000000000501112E (SCOM)
Description	BAR register defining the NDL/NTL MMIO range for brick 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT1_BAR_ENABLE: 0 = Disable BAR for brick 1. 1 = Enable BAR for brick 1.
1:2	RW	NDT1_RESERVED1: Reserved.
3:6	RW	CONFIG_NDT1_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT1_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT1_BAR_ADDR: The 128K aligned address of BAR for brick 1's 128K range.
35	RW	NDT1_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	Performance Configuration Register
Mnemonic	NPU.STCK1.CS.SM1.MISC.PERF_CONFIG
Address	000000000501112F (SCOM)
Description	Performance event selection register.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	PERF_CONFIG_LATSTART: Latency count start event.
8:15	RW	PERF_CONFIG_LATCANCEL: Latency count abort event.
16:23	RW	PERF_CONFIG_EVENT0: Event 0 select.
24:31	RW	PERF_CONFIG_EVENT1: Event 0 select.
32:39	RW	PERF_CONFIG_EVENT2: Event 0 select.
40:47	RW	PERF_CONFIG_EVENT3: Event 0 select.
48:55	RW	PERF_CONFIG_LATFINISH: Latency count finish event.
56:62	RW	PERF_CONFIG_RESERVED2: Reserved.
63	RW	PERF_CONFIG_ACT: Enable clock gates for performance monitor latches.

Register Name	Inhibit Configuration Register
Mnemonic	NPU.STCK1.CS.SM1.MISC.INHIBIT_CONFIG
Address	0000000005011130 (SCOM)
Description	This register configures inhibits for CQ_SM.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_INHIBIT_LFREQ0: Base LFSR frequency 0: 0..11 = $1/2^{(n+1)}$ 12 = $1/2^{14}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
4:5	RW	CONFIG_INHIBIT_PFREQ0: Selects pre frequency 0: 0 = Inhibit timer tick0. 1 = Inverted inhibit timer tick0. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
6	RW	CONFIG_INHIBIT_BLOCKY0: 0 = Disable blocky mode. 1 = Enable blocky mode.
7	RW	CONFIG_INHIBIT_ONESHOT0: 0 = Continuous mode. 1 = One shot mode.
8:15	RW	CONFIG_INHIBIT_DEST0: Selects the destination of the inhibit.
16:19	RW	CONFIG_INHIBIT_LFREQ1: Base LFSR frequency 0: 0..12 = $1/2^{(n+1)}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
20:21	RW	CONFIG_INHIBIT_PFREQ1: Selects pre-frequency 0: 0 = Inhibit timer tick1. 1 = Inverted inhibit timer tick1. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
22	RW	CONFIG_INHIBIT_BLOCKY1: 0 = Disable blocky mode. 1 = Enable blocky mode.
23	RW	CONFIG_INHIBIT_ONESHOT1: 0 = Continuous mode. 1 = One shot mode.
24:31	RW	CONFIG_INHIBIT_DEST1: Selects the destination of the inhibit.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	CERR Message 0 Register
Mnemonic	NPU.STCK1.CS.SM1.MISC.CERR_MESSAGE0
Address	0000000005011131 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS0: Reserved.

Register Name	CERR Message 1 Register
Mnemonic	NPU.STCK1.CS.SM1.MISC.CERR_MESSAGE1
Address	0000000005011132 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS1: Reserved.

Register Name	CERR Message 2 Register
Mnemonic	NPU.STCK1.CS.SM1.MISC.CERR_MESSAGE2
Address	0000000005011133 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS2: Reserved.

Register Name	CERR Message 3 Register
Mnemonic	NPU.STCK1.CS.SM1.MISC.CERR_MESSAGE3
Address	0000000005011134 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS3: Reserved.

Register Name	CERR Message 4 Register
Mnemonic	NPU.STCK1.CS.SM1.MISC.CERR_MESSAGE4
Address	0000000005011135 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS4: Reserved.

Register Name	CQ_SM Status Register
Mnemonic	NPU.STCK1.CS.SM1.MISC.SM_STATUS
Address	0000000005011136 (SCOM)
Description	Status reporting register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SM_STATUS_CREQ0: Set to 1 when brick 0 CREQ allocation is at its idle level.
1	ROX	SM_STATUS_PRB0: Set to 1 when brick 0 probe allocation is at its idle level.

Bits	SCOM	Field Mnemonic: Description
2	ROX	SM_STATUS_CREQ1: Set to 1 when brick 1 CREQ allocation is at its idle level.
3	ROX	SM_STATUS_PRB1: Set to 1 when brick 1 probe allocation is at its idle level.
4	ROX	SM_STATUS_XATS: Set to 1 when ATS/MISC allocation is at its idle level.
5	ROX	SM_STATUS_PWR0: Set to 1 when processor bus (non-CP*) allocation is at its idle level.
6	ROX	SM_STATUS_PWR1: Set to 1 when processor bus (CP*) allocation is at its idle level.
7	ROX	SM_STATUS_CHGRATE: Set to 1 when chgrate.hang slowdown is being applied to machine allocation.
8:11	ROX	SM_STATUS_MRBGP: Master retry back-off level for group-pump commands.
12:15	ROX	SM_STATUS_MRBSP: Master retry back-off level for system-pump commands.
16:19	ROX	SM_STATUS_FENCE0: Brick 0 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X = Flushing pocket cache entries prior to exiting fence.
20:23	ROX	SM_STATUS_FENCE1: Brick 1 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X = Flushing pocket cache entries prior to exiting fence.
24	ROX	SM_STATUS_PBLN: Set to 1 when the outbound Ln scope processor bus request queue is empty.
25	ROX	SM_STATUS_PBNNG: Set to 1 when the outbound Nn/G scope processor bus request queue is empty.
26	ROX	SM_STATUS_PBRNVG: Set to 1 when the outbound Rn/Vg scope processor bus request queue is empty.
27	ROX	SM_STATUS_N0REQ: Set to 1 when the outbound brick 0 CREQ request queue is empty.
28	ROX	SM_STATUS_N0DGD: Set to 1 when the outbound brick 0 downgrade request queue is empty.
29	ROX	SM_STATUS_N1REQ: Set to 1 when the outbound brick 1 CREQ request queue is empty.
30	ROX	SM_STATUS_N1DGD: Set to 1 when the outbound brick 1 downgrade request queue is empty.
31	ROX	SM_STATUS_MMIO: Set to 1 when the outbound MMIO/GenId request queue is empty.
32	ROX	SM_STATUS_ATSXLATE: Set to 1 when the outbound ATS TCE translation request queue is empty.
33	ROX	SM_STATUS_PBRSP: Set to 1 when the outbound processor bus data response/merge operation queue is empty.
34	ROX	SM_STATUS_N0RSP: Set to 1 when the outbound brick 0 response queue is empty.
35	ROX	SM_STATUS_N1RSP: Set to 1 when the outbound brick 1 response queue is empty.
36	ROX	SM_STATUS_XARSP: Set to 1 when the outbound ATS/MISC response queue is empty.
37	ROX	SM_STATUS_SACOLL: Set to 1 when the same address collision check queue is empty.
38	ROX	SM_STATUS_FREE: Set to 1 when the free state machine queue is empty.
39	ROX	SM_STATUS_RESERVED1: Reserved.
40:63	RO	Constant = 0b000000000000000000000000

Register Name	**CQ_SM Miscellaneous Configuration 0 Register**
Mnemonic	NPU.STCK1.CS.SM2.MISC.CONFIG0
Address	0000000005011140 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG1_RESERVED1: Reserved.
1	RW	CONFIG_MA_DSA_OPT_CLAIM_UR: 0 = Use Read.RWC for DCLAIM/DCBZ to GPU memory. 1 = Use Upgrade.DN for DCLAIM/DCBZ to GPU memory.

Bits	SCOM	Field Mnemonic: Description
2	RW	CONFIG_MA_DSA_OPT_FLUSH_UR: 0 = Use Read.RWC for DCBF/DCBFC to GPU memory. 1 = Use Upgrade.DN for DCBF/DCBFC to GPU memory.
3	RW	CONFIG_MA_DSA_OPT_RP_MODE: 0 = Use DMA for Write.NC to processor memory. 1 = Use Read-Push for Write.NC to processor memory.
4	RW	CONFIG_ADR_BAR_MODE: Processor bus adr_bar: 0 = Large system mode. 1 = Small system mode.
5	RW	CONFIG_DISABLE_NN_RN: Processor bus scope: 0 = Enable Nn and Rn scopes. 1 = Disable Nn and Rn scopes.
6	RW	CONFIG_DISABLE_VG_NOT_SYS: Processor bus scope: 0 = Enable Vg less than system. 1 = Force all Vg to system.
7	RW	CONFIG_DISABLE_G: Processor bus scope: 0 = Enable G scope. 1 = Disable G scope.
8	RW	CONFIG_DISABLE_LN: Processor bus scope: 0 = Enable Ln scope. 1 = Disable Ln scope.
9	RW	CONFIG_SKIP_G: Processor bus scope: 0 = Allow G on rty_inc. 1 = Skip G on rty_inc.
10	RW	CONFIG_MA_MCRESP_OPT_WRP: 0 = Increase scope on rty_inc to dma_w. 1 = Use write-read-push on rty_inc to dma_w.
11	RW	CONFIG_MA_MCRESP_OPT_RTY_INJ: On a rty_inj type CRESP: 0 = Keep sending dma. 1 = Change to _inj.
12	RW	CONFIG_MA_MCRESP_OPT_RTY_DMA: On a rty_dma type CRESP: 0 = Keep sending inj. 1 = Change to _dma.
13:15	RW	CONFIG_INC_PRI_MASK: Mask select for priority increase due to rty_drp: 0 = 100% chance to increase priority. 1 = 50% chance to increase priority. 2 = 25% chance to increase priority. 3 = 12.5% chance to increase priority. 4 = 6% chance to increase priority. 5 = 3% chance to increase priority. 6, 7 = 1.5% chance to increase priority.
16	RW	CONFIG1_RESERVED2: Reserved.
17	RW	CONFIG_MA_RSNOOP_OPT_B: TBD, future option bit.
18	RW	CONFIG_MA_RSNOOP_OPT_C: TBD, future option bit.
19	RW	CONFIG_MA_SCRESP_OPT_A: TBD, future option bit.
20	RW	CONFIG_MA_SCRESP_OPT_B: TBD, future option bit.
21	RW	CONFIG_MA_SCRESP_OPT_C: TBD, future option bit.
22	RW	CONFIG_RESERVED4: Reserved.

Bits	SCOM	Field Mnemonic: Description
23	RW	CONFIG_MACH_CORRENAB: 0 = Disable state machine array ECC correction. 1 = Enable state machine array ECC correction.
24	RW	CONFIG_MACH_INJECT_ENABLE1: 0 = Disable state machine array ECC error inject bit 1. 1 = Enable state machine array ECC error inject bit 1.
25	RW	CONFIG_MACH_INJECT_ENABLE2: 0 = Disable state machine array ECC error inject bit 2. 1 = Enable state machine array ECC error inject bit 2.
26	RW	CONFIG_RXO_CORRENAB: 0 = Disable ReqRspOut array ECC correction. 1 = Enable ReqRspOut array ECC correction.
27	RW	CONFIG_RXO_INJECT_ENABLE1: 0 = Disable ReqRspOut array ECC error inject bit 1. 1 = Enable ReqRspOut array ECC error inject bit 1.
28	RW	CONFIG_RXO_INJECT_ENABLE2: 0 = Disable ReqRspOut array ECC error inject bit 1. 1 = Enable ReqRspOut array ECC error inject bit 1.
29	RW	CONFIG_RSI_CORRENAB: 0 = Disable PB-Rsp-In array ECC correction. 1 = Enable PB-Rsp-In array ECC correction.
30	RW	CONFIG_RSI_INJECT_ENABLE1: 0 = Disable PB-Rsp-Ine array ECC error inject bit 1. 1 = Enable PB-Rsp-Ine array ECC error inject bit 1.
31	RW	CONFIG_RSI_INJECT_ENABLE2: 0 = Disable PB-Rsp-Ine array ECC error inject bit 1. 1 = Enable PB-Rsp-Ine array ECC error inject bit 1.
32:33	RW	CONFIG_MA_RSNOOP_OPT_DCLAIM: 0 = Partial respond to DCLAIM to GPU memory with lpc_ack. 1 = Partial respond to DCLAIM to GPU memory with lpc_ack+rty_lost_claim. 2 = Partial respond to DCLAIM to GPU memory with lpc_ack+rty_lpc+start pocket cache. 3 = Reserved.
34	RW	CONFIG_MA_DSA_OPT_DMA_UPG: 0 = Non-relaxed dma_w use Read.RWC to acquire pocket cache state/data. 0 = Non-relaxed dma_w use Upgrade.DN to acquire pocket cache state/data.
35	RW	CONFIG_EVAPORATE_BY_LCO: 0 = Just free the state machine without LCO. 1 = Evaporate pocket cache entries by LCO.
36	RW	CONFIG_MRBGP_TRACK_ALL: 0 = Master retry back-off group-pump track only this stack's retry responses. 1 = Master retry back-off group-pump track all this chip's retry responses.
37	RW	CONFIG_MRBSP_TRACK_ALL: 0 = Master retry back-off system-pump track only this stack's retry responses. 1 = Master retry back-off system-pump track all this chip's retry responses.
38	RW	CONFIG_ENABLE_PBUS: 0 = Disable NPU processor bus RCMD, PRESP, and CRESP interfaces. 1 = Enable NPU processor bus RCMD, PRESP, and CRESP interfaces.
39	RW	CONFIG_BRAZOS_MODE: 0 = Non-brazos 4-group; 2-chip mode. 1 = Brazos 2-group; 4-chip mode.

Bits	SCOM	Field Mnemonic: Description
40	RW	CONFIG_ENABLE_SNARF_CPM: 0 = Disable Probe.I.MO snarfing a cp_m. 1 = Enable Probe.I.MO snarfing a cp_m.
41	RW	CONFIG_PREALLOC2_REQ0: 0/1 = Preallocate two state machines to brick 0 CREQ channel.
42	RW	CONFIG_PREALLOC2_PRB0: 0/1 = Preallocate two state machines to brick 0 PRB channel.
43	RW	CONFIG_PREALLOC2_REQ1: 0/1 = Preallocate two state machines to brick 1 CREQ channel.
44	RW	CONFIG_PREALLOC2_PRB1: 0/1 = Preallocate two state machines to brick 1 PRB channel.
45	RW	CONFIG_PREALLOC2_XATS: 0/1 = Preallocate two state machines to XATS interface.
46	RW	CONFIG_DISABLE_INJECT: 0 = Enable sending cl,pr_dma_inj. 1 = Disable sending cl,pr_dma_inj. **Note:** To disable sending _inj commands, the following bits must also be set to '0': config_ma_mcresp_opt_rty_inj config_ma_dsa_opt_rp_mode
47	RW	CONFIG_DCACHE_MODE: 0 = Drive data bus DCACHE field in basic mode. 1 = Drive data bus DCACHE field in CAPP mode.
48	RW	CONFIG_DCACHE_REPORTS_PHYSICAL: 0 = In basic mode report local masters as near. 1 = In basic mode report local masters as local.
49	RW	CONFIG_RSI_DISABLE_DATIN_FASTPATH: 0 = Enable RSI PB data in fastpath. 1 = Disable fastpath.
50	RW	CONFIG_PCKT_BLK_PRB: 0 = Valid pocket cache entries, do not block probes. 1 = Probes are blocked.
51	RW	CONFIG_P9P9_MODE: 0 = Normal operation. 1 = Run in special lab bring-up GPUless POWER9-to-POWER9 mode.
52	RW	CONFIG_FORBID_MMIO_READ_GT_32: 0 = Allow GPU to PB MMIOs greater than 32 bytes. 1 = Flag error and brick fence on MMIOs greater than 32 bytes.
53	RW	CONFIG_FORBID_MMIO_ATOMIC: 0 = Allow GPU to PB atomics to MMIO space. 1 = Flag error and brick fence on atomics to MMIO space.
54	RW	CONFIG_OPT_SNOOP_CP: 0 = Snoop POWER9 memory cp_* type commands. 1 = Do not snoop cp_* type commands.
55:63	RW	CONFIG0_RESERVED3: Reserved.

Register Name	**CQ_SM Miscellaneous Configuration 1 Register**
Mnemonic	NPU.STCK1.CS.SM2.MISC.CONFIG1
Address	0000000005011141 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_RANDOM_BACKOFF_DUR_MASK: Mask for the base random duration of a random retry back-off: 0000 = 0 - 15 base random duration. 0001 = 0 - 31 base random duration. 0011 = 0 - 63 base random duration. 0111 = 0 - 127 base random duration. 1111 = 0 - 255 base random duration.
4:7	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_REQ: Mask for the slowdown of NTL CREQ credits during chgrate.hang. 'n' = $1/(2^{(n+1)})$ cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slice times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
8:11	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_PRB: Mask for the slowdown of NTL probe credits during chgrate.hang. 'n' = $1/(2^{(n+1)})$ cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
12:15	RW	CONFIG_ARB_NONCRR_SAFETY: Safety valve for non-CRESP/non-REQIN events going down the arbiter pipe. After n+1 REQIN events go through the arbiter while a non-CRR event is waiting, REQIN events are blocked to give non-CRR events a chance.
16:27	RW	CONFIG_EPSILON_WLN_COUNT: Epsilon count for Ln scope CP write.

Bits	SCOM	Field Mnemonic: Description
28:31	RW	CONFIG_SCALE_RPT_HANG_POLL: Scaling factor for rpt_hang.poll: 0 = 1:1 processor bus rpt_hang.polls received. 1 = 1:2 processor bus rpt_hang.polls received. ... 15 = 1:16 processor bus rpt_hang.polls received.
32:35	RW	CONFIG_SCALE_RPT_HANG_DATA: Scaling factor for rpt_hang.data: 0 = 1:1 processor bus rpt_hang.datas received. 1 = 1:2 processor bus rpt_hang.datas received. ... 15 = 1:16 processor bus rpt_hang.datas received.
36:63	RW	CONFIG1_RESERVED: Reserved.

Register Name	**Power Bus Epsilon Configuration Register**
Mnemonic	NPU.STCK1.CS.SM2.MISC.EPSILON_CONFIG
Address	0000000005011142 (SCOM)
Description	Processor bus Epsilon configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_EPSILON_RATE: 0 = Decrement Epsilon count at 1:1 nest_gckn. ... 15 = Epsilon count at 1/16 nest_gckn.
4:15	RW	CONFIG_EPSILON_W0_COUNT: Epsilon count for Nn/G scope CP write.
16:27	RW	CONFIG_EPSILON_W1_COUNT: Epsilon count for Rn/Vg scope CP write.
28:39	RW	CONFIG_EPSILON_R0_COUNT: Epsilon count for Ln scope reads.
40:51	RW	CONFIG_EPSILON_R1_COUNT: Epsilon count for Nn/G scope reads.
52:63	RW	CONFIG_EPSILON_R2_COUNT: Epsilon count for Rn/Vg scope reads.

Register Name	**Timer Configuration Register**
Mnemonic	NPU.STCK1.CS.SM2.MISC.XTIMER_CONFIG
Address	0000000005011143 (SCOM)
Description	Timer configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	CONFIG_POCKET_RATE1: Rate-1 for the pocket cache with data entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate-1) * $2^{(Rate-3)}$ *5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
2:7	RW	CONFIG_POCKET_RATE2: Rate-2 for the long timer for pocket cache entries (2^n cycles).
8:13	RW	CONFIG_POCKET_RATE3: Rate-3 for the short timer for pocket cache entries (2^n cycles).
14:19	RW	CONFIG_FWD_PROG_RATE2: Rate-2 for the forward-progress timer (2^n cycles).

Bits	SCOM	Field Mnemonic: Description
20:25	RW	CONFIG_CTL_TICK: Rate for CTL timer tick (default 63 = off). **Note:** This field can/should have different values in each instance.
26:31	RW	CONFIG_INH0_TICK: Rate for SM inhibit timer tick0 (default 63 = off). **Note:** This field can/should have different values in each instance.
32:37	RW	CONFIG_INH1_TICK: Rate for SM inhibit timer tick1 (default 63 = off). **Note:** This field can/should have different values in each instance.
38:39	RW	CONFIG_NV_RESP_RATE1: Rate-1 for NV-Response timer. The timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds, where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
40:45	RW	CONFIG_NV_RESP_RATE2: Rate-2 for the NV-Response timer (2^n cycles).
46:47	RW	CONFIG_POCKET_ND_RATE1: Rate-1 for the pocket cache dataless entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e -10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
48:63	RO	Constant = 0b0000000000000000

Register Name	GPU BAR Register
Mnemonic	NPU.STCK1.CS.SM2.MISC.GPU_BAR
Address	0000000005011144 (SCOM)
Description	Memory BARs. BAR register defining the GPU memory addresses serviced by bricks 0 and 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GPU0_BAR_ENABLE: 0 = Disable BAR for brick 0. 1 = Enable BAR for brick 0.
1:2	RW	CONFIG_GPU0_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 0. **Note:** It is illegal to set this field to 0b11.
3:6	RW	CONFIG_GPU0_BAR_GROUP: Group field of the base address of BAR for brick 0.
7:9	RW	CONFIG_GPU0_BAR_CHIP: Chip field of the base address of BAR for brick 0.
10:21	RW	CONFIG_GPU0_BAR_ADDR: Base address (1G address) of BAR for brick 0. Must be aligned on the size of the BAR mask.
22	RW	CONFIG_GPU0_BAR_RESERVED: Reserved.
23	RW	CONFIG_GPU0_BAR_GRANULE: Hash boundary for brick 0: 0 = Hash on 512B boundary (hashbits(0:7) = addr(47:54)). 1 = Hash on 1024B boundary (hashbits(0:7) = addr(46:53)).

Bits	SCOM	Field Mnemonic: Description
24:27	RW	CONFIG_GPU0_BAR_SIZE: Size of the base address match for the BAR for brick 0: 0 = 1G 1 = 2G 2 = 4G ... 9 = 512G 10 = 1T 11 = 2T 12 = 4T >12 = Reserved.

Register Name	PHY0/PHY1/NPU MMIO BAR Register
Mnemonic	NPU.STCK1.CS.SM2.MISC.PHY_BAR
Address	0000000005011146 (SCOM)
Description	BAR register defining the PHY0/PHY1/NPU MMIO range. Stack 0 PHY_BAR defines a 2M range mapped to PHY 0 registers. Stack 1 PHY_BAR defines a 2M range mapped to PHY 1 registers. Stack 2 PHY_BAR defines a 16M range mapped to all NPU registers. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_PHY_BAR_ENABLE: 0 = Disable PHY_BAR. 1 = Enable PHY_BAR.
1:2	RW	PHY_RESERVED1: Reserved.
3:6	RW	CONFIG_PHY_BAR_GROUP: Group field of the 2M aligned address of this PHY_BAR.
7:9	RW	CONFIG_PHY_BAR_CHIP: Chip field of the 2M aligned address of this PHY_BAR.
10:30	RW	CONFIG_PHY_BAR_ADDR: The 2M aligned address of this PHY_BAR's 2M range. **Note:** In stack two, the low three address bits are reserved (16M range).
31	RW	PHY_RESERVED2: Reserved.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Generation ID BAR Register
Mnemonic	NPU.STCK1.CS.SM2.MISC.GENID_BAR
Address	0000000005011147 (SCOM)
Description	ID registers MMIO BAR. BAR register defining the Generation ID register for this stack/ramp. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GENID_BAR_ENABLE: 0 = Disable this BAR. 1 = Enable this BAR.

Bits	SCOM	Field Mnemonic: Description
1:2	RW	GENID_RESERVED1: Reserved.
3:6	RW	CONFIG_GENID_BAR_GROUP: Group field of 128K aligned address of this GENID_BAR.
7:9	RW	CONFIG_GENID_BAR_CHIP: Chip field of 128K aligned address of this GENID_BAR.
10:34	RW	CONFIG_GENID_BAR_ADDR: The 128K aligned address of this BAR's 128K range.
35	RW	GENID_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	**Low Water Register**
Mnemonic	NPU.STCK1.CS.SM2.MISC.LOW_WATER
Address	0000000005011148 (SCOM)
Description	State machine allocation for low water marks. Each low water mark should be greater than or equal to 1 and the sum of the low water marks must be less than config_max_machines. Low water marks must not be changed after config_enable_machine_alloc is set to 1 and config_enable_machine_alloc must remain at 1 once it is set to 1. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_LOW_WATER_XATS: Low water mark for XTS/MISC processor bus requests. Can only be changed while config_enable_machine_alloc = 0.
6:11	RW	CONFIG_LOW_WATER_PWR0: Low water mark for processor bus rd/dclaim/atomic/etc. requests. Can only be changed while config_enable_machine_alloc = 0.
12:17	RW	CONFIG_LOW_WATER_PWR1: Low water mark for processor bus CP (castout-push) requests. Can only be changed while config_enable_machine_alloc = 0.
18:23	RW	CONFIG_LOW_WATER_REQ0: Low water mark for NVLink brick 0 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
24:29	RW	CONFIG_LOW_WATER_PRB0: Low water mark for NVLink brick 0 probe requests. Can only be changed while config_enable_machine_alloc = 0.
30:35	RW	CONFIG_LOW_WATER_REQ1: Low water mark for NVLink brick 1 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
36:41	RW	CONFIG_LOW_WATER_PRB1: Low water mark for NVLink brick 1 probe requests. Can only be changed while config_enable_machine_alloc = 0.
42:47	RW	CONFIG_MAX_MACHINES: Maximum number of state machines to be used. Must be >= 8 and <= 62. Can only be changed while config_enable_machine_alloc = 0.
48:50	RW	LOW_WATER_RESERVED1: Reserved.
51	RW	CONFIG_ENABLE_MACHINE_ALLOC: Enable state machine allocation. Can only be changed from 0 to 1 and must stay at 1 once it is set.
52:63	RO	Constant = 0b000000000000

Register Name	**High Water Register**
Mnemonic	NPU.STCK1.CS.SM2.MISC.HIGH_WATER
Address	0000000005011149 (SCOM)
Description	State machine allocation for high water marks. Each high water mark should be greater than or equal to the corresponding config_low_water and less than the config_max_machines. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_HIGH_WATER_XATS: High water mark for XTS/MISC processor bus requests.
6:11	RW	CONFIG_HIGH_WATER_PWR0: High water mark for processor bus rd/dclaim/atomic/etc. requests.
12:17	RW	CONFIG_HIGH_WATER_PWR1: High water mark for processor bus CP (castout-push) requests.
18:23	RW	CONFIG_HIGH_WATER_REQ0: High water mark for NVLink brick 0 non-probe requests.
24:29	RW	CONFIG_HIGH_WATER_PRB0: High water mark for NVLink brick 0 probe requests.
30:35	RW	CONFIG_HIGH_WATER_REQ1: High water mark for NVLink brick 1 non-probe requests.
36:41	RW	CONFIG_HIGH_WATER_PRB1: High water mark for NVLink brick 1 probe requests.
42:43	RW	HIGH_WATER_RESERVED1: Reserved.
44:63	RO	Constant = 0b00000000000000000000

Register Name	**Relaxed Configuration 0 Register**
Mnemonic	NPU.STCK1.CS.SM2.MISC.CONFIG_RELAXED0
Address	000000000501114A (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_SOURCE0_WRENA: 0 = Disable relaxed source 0 for write operations. 1 = Enable relaxed source 0 for write operations.
1	RW	CONFIG_RELAXED_SOURCE0_RDENA: 0 = Disable relaxed source 0 for read operations. 1 = Enable relaxed source 0 for read operations.
2:19	RW	CONFIG_RELAXED_SOURCE0_MATCH: Relaxed source 0 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
20:37	RW	CONFIG_RELAXED_SOURCE0_MASK: Relaxed source 0 tag mask value: 0 = Bit is masked off, the corresponding match bit must be 0. 1 = Bit must equal the corresponding match bit.
38:39	RW	CONFIG_RELAXED_RESERVED0: Reserved.
40	RW	CONFIG_RELAXED_SOURCE1_WRENA: 0 = Disable relaxed source 1 for write operations. 1 = Enable relaxed source 1 for write operations.
41	RW	CONFIG_RELAXED_SOURCE1_RDENA: 0 = Disable relaxed source 1 for read operations. 1 = Enable relaxed source 1 for read operations.
42:59	RW	CONFIG_RELAXED_SOURCE1_MATCH: Relaxed source 1 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 1 Register
Mnemonic	NPU.STCK1.CS.SM2.MISC.CONFIG_RELAXED1
Address	000000000501114B (SCOM)
Description	This register configures relaxed ordering/. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:17	RW	CONFIG_RELAXED_SOURCE1_MASK: Relaxed source 1 tag mask value.
18:19	RW	CONFIG_RELAXED_RESERVED1: Reserved.
20	RW	CONFIG_RELAXED_SOURCE2_WRENA: 0 = Disable relaxed source 2 for write operations. 1 = Enable relaxed source 2 for write operations.
21	RW	CONFIG_RELAXED_SOURCE2_RDENA: 0 = Disable relaxed source 2 for read operations. 1 = Enable relaxed source 2 for read operations.
22:39	RW	CONFIG_RELAXED_SOURCE2_MATCH: Relaxed source 2 tag match value: When config_brazos_mode=0, matches TTAG 2:3,6:21. When config_brazos_mode=1, matches TTAG 3,5:21.
40:57	RW	CONFIG_RELAXED_SOURCE2_MASK: Relaxed source 2 tag mask value.
58:59	RW	CONFIG_RELAXED_RESERVED2: Reserved.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 2 Register
Mnemonic	NPU.STCK1.CS.SM2.MISC.CONFIG_RELAXED2
Address	000000000501114C (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally. M

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_CMD_CL_DMA_W: Enable relaxed ordering for cl_dma_w.
1	RW	CONFIG_RELAXED_CMD_CL_DMA_W_HP: Enable relaxed ordering for cl_dma_w_hp.
2	RW	CONFIG_RELAXED_CMD_CL_DMA_INJ: Enable relaxed ordering for cl_dma_inj.
3	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_U: Enable relaxed ordering for armw_cas_imax_u.
4	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_S: Enable relaxed ordering for armw_cas_imax_s.
5	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_U: Enable relaxed ordering for armw_cas_imin_u.
6	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_S: Enable relaxed ordering for armw_cas_imin_s.
7	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_U: Enable relaxed ordering for armwf_cas_imax_u.
8	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_S: Enable relaxed ordering for armwf_cas_imax_s.
9	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_U: Enable relaxed ordering for armwf_cas_imin_u.
10	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_S: Enable relaxed ordering for armwf_cas_imin_s.
11	RW	CONFIG_RELAXED_CMD_PR_DMA_INJ: Enable relaxed ordering for pr_dma_inj.
12	RW	CONFIG_RELAXED_CMD_DMA_PR_W: Enable relaxed ordering for dma_pr_w.
13	RW	CONFIG_RELAXED_CMD_ARMW_ADD: Enable relaxed ordering for armw_add.
14	RW	CONFIG_RELAXED_CMD_ARMW_AND: Enable relaxed ordering for armw_and.

Bits	SCOM	Field Mnemonic: Description
15	RW	CONFIG_RELAXED_CMD_ARMW_OR: Enable relaxed ordering for armw_or.
16	RW	CONFIG_RELAXED_CMD_ARMW_XOR: Enable relaxed ordering for armw_xor.
17	RW	CONFIG_RELAXED_CMD_ARMWF_ADD: Enable relaxed ordering for armwf_add.
18	RW	CONFIG_RELAXED_CMD_ARMWF_AND: Enable relaxed ordering for armwf_and.
19	RW	CONFIG_RELAXED_CMD_ARMWF_OR: Enable relaxed ordering for armwf_or.
20	RW	CONFIG_RELAXED_CMD_ARMWF_XOR: Enable relaxed ordering for armwf_xor.
21	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_E: Enable relaxed ordering for armwf_cas_e.
22	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_U: Enable relaxed ordering for armwf_cas_u.
23	RW	CONFIG_RELAXED_CMD_CL_RD_NC_F0: Enable relaxed ordering for cl_rd_nc(F=0).
24	RW	CONFIG_RELAXED_SOURCE3_WRENA: 0 = Disable relaxed source 3 for write operations. 1 = Enable relaxed source 3 for write operations.
25	RW	CONFIG_RELAXED_SOURCE3_RDENA: 0 = Disable relaxed source 3 for read operations. 1 = Enable relaxed source 3 for read operations.
26:43	RW	CONFIG_RELAXED_SOURCE3_MATCH: Relaxed source 3 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
44:61	RW	CONFIG_RELAXED_SOURCE3_MASK: Relaxed source 3 tag mask value.
62:63	RW	CONFIG_RELAXED_RESERVED3: Reserved.

Register Name	**NTL0/NDL0 MMIO BAR Register**
Mnemonic	NPU.STCK1.CS.SM2.MISC.NDT0_BAR
Address	000000000501114D (SCOM)
Description	BAR register defining the NDL/NTL MMIO range for brick 0 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT0_BAR_ENABLE: 0 = Disable BAR for brick 0. 1 = Enable BAR for brick 0.
1:2	RW	NDT0_RESERVED1: Reserved.
3:6	RW	CONFIG_NDT0_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT0_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT0_BAR_ADDR: The 128K aligned address of the BAR for brick 0's 128K range.
35	RW	NDT0_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	NTL1/NDL1 MMIO BAR Register
Mnemonic	NPU.STCK1.CS.SM2.MISC.NDT1_BAR
Address	000000000501114E (SCOM)
Description	BAR register defining the NDL/NTL MMIO range for brick 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT1_BAR_ENABLE: 0 = Disable BAR for brick 1. 1 = Enable BAR for brick 1.
1:2	RW	NDT1_RESERVED1: Reserved.
3:6	RW	CONFIG_NDT1_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT1_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT1_BAR_ADDR: The 128K aligned address of the BAR for brick 1 128K range.
35	RW	NDT1_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	Performance Configuration Register
Mnemonic	NPU.STCK1.CS.SM2.MISC.PERF_CONFIG
Address	000000000501114F (SCOM)
Description	Performance event selection register.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	PERF_CONFIG_LATSTART: Latency count start event.
8:15	RW	PERF_CONFIG_LATCANCEL: Latency count abort event.
16:23	RW	PERF_CONFIG_EVENT0: Event 0 select.
24:31	RW	PERF_CONFIG_EVENT1: Event 0 select.
32:39	RW	PERF_CONFIG_EVENT2: Event 0 select.
40:47	RW	PERF_CONFIG_EVENT3: Event 0 select.
48:55	RW	PERF_CONFIG_LATFINISH: Latency count finish event.
56:62	RW	PERF_CONFIG_RESERVED2: Reserved.
63	RW	PERF_CONFIG_ACT: Enable clock gates for performance monitor latches.

Register Name	Inhibit Configuration Register
Mnemonic	NPU.STCK1.CS.SM2.MISC.INHIBIT_CONFIG
Address	0000000005011150 (SCOM)
Description	This register configures inhibits for CQ_SM.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_INHIBIT_LFREQ0: Base LFSR frequency 0: 0..11 = $1/2^{(n+1)}$ 12 = $1/2^{14}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
4:5	RW	CONFIG_INHIBIT_PFREQ0: Selects pre-frequency 0: 0 = Inhibit timer tick0. 1 = Inverted inhibit timer tick0. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
6	RW	CONFIG_INHIBIT_BLOCKY0: 0 = Disable blocky mode. 1 = Enable blocky mode.
7	RW	CONFIG_INHIBIT_ONESHOT0: 0 = Continuous mode. 1 = One shot mode.
8:15	RW	CONFIG_INHIBIT_DEST0: Selects the destination of the inhibit.
16:19	RW	CONFIG_INHIBIT_LFREQ1: Base LFSR frequency 0: 0..12 = $1/2^{(n+1)}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
20:21	RW	CONFIG_INHIBIT_PFREQ1: Selects pre-frequency 0: 0 = Inhibit timer tick1. 1 = Inverted inhibit timer tick1. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
22	RW	CONFIG_INHIBIT_BLOCKY1: 0 = Disable blocky mode. 1 = Enable blocky mode.
23	RW	CONFIG_INHIBIT_ONESHOT1: 0 = Continuous mode. 1 = One shot mode.
24:31	RW	CONFIG_INHIBIT_DEST1: Selects the destination of the inhibit.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	CERR Message 0 Register
Mnemonic	NPU.STCK1.CS.SM2.MISC.CERR_MESSAGE0
Address	0000000005011151 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS0: Reserved.

Register Name	CERR Message 1 Register
Mnemonic	NPU.STCK1.CS.SM2.MISC.CERR_MESSAGE1
Address	0000000005011152 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS1: Reserved.

Register Name	CERR Message 2 Register
Mnemonic	NPU.STCK1.CS.SM2.MISC.CERR_MESSAGE2
Address	0000000005011153 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS2: Reserved.

Register Name	CERR Message 3 Register
Mnemonic	NPU.STCK1.CS.SM2.MISC.CERR_MESSAGE3
Address	0000000005011154 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS3: Reserved.

Register Name	CERR Message 4 Register
Mnemonic	NPU.STCK1.CS.SM2.MISC.CERR_MESSAGE4
Address	0000000005011155 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS4: Reserved.

Register Name	CQ_SM Status Register
Mnemonic	NPU.STCK1.CS.SM2.MISC.SM_STATUS
Address	0000000005011156 (SCOM)
Description	Status reporting register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SM_STATUS_CREQ0: Set to 1 when brick 0 CREQ allocation is at its idle level.
1	ROX	SM_STATUS_PRB0: Set to 1 when brick 0 probe allocation is at its idle level.

Bits	SCOM	Field Mnemonic: Description
2	ROX	SM_STATUS_CREQ1: Set to 1 when brick 1 CREQ allocation is at its idle level.
3	ROX	SM_STATUS_PRB1: Set to 1 when brick 1 probe allocation is at its idle level.
4	ROX	SM_STATUS_XATS: Set to 1 when ATS/MISC allocation is at its idle level.
5	ROX	SM_STATUS_PWR0: Set to 1 when processor bus (non-CP*) allocation is at its idle level.
6	ROX	SM_STATUS_PWR1: Set to 1 when processor bus (CP*) allocation is at its idle level.
7	ROX	SM_STATUS_CHGRATE: Set to 1 when chgrate.hang slowdown is being applied to machine allocation.
8:11	ROX	SM_STATUS_MRBGP: Master retry back-off level for group-pump commands.
12:15	ROX	SM_STATUS_MRBSP: Master retry back-off level for system-pump commands.
16:19	ROX	SM_STATUS_FENCE0: Brick 0 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X = Flushing pocket cache entries prior to exiting fence.
20:23	ROX	SM_STATUS_FENCE1: Brick 1 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X = Flushing pocket cache entries prior to exiting fence.
24	ROX	SM_STATUS_PBLN: Set to 1 when the outbound Ln scope processor bus request queue is empty.
25	ROX	SM_STATUS_PBNNG: Set to 1 when the outbound Nn/G scope processor bus request queue is empty.
26	ROX	SM_STATUS_PBRNVG: Set to 1 when the outbound Rn/Vg scope processor bus request queue is empty.
27	ROX	SM_STATUS_N0REQ: Set to 1 when the outbound brick 0 CREQ request queue is empty.
28	ROX	SM_STATUS_N0DGD: Set to 1 when the outbound brick 0 downgrade request queue is empty.
29	ROX	SM_STATUS_N1REQ: Set to 1 when the outbound brick 1 CREQ request queue is empty.
30	ROX	SM_STATUS_N1DGD: Set to 1 when the outbound brick 1 downgrade request queue is empty.
31	ROX	SM_STATUS_MMIO: Set to 1 when the outbound MMIO/GenId request queue is empty.
32	ROX	SM_STATUS_ATSXLATE: Set to 1 when the outbound ATS TCE translation request queue is empty.
33	ROX	SM_STATUS_PBRSP: Set to 1 when the outbound processor bus data response/merge operation queue is empty.
34	ROX	SM_STATUS_N0RSP: Set to 1 when the outbound brick 0 response queue is empty.
35	ROX	SM_STATUS_N1RSP: Set to 1 when the outbound brick 1 response queue is empty.
36	ROX	SM_STATUS_XARSP: Set to 1 when the outbound ATS/MISC response queue is empty.
37	ROX	SM_STATUS_SACOLL: Set to 1 when the same address collision check queue is empty.
38	ROX	SM_STATUS_FREE: Set to 1 when the free state machine queue is empty.
39	ROX	SM_STATUS_RESERVED1: Reserved.
40:63	RO	Constant = 0b000000000000000000000000

Register Name	CERR First 0 Register
Mnemonic	NPU.STCK1.CS.SM2.MISC.CERR_FIRST0

55	RWX_WCLEAR	IDIAL_SM_FIRST_PBC_11: PBC11 (Reserved).
56:63	RO	Constant = 0b00000000

Register Name	CERR First 2 Register
Mnemonic	NPU.STCK1.CS.SM2.MISC.CERR_FIRST2
Address	0000000005011159 (SCOM)
Description	c_err_rpt first latches read-write-1-clear register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_0: NLG0 s3: RCMD event received, but state machine is not idle.
1	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_1: NLG1 s3: Pocket hit event, but not in M_PCKT_WAIT_HIT state.
2	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_2: NLG2 s3: M_WT_CRESP: ma_scresp table look-up missed.
3	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_3: NLG3 s3: M_WT_CRESP: Sart Epsilon, but Epsilon already in progress.
4	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_4: NLG4 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have NV modified data.
5	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_5: NLG5 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have PB modified data.
6	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_6: NLG6 s3: M_WT_CRESP: Bad scenario code from ma_scresp table.
7	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_7: NLG7 s3: Snoop CRESP received, but not in M_WT_CRESP state.
8	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_8: NLG8 s3: MCResp pocket hit event, but not in PC_* state.
9	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_9: NLG9 s3: PC_WT_CRESP: ma_mcresp table look-up missed.
10	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_10: NLG10 s3: PC_WT_CRESP: Write coll state did not match early protection state.
11	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_11: NLG11 s3: PC_WT_CRESP: Start Epsilon, but Epsilon already in progress.
12	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_12: NLG12 s3: PC_WT_CRESP: Bad scenario code from ma_mcresp table.
13	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_13: NLG13 s3: PC_BK_WT_CRESP: Bad next step for bkill (ack-done).
14	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_14: NLG14 s3: PC_BK_WT_CRESP: Bad next step for bkill (retry).
15	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_15: NLG15 s3: PC_BK_WT_CRESP: Bad CRESP for a bkill.
16	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_16: NLG16 s3: Master CRESP received, but not in PC_WT_CRESP/PC_BK_WT_CRESP states.
17	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_17: NLG17 s3: M_IDLE: Invalid DATALEN[3:0] for data command.
18	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_18: NLG18 s3: M_IDLE: Invalid command type received.
19	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_19: NLG19 s3: AT translate response event, but not in wait translate state.
20	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_20: NLG20 s3: AT translate response event had bad translate status, but command not recognized.
21	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_21: NLG21 s3: SA done event, but not in wait SA state.
22	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_22: NLG22 s3: PC_WAIT_DATADONE: Bad next step for PB data transmit.
23	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_23: NLG23 s3: TD_WAIT_DATADONE: Unknown NVLink master command.
24	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_24: NLG24 s3: BuffDone event, but not in PB/PC/MG/NR/XATS/TD_WAIT_DATADONE state.
25	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_25: NLG25 s3: NC_WT_RESP: Unknown NV master command for NVLink response.
26	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_26: NLG26 s3: RSPLN event, but not in RG_WT_RESP or NC_WT_RESP state.
27	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_27: NLG27 s3: Epsilon in progress, but Epsilon counter clock is not the Epsilon clock.

Bits	SCOM	Field Mnemonic: Description
28	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_28: NLG28 s3: Epsilon counter clock is 'epsilon', but epsilon_ip is not set.
29	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_29: NLG29 s3: PC_WT_BK_RBACK: Bad next step for bkill.
30	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_30: NLG30 s3: M/RR_BACK timer expired, but not in PC_WT(_BK)_RBACK state.
31	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_31: NLG31 s3: Bad epclock value.
32	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_32: NLG32 s3: coll_state is POCKET_RCOLL_ND, but master state is not PCKT_WAIT_HIT.
33	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_33: NLG33 s3: Unknown sm_master_state in ESCAN_LCAO event.
34	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_34: NLG34 s3: Unknown event type received.
35	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_35: NLG35 s4: M_EVAL_DIR: ma_dsa table look-up missed.
36	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_36: NLG36 s4: M_EVAL_DIR: Unknown merge opcode from DSA table.
37	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_37: NLG37 s4: Unknown state.
38	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_38: NLG38 s3: coll_state is POCKET_RCOLL_OND, but master state is not PCKT_WAIT_HIT.
39	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_39: NLG39 s3: Unknown sm_master_state in ESCAN_FENCE event.
40	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_40: NLG40 s3: FENCE_WT_RESP_FILL: Unknown NV master command for Fence-Fill-SUE response.
41	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_41: NLG41 s3: M_WT_CRESP: Impossible command/CRESP.
42	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_42: NLG42 s3: PC_WT_CRESP: Impossible command/CRESP.
43	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_43: NLG43 s3: M_EVAL_DIR: Impossible command/CRESP.
44	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_44: NLG44 s4: Unexpected error state (bad sub-sequence return).
45	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_45: NLG45 s3: sfstat-retry, but not in retry-abbks collision state.
46	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_46: NLG46 s3: *cond*-retry, but not in retry-abbks collision state.
47	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_47: NLG47 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.
48	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_48: NLG48 s3: NVLink response timeout, but not in waiting for NV response state.
49	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_49: NLG49 s4: M_EVAL_DIR: Unsupported NVLink command for POWER9-to-POWER9 mode.
50	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_50: NLG50 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.
51	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_51: NLG51 (Reserved).

Register Name	**CERR Mask 2 Register**
Mnemonic	NPU.STCK1.CS.SM2.MISC.CERR_MASK2
Address	0000000005011150 (SCOM)
Description	c_err_rpt mask register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	IDIAL_SM_MASK_NLG_0: NLG0 s3: RCMD event received, but state machine is not idle.
1	RW	IDIAL_SM_MASK_NLG_1: NLG1 s3: Pocket hit event, but not in M_PCKT_WAIT_HIT state.
2	RW	IDIAL_SM_MASK_NLG_2: NLG2 s3: M_WT_CRESP: ma_scresp table look-up missed.
3	RW	IDIAL_SM_MASK_NLG_3: NLG3 s3: M_WT_CRESP: Start Epsilon, but Epsilon already in progress.
4	RW	IDIAL_SM_MASK_NLG_4: NLG4 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have NV modified data.
5	RW	IDIAL_SM_MASK_NLG_5: NLG5 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have PB modified data.
6	RW	IDIAL_SM_MASK_NLG_6: NLG6 s3: M_WT_CRESP: Bad scenario code from ma_scresp table.
7	RW	IDIAL_SM_MASK_NLG_7: NLG7 s3: Snoop CRESP received, but not in M_WT_CRESP state.
8	RW	IDIAL_SM_MASK_NLG_8: NLG8 s3: MCResp pocket hit event, but not in PC_* state.
9	RW	IDIAL_SM_MASK_NLG_9: NLG9 s3: PC_WT_CRESP: ma_mcresp table look-up missed.
10	RW	IDIAL_SM_MASK_NLG_10: NLG10 s3: PC_WT_CRESP: Write coll state did not match early protection state.
11	RW	IDIAL_SM_MASK_NLG_11: NLG11 s3: PC_WT_CRESP: Start Epsilon, but Epsilon already in progress.
12	RW	IDIAL_SM_MASK_NLG_12: NLG12 s3: PC_WT_CRESP: Bad scenario code from ma_mcresp table.
13	RW	IDIAL_SM_MASK_NLG_13: NLG13 s3: PC_BK_WT_CRESP: Bad next step for bkill (ack-done).

Bits	SCOM	Field Mnemonic: Description
14	RW	IDIAL_SM_MASK_NLG_14: NLG14 s3: PC_BK_WT_CRESP: Bad next step for bkill (retry).
15	RW	IDIAL_SM_MASK_NLG_15: NLG15 s3: PC_BK_WT_CRESP: Bad CRESP for a bkill.
16	RW	IDIAL_SM_MASK_NLG_16: NLG16 s3: Master CRESP received, but not in PC_WT_CRESP/PC_BK_WT_CRESP states.
17	RW	IDIAL_SM_MASK_NLG_17: NLG17 s3: M_IDLE: Invalid DATALEN[3:0] for data command.
18	RW	IDIAL_SM_MASK_NLG_18: NLG18 s3: M_IDLE: Invalid command type received.
19	RW	IDIAL_SM_MASK_NLG_19: NLG19 s3: AT translate response event, but not in wait translate state.
20	RW	IDIAL_SM_MASK_NLG_20: NLG20 s3: AT translate response event had bad translate status, but command not recognized.
21	RW	IDIAL_SM_MASK_NLG_21: NLG21 s3: SA done event, but not in wait SA state.
22	RW	IDIAL_SM_MASK_NLG_22: NLG22 s3: PC_WAIT_DATADONE: Bad next step for PB data transmit.
23	RW	IDIAL_SM_MASK_NLG_23: NLG23 s3: TD_WAIT_DATADONE: Unknown NVLink master command.
24	RW	IDIAL_SM_MASK_NLG_24: NLG24 s3: BuffDone event, but not in PB/PC/MG/NR/XATS/TD_WAIT_DATADONE state.
25	RW	IDIAL_SM_MASK_NLG_25: NLG25 s3: NC_WT_RESP: Unknown NV master command for NVLink response.
26	RW	IDIAL_SM_MASK_NLG_26: NLG26 s3: RSPLN event, but not in RG_WT_RESP or NC_WT_RESP state.
27	RW	IDIAL_SM_MASK_NLG_27: NLG27 s3: Epsilon in progress, but Epsilon counter clock is not the Epsilon clock.
28	RW	IDIAL_SM_MASK_NLG_28: NLG28 s3: Epsilon counter clock is 'epsilon', but epsilon_ip is not set.
29	RW	IDIAL_SM_MASK_NLG_29: NLG29 s3: PC_WT_BK_RBACK: Bad next step for bkill.
30	RW	IDIAL_SM_MASK_NLG_30: NLG30 s3: M/RR_BACK timer expired, but not in PC_WT(_BK)_RBACK state.
31	RW	IDIAL_SM_MASK_NLG_31: NLG31 s3: Bad epclock value.
32	RW	IDIAL_SM_MASK_NLG_32: NLG32 s3: coll_state is POCKET_RCOLL_ND, but master state is not PCKT_WAIT_HIT.
33	RW	IDIAL_SM_MASK_NLG_33: NLG33 s3: Unknown sm_master_state in ESCAN_LCAO event.
34	RW	IDIAL_SM_MASK_NLG_34: NLG34 s3: Unknown event type received.
35	RW	IDIAL_SM_MASK_NLG_35: NLG35 s4: M_EVAL_DIR: ma_dsa table look-up missed.
36	RW	IDIAL_SM_MASK_NLG_36: NLG36 s4: M_EVAL_DIR: Unknown merge opcode from DSA table.
37	RW	IDIAL_SM_MASK_NLG_37: NLG37 s4: Unknown state.
38	RW	IDIAL_SM_MASK_NLG_38: NLG38 s3: coll_state is POCKET_RCOLL_OND, but master state is not PCKT_WAIT_HIT.
39	RW	IDIAL_SM_MASK_NLG_39: NLG39 s3: Unknown sm_master_state in ESCAN_FENCE event.
40	RW	IDIAL_SM_MASK_NLG_40: NLG40 s3: FENCE_WT_RESP_FILL: Unknown NV master command for Fence-Fill-SUE response.
41	RW	IDIAL_SM_MASK_NLG_41: NLG41 s3: M_WT_CRESP: Impossible command/CRESP.
42	RW	IDIAL_SM_MASK_NLG_42: NLG42 s3: PC_WT_CRESP: Impossible command/CRESP.
43	RW	IDIAL_SM_MASK_NLG_43: NLG43 s3: M_EVAL_DIR: Impossible command/CRESP.
44	RW	IDIAL_SM_MASK_NLG_44: NLG44 s4: Unexpected error state (bad sub-sequence return).
45	RW	IDIAL_SM_MASK_NLG_45: NLG45 s3: sfstat-retry, but not in retry-abbks collision state.
46	RW	IDIAL_SM_MASK_NLG_46: NLG46 s3: *cond*-retry, but not in retry-abbks collision state.

Bits	SCOM	Field Mnemonic: Description
47	RW	IDIAL_SM_MASK_NLG_47: NLG47 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.
48	RW	IDIAL_SM_MASK_NLG_48: NLG48 s3: NVLink response timeout, but not in waiting for NV response state.
49	RW	IDIAL_SM_MASK_NLG_49: NLG49 s4: M_EVAL_DIR: Unsupported NVLink command for POWER9-to-POWER9 mode.
50	RW	IDIAL_SM_MASK_NLG_50: NLG50 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.
51	RW	IDIAL_SM_MASK_NLG_51: NLG51 (Reserved).

Register Name	CERR Hold 2 Register
Mnemonic	NPU.STCK1.CS.SM2.MISC.CERR_HOLD2
Address	000000000501115F (SCOM)
Description	c_err_rpt hold latches read-write-clear register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_0: NLG0 s3: RCMD event received, but state machine is not idle.
1	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_1: NLG1 s3: Pocket hit event, but not in M_PCKT_WAIT_HIT state.
2	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_2: NLG2 s3: M_WT_CRESP: ma_scresp table look-up missed.
3	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_3: NLG3 s3: M_WT_CRESP: Start Epsilon, but Epsilon already in progress.
4	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_4: NLG4 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have NV modified data.
5	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_5: NLG5 s3: M_WT_CRESP: ma_scresp indicated 'evaporate', but have PB modified data.
6	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_6: NLG6 s3: M_WT_CRESP: Bad scenario code from ma_scresp table.
7	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_7: NLG7 s3: Snoop CRESP received, but not in M_WT_CRESP state.

Bits	SCOM	Field Mnemonic: Description
8	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_8: NLG8 s3: MCResp pocket hit event, but not in PC_* state.
9	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_9: NLG9 s3: PC_WT_CRESP: ma_mcresp table look-up missed.
10	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_10: NLG10 s3: PC_WT_CRESP: Write coll state did not match early protection state.
11	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_11: NLG11 s3: PC_WT_CRESP: Start Epsilon, but Epsilon already in progress.
12	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_12: NLG12 s3: PC_WT_CRESP: Bad scenario code from ma_mcresp table.
13	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_13: NLG13 s3: PC_BK_WT_CRESP: Bad next step for bkill (ack-done).
14	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_14: NLG14 s3: PC_BK_WT_CRESP: Bad next step for bkill (retry).
15	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_15: NLG15 s3: PC_BK_WT_CRESP: Bad CRESP for a bkill.
16	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_16: NLG16 s3: Master CRESP received, but not in PC_WT_CRESP/PC_BK_WT_CRESP states.
17	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_17: NLG17 s3: M_IDLE: Invalid DATALEN[3:0] for data command.
18	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_18: NLG18 s3: M_IDLE: Invalid command type received.
19	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_19: NLG19 s3: AT translate response event, but not in wait-translate state.
20	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_20: NLG20 s3: AT translate response event had bad translate status, but command not recognized.
21	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_21: NLG21 s3: SA done event, but not in wait SA state.
22	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_22: NLG22 s3: PC_WAIT_DATADONE: Bad next step for PB data transmit.
23	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_23: NLG23 s3: TD_WAIT_DATADONE: Unknown NVLink master command.
24	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_24: NLG24 s3: BuffDone event, but not in PB/PC/MG/NR/XATS/TD_WAIT_DATADONE state.
25	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_25: NLG25 s3: NC_WT_RESP: Unknown NV master command for NVLink response.
26	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_26: NLG26 s3: RSPLN event, but not in RG_WT_RESP or NC_WT_RESP state.
27	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_27: NLG27 s3: Epsilon in progress, but Epsilon counter clock is not the Epsilon clock.
28	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_28: NLG28 s3: Epsilon counter clock is 'epsilon', but epsilon_ip is not set.
29	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_29: NLG29 s3: PC_WT_BK_RBACK: Bad next step for bkill.
30	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_30: NLG30 s3: M/RR_BACK timer expired, but not in PC_WT(_BK)_RBACK state.
31	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_31: NLG31 s3: Bad epclock value.
32	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_32: NLG32 s3: coll_state is POCKET_RCOLL_ND, but master state is not PCKT_WAIT_HIT.
33	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_33: NLG33 s3: Unknown sm_master_state in ESCAN_LCAO event.
34	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_34: NLG34 s3: Unknown event type received.
35	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_35: NLG35 s4: M_EVAL_DIR: ma_dsa table look-up missed.
36	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_36: NLG36 s4: M_EVAL_DIR: Unknown merge opcode from DSA table.
37	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_37: NLG37 s4: Unknown state.
38	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_38: NLG38 s3: coll_state is POCKET_RCOLL_OND, but master state is not PCKT_WAIT_HIT.
39	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_39: NLG39 s3: Unknown sm_master_state in ESCAN_FENCE event.

Bits	SCOM	Field Mnemonic: Description
40	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_40: NLG40 s3: FENCE_WT_RESP_FILL: Unknown NV master command for Fence-Fill-SUE response.
41	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_41: NLG41 s3: M_WT_CRESP: Impossible command/CRESP.
42	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_42: NLG42 s3: PC_WT_CRESP: Impossible command/CRESP.
43	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_43: NLG43 s3: M_EVAL_DIR: Impossible command/CRESP.
44	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_44: NLG44 s4: Unexpected error state (bad sub-sequence return).
45	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_45: NLG45 s3: sfstat-retry, but not in retry-abbks collision state.
46	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_46: NLG46 s3: *cond*-retry, but not in retry-abbks collision state.
47	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_47: NLG47 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.
48	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_48: NLG48 s3: NVLink response timeout, but not in waiting for NV response state.
49	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_49: NLG49 s4: M_EVAL_DIR: Unsupported NVLink command for POWER9-to-POWER9 mode.
50	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_50: NLG50 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.

20	RW	CONFIG_MA_SCRESP_OPT_B: TBD, future option bit.
21	RW	CONFIG_MA_SCRESP_OPT_C: TBD, future option bit.
22	RW	CONFIG_RESERVED4: Reserved.

Bits	SCOM	Field Mnemonic: Description
23	RW	CONFIG_MACH_CORRENAB: 0 = Disable state machine array ECC correction. 1 = Enable state machine array ECC correction.
24	RW	CONFIG_MACH_INJECT_ENABLE1: 0 = Disable state machine array ECC error inject bit 1. 1 = Enable state machine array ECC error inject bit 1.
25	RW	CONFIG_MACH_INJECT_ENABLE2: 0 = Disable state machine array ECC error inject bit 2. 1 = Enable state machine array ECC error inject bit 2.
26	RW	CONFIG_RXO_CORRENAB: 0 = Disable ReqRspOut array ECC correction. 1 = Enable ReqRspOut array ECC correction.
27	RW	CONFIG_RXO_INJECT_ENABLE1: 0 = Disable ReqRspOut array ECC error inject bit 1. 1 = Enable ReqRspOut array ECC error inject bit 1.
28	RW	CONFIG_RXO_INJECT_ENABLE2: 0 = Disable ReqRspOut array ECC error inject bit 1. 1 = Enable ReqRspOut array ECC error inject bit 1.
29	RW	CONFIG_RSI_CORRENAB: 0 = Disable PB-Rsp-In array ECC correction. 1 = Enable PB-Rsp-In array ECC correction.
30	RW	CONFIG_RSI_INJECT_ENABLE1: 0 = Disable PB-Rsp-Ine array ECC error inject bit 1. 1 = Enable PB-Rsp-Ine array ECC error inject bit 1.
31	RW	CONFIG_RSI_INJECT_ENABLE2: 0 = Disable PB-Rsp-Ine array ECC error inject bit 1. 1 = Enable PB-Rsp-Ine array ECC error inject bit 1.
32:33	RW	CONFIG_MA_RSNOOP_OPT_DCLAIM: 0 = Partial respond to DCLAIM to GPU memory with lpc_ack. 1 = Partial respond to DCLAIM to GPU memory with lpc_ack+rty_lost_claim. 2 = Partial respond to DCLAIM to GPU memory with lpc_ack+rty_lpc+start pocket cache. 3 = Reserved.
34	RW	CONFIG_MA_DSA_OPT_DMA_UPG: 0 = Non-relaxed dma_w use Read.RWC to acquire pocket cache state/data. 1 = Non-relaxed dma_w use Upgrade.DN to acquire pocket cache state/data.
35	RW	CONFIG_EVAPORATE_BY_LCO: 0 = Just free the state machine without LCO. 1 = Evaporate pocket cache entries by LCO.
36	RW	CONFIG_MRBGP_TRACK_ALL: 0 = Master retry back-off group-pump track only this stack's retry responses. 1 = Master retry back-off group-pump track all this chip's retry responses.
37	RW	CONFIG_MRBSP_TRACK_ALL: 0 = Master retry back-off system-pump track only this stack's retry responses. 1 = Master retry back-off system-pump track all this chip's retry responses.
38	RW	CONFIG_ENABLE_PBUS: 0 = Disable NPU processor bus RCMD, PRESP, and CRESP interfaces. 1 = Enable NPU processor bus RCMD, PRESP, and CRESP interfaces.
39	RW	CONFIG_BRAZOS_MODE: 0 = Non-brazos 4-group; 2-chip mode. 1 = Brazos 2-group; 4-chip mode.

Bits	SCOM	Field Mnemonic: Description
40	RW	CONFIG_ENABLE_SNARF_CPM: 0 = Disable Probe.I.MO snarfing a cp_m. 1 = Enable Probe.I.MO snarfing a cp_m.
41	RW	CONFIG_PREALLOC2_REQ0: 0/1 = Preallocate two state machines to brick 0 CREQ channel.
42	RW	CONFIG_PREALLOC2_PRB0: 0/1 = Preallocate two state machines to brick 0 PRB channel.
43	RW	CONFIG_PREALLOC2_REQ1: 0/1 = Preallocate two state machines to brick 1 CREQ channel.
44	RW	CONFIG_PREALLOC2_PRB1: 0/1 = Preallocate two state machines to brick 1 PRB channel.
45	RW	CONFIG_PREALLOC2_XATS: 0/1 = Preallocate two state machines to XATS interface.
46	RW	CONFIG_DISABLE_INJECT: 0 = Enable sending cl,pr_dma_inj. 1 = Disable sending cl,pr_dma_inj. **Note:** To disable sending _inj commands, the following bits must also be set to '0': config_ma_mcresp_opt_rty_inj config_ma_dsa_opt_rp_mode
47	RW	CONFIG_DCACHE_MODE: 0 = Drive data bus DCACHE field in basic mode. 1 = Drive data bus DCACHE field in CAPP mode.
48	RW	CONFIG_DCACHE_REPORTS_PHYSICAL: 0 = In basic mode report local masters as near. 1 = In basic mode report local masters as near.
49	RW	CONFIG_RSI_DISABLE_DATIN_FASTPATH: 0 = Enable RSI PB data in fastpath. 1 = Disable fastpath.
50	RW	CONFIG_PCKT_BLK_PRB: 0 = Valid pocket cache entries, do not block probes. 1 = Probes are blocked.
51	RW	CONFIG_P9P9_MODE: 0 = Normal operation. 1 = Run in special lab bring-up GPUless POWER9-to-POWER9 mode.
52	RW	CONFIG_FORBID_MMIO_READ_GT_32: 0 = Allow GPU to PB MMIOs greater than 32 bytes. 1 = Flag error and brick fence on MMIOs greater than 32 bytes.
53	RW	CONFIG_FORBID_MMIO_ATOMIC: 0 = Allow GPU to PB atomics to MMIO space. 1 = Flag error and brick fence on atomics to MMIO space.
54	RW	CONFIG_OPT_SNOOP_CP: 0 = Snoop POWER9 memory cp_* type commands. 1 = Do not snoop cp_* type commands.
55:63	RW	CONFIG0_RESERVED3: Reserved.

Register Name	**CQ_SM Miscellaneous Configuration 1 Register**
Mnemonic	NPU.STCK1.CS.SM3.MISC.CONFIG1
Address	0000000005011161 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_RANDOM_BACKOFF_DUR_MASK: Mask for the base random duration of a random retry back-off: 0000 = 0 - 15 base random duration. 0001 = 0 - 31 base random duration. 0011 = 0 - 63 base random duration. 0111 = 0 - 127 base random duration. 1111 = 0 - 255 base random duration.
4:7	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_REQ: Mask for the slowdown of NTL CREQ credits during chgrate.hang. 'n' = $1/(2^{(n+1)})$ cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
8:11	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_PRB: Mask for the slowdown of NTL probe credits during chgrate.hang. 'n' = $1/(2^{(n+1)})$ cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
12:15	RW	CONFIG_ARB_NONCRR_SAFETY: Safety valve for non-CRESP/non- REQIN events going down the arbiter pipe. After n+1 REQIN events go through the arbiter while a non-CRR event is waiting, REQIN events are blocked to give non-CRR events a chance.
16:27	RW	CONFIG_EPSILON_WLN_COUNT: Epsilon count for Ln scope CP write.

Bits	SCOM	Field Mnemonic: Description
28:31	RW	CONFIG_SCALE_RPT_HANG_POLL: Scaling factor for rpt_hang.poll: 0 = 1:1 processor bus rpt_hang.polls received. 1 = 1:2 processor bus rpt_hang.polls received. ... 15 = 1:16 processor bus rpt_hang.polls received.
32:35	RW	CONFIG_SCALE_RPT_HANG_DATA: Scaling factor for rpt_hang.data: 0 = 1:1 processor bus rpt_hang.datas received. 1 = 1:2 processor bus rpt_hang.datas received. ... 15 = 1:16 processor bus rpt_hang.datas received.
36:63	RW	CONFIG1_RESERVED: Reserved.

Register Name	**Power Bus Epsilon Configuration Register**
Mnemonic	NPU.STCK1.CS.SM3.MISC.EPSILON_CONFIG
Address	0000000005011162 (SCOM)
Description	Processor bus Epsilon configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_EPSILON_RATE: 0 = Decrement Epsilon count at 1:1 nest_gckn. ... 15 = Epsilon count at 1/16 nest_gckn.
4:15	RW	CONFIG_EPSILON_W0_COUNT: Epsilon count for Nn/G scope CP write.
16:27	RW	CONFIG_EPSILON_W1_COUNT: Epsilon count for Rn/Vg scope CP write.
28:39	RW	CONFIG_EPSILON_R0_COUNT: Epsilon count for Ln scope reads.
40:51	RW	CONFIG_EPSILON_R1_COUNT: Epsilon count for Nn/G scope reads.
52:63	RW	CONFIG_EPSILON_R2_COUNT: Epsilon count for Rn/Vg scope reads.

Register Name	**Timer Configuration Register**
Mnemonic	NPU.STCK1.CS.SM3.MISC.XTIMER_CONFIG
Address	0000000005011163 (SCOM)
Description	Timer configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	CONFIG_POCKET_RATE1: Rate-1 for the pocket cache with data entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
2:7	RW	CONFIG_POCKET_RATE2: Rate-2 for the long timer for pocket cache entries (2^n cycles).
8:13	RW	CONFIG_POCKET_RATE3: Rate-3 for the short timer for pocket cache entries (2^n cycles).
14:19	RW	CONFIG_FWD_PROG_RATE2: Rate-2 for the forward-progress timer (2^n cycles).

Bits	SCOM	Field Mnemonic: Description
20:25	RW	CONFIG_CTL_TICK: Rate for CTL timer tick (default 63 = off). **Note:** This field can/should have different values in each instance.
26:31	RW	CONFIG_INH0_TICK: Rate for SM inhibit timer tick0 (default 63 = off). **Note:** This field can/should have different values in each instance.
32:37	RW	CONFIG_INH1_TICK: Rate for SM inhibit timer tick1 (default 63 = off) **Note:** This field can/should have different values in each instance.
38:39	RW	CONFIG_NV_RESP_RATE1: Rate-1 for NV response timer. The timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds, where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
40:45	RW	CONFIG_NV_RESP_RATE2: Rate-2 for the NV response timer (2^n cycles).
46:47	RW	CONFIG_POCKET_ND_RATE1: Rate-1 for the pocket cache dataless entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
48:63	RO	Constant = 0b0000000000000000

Register Name	GPU BAR Register
Mnemonic	NPU.STCK1.CS.SM3.MISC.GPU_BAR
Address	0000000005011164 (SCOM)
Description	Memory BARs. BAR register defining the GPU memory addresses serviced by bricks 0 and 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GPU0_BAR_ENABLE: 0 = Disable BAR for brick 0. 1 = enable BAR for brick 0.
1:2	RW	CONFIG_GPU0_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 0. **Note:** It is illegal to set this field to 0b11.
3:6	RW	CONFIG_GPU0_BAR_GROUP: Group field of the base address of BAR for brick 0.
7:9	RW	CONFIG_GPU0_BAR_CHIP: Chip field of the base address of BAR for brick 0.
10:21	RW	CONFIG_GPU0_BAR_ADDR: The base address (1G address) of the BAR for brick 0. Must be aligned on the size of the BAR mask.
22	RW	CONFIG_GPU0_BAR_RESERVED: Reserved.
23	RW	CONFIG_GPU0_BAR_GRANULE: Hash boundary for brick 0: 0 = Hash on 512B boundary (hashbits(0:7) = addr(47:54)). 1 = Hash on 1024B boundary (hashbits(0:7) = addr(46:53)).

Bits	SCOM	Field Mnemonic: Description

Register Name	PHY0/PHY1/NPU MMIO BAR Register
Mnemonic	NPU.STCK1.CS.SM3.MISC.PHY_BAR
Address	0000000005011166 (SCOM)
Description	BAR register defining the PHY0/PHY1/NPU MMIO range. Stack 0 PHY_BAR defines a 2M range mapped to PHY 0 registers. Stack 1 PHY_BAR defines a 2M range mapped to PHY 1 registers. Stack 2 PHY_BAR defines a 16M range mapped to all NPU registers. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_PHY_BAR_ENABLE: 0 = Disable PHY_BAR. 1 = enable PHY_BAR.
1:2	RW	PHY_RESERVED1: Reserved.
3:6	RW	CONFIG_PHY_BAR_GROUP: Group field of the 2M aligned address of this PHY_BAR.
7:9	RW	CONFIG_PHY_BAR_CHIP: Chip field of the 2M aligned address of this PHY_BAR.
10:30	RW	CONFIG_PHY_BAR_ADDR: The 2M aligned address of this PHY_BAR's 2M range. **Note:** In stack two, the low three address bits are reserved (16M range).
31	RW	PHY_RESERVED2: Reserved.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Generation ID BAR Register
Mnemonic	NPU.STCK1.CS.SM3.MISC.GENID_BAR
Address	0000000005011167 (SCOM)
Description	ID registers MMIO BAR. BAR register defining the GenerationID register for this stack/ramp. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GENID_BAR_ENABLE: 0 = Disable this BAR. 1 = Enable this BAR.

Bits	SCOM	Field Mnemonic: Description
1:2	RW	GENID_RESERVED1: Reserved.
3:6	RW	CONFIG_GENID_BAR_GROUP: Group field of the 128K aligned address of this GENID_BAR.
7:9	RW	CONFIG_GENID_BAR_CHIP: Chip field of the 128K aligned address of this GENID_BAR.
10:34	RW	CONFIG_GENID_BAR_ADDR: The 128K aligned address of this BAR's 128K range.
35	RW	GENID_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	**Low Water Register**
Mnemonic	NPU.STCK1.CS.SM3.MISC.LOW_WATER
Address	0000000005011168 (SCOM)
Description	State machine allocation for low water marks. Each low water mark should be greater than or equal to 1 and the sum of the low water marks must be less than config_max_machines. Low water marks must not be changed after config_enable_machine_alloc is set to 1 and config_enable_machine_alloc must remain at 1 once it is set to 1. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_LOW_WATER_XATS: Low water mark for XTS/MISC processor bus requests. Can only be changed while config_enable_machine_alloc = 0.
6:11	RW	CONFIG_LOW_WATER_PWR0: Low water mark for processor bus rd/dclaim/atomic/etc. requests. Can only be changed while config_enable_machine_alloc = 0.
12:17	RW	CONFIG_LOW_WATER_PWR1: Low water mark for processor bus CP (castout-push) requests. Can only be changed while config_enable_machine_alloc = 0.
18:23	RW	CONFIG_LOW_WATER_REQ0: Low water mark for NVLink brick 0 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
24:29	RW	CONFIG_LOW_WATER_PRB0: Low water mark for NVLink brick 0 probe requests. Can only be changed while config_enable_machine_alloc = 0.
30:35	RW	CONFIG_LOW_WATER_REQ1: Low water mark for NVLink brick 1 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
36:41	RW	CONFIG_LOW_WATER_PRB1: Low water mark for NVLink brick 1 probe requests. Can only be changed while config_enable_machine_alloc = 0.
42:47	RW	CONFIG_MAX_MACHINES: Maximum number of state machines to be used. Must be >= 8 and <= 62. Can only be changed while config_enable_machine_alloc = 0.
48:50	RW	LOW_WATER_RESERVED1: Reserved.
51	RW	CONFIG_ENABLE_MACHINE_ALLOC: Enable state machine allocation. Can only be changed from 0 to 1 and must stay at 1 once it is set.
52:63	RO	Constant = 0b000000000000

Register Name	**High Water Register**
Mnemonic	NPU.STCK1.CS.SM3.MISC.HIGH_WATER
Address	0000000005011169 (SCOM)
Description	State machine allocation for high water marks. Each high water mark should be greater than or equal to the corresponding config_low_water and less than the config_max_machines. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_HIGH_WATER_XATS: High water mark for XTS/MISC processor bus requests.
6:11	RW	CONFIG_HIGH_WATER_PWR0: High water mark for processor bus rd/dclaim/atomic/etc. requests.
12:17	RW	CONFIG_HIGH_WATER_PWR1: High water mark for processor bus CP (castout-push) requests.
18:23	RW	CONFIG_HIGH_WATER_REQ0: High water mark for NVLink brick 0 non-probe requests.
24:29	RW	CONFIG_HIGH_WATER_PRB0: High water mark for NVLink brick 0 probe requests.
30:35	RW	CONFIG_HIGH_WATER_REQ1: High water mark for NVLink brick 1 non-probe requests.
36:41	RW	CONFIG_HIGH_WATER_PRB1: High water mark for NVLink brick 1 probe requests.
42:43	RW	HIGH_WATER_RESERVED1: Reserved.
44:63	RO	Constant = 0b00000000000000000000

Register Name	**Relaxed Configuration 0 Register**
Mnemonic	NPU.STCK1.CS.SM3.MISC.CONFIG_RELAXED0
Address	000000000501116A (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_SOURCE0_WRENA: 0 = Disable relaxed source 0 for write operations. 1 = Enable relaxed source 0 for write operations.
1	RW	CONFIG_RELAXED_SOURCE0_RDENA: 0 = Disable relaxed source 0 for read operations. 1 = Enable relaxed source 0 for read operations.
2:19	RW	CONFIG_RELAXED_SOURCE0_MATCH: Relaxed source 0 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
20:37	RW	CONFIG_RELAXED_SOURCE0_MASK: Relaxed source 0 tag mask value: 0 = Bit is masked off, corresponding match bit must be 0. 1 = Bit must equal corresponding match bit.
38:39	RW	CONFIG_RELAXED_RESERVED0: Reserved.
40	RW	CONFIG_RELAXED_SOURCE1_WRENA: 0 = Disable relaxed source 1 for write operations. 1 = Enable relaxed source 1 for write operations.
41	RW	CONFIG_RELAXED_SOURCE1_RDENA: 0 = Disable relaxed source 1 for read operations. 1 = Enable relaxed source 1 for read operations.
42:59	RW	CONFIG_RELAXED_SOURCE1_MATCH: Relaxed source 1 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 1 Register
Mnemonic	NPU.STCK1.CS.SM3.MISC.CONFIG_RELAXED1
Address	000000000501116B (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:17	RW	CONFIG_RELAXED_SOURCE1_MASK: Relaxed source 1 tag mask value.
18:19	RW	CONFIG_RELAXED_RESERVED1: Reserved.
20	RW	CONFIG_RELAXED_SOURCE2_WRENA: 0 = Disable relaxed source 2 for write operations. 1 = Enable relaxed source 2 for write operations.
21	RW	CONFIG_RELAXED_SOURCE2_RDENA: 0 = Disable relaxed source 2 for read operations. 1 = Enable relaxed source 2 for read operations.
22:39	RW	CONFIG_RELAXED_SOURCE2_MATCH: Relaxed source 2 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
40:57	RW	CONFIG_RELAXED_SOURCE2_MASK: Relaxed source 2 tag mask value.
58:59	RW	CONFIG_RELAXED_RESERVED2: Reserved.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 2 Register
Mnemonic	NPU.STCK1.CS.SM3.MISC.CONFIG_RELAXED2
Address	000000000501116C (SCOM)
Description	This register configures relaxed ordering. N**ote:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_CMD_CL_DMA_W: Enable relaxed ordering for cl_dma_w.
1	RW	CONFIG_RELAXED_CMD_CL_DMA_W_HP: Enable relaxed ordering for cl_dma_w_hp.
2	RW	CONFIG_RELAXED_CMD_CL_DMA_INJ: Enable relaxed ordering for cl_dma_inj.
3	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_U: Enable relaxed ordering for armw_cas_imax_u.
4	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_S: Enable relaxed ordering for armw_cas_imax_s.
5	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_U: Enable relaxed ordering for armw_cas_imin_u.
6	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_S: Enable relaxed ordering for armw_cas_imin_s.
7	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_U: Enable relaxed ordering for armwf_cas_imax_u.
8	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_S: Enable relaxed ordering for armwf_cas_imax_s.
9	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_U: Enable relaxed ordering for armwf_cas_imin_u.
10	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_S: Enable relaxed ordering for armwf_cas_imin_s.
11	RW	CONFIG_RELAXED_CMD_PR_DMA_INJ: Enable relaxed ordering for pr_dma_inj.
12	RW	CONFIG_RELAXED_CMD_DMA_PR_W: Enable relaxed ordering for dma_pr_w.
13	RW	CONFIG_RELAXED_CMD_ARMW_ADD: Enable relaxed ordering for armw_add.
14	RW	CONFIG_RELAXED_CMD_ARMW_AND: Enable relaxed ordering for armw_and.

Bits	SCOM	Field Mnemonic: Description
15	RW	CONFIG_RELAXED_CMD_ARMW_OR: Enable relaxed ordering for armw_or.
16	RW	CONFIG_RELAXED_CMD_ARMW_XOR: Enable relaxed ordering for armw_xor.
17	RW	CONFIG_RELAXED_CMD_ARMWF_ADD: Enable relaxed ordering for armwf_add.
18	RW	CONFIG_RELAXED_CMD_ARMWF_AND: Enable relaxed ordering for armwf_and.
19	RW	CONFIG_RELAXED_CMD_ARMWF_OR: Enable relaxed ordering for armwf_or.
20	RW	CONFIG_RELAXED_CMD_ARMWF_XOR: Enable relaxed ordering for armwf_xor.
21	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_E: Enable relaxed ordering for armwf_cas_e.
22	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_U: Enable relaxed ordering for armwf_cas_u.
23	RW	CONFIG_RELAXED_CMD_CL_RD_NC_F0: Enable relaxed ordering for cl_rd_nc(F=0).
24	RW	CONFIG_RELAXED_SOURCE3_WRENA: 0 = Disable relaxed source 3 for write operations. 1 = Enable relaxed source 3 for write operations.
25	RW	CONFIG_RELAXED_SOURCE3_RDENA: 0 = Disable relaxed source 3 for read operations. 1 = Enable relaxed source 3 for read operations.
26:43	RW	CONFIG_RELAXED_SOURCE3_MATCH: Relaxed source 3 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
44:61	RW	CONFIG_RELAXED_SOURCE3_MASK: Relaxed source 3 tag mask value.
62:63	RW	CONFIG_RELAXED_RESERVED3: Reserved.

Register Name	**NTL0/NDL0 MMIO BAR Register**
Mnemonic	NPU.STCK1.CS.SM3.MISC.NDT0_BAR
Address	000000000501116D (SCOM)
Description	BAR register defining the NDL/NTL MMIO range for brick 0 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT0_BAR_ENABLE: 0 = Disable BAR for brick 0. 1 = Enable BAR for brick 0.
1:2	RW	NDT0_RESERVED1: Reserved.
3:6	RW	CONFIG_NDT0_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT0_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT0_BAR_ADDR: The 128K aligned address of BAR for brick 0's 128K range.
35	RW	NDT0_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	NTL1/NDL1 MMIO BAR Register
Mnemonic	NPU.STCK1.CS.SM3.MISC.NDT1_BAR
Address	000000000501116E (SCOM)
Description	BAR register defining the NDL/NTL MMIO range for brick 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT1_BAR_ENABLE: 0 = Disable BAR for brick 1. 1 = Enable BAR for brick 1.
1:2	RW	NDT1_RESERVED1: Reserved.
3:6	RW	CONFIG_NDT1_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT1_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT1_BAR_ADDR: The 128K aligned address of BAR for brick 1's 128K range.
35	RW	NDT1_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	Performance Configuration Register
Mnemonic	NPU.STCK1.CS.SM3.MISC.PERF_CONFIG
Address	000000000501116F (SCOM)
Description	Performance event selection register.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	PERF_CONFIG_LATSTART: Latency count start event.
8:15	RW	PERF_CONFIG_LATCANCEL: Latency count abort event.
16:23	RW	PERF_CONFIG_EVENT0: Event 0 select.
24:31	RW	PERF_CONFIG_EVENT1: Event 0 select.
32:39	RW	PERF_CONFIG_EVENT2: Event 0 select.
40:47	RW	PERF_CONFIG_EVENT3: Event 0 select.
48:55	RW	PERF_CONFIG_LATFINISH: Latency count finish event.
56:62	RW	PERF_CONFIG_RESERVED2: Reserved.
63	RW	PERF_CONFIG_ACT: Enable clock gates for performance monitor latches.

Register Name	Inhibit Configuration Register
Mnemonic	NPU.STCK1.CS.SM3.MISC.INHIBIT_CONFIG
Address	0000000005011170 (SCOM)
Description	This register configures inhibits for CQ_SM.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_INHIBIT_LFREQ0: Base LFSR frequency 0: 0..11 = $1/2^{(n+1)}$ 12 = $1/2^{14}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
4:5	RW	CONFIG_INHIBIT_PFREQ0: Selects pre frequency 0: 0 = Inhibit timer tick0. 1 = Inverted inhibit timer tick0. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
6	RW	CONFIG_INHIBIT_BLOCKY0: 0 = Disable blocky mode. 1 = Enable blocky mode.
7	RW	CONFIG_INHIBIT_ONESHOT0: 0 = Continuous mode. 1 = One shot mode.
8:15	RW	CONFIG_INHIBIT_DEST0: Selects the destination of the inhibit.
16:19	RW	CONFIG_INHIBIT_LFREQ1: Base LFSR frequency 0: 0...12 = $1/2^{(n+1)}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
20:21	RW	CONFIG_INHIBIT_PFREQ1: Selects pre-frequency 0: 0 = Inhibit timer tick1. 1 = Inverted inhibit timer tick1. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
22	RW	CONFIG_INHIBIT_BLOCKY1: 0 = Disable blocky mode. 1 = Enable blocky mode.
23	RW	CONFIG_INHIBIT_ONESHOT1: 0 = Continuous mode. 1 = One shot mode.
24:31	RW	CONFIG_INHIBIT_DEST1: Selects the destination of the inhibit.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	CERR Message 0 Register
Mnemonic	NPU.STCK1.CS.SM3.MISC.CERR_MESSAGE0
Address	0000000005011171 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS0: Reserved.

Register Name	CERR Message 1 Register
Mnemonic	NPU.STCK1.CS.SM3.MISC.CERR_MESSAGE1
Address	0000000005011172 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS1: Reserved.

Register Name	CERR Message 2 Register
Mnemonic	NPU.STCK1.CS.SM3.MISC.CERR_MESSAGE2
Address	0000000005011173 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS2: Reserved.

Register Name	CERR Message 3 Register
Mnemonic	NPU.STCK1.CS.SM3.MISC.CERR_MESSAGE3
Address	0000000005011174 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS3: Reserved.

Register Name	CERR Message 4 Register
Mnemonic	NPU.STCK1.CS.SM3.MISC.CERR_MESSAGE4
Address	0000000005011175 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS4: Reserved.

Register Name	CQ_SM Status Register
Mnemonic	NPU.STCK1.CS.SM3.MISC.SM_STATUS
Address	0000000005011176 (SCOM)
Description	Status reporting register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SM_STATUS_CREQ0: Set to 1 when brick 0 CREQ allocation is at its idle level.
1	ROX	SM_STATUS_PRB0: Set to 1 when brick 0 probe allocation is at its idle level.

Bits	SCOM	Field Mnemonic: Description
2	ROX	SM_STATUS_CREQ1: Set to 1 when brick 1 CREQ allocation is at its idle level.
3	ROX	SM_STATUS_PRB1: Set to 1 when brick 1 probe allocation is at its idle level.
4	ROX	SM_STATUS_XATS: Set to 1 when ATS/MISC allocation is at its idle level.
5	ROX	SM_STATUS_PWR0: Set to 1 when processor bus (non-CP*) allocation is at its idle level.
6	ROX	SM_STATUS_PWR1: Set to 1 when processor bus (CP*) allocation is at its idle level.
7	ROX	SM_STATUS_CHGRATE: Set to 1 when chgrate.hang slowdown is being applied to machine allocation.
8:11	ROX	SM_STATUS_MRBGP: Master retry back-off level for group-pump commands.
12:15	ROX	SM_STATUS_MRBSP: Master retry back-off level for system-pump commands.
16:19	ROX	SM_STATUS_FENCE0: Brick 0 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X = Flushing pocket cache entries prior to exiting fence.
20:23	ROX	SM_STATUS_FENCE1: Brick 1 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X= Flushing pocket cache entries prior to exiting fence.
24	ROX	SM_STATUS_PBLN: Set to 1 when the outbound Ln scope processor bus request queue is empty.
25	ROX	SM_STATUS_PBNNG: Set to 1 when the outbound Nn/G scope processor bus request queue is empty.
26	ROX	SM_STATUS_PBRNVG: Set to 1 when the outbound Rn/Vg scope processor bus request queue is empty.
27	ROX	SM_STATUS_N0REQ: Set to 1 when the outbound brick 0 CREQ request queue is empty.
28	ROX	SM_STATUS_N0DGD: Set to 1 when the outbound brick 0 downgrade request queue is empty.
29	ROX	SM_STATUS_N1REQ: Set to 1 when the outbound brick 1 CREQ request queue is empty.
30	ROX	SM_STATUS_N1DGD: Set to 1 when the outbound brick 1 downgrade request queue is empty.

Register Name	**CQ_CTL Miscellaneous Configuration 0 Register**
Mnemonic	NPU.STCK1.CS.CTL.MISC.CONFIG0
Address	0000000005011180 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG1_RESERVED0: Reserved. **Note:** This was 1dot0 mode.
1:3	RW	CONFIG1_RESERVED1: Reserved.
4	RW	CONFIG_ADR_BAR_MODE: Processor bus adr_bar: 0 = Large system mode. 1 = Small system mode.

Bits	SCOM	Field Mnemonic: Description
5:9	RW	CONFIG_GEN_HEAD_DELAY: Number of cycles to wait for generation done when reading a generation head register. **Note:** Setting this field to 0 hangs the NPU.
10	RW	CONFIG_MRBGP_DIV2_COUNT_AT_EXP: 0 = Reset to zero the master retry back-off retry count when the sample period expires for group-pump. 1 = Divide by two the master retry back-off retry count when the sample period expires for group-pump.
11	RW	CONFIG_MRBSP_DIV2_COUNT_AT_EXP: 0 = Reset to zero the master retry back-off retry count when the sample period expires for system-pump. 1 = Divide by two the master retry back-off retry count when the sample period expires for system-pump.
12	RW	CONFIG_MRBGP_DIS_DYN_ADJ: 0 = Enable dynamically adjusting the master retry back-off sample period based on level for group-pump. 1 = Disable dynamically adjusting the master retry back-off sample period based on level for group-pump.
13	RW	CONFIG_MRBSP_DIS_DYN_ADJ: 0 = Enable dynamically adjusting the master retry back-off sample period based on level for system-pump 1 = Disable dynamically adjusting the master retry back-off sample period based on level for system-pump.
14	RW	CONFIG_MRBGP_DIS_DYN_LVL_ADJ: 0 = Enable dynamically adjusting the master retry back-off thresholds based on level for group-pump. 1 = Disable dynamically adjusting the master retry back-off thresholds based on level for group-pump.
15	RW	CONFIG_MRBSP_DIS_DYN_LVL_ADJ: 0 = Enable dynamically adjusting the master retry back-off thresholds based on level for system-pump. 1 = Disable dynamically adjusting the master retry back-off thresholds based on level for system-pump.
16:21	RW	CONFIG_MRBGP_THRESH1: Master retry back-off retry count threshold at which to reduce the level for group-pump.
22:27	RW	CONFIG_MRBGP_THRESH2: Master retry back-off retry count threshold at which to increase the level for group-pump. **Note:** Make sure that thresh2 is greater than thresh1 or the back-off level will only increase.
28:33	RW	CONFIG_MRBSP_THRESH1: Master retry back-off retry count threshold at which to reduce the level for system-pump.
34:39	RW	CONFIG_MRBSP_THRESH2: Master retry back-off retry count threshold at which to increase the level for system-pump. **Note:** Make sure that thresh2 is greater than thresh1 or the back-off level will only increase.
40:43	RW	CONFIG_MRBGP_MAX_LEVEL: Master retry back-off maximum level for group-pump.
44:47	RW	CONFIG_MRBSP_MAX_LEVEL: Master retry back-off maximum level for system-pump.
48	RW	CONFIG_BRAZOS_MODE: 0 = Non-brazos 4-group; 2-chip mode. 1 = Brazos 2-group; 4-chip mode.
49	RW	CONFIG_DISABLE_PBM_ECC_COR: 0 = Enable ECC correction of MMIO store data. 1 = Disable ECC correction.
50	RW	CONFIG_LAB_RANDOMIZE_PE_01: 0 = Do not randomize PE(0:1). 1 = Randomize PE(0:1).
51	RW	CONFIG_LAB_RANDOMIZE_PE_23: 0 = Do not randomize PE(2:3). 1 = Randomize PE(2:3).
52:63	RW	CONFIG1_RESERVED2: Reserved.

48:63	RWX_WCLRREG	IDIAL_PERF_COUNT3: Performance counter 3.

Register Name	Performance Configuration Register
Mnemonic	NPU.STCK1.CS.CTL.MISC.PERF_CONFIG
Address	0000000005011187 (SCOM)
Description	Performance event selection register.

Bits	SCOM	Field Mnemonic: Description
0	RW	PERF_CONFIG_ENABLE: PMULet enable (clocks enable).
1	RW	PERF_CONFIG_RESETMODE: 0 = Reset on read. 1 = Reset on write.
2	RW	PERF_CONFIG_FREEZEMODE: 0 = Free run mode. 1 = Freeze on any maximum.
3	RW	PERF_CONFIG_DISABLE_PMISC: 0 = Enable PMISC control of counters. 1 = Disable PMISC control of counters.

Bits	SCOM	Field Mnemonic: Description
4	RW	PERF_CONFIG_PMISC_MODE: 0 = Global PMU PMISC no reset. 1 = Global PMU PMISC reset on enable.
5:7	RW	PERF_CONFIG_CASCADE: PMULet cascade configuration.
8:9	RW	PERF_CONFIG_PRESCALE_C0: Pre-scale configuration for counter 0.
10:11	RW	PERF_CONFIG_PRESCALE_C1: Pre-scale configuration for counter 1.
12:13	RW	PERF_CONFIG_PRESCALE_C2: Pre-scale configuration for counter 2.
14:15	RW	PERF_CONFIG_PRESCALE_C3: Pre-scale configuration for counter 3.
16:23	RW	PERF_CONFIG_EVENT0: Event 0 select.
24:31	RW	PERF_CONFIG_EVENT1: Event 0 select.
32:39	RW	PERF_CONFIG_EVENT2: Event 0 select.
40:47	RW	PERF_CONFIG_EVENT3: Event 0 select.
48:52	RW	PERF_CONFIG_LATSTART: Latency count start event.
53:57	RW	PERF_CONFIG_LATCANCEL: Latency count abort event.
58:62	RW	PERF_CONFIG_LATFINISH: Latency count finish event.
63	RW	PERF_CONFIG_RESERVED: Reserved.

Register Name	**Debug0 Configuration Register**
Mnemonic	NPU.STCK1.CS.CTL.MISC.DEBUG0_CONFIG
Address	0000000005011188 (SCOM)
Description	Configuration register for trace 0 chain.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG0_CONFIG_POD0: Multiplexer control for byte 0 of trace 0.
5:9	RW	DEBUG0_CONFIG_POD1: Multiplexer control for byte 1 of trace 0.
10:14	RW	DEBUG0_CONFIG_POD2: Multiplexer control for byte 2 of trace 0.
15:19	RW	DEBUG0_CONFIG_POD3: Multiplexer control for byte 3 of trace 0.
20:24	RW	DEBUG0_CONFIG_POD4: Multiplexer control for byte 4 of trace 0.
25:29	RW	DEBUG0_CONFIG_POD5: Multiplexer control for byte 5 of trace 0.
30:34	RW	DEBUG0_CONFIG_POD6: Multiplexer control for byte 6 of trace 0.
35:39	RW	DEBUG0_CONFIG_POD7: Multiplexer control for byte 7 of trace 0.
40:44	RW	DEBUG0_CONFIG_POD8: Multiplexer control for byte 8 of trace 0.
45:49	RW	DEBUG0_CONFIG_POD9: Multiplexer control for byte 9 of trace 0.
50:54	RW	DEBUG0_CONFIG_POD10: Multiplexer control for byte 10 of trace 0.
55:62	RW	DEBUG0_CONFIG_RESERVED1: Reserved.
63	RW	DEBUG0_CONFIG_ACT: Enable clock gates for debug trace latches.

Register Name	Debug1 Configuration Register
Mnemonic	NPU.STCK1.CS.CTL.MISC.DEBUG1_CONFIG
Address	0000000005011189 (SCOM)
Description	Configuration register for trace 1 chain.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG1_CONFIG_POD0: Multiplexer control for byte 0 of trace 1.
5:9	RW	DEBUG1_CONFIG_POD1: Multiplexer control for byte 1 of trace 1.
10:14	RW	DEBUG1_CONFIG_POD2: Multiplexer control for byte 2 of trace 1.
15:19	RW	DEBUG1_CONFIG_POD3: Multiplexer control for byte 3 of trace 1.
20:24	RW	DEBUG1_CONFIG_POD4: Multiplexer control for byte 4 of trace 1.
25:29	RW	DEBUG1_CONFIG_POD5: Multiplexer control for byte 5 of trace 1.
30:34	RW	DEBUG1_CONFIG_POD6: Multiplexer control for byte 6 of trace 1.
35:39	RW	DEBUG1_CONFIG_POD7: Multiplexer control for byte 7 of trace 1.
40:44	RW	DEBUG1_CONFIG_POD8: Multiplexer control for byte 8 of trace 1.
45:49	RW	DEBUG1_CONFIG_POD9: Multiplexer control for byte 9 of trace 1.
50:54	RW	DEBUG1_CONFIG_POD10: Multiplexer control for byte 10 of trace 1.
55:62	RW	DEBUG1_CONFIG_RESERVED1: Reserved.
63	RW	DEBUG1_CONFIG_ACT: Enable clock gates for debug trace latches.

Register Name	Brick 0 BDF2PE Configuration 0 Register
Mnemonic	NPU.STCK1.CS.CTL.MISC.BDF2PE_00_CONFIG
Address	000000000501118A (SCOM)
Description	This register configures BDF-to-PE mapping #0 for brick 0. **Note:** Across all six bricks of an NPU, each BDF can map to at most one PE.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_BDF2PE_00_ENABLE: 0 = This BDF-to-PE mapping is disabled. 1 = This BDF-to-PE mapping is enabled.
1	RW	CONFIG_BDF2PE_00_WILDCARD: 0 = This BDF-to-PE mapping matches only this BDF. 1 = This BDF-to-PE mapping matches all BDFs.
2:3	RW	CONFIG_BDF2PE_00_RESERVED: Reserved.
4:7	RW	CONFIG_BDF2PE_00_PE: PE associated with this BDF.
8:23	RW	CONFIG_BDF2PE_00_BDF: BDF mapped to this PE.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	Brick 0 BDF2PE Configuration 1 Register
Mnemonic	NPU.STCK1.CS.CTL.MISC.BDF2PE_01_CONFIG
Address	000000000501118B (SCOM)
Description	This register configures BDF-to-PE mapping #1 for brick 0. **Note:** Across all six bricks of an NPU, each BDF can map to at most one PE.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_BDF2PE_01_ENABLE: 0 = This BDF-to-PE mapping is disabled. 1 = This BDF-to-PE mapping is enabled.
1:3	RW	CONFIG_BDF2PE_01_RESERVED: Reserved.
4:7	RW	CONFIG_BDF2PE_01_PE: PE associated with this BDF.
8:23	RW	CONFIG_BDF2PE_01_BDF: BDF mapped to this PE.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	Brick 0 BDF2PE Configuration 2 Register
Mnemonic	NPU.STCK1.CS.CTL.MISC.BDF2PE_02_CONFIG
Address	000000000501118C (SCOM)
Description	This register configures BDF-to-PE mapping #2 for brick 0. **Note:** Across all six bricks of an NPU, each BDF can map to at most one PE.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_BDF2PE_02_ENABLE: 0 = This BDF-to-PE mapping is disabled. 1 = This BDF-to-PE mapping is enabled.
1:3	RW	CONFIG_BDF2PE_02_RESERVED: Reserved.
4:7	RW	CONFIG_BDF2PE_02_PE: PE associated with this BDF.
8:23	RW	CONFIG_BDF2PE_02_BDF: BDF mapped to this PE.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	Brick 1 BDF2PE Configuration 0 Register
Mnemonic	NPU.STCK1.CS.CTL.MISC.BDF2PE_10_CONFIG
Address	000000000501118D (SCOM)
Description	This register configures BDF-to-PE mapping #0 for brick 1. **Note:** Across all six bricks of an NPU, each BDF can map to at most one PE.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_BDF2PE_10_ENABLE: 0 = This BDF-to-PE mapping is disabled. 1 = This BDF-to-PE mapping is enabled.
1	RW	CONFIG_BDF2PE_10_WILDCARD: 0 = This BDF-to-PE mapping matches only this BDF. 1 = This BDF-to-PE mapping matches all BDFs.
2:3	RW	CONFIG_BDF2PE_10_RESERVED: Reserved.

Bits	SCOM	Field Mnemonic: Description
4:7	RW	CONFIG_BDF2PE_10_PE: PE associated with this BDF.
8:23	RW	CONFIG_BDF2PE_10_BDF: BDF mapped to this PE.
24:63	RO	Constant = 0b0000000000000000000000000000000000000000

Register Name	Brick 1 BDF2PE Configuration 1 Register
Mnemonic	NPU.STCK1.CS.CTL.MISC.BDF2PE_11_CONFIG
Address	000000000501118E (SCOM)
Description	This register configures BDF-to-PE mapping #1 for brick 1. **Note:** Across all six bricks of an NPU, each BDF can map to at most one PE.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_BDF2PE_11_ENABLE: 0 = This BDF-to-PE mapping is disabled. 1 = This BDF-to-PE mapping is enabled.
1:3	RW	CONFIG_BDF2PE_11_RESERVED: Reserved.
4:7	RW	CONFIG_BDF2PE_11_PE: PE associated with this BDF.
8:23	RW	CONFIG_BDF2PE_11_BDF: BDF mapped to this PE.
24:63	RO	Constant = 0b0000000000000000000000000000000000000000

Register Name	Brick 1 BDF2PE Configuration 2 Register
Mnemonic	NPU.STCK1.CS.CTL.MISC.BDF2PE_12_CONFIG
Address	000000000501118F (SCOM)
Description	This register configures BDF-to-PE mapping #2 for brick 1. **Note:** Across all six bricks of an NPU, each BDF can map to at most one PE.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_BDF2PE_12_ENABLE: 0 = This BDF-to-PE mapping is disabled. 1 = This BDF-to-PE mapping is enabled.
1:3	RW	CONFIG_BDF2PE_12_RESERVED: Reserved.
4:7	RW	CONFIG_BDF2PE_12_PE: PE associated with this BDF.
8:23	RW	CONFIG_BDF2PE_12_BDF: BDF mapped to this PE.
24:63	RO	Constant = 0b0000000000000000000000000000000000000000

Register Name	LPC Threshold Configuration Register
Mnemonic	NPU.STCK1.CS.CTL.MISC.LPCTH_CONFIG
Address	0000000005011190 (SCOM)
Description	Threshold configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_LPCTH_BUSY_ENABLE: 0 = Disable thresholding. 1 = Enable thresholding.
1:3	RW	CONFIG_LPCTH_WINDOW_SELECT: 001 = 256 cycle window. 010 = 512 cycle window. 100 = 1024 cycle window.
4:13	RW	CONFIG_LPCTH_THRESH_0: Busy counter threshold 0. When this threshold is exceeded, the LPC_th field in the partial response ATAG is set to '01'.
14:23	RW	CONFIG_LPCTH_THRESH_1: Busy counter threshold 1. When this threshold is exceeded, the LPC_th field in the partial response ATAG is set to '10'.
24:33	RW	CONFIG_LPCTH_THRESH_2: Busy counter threshold 2. When this threshold is exceeded, the LPC_th field in the partial response ATAG is set to '11'.
34:35	RW	CONFIG_LPCTH_RESERVED1: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	Inhibit Configuration Register
Mnemonic	NPU.STCK1.CS.CTL.MISC.INHIBIT_CONFIG
Address	0000000005011191 (SCOM)
Description	This register configures inhibits for CQ_CTL.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_INHIBIT_LFREQ0: Base LFSR frequency 0: 0..11 = $1/2^{(n+1)}$ 12 = $1/2^{14}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
4:5	RW	CONFIG_INHIBIT_PFREQ0: Selects pre-frequency 0: 0 = SM0 timer tick. 1 = Inverted SM0 timer tick. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
6	RW	CONFIG_INHIBIT_BLOCKY0: 0 = Disable blocky mode. 1 = Enable blocky mode.
7	RW	CONFIG_INHIBIT_ONESHOT0: 0 = Continuous mode. 1 = One shot mode.
8:15	RW	CONFIG_INHIBIT_DEST0: Selects the destination of the inhibit.
16:19	RW	CONFIG_INHIBIT_LFREQ1: Base LFSR frequency 0: 0..11 = $1/2^{(n+1)}$ 12 = $1/2^{14}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$

Bits	SCOM	Field Mnemonic: Description
20:21	RW	CONFIG_INHIBIT_PFREQ1: Selects pre frequency 0: 0 = SM1 timer tick. 1 = Inverted SM1 timer tick. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
22	RW	CONFIG_INHIBIT_BLOCKY1: 0 = Disable blocky mode. 1 = Enable blocky mode.
23	RW	CONFIG_INHIBIT_ONESHOT1: 0 = Continuous mode. 1 = One shot mode.
24:31	RW	CONFIG_INHIBIT_DEST1: Selects the destination of the inhibit.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	CQ_CTL Status Register
Mnemonic	NPU.STCK1.CS.CTL.MISC.CTL_STATUS
Address	0000000005011192 (SCOM)
Description	Status reporting register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	CTL_STATUS_SM_MMIO0: Set to 1 when SM slice 0 has an MMIO pending.
1	ROX	CTL_STATUS_SM_MMIO1: Set to 1 when SM slice 1 has an MMIO pending.
2	ROX	CTL_STATUS_SM_MMIO2: Set to 1 when SM slice 2 has an MMIO pending.
3	ROX	CTL_STATUS_SM_MMIO3: Set to 1 when SM slice 3 has an MMIO pending.
4:7	ROX	CTL_STATUS_MRBGP: Master retry back-off level for group-pump commands.
8:11	ROX	CTL_STATUS_MRBSP: Master retry back-off level for system-pump commands.
12:15	ROX	CTL_STATUS_FENCE0: Brick 0 fence sequencing state: 0000 = Idle state, completely unfenced. 1001 = Fenced state, fence sequencing complete. 1100 = Half-fenced state, NTL is not fenced. others = In transition between fenced and not fenced.
16:19	ROX	CTL_STATUS_FENCE1: Brick 1 fence sequencing state: 0000 = Idle state, completely unfenced. 1001 = Fenced state, fence sequencing complete. 1100 = Half-fenced state, NTL is not fenced. others = In transition between fenced and not fenced.
20:21	ROX	CTL_STATUS_LPCTH: LPC threshold value driven in partial responses.
22:26	ROX	CTL_STATUS_PBM_STATE: PB-MMIO/GenId state (0b00000 = Idle).
27	ROX	CTL_STATUS_BRK0_RLX: Set to 1 when brick 0 Gen-Id/relaxed ordering is idle.
28	ROX	CTL_STATUS_BRK1_RLX: Set to 1 when brick 1 Gen-Id/relaxed ordering is idle.
29	ROX	CTL_STATUS_BRK0_NVL: Set to 1 when brick 0 NVLink flush is idle.
30	ROX	CTL_STATUS_BRK1_NVL: Set to 1 when brick 1 NVLink flush is idle.
31	ROX	CTL_STATUS_ATS_SYNC: Set to 1 when AT sync is idle.
32	ROX	CTL_STATUS_NMMU: Set to 1 when NMMU outbound message is idle.
33	ROX	CTL_STATUS_PBLN: Set to 1 when the outbound processor bus Ln scope queue is empty.

Bits	SCOM	Field Mnemonic: Description
34	ROX	CTL_STATUS_PBNNG: Set to 1 when the outbound processor bus Nn/G scope queue is empty.
35	ROX	CTL_STATUS_PBRNVG: Set to 1 when the outbound processor bus Rn/Vg scope queue is empty.
36	ROX	CTL_STATUS_NVREQ0: Set to 1 when the outbound brick 0 request queue is empty.
37	ROX	CTL_STATUS_NVDGD0: Set to 1 when the outbound brick 0 downgrade queue is empty.
38	ROX	CTL_STATUS_NVREQ1: Set to 1 when the outbound brick 1 request queue is empty.
39	ROX	CTL_STATUS_NVDGD1: Set to 1 when the outbound brick 1 downgrade queue is empty.
40	ROX	CTL_STATUS_ATSREQ: Set to 1 when the outbound ATS TCE translate request queue is empty.
41	ROX	CTL_STATUS_MMIO: Set to 1 when the MMIO/GenId state machine is idle.
42	ROX	CTL_STATUS_PBRS: Set to 1 when the outbound PB response/merge queue is empty.
43	ROX	CTL_STATUS_NVRS0: Set to 1 when the outbound brick 0 response queue is empty.
44	ROX	CTL_STATUS_NVRS1: Set to 1 when the outbound brick 0 response queue is empty.
45	ROX	CTL_STATUS_XARS: Set to 1 when the outbound ATS/MISC response queue is empty.
46	ROX	CTL_STATUS_ATRR: Set to 1 when the outbound ATR response logic is idle.
47	ROX	CTL_STATUS_RESERVED1: Reserved.
48:63	RO	Constant = 0b0000000000000000

Register Name	CERR Message 0 Register
Mnemonic	NPU.STCK1.CS.CTL.MISC.CERR_MESSAGE0
Address	0000000005011198 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS0: Reserved.

Register Name	CERR Message 1 Register
Mnemonic	NPU.STCK1.CS.CTL.MISC.CERR_MESSAGE1
Address	0000000005011199 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS1: Reserved.

Register Name	CERR First 0 Register
Mnemonic	NPU.STCK1.CS.CTL.MISC.CERR_FIRST0
Address	000000000501119A (SCOM)
Description	c_err_rpt first latches read-write-1-clear register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_0: NCF0 SM0 NCF error.

Bits	SCOM	Field Mnemonic: Description
1	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_1: NCF1 SM1 NCF error.
2	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_2: NCF2 SM2 NCF error.
3	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_3: NCF3 SM3 NCF error.
4	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_4: NCF4 (Reserved).
5	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_5: NCF5 (Reserved).

Register Name	CQ_DAT Miscellaneous Configuration 1 Register
Mnemonic	NPU.STCK1.DAT.MISC.CONFIG1
Address	00000000050111A1 (SCOM)
Description	CQ_DAT miscellaneous configuration register 1.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	CONFIG1_MGR_CREDIT: CTL to DAT merge request interface number of credits.
2:4	RW	CONFIG1_MRG_PBTX_NBUF: CTL to DAT merge request Power bus TX interface logic request buffer size.
5:8	RW	CONFIG1_MRG_RDBF_NBUF: CTL to DAT merge request Power bus TX array read logic request buffer size.
9:12	RW	CONFIG1_MRG_IBWR_NBUF: CTL to DAT merge request BE merge/OI loopback/AMO inbound buffer write logic request buffer size.
13:15	RW	CONFIG1_MRG_IBRD_NBUF: CTL to DAT merge request BE merge/IO loopback/AMO inbound buffer read logic request buffer size.
16:18	RW	CONFIG1_MRG_BBRD_NBUF: CTL to DAT merge request BE merge BE buffer read logic request buffer size.
19:21	RW	CONFIG1_MRG_OBRD_NBUF: CTL to DAT merge request BE merge/OI loopback/AMO outbound buffer read logic request buffer size.
22	RW	CONFIG1_MRG_CR_DIS: Writing a 1 disables CQ_DAT to send credits to CTL for merge operations.
23	RW	CONFIG1_MRG_CTLW_CR_DIS: Writing a 1 disables the CQ_DAT to send credits to CTL for inbound buffer write operations.
24:25	RW	CONFIG1_NTLR_PAUSE_THRESH: Specifies the number of outbound buffer NTL port occupation cycles before raising NTL pause request: 00 = 32 cycles. 01 = 16 cycles. 10 = 8 cycles. 11b = Never.
26:27	RW	CONFIG1_CTLR_HP_THRESH: Specifies the number of outbound buffer CTL read wait cycles before giving high priority: 00 = 16 cycles. 01 = 8 cycles 10 = 4 cycles. 11 = Never.
28:29	RW	CONFIG1_NTLW_PAUSE_THRESH: Specifies the number of inbound buffer NTL port occupation cycles before raising NTL pause request: 00 = 16 cycles. 01 = 8 cycles. 10 = 4 cycles. 11 = Never.
30:31	RW	CONFIG1_CTLW_HP_THRESH: Specifies the number of inbound buffer CTL write wait cycles before giving high priority: 00 = 16 cycles. 01 = 8 cycles. 10 = 4 cycles. 11 = Never.
32	RW	CONFIG1_PBTX_REDUCE_RTAG: Writing a 1 has the CQ_DAT limit number of outstanding RTAGs to 1 on PB transmit interface (default is 2).
33	RW	CONFIG1_PBTX_DELAY_BDONE: Writing a 1 has the CQ_DAT PB transmit logic wait until all the OW is presented on the PB before raising BuffDone to CTL.
34	RW	CONFIG1_PBTX_FLIP_IMIN_BIG: Writing a 1 has the CQ_DAT PB transmit logic flip the endian of the integer minimum value on failed inc/dec when e = 0 is specified.

Bits	SCOM	Field Mnemonic: Description
35	RW	CONFIG1_PBTX_FLIP_IMIN_LITTLE: Writing a 1 has the CQ_DAT PB transmit logic flip the endian of the integer minimum value on failed inc/dec when e = 1 is specified.
36	RW	CONFIG1_ALU_SAFE_LATENCY: Writing a 1 has the CQ_DAT wait for one more cycle for ALU output in case x2 phase detection logic goes wrong.
37	RW	CONFIG1_ALU_FLIP_ENDIAN_BIG: Writing a 1 has the CQ_DAT flip the ALU endian when e = 0 is specified.
38	RW	CONFIG1_ALU_FLIP_ENDIAN_LITTLE: Writing a 1 has the CQ_DAT flip the ALU endian when e = 1 is specified.
39	RW	CONFIG1_PBTX_EARLY_AFTAG: Writing a 1 has the CQ_DAT raise BuffDone to CTL earlier for armwf_* operations. CQ_DAT does not wait for fetch data to be presented on the PB. However, CQ_DAT does wait for fetch data to leave the inbound buffer, that is the buffer entry can still be safely reused. This bit can be randomized in verification.
40:63	RW	CONFIG1_RESERVED1: Reserved.

Register Name	**CQ_DAT ECC Configuration Register**
Mnemonic	NPU.STCK1.DAT.MISC.ECC_CONFIG
Address	00000000050111A2 (SCOM)
Description	CQ_DAT ECC configuration register.

Bits	SCOM	Field Mnemonic: Description
0	RW	ECC_CONFIG_PBTX_AMO_IGNORE_XUE: For armwf_inc/dec types, replace PB transmit data with negative maximum value when comparison fails, even if the data has UE or SUE. The negative maximum value is marked with SUE as long as suedis_pt = 0.
1	RW	ECC_CONFIG_SUE_DIS_BR_PERR: Writing a 1 disables marking merge result data with SUE when BE buffer read data latch has parity error.
2	RW	ECC_CONFIG_SUE_DIS_IR_PERR: Writing a 1 disables marking merge result data with SUE when inbound buffer read data latch has parity error.
3	RW	ECC_CONFIG_SUE_DIS_OR_PERR: Writing a 1 disables marking merge result data with SUE when the outbound buffer read data latch has parity error.
4	RW	ECC_CONFIG_CORR_DIS_PT: Writing a 1 disables ECC correction in Power bus TX.
5	RW	ECC_CONFIG_CORR_DIS_PR: Writing a 1 disables ECC correction in Power bus RX.
6	RW	ECC_CONFIG_CORR_DIS_BR: Writing a 1 disables ECC correction in byte enable buffer read.
7	RW	ECC_CONFIG_CORR_DIS_IR: Writing a 1 disables ECC correction in merge operation inbound buffer read.
8	RW	ECC_CONFIG_CORR_DIS_OR: Writing a 1 disables ECC correction in merge operation outbound buffer read.
9	RW	ECC_CONFIG_SUE_DIS_PT: Writing a 1 disables converting ECC UE to SUE in Power bus TX.
10	RW	ECC_CONFIG_SUE_DIS_PR: Writing a 1 disables converting ECC UE to SUE in Power bus RX.
11	RW	ECC_CONFIG_SUE_DIS_BR: Writing a 1 disables converting ECC UE to SUE in byte enable buffer read.
12	RW	ECC_CONFIG_SUE_DIS_IR: Writing a 1 disables converting ECC UE to SUE in merge operation inbound buffer read.
13	RW	ECC_CONFIG_SUE_DIS_OR: Writing a 1 disables converting ECC UE to SUE in merge operation outbound buffer read.
14:31	RW	ECC_CONFIG_RESERVED: Reserved.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	CQ_DAT Scratch 0 Register
Mnemonic	NPU.STCK1.DAT.MISC.SCRATCH0
Address	00000000050111A3 (SCOM)
Description	CQ_DAT scratch register.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	SCRATCH0_IDIAL: Scratch register.

Register Name	CQ_DAT CERR ECC Hold Register
Mnemonic	NPU.STCK1.DAT.MISC.CERR_ECC_HOLD
Address	00000000050111A4 (SCOM)
Description	CQ_DAT ECC error c_err_rpt status and clear register.

Bits	SCOM	Field Mnemonic: Description
0:9	RO	Constant = 0b0000000000
10:13	RWX_WCLEAR	IDIAL_CERR_ECC_HOLD_PT_UE: ECC UE on Power bus TX data path (4 ECC words).
14:17	RWX_WCLEAR	IDIAL_CERR_ECC_HOLD_PR_UE: ECC UE on Power bus RX data path (4 ECC words).
18:19	RWX_WCLEAR	IDIAL_CERR_ECC_HOLD_BR_UE: ECC UE on byte enable buffer read data path (2 ECC words).
20:23	RWX_WCLEAR	IDIAL_CERR_ECC_HOLD_IR_UE: ECC UE on merge operation inbound buffer read data path (4 ECC words).
24:27	RWX_WCLEAR	IDIAL_CERR_ECC_HOLD_OR_UE: ECC UE on merge operation outbound buffer read data path (4 ECC words).
28:31	RWX_WCLEAR	IDIAL_CERR_ECC_HOLD_PT_SUE: ECC SUE on Power bus TX data path (4 ECC words).
32:35	RWX_WCLEAR	IDIAL_CERR_ECC_HOLD_PR_SUE: ECC SUE on Power bus RX data path (4 ECC words).
36:37	RWX_WCLEAR	IDIAL_CERR_ECC_HOLD_BR_SUE: ECC SUE on byte enable buffer read data path (2 ECC words).
38:41	RWX_WCLEAR	IDIAL_CERR_ECC_HOLD_IR_SUE: ECC SUE on merge operation inbound buffer read data path (4 ECC words).
42:45	RWX_WCLEAR	IDIAL_CERR_ECC_HOLD_OR_SUE: ECC SUE on merge operation outbound buffer read data path (4 ECC words).
46:49	RWX_WCLEAR	IDIAL_CERR_ECC_HOLD_PT_CE: ECC CE on Power bus TX data path (4 ECC words).
50:53	RWX_WCLEAR	IDIAL_CERR_ECC_HOLD_PR_CE: ECC CE on Power bus RX data path (4 ECC words).
54:55	RWX_WCLEAR	IDIAL_CERR_ECC_HOLD_BR_CE: ECC CE on byte enable buffer read data path (2 ECC words).
56:59	RWX_WCLEAR	IDIAL_CERR_ECC_HOLD_IR_CE: ECC CE on merge operation inbound buffer read data path (4 ECC words).
60:63	RWX_WCLEAR	IDIAL_CERR_ECC_HOLD_OR_CE: ECC CE on merge operation outbound buffer read data path (4 ECC words).

Register Name	CQ_DAT CERR ECC Mask Register
Mnemonic	NPU.STCK1.DAT.MISC.CERR_ECC_MASK
Address	00000000050111A5 (SCOM)
Description	CQ_DAT ECC error c_err_rpt mask register.

Bits	SCOM	Field Mnemonic: Description
0:9	RO	Constant = 0b0000000000
10:63	RW	CERR_ECC_MASK_BITS: CQ_DAT ECC error c_err_rpt mask bits.

Register Name	CQ_DAT CERR ECC First Register
Mnemonic	NPU.STCK1.DAT.MISC.CERR_ECC_FIRST
Address	00000000050111A6 (SCOM)
Description	CQ_DAT ECC error c_err_rpt first register.

Bits	SCOM	Field Mnemonic: Description
0:9	RO	Constant = 0b0000000000
10:63	RWX_WCLEAR	CERR_ECC_FIRST_BITS: CQ_DAT ECC error c_err_rpt first error bits.

Register Name	CQ_DAT CERR Parity Hold Register
Mnemonic	NPU.STCK1.DAT.MISC.CERR_PTY_HOLD
Address	00000000050111A7 (SCOM)
Description	CQ_DAT parity error c_err_rpt status and clear register.

Bits	SCOM	Field Mnemonic: Description
0:36	RO	Constant = 0b000000000000000000000000000000000000
37	RWX_WCLEAR	IDIAL_CERR_PTY_HOLD_INHIBIT_CONFIG: Parity error on inhibit configuration register.
38	RWX_WCLEAR	IDIAL_CERR_PTY_HOLD_MISC_STATE: Parity error on critical state latches in the miscellaneous subunit.
39	RWX_WCLEAR	IDIAL_CERR_PTY_HOLD_MRG_STATE: Parity error on critical state latches in the merge subunit.
40	RWX_WCLEAR	IDIAL_CERR_PTY_HOLD_OBUF_STATE: Parity error on critical state latches in the outbound buffer subunit.
41	RWX_WCLEAR	IDIAL_CERR_PTY_HOLD_PBTX_STATE: Parity error on critical state latches in the PB transmit subunit.
42	RWX_WCLEAR	IDIAL_CERR_PTY_HOLD_RQIN_STATE: Parity error on critical state latches in the merge request buffer subunit.
43	RWX_WCLEAR	IDIAL_CERR_PTY_HOLD_IBUF_STATE: Parity error on critical state latches in the inbound buffer subunit.
44	RWX_WCLEAR	IDIAL_CERR_PTY_HOLD_ERRINJ: Parity error on ECC ERRINJ register.
45:48	RWX_WCLEAR	IDIAL_CERR_PTY_HOLD_PBTX_AMO: Parity error in PB transmit AMO inc/dec data path (4 words).
49:52	RWX_WCLEAR	IDIAL_CERR_PTY_HOLD_IBRD: Parity error in merge operation inbound buffer read data path (4 words).
53:56	RWX_WCLEAR	IDIAL_CERR_PTY_HOLD_OBRD: Parity error in merge operation outbound buffer read data path (4 words).
57:58	RWX_WCLEAR	IDIAL_CERR_PTY_HOLD_BBRD: Parity error in byte enable buffer read data path (2 words).
59	RWX_WCLEAR	IDIAL_CERR_PTY_HOLD_PBRX_RTAG: Parity error on received RTAG on the PB receive interface.
60	RWX_WCLEAR	IDIAL_CERR_PTY_HOLD_ECC_CONFIG: Parity error on ECC configuration register.
61	RWX_WCLEAR	IDIAL_CERR_PTY_HOLD_CONFIG1: Parity error on configuration 1 register.
62	RWX_WCLEAR	IDIAL_CERR_PTY_HOLD_DEBUG0_CONFIG: Parity error on debug 0 configuration register.

Bits	SCOM	Field Mnemonic: Description
63	RWX_WCLEAR	IDIAL_CERR_PTY_HOLD_DEBUG1_CONFIG: Parity error on debug 1 configuration register.

Register Name	CQ_DAT CERR Parity Mask Register
Mnemonic	NPU.STCK1.DAT.MISC.CERR_PTY_MASK
Address	00000000050111A8 (SCOM)
Description	CQ_DAT parity error c_err_rpt mask register.

Bits	SCOM	Field Mnemonic: Description
0:36	RO	Constant = 0b00000000000000000000000000000000000000
37:63	RW	CERR_PTY_MASK_BITS: CQ_DAT parity error c_err_rpt mask bits.

Register Name	CQ_DAT CERR Parity First Register
Mnemonic	NPU.STCK1.DAT.MISC.CERR_PTY_FIRST
Address	00000000050111A9 (SCOM)
Description	CQ_DAT parity error c_err_rpt first register.

Bits	SCOM	Field Mnemonic: Description
0:36	RO	Constant = 0b00000000000000000000000000000000000000
37:63	RWX_WCLEAR	CERR_PTY_FIRST_BITS: CQ_DAT parity error c_err_rpt first error bits.

Register Name	CQ_DAT CERR Logic Hold Register
Mnemonic	NPU.STCK1.DAT.MISC.CERR_LOG_HOLD
Address	00000000050111AA (SCOM)
Description	CQ_DAT logic error c_err_rpt status and clear register.

Bits	SCOM	Field Mnemonic: Description
0:46	RO	Constant = 0b00000000000000000000000000000000000000000000000
47	RWX_WCLEAR	IDIAL_CERR_LOG_HOLD_BBUF_RDWR: Logic error: Read/write conflict on BE buffer, the same buffer entry was read and written in the same cycle.
48	RWX_WCLEAR	IDIAL_CERR_LOG_HOLD_IBUF_RDWR: Logic error: Read/write conflict on inbound buffer, the same buffer entry was read and written in the same cycle.
49	RWX_WCLEAR	IDIAL_CERR_LOG_HOLD_OBUF_RDWR: Logic error: Read/write conflict on outbound buffer, the same buffer entry was read and written in the same cycle.
50:55	RWX_WCLEAR	IDIAL_CERR_LOG_HOLD_RQIN_OVF: Logic error: Merge request buffer overflow in a merge pipeline: Bit 0 = Error in PB transmit request pipeline. Bit 1 = Error in PB transmit array read pipeline. Bit 2 = Error in merge inbound buffer write pipeline. Bit 3 = Error in merge inbound buffer read pipeline. Bit 4 = Error in merge BE buffer read pipeline. Bit 5 = Error in merge outbound buffer read pipeline.
56	RWX_WCLEAR	IDIAL_CERR_LOG_HOLD_IBUF_CTL_PIPE: Logic error: inbound buffer CTL write request/data lost due to excessive incoming request.
57	RWX_WCLEAR	IDIAL_CERR_LOG_HOLD_PBTX_PIPE: Logic error: Pipeline overflow in PB transmit logic.

Bits	SCOM	Field Mnemonic: Description
58	RWX_WCLEAR	IDIAL_CERR_LOG_HOLD_MRG_IR_PIPE: Logic error: Pipeline overflow in merge inbound buffer read logic.
59	RWX_WCLEAR	IDIAL_CERR_LOG_HOLD_MRG_OR_PIPE: Logic error: Pipeline overflow in merge outbound buffer read logic.
60	RWX_WCLEAR	IDIAL_CERR_LOG_HOLD_AMO_ADDR: Logic error: Invalid address position within OW for armw_cas_t, armwf_inc_b, armwf_inc_e, and armwf_dec_b types.
61	RWX_WCLEAR	IDIAL_CERR_LOG_HOLD_PBRX_RTAG: Logic error: Invalid RTAG observed on the PB receive interface.
62	RWX_WCLEAR	IDIAL_CERR_LOG_HOLD_IBUF_WRITE: Logic error: NTL/ CTL wrote inbound buffer entry 0 - 3 cycles after the same entry was read for PB TX.
63	RWX_WCLEAR	IDIAL_CERR_LOG_HOLD_IBUF_WARB: Logic error: More than one write request granted on inbound buffer write port.

Register Name	CQ_DAT CERR Logic Mask Register
Mnemonic	NPU.STCK1.DAT.MISC.CERR_LOG_MASK
Address	00000000050111AB (SCOM)
Description	CQ_DAT logic error c_err_rpt mask register.

Register Name	CQ_DAT CERR Logic First Register
Mnemonic	NPU.STCK1.DAT.MISC.CERR_LOG_FIRST
Address	00000000050111AC (SCOM)
Description	CQ_DAT logic error c_err_rpt first register.

Bits	SCOM	Field Mnemonic: Description
0:46	RO	Constant = 0b00000000000000000000000000000000000000000000000
47:63	RWX_WCLEAR	CERR_LOG_FIRST_BITS: CQ_DAT logic error c_err_rpt first error bits.

Register Name	CQ_DAT RAS Error Message 0 Register
Mnemonic	NPU.STCK1.DAT.MISC.REM0
Address	00000000050111AD (SCOM)
Description	CQ_DAT RAS error message register.

Bits	SCOM	Field Mnemonic: Description
0:16	RO	Constant = 0b00000000000000000

Bits	SCOM	Field Mnemonic: Description
17:21	ROX	REM0_IBUF_WSRC: Indicates the inbound buffer write requester that caused a read/write conflict: Bit 0 = NTL0 datin immediate write. Bit 1 = NTL1 datin immediate write. Bit 2 = NTL1 datin delayed write. Bit 3 = CTL write. Bit 4 = Merge logic.
22:23	ROX	REM0_IBUF_RSRC: Indicates the inbound buffer read requester that caused read/write conflict: Bit 0 = PBTX transmit. Bit 1 = Merge logic.
24:31	ROX	REM0_IBUF_AIDX: The inbound buffer entry (0 - 255) on which the read/write conflict occurred.
32:33	ROX	REM0_IBUF_ABANK: The inbound buffer array bank (0 - 3) on which read/write conflict occurred.
34:35	ROX	REM0_OBUF_WSRC: Indicates the outbound buffer write requester that caused read/write conflict: bit 0 = PBTX receive. bit 1 = Merge logic I-O loopback.
36:41	ROX	REM0_OBUF_RSRC: Indicates the outbound buffer read requester that caused read/write conflict: Bit 0 = NTL0 datout immediate read. Bit 1 = NTL1 datout immediate read. Bit 2 = NTL0 datout regular read. Bit 3 = NTL1 datout regular read. Bit 4 = Merge logic. Bit 5 = CTL read.
42:49	ROX	REM0_OBUF_AIDX: The outbound buffer entry (0 - 255) on which the read/write conflict occurred.
50:51	ROX	REM0_OBUF_ABANK: The outbound buffer array bank (0 - 3) on which the read/write conflict occurred.
52:53	ROX	REM0_BBUF_WSRC: Indicates the BE buffer write requester that caused the read/write conflict: Bit 0 = NTL datin. Bit 1 = Dispalt logic in MISC.
54:55	ROX	REM0_BBUF_RSRC: Indicates the BE buffer read requester that caused the read/write conflict: Bit 0 = Merge logic. Bit 1 = Dispalt logic in MISC.
56:63	ROX	REM0_BBUF_AIDX: The BE buffer entry (0 - 255) on which the read/write conflict occurred.

Register Name	CQ_DAT RAS Error Message 1 Register
Mnemonic	NPU.STCK1.DAT.MISC.REM1
Address	00000000050111AE (SCOM)
Description	CQ_DAT RAS error message register.

Bits	SCOM	Field Mnemonic: Description
0:33	RO	Constant = 0b000000000000000000000000000000000
34:55	ROX	REM1_PBRX_RTAG: The invalid RTAG observed on PB receive interface.
56:58	ROX	REM1_ALU_ADR: The invalid ALU address in the OW that caused address error (in unit of 4B, 0 - 7).
59:62	ROX	REM1_ALU_TYPE: The ALU optype with which an address error was detected.
63	ROX	REM1_ALU_SZ: The ALU operand size (0:4B, 1:8B) when an address error was detected.

Register Name	CQ_DAT Debug0 Configuration Register
Mnemonic	NPU.STCK1.DAT.MISC.DEBUG0_CONFIG
Address	00000000050111B0 (SCOM)
Description	CQ_DAT debug 0 configuration register.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG0_CONFIG_POD0: Multiplexer control for byte 0 of trace 0.
5:9	RW	DEBUG0_CONFIG_POD1: Multiplexer control for byte 1 of trace 0.
10:14	RW	DEBUG0_CONFIG_POD2: Multiplexer control for byte 2 of trace 0.
15:19	RW	DEBUG0_CONFIG_POD3: Multiplexer control for byte 3 of trace 0.
20:24	RW	DEBUG0_CONFIG_POD4: Multiplexer control for byte 4 of trace 0.
25:29	RW	DEBUG0_CONFIG_POD5: Multiplexer control for byte 5 of trace 0.
30:34	RW	DEBUG0_CONFIG_POD6: Multiplexer control for byte 6 of trace 0.
35:39	RW	DEBUG0_CONFIG_POD7: Multiplexer control for byte 7 of trace 0.
40:44	RW	DEBUG0_CONFIG_POD8: Multiplexer control for byte 8 of trace 0.
45:49	RW	DEBUG0_CONFIG_POD9: Multiplexer control for byte 9 of trace 0.
50:54	RW	DEBUG0_CONFIG_POD10: Multiplexer control for byte 10 of trace 0.
55:62	RW	DEBUG0_CONFIG_RESERVED1: Reserved.
63	RW	DEBUG0_CONFIG_ACT: Enable clock gates for debug trace latches.

Register Name	CQ_DAT Debug1 Configuration Register
Mnemonic	NPU.STCK1.DAT.MISC.DEBUG1_CONFIG
Address	00000000050111B1 (SCOM)
Description	CQ_DAT debug 1 configuration register.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG1_CONFIG_POD0: Multiplexer control for byte 0 of trace 0.
5:9	RW	DEBUG1_CONFIG_POD1: Multiplexer control for byte 1 of trace 0.
10:14	RW	DEBUG1_CONFIG_POD2: Multiplexer control for byte 2 of trace 0.
15:19	RW	DEBUG1_CONFIG_POD3: Multiplexer control for byte 3 of trace 0.
20:24	RW	DEBUG1_CONFIG_POD4: Multiplexer control for byte 4 of trace 0.
25:29	RW	DEBUG1_CONFIG_POD5: Multiplexer control for byte 5 of trace 0.
30:34	RW	DEBUG1_CONFIG_POD6: Multiplexer control for byte 6 of trace 0.
35:39	RW	DEBUG1_CONFIG_POD7: Multiplexer control for byte 7 of trace 0.
40:44	RW	DEBUG1_CONFIG_POD8: Multiplexer control for byte 8 of trace 0.
45:49	RW	DEBUG1_CONFIG_POD9: Multiplexer control for byte 9 of trace 0.
50:54	RW	DEBUG1_CONFIG_POD10: Multiplexer control for byte 10 of trace 0.
55:62	RW	DEBUG1_CONFIG_RESERVED1: Reserved.
63	RW	DEBUG1_CONFIG_ACT: Enable clock gates for debug trace latches.

Register Name	CQ_DAT Scratch 1 Register
Mnemonic	NPU.STCK1.DAT.MISC.SCRATCH1
Address	00000000050111BC (SCOM)
Description	CQ_DAT scratch register.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	SCRATCH1_IDIAL: Scratch register.

Register Name	NTL Miscellaneous Configuration 2 Register
Mnemonic	NPU.STCK1.NTL0.REGS.CONFIG2
Address	00000000050111C0 (SCOM)
Description	The NTL Miscellaneous Configuration 2 register is used to control internal NTL function. It contains mode bits, chicken switches, and thresholds.

Bits	SCOM	Field Mnemonic: Description
0	RW	BRICK_ENABLE: When set to 0b1, this NVLink brick is enabled. This configuration bit is used as a general clock gate for latches in the NTL design.
1	RW	RSP_CTL_CRED_SINGLE_ENA: When set to 0b1, the NTL only gives CQ_CTL one RSP credit at a time, instead of the normal two.
2	RW	CREQ_BE_128: When set to 0b1, the NTL always sends 128 bytes of data when it needs to send a byte enable (BE) flit to the GPU for a CREQ packet. When set to 0b0, the NTL sends the least number of data flits required.
3	RW	DGD_BE_128: When set to 0b1, the NTL always sends 128 bytes of data when it needs to send a byte enable (BE) flit to the GPU for a downgrade packet (BE and data flits are sent in the TransDone packet for the downgrade). When se to 0b0, NTL sends the least number of data flits required.
4	RW	WR_SPLIT_UT0_ENA: When set to 0b1, the NTL splits up the write requests with UT = 0 from the GPU that map to the MMIO space into legal processor bus sizes/alignments. When set to 0b0, the NTL passes all write requests with UT = 0 as is to the CQ.
5	RW	WR_SPLIT_UT1_ENA: When set to 0b1, the NTL splits up the write requests with UT = 1 from the GPU into legal processor bus sizes/alignments. This includes both DMA writes and MMIO writes since there is no way for the NTL to distinguish between them. When set to 0b0, the NTL passes all write requests with UT = 1 as is to the CQ.
6	RW	BRICK_DEBUG_MODE: When set to 0b1, the NTL ignores all incoming NVLink packets from the GPU and throws away all NVLink requests/responses from the CQ destined for the GPU. This mode is used for debug purposes only when the NPU is not connected over NVLink to a GPU.
7	RW	P9_TO_P9_MODE: When set to 0b1, the NTL sets UT = 1 for all incoming read, write, and atomic NVLink packets before sending to the CQ. This mode is used for debug purposes only when the NPU is connected to another/same NPU over NVLink.
8:9	RW	CONFIG2_RESERVED1: Reserved.
10:15	RW	CAM256_MAX_CNT: This field specifies the number of entries in the CAM that holds information to send responses for 256 byte operations that require a response (maximum value = 48).
16	RW	NDL_RX_PARITY_ENA: When set to 0b1, the NTL checks parity on the incoming NDL RX signals.
17	RW	NDL_TX_PARITY_ENA: When set to 0b1, the NTL checks parity on the incoming NDL TX (that is, TX credits) signals.
18	RW	NDL_PRI_PARITY_ENA: When set to 0b1, the NTL checks the parity on the incoming NDL signals.
19	RW	RCV_CREDIT_OVERFLOW_ENA: When set to 0b1, the NTL checks for overflows on any received credits from the GPU, NDL, and NDL wrapper.

Bits	SCOM	Field Mnemonic: Description
20	RW	HDR_ARR_ECC_CORR_ENA: When set to 0b1, the NTL corrects ECC SBEs when reading the RX header array.
21	RW	DAT_ARR_ECC_CORR_ENA: When set to 0b1, the NTL corrects ECC SBEs when reading the RX data array. The NTL only corrects ECC on reads of the RX data array that require the NTL to update the data before sending to CQ_DAT (for example, BE flit or data flits for atomic CAS ops).
22	RW	TX_DATA_ECC_CORR_ENA: When set to 0b1, the NTL corrects ECC SBEs when reading TX data from CQ_DAT.
23	RW	CONFIG2_RESERVED2: Reserved.
24	RW	PARITY_ERROR_SUE_ENA: When set to 0b1, the NTL drives SUE on all data transfers to the CQ_DAT for a packet that has a parity error on an incoming data flit.
25	RW	DATA_POISON_SUE_ENA: When set to 0b1, the NTL drives SUE on all data transfers to the CQ_DAT for a packet that receives LMD = data poison.
26	RW	HDR_ARR_ECC_SUE_ENA: When set to 0b1, the NTL drives SUE on all data transfers to the CQ_DAT for a packet that has an ECC UE/SUE on the header info read from the RX header array.
27	RW	DAT_ARR_ECC_SUE_ENA: When set to 0b1, the NTL drives SUE on all data transfers to the CQ_DAT for a packet that has an ECC UE/SUE on data read from the RX data array. The NTL only checks ECC on reads of the RX data array that require the NTL to update the data before sending to the CQ_DAT (for example, BE flit or data flits for atomic CAS ops).
28	RW	TX_ECC_DATA_POISON_ENA: When set to 0b1, the NTL sends LMD = data poison for an outgoing NVLink packet that encounters an ECC UE/SUE on data read from CQ_DAT.
29:31	RW	CONFIG2_RESERVED3: Reserved.
32	RW	PRI_STATE_MACHINE_RESET: Reset PRI state machine to idle state (debug use only).
33:63	RW	CONFIG2_RESERVED4: Reserved.

Register Name	NTL Miscellaneous Configuration 3 Register
Mnemonic	NPU.STCK1.NTL0.REGS.CONFIG3
Address	00000000050111C1 (SCOM)
Description	The NTL Miscellaneous Configuration 3 register is used for future control of internal NTL functions. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CONFIG3_RESERVED1: Reserved.

Register Name	NTL CERR Hold 1 Register
Mnemonic	NPU.STCK1.NTL0.REGS.CERR_HOLD1
Address	00000000050111C2 (SCOM)
Description	c_err_rpt hold latches read-write-clear register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	NTL_HOLD1_0: ERROR - NTL RX - Unsupported command or ExCmd field encode received in an incoming NVLink packet.
1	RWX_WCLRREG	NTL_HOLD1_1: ERROR - NTL RX - AN /= 1 in an incoming NVLink packet where RX Vld = 1 and RX Hdr Vld = 1.
2	RWX_WCLRREG	NTL_HOLD1_2: ERROR - NTL RX - DatLen = 64B and Addr(6:5) = 11 in an incoming NVLink request packet where the address field is valid.

Bits	SCOM	Field Mnemonic: Description
3	RWX_WCLRREG	NTL_HOLD1_3: ERROR - NTL RX - DatLen = 96B and Addr(6) = 1 in an incoming NVLink request packet where the address field is valid.
4	RWX_WCLRREG	NTL_HOLD1_4: ERROR - NTL RX - AddrType = 01 or 10 in an incoming NVLink read, write, atomic, or RMW request packet.
5	RWX_WCLRREG	NTL_HOLD1_5: ERROR - NTL RX - DatLen = Reserved encode in an incoming NVLink request/response packet where the DatLen field is valid.
6	RWX_WCLRREG	NTL_HOLD1_6: ERROR - NTL RX - DatLen = 256B in an incoming NVLink request packet where the DatLen field is valid and not read or write.
7	RWX_WCLRREG	NTL_HOLD1_7: ERROR - NTL RX - BE flit exists in an incoming NVLink request/response with data packet.
8	RWX_WCLRREG	NTL_HOLD1_8: ERROR - NTL RX - DatLen = 96B or 128B in an incoming NVLink atomic CAS packet.
9	RWX_WCLRREG	NTL_HOLD1_9: ERROR - NTL RX - Compressed responses not populated in the order CR0, CR1, and CR2 in an incoming NVLink response packet.
10	RWX_WCLRREG	NTL_HOLD1_10: ERROR - NTL RX - Compressed response with an invalid/reserved TD/IVC combination in an incoming NVLink response packet.
11	RWX_WCLRREG	NTL_HOLD1_11: ERROR - NTL RX - Address(63:49) /= 0 in an incoming NVLink request packet where the address field is valid.
12	RWX_WCLRREG	NTL_HOLD1_12: ERROR - NTL RX - Address(48:47) /= 0 in an incoming NVLink UT = 0 request packet where the address field is valid and not ATR.
13	RWX_WCLRREG	NTL_HOLD1_13: ERROR - NTL RX - DatLen /= 16, 32, 64, or 128B in an incoming NVLink probe packet.
14	RWX_WCLRREG	NTL_HOLD1_14: ERROR - NTL RX - DatLen = 96B or 256B in an incoming NVLink request/response with data packet.
15	RWX_WCLRREG	NTL_HOLD1_15: ERROR - NTL RX - AtomicSz /= 4B or 8B in an incoming NVLink atomic packet.
16	RWX_WCLRREG	NTL_HOLD1_16: ERROR - NTL RX - DatLen and AtomicSz not both 4B or 8B in an incoming NVLink atomic packet where no BE flit exists.
17	RWX_WCLRREG	NTL_HOLD1_17: ERROR - NTL RX - Reserved.
18	RWX_WCLRREG	NTL_HOLD1_18: ERROR - NTL RX - Reserved.
19	RWX_WCLRREG	NTL_HOLD1_19: ERROR - NTL RX - Reserved.
20	RWX_WCLRREG	NTL_HOLD1_20: ERROR - NTL RX - Reserved.
21	RWX_WCLRREG	NTL_HOLD1_21: ERROR - NTL RX - Reserved.
22	RWX_WCLRREG	NTL_HOLD1_22: ERROR - NTL RX - Reserved.
23	RWX_WCLRREG	NTL_HOLD1_23: ERROR - NTL RX - Reserved.
24	RWX_WCLRREG	NTL_HOLD1_24: ERROR - NTL RX - ECC UE on data(0:63) read from the header array.
25	RWX_WCLRREG	NTL_HOLD1_25: ERROR - NTL RX - ECC UE on data(64:127) read from the header array.
26	RWX_WCLRREG	NTL_HOLD1_26: ERROR - NTL RX - ECC UE on data(128:167) read from the header array.
27	RWX_WCLRREG	NTL_HOLD1_27: ERROR - NTL RX - ECC UE on data(0:63) read from the data array.
28	RWX_WCLRREG	NTL_HOLD1_28: ERROR - NTL RX - ECC UE on data(64:127) read from the data array.
29	RWX_WCLRREG	NTL_HOLD1_29: ERROR - NTL RX - Parity error on incoming NDL RX Vld and Hdr_Vld signals.
30	RWX_WCLRREG	NTL_HOLD1_30: ERROR - NTL RX - Parity error on incoming NDL RX LMD and CRC signals.
31	RWX_WCLRREG	NTL_HOLD1_31: ERROR - NTL RX - Parity error on incoming NDL RX header flit signals.
32	RWX_WCLRREG	NTL_HOLD1_32: ERROR - NTL RX - Parity error on incoming NDL RX AE flit signals.
33	RWX_WCLRREG	NTL_HOLD1_33: ERROR - NTL RX - Parity error on incoming NDL RX data flit signals.

Bits	SCOM	Field Mnemonic: Description
34	RWX_WCLRREG	NTL_HOLD1_34: ERROR - NTL RX - An NVLink packet with data received LMD = data poison.
35	RWX_WCLRREG	NTL_HOLD1_35: ERROR - NTL RX - New CREQ header flit from NVLink received when the CREQ header array is full.
36	RWX_WCLRREG	NTL_HOLD1_36: ERROR - NTL RX - New CREQ data flit from NVLink received when the CREQ data array is full.
37	RWX_WCLRREG	NTL_HOLD1_37: ERROR - NTL RX - CREQ data flit was attempted to be read from the CREQ data array when it was empty.
38	RWX_WCLRREG	NTL_HOLD1_38: ERROR - NTL RX - New RSP header flit from NVLink received when the RSP header array is full.
39	RWX_WCLRREG	NTL_HOLD1_39: ERROR - NTL RX - New RSP data flit from NVLink received when the RSP data array is full.
40	RWX_WCLRREG	NTL_HOLD1_40: ERROR - NTL RX - RSP data flit was attempted to be read from the RSP data array when it was empty.
41	RWX_WCLRREG	NTL_HOLD1_41: ERROR - NTL RX - New PRB header flit from NVLink received when the PRB header array is full.
42	RWX_WCLRREG	NTL_HOLD1_42: ERROR - NTL RX - New ATR header flit from NVLink received when the ATR header array is full.
43	RWX_WCLRREG	NTL_HOLD1_43: ERROR - NTL RX - A new NVLink header flit was received when NTL was still expecting data flits for the previous packet.
44	RWX_WCLRREG	NTL_HOLD1_44: ERROR - NTL RX - More than one VC tried to write the header and/or data array on the same cycle.
45	RWX_WCLRREG	NTL_HOLD1_45: ERROR - NTL RX - A CQ slice credit was received when one was already valid (overflow).
46	RWX_WCLRREG	NTL_HOLD1_46: ERROR - NTL RX - A CQ ATR credit was received when one was already valid (overflow).
47	RWX_WCLRREG	NTL_HOLD1_47: ERROR - NTL RX - A CQ flush credit was received when 15 were already valid (overflow).
48	RWX_WCLRREG	NTL_HOLD1_48: ERROR - NTL RX - A CQ global credit was received when three were already valid (overflow).
49	RWX_WCLRREG	NTL_HOLD1_49: ERROR - NTL RX - A CQ response credit was received when one was already valid (overflow).
50	RWX_WCLRREG	NTL_HOLD1_50: ERROR - NTL RX - A send SUE on data transfers to CQ_DAT latch was set for a NVLink CREQ packet without data.
51	RWX_WCLRREG	NTL_HOLD1_51: ERROR - NTL RX - A send SUE on data transfers to CQ_DAT latch was set for a NVLink RSP packet without data.
52	RWX_WCLRREG	NTL_HOLD1_52: ERROR - NTL RX - Reserved.
53	RWX_WCLRREG	NTL_HOLD1_53: ERROR - NTL RX - Reserved.
54	RWX_WCLRREG	NTL_HOLD1_54: ERROR - NTL RX - Reserved.
55	RWX_WCLRREG	NTL_HOLD1_55: ERROR - NTL RX - Reserved.
56	RWX_WCLRREG	NTL_HOLD1_56: ERROR - NTL RX - ECC CE on data(0:63) read from the header array.
57	RWX_WCLRREG	NTL_HOLD1_57: ERROR - NTL RX - ECC CE on data(64:127) read from the header array.
58	RWX_WCLRREG	NTL_HOLD1_58: ERROR - NTL RX - ECC CE on data(128:167) read from the header array.
59	RWX_WCLRREG	NTL_HOLD1_59: ERROR - NTL RX - ECC CE on data(0:63) read from the data array.
60	RWX_WCLRREG	NTL_HOLD1_60: ERROR - NTL RX - ECC CE on data(64:127) read from the data array.
61	RWX_WCLRREG	NTL_HOLD1_61: ERROR - NTL RX - CRC error occurred on an incoming NVLink packet.

Bits	SCOM	Field Mnemonic: Description
62	RWX_WCLRREG	NTL_HOLD1_62: ERROR - NTL RX - LMD = Stomp occurred on an incoming NVLink packet.
63	RWX_WCLRREG	NTL_HOLD1_63: ERROR - NTL RX - Reserved.

Register Name	NTL CERR Mask 1 Register
Mnemonic	NPU.STCK1.NTL0.REGS.CERR_MASK1
Address	00000000050111C3 (SCOM)
Description	c_err_rpt mask latches read-only register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	NTL_MASK1_0: ERROR - NTL RX - Unsupported command or ExCmd field encode received in an incoming NVLink packet.
1	ROX	NTL_MASK1_1: ERROR - NTL RX - AN /= 1 in an incoming NVLink packet where RX Vld = 1 and RX Hdr Vld = 1.

Register Name	NTL CERR Mask 2 Register
Mnemonic	NPU.STCK1.NTL0.REGS.CERR_MASK2
Address	00000000050111C7 (SCOM)
Description	c_err_rpt mask latches read-only register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	NTL_MASK2_0: ERROR - NTL TX - Parity error on incoming NDL TX credit signals.
1	ROX	NTL_MASK2_1: ERROR - NTL TX - ECC UE on data(0:63) read from CQ_DAT.
2	ROX	NTL_MASK2_2: ERROR - NTL TX - ECC UE on data(64:127) read from CQ_DAT.
3	ROX	NTL_MASK2_3: ERROR - NTL TX - ECC SUE on data(0:63) read from CQ_DAT.
4	ROX	NTL_MASK2_4: ERROR - NTL TX - ECC SUE on data(64:127) read from CQ_DAT.
5	ROX	NTL_MASK2_5: ERROR - NTL TX - Read or atomic request with a length that is not a power of 2.
6	ROX	NTL_MASK2_6: ERROR - NTL TX - New CREQ request received from CQ when one already existed (overflow).
7	ROX	NTL_MASK2_7: ERROR - NTL TX - New DGD request received from CQ when one already existed (overflow).
8	ROX	NTL_MASK2_8: ERROR - NTL TX - New ATSD request received from CQ when one already existed (overflow).
9	ROX	NTL_MASK2_9: ERROR - NTL TX - New RSP request received from CQ when two already existed (overflow).
10	ROX	NTL_MASK2_10: ERROR - NTL TX - A data beat was received from CQ_DAT when one was not expected.
11	ROX	NTL_MASK2_11: ERROR - NTL TX - More than one type of flit was attempted to be sent to NDL at the same time.
12	ROX	NTL_MASK2_12: ERROR - NTL TX - More than one entry in the 256B Ops CAM was hit at the same time.
13	ROX	NTL_MASK2_13: ERROR - NTL TX - More than one entry in the CREQ sticky CAM was hit at the same time.
14	ROX	NTL_MASK2_14: ERROR - NTL TX - More than one entry in the DGD sticky CAM was hit at the same time.
15	ROX	NTL_MASK2_15: ERROR - NTL TX - Reserved.

Mnemonic	NPU.STCK1.NTL0.REGS.SCRATCH2
Address	00000000050111CA (SCOM)
Description	The NTL Scratch 2 register is provided in case a new control function is required in the future. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH2: Scratch register.

Register Name	NTL Scratch 3 Register
Mnemonic	NPU.STCK1.NTL0.REGS.SCRATCH3
Address	00000000050111CB (SCOM)
Description	The NTL Scratch 3 register is provided in case a new control function is required in the future. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH3: Scratch register.

Register Name	NTL Debug0 Configuration Register
Mnemonic	NPU.STCK1.NTL0.REGS.DEBUG0_CONFIG
Address	00000000050111CC (SCOM)
Description	The NTL Debug Trace 0 Configuration register is used to configure what debug information is sent on the debug trace 0 bus outputs of NTL.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG0_CONFIG_POD0: Multiplexer control for byte 0 of debug trace 0: 0x00 = Debug trace 0 byte 0 inputs. 0x01 = Debug trace 0 byte 1 inputs. 0x02 = Debug trace 0 byte 2 inputs. 0x03 = Debug trace 0 byte 3 inputs. 0x04 = Debug trace 0 byte 4 inputs. 0x05 = Debug trace 0 byte 5 inputs. 0x06 = Debug trace 0 byte 6 inputs. 0x07 = Debug trace 0 byte 7 inputs. 0x08 = Debug trace 0 byte 8 inputs. 0x09 = Debug trace 0 byte 9 inputs. 0x0A = Debug trace 0 byte 10 inputs. 0x0B = RX debug group 0. 0x0C = RX debug group 1. 0x0D = RX debug group 2. 0x0E = RX debug group 3. 0x0F = RX debug group 4. 0x10 = RX debug group 5. 0x11 = RX debug group 6. 0x12 = RX debug group 7. 0x13 = RX debug group 8. 0x14 = TX debug group 0. 0x15 = TX debug group 1. 0x16 = TX debug group 2. 0x17 = TX debug group 3. 0x18 = TX debug group 4. 0x19 = TX debug group 5. 0x1A = TX debug group 6. 0x1B = REGS debug group 0.
5:9	RW	DEBUG0_CONFIG_POD1: Multiplexer control for byte 1 of debug trace 0.
10:14	RW	DEBUG0_CONFIG_POD2: Multiplexer control for byte 2 of debug trace 0.
15:19	RW	DEBUG0_CONFIG_POD3: Multiplexer control for byte 3 of debug trace 0.
20:24	RW	DEBUG0_CONFIG_POD4: Multiplexer control for byte 4 of debug trace 0.
25:29	RW	DEBUG0_CONFIG_POD5: Multiplexer control for byte 5 of debug trace 0.
30:34	RW	DEBUG0_CONFIG_POD6: Multiplexer control for byte 6 of debug trace 0.

Bits	SCOM	Field Mnemonic: Description
35:39	RW	DEBUG0_CONFIG_POD7: Multiplexer control for byte 7 of debug trace 0.
40:44	RW	DEBUG0_CONFIG_POD8: Multiplexer control for byte 8 of debug trace 0.
45:49	RW	DEBUG0_CONFIG_POD9: Multiplexer control for byte 9 of debug trace 0.
50:54	RW	DEBUG0_CONFIG_POD10: Multiplexer control for byte 10 of debug trace 0.
55:62	RW	DEBUG0_CONFIG_RESERVED1: Reserved.
63	RW	DEBUG0_CONFIG_ACT: Enable clock gates for debug trace latches.

Register Name	**NTL Debug1 Configuration Register**
Mnemonic	NPU.STCK1.NTL0.REGS.DEBUG1_CONFIG
Address	00000000050111CD (SCOM)
Description	The NTL Debug Trace 1 Configuration register is used to configure what debug information is sent on the debug trace 1 bus outputs of NTL.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG1_CONFIG_POD0: Multiplexer control for byte 0 of debug trace 1: 0x00 = Debug trace 1 byte 0 inputs. 0x01 = Debug trace 1 byte 1 inputs. 0x02 = Debug trace 1 byte 2 inputs. 0x03 = Debug trace 1 byte 3 inputs. 0x04 = Debug trace 1 byte 4 inputs. 0x05 = Debug trace 1 byte 5 inputs. 0x06 = Debug trace 1 byte 6 inputs. 0x07 = Debug trace 1 byte 7 inputs. 0x08 = Debug trace 1 byte 8 inputs. 0x09 = Debug trace 1 byte 9 inputs. 0x0A = Debug trace 1 byte 10 inputs. 0x0B = RX debug group 0. 0x0C = RX debug group 1. 0x0D = RX debug group 2. 0x0E = RX debug group 3. 0x0F = RX debug group 4. 0x10 = RX debug group 5. 0x11 = RX debug group 6. 0x12 = RX debug group 7. 0x13 = RX debug group 8. 0x14 = TX debug group 0. 0x15 = TX debug group 1. 0x16 = TX debug group 2. 0x17 = TX debug group 3. 0x18 = TX debug group 4. 0x19 = TX debug group 5. 0x1A = TX debug group 6. 0x1B = REGS debug group 0.
5:9	RW	DEBUG1_CONFIG_POD1: Multiplexer control for byte 1 of debug trace 1.
10:14	RW	DEBUG1_CONFIG_POD2: Multiplexer control for byte 2 of debug trace 1.
15:19	RW	DEBUG1_CONFIG_POD3: Multiplexer control for byte 3 of debug trace 1.
20:24	RW	DEBUG1_CONFIG_POD4: Multiplexer control for byte 4 of debug trace 1.
25:29	RW	DEBUG1_CONFIG_POD5: Multiplexer control for byte 5 of debug trace 1.
30:34	RW	DEBUG1_CONFIG_POD6: Multiplexer control for byte 6 of debug trace 1.
35:39	RW	DEBUG1_CONFIG_POD7: Multiplexer control for byte 7 of debug trace 1.

Bits	SCOM	Field Mnemonic: Description
40:44	RW	DEBUG1_CONFIG_POD8: Multiplexer control for byte 8 of debug trace 1.
45:49	RW	DEBUG1_CONFIG_POD9: Multiplexer control for byte 9 of debug trace 1.
50:54	RW	DEBUG1_CONFIG_POD10: Multiplexer control for byte 10 of debug trace 1.
55:62	RW	DEBUG1_CONFIG_RESERVED1: Reserved.
63	RW	DEBUG1_CONFIG_ACT: Enable clock gates for debug trace latches.

Register Name	**NTL Performance Configuration Register**
Mnemonic	NPU.STCK1.NTL0.REGS.PERF_CONFIG
Address	00000000050111CE (SCOM)
Description	The NTL Performance Configuration register is used to configure what information is counted by the NTL PMULet.

Bits	SCOM	Field Mnemonic: Description
0	RW	PERF_CONFIG_ENABLE: PMULet enable (clocks enable).
1	RW	PERF_CONFIG_RESETMODE: 0 = Reset on read. 1 = Reset on write.
2	RW	PERF_CONFIG_FREEZEMODE: 0 = Free run mode. 1 = Freeze on any maximum.
3	RW	PERF_CONFIG_DISABLE_PMISC: 0 = Enable PMISC control of counters. 1 = Disable PMISC control of counters.
4	RW	PERF_CONFIG_PMISC_MODE: 0 = Global PMU PMISC no reset. 1 = Global PMU PMISC reset on enable.
5:7	RW	PERF_CONFIG_CASCADE: PMULet cascade configuration.
8:9	RW	PERF_CONFIG_PRESCALE_C0: Pre-scale configuration for counter 0.
10:11	RW	PERF_CONFIG_PRESCALE_C1: Pre-scale configuration for counter 1.
12:13	RW	PERF_CONFIG_PRESCALE_C2: Pre-scale configuration for counter 2.
14:15	RW	PERF_CONFIG_PRESCALE_C3: Pre-scale configuration for counter 3.
16:23	RW	PERF_CONFIG_EVENT0: Event 0 select: 0x00 = Disable. 0x01 = Cycles. 0x02 = Latency events. 0x03 = Latency cycles. 0x04 = Latency aborts. 0x20 = REGS - NDL PRI request. 0x21 = REGS - NDL PRI write request. 0x22 = REGS - NDL PRI read request. 0x23 = REGS - PHY PRI request. 0x24 = REGS - PHY PRI write request. 0x25 = REGS - PHY PRI read request. 0x40 = TX - Any flit sent. 0x41 = TX - Header flit sent. 0x42 = TX - AE flit sent.

Bits	SCOM	Field Mnemonic: Description
		0x43 = TX - BE flit sent. 0x44 = TX - Data flit sent. 0x45 = TX - Flow control packet. 0x46 = TX - Write.NC. 0x47 = TX - Write.NC 128B. 0x48 = TX - Write.NC 32B - 96B. 0x49 = TX - Write.NC 1B - 16B. 0x4A = TX - Write.NC with BE flit. 0x4B = TX - Read. 0x4C = TX - Upgrade. 0x4D = TX - Atomic. 0x4E = TX - Downgrade. 0x4F = TX - ATSD. 0x50 = TX - Request response, no data. 0x51 = TX - Request response with data. 0x52 = TX - Probe response, no data. 0x53 = TX - Probe response with data. 0x54 = TX - ATR response. 0x55 = TX - TransDone response, no data. 0x56 = TX - TransDone response with data. 0x57 = TX - TransDone response with data 128B. 0x58 = TX - TransDone response with data 32B - 96B. 0x59 = TX - TransDone response with data 1B - 16B. 0x5A = TX - TransDone response with data with BE flit. 0x5B = TX - Not enough CREQ header credits. 0x5C = TX - Not enough DGD header credits. 0x5D = TX - Not enough ATSD header credits. 0x5E = TX - Not enough RSP header credits. 0x5F = TX - Not enough CREQ data credits. 0x60 = TX - Not enough RSP data credits. 0x61 = TX - Not enough replay buffer credits. 0x62 = TX - Not enough asynchronous buffer credits. 0x80 = RX - CREQ header array full. 0x81 = RX - PRB header array full. 0x82 = RX - ATR header array full. 0x83 = RX - RSP header array full. 0x84 = RX - CREQ data array full. 0x85 = RX - RSP data array full. 0x86 = RX - Any flit received. 0x87 = RX - Header flit received. 0x88 = RX - AE flit received. 0x89 = RX - BE flit received. 0x8A = RX - Data flit received. 0x8B = RX - NOP flow control flit received. 0x8C = RX - Write.NC (UT = 0). 0x8D = RX - Write.NC (UT = 1). 0x8E = RX - Write.NC (UT = 0) 128B. 0x8F = RX - Write.NC (UT = 1) 128B. 0x90 = RX - Write.NC (UT = 0) 256B. 0x91 = RX - Write.NC (UT = 1) 256B. 0x92 = RX - Write.NC (UT = 0) 32B - 96B. 0x93 = RX - Write.NC (UT = 1) 32B - 96B. 0x94 = RX - Write.NC (UT = 0) 1B - 16B. 0x95 = RX - Write.NC (UT = 1) 1B - 16B. 0x96 = RX - Write.NC (UT = 0) with BE flit. 0x97 = RX - Write.NC (UT = 1) with BE flit. 0x98 = RX - Write.NC (UT = 0) to MMIO space. 0x99 = RX - Write.NC (UT = 0) to MMIO space and split into multiple requests. 0x9A = RX - Write.NC (UT = 1) and split into multiple requests. 0x9B = RX - Read.NC (UT = 0).

Bits	SCOM	Field Mnemonic: Description
		0x9C = RX - Read.NC (UT = 1). 0x9D = RX - Read.NC (UT = 0) 128B. 0x9E = RX - Read.NC (UT = 1) 128B. 0x9F = RX - Read.NC (UT = 0) 256B. 0xA0 = RX - Read.NC (UT = 1) 256B. 0xA1 = RX - Read.NC (UT = 0) 32B - 96B. 0xA2 = RX - Read.NC (UT = 1) 32B - 96B. 0xA3 = RX - Read.NC (UT = 0) 1B - 16B. 0xA4 = RX - Read.NC (UT = 1) 1B - 16B. 0xA5 = RX - Flush. 0xA6 = RX - RMW. 0xA7 = RX - Atomic.NR. 0xA8 = RX - Atomic.RR. 0xA9 = RX - Probe.I.MO. 0xAA = RX - Probe.I.N. 0xAB = RX - Probe.X.MO. 0xAC = RX - ATR. 0xAD = RX - ReqRsp.ND. 0xAE = RX - ReqRsp.D. 0xAF = RX - DGDRsp. 0xB0 = RX - ATSDRsp. 0xB1 = RX - TransDone.ND. 0xB2 = RX - TransDone.D. 0xB3 = RX - TransDone.D with BE flit. 0xB4 = RX - CREQ non-flush waiting for CQ credit. 0xB5 = RX - CREQ flush waiting for CQ credit. 0xB6 = RX - CREQ waiting for global credit. 0xB7 = RX - CREQ 256B Op waiting for 256B Ops CAM entry. 0xB8 = RX - PRB waiting for CQ credit. 0xB9 = RX - PRB waiting for global credit. 0xBA = RX - ATR waiting for CQ credit. 0xBB = RX - ATR waiting for global credit.
24:31	RW	PERF_CONFIG_EVENT1: Event 1 select (see Event 0 select for encodes).
32:39	RW	PERF_CONFIG_EVENT2: Event 2 select (see Event 0 select for encodes).
40:47	RW	PERF_CONFIG_EVENT3: Event 3 select (see Event 0 select for encodes).
48:50	RW	PERF_CONFIG_LATENCY: Latency select: 0 = Disable. 1 = Read.NC to response. 2 = Write.RR to response. 3 = Atomic.RR to response. 4 = RMW to response. 5 = Flush to response. 6 = Probe to response. 7 = ATR to response.
51:63	RW	PERF_CONFIG_RESERVED: Reserved.

Register Name	NTL Performance Count Register
Mnemonic	NPU.STCK1.NTL0.REGS.PERF_COUNT
Address	00000000050111CF (SCOM)
Description	The NTL Performance Count register holds the performance counts from the NTL PMULet.

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	IDIAL_PERF_COUNT0: Performance counter 0.

Bits	SCOM	Field Mnemonic: Description
16:31	RWX_WCLRREG	IDIAL_PERF_COUNT1: Performance counter 1.
32:47	RWX_WCLRREG	IDIAL_PERF_COUNT2: Performance counter 2.
48:63	RWX_WCLRREG	IDIAL_PERF_COUNT3: Performance counter 3.

Register Name	NTL CREQ Header Array Pointer Register
Mnemonic	NPU.STCK1.NTL0.REGS.CREQ_HA_PTR
Address	00000000050111D0 (SCOM)
Description	The NTL CREQ Header Array Pointer register is used to change the start and/or end entry in the NTL header array for holding CREQ header information.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	CREQ_HA_PTR_RESERVED1: Reserved.
5:11	RW	CREQ_HA_PTR_START: Starting header array location for CREQ headers received from the GPU. The header array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
12:16	RW	CREQ_HA_PTR_RESERVED2: Reserved.
17:23	RW	CREQ_HA_PTR_END: Ending header array location for CREQ headers received from the GPU. The header array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL PRB Header Array Pointer Register
Mnemonic	NPU.STCK1.NTL0.REGS.PRB_HA_PTR
Address	00000000050111D1 (SCOM)
Description	The NTL PRB Header Array Pointer register is used to change the start and/or end entry in the NTL header array for holding PRB header information.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	PRB_HA_PTR_RESERVED1: Reserved.
5:11	RW	PRB_HA_PTR_START: Starting header array location for PRB headers received from the GPU. The header array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
12:16	RW	PRB_HA_PTR_RESERVED2: Reserved.
17:23	RW	PRB_HA_PTR_END: Ending header array location for PRB headers received from the GPU. The header array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL ATR Header Array Pointer Register
Mnemonic	NPU.STCK1.NTL0.REGS.ATR_HA_PTR
Address	00000000050111D2 (SCOM)
Description	The NTL ATR Header Array Pointer register is used to change the start and/or end entry in the NTL header array for holding ATR header information.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	ATR_HA_PTR_RESERVED1: Reserved.
5:11	RW	ATR_HA_PTR_START: Starting header array location for ATR headers received from the GPU. The header array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
12:16	RW	ATR_HA_PTR_RESERVED2: Reserved.
17:23	RW	ATR_HA_PTR_END: Ending header array location for ATR headers received from the GPU. The header array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL RSP Header Array Pointer Register
Mnemonic	NPU.STCK1.NTL0.REGS.RSP_HA_PTR
Address	00000000050111D3 (SCOM)
Description	The NTL RSP Header Array Pointer register is used to change the start and/or end entry in the NTL header array for holding RSP header information.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	RSP_HA_PTR_RESERVED1: Reserved.
5:11	RW	RSP_HA_PTR_START: Starting header array location for RSP headers received from the GPU. The header array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
12:16	RW	RSP_HA_PTR_RESERVED2: Reserved.
17:23	RW	RSP_HA_PTR_END: Ending header array location for RSP headers received from the GPU. The header array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL CREQ Data Array Pointer Register
Mnemonic	NPU.STCK1.NTL0.REGS.CREQ_DA_PTR
Address	00000000050111D4 (SCOM)
Description	The NTL CREQ Data Array Pointer register is used to change the start and/or end entry in the NTL data array for holding CREQ data flits.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	CREQ_DA_PTR_RESERVED1: Reserved.
3:11	RW	CREQ_DA_PTR_START: Starting data array location for CREQ data flits received from the GPU. The data array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
12:14	RW	CREQ_DA_PTR_RESERVED2: Reserved.
15:23	RW	CREQ_DA_PTR_END: Ending data array location for CREQ data flits received from the GPU. The data array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL RSP Data Array Pointer Register
Mnemonic	NPU.STCK1.NTL0.REGS.RSP_DA_PTR
Address	00000000050111D5 (SCOM)
Description	The NTL RSP Data Array Pointer register is used to change the start and/or end entry in the NTL data array for holding RSP data flits.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	RSP_DA_PTR_RESERVED1: Reserved.
3:11	RW	RSP_DA_PTR_START: Starting data array location for RSP data flits received from the GPU. The data array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
12:14	RW	RSP_DA_PTR_RESERVED2: Reserved.
15:23	RW	RSP_DA_PTR_END: Ending data array location for RSP data flits received from the GPU. The data array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL Private Register Interface (PRI) Configuration Register
Mnemonic	NPU.STCK1.NTL0.REGS.PRI_CONFIG
Address	00000000050111D6 (SCOM)
Description	The NTL Private Register Interface (PRI) Configuration register is used to set up the PRI settings for this NTL. This register must be configured before any PRI requests are attempted to NDL or PHY registers.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	PRI_CONFIG_NDL: NDL indication sent in the PRI read/write access: 00 = NDL 0. 01 = NDL 1. 10 = NDL 2. 11 = Disable (this disables the NTL from decoding the NDL register space).
2:3	RW	PRI_CONFIG_PHY: Indicates if this NTL should decode a PHY register space: 00 = Decode PHY 0 register space (only one NTL that is connected to PHY 0 must be set to this value). 01 = Decode PHY 1 register space (only one NTL that is connected to PHY 1 must be set to this value). 1X = Do not decode any PHY register space.
4:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	NTL Miscellaneous Configuration 1 Register
Mnemonic	NPU.STCK1.NTL0.REGS.CONFIG1
Address	00000000050111D8 (SCOM)
Description	The NTL Miscellaneous Configuration 1 register is used to control NVLink packet formatting by the POWER9 processor. It also controls resetting of the POWER9 NTL.

Bits	SCOM	Field Mnemonic: Description
0	RW	COMPRESSED_RSP_ENA: When set to 0b1, the NTL attempts to compress responses that it sends to the GPU whenever possible.
1:3	RW	CONFIG1_RESERVED1: Reserved.

Bits	SCOM	Field Mnemonic: Description
4	RW	CREQ_AE_ALWAYS: When set to 0b1, the NTL always sends an AE flit when it sends a CREQ packet to the GPU.
5	RW	DGD_AE_ALWAYS: When set to 0b1, the NTL always sends an AE flit when it sends a downgrade packet to the GPU.
6	RW	RSP_AE_ALWAYS: When set to 0b1, the NTL always sends an AE flit when it sends a response packet to the GPU.
7	RW	CONFIG1_RESERVED2: Reserved.
8:9	RW	NTL_RESET: This field indicates the NTL reset mode: 00 = Reset disabled. 11 = Reset (fence) both NTL and the processor bus for this brick. 10 = Reset (fence) only the processor bus for this brick, the NTL is operational. 01 = Reserved. **Note:** The only legal sequence is 00 →11 →10 →00. This field should not be changed unless bits 0:1 in the CQ Fence Status register equals the value in this field.
10:63	RW	CONFIG1_RESERVED3: Reserved.

Register Name	NTL Scratch 1 Register
Mnemonic	NPU.STCK1.NTL0.REGS.SCRATCH1
Address	00000000050111DA (SCOM)
Description	The NTL scratch 1 register is provided in case a new control function is required in the future. This register has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH1: Scratch register.

Register Name	NTL Low Power Register
Mnemonic	NPU.STCK1.NTL0.REGS.LOW_PWR
Address	00000000050111DC (SCOM)
Description	The NTL Low Power Configuration register is used to enable the NPU to request that the NVLink interconnect be placed into low-power mode. The register also defines the conditions under which the NPU turns its low-power request on or off.

Bits	SCOM	Field Mnemonic: Description
0	RW	LP_MODE_ENABLE: When set to 0b1, this NTL is allowed to activate the low-power requested signal to NDL when the low-power count is greater than or equal to the low-power count threshold.
1	RW	LP_ONLY_MODE: When set to 0b1, this NTL activates the low-power requested signal to NDL continuously. This can be used for lab stress or debug.
2:7	RW	LP_TIMER_TICK_CONFIG: Rate for the low-power timer tick (2^n cycles).
8:19	RW	LP_MIN_CRED_THRESH: Whenever the NDL replay buffer credits is greater than this threshold, the low-power requested signal to NDL is deactivated. This value must be greater than 0 and less than the maximum credit threshold.
20:31	RW	LP_MAX_CRED_THRESH: Whenever the NDL replay buffer credits is greater than or equal to this threshold and the low-power timer tick is active, then the low-power count is incremented by 1. This value must be greater than the minimum credit threshold.

Bits	SCOM	Field Mnemonic: Description
32:43	RW	LP_CNT_THRESH: Whenever the low-power count is greater than or equal to this threshold, this NTL activates the low-power requested signal to NDL until the NDL replay buffer credits is less than the low-power minimum credit threshold. This value must be greater than 0.
44:63	RO	Constant = 0b00000000000000000000

Register Name	NTL Miscellaneous Configuration 2 Register
Mnemonic	NPU.STCK1.NTL1.REGS.CONFIG2
Address	00000000050111E0 (SCOM)
Description	The NTL Miscellaneous Configuration 2 register is used to control internal NTL function. It contains mode bits, chicken switches, and thresholds.

Bits	SCOM	Field Mnemonic: Description
0	RW	BRICK_ENABLE: When set to 0b1, this NVLink brick is enabled. This configuration bit is used as a general clock gate for latches in the NTL design.
1	RW	RSP_CTL_CRED_SINGLE_ENA: When set to 0b1, the NTL only gives the CQ_CTL one RSP credit at a time, instead of the normal 2.
2	RW	CREQ_BE_128: When set to 0b1, the NTL always sends 128 bytes of data when it needs to send a byte enable (BE) flit to the GPU for a CREQ packet. When set to 0b0, the NTL sends the least number of data flits required.
3	RW	DGD_BE_128: When set to 0b1, the NTL always sends 128 bytes of data when it needs to send a byte enable (BE) flit to the GPU for a downgrade packet (BE and data flits are sent in the TransDone packet for the downgrade). When set to 0b0, the NTL sends the least number of data flits required.
4	RW	WR_SPLIT_UT0_ENA: When set to 0b1, the NTL splits up write requests with UT = 0 from the GPU that map to the MMIO space into legal processor bus sizes/alignments. When set to 0b0, the NTL passes all write requests with UT = 0 as is to the CQ.
5	RW	WR_SPLIT_UT1_ENA: When set to 0b1, the NTL splits up write requests with UT = 1 from the GPU into legal processor bus sizes/alignments. This includes both DMA writes and MMIO writes since there is no way for the NTL to distinguish between them. When set to 0b0, the NTL passes all write requests with UT = 1 as is to the CQ.
6	RW	BRICK_DEBUG_MODE: When set to 0b1, the NTL ignores all incoming NVLink packets from the GPU and throws away all NVLink requests/responses from the CQ destined for the GPU. This mode is used for debug purposes only when the NPU is not connected over NVLink to a GPU.
7	RW	P9_TO_P9_MODE: When set to 0b1, the NTL sets UT = 1 for all incoming read, write, and atomic NVLink packets before sending to the CQ. This mode is used for debug purposes only when the NPU is connected to another/same NPU over NVLink.
8:9	RW	CONFIG2_RESERVED1: Reserved.
10:15	RW	CAM256_MAX_CNT: This field specifies the number of entries in the CAM that holds information to send responses for 256 byte operations that require a response (maximum value = 48).
16	RW	NDL_RX_PARITY_ENA: When set to 0b1, the NTL checks the parity on the incoming NDL RX signals.
17	RW	NDL_TX_PARITY_ENA: When set to 0b1, the NTL checks the parity on the incoming NDL TX (that is, TX credits) signals.
18	RW	NDL_PRI_PARITY_ENA: When set to 0b1, the NTL checks the parity on the incoming NDL signals.
19	RW	RCV_CREDIT_OVERFLOW_ENA: When set to 0b1, the NTL checks for overflows on any received credits from the GPU, NDL, and NDL wrapper.
20	RW	HDR_ARR_ECC_CORR_ENA: When set to 0b1, the NTL corrects ECC SBEs when reading the RX header array.

Bits	SCOM	Field Mnemonic: Description
21	RW	DAT_ARR_ECC_CORR_ENA: When set to 0b1, the NTL corrects ECC SBEs when reading the RX data array. The NTL only corrects ECC on reads of the RX data array that require the NTL to update the data before sending to CQ_DAT (for example, BE flit or data flits for atomic CAS ops).
22	RW	TX_DATA_ECC_CORR_ENA: When set to 0b1, the NTL corrects ECC SBEs when reading TX data from CQ_DAT.
23	RW	CONFIG2_RESERVED2: Reserved.
24	RW	PARITY_ERROR_SUE_ENA: When set to 0b1, the NTL drives SUE on all data transfers to CQ_DAT for a packet that has a parity error on an incoming data flit.
25	RW	DATA_POISON_SUE_ENA: When set to 0b1, the NTL drives SUE on all data transfers to CQ_DAT for a packet that receives LMD = data poison.
26	RW	HDR_ARR_ECC_SUE_ENA: When set to 0b1, the NTL drives SUE on all data transfers to CQ_DAT for a packet that has an ECC UE/SUE on the header info read from the RC header array.
27	RW	DAT_ARR_ECC_SUE_ENA: When set to 0b1, the NTL drives SUE on all data transfers to CQ_DAT for a packet that has an ECC UE/SUE on data read from the RX data array. The NTL only checks ECC on reads of the RX data array that require the NTL to update the data before sending to CQ_DAT (for example, BE flit or data flits for atomic CAS ops).
28	RW	TX_ECC_DATA_POISON_ENA: When set to 0b1, the NTL sends LMD = data poison for an outgoing NVLink packet that encounters an ECC UE/SUE on data read from CQ_DAT.
29:31	RW	CONFIG2_RESERVED3: Reserved.
32	RW	PRI_STATE_MACHINE_RESET: Reset PRI state machine to idle state (debug use only).
33:63	RW	CONFIG2_RESERVED4: Reserved.

Register Name	NTL Miscellaneous Configuration 3 Register
Mnemonic	NPU.STCK1.NTL1.REGS.CONFIG3
Address	00000000050111E1 (SCOM)
Description	The NTL Miscellaneous Configuration 3 register is used for future control of internal NTL functions. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CONFIG3_RESERVED1: Reserved.

Register Name	NTL CERR Hold 1 Register
Mnemonic	NPU.STCK1.NTL1.REGS.CERR_HOLD1
Address	00000000050111E2 (SCOM)
Description	c_err_rpt hold latches read-write-clear register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	NTL_HOLD1_0: ERROR - NTL RX - Unsupported command or ExCmd field encode received in an incoming NVLink packet.
1	RWX_WCLRREG	NTL_HOLD1_1: ERROR - NTL RX - AN /= 1 in an incoming NVLink packet where RX Vld = 1 and RX Hdr Vld = 1.
2	RWX_WCLRREG	NTL_HOLD1_2: ERROR - NTL RX - DatLen = 64B and Addr(6:5) = 11 in an incoming NVLink request packet where the address field is valid.
3	RWX_WCLRREG	NTL_HOLD1_3: ERROR - NTL RX - DatLen = 96B and Addr(6) = 1 in an incoming NVLink request packet where the address field is valid.

Bits	SCOM	Field Mnemonic: Description
4	RWX_WCLRREG	NTL_HOLD1_4: ERROR - NTL RX - AddrType = 01 or 10 in an incoming NVLink read, write, atomic, or RMW request packet.
5	RWX_WCLRREG	NTL_HOLD1_5: ERROR - NTL RX - DatLen = Reserved encode in an incoming NVLink request/response packet where the DatLen field is valid.
6	RWX_WCLRREG	NTL_HOLD1_6: ERROR - NTL RX - DatLen = 256B in an incoming NVLink request packet where the DatLen field is valid and not read or write.
7	RWX_WCLRREG	NTL_HOLD1_7: ERROR - NTL RX - BE flit exists in an incoming NVLink request/response with data packet.
8	RWX_WCLRREG	NTL_HOLD1_8: ERROR - NTL RX - DatLen = 96B or 128B in an incoming NVLink atomic CAS packet.
9	RWX_WCLRREG	NTL_HOLD1_9: ERROR - NTL RX - Compressed responses not populated in the order CR0, CR1, and CR2 in an incoming NVLink response packet.
10	RWX_WCLRREG	NTL_HOLD1_10: ERROR - NTL RX - Compressed response with an invalid/reserved TD/IVC combination in an incoming NVLink response packet.
11	RWX_WCLRREG	NTL_HOLD1_11: ERROR - NTL RX - Address(63:49) /= 0 in an incoming NVLink request packet where the address field is valid.
12	RWX_WCLRREG	NTL_HOLD1_12: ERROR - NTL RX - Address(48:47) /= 0 in an incoming NVLink UT = 0 request packet where the address field is valid and not ATR.
13	RWX_WCLRREG	NTL_HOLD1_13: ERROR - NTL RX - DatLen /= 16, 32, 64, or 128B in an incoming NVLink probe packet.
14	RWX_WCLRREG	NTL_HOLD1_14: ERROR - NTL RX - DatLen = 96B or 256B in an incoming NVLink request/response with data packet.
15	RWX_WCLRREG	NTL_HOLD1_15: ERROR - NTL RX - AtomicSz /= 4B or 8B in an incoming NVLink atomic packet.
16	RWX_WCLRREG	NTL_HOLD1_16: ERROR - NTL RX - DatLen and AtomicSz not both 4B or 8B in an incoming NVLink atomic packet where no BE flit exists.
17	RWX_WCLRREG	NTL_HOLD1_17: ERROR - NTL RX - Reserved.
18	RWX_WCLRREG	NTL_HOLD1_18: ERROR - NTL RX - Reserved.
19	RWX_WCLRREG	NTL_HOLD1_19: ERROR - NTL RX - Reserved.
20	RWX_WCLRREG	NTL_HOLD1_20: ERROR - NTL RX - Reserved.
21	RWX_WCLRREG	NTL_HOLD1_21: ERROR - NTL RX - Reserved.

61	RWX_WCLEAR	NTL_FIRST1_61: ERROR - NTL RX - CRC error occurred on an incoming NVLink packet.
62	RWX_WCLEAR	NTL_FIRST1_62: ERROR - NTL RX - LMD = Stomp occurred on an incoming NVLink packet.
63	RWX_WCLEAR	NTL_FIRST1_63: ERROR - NTL RX - Reserved.

Register Name	**NTL CERR First Mask 1 Register**
Mnemonic	NPU.STCK1.NTL1.REGS.CERR_FIRST_MASK1
Address	00000000050111E5 (SCOM)
Description	Mask errors from being captured in the First1 Error registers and the RAS Error Message registers.

Bits	SCOM	Field Mnemonic: Description
0	RW	NTL_FIRST_MASK1_0: ERROR - NTL RX - Unsupported command or ExCmd field encode received in an incoming NVLink packet.
1	RW	NTL_FIRST_MASK1_1: ERROR - NTL RX - AN /= 1 in an incoming NVLink packet where RX Vld = 1 and RX Hdr Vld = 1.

Bits	SCOM	Field Mnemonic: Description
2	RW	NTL_FIRST_MASK1_2: ERROR - NTL RX - DatLen = 64B and Addr(6:5) = 11 in an incoming NVLink request packet where the address field is valid.
3	RW	NTL_FIRST_MASK1_3: ERROR - NTL RX - DatLen = 96B and Addr(6) = 1 in an incoming NVLink request packet where the address field is valid.
4	RW	NTL_FIRST_MASK1_4: ERROR - NTL RX - AddrType = 01 or 10 in an incoming NVLink read, write, atomic, or RMW request packet.
5	RW	NTL_FIRST_MASK1_5: ERROR - NTL RX - DatLen = Reserved encode in an incoming NVLink request/response packet where the DatLen field is valid.
6	RW	NTL_FIRST_MASK1_6: ERROR - NTL RX - DatLen = 256B in an incoming NVLink request packet where the DatLen field is valid and not read or write.
7	RW	NTL_FIRST_MASK1_7: ERROR - NTL RX - BE flit exists in an incoming NVLink request/response with data packet.
8	RW	NTL_FIRST_MASK1_8: ERROR - NTL RX - DatLen = 96B or 128B in an incoming NVLink atomic CAS packet.
9	RW	NTL_FIRST_MASK1_9: ERROR - NTL RX - Compressed responses not populated in the order CR0, CR1, and CR2 in an incoming NVLink response packet.
10	RW	NTL_FIRST_MASK1_10: ERROR - NTL RX - Compressed response with an invalid/reserved TD/IVC combination in an incoming NVLink response packet.
11	RW	NTL_FIRST_MASK1_11: ERROR - NTL RX - Address(63:49) /= 0 in an incoming NVLink request packet where the address field is valid.
12	RW	NTL_FIRST_MASK1_12: ERROR - NTL RX - Address(48:47) /= 0 in an incoming NVLink UT = 0 request packet where the address field is valid and not ATR.
13	RW	NTL_FIRST_MASK1_13: ERROR - NTL RX - DatLen /= 16, 32, 64, or 128B in an incoming NVLink probe packet.
14	RW	NTL_FIRST_MASK1_14: ERROR - NTL RX - DatLen = 96B or 256B in an incoming NVLink request/response with data packet.
15	RW	NTL_FIRST_MASK1_15: ERROR - NTL RX - AtomicSz /= 4B or 8B in an incoming NVLink atomic packet.
16	RW	NTL_FIRST_MASK1_16: ERROR - NTL RX - DatLen and AtomicSz not both 4B or 8B in an incoming NVLink atomic packet where no BE flit exists.
17	RW	NTL_FIRST_MASK1_17: ERROR - NTL RX - Reserved.
18	RW	NTL_FIRST_MASK1_18: ERROR - NTL RX - Reserved.
19	RW	NTL_FIRST_MASK1_19: ERROR - NTL RX - Reserved.
20	RW	NTL_FIRST_MASK1_20: ERROR - NTL RX - Reserved.
21	RW	NTL_FIRST_MASK1_21: ERROR - NTL RX - Reserved.
22	RW	NTL_FIRST_MASK1_22: ERROR - NTL RX - Reserved.
23	RW	NTL_FIRST_MASK1_23: ERROR - NTL RX - Reserved.
24	RW	NTL_FIRST_MASK1_24: ERROR - NTL RX - ECC UE on data(0:63) read from the header array.
25	RW	NTL_FIRST_MASK1_25: ERROR - NTL RX - ECC UE on data(64:127) read from the header array.
26	RW	NTL_FIRST_MASK1_26: ERROR - NTL RX - ECC UE on data(128:167) read from the header array.
27	RW	NTL_FIRST_MASK1_27: ERROR - NTL RX - ECC UE on data(0:63) read from the data array.
28	RW	NTL_FIRST_MASK1_28: ERROR - NTL RX - ECC UE on data(64:127) read from the data array.
29	RW	NTL_FIRST_MASK1_29: ERROR - NTL RX - Parity error on incoming NDL RX Vld and Hdr_Vld signals.
30	RW	NTL_FIRST_MASK1_30: ERROR - NTL RX - Parity error on incoming NDL RX LMD and CRC signals.
31	RW	NTL_FIRST_MASK1_31: ERROR - NTL RX - Parity error on incoming NDL RX header flit signals.

Bits	SCOM	Field Mnemonic: Description
32	RW	NTL_FIRST_MASK1_32: ERROR - NTL RX - Parity error on incoming NDL RX AE flit signals.
33	RW	NTL_FIRST_MASK1_33: ERROR - NTL RX - Parity error on incoming NDL RX data flit signals.
34	RW	NTL_FIRST_MASK1_34: ERROR - NTL RX - An NVLink packet with data received LMD = data poison.
35	RW	NTL_FIRST_MASK1_35: ERROR - NTL RX - New CREQ header flit from NVLink received when the CREQ header array is full.
36	RW	NTL_FIRST_MASK1_36: ERROR - NTL RX - New CREQ data flit from NVLink received when the CREQ data array is full.
37	RW	NTL_FIRST_MASK1_37: ERROR - NTL RX - CREQ data flit was attempted to be read from the CREQ data array when it was empty.
38	RW	NTL_FIRST_MASK1_38: ERROR - NTL RX - New RSP header flit from NVLink received when the RSP header array is full.
39	RW	NTL_FIRST_MASK1_39: ERROR - NTL RX - New RSP data flit from NVLink received when the RSP data array is full.
40	RW	NTL_FIRST_MASK1_40: ERROR - NTL RX - RSP data flit was attempted to be read from the RSP data array when it was empty.
41	RW	NTL_FIRST_MASK1_41: ERROR - NTL RX - New PRB header flit from NVLink received when the PRB header array is full.
42	RW	NTL_FIRST_MASK1_42: ERROR - NTL RX - New ATR header flit from NVLink received when the ATR header array is full.
43	RW	NTL_FIRST_MASK1_43: ERROR - NTL RX - A new NVLink header flit was received when NTL was still expecting data flits for the previous packet.
44	RW	NTL_FIRST_MASK1_44: ERROR - NTL RX - More than one VC tried to write the Header and/or data array on the same cycle.
45	RW	NTL_FIRST_MASK1_45: ERROR - NTL RX - A CQ slice credit was received when one was already valid (overflow).
46	RW	NTL_FIRST_MASK1_46: ERROR - NTL RX - A CQ ATR credit was received when one was already valid (overflow).
47	RW	NTL_FIRST_MASK1_47: ERROR - NTL RX - A CQ flush credit was received when 15 were already valid (overflow).
48	RW	NTL_FIRST_MASK1_48: ERROR - NTL RX - A CQ global credit was received when 3 were already valid (overflow).
49	RW	NTL_FIRST_MASK1_49: ERROR - NTL RX - A CQ response credit was received when one was already valid (overflow).
50	RW	NTL_FIRST_MASK1_50: ERROR - NTL RX – A send SUE on data transfers to CQ_DAT latch was set for a NVLink CREQ packet without data.
51	RW	NTL_FIRST_MASK1_51: ERROR - NTL RX - A send SUE on data transfers to CQ_DAT latch was set for a NVLink RSP packet without data.
52	RW	NTL_FIRST_MASK1_52: ERROR - NTL RX - Reserved.
53	RW	NTL_FIRST_MASK1_53: ERROR - NTL RX - Reserved.
54	RW	NTL_FIRST_MASK1_54: ERROR - NTL RX - Reserved.
55	RW	NTL_FIRST_MASK1_55: ERROR - NTL RX - Reserved.
56	RW	NTL_FIRST_MASK1_56: ERROR - NTL RX - ECC CE on data(0:63) read from the header array.
57	RW	NTL_FIRST_MASK1_57: ERROR - NTL RX - ECC CE on data(64:127) read from the header array.
58	RW	NTL_FIRST_MASK1_58: ERROR - NTL RX - ECC CE on data(128:167) read from the header array.
59	RW	NTL_FIRST_MASK1_59: ERROR - NTL RX - ECC CE on data(0:63) read from the data array.

Bits	SCOM	Field Mnemonic: Description
60	RW	NTL_FIRST_MASK1_60: ERROR - NTL RX - ECC CE on data(64:127) read from the data array.
61	RW	NTL_FIRST_MASK1_61: ERROR - NTL RX - CRC error occurred on an incoming NVLink packet.
62	RW	NTL_FIRST_MASK1_62: ERROR - NTL RX - LMD = Stomp occurred on an incoming NVLink packet.
63	RW	NTL_FIRST_MASK1_63: ERROR - NTL RX - Reserved.

Register Name	**NTL CERR Hold 2 Register**
Mnemonic	NPU.STCK1.NTL1.REGS.CERR_HOLD2
Address	00000000050111E6 (SCOM)
Description	c_err_rpt hold latches read-write-clear registers.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	NTL_HOLD2_0: ERROR - NTL TX - Parity error on incoming NDL TX credit signals.
1	RWX_WCLRREG	NTL_HOLD2_1: ERROR - NTL TX - ECC UE on data(0:63) read from CQ_DAT.
2	RWX_WCLRREG	NTL_HOLD2_2: ERROR - NTL TX - ECC UE on data(64:127) read from CQ_DAT.
3	RWX_WCLRREG	NTL_HOLD2_3: ERROR - NTL TX - ECC SUE on data(0:63) read from CQ_DAT.
4	RWX_WCLRREG	NTL_HOLD2_4: ERROR - NTL TX - ECC SUE on data(64:127) read from CQ_DAT.
5	RWX_WCLRREG	NTL_HOLD2_5: ERROR - NTL TX - Read or atomic request with a length that is not a power of 2.
6	RWX_WCLRREG	NTL_HOLD2_6: ERROR - NTL TX - New CREQ request received from CQ when one already existed (overflow).
7	RWX_WCLRREG	NTL_HOLD2_7: ERROR - NTL TX - New DGD request received from CQ when one already existed (overflow).
8	RWX_WCLRREG	NTL_HOLD2_8: ERROR - NTL TX - New ATSD request received from CQ when one already existed (overflow).
9	RWX_WCLRREG	NTL_HOLD2_9: ERROR - NTL TX - New RSP request received from CQ when two already existed (overflow).
10	RWX_WCLRREG	NTL_HOLD2_10: ERROR - NTL TX - A data beat was received from CQ_DAT when one was not expected.
11	RWX_WCLRREG	NTL_HOLD2_11: ERROR - NTL TX - More than 1 type of flit was attempted to be sent to NDL at the same time.
12	RWX_WCLRREG	NTL_HOLD2_12: ERROR - NTL TX - More than one entry in the 256B Ops CAM was hit at the same time.
13	RWX_WCLRREG	NTL_HOLD2_13: ERROR - NTL TX - More than one entry in the CREQ sticky CAM was hit at the same time.
14	RWX_WCLRREG	NTL_HOLD2_14: ERROR - NTL TX - More than one entry in the DGD sticky CAM was hit at the same time.
15	RWX_WCLRREG	NTL_HOLD2_15: ERROR - NTL TX - Reserved.
16	RWX_WCLRREG	NTL_HOLD2_16: ERROR - NTL TX - Reserved.
17	RWX_WCLRREG	NTL_HOLD2_17: ERROR - NTL TX - Reserved.
18	RWX_WCLRREG	NTL_HOLD2_18: ERROR - NTL TX - Reserved.
19	RWX_WCLRREG	NTL_HOLD2_19: ERROR - NTL TX - Reserved.
20	RWX_WCLRREG	NTL_HOLD2_20: ERROR - NTL TX - Reserved.
21	RWX_WCLRREG	NTL_HOLD2_21: ERROR - NTL TX - Reserved.

Bits	SCOM	Field Mnemonic: Description
22	RWX_WCLRREG	NTL_HOLD2_22: ERROR - NTL TX - Reserved.
23	RWX_WCLRREG	NTL_HOLD2_23: ERROR - NTL TX - Reserved.
24	RWX_WCLRREG	NTL_HOLD2_24: ERROR - NTL TX - ECC CE on data(0:63) read from CQ_DAT.
25	RWX_WCLRREG	NTL_HOLD2_25: ERROR - NTL TX - ECC CE on data(64:127) read from CQ_DAT.
26	RWX_WCLRREG	NTL_HOLD2_26: ERROR - NTL TX - Reserved.
27	RWX_WCLRREG	NTL_HOLD2_27: ERROR - NTL TX - Reserved.
28	RWX_WCLRREG	NTL_HOLD2_28: ERROR - NTL TX - Reserved.
29	RWX_WCLRREG	NTL_HOLD2_29: ERROR - NTL TX - Reserved.
30	RWX_WCLRREG	NTL_HOLD2_30: ERROR - NTL TX - Reserved.
31	RWX_WCLRREG	NTL_HOLD2_31: ERROR - NTL TX - Reserved.
32	RWX_WCLRREG	NTL_HOLD2_32: ERROR - NTL REGS - CREQ header credits received from the GPU are greater than maximum value.
33	RWX_WCLRREG	NTL_HOLD2_33: ERROR - NTL REGS - DGD header credits received from the GPU are greater than maximum value.
34	RWX_WCLRREG	NTL_HOLD2_34: ERROR - NTL REGS - ATSD header credits received from the GPU are greater than maximum value.
35	RWX_WCLRREG	NTL_HOLD2_35: ERROR - NTL REGS - RSP header credits received from the GPU are greater than maximum value.
36	RWX_WCLRREG	NTL_HOLD2_36: ERROR - NTL REGS - CREQ data credits received from the GPU are greater than maximum value.
37	RWX_WCLRREG	NTL_HOLD2_37: ERROR - NTL REGS - RSP data credits received from the GPU are greater than maximum value.
38	RWX_WCLRREG	NTL_HOLD2_38: ERROR - NTL REGS - Replay buffer credits received from NDL are greater than 512.
39	RWX_WCLRREG	NTL_HOLD2_39: ERROR - NTL REGS - Asynchronous buffer credits received from the NDL wrapper are greater than 64.
40	RWX_WCLRREG	NTL_HOLD2_40: ERROR - NTL REGS - Multiple PRI requests are active at the same time for different NTLs.
41	RWX_WCLRREG	NTL_HOLD2_41: ERROR - NTL REGS - Multiple PRI requests are active at the same time for the same NTL.
42	RWX_WCLRREG	NTL_HOLD2_42: ERROR - NTL REGS - Reserved.
43	RWX_WCLRREG	NTL_HOLD2_43: ERROR - NTL REGS - Reserved.
44	RWX_WCLRREG	NTL_HOLD2_44: ERROR - NTL REGS - Reserved.
45	RWX_WCLRREG	NTL_HOLD2_45: ERROR - NTL REGS - Reserved.
46	RWX_WCLRREG	NTL_HOLD2_46: ERROR - NTL REGS - Reserved.

62	ROX	NTL_MASK2_62: ERROR - NTL REGS - Reserved.
63	ROX	NTL_MASK2_63: ERROR - NTL REGS - Reserved.

Register Name	**NTL CERR First 2 Register**
Mnemonic	NPU.STCK1.NTL1.REGS.CERR_FIRST2
Address	00000000050111E8 (SCOM)
Description	c_err_rpt first error latches read-write-1-clear register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLEAR	NTL_FIRST2_0: ERROR - NTL TX - Parity error on incoming NDL TX credit signals.
1	RWX_WCLEAR	NTL_FIRST2_1: ERROR - NTL TX - ECC UE on data(0:63) read from CQ_DAT.
2	RWX_WCLEAR	NTL_FIRST2_2: ERROR - NTL TX - ECC UE on data(64:127) read from CQ_DAT.
3	RWX_WCLEAR	NTL_FIRST2_3: ERROR - NTL TX - ECC SUE on data(0:63) read from CQ_DAT.
4	RWX_WCLEAR	NTL_FIRST2_4: ERROR - NTL TX - ECC SUE on data(64:127) read from CQ_DAT.
5	RWX_WCLEAR	NTL_FIRST2_5: ERROR - NTL TX - Read or atomic request with a length that is not a power of 2.
6	RWX_WCLEAR	NTL_FIRST2_6: ERROR - NTL TX - New CREQ request received from CQ when one already existed (overflow).
7	RWX_WCLEAR	NTL_FIRST2_7: ERROR - NTL TX - New DGD request received from CQ when one already existed (overflow).
8	RWX_WCLEAR	NTL_FIRST2_8: ERROR - NTL TX - New ATSD request received from CQ when one already existed (overflow).
9	RWX_WCLEAR	NTL_FIRST2_9: ERROR - NTL TX - New RSP request received from CQ when two already existed (overflow).
10	RWX_WCLEAR	NTL_FIRST2_10: ERROR - NTL TX - A data beat was received from CQ_DAT when one was not expected.
11	RWX_WCLEAR	NTL_FIRST2_11: ERROR - NTL TX - More than one type of flit was attempted to be sent to NDL at the same time.
12	RWX_WCLEAR	NTL_FIRST2_12: ERROR - NTL TX - More than one entry in the 256B Ops CAM was hit at the same time.
13	RWX_WCLEAR	NTL_FIRST2_13: ERROR - NTL TX - More than one entry in the CREQ sticky CAM was hit at the same time.

Bits	SCOM	Field Mnemonic: Description
14	RWX_WCLEAR	NTL_FIRST2_14: ERROR - NTL TX - More than one entry in the DGD sticky CAM was hit at the same time.
15	RWX_WCLEAR	NTL_FIRST2_15: ERROR - NTL TX - Reserved.
16	RWX_WCLEAR	NTL_FIRST2_16: ERROR - NTL TX - Reserved.
17	RWX_WCLEAR	NTL_FIRST2_17: ERROR - NTL TX - Reserved.
18	RWX_WCLEAR	NTL_FIRST2_18: ERROR - NTL TX - Reserved.
19	RWX_WCLEAR	NTL_FIRST2_19: ERROR - NTL TX - Reserved.
20	RWX_WCLEAR	NTL_FIRST2_20: ERROR - NTL TX - Reserved.
21	RWX_WCLEAR	NTL_FIRST2_21: ERROR - NTL TX - Reserved.
22	RWX_WCLEAR	NTL_FIRST2_22: ERROR - NTL TX - Reserved.
23	RWX_WCLEAR	NTL_FIRST2_23: ERROR - NTL TX - Reserved.
24	RWX_WCLEAR	NTL_FIRST2_24: ERROR - NTL TX - ECC CE on data(0:63) read from CQ_DAT.
25	RWX_WCLEAR	NTL_FIRST2_25: ERROR - NTL TX - ECC CE on data(64:127) read from CQ_DAT.
26	RWX_WCLEAR	NTL_FIRST2_26: ERROR - NTL TX - Reserved.
27	RWX_WCLEAR	NTL_FIRST2_27: ERROR - NTL TX - Reserved.
28	RWX_WCLEAR	NTL_FIRST2_28: ERROR - NTL TX - Reserved.
29	RWX_WCLEAR	NTL_FIRST2_29: ERROR - NTL TX - Reserved.
30	RWX_WCLEAR	NTL_FIRST2_30: ERROR - NTL TX - Reserved.
31	RWX_WCLEAR	NTL_FIRST2_31: ERROR - NTL TX - Reserved.
32	RWX_WCLEAR	NTL_FIRST2_32: ERROR - NTL REGS - CREQ header credits received from the GPU are greater than maximum value.
33	RWX_WCLEAR	NTL_FIRST2_33: ERROR - NTL REGS - DGD header credits received from the GPU are greater than maximum value.
34	RWX_WCLEAR	NTL_FIRST2_34: ERROR - NTL REGS - ATSD header credits received from the GPU are greater than maximum value.
35	RWX_WCLEAR	NTL_FIRST2_35: ERROR - NTL REGS - RSP header credits received from the GPU are greater than maximum value.
36	RWX_WCLEAR	NTL_FIRST2_36: ERROR - NTL REGS - CREQ data credits received from the GPU are greater than maximum value.
37	RWX_WCLEAR	NTL_FIRST2_37: ERROR - NTL REGS - RSP data credits received from the GPU are greater than maximum value.
38	RWX_WCLEAR	NTL_FIRST2_38: ERROR - NTL REGS - Replay buffer credits received from NDL are greater than 512.
39	RWX_WCLEAR	NTL_FIRST2_39: ERROR - NTL REGS - Asynchronous buffer credits received from the NDL wrapper are greater than 64.
40	RWX_WCLEAR	NTL_FIRST2_40: ERROR - NTL REGS - Multiple PRI requests are active at the same time for different NTLs.
41	RWX_WCLEAR	NTL_FIRST2_41: ERROR - NTL REGS - Multiple PRI requests are active at the same time for the same NTL.

51	RWX_WCLEAR	NTL_FIRST2_51: ERROR - NTL REGS - Reserved.
52	RWX_WCLEAR	NTL_FIRST2_52: ERROR - NTL REGS - PHY timeout error indication received on a PRI response.
53	RWX_WCLEAR	NTL_FIRST2_53: ERROR - NTL REGS - NDL error indication received on a PRI response.
54	RWX_WCLEAR	NTL_FIRST2_54: ERROR - NTL REGS - Access to NDL while in reset error indication received on a PRI response.
55	RWX_WCLEAR	NTL_FIRST2_55: ERROR - NTL REGS - Bad address error indication received on a PRI response.
56	RWX_WCLEAR	NTL_FIRST2_56: ERROR - NTL REGS - Parity error indication received on a PRI response.
57	RWX_WCLEAR	NTL_FIRST2_57: ERROR - NTL REGS - Protocol error indication received on a PRI response.
58	RWX_WCLEAR	NTL_FIRST2_58: ERROR - NTL REGS - PRI acknowledgment signal from NDL wrapper went invalid in the middle of a PRI response.
59	RWX_WCLEAR	NTL_FIRST2_59: ERROR - NTL REGS - Parity error on incoming NDL PRI response signals.
60	RWX_WCLEAR	NTL_FIRST2_60: ERROR - NTL REGS - Reserved.
61	RWX_WCLEAR	NTL_FIRST2_61: ERROR - NTL REGS - Reserved.
62	RWX_WCLEAR	NTL_FIRST2_62: ERROR - NTL REGS - Reserved.
63	RWX_WCLEAR	NTL_FIRST2_63: ERROR - NTL REGS - Reserved.

Register Name	**NTL CERR First Mask 2 Register**
Mnemonic	NPU.STCK1.NTL1.REGS.CERR_FIRST_MASK2
Address	00000000050111E9 (SCOM)
Description	This register masks errors from being captured in the First 2 Error registers and the RAS Error Message registers.

Bits	SCOM	Field Mnemonic: Description
0	RW	NTL_FIRST_MASK2_0: ERROR - NTL TX - Parity error on incoming NDL TX credit signals.
1	RW	NTL_FIRST_MASK2_1: ERROR - NTL TX - ECC UE on data(0:63) read from CQ_DAT.
2	RW	NTL_FIRST_MASK2_2: ERROR - NTL TX - ECC UE on data(64:127) read from CQ_DAT.
3	RW	NTL_FIRST_MASK2_3: ERROR - NTL TX - ECC SUE on data(0:63) read from CQ_DAT.
4	RW	NTL_FIRST_MASK2_4: ERROR - NTL TX - ECC SUE on data(64:127) read from CQ_DAT.
5	RW	NTL_FIRST_MASK2_5: ERROR - NTL TX - Read or atomic request with a length that is not a power of 2.
6	RW	NTL_FIRST_MASK2_6: ERROR - NTL TX - New CREQ request received from CQ when one already existed (overflow).
7	RW	NTL_FIRST_MASK2_7: ERROR - NTL TX - New DGD request received from CQ when one already existed (overflow).
8	RW	NTL_FIRST_MASK2_8: ERROR - NTL TX - New ATSD request received from CQ when one already existed (overflow).
9	RW	NTL_FIRST_MASK2_9: ERROR - NTL TX - New RSP request received from CQ when two already existed (overflow).

Bits	SCOM	Field Mnemonic: Description
10	RW	NTL_FIRST_MASK2_10: ERROR - NTL TX - A data beat was received from CQ_DAT when one was not expected.
11	RW	NTL_FIRST_MASK2_11: ERROR - NTL TX - More than one type of flit was attempted to be sent to NDL at the same time.
12	RW	NTL_FIRST_MASK2_12: ERROR - NTL TX - More than one entry in the 256B Ops CAM was hit at the same time.
13	RW	NTL_FIRST_MASK2_13: ERROR - NTL TX - More than one entry in the CREQ sticky CAM was hit at the same time.
14	RW	NTL_FIRST_MASK2_14: ERROR - NTL TX - More than one entry in the DGD sticky CAM was hit at the same time.
15	RW	NTL_FIRST_MASK2_15: ERROR - NTL TX - Reserved.
16	RW	NTL_FIRST_MASK2_16: ERROR - NTL TX - Reserved.
17	RW	NTL_FIRST_MASK2_17: ERROR - NTL TX - Reserved.
18	RW	NTL_FIRST_MASK2_18: ERROR - NTL TX - Reserved.
19	RW	NTL_FIRST_MASK2_19: ERROR - NTL TX - Reserved.
20	RW	NTL_FIRST_MASK2_20: ERROR - NTL TX - Reserved.
21	RW	NTL_FIRST_MASK2_21: ERROR - NTL TX - Reserved.
22	RW	NTL_FIRST_MASK2_22: ERROR - NTL TX - Reserved.
23	RW	NTL_FIRST_MASK2_23: ERROR - NTL TX - Reserved.
24	RW	NTL_FIRST_MASK2_24: ERROR - NTL TX - ECC CE on data(0:63) read from CQ_DAT.
25	RW	NTL_FIRST_MASK2_25: ERROR - NTL TX - ECC CE on data(64:127) read from CQ_DAT.
26	RW	NTL_FIRST_MASK2_26: ERROR - NTL TX - Reserved.
27	RW	NTL_FIRST_MASK2_27: ERROR - NTL TX - Reserved.
28	RW	NTL_FIRST_MASK2_28: ERROR - NTL TX - Reserved.
29	RW	NTL_FIRST_MASK2_29: ERROR - NTL TX - Reserved.
30	RW	NTL_FIRST_MASK2_30: ERROR - NTL TX - Reserved.
31	RW	NTL_FIRST_MASK2_31: ERROR - NTL TX - Reserved.
32	RW	NTL_FIRST_MASK2_32: ERROR - NTL REGS - CREQ header credits received from the GPU are greater than maximum value.
33	RW	NTL_FIRST_MASK2_33: ERROR - NTL REGS - DGD header credits received from the GPU are greater than maximum value.
34	RW	NTL_FIRST_MASK2_34: ERROR - NTL REGS - ATSD header credits received from the GPU are greater than maximum value.
35	RW	NTL_FIRST_MASK2_35: ERROR - NTL REGS - RSP header credits received from the GPU are greater than maximum value.
36	RW	NTL_FIRST_MASK2_36: ERROR - NTL REGS - CREQ data credits received from the GPU are greater than maximum value.
37	RW	NTL_FIRST_MASK2_37: ERROR - NTL REGS - RSP data credits received from the GPU are greater than maximum value.
38	RW	NTL_FIRST_MASK2_38: ERROR - NTL REGS - Replay buffer credits received from NDL are greater than 512.
39	RW	NTL_FIRST_MASK2_39: ERROR - NTL REGS - Asynchronous buffer credits received from the NDL wrapper are greater than 64.

Bits	SCOM	Field Mnemonic: Description
40	RW	NTL_FIRST_MASK2_40: ERROR - NTL REGS - Multiple PRI requests are active at the same time for different NTLs.
41	RW	NTL_FIRST_MASK2_41: ERROR - NTL REGS - Multiple PRI requests are active at the same time for the same NTL.
42	RW	NTL_FIRST_MASK2_42: ERROR - NTL REGS - Reserved.
43	RW	NTL_FIRST_MASK2_43: ERROR - NTL REGS - Reserved.
44	RW	NTL_FIRST_MASK2_44: ERROR - NTL REGS - Reserved.
45	RW	NTL_FIRST_MASK2_45: ERROR - NTL REGS - Reserved.

Register Name	NTL Scratch 2 Register
Mnemonic	NPU.STCK1.NTL1.REGS.SCRATCH2
Address	00000000050111EA (SCOM)
Description	The NTL Scratch 2 register is provided in case a new control function is required in the future. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH2: Scratch register.

Register Name	NTL Scratch 3 Register
Mnemonic	NPU.STCK1.NTL1.REGS.SCRATCH3
Address	00000000050111EB (SCOM)
Description	The NTL Scratch 3 Register is provided in case a new control function is required in the future. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH3: Scratch register.

Register Name	NTL Debug0 Configuration Register
Mnemonic	NPU.STCK1.NTL1.REGS.DEBUG0_CONFIG
Address	00000000050111EC (SCOM)
Description	The NTL Debug Trace 0 Configuration register is used to configure what debug information is sent on the debug trace 0 bus outputs of NTL.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG0_CONFIG_POD0: Multiplexer control for byte 0 of debug trace 0: 0x00 = Debug trace 0 byte 0 inputs. 0x01 = Debug trace 0 byte 1 inputs. 0x02 = Debug trace 0 byte 2 inputs. 0x03 = Debug trace 0 byte 3 inputs. 0x04 = Debug trace 0 byte 4 inputs. 0x05 = Debug trace 0 byte 5 inputs. 0x06 = Debug trace 0 byte 6 inputs. 0x07 = Debug trace 0 byte 7 inputs. 0x08 = Debug trace 0 byte 8 inputs. 0x09 = Debug trace 0 byte 9 inputs. 0x0A = Debug trace 0 byte 10 inputs. 0x0B = RX debug group 0. 0x0C = RX debug group 1. 0x0D = RX debug group 2. 0x0E = RX debug group 3. 0x0F = RX debug group 4. 0x10 = RX debug group 5. 0x11 = RX debug group 6. 0x12 = RX debug group 7. 0x13 = RX debug group 8. 0x14 = TX debug group 0. 0x15 = TX debug group 1. 0x16 = TX debug group 2. 0x17 = TX debug group 3. 0x18 = TX debug group 4. 0x19 = TX debug group 5. 0x1A = TX debug group 6. 0x1B = REGS debug group 0.
5:9	RW	DEBUG0_CONFIG_POD1: Multiplexer control for byte 1 of debug trace 0.
10:14	RW	DEBUG0_CONFIG_POD2: Multiplexer control for byte 2 of debug trace 0.
15:19	RW	DEBUG0_CONFIG_POD3: Multiplexer control for byte 3 of debug trace 0.
20:24	RW	DEBUG0_CONFIG_POD4: Multiplexer control for byte 4 of debug trace 0.
25:29	RW	DEBUG0_CONFIG_POD5: Multiplexer control for byte 5 of debug trace 0.
30:34	RW	DEBUG0_CONFIG_POD6: Multiplexer control for byte 6 of debug trace 0.

Bits	SCOM	Field Mnemonic: Description
35:39	RW	DEBUG0_CONFIG_POD7: Multiplexer control for byte 7 of debug trace 0.
40:44	RW	DEBUG0_CONFIG_POD8: Multiplexer control for byte 8 of debug trace 0.
45:49	RW	DEBUG0_CONFIG_POD9: Multiplexer control for byte 9 of debug trace 0.
50:54	RW	DEBUG0_CONFIG_POD10: Multiplexer control for byte 10 of debug trace 0.
55:62	RW	DEBUG0_CONFIG_RESERVED1: Reserved.
63	RW	DEBUG0_CONFIG_ACT: Enable clock gates for debug trace latches.

Register Name	**NTL Debug1 Configuration Register**
Mnemonic	NPU.STCK1.NTL1.REGS.DEBUG1_CONFIG
Address	00000000050111ED (SCOM)
Description	The NTL Debug Trace 1 Configuration register is used to configure what debug information is sent on the debug trace 1 bus outputs of NTL.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG1_CONFIG_POD0: Multiplexer control for byte 0 of debug trace 1: 0x00 = Debug trace 1 byte 0 inputs. 0x01 = Debug trace 1 byte 1 inputs. 0x02 = Debug trace 1 byte 2 inputs. 0x03 = Debug trace 1 byte 3 inputs. 0x04 = Debug trace 1 byte 4 inputs. 0x05 = Debug trace 1 byte 5 inputs. 0x06 = Debug trace 1 byte 6 inputs. 0x07 = Debug trace 1 byte 7 inputs. 0x08 = Debug trace 1 byte 8 inputs. 0x09 = Debug trace 1 byte 9 inputs. 0x0A = Debug trace 1 byte 10 inputs. 0x0B = RX debug group 0. 0x0C = RX debug group 1. 0x0D = RX debug group 2. 0x0E = RX debug group 3. 0x0F = RX debug group 4. 0x10 = RX debug group 5. 0x11 = RX debug group 6. 0x12 = RX debug group 7. 0x13 = RX debug group 8. 0x14 = TX debug group 0. 0x15 = TX debug group 1. 0x16 = TX debug group 2. 0x17 = TX debug group 3. 0x18 = TX debug group 4. 0x19 = TX debug group 5. 0x1A = TX debug group 6. 0x1B = REGS debug group 0.
5:9	RW	DEBUG1_CONFIG_POD1: Multiplexer control for byte 1 of debug trace 1.
10:14	RW	DEBUG1_CONFIG_POD2: Multiplexer control for byte 2 of debug trace 1.
15:19	RW	DEBUG1_CONFIG_POD3: Multiplexer control for byte 3 of debug trace 1.
20:24	RW	DEBUG1_CONFIG_POD4: Multiplexer control for byte 4 of debug trace 1.
25:29	RW	DEBUG1_CONFIG_POD5: Multiplexer control for byte 5 of debug trace 1.
30:34	RW	DEBUG1_CONFIG_POD6: Multiplexer control for byte 6 of debug trace 1.
35:39	RW	DEBUG1_CONFIG_POD7: Multiplexer control for byte 7 of debug trace 1.

Bits	SCOM	Field Mnemonic: Description
40:44	RW	DEBUG1_CONFIG_POD8: Multiplexer control for byte 8 of debug trace 1.
45:49	RW	DEBUG1_CONFIG_POD9: Multiplexer control for byte 9 of debug trace 1.
50:54	RW	DEBUG1_CONFIG_POD10: Multiplexer control for byte 10 of debug trace 1.
55:62	RW	DEBUG1_CONFIG_RESERVED1: Reserved.
63	RW	DEBUG1_CONFIG_ACT: Enable clock gates for debug trace latches.

Register Name	**NTL Performance Configuration Register**
Mnemonic	NPU.STCK1.NTL1.REGS.PERF_CONFIG
Address	00000000050111EE (SCOM)
Description	The NTL Performance Configuration register is used to configure what information is counted by the NTL PMULet.

Bits	SCOM	Field Mnemonic: Description
0	RW	PERF_CONFIG_ENABLE: PMULet enable (clocks enable).
1	RW	PERF_CONFIG_RESETMODE: 0 = Reset on read. 1 = Reset on write.
2	RW	PERF_CONFIG_FREEZEMODE: 0 = Free run mode. 1 =Freeze on any maximum.
3	RW	PERF_CONFIG_DISABLE_PMISC: 0 = Enable PMISC control of counters. 1 = Disable PMISC control of counters.
4	RW	PERF_CONFIG_PMISC_MODE: 0 = Global PMU PMISC no reset. 1 = Global PMU PMISC reset on enable.
5:7	RW	PERF_CONFIG_CASCADE: PMULet cascade configuration.
8:9	RW	PERF_CONFIG_PRESCALE_C0: Pre-scale configuration for counter 0.
10:11	RW	PERF_CONFIG_PRESCALE_C1: Pre-scale configuration for counter 1.

Register Name	NTL RSP Data Array Pointer Register
Mnemonic	NPU.STCK1.NTL1.REGS.RSP_DA_PTR
Address	00000000050111F5 (SCOM)
Description	The NTL RSP Data Array Pointer register is used to change the start and/or end entry in the NTL data array for holding RSP data flits.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	RSP_DA_PTR_RESERVED1: Reserved.
3:11	RW	RSP_DA_PTR_START: Starting data array location for RSP data flits received from the GPU. The data array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
12:14	RW	RSP_DA_PTR_RESERVED2: Reserved.
15:23	RW	RSP_DA_PTR_END: Ending data array location for RSP data flits received from the GPU. The data array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
24:63	RO	Constant = 0b000000000000000000000000000000000000000000000000

Register Name	NTL Private Register Interface (PRI) Configuration Register
Mnemonic	NPU.STCK1.NTL1.REGS.PRI_CONFIG
Address	00000000050111F6 (SCOM)
Description	The NTL Private Register Interface (PRI) Configuration register is used to set up the PRI settings for this NTL. This register must be configured before any PRI requests are attempted to NDL or PHY registers.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	PRI_CONFIG_NDL: NDL indication sent in the PRI read/write access: 00 = NDL 0. 01 = NDL 1. 10 = NDL 2. 11 = Disable (this disables the NTL from decoding the NDL register space).
2:3	RW	PRI_CONFIG_PHY: Indicates if this NTL should decode a PHY register space: 00 = Decode PHY 0 register space (only one NTL that is connected to PHY 0 must be set to this value). 01 = Decode PHY 1 register space (only one NTL that is connected to PHY 1 must be set to this value). 1X = Do not decode any PHY register space.
4:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	NTL Miscellaneous Configuration 1 Register
Mnemonic	NPU.STCK1.NTL1.REGS.CONFIG1
Address	00000000050111F8 (SCOM)
Description	The NTL Miscellaneous Configuration 1 register is used to control NVLink packet formatting by the POWER9 processor. It also controls resetting of the POWER9 NTL.

Bits	SCOM	Field Mnemonic: Description
0	RW	COMPRESSED_RSP_ENA: When set to 0b1, the NTL attempts to compress responses that it sends to the GPU whenever possible.
1:3	RW	CONFIG1_RESERVED1: Reserved.

Bits	SCOM	Field Mnemonic: Description
4	RW	CREQ_AE_ALWAYS: When set to 0b1, the NTL always sends an AE flit when it sends a CREQ packet to the GPU.
5	RW	DGD_AE_ALWAYS: When set to 0b1, the NTL always sends an AE flit when it sends a downgrade packet to the GPU.
6	RW	RSP_AE_ALWAYS: When set to 0b1, the NTL always sends an AE flit when it sends a response packet to the GPU.
7	RW	CONFIG1_RESERVED2: Reserved.
8:9	RW	NTL_RESET: This field indicates the NTL reset mode: 00 = Reset disabled. 11 = Reset (fence) both NTL and the processor bus for this brick. 10 = Reset (fence) only the processor bus for this brick, the NTL is operational. 01 = Reserved. **Note:** The only legal sequence is 00 →11 →10 →00. This field should not be changed unless bits 0:1 in the CQ Fence Status register equals the value in this field.
10:63	RW	CONFIG1_RESERVED3: Reserved.

Register Name	NTL Scratch 1 Register
Mnemonic	NPU.STCK1.NTL1.REGS.SCRATCH1
Address	00000000050111FA (SCOM)
Description	The NTL Scratch 1 register is provided in case a new control function is required in the future. This register has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH1: Scratch register.

Register Name	NTL Low Power Register
Mnemonic	NPU.STCK1.NTL1.REGS.LOW_PWR
Address	00000000050111FC (SCOM)
Description	The NTL Low Power Configuration register is used to enable the NPU to request that the NVLink interconnect be placed into low-power mode. The register also defines the conditions under which the NPU turns its low-power request on or off.

Bits	SCOM	Field Mnemonic: Description
0	RW	LP_MODE_ENABLE: When set to 0b1, this NTL is allowed to activate the low-power requested signal to NDL when the low-power count is greater than or equal to the low-power count threshold.
1	RW	LP_ONLY_MODE: When set to 0b1, this NTL activates the low-power requested signal to NDL continuously. This can be used for lab stress or debug.
2:7	RW	LP_TIMER_TICK_CONFIG: Rate for the low-power timer tick (2^n cycles).
8:19	RW	LP_MIN_CRED_THRESH: Whenever the NDL replay buffer credits is less than this threshold, the low-power requested signal to NDL is deactivated. This value must be greater than 0 and less than the maximum credit threshold.
20:31	RW	LP_MAX_CRED_THRESH: Whenever the NDL replay buffer credits is greater than or equal to this threshold and the low-power timer tick is active, then the low-power count is incremented by 1. This value must be greater than the minimum credit threshold.

Bits	SCOM	Field Mnemonic: Description
32:43	RW	LP_CNT_THRESH: Whenever the low-power count is greater than or equal to this threshold, this NTL activates the low-power requested signal to NDL until the NDL replay buffer credits is less than the low-power minimum credit threshold. This value must be greater than 0.
44:63	RO	Constant = 0b00000000000000000000

Register Name	**CQ_SM Miscellaneous Configuration 0 Register**
Mnemonic	NPU.STCK2.CS.SM0.MISC.CONFIG0
Address	0000000005011200 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG1_RESERVED1: Reserved.
1	RW	CONFIG_MA_DSA_OPT_CLAIM_UR: 0 = Use Read.RWC for DCLAIM/DCBZ to GPU memory. 1 = Use Upgrade.DN for DCLAIM/DCBZ to GPU memory.

51	RW	CONFIG_P9P9_MODE: 0 = Normal operation. 1 = Run in special lab bring-up GPUless POWER9-to-POWER9 mode.
52	RW	CONFIG_FORBID_MMIO_READ_GT_32: 0 = Allow GPU to PB MMIOs greater than 32 bytes. 1 = Flag error and brick fence on MMIOs greater than 32 bytes.
53	RW	CONFIG_FORBID_MMIO_ATOMIC: 0 = Allow GPU to PB atomics to MMIO space. 1 = Flag error and brick fence on atomics to MMIO space.

Bits	SCOM	Field Mnemonic: Description
54	RW	CONFIG_OPT_SNOOP_CP: 0 = Snoop POWER9 memory cp_* type commands. 1 = Do not snoop cp_* type commands.
55:63	RW	CONFIG0_RESERVED3: Reserved.

Register Name	**CQ_SM Miscellaneous Configuration 1 Register**
Mnemonic	NPU.STCK2.CS.SM0.MISC.CONFIG1
Address	0000000005011201 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_RANDOM_BACKOFF_DUR_MASK: Mask for the base random duration of a random retry back-off: 0000 = 0 - 15 base random duration. 0001 = 0 - 31 base random duration. 0011 = 0 - 63 base random duration. 0111 = 0 - 127 base random duration. 1111 = 0 - 255 base random duration.
4:7	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_REQ: Mask for the slowdown of NTL CREQ credits during chgrate.hang. 'n' = $1/(2^{(n+1)})$ cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slice times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
8:11	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_PRB: Mask for the slowdown of NTL probe credits during chgrate.hang. 'n' = $1/(2^{(n+1)})$ cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
12:15	RW	CONFIG_ARB_NONCRR_SAFETY: Safety valve for non-CRESP/non-REQIN events going down the arbiter pipe. After n+1 REQIN events go through the arbiter while a non-CRR event is waiting, REQIN events are blocked to give non-CRR events a chance.
16:27	RW	CONFIG_EPSILON_WLN_COUNT: Epsilon count for Ln scope CP write.
28:31	RW	CONFIG_SCALE_RPT_HANG_POLL: Scaling factor for rpt_hang.poll: 0 = 1:1 processor bus rpt_hang.polls received. 1 = 1:2 processor bus rpt_hang.polls received. ... 15 = 1:16 processor bus rpt_hang.polls received.
32:35	RW	CONFIG_SCALE_RPT_HANG_DATA: Scaling factor for rpt_hang.data: 0 = 1:1 processor bus rpt_hang.datas received. 1 = 1:2 processor bus rpt_hang.datas received. ... 15 = 1:16 processor bus rpt_hang.datas received.
36:63	RW	CONFIG1_RESERVED: Reserved.

Register Name	**Power Bus Epsilon Configuration Register**
Mnemonic	NPU.STCK2.CS.SM0.MISC.EPSILON_CONFIG
Address	0000000005011202 (SCOM)
Description	Processor bus Epsilon configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_EPSILON_RATE: 0 = Decrement Epsilon count at 1:1 nest_gckn. ... 15 = Epsilon count at 1/16 nest_gckn.
4:15	RW	CONFIG_EPSILON_W0_COUNT: Epsilon count for Nn/G scope CP write.
16:27	RW	CONFIG_EPSILON_W1_COUNT: Epsilon count for Rn/Vg scope CP write.

Bits	SCOM	Field Mnemonic: Description
28:39	RW	CONFIG_EPSILON_R0_COUNT: Epsilon count for Ln scope reads.
40:51	RW	CONFIG_EPSILON_R1_COUNT: Epsilon count for Nn/G scope reads.
52:63	RW	CONFIG_EPSILON_R2_COUNT: Epsilon count for Rn/Vg scope reads.

Register Name	**Timer Configuration Register**
Mnemonic	NPU.STCK2.CS.SM0.MISC.XTIMER_CONFIG
Address	0000000005011203 (SCOM)
Description	Timer configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	CONFIG_POCKET_RATE1: Rate-1 for the pocket cache with data entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
2:7	RW	CONFIG_POCKET_RATE2: Rate-2 for the long timer for pocket cache entries (2^n cycles).
8:13	RW	CONFIG_POCKET_RATE3: Rate-3 for the short timer for pocket cache entries (2^n cycles).
14:19	RW	CONFIG_FWD_PROG_RATE2: Rate-2 for the forward progress timer (2^n cycles).
20:25	RW	CONFIG_CTL_TICK: Rate for CTL timer tick (default 63 = off). **Note:** This field can/should have different values in each instance.
26:31	RW	CONFIG_INH0_TICK: Rate for SM inhibit timer tick0 (default 63 = off). **Note:** This field can/should have different values in each instance.
32:37	RW	CONFIG_INH1_TICK: Rate for SM inhibit timer tick1 (default 63 = off). **Note:** This field can/should have different values in each instance.
38:39	RW	CONFIG_NV_RESP_RATE1: Rate-1 for NV response timer. The timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds, where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
40:45	RW	CONFIG_NV_RESP_RATE2: Rate-2 for the NV response timer (2^n cycles).
46:47	RW	CONFIG_POCKET_ND_RATE1: Rate-1 for the pocket cache dataless entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
48:63	RO	Constant = 0b0000000000000000

Register Name	GPU BAR Register
Mnemonic	NPU.STCK2.CS.SM0.MISC.GPU_BAR
Address	0000000005011204 (SCOM)
Description	Memory BARs. BAR register defining the GPU memory addresses serviced by bricks 0 and 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GPU0_BAR_ENABLE: 0 = Disable BAR for brick 0. 0 = Enable BAR for brick 0.
1:2	RW	CONFIG_GPU0_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 0. **Note:** It is illegal to set this field to 0b11.
3:6	RW	CONFIG_GPU0_BAR_GROUP: Group field of the base address of BAR for brick 0.
7:9	RW	CONFIG_GPU0_BAR_CHIP: Chip field of the base address of BAR for brick 0.
10:21	RW	CONFIG_GPU0_BAR_ADDR: The base address (1G address) of the BAR for brick 0. Must be aligned on the size of the BAR mask.
22	RW	CONFIG_GPU0_BAR_RESERVED: Reserved.
23	RW	CONFIG_GPU0_BAR_GRANULE: Hash boundary for brick 0: 0 = Hash on 512B boundary (hashbits(0:7) = addr(47:54)). 1 = Hash on 1024B boundary (hashbits(0:7) = addr(46:53)).
24:27	RW	CONFIG_GPU0_BAR_SIZE: Size of base address match for the BAR for brick 0: 0 = 1G 1 = 2G 2 = 4G ... 9 = 512G 10 = 1T 11 = 2T 12 = 4T >12 = Reserved.
28:31	RW	CONFIG_GPU0_BAR_MODE: Hash mode of the BAR for brick 0: 0 = (single) match on all address in address/size. 1 = (dual.0) match if hashbits(7) = 0. 2 = (dual.1) match if hashbits(7) = 1. 3 = (triple.0) match if hashbits%3 = 0. 4 = (triple.1) match if hashbits%3 = 1. 5 = (triple.2) match if hashbits%3 = 2. 6 = (quad.0) match if hashbits(6:7) = 0. 7 = (quad.1) match if hashbits(6:7) = 1. 8 = (quad.2) match if hashbits(6:7) = 2. 9 = (quad.3) match if hashbits(6:7) = 3. 10 = (six.0) match if hashbits%3 = 0 and hashbits(7) = 0. 11 = (six.1) match if hashbits%3 = 0 and hashbits(7) = 1. 12 = (six.2) match if hashbits%3 = 1 and hashbits(7) = 0. 13 = (six.3) match if hashbits%3 = 1 and hashbits(7) = 1. 14 = (six.4) match if hashbits%3 = 2 and hashbits(7) = 0. 15 = (six.5) match if hashbits%3 = 2 and hashbits(7) = 1.
32	RW	CONFIG_GPU1_BAR_ENABLE: 0 = Disable BAR for brick 1. 1 = Enable BAR for brick 1.
33:34	RW	CONFIG_GPU1_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 1. Note: It is illegal to set this field to 0b11.
35:38	RW	CONFIG_GPU1_BAR_GROUP: Group field of the base address of BAR for brick 1.

Bits	SCOM	Field Mnemonic: Description
39:41	RW	CONFIG_GPU1_BAR_CHIP: Chip field of the base address of BAR for brick 1.
42:53	RW	CONFIG_GPU1_BAR_ADDR: The base address (1G address) of the BAR for brick 1. Must be aligned on the size of the BAR mask.
54	RW	CONFIG_GPU1_BAR_RESERVED: Reserved.
55	RW	CONFIG_GPU1_BAR_GRANULE: Hash boundary for brick 1: 0 = Hash on 512B boundary (hashbits(0:7) = addr(47:54)). 1 = Hash on 1024B boundary (hashbits(0:7) = addr(46:53)).
56:59	RW	CONFIG_GPU1_BAR_SIZE: Size of the base address match for the BAR for brick 1: 0 = 1G 1 = 2G 2 = 4G ... 9 = 512G 10 = 1T 11 = 2T 12 = 4T >12 = Reserved.
60:63	RW	CONFIG_GPU1_BAR_MODE: Hash mode of the BAR for brick 1: 0 = (single) match on all address in address/size. 1 = (dual.0) match if hashbits(7) = 0. 2 = (dual.1) match if hashbits(7) = 1. 3 = (triple.0) match if hashbits%3 = 0. 4 = (triple.1) match if hashbits%3 = 1. 5 = (triple.2) match if hashbits%3 = 2. 6 = (quad.0) match if hashbits(6:7) = 0. 7 = (quad.1) match if hashbits(6:7) = 1. 8 = (quad.2) match if hashbits(6:7) = 2. 9 = (quad.3) match if hashbits(6:7) = 3. 10 = (six.0) match if hashbits%3 = 0 and hashbits(7) = 0. 11 = (six.1) match if hashbits%3 = 0 and hashbits(7) = 1. 12 = (six.2) match if hashbits%3 = 1 and hashbits(7) = 0. 13 = (six.3) match if hashbits%3 = 1 and hashbits(7) = 1. 14 = (six.4) match if hashbits%3 = 2 and hashbits(7) = 0. 15 = (six.5) match if hashbits%3 = 2 and hashbits(7) = 1.

Register Name	**PHY0/PHY1/NPU MMIO BAR Register**
Mnemonic	NPU.STCK2.CS.SM0.MISC.PHY_BAR
Address	0000000005011206 (SCOM)
Description	BAR register defining the PHY0/PHY1/NPU MMIO range. Stack 0 PHY_BAR defines a 2M range mapped to PHY 0 registers. Stack 1 PHY_BAR defines a 2M range mapped to PHY 1 registers. Stack 2 PHY_BAR defines a 16M range mapped to all NPU registers. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_PHY_BAR_ENABLE: 0 = Disable PHY_BAR. 1 = Enable PHY_BAR.
1:2	RW	PHY_RESERVED1: Reserved.
3:6	RW	CONFIG_PHY_BAR_GROUP: Group field of the 2M aligned address of this PHY_BAR.
7:9	RW	CONFIG_PHY_BAR_CHIP: Chip field of the 2M aligned address of this PHY_BAR.

Bits	SCOM	Field Mnemonic: Description
10:30	RW	CONFIG_PHY_BAR_ADDR: The 2M aligned address of this PHY_BAR's 2M range. **Note:** In stack two, the low three address bits are reserved (16M range).
31	RW	PHY_RESERVED2: Reserved.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Generation ID BAR Register
Mnemonic	NPU.STCK2.CS.SM0.MISC.GENID_BAR
Address	0000000005011207 (SCOM)
Description	ID Registers MMIO BAR. BAR register defining the Generation ID register for this stack/ramp. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GENID_BAR_ENABLE: 0 = Disable this BAR. 1 = Enable this BAR.
1:2	RW	GENID_RESERVED1: Reserved.
3:6	RW	CONFIG_GENID_BAR_GROUP: Group field of the 128K aligned address of this GENID_BAR.
7:9	RW	CONFIG_GENID_BAR_CHIP: Chip field of the128K aligned address of this GENID_BAR.
10:34	RW	CONFIG_GENID_BAR_ADDR: The 128K aligned address of this BAR's 128K range.
35	RW	GENID_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	Low Water Register
Mnemonic	NPU.STCK2.CS.SM0.MISC.LOW_WATER
Address	0000000005011208 (SCOM)
Description	State machine allocation for low water marks. Each low water mark should be greater than or equal to 1 and the sum of the low water marks must be less than config_max_machines. Low water marks must not be changed after config_enable_machine_alloc is set to 1 and config_enable_machine_alloc must remain at 1 once it is set to 1. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_LOW_WATER_XATS: Low water mark for XTS/MISC processor bus requests. Can only be changed while config_enable_machine_alloc = 0.
6:11	RW	CONFIG_LOW_WATER_PWR0: Low water mark for processor bus rd/dclaim/atomic/etc. requests. Can only be changed while config_enable_machine_alloc = 0.
12:17	RW	CONFIG_LOW_WATER_PWR1: Low water mark for processor bus CP (castout-push) requests. Can only be changed while config_enable_machine_alloc = 0.
18:23	RW	CONFIG_LOW_WATER_REQ0: Low water mark for NVLink brick 0 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
24:29	RW	CONFIG_LOW_WATER_PRB0: Low water mark for NVLink brick 0 probe requests. Can only be changed while config_enable_machine_alloc = 0.
30:35	RW	CONFIG_LOW_WATER_REQ1: Low water mark for NVLink brick 1 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.

Bits	SCOM	Field Mnemonic: Description
36:41	RW	CONFIG_LOW_WATER_PRB1: Low water mark for NVLink brick 1 probe requests. Can only be changed while config_enable_machine_alloc = 0.
42:47	RW	CONFIG_MAX_MACHINES: Maximum number of state machines to be used. Must be >= 8 and <= 62. Can only be changed while config_enable_machine_alloc = 0.
48:50	RW	LOW_WATER_RESERVED1: Reserved.
51	RW	CONFIG_ENABLE_MACHINE_ALLOC: Enable state machine allocation. Can only be changed from 0 to 1 and must stay at 1 once it is set.
52:63	RO	Constant = 0b000000000000

Register Name	**High Water Register**
Mnemonic	NPU.STCK2.CS.SM0.MISC.HIGH_WATER
Address	0000000005011209 (SCOM)
Description	State machine allocation for high water marks. Each high water mark should be greater than or equal to the corresponding config_low_water and config_max_machines. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_HIGH_WATER_XATS: High water mark for XTS/MISC processor bus requests.
6:11	RW	CONFIG_HIGH_WATER_PWR0: High water mark for processor bus rd/dclaim/atomic/etc. requests.
12:17	RW	CONFIG_HIGH_WATER_PWR1: High water mark for processor bus CP (castout-push) requests.
18:23	RW	CONFIG_HIGH_WATER_REQ0: High water mark for NVLink brick 0 non-probe requests.
24:29	RW	CONFIG_HIGH_WATER_PRB0: High water mark for NVLink brick 0 probe requests.
30:35	RW	CONFIG_HIGH_WATER_REQ1: High water mark for NVLink brick 1 non-probe requests.
36:41	RW	CONFIG_HIGH_WATER_PRB1: High water mark for NVLink brick 1 probe requests.
42:43	RW	HIGH_WATER_RESERVED1: Reserved.
44:63	RO	Constant = 0b00000000000000000000

Register Name	**Relaxed Configuration 0 Register**
Mnemonic	NPU.STCK2.CS.SM0.MISC.CONFIG_RELAXED0
Address	000000005011120A (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_SOURCE0_WRENA: 0 = Disable relaxed source 0 for write operations. 1 = Enable relaxed source 0 for write operations.
1	RW	CONFIG_RELAXED_SOURCE0_RDENA: 0 = Disable relaxed source 0 for read operations. 1 = Enable relaxed source 0 for read operations.
2:19	RW	CONFIG_RELAXED_SOURCE0_MATCH: Relaxed source 0 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.

Bits	SCOM	Field Mnemonic: Description
20:37	RW	CONFIG_RELAXED_SOURCE0_MASK: Relaxed source 0 tag mask value: 0 = Bit is masked off, corresponding match bit must be zero. 1 = Bit must equal corresponding match bit.
38:39	RW	CONFIG_RELAXED_RESERVED0: Reserved.
40	RW	CONFIG_RELAXED_SOURCE1_WRENA: 0 = Disable relaxed source 1 for write operations. 1 = Enable relaxed source 1 for write operations.
41	RW	CONFIG_RELAXED_SOURCE1_RDENA: 0 = Disable relaxed source 1 for read operations. 1 = Enable relaxed source 1 for read operations.
42:59	RW	CONFIG_RELAXED_SOURCE1_MATCH: Relaxed source 1 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 1 Register
Mnemonic	NPU.STCK2.CS.SM0.MISC.CONFIG_RELAXED1
Address	000000000501120B (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:17	RW	CONFIG_RELAXED_SOURCE1_MASK: Relaxed source 1 tag mask value.
18:19	RW	CONFIG_RELAXED_RESERVED1: Reserved.
20	RW	CONFIG_RELAXED_SOURCE2_WRENA: 0 = Disable relaxed source 2 for write operations. 1 = Enable relaxed source 2 for write operations.
21	RW	CONFIG_RELAXED_SOURCE2_RDENA: 0 = Disable relaxed source 2 for read operations. 1 = Enable relaxed source 2 for read operations.
22:39	RW	CONFIG_RELAXED_SOURCE2_MATCH: Relaxed source 2 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
40:57	RW	CONFIG_RELAXED_SOURCE2_MASK: Relaxed source 2 tag mask value.
58:59	RW	CONFIG_RELAXED_RESERVED2: Reserved.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 2 Register
Mnemonic	NPU.STCK2.CS.SM0.MISC.CONFIG_RELAXED2
Address	000000000501120C (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_CMD_CL_DMA_W: Enable relaxed ordering for cl_dma_w.
1	RW	CONFIG_RELAXED_CMD_CL_DMA_W_HP: Enable relaxed ordering for cl_dma_w_hp.

Bits	SCOM	Field Mnemonic: Description
2	RW	CONFIG_RELAXED_CMD_CL_DMA_INJ: Enable relaxed ordering for cl_dma_inj.
3	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_U: Enable relaxed ordering for armw_cas_imax_u.
4	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_S: Enable relaxed ordering for armw_cas_imax_s.
5	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_U: Enable relaxed ordering for armw_cas_imin_u.
6	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_S: Enable relaxed ordering for armw_cas_imin_s.
7	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_U: Enable relaxed ordering for armwf_cas_imax_u.
8	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_S: Enable relaxed ordering for armwf_cas_imax_s.
9	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_U: Enable relaxed ordering for armwf_cas_imin_u.
10	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_S: Enable relaxed ordering for armwf_cas_imin_s.
11	RW	CONFIG_RELAXED_CMD_PR_DMA_INJ: Enable relaxed ordering for pr_dma_inj.
12	RW	CONFIG_RELAXED_CMD_DMA_PR_W: Enable relaxed ordering for dma_pr_w.
13	RW	CONFIG_RELAXED_CMD_ARMW_ADD: Enable relaxed ordering for armw_add.
14	RW	CONFIG_RELAXED_CMD_ARMW_AND: Enable relaxed ordering for armw_and.
15	RW	CONFIG_RELAXED_CMD_ARMW_OR: Enable relaxed ordering for armw_or.
16	RW	CONFIG_RELAXED_CMD_ARMW_XOR: Enable relaxed ordering for armw_xor.
17	RW	CONFIG_RELAXED_CMD_ARMWF_ADD: Enable relaxed ordering for armwf_add.
18	RW	CONFIG_RELAXED_CMD_ARMWF_AND: Enable relaxed ordering for armwf_and.
19	RW	CONFIG_RELAXED_CMD_ARMWF_OR: Enable relaxed ordering for armwf_or.
20	RW	CONFIG_RELAXED_CMD_ARMWF_XOR: Enable relaxed ordering for armwf_xor.
21	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_E: Enable relaxed ordering for armwf_cas_e.
22	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_U: Enable relaxed ordering for armwf_cas_u.
23	RW	CONFIG_RELAXED_CMD_CL_RD_NC_F0: Enable relaxed ordering for cl_rd_nc(F=0).
24	RW	CONFIG_RELAXED_SOURCE3_WRENA: 0 = Disable relaxed source 3 for write operations. 1 = Enable relaxed source 3 for write operations.
25	RW	CONFIG_RELAXED_SOURCE3_RDENA: 0 = Disable relaxed source 3 for read operations. 1 = Enable relaxed source 3 for read operations.
26:43	RW	CONFIG_RELAXED_SOURCE3_MATCH: Relaxed source 3 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
44:61	RW	CONFIG_RELAXED_SOURCE3_MASK: Relaxed source 3 tag mask value.
62:63	RW	CONFIG_RELAXED_RESERVED3: Reserved.

Register Name	**NTL0/NDL0 MMIO BAR Register**
Mnemonic	NPU.STCK2.CS.SM0.MISC.NDT0_BAR
Address	000000000501120D (SCOM)
Description	BAR register defining the NDL/NTL MMIO range for brick 0 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT0_BAR_ENABLE: 0 = Disable BAR for brick 0. 1 = Enable BAR for brick 0.
1:2	RW	NDT0_RESERVED1: Reserved.

Bits	SCOM	Field Mnemonic: Description
3:6	RW	CONFIG_NDT0_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT0_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT0_BAR_ADDR: The 128K aligned address of BAR for brick 0's 128K range.
35	RW	NDT0_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	**NTL1/NDL1 MMIO BAR Register**
Mnemonic	NPU.STCK2.CS.SM0.MISC.NDT1_BAR
Address	000000000501120E (SCOM)
Description	BAR register defining the NDL/NTL MMIO range for brick 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT1_BAR_ENABLE: 0 = Disable BAR for brick 1. 1 = Enable BAR for brick 1.
1:2	RW	NDT1_RESERVED1: Reserved.
3:6	RW	CONFIG_NDT1_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT1_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT1_BAR_ADDR: The 128K aligned address of BAR for brick 1's 128K range.
35	RW	NDT1_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	**Performance Configuration Register**
Mnemonic	NPU.STCK2.CS.SM0.MISC.PERF_CONFIG
Address	000000000501120F (SCOM)
Description	Performance event selection register.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	PERF_CONFIG_LATSTART: Latency count start event.
8:15	RW	PERF_CONFIG_LATCANCEL: Latency count abort event.
16:23	RW	PERF_CONFIG_EVENT0: Event 0 select.
24:31	RW	PERF_CONFIG_EVENT1: Event 0 select.
32:39	RW	PERF_CONFIG_EVENT2: Event 0 select.
40:47	RW	PERF_CONFIG_EVENT3: Event 0 select.
48:55	RW	PERF_CONFIG_LATFINISH: Latency count finish event.
56:62	RW	PERF_CONFIG_RESERVED2: Reserved.
63	RW	PERF_CONFIG_ACT: Enable clock gates for performance monitor latches.

Register Name	Inhibit Configuration Register
Mnemonic	NPU.STCK2.CS.SM0.MISC.INHIBIT_CONFIG
Address	0000000005011210 (SCOM)
Description	This register configures inhibits for CQ_SM.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_INHIBIT_LFREQ0: Base LFSR frequency 0: 0...11 = $1/2^{(n+1)}$ 12 = $1/2^{14}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
4:5	RW	CONFIG_INHIBIT_PFREQ0: Selects pre-frequency 0: 0 = Inhibit timer tick0. 1 = Inverted inhibit timer tick0. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
6	RW	CONFIG_INHIBIT_BLOCKY0: 0 = Disable blocky mode. 1 = Enable blocky mode.
7	RW	CONFIG_INHIBIT_ONESHOT0: 0 = Continuous mode. 1 = One shot mode.
8:15	RW	CONFIG_INHIBIT_DEST0: Selects the destination of the inhibit.
16:19	RW	CONFIG_INHIBIT_LFREQ1: Base LFSR frequency 0: 0...12 = $1/2^{(n+1)}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
20:21	RW	CONFIG_INHIBIT_PFREQ1: Selects pre-frequency 0: 0 = Inhibit timer tick1. 1 = Inverted inhibit timer tick1. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
22	RW	CONFIG_INHIBIT_BLOCKY1: 0 = Disable blocky mode. 1 = Enable blocky mode.
23	RW	CONFIG_INHIBIT_ONESHOT1: 0 = Continuous mode. 1 = One shot mode.
24:31	RW	CONFIG_INHIBIT_DEST1: Selects the destination of the inhibit.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	CERR Message 0 Register
Mnemonic	NPU.STCK2.CS.SM0.MISC.CERR_MESSAGE0
Address	0000000005011211 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS0: Reserved.

Register Name	CERR Message 1 Register
Mnemonic	NPU.STCK2.CS.SM0.MISC.CERR_MESSAGE1
Address	0000000005011212 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS1: Reserved.

Register Name	CERR Message 2 Register
Mnemonic	NPU.STCK2.CS.SM0.MISC.CERR_MESSAGE2
Address	0000000005011213 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS2: Reserved.

Register Name	CERR Message 3 Register
Mnemonic	NPU.STCK2.CS.SM0.MISC.CERR_MESSAGE3
Address	0000000005011214 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS3: Reserved.

Register Name	CERR Message 4 Register
Mnemonic	NPU.STCK2.CS.SM0.MISC.CERR_MESSAGE4
Address	0000000005011215 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS4: Reserved.

Register Name	CQ_SM Status Register
Mnemonic	NPU.STCK2.CS.SM0.MISC.SM_STATUS
Address	0000000005011216 (SCOM)
Description	Status reporting register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SM_STATUS_CREQ0: Set to 1 when brick 0 CREQ allocation is at its idle level.
1	ROX	SM_STATUS_PRB0: Set to 1 when brick 0 probe allocation is at its idle level.
2	ROX	SM_STATUS_CREQ1: 1Set to when brick 1 CREQ allocation is at its idle level.
3	ROX	SM_STATUS_PRB1: Set to 1 when brick 1 probe allocation is at its idle level.
4	ROX	SM_STATUS_XATS: Set to 1 when ATS/MISC allocation is at its idle level.
5	ROX	SM_STATUS_PWR0: Set to 1 when processor bus (non-CP*) allocation is at its idle level.
6	ROX	SM_STATUS_PWR1: Set to 1 when processor bus (CP*) allocation is at its idle level.
7	ROX	SM_STATUS_CHGRATE: Set to 1 when chgrate.hang slowdown is being applied to machine allocation.
8:11	ROX	SM_STATUS_MRBGP: Master retry back-off level for group-pump commands.
12:15	ROX	SM_STATUS_MRBSP: Master retry back-off level for system-pump commands.
16:19	ROX	SM_STATUS_FENCE0: Brick 0 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X = Flushing pocket cache entries prior to exiting fence.
20:23	ROX	SM_STATUS_FENCE1: Brick 1 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X= Flushing pocket cache entries prior to exiting fence.
24	ROX	SM_STATUS_PBLN: Set to 1 when the outbound Ln scope processor bus request queue is empty.
25	ROX	SM_STATUS_PBNNG: Set to 1 when the outbound Nn/G scope processor bus request queue is empty.
26	ROX	SM_STATUS_PBRNVG: 1Set to when the outbound Rn/Vg scope processor bus request queue is empty.
27	ROX	SM_STATUS_N0REQ: Set to 1 when the outbound brick 0 CREQ request queue is empty.
28	ROX	SM_STATUS_N0DGD: Set to 1 when the outbound brick 0 downgrade request queue is empty.
29	ROX	SM_STATUS_N1REQ: Set to 1 when the outbound brick 1 CREQ request queue is empty.
30	ROX	SM_STATUS_N1DGD: Set to 1 when the outbound brick 1 downgrade request queue is empty.
31	ROX	SM_STATUS_MMIO: Set to 1 when the outbound MMIO/GenId request queue is empty.
32	ROX	SM_STATUS_ATSXLATE: Set to 1 when o the utbound ATS TCE translation request queue is empty.
33	ROX	SM_STATUS_PBRSP: Set to 1 when the outbound processor bus data-response/merge-operation queue is empty.
34	ROX	SM_STATUS_N0RSP: Set to 1 when the outbound brick 0 response queue is empty.
35	ROX	SM_STATUS_N1RSP: Set to 1 when the outbound brick 1 response queue is empty.
36	ROX	SM_STATUS_XARSP: Set to 1 when the outbound ATS/MISC response queue is empty.
37	ROX	SM_STATUS_SACOLL: Set to 1 when the same address collision check queue is empty.
38	ROX	SM_STATUS_FREE: Set to 1 when the free state machine queue is empty.
39	ROX	SM_STATUS_RESERVED1: Reserved.
40:63	RO	Constant = 0b000000000000000000000000

Register Name	**CQ_SM Miscellaneous Configuration 0 Register**
Mnemonic	NPU.STCK2.CS.SM1.MISC.CONFIG0
Address	0000000005011220 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG1_RESERVED1: Reserved.
1	RW	CONFIG_MA_DSA_OPT_CLAIM_UR: 01 = Use Read.RWC for DCLAIM/DCBZ to GPU memory. 1 = Use Upgrade.DN for DCLAIM/DCBZ to GPU memory.
2	RW	CONFIG_MA_DSA_OPT_FLUSH_UR: 0 = Use Read.RWC for DCBF/DCBFC to GPU memory. 1 = Use Upgrade.DN for DCBF/DCBFC to GPU memory.
3	RW	CONFIG_MA_DSA_OPT_RP_MODE: 0 = Use DMA for Write.NC to processor memory. 1 = Use Read-Push for Write.NC to processor memory.
4	RW	CONFIG_ADR_BAR_MODE: Processor bus adr_bar: 0 = Large system mode. 1 = Small system mode.
5	RW	CONFIG_DISABLE_NN_RN: Processor bus scope: 0 = Enable Nn and Rn scopes. 1 = Disable Nn and Rn scopes.
6	RW	CONFIG_DISABLE_VG_NOT_SYS: Processor bus scope: 0 = Enable Vg less than system. 1 = Force all Vg to system.
7	RW	CONFIG_DISABLE_G: Processor bus scope: 0 = Enable G scope. 1 = Disable G scope.
8	RW	CONFIG_DISABLE_LN: Processor bus scope: 0 = Enable Ln scope. 1 = Disable Ln scope.
9	RW	CONFIG_SKIP_G: Processor bus scope: 0 = Allow G on rty_inc. 1 = Skip G on rty_inc.
10	RW	CONFIG_MA_MCRESP_OPT_WRP: 0 = Increase scope on rty_inc to dma_w. 1 = Use write-read-push on rty_inc to dma_w.
11	RW	CONFIG_MA_MCRESP_OPT_RTY_INJ: On a rty_inj type CRESP: 0 = Keep sending dma. 1 = Change to _inj.
12	RW	CONFIG_MA_MCRESP_OPT_RTY_DMA: On a rty_dma type CRESP: 0 = Keep sending inj. 1 = Change to _dma.
13:15	RW	CONFIG_INC_PRI_MASK: Mask select for priority increase due to rty_drp. 0 = 100% chance to increase priority. 1 = 50% chance to increase priority. 2 = 25% chance to increase priority. 3 = 12.5% chance to increase priority. 4 = 6% chance to increase priority. 5 = 3% chance to increase priority. 6, 7 = 1.5% chance to increase priority.

Bits	SCOM	Field Mnemonic: Description
16	RW	CONFIG1_RESERVED2: Reserved.
17	RW	CONFIG_MA_RSNOOP_OPT_B: TBD, future option bit.
18	RW	CONFIG_MA_RSNOOP_OPT_C: TBD, future option bit.
19	RW	CONFIG_MA_SCRESP_OPT_A: TBD, future option bit.
20	RW	CONFIG_MA_SCRESP_OPT_B: TBD, future option bit.
21	RW	CONFIG_MA_SCRESP_OPT_C: TBD, future option bit.
22	RW	CONFIG_RESERVED4: Reserved.
23	RW	CONFIG_MACH_CORRENAB: 0 = Disable state machine array ECC correction. 1 = Enable state machine array ECC correction.
24	RW	CONFIG_MACH_INJECT_ENABLE1: 0 = Disable state machine array ECC error inject bit 1. 1 = DEnable state machine array ECC error inject bit 1.
25	RW	CONFIG_MACH_INJECT_ENABLE2: 0 = Disable state machine array ECC error inject bit 2. 1 = Enable state machine array ECC error inject bit 2.
26	RW	CONFIG_RXO_CORRENAB: 0 = Disable ReqRspOut array ECC correction. 1 = Enable ReqRspOut array ECC correction.
27	RW	CONFIG_RXO_INJECT_ENABLE1: 0 = Disable ReqRspOut array ECC error inject bit 1. 1 = Enable ReqRspOut array ECC error inject bit 1.
28	RW	CONFIG_RXO_INJECT_ENABLE2: 0 = Disable ReqRspOut array ECC error inject bit 1. 1 = Enable ReqRspOut array ECC error inject bit 1.
29	RW	CONFIG_RSI_CORRENAB: 0 = Disable PB-Rsp-In array ECC correction. 1 = Enable PB-Rsp-In array ECC correction.
30	RW	CONFIG_RSI_INJECT_ENABLE1: 0 = Disable PB-Rsp-Ine array ECC error inject bit 1. 1 = Enable PB-Rsp-Ine array ECC error inject bit 1.
31	RW	CONFIG_RSI_INJECT_ENABLE2: 0 = Disable PB-Rsp-Ine array ECC error inject bit 1. 1 = Enable PB-Rsp-Ine array ECC error inject bit 1.
32:33	RW	CONFIG_MA_RSNOOP_OPT_DCLAIM: 0 = Partial respond to DCLAIM to GPU memory with lpc_ack. 1 = Partial respond to DCLAIM to GPU memory with lpc_ack+rty_lost_claim. 2 = Partial respond to DCLAIM to GPU memory with lpc_ack+rty_lpc+start pocket cache. 3 = Reserved.
34	RW	CONFIG_MA_DSA_OPT_DMA_UPG: 0 = Non-relaxed dma_w use Read.RWC to acquire pocket cache state/data. 1 = Non-relaxed dma_w use Upgrade.DN to acquire pocket cache state/data.
35	RW	CONFIG_EVAPORATE_BY_LCO: 0 = Just free the state machine without LCO. 1 = Evaporate pocket cache entries by LCO.
36	RW	CONFIG_MRBGP_TRACK_ALL: 0 = Master retry back-off group-pump track only this stack's retry responses. 1 = Master retry back-off group-pump track all this chip's retry responses.

Bits	SCOM	Field Mnemonic: Description
37	RW	CONFIG_MRBSP_TRACK_ALL: 0 = Master retry back-off system-pump track only this stack's retry responses. 1 = Master retry back-off system-pump track all this chip's retry responses.
38	RW	CONFIG_ENABLE_PBUS: 0 = Disable NPU processor bus RCMD, PRESP, and CRESP interfaces. 1 = Enable NPU processor bus RCMD, PRESP, and CRESP interfaces.
39	RW	CONFIG_BRAZOS_MODE: 0 = Non-brazos 4-group; 2-chip mode. 1 = Brazos 2-group; 4-chip mode.
40	RW	CONFIG_ENABLE_SNARF_CPM: 0 = Disable Probe.I.MO snarfing a cp_m. 1 = Enable Probe.I.MO snarfing a cp_m.
41	RW	CONFIG_PREALLOC2_REQ0: 0/1 = Preallocate two state machines to brick 0 CREQ channel.
42	RW	CONFIG_PREALLOC2_PRB0: 0/1 = Preallocate two state machines to brick 0 PRB channel.
43	RW	CONFIG_PREALLOC2_REQ1: 0/1 = Preallocate two state machines to brick 1 CREQ channel.
44	RW	CONFIG_PREALLOC2_PRB1: 0/1 = Preallocate two state machines to brick 1 PRB channel.
45	RW	CONFIG_PREALLOC2_XATS: 0/1 = Preallocate two state machines to XATS interface.
46	RW	CONFIG_DISABLE_INJECT: 0 = Enable sending cl,pr_dma_inj. 1 = Disable sending cl,pr_dma_inj. **Note:** To disable sending _inj commands, the following bits must also be set to '0': config_ma_mcresp_opt_rty_inj config_ma_dsa_opt_rp_mode
47	RW	CONFIG_DCACHE_MODE: 0 = Drive data bus DCACHE field in basic mode. 1 = Drive data bus DCACHE field in CAPP mode.
48	RW	CONFIG_DCACHE_REPORTS_PHYSICAL: 0 = In basic mode, report local masters as near. 1 = In basic mode, report local masters as local.
49	RW	CONFIG_RSI_DISABLE_DATIN_FASTPATH: 0 = Enable RSI PB data in fastpath. 1 = Disable fastpath.
50	RW	CONFIG_PCKT_BLK_PRB: 0 = Valid pocket cache entries, do not block probes. 1 = Probes are blocked.
51	RW	CONFIG_P9P9_MODE: 0 = Normal operation. 1 = Run in special lab bring-up GPUless POWER9-to-POWER9 mode.
52	RW	CONFIG_FORBID_MMIO_READ_GT_32: 0 = Allow GPU to PB MMIOs greater than 32 bytes. 1 = Flag error and brick fence on MMIOs greater than 32 bytes.
53	RW	CONFIG_FORBID_MMIO_ATOMIC: 0 = Allow GPU to PB atomics to MMIO space. 1 = Flag error and brick fence on atomics to MMIO space.
54	RW	CONFIG_OPT_SNOOP_CP: 0 = Snoop POWER9 memory cp_* type commands. 1 = Do not snoop cp_* type commands.
55:63	RW	CONFIG0_RESERVED3: Reserved.

Register Name	CQ_SM Miscellaneous Configuration 1 Register
Mnemonic	NPU.STCK2.CS.SM1.MISC.CONFIG1
Address	0000000005011221 (SCOM)
Description	Miscellaneous configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_RANDOM_BACKOFF_DUR_MASK: Mask for the base random duration of a random retry back-off: 0000 = 0 - 15 base random duration. 0001 = 0 - 31 base random duration. 0011 = 0 - 63 base random duration. 0111 = 0 - 127 base random duration. 1111 = 0 - 255 base random duration.
4:7	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_REQ: Mask for the slowdown of NTL CREQ credits during chgrate.hang. 'n' = $1/(2^{(n+1)})$ cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
8:11	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_PRB: Mask for the slowdown of NTL probe credits during chgrate.hang. 'n' = $1/(2^{(n+1)})$ cycles average rate. **Note:** For a single processor bus ramp, the rate is actually eight times faster since there are four RCMD slices times two NTL bricks that get CREQ credits. This field is the rate for one brick receiving credit from one RCMD slice.
12:15	RW	CONFIG_ARB_NONCRR_SAFETY: Safety valve for non-CRESP/non- REQIN events going down the arbiter pipe. After n+1 REQIN events go through the arbiter while a non-CRR event is waiting, REQIN events are blocked to give non-CRR events a chance.
16:27	RW	CONFIG_EPSILON_WLN_COUNT: Epsilon count for Ln scope CP write.
28:31	RW	CONFIG_SCALE_RPT_HANG_POLL: Scaling factor for rpt_hang.poll. 0 = 1:1 processor bus rpt_hang.polls received. 1 = 1:2 processor bus rpt_hang.polls received. ... 15 = 1:16 processor bus rpt_hang.polls received.
32:35	RW	CONFIG_SCALE_RPT_HANG_DATA: Scaling factor for rpt_hang.data. 0 = 1:1 processor bus rpt_hang.datas received. 1 = 1:2 processor bus rpt_hang.datas received. ... 15 = 1:16 processor bus rpt_hang.datas received.
36:63	RW	CONFIG1_RESERVED: Reserved.

Register Name	Power Bus Epsilon Configuration Register
Mnemonic	NPU.STCK2.CS.SM1.MISC.EPSILON_CONFIG
Address	0000000005011222 (SCOM)
Description	Processor bus Epsilon configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_EPSILON_RATE: 0 = Decrement Epsilon count at 1:1 nest_gckn. ... 15 = Epsilon count at 1/16 nest_gckn.
4:15	RW	CONFIG_EPSILON_W0_COUNT: Epsilon count for Nn/G scope CP write.
16:27	RW	CONFIG_EPSILON_W1_COUNT: Epsilon count for Rn/Vg scope CP write.

Bits	SCOM	Field Mnemonic: Description
28:39	RW	CONFIG_EPSILON_R0_COUNT: Epsilon count for Ln scope reads.
40:51	RW	CONFIG_EPSILON_R1_COUNT: Epsilon count for Nn/G scope reads.
52:63	RW	CONFIG_EPSILON_R2_COUNT: Epsilon count for Rn/Vg scope reads.

Register Name	**Timer Configuration Register**
Mnemonic	NPU.STCK2.CS.SM1.MISC.XTIMER_CONFIG
Address	0000000005011223 (SCOM)
Description	Timer configuration register. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	CONFIG_POCKET_RATE1: Rate-1 for the pocket cache with data entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
2:7	RW	CONFIG_POCKET_RATE2: Rate-2 for the long timer for pocket cache entries (2^n cycles).
8:13	RW	CONFIG_POCKET_RATE3: Rate-3 for the short timer for pocket cache entries (2^n cycles).
14:19	RW	CONFIG_FWD_PROG_RATE2: Rate-2 for the forward-progress timer (2^n cycles).
20:25	RW	CONFIG_CTL_TICK: Rate for CTL timer tick (default 63 = off). **Note:** This field can/should have different values in each instance.
26:31	RW	CONFIG_INH0_TICK: Rate for SM inhibit timer tick0 (default 63 = off). **Note:** This field can/should have different values in each instance.
32:37	RW	CONFIG_INH1_TICK: Rate for SM inhibit timer tick1 (default 63 = off). **Note:** This field can/should have different values in each instance.
38:39	RW	CONFIG_NV_RESP_RATE1: Rate-1 for NV-Response timer. The timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds, where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
40:45	RW	CONFIG_NV_RESP_RATE2: Rate-2 for the NV-Response timer (2^n cycles).
46:47	RW	CONFIG_POCKET_ND_RATE1: Rate-1 for the pocket cache dataless entries. The pocket cache timer is used to evaporate pocket cache entries which are not claimed. The long timer duration is f(Rate-1) * $2^{(Rate-2)}$ * 5e - 10 seconds. The short timer duration is f(Rate-1) * $2^{(Rate-3)}$ * 5e - 10 seconds. Where f(Rate-1) is: f(0b00) = 7 f(0b01) = 63 f(0b10) = 511 f(0b11) = 4095
48:63	RO	Constant = 0b0000000000000000

Register Name	GPU BAR Register
Mnemonic	NPU.STCK2.CS.SM1.MISC.GPU_BAR
Address	0000000005011224 (SCOM)
Description	BAR register defining the GPU memory addresses serviced by bricks 0 and 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GPU0_BAR_ENABLE: 0 = Disable BAR for brick 0. 1 = Enable BAR for brick 0.
1:2	RW	CONFIG_GPU0_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 0. **Note:** It is illegal to set this field to 0b11.
3:6	RW	CONFIG_GPU0_BAR_GROUP: Group field of the base address of BAR for brick 0.
7:9	RW	CONFIG_GPU0_BAR_CHIP: Chip field of the base address of BAR for brick 0.
10:21	RW	CONFIG_GPU0_BAR_ADDR: The base address (1G address) of the BAR for brick 0. Must be aligned on the size of the BAR mask.
22	RW	CONFIG_GPU0_BAR_RESERVED: Reserved.
23	RW	CONFIG_GPU0_BAR_GRANULE: Hash boundary for brick 0: 0 = Hash on 512B boundary (hashbits(0:7) = addr(47:54)). 1 = Hash on 1024B boundary (hashbits(0:7) = addr(46:53)).
24:27	RW	CONFIG_GPU0_BAR_SIZE: Size of base address match for the BAR for brick 0: 0 = 1G 1 = 2G 2 = 4G ... 9 = 512G 10 = 1T 11 = 2T 12 = 4T >12 = Reserved.
28:31	RW	CONFIG_GPU0_BAR_MODE: Hash mode of the BAR for brick 0: 0 = (single) match on all address in address/size. 1 = (dual.0) match if hashbits(7) = 0. 2 = (dual.1) match if hashbits(7) = 1. 3 = (triple.0) match if hashbits%3 = 0. 4 = (triple.1) match if hashbits%3 = 1. 5 = (triple.2) match if hashbits%3 = 2. 6 = (quad.0) match if hashbits(6:7) = 0. 7 = (quad.1) match if hashbits(6:7) = 1. 8 = (quad.2) match if hashbits(6:7) = 2. 9 = (quad.3) match if hashbits(6:7) = 3. 10 = (six.0) match if hashbits%3 = 0 and hashbits(7) = 0. 11 = (six.1) match if hashbits%3 = 0 and hashbits(7) = 1. 12 = (six.2) match if hashbits%3 = 1 and hashbits(7) = 0. 13 = (six.3) match if hashbits%3 = 1 and hashbits(7) = 1. 14 = (six.4) match if hashbits%3 = 2 and hashbits(7) = 0. 15 = (six.5) match if hashbits%3 = 2 and hashbits(7) = 1.
32	RW	CONFIG_GPU1_BAR_ENABLE: 0 = Disable BAR for brick 1. 1 = Enable BAR for brick 1.
33:34	RW	CONFIG_GPU1_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 1. **Note:** It is illegal to set this field to 0b11.
35:38	RW	CONFIG_GPU1_BAR_GROUP: Group field of the base address of BAR for brick 1.

Bits	SCOM	Field Mnemonic: Description
39:41	RW	CONFIG_GPU1_BAR_CHIP: Chip field of the base address of BAR for brick 1.
42:53	RW	CONFIG_GPU1_BAR_ADDR: The base address (1G address) of the BAR for brick 1. Must be aligned on the size of the BAR mask.
54	RW	CONFIG_GPU1_BAR_RESERVED: Reserved.

Register Name	**PHY0/PHY1/NPU MMIO BAR Register**
Mnemonic	NPU.STCK2.CS.SM1.MISC.PHY_BAR
Address	0000000005011226 (SCOM)
Description	BAR register defining PHY0/PHY1/NPU MMIO range. Stack 0 PHY_BAR defines a 2M range mapped to PHY 0 registers. Stack 1 PHY_BAR defines a 2M range mapped to PHY 1 registers. Stack 2 PHY_BAR defines a 16M range mapped to all NPU registers. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_PHY_BAR_ENABLE: 0 = Disable PHY_BAR. 1 = Enable PHY_BAR.
1:2	RW	PHY_RESERVED1: Reserved.
3:6	RW	CONFIG_PHY_BAR_GROUP: Group field of the 2M aligned address of this PHY_BAR.
7:9	RW	CONFIG_PHY_BAR_CHIP: Chip field of the 2M aligned address of this PHY_BAR.

Bits	SCOM	Field Mnemonic: Description
10:30	RW	CONFIG_PHY_BAR_ADDR: The 2M aligned address of this PHY_BAR;s 2M range. **Note:** In stack two, the low three address bits are reserved (16M range).
31	RW	PHY_RESERVED2: Reserved.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Generation ID BAR Register
Mnemonic	NPU.STCK2.CS.SM1.MISC.GENID_BAR
Address	0000000005011227 (SCOM)
Description	BAR register defining the Generation ID register for this stack/ramp. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GENID_BAR_ENABLE: 0 = Disable this BAR. 1 = Enable this BAR.
1:2	RW	GENID_RESERVED1: Reserved.
3:6	RW	CONFIG_GENID_BAR_GROUP: Group field of the 128K aligned address of this GENID_BAR.
7:9	RW	CONFIG_GENID_BAR_CHIP: Chip field of the 128K aligned address of this GENID_BAR.
10:34	RW	CONFIG_GENID_BAR_ADDR: The 128K aligned address of this BAR's 128K range.
35	RW	GENID_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	Low Water Register
Mnemonic	NPU.STCK2.CS.SM1.MISC.LOW_WATER
Address	0000000005011228 (SCOM)
Description	State machine allocation for low water marks. Each low water mark should be greater than or equal to 1 and the sum of the low water marks must be less than config_max_machines. Low water marks must not be changed after config_enable_machine_alloc is set to 1 and config_enable_machine_alloc must remain at 1 once it is set to 1. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_LOW_WATER_XATS: Low water mark for XTS/MISC processor bus requests. Can only be changed while config_enable_machine_alloc = 0.
6:11	RW	CONFIG_LOW_WATER_PWR0: Low water mark for processor bus rd/dclaim/atomic/etc. requests. Can only be changed while config_enable_machine_alloc = 0.
12:17	RW	CONFIG_LOW_WATER_PWR1: Low water mark for processor bus CP (castout-push) requests. Can only be changed while config_enable_machine_alloc = 0.
18:23	RW	CONFIG_LOW_WATER_REQ0: Low water mark for NVLink brick 0 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.
24:29	RW	CONFIG_LOW_WATER_PRB0: Low water mark for NVLink brick 0 probe requests. Can only be changed while config_enable_machine_alloc = 0.
30:35	RW	CONFIG_LOW_WATER_REQ1: Low water mark for NVLink brick 1 non-probe requests. Can only be changed while config_enable_machine_alloc = 0.

Bits	SCOM	Field Mnemonic: Description
36:41	RW	CONFIG_LOW_WATER_PRB1: Low water mark for NVLink brick 1 probe requests. Can only be changed while config_enable_machine_alloc = 0.
42:47	RW	CONFIG_MAX_MACHINES: Maximum number of state machines to be used. Must be >= 8 and <= 62. Can only be changed while config_enable_machine_alloc = 0.
48:50	RW	LOW_WATER_RESERVED1: Reserved.
51	RW	CONFIG_ENABLE_MACHINE_ALLOC: Enable state machine allocation. Can only be changed from 0 to 1 and must stay at 1 once it is set.
52:63	RO	Constant = 0b000000000000

Register Name	**High Water Register**
Mnemonic	NPU.STCK2.CS.SM1.MISC.HIGH_WATER
Address	0000000005011229 (SCOM)
Description	State machine allocation for high water marks. Each high water mark should be greater than or equal to the corresponding config_low_water and less than the config_max_machines. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_HIGH_WATER_XATS: High water mark for XTS/MISC processor bus requests.
6:11	RW	CONFIG_HIGH_WATER_PWR0: High water mark for processor bus rd/dclaim/atomic/etc. requests.
12:17	RW	CONFIG_HIGH_WATER_PWR1: High water mark for processor bus CP (castout-push) requests.
18:23	RW	CONFIG_HIGH_WATER_REQ0: High water mark for NVLink brick 0 non-probe requests.
24:29	RW	CONFIG_HIGH_WATER_PRB0: High water mark for NVLink brick 0 probe requests.
30:35	RW	CONFIG_HIGH_WATER_REQ1: High water mark for NVLink brick 1 non-probe requests.
36:41	RW	CONFIG_HIGH_WATER_PRB1: High water mark for NVLink brick 1 probe requests.
42:43	RW	HIGH_WATER_RESERVED1: Reserved.
44:63	RO	Constant = 0b00000000000000000000

Register Name	**Relaxed Configuration 0 Register**
Mnemonic	NPU.STCK2.CS.SM1.MISC.CONFIG_RELAXED0
Address	000000005011122A (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_SOURCE0_WRENA: 0 = Disable relaxed source 0 for write operations. 1 = Enable relaxed source 0 for write operations.
1	RW	CONFIG_RELAXED_SOURCE0_RDENA: 0 = Disable relaxed source 0 for read operations. 1 = Enable relaxed source 0 for read operations.
2:19	RW	CONFIG_RELAXED_SOURCE0_MATCH: Relaxed source 0 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.

Bits	SCOM	Field Mnemonic: Description
20:37	RW	CONFIG_RELAXED_SOURCE0_MASK: Relaxed source 0 tag mask value: 0 = Bit is masked off, the corresponding match bit must be zero. 1 = Bit must equal corresponding match bit.
38:39	RW	CONFIG_RELAXED_RESERVED0: Reserved.
40	RW	CONFIG_RELAXED_SOURCE1_WRENA: 0 = Disable relaxed source 1 for write operations. 1 = Enable relaxed source 1 for write operations.
41	RW	CONFIG_RELAXED_SOURCE1_RDENA: 0 = Disable relaxed source 1 for read operations. 1 = Enable relaxed source 1 for read operations.
42:59	RW	CONFIG_RELAXED_SOURCE1_MATCH: Relaxed source 1 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 1 Register
Mnemonic	NPU.STCK2.CS.SM1.MISC.CONFIG_RELAXED1
Address	000000000501122B (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:17	RW	CONFIG_RELAXED_SOURCE1_MASK: Relaxed source 1 tag mask value.
18:19	RW	CONFIG_RELAXED_RESERVED1: Reserved.
20	RW	CONFIG_RELAXED_SOURCE2_WRENA: 0 = Disable relaxed source 2 for write operations. 1 = Enable relaxed source 2 for write operations.
21	RW	CONFIG_RELAXED_SOURCE2_RDENA: 0 = Disable relaxed source 2 for read operations. 1 = Enable relaxed source 2 for read operations.
22:39	RW	CONFIG_RELAXED_SOURCE2_MATCH: Relaxed source 2 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
40:57	RW	CONFIG_RELAXED_SOURCE2_MASK: Relaxed source 2 tag mask value.
58:59	RW	CONFIG_RELAXED_RESERVED2: Reserved.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 2 Register
Mnemonic	NPU.STCK2.CS.SM1.MISC.CONFIG_RELAXED2
Address	000000000501122C (SCOM)
Description	This register configures relaxed ordering. **Note:** This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_CMD_CL_DMA_W: Enable relaxed ordering for cl_dma_w.
1	RW	CONFIG_RELAXED_CMD_CL_DMA_W_HP: Enable relaxed ordering for cl_dma_w_hp.

Bits	SCOM	Field Mnemonic: Description
2	RW	CONFIG_RELAXED_CMD_CL_DMA_INJ: Enable relaxed ordering for cl_dma_inj.
3	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_U: Enable relaxed ordering for armw_cas_imax_u.
4	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_S: Enable relaxed ordering for armw_cas_imax_s.
5	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_U: Enable relaxed ordering for armw_cas_imin_u.
6	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_S: Enable relaxed ordering for armw_cas_imin_s.
7	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_U: Enable relaxed ordering for armwf_cas_imax_u.
8	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_S: Enable relaxed ordering for armwf_cas_imax_s.
9	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_U: Enable relaxed ordering for armwf_cas_imin_u.
10	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_S: Enable relaxed ordering for armwf_cas_imin_s.
11	RW	CONFIG_RELAXED_CMD_PR_DMA_INJ: Enable relaxed ordering for pr_dma_inj.
12	RW	CONFIG_RELAXED_CMD_DMA_PR_W: Enable relaxed ordering for dma_pr_w.
13	RW	CONFIG_RELAXED_CMD_ARMW_ADD: Enable relaxed ordering for armw_add.
14	RW	CONFIG_RELAXED_CMD_ARMW_AND: Enable relaxed ordering for armw_and.
15	RW	CONFIG_RELAXED_CMD_ARMW_OR: Enable relaxed ordering for armw_or.
16	RW	CONFIG_RELAXED_CMD_ARMW_XOR: Enable relaxed ordering for armw_xor.
17	RW	CONFIG_RELAXED_CMD_ARMWF_ADD: Enable relaxed ordering for armwf_add.
18	RW	CONFIG_RELAXED_CMD_ARMWF_AND: Enable relaxed ordering for armwf_and.
19	RW	CONFIG_RELAXED_CMD_ARMWF_OR: Enable relaxed ordering for armwf_or.
20	RW	CONFIG_RELAXED_CMD_ARMWF_XOR: Enable relaxed ordering for armwf_xor.
21	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_E: Enable relaxed ordering for armwf_cas_e.
22	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_U: Enable relaxed ordering for armwf_cas_u.
23	RW	CONFIG_RELAXED_CMD_CL_RD_NC_F0: Enable relaxed ordering for cl_rd_nc(F=0).
24	RW	CONFIG_RELAXED_SOURCE3_WRENA: 0 = Disable relaxed source 3 for write operations. 1 = Enable relaxed source 3 for write operations.
25	RW	CONFIG_RELAXED_SOURCE3_RDENA: 0 = Disable relaxed source 3 for read operations. 1 = Enable relaxed source 3 for read operations.
26:43	RW	CONFIG_RELAXED_SOURCE3_MATCH: Relaxed source 3 tag match value: When config_brazos_mode = 0, matches TTAG 2:3,6:21. When config_brazos_mode = 1, matches TTAG 3,5:21.
44:61	RW	CONFIG_RELAXED_SOURCE3_MASK: Relaxed source 3 tag mask value.
62:63	RW	CONFIG_RELAXED_RESERVED3: Reserved.

Register Name	**NTL0/NDL0 MMIO BAR Register**
Mnemonic	NPU.STCK2.CS.SM1.MISC.NDT0_BAR
Address	000000000501122D (SCOM)
Description	BAR register defining the NDL/NTL MMIO range for brick 0 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT0_BAR_ENABLE: 0 = Disable BAR for brick 0. 1 = Enable BAR for brick 0.
1:2	RW	NDT0_RESERVED1: Reserved.
3:6	RW	CONFIG_NDT0_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT0_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT0_BAR_ADDR: The 128K aligned address of BAR for brick 0's 128K range.
35	RW	NDT0_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	**NTL1/NDL1 MMIO BAR Register**
Mnemonic	NPU.STCK2.CS.SM1.MISC.NDT1_BAR
Address	000000000501122E (SCOM)
Description	BAR register defining the NDL/NTL MMIO range for brick 1 connected to this stack. **Note:** This register should be set to the same value for each brick/stack.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT1_BAR_ENABLE: 0 = Disable BAR for brick 1. 1 = Enable BAR for brick 1.
1:2	RW	NDT1_RESERVED1: Reserved.
3:6	RW	CONFIG_NDT1_BAR_GROUP: Group field of the address for this BAR.
7:9	RW	CONFIG_NDT1_BAR_CHIP: Chip field of the address for this BAR.
10:34	RW	CONFIG_NDT1_BAR_ADDR: The 128K aligned address of BAR for brick 1's 128K range.
35	RW	NDT1_RESERVED2: Reserved.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	**Performance Configuration Register**
Mnemonic	NPU.STCK2.CS.SM1.MISC.PERF_CONFIG
Address	000000000501122F (SCOM)
Description	Performance event selection register.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	PERF_CONFIG_LATSTART: Latency count start event.
8:15	RW	PERF_CONFIG_LATCANCEL: Latency count abort event.
16:23	RW	PERF_CONFIG_EVENT0: Event 0 select.
24:31	RW	PERF_CONFIG_EVENT1: Event 0 select.
32:39	RW	PERF_CONFIG_EVENT2: Event 0 select.
40:47	RW	PERF_CONFIG_EVENT3: Event 0 select.
48:55	RW	PERF_CONFIG_LATFINISH: Latency count finish event.
56:62	RW	PERF_CONFIG_RESERVED2: Reserved.

Bits	SCOM	Field Mnemonic: Description
63	RW	PERF_CONFIG_ACT: Enable clock gates for performance monitor latches.

Register Name	Inhibit Configuration Register
Mnemonic	NPU.STCK2.CS.SM1.MISC.INHIBIT_CONFIG
Address	0000000005011230 (SCOM)
Description	The register configures inhibits for CQ_SM.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_INHIBIT_LFREQ0: Base LFSR frequency 0: 0...11 = $1/2^{(n+1)}$ 12 = $1/2^{14}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
4:5	RW	CONFIG_INHIBIT_PFREQ0: Selects pre frequency 0: 0 = Inhibit timer tick0. 1 = Inverted inhibit timer tick0. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
6	RW	CONFIG_INHIBIT_BLOCKY0: 0 = Disable blocky mode. 1 = Enable blocky mode.
7	RW	CONFIG_INHIBIT_ONESHOT0: 0 = Continuous mode. 1 = One shot mode.
8:15	RW	CONFIG_INHIBIT_DEST0: Selects the destination of the inhibit.
16:19	RW	CONFIG_INHIBIT_LFREQ1: Base LFSR frequency 0: 0...12 = $1/2^{(n+1)}$ 13 = $1/2^{16}$ 14 = $1/2^{18}$ 15 = $1/2^{20}$
20:21	RW	CONFIG_INHIBIT_PFREQ1: Selects pre-frequency 0: 0 = Inhibit timer tick1. 1 = Inverted inhibit timer tick1. 2 = LFSR. 3 = Inverted LFSR (1/2, 3/4, 7/8, ...).
22	RW	CONFIG_INHIBIT_BLOCKY1: 0 = Disable blocky mode. 1 = Enable blocky mode.
23	RW	CONFIG_INHIBIT_ONESHOT1: 0 = Continuous mode. 1 = One shot mode.
24:31	RW	CONFIG_INHIBIT_DEST1: Selects the destination of the inhibit.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	CERR Message 0 Register
Mnemonic	NPU.STCK2.CS.SM1.MISC.CERR_MESSAGE0
Address	0000000005011231 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS0: Reserved.

Register Name	CERR Message 1 Register
Mnemonic	NPU.STCK2.CS.SM1.MISC.CERR_MESSAGE1
Address	0000000005011232 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS1: Reserved.

Register Name	CERR Message 2 Register
Mnemonic	NPU.STCK2.CS.SM1.MISC.CERR_MESSAGE2
Address	0000000005011233 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS2: Reserved.

Register Name	CERR Message 3 Register
Mnemonic	NPU.STCK2.CS.SM1.MISC.CERR_MESSAGE3
Address	0000000005011234 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS3: Reserved.

Register Name	CERR Message 4 Register
Mnemonic	NPU.STCK2.CS.SM1.MISC.CERR_MESSAGE4
Address	0000000005011235 (SCOM)
Description	Error message/capture register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS4: Reserved.

Register Name	CQ_SM Status Register
Mnemonic	NPU.STCK2.CS.SM1.MISC.SM_STATUS
Address	0000000005011236 (SCOM)
Description	Status reporting register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SM_STATUS_CREQ0: Set to 1 when brick 0 CREQ allocation is at its idle level.
1	ROX	SM_STATUS_PRB0: Set to 1 when brick 0 probe allocation is at its idle level.
2	ROX	SM_STATUS_CREQ1: Set to 1 when brick 1 CREQ allocation is at its idle level.
3	ROX	SM_STATUS_PRB1: Set to 1 when brick 1 probe allocation is at its idle level.
4	ROX	SM_STATUS_XATS: Set to 1 when ATS/MISC allocation is at its idle level.
5	ROX	SM_STATUS_PWR0: Set to 1 when processor bus (non-CP*) allocation is at its idle level.
6	ROX	SM_STATUS_PWR1: Set to 1 when processor bus (CP*) allocation is at its idle level.
7	ROX	SM_STATUS_CHGRATE: Set to 1 when chgrate.hang slowdown is being applied to machine allocation.
8:11	ROX	SM_STATUS_MRBGP: Master retry back-off level for group-pump commands.
12:15	ROX	SM_STATUS_MRBSP: Master retry back-off level for system-pump commands.
16:19	ROX	SM_STATUS_FENCE0: Brick 0 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X = Flushing pocket cache entries prior to exiting fence.
20:23	ROX	SM_STATUS_FENCE1: Brick 1 fence sequencing state: 0000 = Idle state, completely unfenced. 0XXX = In transition between fenced and not fenced. 0111 = Fenced state, fence sequencing complete. 100X= Flushing pocket cache entries prior to exiting fence.
24	ROX	SM_STATUS_PBLN: Set to 1 when the outbound Ln scope processor bus request queue is empty.
25	ROX	SM_STATUS_PBNNG: Set to 1 when the outbound Nn/G scope processor bus request queue is empty.
26	ROX	SM_STATUS_PBRNVG: Set to 1 when the outbound Rn/Vg scope processor bus request queue is empty.
27	ROX	SM_STATUS_N0REQ: Set to 1 when the outbound brick 0 CREQ request queue is empty.
28	ROX	SM_STATUS_N0DGD: Set to 1 when the outbound brick 0 downgrade request queue is empty.
29	ROX	SM_STATUS_N1REQ: Set to 1 when the outbound brick 1 CREQ request queue is empty.
30	ROX	SM_STATUS_N1DGD: Set to 1 when the outbound brick 1 downgrade request queue is empty.
31	ROX	SM_STATUS_MMIO: Set to 1 when the outbound MMIO/GenId request queue is empty.
32	ROX	SM_STATUS_ATSXLATE: Set to 1 when the outbound ATS TCE translation request queue is empty.
33	ROX	SM_STATUS_PBRSP: Set to 1 when the outbound processor bus data response/merge operation queue is empty.
34	ROX	SM_STATUS_N0RSP: Set to 1 when the outbound brick 0 response queue is empty.
35	ROX	SM_STATUS_N1RSP: Set to 1 when the outbound brick 1 response queue is empty.
36	ROX	SM_STATUS_XARSP: Set to 1 when the outbound ATS/MISC response queue is empty.
37	ROX	SM_STATUS_SACOLL: Set to 1 when the same address collision check queue is empty.
38	ROX	SM_STATUS_FREE: Set to 1 when the free state machine queue is empty.
39	ROX	SM_STATUS_RESERVED1: Reserved.
40:63	RO	Constant = 0b000000000000000000000000

Register Name	CERR First 0 Register
Mnemonic	NPU.STCK2.CS.SM1.MISC.CERR_FIRST0
Address	0000000005011237 (SCOM)
Description	c_err_rpt first latches read-write-1-clear register.

Bits	SCOM	Field Mnemonic: Description

Address	0000000005011239 (SCOM)
Description	2 latches c_err_rpt first latches read-write-1-clear reg

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_0: NLG0 s3: RCMD Event received but state machine is not IDLE.
1	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_1: NLG1 s3: Pocket-Hit event but not in M_PCKT_WAIT_HIT state.
2	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_2: NLG2 s3: M_WT_CRESP: ma_scresp table lookup missed.
3	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_3: NLG3 s3: M_WT_CRESP: start epsilon, but epsilon already in progress.
4	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_4: NLG4 s3: M_WT_CRESP: ma_scresp indicated 'evaporate' but have NV modified data.
5	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_5: NLG5 s3: M_WT_CRESP: ma_scresp indicated 'evaporate' but have PB modified data.
6	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_6: NLG6 s3: M_WT_CRESP: bad scenario code from ma_scresp table.
7	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_7: NLG7 s3: snoop CRESP received but not in M_WT_CRESP state.
8	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_8: NLG8 s3: MCResp-Pocket-Hit event but not in PC_* state.
9	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_9: NLG9 s3: PC_WT_CRESP: ma_mcresp table lookup missed.
10	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_10: NLG10 s3: PC_WT_CRESP: Write coll state didn't match early protection state.
11	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_11: NLG11 s3: PC_WT_CRESP: start epsilon, but epsilon already in progress.
12	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_12: NLG12 s3: PC_WT_CRESP: bad scenario code from ma_mcresp table.
13	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_13: NLG13 s3: PC_BK_WT_CRESP: bad next-step for bkill (ack-done).
14	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_14: NLG14 s3: PC_BK_WT_CRESP: bad next-step for bkill (retry).
15	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_15: NLG15 s3: PC_BK_WT_CRESP: bad CRESP for a bkill.
16	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_16: NLG16 s3: master CRESP received but not in PC_WT_CRESP/PC_BK_WT_CRESP states.
17	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_17: NLG17 s3: M_IDLE: Invalid DATALEN[3:0] for data command.
18	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_18: NLG18 s3: M_IDLE: Invalid command type received.
19	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_19: NLG19 s3: AT-translate-Response event but not in wait-translate state.
20	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_20: NLG20 s3: AT-translate-Response event had bad translate status, but command not recognized.
21	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_21: NLG21 s3: SA-Done event but not in wait-SA state.
22	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_22: NLG22 s3: PC_WAIT_DATADONE: bad next-step for PB data transmit.
23	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_23: NLG23 s3: TD_WAIT_DATADONE: Unknown NVLink Master Command.
24	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_24: NLG24 s3: BuffDone event but not in PB/PC/MG/NR/XATS/TD_WAIT_DATADONE state.

Bits	SCOM	Field Mnemonic: Description
25	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_25: NLG25 s3: NC_WT_RESP: Unknown nv-master command for NVLink response.
26	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_26: NLG26 s3: RspIn event but not in RG_WT_RESP or NC_WT_RESP state.
27	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_27: NLG27 s3: Epsilon-In-Progress, but epsilon counter clock is not the epsilon clock.
28	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_28: NLG28 s3: Epsilon counter clock is 'epsilon' but epsilon_ip is not set.
29	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_29: NLG29 s3: PC_WT_BK_RBACK: bad next-step for bkill.
30	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_30: NLG30 s3: M/RR_BACK timer expired but not in PC_WT(_BK)_RBACK state.
31	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_31: NLG31 s3: Bad epclock value.
32	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_32: NLG32 s3: coll_state is POCKET_RCOLL_ND but master state is not PCKT_WAIT_HIT.
33	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_33: NLG33 s3: Unknown sm_master_state in ESCAN_LCAO event.
34	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_34: NLG34 s3: Unknown Event type received.
35	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_35: NLG35 s4: M_EVAL_DIR: ma_dsa table lookup missed.
36	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_36: NLG36 s4: M_EVAL_DIR: Unknown merge opcode from dsa table.
37	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_37: NLG37 s4: Unknown State.
38	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_38: NLG38 s3: coll_state is POCKET_RCOLL_OND but master state is not PCKT_WAIT_HIT.
39	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_39: NLG39 s3: Unknown sm_master_state in ESCAN_FENCE event.
40	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_40: NLG40 s3: FENCE_WT_RESP_FILL: Unknown nv-master command for Fence-Fill-SUE response.
41	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_41: NLG41 s3: M_WT_CRESP: impossible command/CRESP.
42	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_42: NLG42 s3: PC_WT_CRESP: impossible command/CRESP.
43	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_43: NLG43 s3: M_EVAL_DIR: impossible command/CRESP.
44	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_44: NLG44 s4: Unexpected Error State (bad sub-sequence return).
45	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_45: NLG45 s3: sfstat-retry but not in retry-abbks collision state.
46	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_46: NLG46 s3: *cond*-retry but not in retry-abbks collision state.
47	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_47: NLG47 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.
48	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_48: NLG48 s3: NVLink response timeout but not in waiting-NV-response state.
49	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_49: NLG49 s4: M_EVAL_DIR: Unsupported NVLink command for POWER9-to-POWER9 mode.
50	RWX_WCLEAR	IDIAL_SM_FIRST_NLG_50: NLG50 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.

Register Name	CERR Hold 2 Register
Mnemonic	NPU.STCK2.CS.SM1.MISC.CERR_HOLD2
Address	000000000501123F (SCOM)
Description	2 latches c_err_rpt hold latches read-write-clear reg

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_0: NLG0 s3: RCMD Event received but state machine is not IDLE.
1	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_1: NLG1 s3: Pocket-Hit event but not in M_PCKT_WAIT_HIT state.
2	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_2: NLG2 s3: M_WT_CRESP: ma_scresp table lookup missed.
3	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_3: NLG3 s3: M_WT_CRESP: start epsilon, but epsilon already in progress.
4	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_4: NLG4 s3: M_WT_CRESP: ma_scresp indicated 'evaporate' but have NV modified data.
5	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_5: NLG5 s3: M_WT_CRESP: ma_scresp indicated 'evaporate' but have PB modified data.
6	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_6: NLG6 s3: M_WT_CRESP: bad scenario code from ma_scresp table.
7	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_7: NLG7 s3: snoop CRESP received but not in M_WT_CRESP state.
8	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_8: NLG8 s3: MCResp-Pocket-Hit event but not in PC_* state.
9	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_9: NLG9 s3: PC_WT_CRESP: ma_mcresp table lookup missed.
10	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_10: NLG10 s3: PC_WT_CRESP: Write coll state didn't match early protection state.
11	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_11: NLG11 s3: PC_WT_CRESP: start epsilon, but epsilon already in progress.
12	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_12: NLG12 s3: PC_WT_CRESP: bad scenario code from ma_mcresp table.
13	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_13: NLG13 s3: PC_BK_WT_CRESP: bad next-step for bkill (ack-done).
14	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_14: NLG14 s3: PC_BK_WT_CRESP: bad next-step for bkill (retry).
15	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_15: NLG15 s3: PC_BK_WT_CRESP: bad CRESP for a bkill.
16	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_16: NLG16 s3: master CRESP received but not in PC_WT_CRESP/PC_BK_WT_CRESP states.
17	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_17: NLG17 s3: M_IDLE: Invalid DATALEN[3:0] for data command.
18	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_18: NLG18 s3: M_IDLE: Invalid command type received.
19	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_19: NLG19 s3: AT-translate-Response event but not in wait-translate state.
20	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_20: NLG20 s3: AT-translate-Response event had bad translate status, but command not recognized.
21	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_21: NLG21 s3: SA-Done event but not in wait-SA state.
22	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_22: NLG22 s3: PC_WAIT_DATADONE: bad next-step for PB data transmit.
23	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_23: NLG23 s3: TD_WAIT_DATADONE: Unknown NVLink Master Command.
24	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_24: NLG24 s3: BuffDone event but not in PB/PC/MG/NR/XATS/TD_WAIT_DATADONE state.
25	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_25: NLG25 s3: NC_WT_RESP: Unknown nv-master command for NVLink response.
26	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_26: NLG26 s3: RspIn event but not in RG_WT_RESP or NC_WT_RESP state.
27	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_27: NLG27 s3: Epsilon-In-Progress, but epsilon counter clock is not the epsilon clock.
28	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_28: NLG28 s3: Epsilon counter clock is 'epsilon' but epsilon_ip is not set.

Bits	SCOM	Field Mnemonic: Description
29	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_29: NLG29 s3: PC_WT_BK_RBACK: bad next-step for bkill.
30	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_30: NLG30 s3: M/RR_BACK timer expired but not in PC_WT(_BK)_RBACK state.
31	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_31: NLG31 s3: Bad epclock value.
32	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_32: NLG32 s3: coll_state is POCKET_RCOLL_ND but master state is not PCKT_WAIT_HIT.
33	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_33: NLG33 s3: Unknown sm_master_state in ESCAN_LCAO event.
34	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_34: NLG34 s3: Unknown Event type received.
35	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_35: NLG35 s4: M_EVAL_DIR: ma_dsa table lookup missed.
36	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_36: NLG36 s4: M_EVAL_DIR: Unknown merge opcode from dsa table.
37	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_37: NLG37 s4: Unknown State.
38	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_38: NLG38 s3: coll_state is POCKET_RCOLL_OND but master state is not PCKT_WAIT_HIT.
39	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_39: NLG39 s3: Unknown sm_master_state in ESCAN_FENCE event.
40	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_40: NLG40 s3: FENCE_WT_RESP_FILL: Unknown nv-master command for Fence-Fill-SUE response.
41	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_41: NLG41 s3: M_WT_CRESP: impossible command/cresp.
42	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_42: NLG42 s3: PC_WT_CRESP: impossible command/cresp.
43	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_43: NLG43 s3: M_EVAL_DIR: impossible command/cresp.
44	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_44: NLG44 s4: Unexpected Error State (bad sub-sequence return).
45	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_45: NLG45 s3: sfstat-retry but not in retry-abbks collision state.
46	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_46: NLG46 s3: *cond*-retry but not in retry-abbks collision state.
47	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_47: NLG47 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.
48	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_48: NLG48 s3: NVLink response timeout but not in waiting-NV-response state.
49	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_49: NLG49 s4: M_EVAL_DIR: Unsupported NVLink command for POWER9-to-POWER9 mode.
50	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_50: NLG50 s3: Request from CTL/NTL caused bad MMIO alignment, but command not recognized.
51	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_51: NLG51 (Reserved).
52	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_52: NLG52 (Reserved).
53	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_53: NLG53 (Reserved).
54	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_54: NLG54 (Reserved).
55	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_55: NLG55 (Reserved).
56	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_56: NLG56 (Reserved).
57	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_57: NLG57 (Reserved).
58	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_58: NLG58 (Reserved).
59	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_59: NLG59 (Reserved).
60	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_60: NLG60 (Reserved).
61	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_61: NLG61 (Reserved).
62	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_62: NLG62 (Reserved).
63	RWX_WCLRREG	IDIAL_SM_HOLD_NLG_63: NLG63 (Reserved).

Register Name	**CQ_SM Miscellaneous Configuration 0 Register**
Mnemonic	NPU.STCK2.CS.SM2.MISC.CONFIG0
Address	0000000005011240 (SCOM)
Description	Misc Configuration Register Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG1_Reserved1: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
1	RW	CONFIG_MA_DSA_OPT_CLAIM_UR: 0/1 = use Read.RWC/Upgrade.DN for dclaim/dcbz to GPU Mem.
2	RW	CONFIG_MA_DSA_OPT_FLUSH_UR: 0/1 = use Read.RWC/Upgrade.DN for dcbf/dcbfc to GPU Mem.
3	RW	CONFIG_MA_DSA_OPT_RP_MODE: 0/1 = use DMA/Read-Push for Write.NC to Proc Mem.
4	RW	CONFIG_ADR_BAR_MODE: Processor bus adr_bar: 0/1 = large-system-mode/small-system-mode.
5	RW	CONFIG_DISABLE_NN_RN: Processor bus scope: 0/1 = Enable Nn and Rn scopes / Disable Nn and Rn scopes.
6	RW	CONFIG_DISABLE_VG_NOT_SYS: Processor bus scope: 0/1 = Enable Vg less than sys / Force all Vg to sys.
7	RW	CONFIG_DISABLE_G: Processor bus scope: 0/1 = Enable G scope / Disable G scope.
8	RW	CONFIG_DISABLE_LN: Processor bus scope: 0/1 = Enable Ln scope / Disable Ln scope.
9	RW	CONFIG_SKIP_G: Processor bus scope: 0/1 = Allow G on rty_inc / Skip G on rty_inc.
10	RW	CONFIG_MA_MCRESP_OPT_WRP: 0/1 = increase scope on rty_inc to dma_w / use write-read-push on rty_inc to dma_w.
11	RW	CONFIG_MA_MCRESP_OPT_RTY_INJ: On a rty_inj type cresp, 0/1 = keep sending dma/change to _inj.
12	RW	CONFIG_MA_MCRESP_OPT_RTY_DMA: On a rty_dma type cresp, 0/1 = keep sending inj/change to _dma.
13:15	RW	CONFIG_INC_PRI_MASK: Mask select for priority increase due to rty_drp. 0: 100% chance to increase priority. 1: 50% chance to increase priority. 2: 25% chance to increase priority. 3: 12.5% chance to increase priority. 4: 6% chance to increase priority. 5: 3% chance to increase priority. 6,7: 1.5% chance to increase priority.
16	RW	CONFIG1_Reserved2: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
17	RW	CONFIG_MA_RSNOOP_OPT_B: TBD future option bit.
18	RW	CONFIG_MA_RSNOOP_OPT_C: TBD future option bit.
19	RW	CONFIG_MA_SCRESP_OPT_A: TBD future option bit.
20	RW	CONFIG_MA_SCRESP_OPT_B: TBD future option bit.
21	RW	CONFIG_MA_SCRESP_OPT_C: TBD future option bit.
22	RW	CONFIG_Reserved4: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.

Bits	SCOM	Field Mnemonic: Description
23	RW	CONFIG_MACH_CORRENAB: 0/1 = Disable/enable state machine array ECC correction.
24	RW	CONFIG_MACH_INJECT_ENABLE1: 0/1 = Disable/enable state machine array ECC error inject bit 1.
25	RW	CONFIG_MACH_INJECT_ENABLE2: 0/1 = Disable/enable state machine array ECC error inject bit 2.
26	RW	CONFIG_RXO_CORRENAB: 0/1 = Disable/enable ReqRspOut array ECC correction.
27	RW	CONFIG_RXO_INJECT_ENABLE1: 0/1 = Disable/enable ReqRspOut array ECC error inject bit 1.
28	RW	CONFIG_RXO_INJECT_ENABLE2: 0/1 = Disable/enable ReqRspOut array ECC error inject bit 1.
29	RW	CONFIG_RSI_CORRENAB: 0/1 = Disable/enable PB-Rsp-In array ECC correction.
30	RW	CONFIG_RSI_INJECT_ENABLE1: 0/1 = Disable/enable PB-Rsp-Ine array ECC error inject bit 1.
31	RW	CONFIG_RSI_INJECT_ENABLE2: 0/1 = Disable/enable PB-Rsp-Ine array ECC error inject bit 1.
32:33	RW	CONFIG_MA_RSNOOP_OPT_DCLAIM: 0 = partial-respond to dclaim to GPU Mem with lpc_ack. 1 = partial-respond to dclaim to GPU Mem with lpc_ack+rty_lost_claim. 2 = partial-respond to dclaim to GPU Mem with lpc_ack+rty_lpc+start pocket cache. 3 = Reserved.
34	RW	CONFIG_MA_DSA_OPT_DMA_UPG: 0/1 = non-relaxed dma_w use Read.RWC/Upgrade.DN to acquire pocket-cache state/data.
35	RW	CONFIG_EVAPORATE_BY_LCO: 0/1 = just free the state-machine without lco/evaporate pocket-cache entries by lco.
36	RW	CONFIG_MRBGP_TRACK_ALL: 0/1 = master-retry-backoff group-pump track only this stack's/all-this-chips retry responses.
37	RW	CONFIG_MRBSP_TRACK_ALL: 0/1 = master-retry-backoff system-pump track only this stack's/all-this-chips retry responses.
38	RW	CONFIG_ENABLE_PBUS: 0/1 = Disable NPU processor bus RCMD, PResp, and CRESP interfaces / enable these interfaces.
39	RW	CONFIG_BRAZOS_MODE: 0/1 = non-brazos 4-group;2-chip mode / brazos 2-group;4-chip mode.
40	RW	CONFIG_ENABLE_SNARF_CPM: 0/1 = Disable/enable Probe.I.MO snarfing a cp_m.
41	RW	CONFIG_PREALLOC2_REQ0: 0/1 = pre-allocate 2 state-machines to brick 0 CREQ channel.
42	RW	CONFIG_PREALLOC2_PRB0: 0/1 = pre-allocate 2 state-machines to brick 0 PRB channel.
43	RW	CONFIG_PREALLOC2_REQ1: 0/1 = pre-allocate 2 state-machines to brick 1 CREQ channel.
44	RW	CONFIG_PREALLOC2_PRB1: 0/1 = pre-allocate 2 state-machines to brick 1 PRB channel.
45	RW	CONFIG_PREALLOC2_XATS: 0/1 = pre-allocate 2 state-machines to XATS interface.
46	RW	CONFIG_DISABLE_INJECT: 0/1 = Enable sending cl,pr_dma_inj / disable sending cl,pr_dma_inj. Note: to truly disable sending _inj commands, the following bits must also be set to '0': config_ma_mcresp_opt_rty_inj. config_ma_dsa_opt_rp_mode.
47	RW	CONFIG_DCACHE_MODE: 0/1 = drive data-bus dcache field in basic mode / CAPP mode.
48	RW	CONFIG_DCACHE_REPORTS_PHYSICAL: 0/1 = in basic mode, report local masters as near / local.
49	RW	CONFIG_RSI_DISABLE_DATIN_FASTPATH: 0/1 = Enable rsi PB data-in fastpath/disable fastpath.
50	RW	CONFIG_PCKT_BLK_PRB: 0/1 = valid pocket-cache entries do not block probes / probes are blocked.
51	RW	CONFIG_P9P9_MODE: 0/1 = normal operation / run in special lab-bringup GPU-less POWER9-to-POWER9 mode.
52	RW	CONFIG_FORBID_MMIO_READ_GT_32: 0/1 = Allow GPU->PB MMIOs > 32-bytes / flag-error and brick-fence on MMIOs > 32-bytes.
53	RW	CONFIG_FORBID_MMIO_ATOMIC: 0/1 = Allow GPU->PB atomics to MMIO space / flag-error and brick-fence on atomics to MMIO space.

Bits	SCOM	Field Mnemonic: Description
54	RW	CONFIG_OPT_SNOOP_CP: 0/1 = Snoop POWER9-Mem cp_* type commands / don't snoop cp_* type commands.
55:63	RW	CONFIG0_Reserved3: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.

Register Name	**CQ_SM Miscellaneous Configuration 1 Register**
Mnemonic	NPU.STCK2.CS.SM2.MISC.CONFIG1
Address	0000000005011241 (SCOM)
Description	Misc Configuration Register Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_RANDOM_BACKOFF_DUR_MASK: Mask for the base random duration of a random retry backoff. 0000 -> 0-15 base random duration. 0001 -> 0-31 base random duration. 0011 -> 0-63 base random duration. 0111 -> 0-127 base random duration. 1111 -> 0-255 base random duration.
4:7	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_REQ: Mask for for the slowdown of NTL CReq credits during chgrate.hang. 'n' -> 1/(2^(n+1)) cycles average rate. Note that for a single processor bus ramp, the rate is actually 8 times faster since there are 4 RCMD slice x 2 NTL Bricks that get CReq credits. This field is the rate for 1 brick receiving credit from 1 RCMD slice.
8:11	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_PRB: Mask for for the slowdown of NTL Probe credits during chgrate.hang. 'n' -> 1/(2^(n+1)) cycles average rate. Note that for a single processor bus ramp, the rate is actually 8 times faster since there are 4 RCMD slice x 2 NTL Bricks that get CReq credits. This field is the rate for 1 brick receiving credit from 1 RCMD slice.
12:15	RW	CONFIG_ARB_NONCRR_SAFETY: Safety valve for non-cresp/non-reqin events going down the arb pipe. after N+1 reqin events go through the arbiter while a non-crr event is waiting, reqin events are blocked to give non-crr events a chance.
16:27	RW	CONFIG_EPSILON_WLN_COUNT: epsilon count for Ln scope CP-Write.
28:31	RW	CONFIG_SCALE_RPT_HANG_POLL: Scaling factor for rpt_hang.poll. 0 = 1:1 processor bus rpt_hang.polls received. 1 = 1:2 processor bus rpt_hang.polls received. ... 15 = 1:16 processor bus rpt_hang.polls received.
32:35	RW	CONFIG_SCALE_RPT_HANG_DATA: Scaling factor for rpt_hang.data. 0 = 1:1 processor bus rpt_hang.datas received. 1 = 1:2 processor bus rpt_hang.datas received. ... 15 = 1:16 processor bus rpt_hang.datas received.
36:63	RW	CONFIG1_Reserved: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.

Register Name	Power Bus Epsilon Configuration Register
Mnemonic	NPU.STCK2.CS.SM2.MISC.EPSILON_CONFIG
Address	0000000005011242 (SCOM)
Description	Pprocessor bus Epsilon Configuration Register Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_EPSILON_RATE: 0 = decrement epsilon count at 1:1 nest_gckn. ... 15 = epsilon count at 1/16 nest_gckn.
4:15	RW	CONFIG_EPSILON_W0_COUNT: epsilon count for Nn/G scope CP-Write.
16:27	RW	CONFIG_EPSILON_W1_COUNT: epsilon count for Rn/Vg scope CP-Write.
28:39	RW	CONFIG_EPSILON_R0_COUNT: epsilon count for Ln scope Reads.
40:51	RW	CONFIG_EPSILON_R1_COUNT: epsilon count for Nn/G scope Reads.
52:63	RW	CONFIG_EPSILON_R2_COUNT: epsilon count for Rn/Vg scope Reads.

Register Name	Timer Configuration Register
Mnemonic	NPU.STCK2.CS.SM2.MISC.XTIMER_CONFIG
Address	0000000005011243 (SCOM)
Description	Timer Configuration Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	CONFIG_POCKET_RATE1: Rate-1 for the Pocket-Cache w/ Data entries. The Pocket-Cache timer is used to evaporate pocket-cache entries which are not claimed. The Long timer duration is f(Rate-1)*2^(Rate-2)*5e-10 seconds and. the Short timer duration is f(Rate-1)*2^(Rate-3)*5e-10 seconds where f(Rate-1) is: f(0b00) = 7. f(0b01) = 63. f(0b10) = 511. f(0b11) = 4095.
2:7	RW	CONFIG_POCKET_RATE2: Rate-2 for the long timer for Pocket-Cache entries (2^n cycles).
8:13	RW	CONFIG_POCKET_RATE3: Rate-3 for the short timer for Pocket-Cache entries (2^n cycles).
14:19	RW	CONFIG_FWD_PROG_RATE2: Rate-2 for the forward-progress timer (2^n cycles).
20:25	RW	CONFIG_CTL_TICK: Rate for CTL timer tick (default 63 = off). Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
26:31	RW	CONFIG_INH0_TICK: Rate for SM-Inhibit timer tick0 (default 63 = off). Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
32:37	RW	CONFIG_INH1_TICK: Rate for SM-Inhibit timer tick1 (default 63 = off). Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.

Bits	SCOM	Field Mnemonic: Description
38:39	RW	CONFIG_NV_RESP_RATE1: Rate-1 for NV-Response timer. The timer duration is f(Rate-1)*2^(Rate-2)*5e-10 seconds. f(0b00) = 7. f(0b01) = 63. f(0b10) = 511. f(0b11) = 4095.
40:45	RW	CONFIG_NV_RESP_RATE2: Rate-2 for the NV-Response timer (2^n cycles).
46:47	RW	CONFIG_POCKET_ND_RATE1: Rate-1 for the Pocket-Cache Dataless entries. The Pocket-Cache timer is used to evaporate pocket-cache entries which are not claimed. The Long timer duration is f(Rate-1)*2^(Rate-2)*5e-10 seconds and. the Short timer duration is f(Rate-1)*2^(Rate-3)*5e-10 seconds where f(Rate-1) is: f(0b00) = 7. f(0b01) = 63. f(0b10) = 511. f(0b11) = 4095.
48:63	RO	Constant = 0b0000000000000000

Register Name	GPU BAR Register
Mnemonic	NPU.STCK2.CS.SM2.MISC.GPU_BAR
Address	0000000005011244 (SCOM)
Description	Memory BARs BAR register defining GPU Mem addresses serviced by bricks 0 and 1 connected to this stack. Note: This register should be set to the same value for each brick/stack. MDials have been created at NPU_STACK_WRAP for this register's IDials

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GPU0_BAR_ENABLE: 0/1 = Disable/enable BAR for brick 0.
1:2	RW	CONFIG_GPU0_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 0. Note: It is illegal to set this field to 0b11.
3:6	RW	CONFIG_GPU0_BAR_GROUP: group field of the Base address of BAR for brick 0.
7:9	RW	CONFIG_GPU0_BAR_CHIP: Chip field of the Base address of BAR for brick 0.
10:21	RW	CONFIG_GPU0_BAR_ADDR: Base address (1G address) of BAR for brick 0. Must be aligned on the size of the BAR mask.
22	RW	CONFIG_GPU0_BAR_Reserved: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
23	RW	CONFIG_GPU0_BAR_GRANULE: Hash boundary for brick 0: 0 = hash on 512B boundary (hashbits(0:7) = addr(47:54)). 1 = hash on 1024B boundary (hashbits(0:7) = addr(46:53)).
24:27	RW	CONFIG_GPU0_BAR_SIZE: Size of Base Address match for the BAR for brick 0. 0 = 1G. 1 = 2G. 2 = 4G. ... 9 = 512G. 10 = 1T. 11 = 2T. 12 = 4T. >12 = Reserved.

Bits	SCOM	Field Mnemonic: Description

10:34	RW	CONFIG_GENID_BAR_ADDR: 128K aligned address of this BARs 128K range.
35	RW	GENID_Reserved2: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	**Low Water Register**
Mnemonic	NPU.STCK2.CS.SM2.MISC.LOW_WATER
Address	0000000005011248 (SCOM)
Description	Water Marks State-Machine allocation Low-Water Marks Each Low-Water mark should be > = 1 and the sum of the Low-Water marks must be less than config_max_machines Low-Water marks must not be changed after config_enable_machine_alloc is set to 1 and config_enable_machine_alloc must remain at 1 once set to 1 Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_LOW_WATER_XATS: Low-Water mark for XTS/MISC processor bus requests. Can only be changed while config_enable_machine_alloc = 0.
6:11	RW	CONFIG_LOW_WATER_PWR0: Low-Water mark for processor bus rd/dclaim/atomic/etc. requests. Can only be changed while config_enable_machine_alloc = 0.
12:17	RW	CONFIG_LOW_WATER_PWR1: Low-Water mark for processor bus cp (castout-push) requests. Can only be changed while config_enable_machine_alloc = 0.
18:23	RW	CONFIG_LOW_WATER_REQ0: Low-Water mark for NVLink brick-0 non-Probe requests. Can only be changed while config_enable_machine_alloc = 0.
24:29	RW	CONFIG_LOW_WATER_PRB0: Low-Water mark for NVLink brick-0 Probe requests. Can only be changed while config_enable_machine_alloc = 0.
30:35	RW	CONFIG_LOW_WATER_REQ1: Low-Water mark for NVLink brick-1 non-Probe requests. Can only be changed while config_enable_machine_alloc = 0.
36:41	RW	CONFIG_LOW_WATER_PRB1: Low-Water mark for NVLink brick-1 Probe requests. Can only be changed while config_enable_machine_alloc = 0.
42:47	RW	CONFIG_MAX_MACHINES: Maximum number of state-machines to be used. Must be > = 8 and < = 62. Can only be changed while config_enable_machine_alloc = 0.
48:50	RW	LOW_WATER_Reserved1: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
51	RW	CONFIG_ENABLE_MACHINE_ALLOC: Enable state-machine allocation. Can only be changed 0->1, must stay 1 once set.

Bits	SCOM	Field Mnemonic: Description
52:63	RO	Constant = 0b000000000000

Register Name	High Water Register
Mnemonic	NPU.STCK2.CS.SM2.MISC.HIGH_WATER
Address	0000000005011249 (SCOM)
Description	Water Marks State-Machine allocation High-Water Marks Each High-Water mark should be > = corresponding config_low_water and < config_max_machines Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_HIGH_WATER_XATS: High-Water mark for XTS/MISC processor bus requests.
6:11	RW	CONFIG_HIGH_WATER_PWR0: High-Water mark for processor bus rd/dclaim/atomic/etc. requests.
12:17	RW	CONFIG_HIGH_WATER_PWR1: High-Water mark for processor bus cp (castout-push) requests.
18:23	RW	CONFIG_HIGH_WATER_REQ0: High-Water mark for NVLink brick-0 non-Probe requests.
24:29	RW	CONFIG_HIGH_WATER_PRB0: High-Water mark for NVLink brick-0 Probe requests.
30:35	RW	CONFIG_HIGH_WATER_REQ1: High-Water mark for NVLink brick-1 non-Probe requests.
36:41	RW	CONFIG_HIGH_WATER_PRB1: High-Water mark for NVLink brick-1 Probe requests.
42:43	RW	HIGH_WATER_Reserved1: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
44:63	RO	Constant = 0b00000000000000000000

Register Name	Relaxed Configuration 0 Register
Mnemonic	NPU.STCK2.CS.SM2.MISC.CONFIG_RELAXED0
Address	000000000501124A (SCOM)
Description	Ordering Config0 Configure relaxed-ordering Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_SOURCE0_WRENA: 0/1 = Disable/enable relaxed source0 for write operations.
1	RW	CONFIG_RELAXED_SOURCE0_RDENA: 0/1 = Disable/enable relaxed source0 for read operations.
2:19	RW	CONFIG_RELAXED_SOURCE0_MATCH: relaxed source0 tag match value. when config_brazos_mode = 0, matches TTag 2:3,6:21. when config_brazos_mode = 1, matches TTag 3,5:21.
20:37	RW	CONFIG_RELAXED_SOURCE0_MASK: relaxed source0 tag mask value. 0 = bit is masked off, corresponding match bit must be zero. 1 = bit must equal corresponding match bit.
38:39	RW	CONFIG_RELAXED_Reserved0: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
40	RW	CONFIG_RELAXED_SOURCE1_WRENA: 0/1 = Disable/enable relaxed source1 for write operations.

Bits	SCOM	Field Mnemonic: Description
41	RW	CONFIG_RELAXED_SOURCE1_RDENA: 0/1 = Disable/enable relaxed source1 for read operations.
42:59	RW	CONFIG_RELAXED_SOURCE1_MATCH: relaxed source1 tag match value. when config_brazos_mode = 0, matches TTag 2:3,6:21. when config_brazos_mode = 1, matches TTag 3,5:21.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 1 Register
Mnemonic	NPU.STCK2.CS.SM2.MISC.CONFIG_RELAXED1
Address	000000000501124B (SCOM)
Description	Ordering Config1 Configure relaxed-ordering Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:17	RW	CONFIG_RELAXED_SOURCE1_MASK: relaxed source1 tag mask value.
18:19	RW	CONFIG_RELAXED_Reserved1: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
20	RW	CONFIG_RELAXED_SOURCE2_WRENA: 0/1 = Disable/enable relaxed source2 for write operations.
21	RW	CONFIG_RELAXED_SOURCE2_RDENA: 0/1 = Disable/enable relaxed source2 for read operations.
22:39	RW	CONFIG_RELAXED_SOURCE2_MATCH: relaxed source2 tag match value. when config_brazos_mode = 0, matches TTag 2:3,6:21. when config_brazos_mode = 1, matches TTag 3,5:21.
40:57	RW	CONFIG_RELAXED_SOURCE2_MASK: relaxed source0 tag mask value.
58:59	RW	CONFIG_RELAXED_Reserved2: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 2 Register
Mnemonic	NPU.STCK2.CS.SM2.MISC.CONFIG_RELAXED2
Address	000000000501124C (SCOM)
Description	Ordering Config2 Configure relaxed-ordering Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_CMD_CL_DMA_W: Enable relaxed ordering for cl_dma_w.
1	RW	CONFIG_RELAXED_CMD_CL_DMA_W_HP: Enable relaxed ordering for cl_dma_w_hp.
2	RW	CONFIG_RELAXED_CMD_CL_DMA_INJ: Enable relaxed ordering for cl_dma_inj.
3	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_U: Enable relaxed ordering for armw_cas_imax_u.
4	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_S: Enable relaxed ordering for armw_cas_imax_s.

Bits	SCOM	Field Mnemonic: Description
5	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_U: Enable relaxed ordering for armw_cas_imin_u.
6	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_S: Enable relaxed ordering for armw_cas_imin_s.
7	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_U: Enable relaxed ordering for armwf_cas_imax_u.
8	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_S: Enable relaxed ordering for armwf_cas_imax_s.
9	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_U: Enable relaxed ordering for armwf_cas_imin_u.
10	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_S: Enable relaxed ordering for armwf_cas_imin_s.
11	RW	CONFIG_RELAXED_CMD_PR_DMA_INJ: Enable relaxed ordering for pr_dma_inj.
12	RW	CONFIG_RELAXED_CMD_DMA_PR_W: Enable relaxed ordering for dma_pr_w.
13	RW	CONFIG_RELAXED_CMD_ARMW_ADD: Enable relaxed ordering for armw_add.
14	RW	CONFIG_RELAXED_CMD_ARMW_AND: Enable relaxed ordering for armw_and.
15	RW	CONFIG_RELAXED_CMD_ARMW_OR: Enable relaxed ordering for armw_or.
16	RW	CONFIG_RELAXED_CMD_ARMW_XOR: Enable relaxed ordering for armw_xor.
17	RW	CONFIG_RELAXED_CMD_ARMWF_ADD: Enable relaxed ordering for armwf_add.
18	RW	CONFIG_RELAXED_CMD_ARMWF_AND: Enable relaxed ordering for armwf_and.
19	RW	CONFIG_RELAXED_CMD_ARMWF_OR: Enable relaxed ordering for armwf_or.
20	RW	CONFIG_RELAXED_CMD_ARMWF_XOR: Enable relaxed ordering for armwf_xor.
21	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_E: Enable relaxed ordering for armwf_cas_e.
22	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_U: Enable relaxed ordering for armwf_cas_u.
23	RW	CONFIG_RELAXED_CMD_CL_RD_NC_F0: Enable relaxed ordering for cl_rd_nc(F = 0).

26	RW	CONFIG_RXO_CORRENAB: 0/1 = Disable/enable ReqRspOut array ECC correction.
27	RW	CONFIG_RXO_INJECT_ENABLE1: 0/1 = Disable/enable ReqRspOut array ECC error inject bit 1.
28	RW	CONFIG_RXO_INJECT_ENABLE2: 0/1 = Disable/enable ReqRspOut array ECC error inject bit 1.
29	RW	CONFIG_RSI_CORRENAB: 0/1 = Disable/enable PB-Rsp-In array ECC correction.
30	RW	CONFIG_RSI_INJECT_ENABLE1: 0/1 = Disable/enable PB-Rsp-Ine array ECC error inject bit 1.
31	RW	CONFIG_RSI_INJECT_ENABLE2: 0/1 = Disable/enable PB-Rsp-Ine array ECC error inject bit 1.
32:33	RW	CONFIG_MA_RSNOOP_OPT_DCLAIM: 0 = partial-respond to dclaim to GPU Mem with lpc_ack. 1 = partial-respond to dclaim to GPU Mem with lpc_ack+rty_lost_claim. 2 = partial-respond to dclaim to GPU Mem with lpc_ack+rty_lpc+start pocket cache. 3 = Reserved.
34	RW	CONFIG_MA_DSA_OPT_DMA_UPG: 0/1 = non-relaxed dma_w use Read.RWC/Upgrade.DN to acquire pocket-cache state/data.

Bits	SCOM	Field Mnemonic: Description
35	RW	CONFIG_EVAPORATE_BY_LCO: 0/1 = just free the state-machine without lco/evaporate pocket-cache entries by lco.
36	RW	CONFIG_MRBGP_TRACK_ALL: 0/1 = master-retry-backoff group-pump track only this stack's/all-this-chips retry responses.
37	RW	CONFIG_MRBSP_TRACK_ALL: 0/1 = master-retry-backoff system-pump track only this stack's/all-this-chips retry responses.
38	RW	CONFIG_ENABLE_PBUS: 0/1 = Disable NPU processor bus RCMD, PResp, and CRESP interfaces / enable these interfaces.
39	RW	CONFIG_BRAZOS_MODE: 0/1 = non-brazos 4-group;2-chip mode / brazos 2-group;4-chip mode.
40	RW	CONFIG_ENABLE_SNARF_CPM: 0/1 = Disable/enable Probe.I.MO snarfing a cp_m.
41	RW	CONFIG_PREALLOC2_REQ0: 0/1 = pre-allocate 2 state-machines to brick 0 CREQ channel.
42	RW	CONFIG_PREALLOC2_PRB0: 0/1 = pre-allocate 2 state-machines to brick 0 PRB channel.
43	RW	CONFIG_PREALLOC2_REQ1: 0/1 = pre-allocate 2 state-machines to brick 1 CREQ channel.
44	RW	CONFIG_PREALLOC2_PRB1: 0/1 = pre-allocate 2 state-machines to brick 1 PRB channel.
45	RW	CONFIG_PREALLOC2_XATS: 0/1 = pre-allocate 2 state-machines to XATS interface.
46	RW	CONFIG_DISABLE_INJECT: 0/1 = Enable sending cl,pr_dma_inj / disable sending cl,pr_dma_inj. Note: to truly disable sending _inj commands, the following bits must also be set to '0': config_ma_mcresp_opt_rty_inj. config_ma_dsa_opt_rp_mode.
47	RW	CONFIG_DCACHE_MODE: 0/1 = drive data-bus dcache field in basic mode / CAPP mode.
48	RW	CONFIG_DCACHE_REPORTS_PHYSICAL: 0/1 = in basic mode, report local masters as near / local.
49	RW	CONFIG_RSI_DISABLE_DATIN_FASTPATH: 0/1 = Enable rsi PB data-in fastpath/disable fastpath.
50	RW	CONFIG_PCKT_BLK_PRB: 0/1 = valid pocket-cache entries do not block probes / probes are blocked.
51	RW	CONFIG_P9P9_MODE: 0/1 = normal operation / run in special lab-bringup GPU-less POWER9-to-POWER9 mode.
52	RW	CONFIG_FORBID_MMIO_READ_GT_32: 0/1 = Allow GPU->PB MMIOs > 32-bytes / flag-error and brick-fence on MMIOs > 32-bytes.
53	RW	CONFIG_FORBID_MMIO_ATOMIC: 0/1 = Allow GPU->PB atomics to MMIO space / flag-error and brick-fence on atomics to MMIO space.
54	RW	CONFIG_OPT_SNOOP_CP: 0/1 = Snoop POWER9-Mem cp_* type commands / don't snoop cp_* type commands.
55:63	RW	CONFIG0_Reserved3: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.

Register Name	**CQ_SM Miscellaneous Configuration 1 Register**
Mnemonic	NPU.STCK2.CS.SM3.MISC.CONFIG1
Address	0000000005011261 (SCOM)
Description	Misc Configuration Register Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_RANDOM_BACKOFF_DUR_MASK: Mask for the base random duration of a random retry backoff. 0000 -> 0-15 base random duration. 0001 -> 0-31 base random duration. 0011 -> 0-63 base random duration. 0111 -> 0-127 base random duration. 1111 -> 0-255 base random duration.
4:7	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_REQ: Mask for for the slowdown of NTL CReq credits during chgrate.hang. 'n' -> 1/(2^(n+1)) cycles average rate. Note that for a single processor bus ramp, the rate is actually 8 times faster since there are 4 RCMD slice x 2 NTL Bricks that get CReq credits. This field is the rate for 1 brick receiving credit from 1 RCMD slice.
8:11	RW	CONFIG_CHGRATE_HANG_SLOWDOWN_PRB: Mask for for the slowdown of NTL Probe credits during chgrate.hang. 'n' -> 1/(2^(n+1)) cycles average rate. Note that for a single processor bus ramp, the rate is actually 8 times faster since there are 4 RCMD slice x 2 NTL Bricks that get CReq credits. This field is the rate for 1 brick receiving credit from 1 RCMD slice.
12:15	RW	CONFIG_ARB_NONCRR_SAFETY: Safety valve for non-cresp/non-reqin events going down the arb pipe. after N+1 reqin events go through the arbiter while a non-crr event is waiting, reqin events are blocked to give non-crr events a chance.
16:27	RW	CONFIG_EPSILON_WLN_COUNT: epsilon count for Ln scope CP-Write.
28:31	RW	CONFIG_SCALE_RPT_HANG_POLL: Scaling factor for rpt_hang.poll. 0 = 1:1 processor bus rpt_hang.polls received. 1 = 1:2 processor bus rpt_hang.polls received. ... 15 = 1:16 processor bus rpt_hang.polls received.
32:35	RW	CONFIG_SCALE_RPT_HANG_DATA: Scaling factor for rpt_hang.data. 0 = 1:1 processor bus rpt_hang.datas received. 1 = 1:2 processor bus rpt_hang.datas received. ... 15 = 1:16 processor bus rpt_hang.datas received.
36:63	RW	CONFIG1_Reserved: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.

Register Name	**Power Bus Epsilon Configuration Register**
Mnemonic	NPU.STCK2.CS.SM3.MISC.EPSILON_CONFIG
Address	0000000005011262 (SCOM)
Description	Processor bus Epsilon Configuration Register Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_EPSILON_RATE: 0 = decrement epsilon count at 1:1 nest_gckn. ... 15 = epsilon count at 1/16 nest_gckn.
4:15	RW	CONFIG_EPSILON_W0_COUNT: epsilon count for Nn/G scope CP-Write.
16:27	RW	CONFIG_EPSILON_W1_COUNT: epsilon count for Rn/Vg scope CP-Write.
28:39	RW	CONFIG_EPSILON_R0_COUNT: epsilon count for Ln scope Reads.
40:51	RW	CONFIG_EPSILON_R1_COUNT: epsilon count for Nn/G scope Reads.

Bits	SCOM	Field Mnemonic: Description
52:63	RW	CONFIG_EPSILON_R2_COUNT: epsilon count for Rn/Vg scope Reads.

Register Name	Timer Configuration Register
Mnemonic	NPU.STCK2.CS.SM3.MISC.XTIMER_CONFIG
Address	0000000005011263 (SCOM)
Description	Timer Configuration Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	CONFIG_POCKET_RATE1: Rate-1 for the Pocket-Cache w/ Data entries. The Pocket-Cache timer is used to evaporate pocket-cache entries which are not claimed. The Long timer duration is f(Rate-1)*2^(Rate-2)*5e-10 seconds and. the Short timer duration is f(Rate-1)*2^(Rate-3)*5e-10 seconds where f(Rate-1) is: f(0b00) = 7. f(0b01) = 63. f(0b10) = 511. f(0b11) = 4095.
2:7	RW	CONFIG_POCKET_RATE2: Rate-2 for the long timer for Pocket-Cache entries (2^n cycles).
8:13	RW	CONFIG_POCKET_RATE3: Rate-3 for the short timer for Pocket-Cache entries (2^n cycles).
14:19	RW	CONFIG_FWD_PROG_RATE2: Rate-2 for the forward-progress timer (2^n cycles).
20:25	RW	CONFIG_CTL_TICK: Rate for CTL timer tick (default 63 = off). Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
26:31	RW	CONFIG_INH0_TICK: Rate for SM-Inhibit timer tick0 (default 63 = off). Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
32:37	RW	CONFIG_INH1_TICK: Rate for SM-Inhibit timer tick1 (default 63 = off). Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
38:39	RW	CONFIG_NV_RESP_RATE1: Rate-1 for NV-Response timer. The timer duration is f(Rate-1)*2^(Rate-2)*5e-10 seconds. f(0b00) = 7. f(0b01) = 63. f(0b10) = 511. f(0b11) = 4095.
40:45	RW	CONFIG_NV_RESP_RATE2: Rate-2 for the NV-Response timer (2^n cycles).
46:47	RW	CONFIG_POCKET_ND_RATE1: Rate-1 for the Pocket-Cache Dataless entries. The Pocket-Cache timer is used to evaporate pocket-cache entries which are not claimed. The Long timer duration is f(Rate-1)*2^(Rate-2)*5e-10 seconds and. the Short timer duration is f(Rate-1)*2^(Rate-3)*5e-10 seconds where f(Rate-1) is: f(0b00) = 7. f(0b01) = 63. f(0b10) = 511. f(0b11) = 4095.
48:63	RO	Constant = 0b0000000000000000

Register Name	GPU BAR Register
Mnemonic	NPU.STCK2.CS.SM3.MISC.GPU_BAR
Address	0000000005011264 (SCOM)
Description	Memory BARs BAR register defining GPU Mem addresses serviced by bricks 0 and 1 connected to this stack. Note: This register should be set to the same value for each brick/stack. MDials have been created at NPU_STACK_WRAP for this register's IDials

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GPU0_BAR_ENABLE: 0/1 = Disable/enable BAR for brick 0.
1:2	RW	CONFIG_GPU0_BAR_MEMTYPE: Memory type bits (addr(13:14)) needed to match this BAR for brick 0. Note: It is illegal to set this field to 0b11.
3:6	RW	CONFIG_GPU0_BAR_GROUP: group field of the Base address of BAR for brick 0.
7:9	RW	CONFIG_GPU0_BAR_CHIP: Chip field of the Base address of BAR for brick 0.
10:21	RW	CONFIG_GPU0_BAR_ADDR: Base address (1G address) of BAR for brick 0. Must be aligned on the size of the BAR mask.
22	RW	CONFIG_GPU0_BAR_Reserved: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
23	RW	CONFIG_GPU0_BAR_GRANULE: Hash boundary for brick 0: 0 = hash on 512B boundary (hashbits(0:7) = addr(47:54)). 1 = hash on 1024B boundary (hashbits(0:7) = addr(46:53)).
24:27	RW	CONFIG_GPU0_BAR_SIZE: Size of Base Address match for the BAR for brick 0. 0 = 1G. 1 = 2G. 2 = 4G. ... 9 = 512G. 10 = 1T. 11 = 2T. 12 = 4T. >12 = Reserved.
28:31	RW	CONFIG_GPU0_BAR_MODE: Hash mode of the BAR for brick 0: 0 = (single) match on all address in addr/size. 1 = (dual.0) match if hashbits(7) = 0. 2 = (dual.1) match if hashbits(7) = 1. 3 = (triple.0) match if hashbits%3 = 0. 4 = (triple.1) match if hashbits%3 = 1. 5 = (triple.2) match if hashbits%3 = 2. 6 = (quad.0) match if hashbits(6:7) = 0. 7 = (quad.1) match if hashbits(6:7) = 1. 8 = (quad.2) match if hashbits(6:7) = 2. 9 = (quad.3) match if hashbits(6:7) = 3. 10 = (six.0) match if hashbits%3 = 0 and hashbits(7) = 0. 11 = (six.1) match if hashbits%3 = 0 and hashbits(7) = 1. 12 = (six.2) match if hashbits%3 = 1 and hashbits(7) = 0. 13 = (six.3) match if hashbits%3 = 1 and hashbits(7) = 1. 14 = (six.4) match if hashbits%3 = 2 and hashbits(7) = 0. 15 = (six.5) match if hashbits%3 = 2 and hashbits(7) = 1.
32	RW	CONFIG_GPU1_BAR_ENABLE: 0/1 = Disable/enable BAR for brick 1.

Register Name	PHY0/PHY1/NPU MMIO BAR Register
Mnemonic	NPU.STCK2.CS.SM3.MISC.PHY_BAR
Address	0000000005011266 (SCOM)
Description	BAR register defining PHY0/PHY1/NPU MMIO range stack 0 phy_bar defines a 2M range mapped to PHY-0 registers stack 1 phy_bar defines a 2M range mapped to PHY-1 registers stack 2 phy_bar defines a 16M range mapped to all NPU registers Note: This register should be set to the same value for each brick/stack. MDials have been created at NPU_STACK_WRAP for this register's IDials

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_PHY_BAR_ENABLE: 0/1 = Disable/enable PHY_BAR.
1:2	RW	PHY_Reserved1: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.

Bits	SCOM	Field Mnemonic: Description
3:6	RW	CONFIG_PHY_BAR_GROUP: group field of 2M aligned address of this PHY_BAR.
7:9	RW	CONFIG_PHY_BAR_CHIP: chip field of 2M aligned address of this PHY_BAR.
10:30	RW	CONFIG_PHY_BAR_ADDR: 2M aligned address of this PHY_BARs 2M range. (in stack 2 the low 3 address bits are Reserved -> 16M range).
31	RW	PHY_Reserved2: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Generation ID BAR Register
Mnemonic	NPU.STCK2.CS.SM3.MISC.GENID_BAR
Address	0000000005011267 (SCOM)
Description	ID Registers MMIO BAR BAR register defining Generation-ID register for this stack/ramp Note: This register should be set to the same value for each brick/stack. MDials have been created at NPU_STACK_WRAP for this register's IDials

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_GENID_BAR_ENABLE: 0/1 = Disable/enable this BAR.
1:2	RW	GENID_Reserved1: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
3:6	RW	CONFIG_GENID_BAR_GROUP: group field of 128K aligned address of this GENID_BAR.
7:9	RW	CONFIG_GENID_BAR_CHIP: chip field of 128K aligned address of this GENID_BAR.
10:34	RW	CONFIG_GENID_BAR_ADDR: 128K aligned address of this BARs 128K range.
35	RW	GENID_Reserved2: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
36:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Low Water Register
Mnemonic	NPU.STCK2.CS.SM3.MISC.LOW_WATER
Address	0000000005011268 (SCOM)
Description	Water Marks State-Machine allocation Low-Water Marks Each Low-Water mark should be > = 1 and the sum of the Low-Water marks must be less than config_max_machines Low-Water marks must not be changed after config_enable_machine_alloc is set to 1 and config_enable_machine_alloc must remain at 1 once set to 1 Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_LOW_WATER_XATS: Low-Water mark for XTS/MISC processor bus requests. Can only be changed while config_enable_machine_alloc = 0.

Bits	SCOM	Field Mnemonic: Description
6:11	RW	CONFIG_LOW_WATER_PWR0: Low-Water mark for processor bus rd/dclaim/atomic/etc. requests. Can only be changed while config_enable_machine_alloc = 0.
12:17	RW	CONFIG_LOW_WATER_PWR1: Low-Water mark for processor bus cp (castout-push) requests. Can only be changed while config_enable_machine_alloc = 0.
18:23	RW	CONFIG_LOW_WATER_REQ0: Low-Water mark for NVLink brick-0 non-Probe requests. Can only be changed while config_enable_machine_alloc = 0.
24:29	RW	CONFIG_LOW_WATER_PRB0: Low-Water mark for NVLink brick-0 Probe requests. Can only be changed while config_enable_machine_alloc = 0.
30:35	RW	CONFIG_LOW_WATER_REQ1: Low-Water mark for NVLink brick-1 non-Probe requests. Can only be changed while config_enable_machine_alloc = 0.
36:41	RW	CONFIG_LOW_WATER_PRB1: Low-Water mark for NVLink brick-1 Probe requests. Can only be changed while config_enable_machine_alloc = 0.
42:47	RW	CONFIG_MAX_MACHINES: Maximum number of state-machines to be used. Must be > = 8 and < = 62. Can only be changed while config_enable_machine_alloc = 0.
48:50	RW	LOW_WATER_Reserved1: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
51	RW	CONFIG_ENABLE_MACHINE_ALLOC: Enable state-machine allocation. Can only be changed 0->1, must stay 1 once set.
52:63	RO	Constant = 0b000000000000

Register Name	High Water Register
Mnemonic	NPU.STCK2.CS.SM3.MISC.HIGH_WATER
Address	0000000005011269 (SCOM)
Description	Water Marks State-Machine allocation High-Water Marks Each High-Water mark should be > = corresponding config_low_water and < config_max_machines Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_HIGH_WATER_XATS: High-Water mark for XTS/MISC processor bus requests.
6:11	RW	CONFIG_HIGH_WATER_PWR0: High-Water mark for processor bus rd/dclaim/atomic/etc. requests.
12:17	RW	CONFIG_HIGH_WATER_PWR1: High-Water mark for processor bus cp (castout-push) requests.
18:23	RW	CONFIG_HIGH_WATER_REQ0: High-Water mark for NVLink brick-0 non-Probe requests.
24:29	RW	CONFIG_HIGH_WATER_PRB0: High-Water mark for NVLink brick-0 Probe requests.
30:35	RW	CONFIG_HIGH_WATER_REQ1: High-Water mark for NVLink brick-1 non-Probe requests.
36:41	RW	CONFIG_HIGH_WATER_PRB1: High-Water mark for NVLink brick-1 Probe requests.
42:43	RW	HIGH_WATER_Reserved1: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
44:63	RO	Constant = 0b00000000000000000000

Register Name	Relaxed Configuration 0 Register
Mnemonic	NPU.STCK2.CS.SM3.MISC.CONFIG_RELAXED0
Address	000000000501126A (SCOM)
Description	Ordering Config0 Configure relaxed-ordering Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_SOURCE0_WRENA: 0/1 = Disable/enable relaxed source0 for write operations.
1	RW	CONFIG_RELAXED_SOURCE0_RDENA: 0/1 = Disable/enable relaxed source0 for read operations.
2:19	RW	CONFIG_RELAXED_SOURCE0_MATCH: relaxed source0 tag match value. when config_brazos_mode = 0, matches TTag 2:3,6:21. when config_brazos_mode = 1, matches TTag 3,5:21.
20:37	RW	CONFIG_RELAXED_SOURCE0_MASK: relaxed source0 tag mask value. 0 = bit is masked off, corresponding match bit must be zero. 1 = bit must equal corresponding match bit.
38:39	RW	CONFIG_RELAXED_Reserved0: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
40	RW	CONFIG_RELAXED_SOURCE1_WRENA: 0/1 = Disable/enable relaxed source1 for write operations.
41	RW	CONFIG_RELAXED_SOURCE1_RDENA: 0/1 = Disable/enable relaxed source1 for read operations.
42:59	RW	CONFIG_RELAXED_SOURCE1_MATCH: relaxed source1 tag match value. when config_brazos_mode = 0, matches TTag 2:3,6:21. when config_brazos_mode = 1, matches TTag 3,5:21.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 1 Register
Mnemonic	NPU.STCK2.CS.SM3.MISC.CONFIG_RELAXED1
Address	000000000501126B (SCOM)
Description	Ordering Config1 Configure relaxed-ordering Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:17	RW	CONFIG_RELAXED_SOURCE1_MASK: relaxed source1 tag mask value.
18:19	RW	CONFIG_RELAXED_Reserved1: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
20	RW	CONFIG_RELAXED_SOURCE2_WRENA: 0/1 = Disable/enable relaxed source2 for write operations.
21	RW	CONFIG_RELAXED_SOURCE2_RDENA: 0/1 = Disable/enable relaxed source2 for read operations.
22:39	RW	CONFIG_RELAXED_SOURCE2_MATCH: relaxed source2 tag match value. when config_brazos_mode = 0, matches TTag 2:3,6:21. when config_brazos_mode = 1, matches TTag 3,5:21.
40:57	RW	CONFIG_RELAXED_SOURCE2_MASK: relaxed source0 tag mask value.

Bits	SCOM	Field Mnemonic: Description
58:59	RW	CONFIG_RELAXED_Reserved2: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
60:63	RO	Constant = 0b0000

Register Name	Relaxed Configuration 2 Register
Mnemonic	NPU.STCK2.CS.SM3.MISC.CONFIG_RELAXED2
Address	0000000005011260 (SCOM)
Description	Ordering Config2 Configure relaxed-ordering Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_RELAXED_CMD_CL_DMA_W: Enable relaxed ordering for cl_dma_w.
1	RW	CONFIG_RELAXED_CMD_CL_DMA_W_HP: Enable relaxed ordering for cl_dma_w_hp.
2	RW	CONFIG_RELAXED_CMD_CL_DMA_INJ: Enable relaxed ordering for cl_dma_inj.
3	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_U: Enable relaxed ordering for armw_cas_imax_u.
4	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMAX_S: Enable relaxed ordering for armw_cas_imax_s.
5	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_U: Enable relaxed ordering for armw_cas_imin_u.
6	RW	CONFIG_RELAXED_CMD_ARMW_CAS_IMIN_S: Enable relaxed ordering for armw_cas_imin_s.
7	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_U: Enable relaxed ordering for armwf_cas_imax_u.
8	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMAX_S: Enable relaxed ordering for armwf_cas_imax_s.
9	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_U: Enable relaxed ordering for armwf_cas_imin_u.
10	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_IMIN_S: Enable relaxed ordering for armwf_cas_imin_s.
11	RW	CONFIG_RELAXED_CMD_PR_DMA_INJ: Enable relaxed ordering for pr_dma_inj.
12	RW	CONFIG_RELAXED_CMD_DMA_PR_W: Enable relaxed ordering for dma_pr_w.
13	RW	CONFIG_RELAXED_CMD_ARMW_ADD: Enable relaxed ordering for armw_add.
14	RW	CONFIG_RELAXED_CMD_ARMW_AND: Enable relaxed ordering for armw_and.
15	RW	CONFIG_RELAXED_CMD_ARMW_OR: Enable relaxed ordering for armw_or.
16	RW	CONFIG_RELAXED_CMD_ARMW_XOR: Enable relaxed ordering for armw_xor.
17	RW	CONFIG_RELAXED_CMD_ARMWF_ADD: Enable relaxed ordering for armwf_add.
18	RW	CONFIG_RELAXED_CMD_ARMWF_AND: Enable relaxed ordering for armwf_and.
19	RW	CONFIG_RELAXED_CMD_ARMWF_OR: Enable relaxed ordering for armwf_or.
20	RW	CONFIG_RELAXED_CMD_ARMWF_XOR: Enable relaxed ordering for armwf_xor.
21	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_E: Enable relaxed ordering for armwf_cas_e.
22	RW	CONFIG_RELAXED_CMD_ARMWF_CAS_U: Enable relaxed ordering for armwf_cas_u.
23	RW	CONFIG_RELAXED_CMD_CL_RD_NC_F0: Enable relaxed ordering for cl_rd_nc(F = 0).
24	RW	CONFIG_RELAXED_SOURCE3_WRENA: 0/1 = Disable/enable relaxed source3 for write operations.
25	RW	CONFIG_RELAXED_SOURCE3_RDENA: 0/1 = Disable/enable relaxed source3 for read operations.

Bits	SCOM	Field Mnemonic: Description
26:43	RW	CONFIG_RELAXED_SOURCE3_MATCH: relaxed source3 tag match value. when config_brazos_mode = 0, matches TTag 2:3,6:21. when config_brazos_mode = 1, matches TTag 3,5:21.
44:61	RW	CONFIG_RELAXED_SOURCE3_MASK: relaxed source0 tag mask value.
62:63	RW	CONFIG_RELAXED_Reserved3: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.

Register Name	**NTL0/NDL0 MMIO BAR Register**
Mnemonic	NPU.STCK2.CS.SM3.MISC.NDT0_BAR
Address	000000000501126D (SCOM)
Description	BAR register defining NDL/NTL MMIO range for brick 0 connected to this stack Note: This register should be set to the same value for each brick/stack. MDials have been created at NPU_STACK_WRAP for this register's IDials

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_NDT0_BAR_ENABLE: 0/1 = Disable/enable BAR for brick 0.
1:2	RW	NDT0_Reserved1: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
3:6	RW	CONFIG_NDT0_BAR_GROUP: group field of the address for this BAR.
7:9	RW	CONFIG_NDT0_BAR_CHIP: chip field of the address for this BAR.
10:34	RW	CONFIG_NDT0_BAR_ADDR: 128K aligned address of BAR for brick 0's 128K range.
35	RW	NDT0_Reserved2: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.

Register Name	CERR Message 0 Register
Mnemonic	NPU.STCK2.CS.SM3.MISC.CERR_MESSAGE0
Address	0000000005011271 (SCOM)
Description	Error message/capture register 0

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS0: Reserved.

Register Name	CERR Message 1 Register
Mnemonic	NPU.STCK2.CS.SM3.MISC.CERR_MESSAGE1
Address	0000000005011272 (SCOM)
Description	Error message/capture register 1

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS1: Reserved.

Register Name	CERR Message 2 Register
Mnemonic	NPU.STCK2.CS.SM3.MISC.CERR_MESSAGE2
Address	0000000005011273 (SCOM)
Description	2 latches Error message/capture register 2

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS2: Reserved.

Register Name	CERR Message 3 Register
Mnemonic	NPU.STCK2.CS.SM3.MISC.CERR_MESSAGE3
Address	0000000005011274 (SCOM)
Description	3 latches Error message/capture register 3

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS3: Reserved.

Register Name	CERR Message 4 Register
Mnemonic	NPU.STCK2.CS.SM3.MISC.CERR_MESSAGE4
Address	0000000005011275 (SCOM)
Description	4 latches Error message/capture register 4

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS4: Reserved.

Register Name	CQ_SM Status Register
Mnemonic	NPU.STCK2.CS.SM3.MISC.SM_STATUS
Address	0000000005011276 (SCOM)
Description	Status reporting register

Bits	SCOM	Field Mnemonic: Description
0	ROX	SM_STATUS_CREQ0: 1 when brick 0 CReq allocation is at its idle level.
1	ROX	SM_STATUS_PRB0: 1 when brick 0 Probe allocation is at its idle level.
2	ROX	SM_STATUS_CREQ1: 1 when brick 1 CReq allocation is at its idle level.
3	ROX	SM_STATUS_PRB1: 1 when brick 1 Probe allocation is at its idle level.
4	ROX	SM_STATUS_XATS: 1 when ATS/MISC allocation is at its idle level.
5	ROX	SM_STATUS_PWR0: 1 when processor bus (non-cp*) allocation is at its idle level.
6	ROX	SM_STATUS_PWR1: 1 when processor bus (cp*) allocation is at its idle level.
7	ROX	SM_STATUS_CHGRATE: 1 when chgrate.hang slowdown is being applied to machine allocation.
8:11	ROX	SM_STATUS_MRBGP: Master-Retry backoff level for Group-Pump commands.
12:15	ROX	SM_STATUS_MRBSP: Master-Retry backoff level for System-Pump commands.
16:19	ROX	SM_STATUS_FENCE0: Brick-0 Fence sequencing state. 0000 = Idle state, completely unfenced. 0xxx = In transition between fenced and not-fenced. 0111 = Fenced state, fence sequencing complete. 100x = Flushing pocket-cache entries prior to exiting fence.
20:23	ROX	SM_STATUS_FENCE1: Brick-1 Fence sequencing state. 0000 = Idle state, completely unfenced. 0xxx = In transition between fenced and not-fenced. 0111 = Fenced state, fence sequencing complete. 100x = Flushing pocket-cache entries prior to exiting fence.

Bits	SCOM	Field Mnemonic: Description
24	ROX	SM_STATUS_PBLN: 1 when outbound Ln-scope processor bus request queue is empty.
25	ROX	SM_STATUS_PBNNG: 1 when outbound Nn/G-scope processor bus request queue is empty.
26	ROX	SM_STATUS_PBRNVG: 1 when outbound Rn/Vg-scope processor bus request queue is empty.
27	ROX	SM_STATUS_N0REQ: 1 when outbound brick 0 CReq request queue is empty.
28	ROX	SM_STATUS_N0DGD: 1 when outbound brick 0 Downgrade request queue is empty.
29	ROX	SM_STATUS_N1REQ: 1 when outbound brick 1 CReq request queue is empty.
30	ROX	SM_STATUS_N1DGD: 1 when outbound brick 1 Downgrade request queue is empty.
31	ROX	SM_STATUS_MMIO: 1 when outbound MMIO/GenId request queue is empty.
32	ROX	SM_STATUS_ATSXLATE: 1 when outbound ATS-TCE-Translation request queue is empty.
33	ROX	SM_STATUS_PBRSP: 1 when outbound processor bus data-response/merge-operation queue is empty.
34	ROX	SM_STATUS_N0RSP: 1 when outbound brick 0 response queue is empty.
35	ROX	SM_STATUS_N1RSP: 1 when outbound brick 1 response queue is empty.
36	ROX	SM_STATUS_XARSP: 1 when outbound ATS/MISC response queue is empty.
37	ROX	SM_STATUS_SACOLL: 1 when Same-Address Collision-Check queue is empty.
38	ROX	SM_STATUS_FREE: 1 when Free state machine queue is empty.
39	ROX	SM_STATUS_Reserved1: Reserved.

Register Name	**CQ_CTL Miscellaneous Configuration 0 Register**
Mnemonic	NPU.STCK2.CS.CTL.MISC.CONFIG0
Address	0000000005011280 (SCOM)
Description	Misc Configuration Register Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG1_Reserved0: Reserved - was 1dot0 mode. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
1:3	RW	CONFIG1_Reserved1: Reserved. Note: This field can/should have different values in each instance. No MDials have been created for this field's IDials.
4	RW	CONFIG_ADR_BAR_MODE: Processor bus adr_bar: 0/1 = large-system-mode/small-system-mode.
5:9	RW	CONFIG_GEN_HEAD_DELAY: Number of cycles to wait for generation-done when reading a generation-head register. Note: setting this to zero will hang the NPU.
10	RW	CONFIG_MRBGP_DIV2_COUNT_AT_EXP: Master-retry-backoff retry count when the sample period expires for group-pump. 0 = reset-to-zero 1 = divide-by-two
11	RW	CONFIG_MRBSP_DIV2_COUNT_AT_EXP: Master-retry-backoff retry count when the sample period expires for system-pump 0 = reset-to-zero 1 = divide-by-two
12	RW	CONFIG_MRBGP_DIS_DYN_ADJ: Dynamically adjust the master-retry-backoff sample period based on level for the group-pump. 0 = Enable 1 = Disable
13	RW	CONFIG_MRBSP_DIS_DYN_ADJ: Dynamically adjust the master-retry-backoff sample period based on level for the system-pump. 0 = Enable 1 = Disable

Bits	SCOM	Field Mnemonic: Description
14	RW	CONFIG_MRBGP_DIS_DYN_LVL_ADJ: 0/1 = Adjust the master-retry-backoff thresholds based on level for group-pump. 0 = Enable 1 = Disable
15	RW	CONFIG_MRBSP_DIS_DYN_LVL_ADJ: Adjust the master-retry-backoff thresholds based on level for system-pump. 0 = Enable 1 = Disable
16:21	RW	CONFIG_MRBGP_THRESH1: Master-retry-backoff retry-count threshold at which to reduce the level for group-pump.
22:27	RW	CONFIG_MRBGP_THRESH2: Master-retry-backoff retry-count threshold at which to increase the level for group-pump. Note: make sure that thresh2 > thresh1, or backoff level will only increase.
28:33	RW	CONFIG_MRBSP_THRESH1: Master-retry-backoff retry-count threshold at which to reduce the level for system-pump.
34:39	RW	CONFIG_MRBSP_THRESH2: Master-retry-backoff retry-count threshold at which to increase the level for system-pump. Note: make sure that thresh2 > thresh1, or backoff level will only increase.
40:43	RW	CONFIG_MRBGP_MAX_LEVEL: Master-retry-backoff maximum level for group-pump.
44:47	RW	CONFIG_MRBSP_MAX_LEVEL: Master-retry-backoff maximum level for system-pump.
48	RW	CONFIG_BRAZOS_MODE: 0/1 = non-brazos 4-group;2-chip mode / brazos 2-group;4-chip mode.
49	RW	CONFIG_DISABLE_PBM_ECC_COR: 0/1 = Enable ECC correction of MMIO store data / disable ECC correction.
50	RW	CONFIG_LAB_RANDOMIZE_PE_01: 0 = Don't randomize PE(0:1). 1 = Randomize PE(0:1).
51	RW	CONFIG_LAB_RANDOMIZE_PE_23: 0 = Don't randomize PE(2:3). 1 = Randomize PE(2:3).
52:63	RW	CONFIG1_Reserved2: Reserved. Note: This field can/should have different values in each instance.

Register Name	Future Configuration 1 Register
Mnemonic	NPU.STCK2.CS.CTL.MISC.CONFIG1
Address	0000000005011281 (SCOM)
Description	Currently reserved register. Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_CONFIG1: Future configuration register.

Register Name	Future Configuration 2 Register
Mnemonic	NPU.STCK2.CS.CTL.MISC.CONFIG2
Address	0000000005011282 (SCOM)
Description	Currently reserved register. Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_CONFIG2: Future configuration register.

Register Name	Future Configuration 3 Register
Mnemonic	NPU.STCK2.CS.CTL.MISC.CONFIG3
Address	0000000005011283 (SCOM)
Description	Currently Reserved register. Note: This register should be set to the same value globally.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_CONFIG3: Future configuration register.

Register Name	Performance Match Configuration Register
Mnemonic	NPU.STCK2.CS.CTL.MISC.PERF_MATCH_CONFIG
Address	0000000005011284 (SCOM)
Description	Performance Event Field Match

Bits	SCOM	Field Mnemonic: Description
0:5	RW	PERF_MATCH_NMCMD: NVLink Command.
6:10	RW	PERF_MATCH_NMEXCMD: NVLink ExtReqCmd.
11	RW	PERF_MATCH_BE: NVLink byte enables.
12:17	RW	PERF_MATCH_CS: NVLink CS(0:5).
18:33	RW	PERF_MATCH_AECS: NVLink AECS(0:15).
34:37	RW	PERF_MATCH_PE: PE.
38:39	RW	PERF_MATCH_Reserved1: Reserved.
40:63	RO	Constant = 0b000000000000000000000000

Register Name	Performance Mask Configuration Register
Mnemonic	NPU.STCK2.CS.CTL.MISC.PERF_MASK_CONFIG
Address	0000000005011285 (SCOM)
Description	Performance Event Field Mask

Bits	SCOM	Field Mnemonic: Description
0:5	RW	PERF_MASK_NMCMD: NVLink Command.
6:10	RW	PERF_MASK_NMEXCMD: NVLink ExtReqCmd.
11	RW	PERF_MASK_BE: NVLink byte enables.
12:17	RW	PERF_MASK_CS: NVLink CS(0:5).
18:33	RW	PERF_MASK_AECS: NVLink AECS(0:15).
34:37	RW	PERF_MASK_PE: PE.
38:39	RW	PERF_MASK_Reserved1: Reserved.

Bits	SCOM	Field Mnemonic: Description
40:63	RO	Constant = 0b000000000000000000000000

Register Name	CQ_CTL Performance Count Register
Mnemonic	NPU.STCK2.CS.CTL.MISC.PERF_COUNT
Address	0000000005011286 (SCOM)
Description	PMULet Count values

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	IDIAL_PERF_COUNT0: Performance Counter 0.
16:31	RWX_WCLRREG	IDIAL_PERF_COUNT1: Performance Counter 1.
32:47	RWX_WCLRREG	IDIAL_PERF_COUNT2: Performance Counter 2.
48:63	RWX_WCLRREG	IDIAL_PERF_COUNT3: Performance Counter 3.

Register Name	Performance Configuration Register
Mnemonic	NPU.STCK2.CS.CTL.MISC.PERF_CONFIG
Address	0000000005011287 (SCOM)
Description	Performance Event selection

Bits	SCOM	Field Mnemonic: Description
0	RW	PERF_CONFIG_ENABLE: PMULet Enable (clocks enable).
1	RW	PERF_CONFIG_RESETMODE: 0/1 = reset-on-read/reset-on-write.
2	RW	PERF_CONFIG_FREEZEMODE: 0/1 = freerun-mode/freeze-on-any-max.
3	RW	PERF_CONFIG_DISABLE_PMISC: 0/1 = enable-pmisc/disable-pmisc control of counters.
4	RW	PERF_CONFIG_PMISC_MODE: 0/1 = global pmu pmisc no reset/global pmu miscellaneous reset-on-enable.
5:7	RW	PERF_CONFIG_CASCADE: pmulet cascade config.
8:9	RW	PERF_CONFIG_PRESCALE_C0: prescale config for counter 0.
10:11	RW	PERF_CONFIG_PRESCALE_C1: prescale config for counter 1.
12:13	RW	PERF_CONFIG_PRESCALE_C2: prescale config for counter 2.
14:15	RW	PERF_CONFIG_PRESCALE_C3: prescale config for counter 3.
16:23	RW	PERF_CONFIG_EVENT0: Event 0 select.
24:31	RW	PERF_CONFIG_EVENT1: Event 0 select.
32:39	RW	PERF_CONFIG_EVENT2: Event 0 select.
40:47	RW	PERF_CONFIG_EVENT3: Event 0 select.
48:52	RW	PERF_CONFIG_LATSTART: Latency count start event.
53:57	RW	PERF_CONFIG_LATCANCEL: Latency count abort event.
58:62	RW	PERF_CONFIG_LATFINISH: Latency count finish event.
63	RW	PERF_CONFIG_Reserved: Reserved.

Register Name	Debug0 Configuration Register
Mnemonic	NPU.STCK2.CS.CTL.MISC.DEBUG0_CONFIG
Address	0000000005011288 (SCOM)
Description	Config register for trace-0 chain

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG0_CONFIG_POD0: Multiplexer control for byte 0 of trace-0.
5:9	RW	DEBUG0_CONFIG_POD1: Multiplexer control for byte 1 of trace-0.
10:14	RW	DEBUG0_CONFIG_POD2: Multiplexer control for byte 2 of trace-0.
15:19	RW	DEBUG0_CONFIG_POD3: Multiplexer control for byte 3 of trace-0.
20:24	RW	DEBUG0_CONFIG_POD4: Multiplexer control for byte 4 of trace-0.
25:29	RW	DEBUG0_CONFIG_POD5: Multiplexer control for byte 5 of trace-0.
30:34	RW	DEBUG0_CONFIG_POD6: Multiplexer control for byte 6 of trace-0.
35:39	RW	DEBUG0_CONFIG_POD7: Multiplexer control for byte 7 of trace-0.
40:44	RW	DEBUG0_CONFIG_POD8: Multiplexer control for byte 8 of trace-0.
45:49	RW	DEBUG0_CONFIG_POD9: Multiplexer control for byte 9 of trace-0.
50:54	RW	DEBUG0_CONFIG_POD10: Multiplexer control for byte 10 of trace-0.
55:62	RW	DEBUG0_CONFIG_Reserved1: Reserved.
63	RW	DEBUG0_CONFIG_ACT: Enable clock-gates for debug trace latches.

Register Name	Debug1 Configuration Register
Mnemonic	NPU.STCK2.CS.CTL.MISC.DEBUG1_CONFIG
Address	0000000005011289 (SCOM)
Description	Config register for trace-1 chain

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG1_CONFIG_POD0: Multiplexer control for byte 0 of trace-1.
5:9	RW	DEBUG1_CONFIG_POD1: Multiplexer control for byte 1 of trace-1.
10:14	RW	DEBUG1_CONFIG_POD2: Multiplexer control for byte 2 of trace-1.
15:19	RW	DEBUG1_CONFIG_POD3: Multiplexer control for byte 3 of trace-1.
20:24	RW	DEBUG1_CONFIG_POD4: Multiplexer control for byte 4 of trace-1.
25:29	RW	DEBUG1_CONFIG_POD5: Multiplexer control for byte 5 of trace-1.
30:34	RW	DEBUG1_CONFIG_POD6: Multiplexer control for byte 6 of trace-1.
35:39	RW	DEBUG1_CONFIG_POD7: Multiplexer control for byte 7 of trace-1.
40:44	RW	DEBUG1_CONFIG_POD8: Multiplexer control for byte 8 of trace-1.
45:49	RW	DEBUG1_CONFIG_POD9: Multiplexer control for byte 9 of trace-1.
50:54	RW	DEBUG1_CONFIG_POD10: Multiplexer control for byte 10 of trace-1.
55:62	RW	DEBUG1_CONFIG_Reserved1: Reserved.
63	RW	DEBUG1_CONFIG_ACT: Enable clock-gates for debug trace latches.

Register Name	Brick 0 BDF2PE Configuration 0 Register
Mnemonic	NPU.STCK2.CS.CTL.MISC.BDF2PE_00_CONFIG
Address	000000000501128A (SCOM)
Description	to-PE map 0 Configured BDF-to-PE mapping #0 for brick 0 Note: Across all six bricks of an NPU, each BDF may map to at most 1 PE

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_BDF2PE_00_ENABLE: 0/1 = This BDF-to-PE mapping is disabled/enabled.
1	RW	CONFIG_BDF2PE_00_WILDCARD: 0/1 = This BDF-to-PE mapping matches only this BDF/matches all BDFs.

Register Name	CQ_CTL Status Register
Mnemonic	NPU.STCK2.CS.CTL.MISC.CTL_STATUS
Address	0000000005011292 (SCOM)
Description	Status reporting register

Bits	SCOM	Field Mnemonic: Description
0	ROX	CTL_STATUS_SM_MMIO0: 1 when SM slice 0 has an MMIO pending.
1	ROX	CTL_STATUS_SM_MMIO1: 1 when SM slice 1 has an MMIO pending.
2	ROX	CTL_STATUS_SM_MMIO2: 1 when SM slice 2 has an MMIO pending.
3	ROX	CTL_STATUS_SM_MMIO3: 1 when SM slice 3 has an MMIO pending.
4:7	ROX	CTL_STATUS_MRBGP: Master-retry backoff level for Group-Pump commands.
8:11	ROX	CTL_STATUS_MRBSP: Master-retry backoff level for System-Pump commands.
12:15	ROX	CTL_STATUS_FENCE0: Brick-0 Fence sequencing state. 0b0000 = Idle state, completely unfenced. 0b1001 = Fenced state, fence sequencing complete. 0b1100 = Half-Fenced state, NTL is un-fenced. others = in transition between fenced and not-fenced.
16:19	ROX	CTL_STATUS_FENCE1: Brick-1 Fence sequencing state. 0b0000 = Idle state, completely unfenced. 0b1001 = Fenced state, fence sequencing complete. 0b1100 = Half-Fenced state, NTL is un-fenced. others = in transition between fenced and not-fenced.
20:21	ROX	CTL_STATUS_LPCTH: LPC-Threshold value driven in partial-responses.
22:26	ROX	CTL_STATUS_PBM_STATE: PB-MMIO/GenId state (0b00000 = Idle).
27	ROX	CTL_STATUS_BRK0_RLX: 1 when brick-0 Gen-Id/relaxed-ordering is idle.
28	ROX	CTL_STATUS_BRK1_RLX: 1 when brick-1 Gen-Id/relaxed-ordering is idle.
29	ROX	CTL_STATUS_BRK0_NVL: 1 when brick-0 NVLink-Flush is idle.
30	ROX	CTL_STATUS_BRK1_NVL: 1 when brick-1 NVLink-Flush is idle.
31	ROX	CTL_STATUS_ATS_SYNC: 1 when ATS-Sync is idle.

Bits	SCOM	Field Mnemonic: Description
32	ROX	CTL_STATUS_NMMU: 1 when NMMU outbound-message is idle.
33	ROX	CTL_STATUS_PBLN: 1 when outbound processor bus Ln-scope queue is empty.
34	ROX	CTL_STATUS_PBNNG: 1 when outbound processor bus Nn/G-scope queue is empty.
35	ROX	CTL_STATUS_PBRNVG: 1 when outbound processor bus Rn/Vg-scope queue is empty.
36	ROX	CTL_STATUS_NVREQ0: 1 when outbound brick 0 request queue is empty.
37	ROX	CTL_STATUS_NVDGD0: 1 when outbound brick 0 downgrade queue is empty.
38	ROX	CTL_STATUS_NVREQ1: 1 when outbound brick 1 request queue is empty.
39	ROX	CTL_STATUS_NVDGD1: 1 when outbound brick 1 downgrade queue is empty.
40	ROX	CTL_STATUS_ATSREQ: 1 when outbound ATS-TCE-Translate request queue is empty.
41	ROX	CTL_STATUS_MMIO: 1 when MMIO/GenId state machine is idle.
42	ROX	CTL_STATUS_PBRS: 1 when outbound PB-Response/Merge queue is empty.
43	ROX	CTL_STATUS_NVRS0: 1 when outbound brick 0 response queue is empty.
44	ROX	CTL_STATUS_NVRS1: 1 when outbound brick 0 response queue is empty.
45	ROX	CTL_STATUS_XARS: 1 when outbound ATS/MISC response queue is empty.
46	ROX	CTL_STATUS_ATRR: 1 when outbound ATR-Response logic is idle.
47	ROX	CTL_STATUS_Reserved1: Reserved.
48:63	RO	Constant = 0b0000000000000000

Register Name	CERR Message 0 Register
Mnemonic	NPU.STCK2.CS.CTL.MISC.CERR_MESSAGE0
Address	0000000005011298 (SCOM)
Description	Error message/capture register 0

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS0: Reserved.

Register Name	CERR Message 1 Register
Mnemonic	NPU.STCK2.CS.CTL.MISC.CERR_MESSAGE1
Address	0000000005011299 (SCOM)
Description	Error message/capture register 1

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	CERR_MESSAGE_BITS1: Reserved.

Register Name	CERR First 0 Register
Mnemonic	NPU.STCK2.CS.CTL.MISC.CERR_FIRST0
Address	000000000501129A (SCOM)
Description	This register is read and write, write of a ‘1’ clears the bit.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_0: NCF0 SM0 NCF error.
1	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_1: NCF1 SM1 NCF error.
2	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_2: NCF2 SM2 NCF error.
3	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_3: NCF3 SM3 NCF error.
4	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_4: NCF4 (Reserved).
5	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_5: NCF5 (Reserved).
6	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_6: NCF6 (Reserved).
7	RWX_WCLEAR	IDIAL_CTL_FIRST_NCF_7: NCF7 (Reserved).
8	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_0: NVF0 SM0 NCF error.
9	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_1: NVF1 SM1 NCF error.
10	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_2: NVF2 SM2 NCF error.
11	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_3: NVF3 SM3 NCF error.
12	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_4: NVF4 Illegal Probe.MO: Probe.MO received with illegal ProbeState.
13	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_5: NVF5 Illegal Probe.N: Probe.N received with illegal ProbeState.
14	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_6: NVF6 Illegal Atomic: Illegal AtomicCmd for Atomic.NR with Red = 1.
15	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_7: NVF7 Illegal Atomic: Atomic.NR with Red = 0.
16	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_8: NVF8 Illegal Atomic: Atomic.NR with AtomicSize/ = 4 or 8 or with non-4/8 byte-enables.
17	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_9: NVF9 Illegal Atomic: Illegal AtomicCmd for Atomic.RR w/ Red = 0.
18	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_10: NVF10 Illegal Atomic: Illegal AtomicCmd for Atomic.RR w/ Red = 1.
19	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_11: NVF11 Illegal Atomic: Atomic.RR w/ AtomicSize/ = 4 or 8 or w/ non-4/8 byte-enables.
20	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_12: NVF12 Illegal ExCmd for command = ExCmd-CReq.
21	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_13: NVF13 Illegal ExCmd for command = ExCmd-ATR.
22	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_14: NVF14 Illegal command or RMW w/ illegal len.
23	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_15: NVF15 BDF-to-PE lookup failed.
24	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_16: NVF16 Received a 256 B FO = 1 Write.
25	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_17: NVF17 Received an invalid AddrType field - neither 00 or 11.
26	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_18: NVF18 Received an invalid transaction-ID in a NVLink response.
27	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_19: NVF19 Received a rsp_status of target-error in an ATSD response.
28	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_20: NVF20 Received a rsp_status of unsupported-request in an ATSD response.
29	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_21: NVF21 Received a rsp_status of '11' - Reserved value - in an ATSD response.
30	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_22: NVF22 Brick 0 NVF error occurred.
31	RWX_WCLEAR	IDIAL_CTL_FIRST_NVF_23: NVF23 Brick 1 NVF error occurred.
32	RWX_WCLEAR	IDIAL_CTL_FIRST_RSV1_0: RSV10 (Reserved).
33	RWX_WCLEAR	IDIAL_CTL_FIRST_RSV1_1: RSV11 (Reserved).
34	RWX_WCLEAR	IDIAL_CTL_FIRST_RSV1_2: RSV12 (Reserved).
35	RWX_WCLEAR	IDIAL_CTL_FIRST_RSV1_3: RSV13 (Reserved).
36	RWX_WCLEAR	IDIAL_CTL_FIRST_ASBE_0: ASBE0 SM0 asbe error.

Bits	SCOM	Field Mnemonic: Description
37	RWX_WCLEAR	IDIAL_CTL_FIRST_ASBE_1: ASBE1 SM1 asbe error.
38	RWX_WCLEAR	IDIAL_CTL_FIRST_ASBE_2: ASBE2 SM2 asbe error.
39	RWX_WCLEAR	IDIAL_CTL_FIRST_ASBE_3: ASBE3 SM3 asbe error.
40	RWX_WCLEAR	IDIAL_CTL_FIRST_ASBE_4: ASBE4 processor bus MMIO Data Ecc CE Error.

Register Name	CQ_DAT Miscellaneous Configuration 1 Register
Mnemonic	NPU.STCK2.DAT.MISC.CONFIG1
Address	00000000050112A1 (SCOM)
Description	CQ_DAT Misc configuration register #1

Bits	SCOM	Field Mnemonic: Description
0:1	RW	CONFIG1_MGR_CREDIT: CTL->DAT merge request interface number of credits.
2:4	RW	CONFIG1_MRG_PBTX_NBUF: CTL->DAT merge request Powerbus TX interface logic request buffer size.
5:8	RW	CONFIG1_MRG_RDBF_NBUF: CTL->DAT merge request Powerbus TX array read logic request buffer size.
9:12	RW	CONFIG1_MRG_IBWR_NBUF: CTL->DAT merge request BE merge/OI-loopback/AMO I-buf write logic request buffer size.
13:15	RW	CONFIG1_MRG_IBRD_NBUF: CTL->DAT merge request BE merge/IO-loopback/AMO I-buf read logic request buffer size.
16:18	RW	CONFIG1_MRG_BBRD_NBUF: CTL->DAT merge request BE merge B-buf read logic request buffer size.
19:21	RW	CONFIG1_MRG_OBRD_NBUF: CTL->DAT merge request BE merge/OI-loopback/AMO O-buf read logic request buffer size.
22	RW	CONFIG1_MRG_CR_DIS: Writing a 1 disables CQ_DAT to send credits to CTL for merge operations.
23	RW	CONFIG1_MRG_CTLW_CR_DIS: Writing a 1 disables CQ_DAT to send credits to CTL for inbound buffer write operations.
24:25	RW	CONFIG1_NTLR_PAUSE_THRESH: Specifies number of O-buf NTL port occupation cycles before raising NTL pause request(00b = > 32cyc, 01b = > 16cyc, 10b = > 8cyc, 11b = > never).
26:27	RW	CONFIG1_CTLR_HP_THRESH: Specifies number of O-buf CTL read wait cycles before giving high priority(00b = > 16cyc, 01b = > 8cyc, 10b = > 4cyc, 11b = > never).
28:29	RW	CONFIG1_NTLW_PAUSE_THRESH: Specifies number of I-buf NTL port occupation cycles before raising NTL pause request(00b = > 16cyc, 01b = > 8cyc, 10b = > 4cyc, 11b = > never).
30:31	RW	CONFIG1_CTLW_HP_THRESH: Specifies number of I-buf CTL write wait cycles before giving high priority(00b = > 16cyc, 01b = > 8cyc, 10b = > 4cyc, 11b = > never).
32	RW	CONFIG1_PBTX_REDUCE_RTAG: Writing a 1 have CQ_DAT limit number of outstanding RTAGs to 1 on PB transmit interface (default is 2).
33	RW	CONFIG1_PBTX_DELAY_BDONE: Writing a 1 have CQ_DAT PB transmit logic wait until all the OW is presented on the PB before raising buffdone to CTL.
34	RW	CONFIG1_PBTX_FLIP_IMIN_BIG: Writing a 1 have CQ_DAT PB transmit logic flip the endian of the integer minimum value on failed inc/dec when e = 0 is specified.
35	RW	CONFIG1_PBTX_FLIP_IMIN_LITTLE: Writing a 1 have CQ_DAT PB transmit logic flip the endian of the integer minimum value on failed inc/dec when e = 1 is specified.
36	RW	CONFIG1_ALU_SAFE_LATENCY: Writing a 1 have CQ_DAT wait for 1 more cycle for ALU output in case x2 phase detection logic goes wrong.
37	RW	CONFIG1_ALU_FLIP_ENDIAN_BIG: Writing a 1 have CQ_DAT flip the ALU endian when e = 0 is specified.
38	RW	CONFIG1_ALU_FLIP_ENDIAN_LITTLE: Writing a 1 have CQ_DAT flip the ALU endian when e = 1 is specified.
39	RW	CONFIG1_PBTX_EARLY_AFTAG: Writing a 1 have CQ_DAT raise buffdone to CTL earlier for armwf_* operations. CQ_DAT does not wait for fetch data to be presented on the PB. However CQ_DAT does wait for fetch data to leave the I-buf that is, the buffer entry can still be safely reused. This bit can be randomized in verification.
40:63	RW	CONFIG1_Reserved1: Reserved.

Register Name	CQ_DAT ECC Configuration Register
Mnemonic	NPU.STCK2.DAT.MISC.ECC_CONFIG
Address	00000000050112A2 (SCOM)
Description	CQ_DAT ECC configuration register

Bits	SCOM	Field Mnemonic: Description
0	RW	ECC_CONFIG_PBTX_AMO_IGNORE_XUE: For armwf_inc/dec ttypes, replace PB transmit data with negative max value when comparison fails, even if the data has UE or SUE. The negative max value will be marked with SUE as long as suedis_pt = 0.
1	RW	ECC_CONFIG_SUE_DIS_BR_PERR: Writing a 1 disables marking merge result data with SUE when BE-buf read data latch has parity error.
2	RW	ECC_CONFIG_SUE_DIS_IR_PERR: Writing a 1 disables marking merge result data with SUE when Inbound-buf read data latch has parity error.
3	RW	ECC_CONFIG_SUE_DIS_OR_PERR: Writing a 1 disables marking merge result data with SUE when Outbound-buf read data latch has parity error.
4	RW	ECC_CONFIG_CORR_DIS_PT: Writing a 1 disables ECC correction in Power Bus TX.
5	RW	ECC_CONFIG_CORR_DIS_PR: Writing a 1 disables ECC correction in Power Bus RX.
6	RW	ECC_CONFIG_CORR_DIS_BR: Writing a 1 disables ECC correction in Byte Enable buffer read.
7	RW	ECC_CONFIG_CORR_DIS_IR: Writing a 1 disables ECC correction in Merge operation inbound buffer read.
8	RW	ECC_CONFIG_CORR_DIS_OR: Writing a 1 disables ECC correction in Merge operation outbound buffer read.
9	RW	ECC_CONFIG_SUE_DIS_PT: Writing a 1 disables converting ECC UE to SUE in Power Bus TX.
10	RW	ECC_CONFIG_SUE_DIS_PR: Writing a 1 disables converting ECC UE to SUE in Power Bus RX.
11	RW	ECC_CONFIG_SUE_DIS_BR: Writing a 1 disables converting ECC UE to SUE in Byte Enable buffer read.
12	RW	ECC_CONFIG_SUE_DIS_IR: Writing a 1 disables converting ECC UE to SUE in Merge operation inbound buffer read.
13	RW	ECC_CONFIG_SUE_DIS_OR: Writing a 1 disables converting ECC UE to SUE in Merge operation outbound buffer read.
14:31	RW	ECC_CONFIG_Reserved: Reserved.

47:63	RWX_WCLEAR	CERR_LOG_FIRST_BITS: CQ_DAT logic error c_err_rpt first error bits.

Register Name	CQ_DAT RAS Error Message 0 Register
Mnemonic	NPU.STCK2.DAT.MISC.REM0
Address	00000000050112AD (SCOM)
Description	CQ_DAT RAS Error Message 0

Bits	SCOM	Field Mnemonic: Description
0:16	RO	Constant = 0b00000000000000000
17:21	ROX	REM0_IBUF_WSRC: Indicates the I-buf write requestor that caused read-write conflict. bit 0 : NTL0 datin immediate write. bit 1 : NTL1 datin immediate write. bit 2 : NTL1 datin delayed write. bit 3 : CTL write. bit 4 : Merge logic.
22:23	ROX	REM0_IBUF_RSRC: Indicates the I-buf read requestor that caused read-write conflict. bit 0 : PBTX transmit. bit 1 : Merge logic.
24:31	ROX	REM0_IBUF_AIDX: The I-buf entry (0-255) on which read-write conflict occurred.
32:33	ROX	REM0_IBUF_ABANK: The I-buf array bank (0-3) on which read-write conflict occurred.
34:35	ROX	REM0_OBUF_WSRC: Indicates the O-buf write requestor that caused read-write conflict. bit 0 : PBTX receive. bit 1 : Merge logic I-O loopback.
36:41	ROX	REM0_OBUF_RSRC: Indicates the O-buf read requestor that caused read-write conflict. bit 0 : NTL0 datout immedate read. bit 1 : NTL1 datout immedate read. bit 2 : NTL0 datout regular read. bit 3 : NTL1 datout regular read. bit 4 : Merge logic. bit 5 : CTL read.

Bits	SCOM	Field Mnemonic: Description
42:49	ROX	REM0_OBUF_AIDX: The O-buf entry (0-255) on which read-write conflict occurred.
50:51	ROX	REM0_OBUF_ABANK: The O-buf array bank (0-3) on which read-write conflict occurred.
52:53	ROX	REM0_BBUF_WSRC: Indicates the B-buf write requestor that caused read-write conflict. bit 0 : NTL datin. bit 1 : Dispalt logic in MISC.
54:55	ROX	REM0_BBUF_RSRC: Indicates the B-buf read requestor that caused read-write conflict. bit 0 : Merge logic. bit 1 : Dispalt logic in MISC.
56:63	ROX	REM0_BBUF_AIDX: The B-buf entry (0-255) on which read-write conflict occurred.

Register Name	CQ_DAT RAS Error Message 1 Register
Mnemonic	NPU.STCK2.DAT.MISC.REM1
Address	00000000050112AE (SCOM)
Description	CQ_DAT RAS Error Message 1

Bits	SCOM	Field Mnemonic: Description
0:33	RO	Constant = 0b00000000000000000000000000000000
34:55	ROX	REM1_PBRX_RTAG: The invalid RTAG observed on PB receive interface.
56:58	ROX	REM1_ALU_ADR: The invalid ALU address in the OW that caused address error (in unit of 4B, 0 to 7).
59:62	ROX	REM1_ALU_TYPE: The ALU optype with which an address error was detected.
63	ROX	REM1_ALU_SZ: The ALU operand size (0:4B, 1:8B) when an address error was detected.

Register Name	CQ_DAT Debug0 Configuration Register
Mnemonic	NPU.STCK2.DAT.MISC.DEBUG0_CONFIG
Address	00000000050112B0 (SCOM)
Description	CQ_DAT Debug0 configuration register

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG0_CONFIG_POD0: Multiplexer control for byte 0 of trace-0.
5:9	RW	DEBUG0_CONFIG_POD1: Multiplexer control for byte 1 of trace-0.
10:14	RW	DEBUG0_CONFIG_POD2: Multiplexer control for byte 2 of trace-0.
15:19	RW	DEBUG0_CONFIG_POD3: Multiplexer control for byte 3 of trace-0.
20:24	RW	DEBUG0_CONFIG_POD4: Multiplexer control for byte 4 of trace-0.
25:29	RW	DEBUG0_CONFIG_POD5: Multiplexer control for byte 5 of trace-0.
30:34	RW	DEBUG0_CONFIG_POD6: Multiplexer control for byte 6 of trace-0.
35:39	RW	DEBUG0_CONFIG_POD7: Multiplexer control for byte 7 of trace-0.
40:44	RW	DEBUG0_CONFIG_POD8: Multiplexer control for byte 8 of trace-0.
45:49	RW	DEBUG0_CONFIG_POD9: Multiplexer control for byte 9 of trace-0.
50:54	RW	DEBUG0_CONFIG_POD10: Multiplexer control for byte 10 of trace-0.
55:62	RW	DEBUG0_CONFIG_Reserved1: Reserved.
63	RW	DEBUG0_CONFIG_ACT: Enable clock-gates for debug trace latches.

Register Name	CQ_DAT Debug1 Configuration Register
Mnemonic	NPU.STCK2.DAT.MISC.DEBUG1_CONFIG
Address	00000000050112B1 (SCOM)
Description	CQ_DAT Debug1 configuration register

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG1_CONFIG_POD0: Multiplexer control for byte 0 of trace-0.
5:9	RW	DEBUG1_CONFIG_POD1: Multiplexer control for byte 1 of trace-0.
10:14	RW	DEBUG1_CONFIG_POD2: Multiplexer control for byte 2 of trace-0.
15:19	RW	DEBUG1_CONFIG_POD3: Multiplexer control for byte 3 of trace-0.
20:24	RW	DEBUG1_CONFIG_POD4: Multiplexer control for byte 4 of trace-0.
25:29	RW	DEBUG1_CONFIG_POD5: Multiplexer control for byte 5 of trace-0.
30:34	RW	DEBUG1_CONFIG_POD6: Multiplexer control for byte 6 of trace-0.
35:39	RW	DEBUG1_CONFIG_POD7: Multiplexer control for byte 7 of trace-0.
40:44	RW	DEBUG1_CONFIG_POD8: Multiplexer control for byte 8 of trace-0.
45:49	RW	DEBUG1_CONFIG_POD9: Multiplexer control for byte 9 of trace-0.
50:54	RW	DEBUG1_CONFIG_POD10: Multiplexer control for byte 10 of trace-0.
55:62	RW	DEBUG1_CONFIG_Reserved1: Reserved.
63	RW	DEBUG1_CONFIG_ACT: Enable clock-gates for debug trace latches.

Register Name	CQ_DAT Scratch 1 Register
Mnemonic	NPU.STCK2.DAT.MISC.SCRATCH1
Address	00000000050112BC (SCOM)
Description	CQ_DAT scratch register 1

Bits	SCOM	Field Mnemonic: Description
0:63	RW	SCRATCH1_IDIAL: Scratch register.

Register Name	NTL Miscellaneous Configuration 2 Register
Mnemonic	NPU.STCK2.NTL0.REGS.CONFIG2
Address	00000000050112C0 (SCOM)
Description	The NTL Miscellaneous Configuration 2 Register is used to control internal NTL function. It contains mode bits, chicken switches, and thresholds.

Bits	SCOM	Field Mnemonic: Description
0	RW	BRICK_ENABLE: When 0b1, this NVLink brick is enabled. This configuration bit will be used as a general clock gate for latches in the NTL design.
1	RW	RSP_CTL_CRED_SINGLE_ENA: When 0b1, NTL will only give CQ_CTL 1 RSP credit at a time, instead of the normal 2.
2	RW	CREQ_BE_128: When 0b1, NTL will always send 128 bytes of data when it needs to send a Byte Enable (BE) flit to the GPU for a CREQ packet. When 0b0, NTL will send the least number of data flits required.

Bits	SCOM	Field Mnemonic: Description
3	RW	DGD_BE_128: When 0b1, NTL will always send 128 bytes of data when it needs to send a Byte Enable (BE) flit to the GPU for a Downgrade packet (BE and data flits are sent in the TransDone packet for the Downgrade). When 0b0, NTL will send the least number of data flits required.
4	RW	WR_SPLIT_UT0_ENA: When 0b1, NTL will split up Write requests with UT = 0 from the GPU that map to MMIO space into legal processor bus sizes/alignments. When 0b0, NTL will pass all Write requests with UT = 0 as is to CQ.
5	RW	WR_SPLIT_UT1_ENA: When 0b1, NTL will split up Write requests with UT = 1 from the GPU into legal processor bus sizes/alignments. This will include both DMA Writes and MMIO Writes since there is no way for NTL to distinguish between them. When 0b0, NTL will pass all Write requests with UT = 1 as is to CQ.
6	RW	BRICK_DEBUG_MODE: When 0b1, NTL will ignore all incoming NVLink packets from the GPU and will throw away all NVLink requests/responses from CQ destined for the GPU. This mode is used for debug purposes only when the NPU is not connected over NVLink to a GPU.
7	RW	P9_TO_P9_MODE: When 0b1, NTL will set UT = 1 for all incoming Read, Write, and Atomic NVLink packets before sending to CQ. This mode is used for debug purposes only when the NPU is connected to another/same NPU over NVLink.
8:9	RW	CONFIG2_Reserved1: Reserved.
10:15	RW	CAM256_MAX_CNT: This field specifies the number of entries in the CAM that holds information to send Responses for 256 byte operations that require a Response. (max value = 48).
16	RW	NDL_RX_PARITY_ENA: When 0b1, NTL will check parity on the incoming NDL RX signals.
17	RW	NDL_TX_PARITY_ENA: When 0b1, NTL will check parity on the incoming NDL TX (that is, TX Credits) signals.
18	RW	NDL_PRI_PARITY_ENA: When 0b1, NTL will check parity on the incoming NDL Priority Register Interface signals.
19	RW	RCV_CREDIT_OVERFLOW_ENA: When 0b1, NTL will check for overflows on any Received Credits from the GPU, NDL, and NDL Wrapper.
20	RW	HDR_ARR_ECC_CORR_ENA: When 0b1, NTL will correct ECC SBEs when reading the Rx Header Array.
21	RW	DAT_ARR_ECC_CORR_ENA: When 0b1, NTL will correct ECC SBEs when reading the Rx Data Array. NTL will only correct ECC on reads of the Rx Data Array that require NTL to update the data before sending to CQ_DAT (for example, BE flit or Data flits for Atomic CAS ops).
22	RW	TX_DATA_ECC_CORR_ENA: When 0b1, NTL will correct ECC SBEs when reading Tx Data from CQ_DAT.
23	RW	CONFIG2_Reserved2: Reserved.
24	RW	PARITY_ERROR_SUE_ENA: When 0b1, NTL will drive SUE on all Data transfers to CQ_DAT for a packet that has a parity error on an incoming Data flit.
25	RW	DATA_POISON_SUE_ENA: When 0b1, NTL will drive SUE on all Data transfers to CQ_DAT for a packet that receives LMD = Data Poison.
26	RW	HDR_ARR_ECC_SUE_ENA: When 0b1, NTL will drive SUE on all Data transfers to CQ_DAT for a packet that has an ECC UE/SUE on the header info read from the Rx Header Array.
27	RW	DAT_ARR_ECC_SUE_ENA: When 0b1, NTL will drive SUE on all Data transfers to CQ_DAT for a packet that has an ECC UE/SUE on data read from the Rx Data Array. NTL will only check ECC on reads of the Rx Data Array that require NTL to update the data before sending to CQ_DAT (for example, BE flit or Data flits for Atomic CAS ops).
28	RW	TX_ECC_DATA_POISON_ENA: When 0b1, NTL will send LMD = Data Poison for an outgoing NVLink packet that encounters an ECC UE/SUE on data read from CQ_DAT.
29:31	RW	CONFIG2_Reserved3: Reserved.
32	RW	PRI_STATE_MACHINE_RESET: Reset Priority Register Interface (PRI) state machine to Idle state (Debug use only).
33:63	RW	CONFIG2_Reserved4: Reserved.

Register Name	NTL Miscellaneous Configuration 3 Register
Mnemonic	NPU.STCK2.NTL0.REGS.CONFIG3
Address	00000000050112C1 (SCOM)
Description	The NTL Miscellaneous Configuration 3 Register is used for future control of internal NTL functions. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CONFIG3_Reserved1: Reserved.

Register Name	NTL CERR Hold 1 Register
Mnemonic	NPU.STCK2.NTL0.REGS.CERR_HOLD1
Address	00000000050112C2 (SCOM)
Description	c_err_rpt hold latches read-write-clear reg

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	NTL_HOLD1_0: ERROR - NTL RX - Unsupported command or ExCmd field encode received in an incoming NVLink packet.
1	RWX_WCLRREG	NTL_HOLD1_1: ERROR - NTL RX - AN / = 1 in an incoming NVLink packet where Rx Vld = 1 and Rx Hdr Vld = 1.
2	RWX_WCLRREG	NTL_HOLD1_2: ERROR - NTL RX - DatLen = 64B and Addr(6:5) = 11 in an incoming NVLink request packet where the Address field is valid.
3	RWX_WCLRREG	NTL_HOLD1_3: ERROR - NTL RX - DatLen = 96B and Addr(6) = 1 in an incoming NVLink request packet where the Address field is valid.
4	RWX_WCLRREG	NTL_HOLD1_4: ERROR - NTL RX - AddrType = 01 or 10 in an incoming NVLink Read,Write,Atomic,RMW request packet.
5	RWX_WCLRREG	NTL_HOLD1_5: ERROR - NTL RX - DatLen = Reserved encode in an incoming NVLink request/response packet where the DatLen field is valid.
6	RWX_WCLRREG	NTL_HOLD1_6: ERROR - NTL RX - DatLen = 256B in an incoming NVLink request packet where the DatLen field is valid, and not Read nor Write.
7	RWX_WCLRREG	NTL_HOLD1_7: ERROR - NTL RX - BE flit exists in an incoming NVLink ReqRsp with Data packet.

63	RWX_WCLEAR	NTL_FIRST1_63: ERROR - NTL RX - Reserved.

Register Name	**NTL CERR First Mask 1 Register**
Mnemonic	NPU.STCK2.NTL0.REGS.CERR_FIRST_MASK1
Address	00000000050112C5 (SCOM)
Description	1 error mask register Mask errors from being captured in the First-1 Error registers and the RAS Error Message registers

Bits	SCOM	Field Mnemonic: Description
0	RW	NTL_FIRST_MASK1_0: ERROR - NTL RX - Unsupported command or ExCmd field encode received in an incoming NVLink packet.
1	RW	NTL_FIRST_MASK1_1: ERROR - NTL RX - AN / = 1 in an incoming NVLink packet where Rx Vld = 1 and Rx Hdr Vld = 1.
2	RW	NTL_FIRST_MASK1_2: ERROR - NTL RX - DatLen = 64B and Addr(6:5) = 11 in an incoming NVLink request packet where the Address field is valid.
3	RW	NTL_FIRST_MASK1_3: ERROR - NTL RX - DatLen = 96B and Addr(6) = 1 in an incoming NVLink request packet where the Address field is valid.
4	RW	NTL_FIRST_MASK1_4: ERROR - NTL RX - AddrType = 01 or 10 in an incoming NVLink Read,Write,Atomic,RMW request packet.

Bits	SCOM	Field Mnemonic: Description
5	RW	NTL_FIRST_MASK1_5: ERROR - NTL RX - DatLen = Reserved encode in an incoming NVLink request/response packet where the DatLen field is valid.
6	RW	NTL_FIRST_MASK1_6: ERROR - NTL RX - DatLen = 256B in an incoming NVLink request packet where the DatLen field is valid, and not Read nor Write.
7	RW	NTL_FIRST_MASK1_7: ERROR - NTL RX - BE flit exists in an incoming NVLink ReqRsp with Data packet.
8	RW	NTL_FIRST_MASK1_8: ERROR - NTL RX - DatLen = 96B or 128B in an incoming NVLink Atomic CAS packet.
9	RW	NTL_FIRST_MASK1_9: ERROR - NTL RX - Compressed Responses not populated in the order CR0,CR1,CR2 in an incoming NVLink response packet.
10	RW	NTL_FIRST_MASK1_10: ERROR - NTL RX - Compressed Response with an Invalid/Reserved TD/IVC combination in an incoming NVLink response packet.
11	RW	NTL_FIRST_MASK1_11: ERROR - NTL RX - Address(63:49) / = 0 in an incoming NVLink request packet where the Address field is valid.
12	RW	NTL_FIRST_MASK1_12: ERROR - NTL RX - Address(48:47) / = 0 in an incoming NVLink UT = 0 request packet where the Address field is valid, and not ATR.
13	RW	NTL_FIRST_MASK1_13: ERROR - NTL RX - DatLen / = 16,32,64,128B in an incoming NVLink Probe packet.
14	RW	NTL_FIRST_MASK1_14: ERROR - NTL RX - DatLen = 96B or 256B in an incoming NVLink ReqRsp with Data packet.
15	RW	NTL_FIRST_MASK1_15: ERROR - NTL RX - AtomicSz / = 4B or 8B in an incoming NVLink Atomic packet.
16	RW	NTL_FIRST_MASK1_16: ERROR - NTL RX - DatLen and AtomicSz not both 4B or 8B in an incoming NVLink Atomic packet where no BE flit exists.
17	RW	NTL_FIRST_MASK1_17: ERROR - NTL RX - Reserved.
18	RW	NTL_FIRST_MASK1_18: ERROR - NTL RX - Reserved.
19	RW	NTL_FIRST_MASK1_19: ERROR - NTL RX - Reserved.
20	RW	NTL_FIRST_MASK1_20: ERROR - NTL RX - Reserved.
21	RW	NTL_FIRST_MASK1_21: ERROR - NTL RX - Reserved.
22	RW	NTL_FIRST_MASK1_22: ERROR - NTL RX - Reserved.
23	RW	NTL_FIRST_MASK1_23: ERROR - NTL RX - Reserved.
24	RW	NTL_FIRST_MASK1_24: ERROR - NTL RX - ECC Uncorrectable Error (UE) on Data(0:63) read from the Header Array.
25	RW	NTL_FIRST_MASK1_25: ERROR - NTL RX - ECC Uncorrectable Error (UE) on Data(64:127) read from the Header Array.
26	RW	NTL_FIRST_MASK1_26: ERROR - NTL RX - ECC Uncorrectable Error (UE) on Data(128:167) read from the Header Array.
27	RW	NTL_FIRST_MASK1_27: ERROR - NTL RX - ECC Uncorrectable Error (UE) on Data(0:63) read from the Data Array.
28	RW	NTL_FIRST_MASK1_28: ERROR - NTL RX - ECC Uncorrectable Error (UE) on Data(64:127) read from the Data Array.
29	RW	NTL_FIRST_MASK1_29: ERROR - NTL RX - Parity error on incoming NDL Rx Vld and Hdr_Vld signals.
30	RW	NTL_FIRST_MASK1_30: ERROR - NTL RX - Parity error on incoming NDL Rx LMD and CRC signals.
31	RW	NTL_FIRST_MASK1_31: ERROR - NTL RX - Parity error on incoming NDL Rx Header flit signals.
32	RW	NTL_FIRST_MASK1_32: ERROR - NTL RX - Parity error on incoming NDL Rx AE flit signals.
33	RW	NTL_FIRST_MASK1_33: ERROR - NTL RX - Parity error on incoming NDL Rx Data flit signals.

Bits	SCOM	Field Mnemonic: Description
34	RW	NTL_FIRST_MASK1_34: ERROR - NTL RX - An NVLink packet with data received LMD = Data Poison.
35	RW	NTL_FIRST_MASK1_35: ERROR - NTL RX - New CREQ Header flit from NVLink received when the CREQ Header Array is full.
36	RW	NTL_FIRST_MASK1_36: ERROR - NTL RX - New CREQ Data flit from NVLink received when the CREQ Data Array is full.
37	RW	NTL_FIRST_MASK1_37: ERROR - NTL RX - CREQ Data flit was attempted to be read from the CREQ Data Array when it was empty.
38	RW	NTL_FIRST_MASK1_38: ERROR - NTL RX - New RSP Header flit from NVLink received when the RSP Header Array is full.
39	RW	NTL_FIRST_MASK1_39: ERROR - NTL RX - New RSP Data flit from NVLink received when the RSP Data Array is full.
40	RW	NTL_FIRST_MASK1_40: ERROR - NTL RX - RSP Data flit was attempted to be read from the RSP Data Array when it was empty.
41	RW	NTL_FIRST_MASK1_41: ERROR - NTL RX - New PRB Header flit from NVLink received when the PRB Header Array is full.
42	RW	NTL_FIRST_MASK1_42: ERROR - NTL RX - New ATR Header flit from NVLink received when the ATR Header Array is full.
43	RW	NTL_FIRST_MASK1_43: ERROR - NTL RX - A new NVLink Header flit was received when NTL was still expecting Data flits for the previous packet.
44	RW	NTL_FIRST_MASK1_44: ERROR - NTL RX - More than one VC tried to write the Header and/or Data Array on the same cycle.
45	RW	NTL_FIRST_MASK1_45: ERROR - NTL RX - A CQ Slice Credit was received when one was already valid (overflow).
46	RW	NTL_FIRST_MASK1_46: ERROR - NTL RX - A CQ ATR Credit was received when one was already valid (overflow).
47	RW	NTL_FIRST_MASK1_47: ERROR - NTL RX - A CQ Flush Credit was received when 15 were already valid (overflow).
48	RW	NTL_FIRST_MASK1_48: ERROR - NTL RX - A CQ Global Credit was received when 3 were already valid (overflow).
49	RW	NTL_FIRST_MASK1_49: ERROR - NTL RX - A CQ Response Credit was received when one was already valid (overflow).
50	RW	NTL_FIRST_MASK1_50: ERROR - NTL RX - A Send SUE on data transfers to CQ_DAT latch was set for a NVLink CREQ packet without data.
51	RW	NTL_FIRST_MASK1_51: ERROR - NTL RX - A Send SUE on data transfers to CQ_DAT latch was set for a NVLink RSP packet without data.
52	RW	NTL_FIRST_MASK1_52: ERROR - NTL RX - Reserved.
53	RW	NTL_FIRST_MASK1_53: ERROR - NTL RX - Reserved.
54	RW	NTL_FIRST_MASK1_54: ERROR - NTL RX - Reserved.
55	RW	NTL_FIRST_MASK1_55: ERROR - NTL RX - Reserved.
56	RW	NTL_FIRST_MASK1_56: ERROR - NTL RX - ECC Correctable Error (CE) on Data(0:63) read from the Header Array.
57	RW	NTL_FIRST_MASK1_57: ERROR - NTL RX - ECC Correctable Error (CE) on Data(64:127) read from the Header Array.
58	RW	NTL_FIRST_MASK1_58: ERROR - NTL RX - ECC Correctable Error (CE) on Data(128:167) read from the Header Array.
59	RW	NTL_FIRST_MASK1_59: ERROR - NTL RX - ECC Correctable Error (CE) on Data(0:63) read from the Data Array.

Bits	SCOM	Field Mnemonic: Description
60	RW	NTL_FIRST_MASK1_60: ERROR - NTL RX - ECC Correctable Error (CE) on Data(64:127) read from the Data Array.
61	RW	NTL_FIRST_MASK1_61: ERROR - NTL RX - CRC error occurred on an incoming NVLink packet.
62	RW	NTL_FIRST_MASK1_62: ERROR - NTL RX - LMD = Stomp occurred on an incoming NVLink packet.
63	RW	NTL_FIRST_MASK1_63: ERROR - NTL RX - Reserved.

Register Name	**NTL CERR Hold 2 Register**
Mnemonic	NPU.STCK2.NTL0.REGS.CERR_HOLD2
Address	00000000050112C6 (SCOM)
Description	2 latches register c_err_rpt hold latches read-write-clear reg

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	NTL_HOLD2_0: ERROR - NTL TX - Parity error on incoming NDL Tx Credit signals.
1	RWX_WCLRREG	NTL_HOLD2_1: ERROR - NTL TX - ECC Uncorrectable Error (UE) on Data(0:63) read from CQ_DAT.
2	RWX_WCLRREG	NTL_HOLD2_2: ERROR - NTL TX - ECC Uncorrectable Error (UE) on Data(64:127) read from CQ_DAT.
3	RWX_WCLRREG	NTL_HOLD2_3: ERROR - NTL TX - ECC Special Uncorrectable Error (SUE) on Data(0:63) read from CQ_DAT.
4	RWX_WCLRREG	NTL_HOLD2_4: ERROR - NTL TX - ECC Special Uncorrectable Error (SUE) on Data(64:127) read from CQ_DAT.
5	RWX_WCLRREG	NTL_HOLD2_5: ERROR - NTL TX - Read or Atomic request with a length that is not a power of 2.
6	RWX_WCLRREG	NTL_HOLD2_6: ERROR - NTL TX - New CREQ request received from CQ when one already existed (overflow).
7	RWX_WCLRREG	NTL_HOLD2_7: ERROR - NTL TX - New DGD request received from CQ when one already existed (overflow).
8	RWX_WCLRREG	NTL_HOLD2_8: ERROR - NTL TX - New ATSD request received from CQ when one already existed (overflow).
9	RWX_WCLRREG	NTL_HOLD2_9: ERROR - NTL TX - New RSP request received from CQ when two already existed (overflow).
10	RWX_WCLRREG	NTL_HOLD2_10: ERROR - NTL TX - A data beat was received from CQ_DAT when one was not expected.
11	RWX_WCLRREG	NTL_HOLD2_11: ERROR - NTL TX - More than 1 type of flit was attempted to be sent to NDL at the same time.
12	RWX_WCLRREG	NTL_HOLD2_12: ERROR - NTL TX - More than 1 entry in the 256B Ops CAM was hit at the same time.
13	RWX_WCLRREG	NTL_HOLD2_13: ERROR - NTL TX - More than 1 entry in the CREQ Sticky CAM was hit at the same time.
14	RWX_WCLRREG	NTL_HOLD2_14: ERROR - NTL TX - More than 1 entry in the DGD Sticky CAM was hit at the same time.
15	RWX_WCLRREG	NTL_HOLD2_15: ERROR - NTL TX - Reserved.
16	RWX_WCLRREG	NTL_HOLD2_16: ERROR - NTL TX - Reserved.
17	RWX_WCLRREG	NTL_HOLD2_17: ERROR - NTL TX - Reserved.
18	RWX_WCLRREG	NTL_HOLD2_18: ERROR - NTL TX - Reserved.
19	RWX_WCLRREG	NTL_HOLD2_19: ERROR - NTL TX - Reserved.

Bits	SCOM	Field Mnemonic: Description
20	RWX_WCLRREG	NTL_HOLD2_20: ERROR - NTL TX - Reserved.
21	RWX_WCLRREG	NTL_HOLD2_21: ERROR - NTL TX - Reserved.
22	RWX_WCLRREG	NTL_HOLD2_22: ERROR - NTL TX - Reserved.
23	RWX_WCLRREG	NTL_HOLD2_23: ERROR - NTL TX - Reserved.
24	RWX_WCLRREG	NTL_HOLD2_24: ERROR - NTL TX - ECC Correctable Error (CE) on Data(0:63) read from CQ_DAT.
25	RWX_WCLRREG	NTL_HOLD2_25: ERROR - NTL TX - ECC Correctable Error (CE) on Data(64:127) read from CQ_DAT.
26	RWX_WCLRREG	NTL_HOLD2_26: ERROR - NTL TX - Reserved.
27	RWX_WCLRREG	NTL_HOLD2_27: ERROR - NTL TX - Reserved.
28	RWX_WCLRREG	NTL_HOLD2_28: ERROR - NTL TX - Reserved.
29	RWX_WCLRREG	NTL_HOLD2_29: ERROR - NTL TX - Reserved.
30	RWX_WCLRREG	NTL_HOLD2_30: ERROR - NTL TX - Reserved.
31	RWX_WCLRREG	NTL_HOLD2_31: ERROR - NTL TX - Reserved.
32	RWX_WCLRREG	NTL_HOLD2_32: ERROR - NTL REGS - CREQ Header Credits received from the GPU are greater than max value.
33	RWX_WCLRREG	NTL_HOLD2_33: ERROR - NTL REGS - DGD Header Credits received from the GPU are greater than max value.
34	RWX_WCLRREG	NTL_HOLD2_34: ERROR - NTL REGS - ATSD Header Credits received from the GPU are greater than max value.
35	RWX_WCLRREG	NTL_HOLD2_35: ERROR - NTL REGS - RSP Header Credits received from the GPU are greater than max value.
36	RWX_WCLRREG	NTL_HOLD2_36: ERROR - NTL REGS - CREQ Data Credits received from the GPU are greater than max value.
37	RWX_WCLRREG	NTL_HOLD2_37: ERROR - NTL REGS - RSP Data Credits received from the GPU are greater than max value.
38	RWX_WCLRREG	NTL_HOLD2_38: ERROR - NTL REGS - Replay Buffer Credits received from NDL are greater than 512.
39	RWX_WCLRREG	NTL_HOLD2_39: ERROR - NTL REGS - Async Buffer Credits received from the NDL Wrapper are greater than 64.
40	RWX_WCLRREG	NTL_HOLD2_40: ERROR - NTL REGS - Multiple Private Register Interface requests active at the same time for different NTLs.
41	RWX_WCLRREG	NTL_HOLD2_41: ERROR - NTL REGS - Multiple Private Register Interface requests active at the same time for the same NTL.
42	RWX_WCLRREG	NTL_HOLD2_42: ERROR - NTL REGS - Reserved.
43	RWX_WCLRREG	NTL_HOLD2_43: ERROR - NTL REGS - Reserved.

Register Name	NTL CERR First Mask 2 Register
Mnemonic	NPU.STCK2.NTL0.REGS.CERR_FIRST_MASK2
Address	00000000050112C9 (SCOM)
Description	2 error mask register Mask errors from being captured in the First-2 Error registers and the RAS Error Message registers

Bits	SCOM	Field Mnemonic: Description
0	RW	NTL_FIRST_MASK2_0: ERROR - NTL TX - Parity error on incoming NDL Tx Credit signals.
1	RW	NTL_FIRST_MASK2_1: ERROR - NTL TX - ECC Uncorrectable Error (UE) on Data(0:63) read from CQ_DAT.
2	RW	NTL_FIRST_MASK2_2: ERROR - NTL TX - ECC Uncorrectable Error (UE) on Data(64:127) read from CQ_DAT.
3	RW	NTL_FIRST_MASK2_3: ERROR - NTL TX - ECC Special Uncorrectable Error (SUE) on Data(0:63) read from CQ_DAT.
4	RW	NTL_FIRST_MASK2_4: ERROR - NTL TX - ECC Special Uncorrectable Error (SUE) on Data(64:127) read from CQ_DAT.
5	RW	NTL_FIRST_MASK2_5: ERROR - NTL TX - Read or Atomic request with a length that is not a power of 2.
6	RW	NTL_FIRST_MASK2_6: ERROR - NTL TX - New CREQ request received from CQ when one already existed (overflow).
7	RW	NTL_FIRST_MASK2_7: ERROR - NTL TX - New DGD request received from CQ when one already existed (overflow).
8	RW	NTL_FIRST_MASK2_8: ERROR - NTL TX - New ATSD request received from CQ when one already existed (overflow).
9	RW	NTL_FIRST_MASK2_9: ERROR - NTL TX - New RSP request received from CQ when two already existed (overflow).
10	RW	NTL_FIRST_MASK2_10: ERROR - NTL TX - A data beat was received from CQ_DAT when one was not expected.
11	RW	NTL_FIRST_MASK2_11: ERROR - NTL TX - More than 1 type of flit was attempted to be sent to NDL at the same time.

Register Name	**NTL Scratch 2 Register**
Mnemonic	NPU.STCK2.NTL0.REGS.SCRATCH2
Address	00000000050112CA (SCOM)
Description	The NTL Scratch 2 Register is provided in case a new control function is required in the future. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH2: Scratch register.

Register Name	**NTL Scratch 3 Register**
Mnemonic	NPU.STCK2.NTL0.REGS.SCRATCH3
Address	00000000050112CB (SCOM)
Description	The NTL Scratch 3 Register is provided in case a new control function is required in the future. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH3: Scratch register.

Register Name	**NTL Debug0 Configuration Register**
Mnemonic	NPU.STCK2.NTL0.REGS.DEBUG0_CONFIG
Address	00000000050112CC (SCOM)
Description	The NTL Debug Trace 0 Configuration Register is used to configure what debug information is sent on the Debug Trace 0 bus outputs of NTL.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG0_CONFIG_POD0: Multiplexer control for byte 0 of Debug Trace 0. 0x00 = Debug Trace 0 byte 0 inputs. 0x01 = Debug Trace 0 byte 1 inputs. 0x02 = Debug Trace 0 byte 2 inputs. 0x03 = Debug Trace 0 byte 3 inputs. 0x04 = Debug Trace 0 byte 4 inputs. 0x05 = Debug Trace 0 byte 5 inputs. 0x06 = Debug Trace 0 byte 6 inputs. 0x07 = Debug Trace 0 byte 7 inputs. 0x08 = Debug Trace 0 byte 8 inputs. 0x09 = Debug Trace 0 byte 9 inputs. 0x0A = Debug Trace 0 byte 10 inputs. 0x0B = RX Debug Group 0. 0x0C = RX Debug Group 1. 0x0D = RX Debug Group 2. 0x0E = RX Debug Group 3. 0x0F = RX Debug Group 4. 0x10 = RX Debug Group 5. 0x11 = RX Debug Group 6. 0x12 = RX Debug Group 7. 0x13 = RX Debug Group 8. 0x14 = TX Debug Group 0. 0x15 = TX Debug Group 1. 0x16 = TX Debug Group 2. 0x17 = TX Debug Group 3. 0x18 = TX Debug Group 4. 0x19 = TX Debug Group 5. 0x1A = TX Debug Group 6. 0x1B = REGS Debug Group 0.
5:9	RW	DEBUG0_CONFIG_POD1: Multiplexer control for byte 1 of Debug Trace 0.
10:14	RW	DEBUG0_CONFIG_POD2: Multiplexer control for byte 2 of Debug Trace 0.
15:19	RW	DEBUG0_CONFIG_POD3: Multiplexer control for byte 3 of Debug Trace 0.
20:24	RW	DEBUG0_CONFIG_POD4: Multiplexer control for byte 4 of Debug Trace 0.
25:29	RW	DEBUG0_CONFIG_POD5: Multiplexer control for byte 5 of Debug Trace 0.
30:34	RW	DEBUG0_CONFIG_POD6: Multiplexer control for byte 6 of Debug Trace 0.
35:39	RW	DEBUG0_CONFIG_POD7: Multiplexer control for byte 7 of Debug Trace 0.
40:44	RW	DEBUG0_CONFIG_POD8: Multiplexer control for byte 8 of Debug Trace 0.
45:49	RW	DEBUG0_CONFIG_POD9: Multiplexer control for byte 9 of Debug Trace 0.
50:54	RW	DEBUG0_CONFIG_POD10: Multiplexer control for byte 10 of Debug Trace 0.
55:62	RW	DEBUG0_CONFIG_Reserved1: Reserved.
63	RW	DEBUG0_CONFIG_ACT: Enable clock gates for Debug Trace latches.

Register Name	**NTL Debug1 Configuration Register**
Mnemonic	NPU.STCK2.NTL0.REGS.DEBUG1_CONFIG
Address	00000000050112CD (SCOM)
Description	The NTL Debug Trace 1 Configuration Register is used to configure what debug information is sent on the Debug Trace 1 bus outputs of NTL.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG1_CONFIG_POD0: Multiplexer control for byte 0 of Debug Trace 1. 0x00 = Debug Trace 1 byte 0 inputs. 0x01 = Debug Trace 1 byte 1 inputs. 0x02 = Debug Trace 1 byte 2 inputs. 0x03 = Debug Trace 1 byte 3 inputs. 0x04 = Debug Trace 1 byte 4 inputs. 0x05 = Debug Trace 1 byte 5 inputs. 0x06 = Debug Trace 1 byte 6 inputs. 0x07 = Debug Trace 1 byte 7 inputs. 0x08 = Debug Trace 1 byte 8 inputs. 0x09 = Debug Trace 1 byte 9 inputs. 0x0A = Debug Trace 1 byte 10 inputs. 0x0B = RX Debug Group 0. 0x0C = RX Debug Group 1. 0x0D = RX Debug Group 2. 0x0E = RX Debug Group 3. 0x0F = RX Debug Group 4. 0x10 = RX Debug Group 5. 0x11 = RX Debug Group 6. 0x12 = RX Debug Group 7. 0x13 = RX Debug Group 8. 0x14 = TX Debug Group 0. 0x15 = TX Debug Group 1. 0x16 = TX Debug Group 2. 0x17 = TX Debug Group 3. 0x18 = TX Debug Group 4. 0x19 = TX Debug Group 5. 0x1A = TX Debug Group 6. 0x1B = REGS Debug Group 0.
5:9	RW	DEBUG1_CONFIG_POD1: Multiplexer control for byte 1 of Debug Trace 1.
10:14	RW	DEBUG1_CONFIG_POD2: Multiplexer control for byte 2 of Debug Trace 1.
15:19	RW	DEBUG1_CONFIG_POD3: Multiplexer control for byte 3 of Debug Trace 1.
20:24	RW	DEBUG1_CONFIG_POD4: Multiplexer control for byte 4 of Debug Trace 1.
25:29	RW	DEBUG1_CONFIG_POD5: Multiplexer control for byte 5 of Debug Trace 1.
30:34	RW	DEBUG1_CONFIG_POD6: Multiplexer control for byte 6 of Debug Trace 1.
35:39	RW	DEBUG1_CONFIG_POD7: Multiplexer control for byte 7 of Debug Trace 1.
40:44	RW	DEBUG1_CONFIG_POD8: Multiplexer control for byte 8 of Debug Trace 1.
45:49	RW	DEBUG1_CONFIG_POD9: Multiplexer control for byte 9 of Debug Trace 1.
50:54	RW	DEBUG1_CONFIG_POD10: Multiplexer control for byte 10 of Debug Trace 1.
55:62	RW	DEBUG1_CONFIG_Reserved1: Reserved.
63	RW	DEBUG1_CONFIG_ACT: Enable clock gates for Debug Trace latches.

Register Name	**NTL Performance Configuration Register**
Mnemonic	NPU.STCK2.NTL0.REGS.PERF_CONFIG
Address	00000000050112CE (SCOM)
Description	The NTL Performance Configuration Register is used to configure what information is counted by the NTL PMULet.

Bits	SCOM	Field Mnemonic: Description
0	RW	PERF_CONFIG_ENABLE: PMULet Enable (clocks enable).

Bits	SCOM	Field Mnemonic: Description
1	RW	PERF_CONFIG_RESETMODE: 0/1 = reset-on-read/reset-on-write.
2	RW	PERF_CONFIG_FREEZEMODE: 0/1 = freerun-mode/freeze-on-any-max.
3	RW	PERF_CONFIG_DISABLE_PMISC: 0/1 = enable-pmisc/disable-pmisc control of counters.
4	RW	PERF_CONFIG_PMISC_MODE: 0/1 = global pmu pmisc no reset/global pmu pmisc reset-on-enable.
5:7	RW	PERF_CONFIG_CASCADE: PMULet cascade config.
8:9	RW	PERF_CONFIG_PRESCALE_C0: prescale config for counter 0.
10:11	RW	PERF_CONFIG_PRESCALE_C1: prescale config for counter 1.
12:13	RW	PERF_CONFIG_PRESCALE_C2: prescale config for counter 2.
14:15	RW	PERF_CONFIG_PRESCALE_C3: prescale config for counter 3.

Register Name	NTL RSP Data Array Pointer Register
Mnemonic	NPU.STCK2.NTL0.REGS.RSP_DA_PTR
Address	00000000050112D5 (SCOM)
Description	The NTL RSP Data Array Pointer Register is used to change the start and/or end entry in the NTL Data Array for holding RSP data flits.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	RSP_DA_PTR_Reserved1: Reserved.
3:11	RW	RSP_DA_PTR_START: Starting Data Array location for RSP data flits received from the GPU. The Data Array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
12:14	RW	RSP_DA_PTR_Reserved2: Reserved.
15:23	RW	RSP_DA_PTR_END: Ending Data Array location for RSP data flits received from the GPU. The Data Array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL Private Register Interface (PRI) Configuration Register
Mnemonic	NPU.STCK2.NTL0.REGS.PRI_CONFIG
Address	00000000050112D6 (SCOM)
Description	The NTL PRI Configuration Register is used to set up the Private Register Interface settings for this NTL. This register must be configured before any PRI requests are attempted to NDL or PHY registers.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	PRI_CONFIG_NDL: NDL indication sent in the PRI Read/Write access: 00 = NDL 0. 01 = NDL 1. 10 = NDL 2. 11 = Disable (this will disable NTL from decoding the NDL register space).
2:3	RW	PRI_CONFIG_PHY: Indicates if this NTL should decode a PHY register space: 00 = Decode PHY0 register space (one and only one NTL that is connected to PHY 0 must be set to this value). 01 = Decode PHY1 register space (one and only one NTL that is connected to PHY 1 must be set to this value). 1- = Do not decode any PHY register space.
4:63	RO	Constant = 0b0000000000000000000000000000000000000000000000000000000000000000

Register Name	NTL Miscellaneous Configuration 1 Register
Mnemonic	NPU.STCK2.NTL0.REGS.CONFIG1
Address	00000000050112D8 (SCOM)
Description	The NVLink transaction layer (NTL) Miscellaneous Configuration 1 Register is used to control NVLink packet formatting by the POWER9 processor. It also controls resetting of the POWER9 NTL.

Bits	SCOM	Field Mnemonic: Description
0	RW	COMPRESSED_RSP_ENA: When 0b1, NTL will attempt to compress responses that it sends to the GPU whenever possible.
1:3	RW	CONFIG1_Reserved1: Reserved.
4	RW	CREQ_AE_ALWAYS: When 0b1, NTL will always send an AE flit when it sends a CREQ packet to the GPU.
5	RW	DGD_AE_ALWAYS: When 0b1, NTL will always send an AE flit when it sends a Downgrade packet to the GPU.
6	RW	RSP_AE_ALWAYS: When 0b1, NTL will always send an AE flit when it sends a Response packet to the GPU.
7	RW	CONFIG1_Reserved2: Reserved.
8:9	RW	NTL_RESET: This field indicates the NTL Reset mode: 00 - Reset disabled. 11 - Reset (Fence) both NTL and the processor bus for this Brick. 10 - Reset (Fence) only the processor bus for this Brick, NTL will be operational. 01 - Reserved. The only legal sequence is 00->11->10->00. This field should not be changed unless bits 0:1 in the CQ Fence Status register equals the value in this field.
10:63	RW	CONFIG1_Reserved3: Reserved.

Register Name	NTL Scratch 1 Register
Mnemonic	NPU.STCK2.NTL0.REGS.SCRATCH1
Address	00000000050112DA (SCOM)
Description	The NTL Scratch 1 Register is provided in case a new control function is required in the future. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH1: Scratch register.

Register Name	NTL Low Power Configuration Register
Mnemonic	NPU.STCK2.NTL0.REGS.LOW_PWR
Address	00000000050112DC (SCOM)
Description	The NTL Low Power Configuration Register is used to enable the NPU to request that the NVLink interconnect be placed into low-power mode. The register also defines the conditions under which the NPU turns its low-power request on or off.

Bits	SCOM	Field Mnemonic: Description
0	RW	LP_MODE_ENABLE: When 0b1, this NTL is allowed to activate the Low Power Requested signal to NDL when the Low Power Count > = Low Power Count Threshold.
1	RW	LP_ONLY_MODE: When 0b1, this NTL will activate the Low Power Requested signal to NDL continuously. This can be used for lab stress/debug.
2:7	RW	LP_TIMER_TICK_CONFIG: Rate for the Low Power timer tick (2^n cycles).
8:19	RW	LP_MIN_CRED_THRESH: Whenever the NDL Replay Buffer Credits < this threshold, the Low Power Requested signal to NDL will be de-activated. This value must be greater than 0 and less than the Max Credit Threshold.
20:31	RW	LP_MAX_CRED_THRESH: Whenever the NDL Replay Buffer Credits > = this threshold and the Low Power timer tick is active, then the Low Power Count will be incremented by 1. This value must be greater than the Min Credit Threshold.
32:43	RW	LP_CNT_THRESH: Whenever the Low Power Count > = this threshold, this NTL will activate the Low Power Requested signal to NDL until the NDL Replay Buffer Credits < Low Power Min Credit Threshold. This value must be greater than 0.
44:63	RO	Constant = 0b00000000000000000000

Register Name	NTL Miscellaneous Configuration 2 Register
Mnemonic	NPU.STCK2.NTL1.REGS.CONFIG2
Address	00000000050112E0 (SCOM)
Description	The NTL Miscellaneous Configuration 2 Register is used to control internal NTL function. It contains mode bits, chicken switches, and thresholds.

Bits	SCOM	Field Mnemonic: Description
0	RW	BRICK_ENABLE: When 0b1, this NVLink brick is enabled. This configuration bit will be used as a general clock gate for latches in the NTL design.
1	RW	RSP_CTL_CRED_SINGLE_ENA: When 0b1, NTL will only give CQ_CTL 1 RSP credit at a time, instead of the normal 2.
2	RW	CREQ_BE_128: When 0b1, NTL will always send 128 bytes of data when it needs to send a Byte Enable (BE) flit to the GPU for a CREQ packet. When 0b0, NTL will send the least number of data flits required.

Bits	SCOM	Field Mnemonic: Description
3	RW	DGD_BE_128: When 0b1, NTL will always send 128 bytes of data when it needs to send a Byte Enable (BE) flit to the GPU for a Downgrade packet (BE and data flits are sent in the TransDone packet for the Downgrade). When 0b0, NTL will send the least number of data flits required.
4	RW	WR_SPLIT_UT0_ENA: When 0b1, NTL will split up Write requests with UT = 0 from the GPU that map to MMIO space into legal processor bus sizes/alignments. When 0b0, NTL will pass all Write requests with UT = 0 as is to CQ.
5	RW	WR_SPLIT_UT1_ENA: When 0b1, NTL will split up Write requests with UT = 1 from the GPU into legal processor bus sizes/alignments. This will include both DMA Writes and MMIO Writes since there is no way for NTL to distinguish between them. When 0b0, NTL will pass all Write requests with UT = 1 as is to CQ.
6	RW	BRICK_DEBUG_MODE: When 0b1, NTL will ignore all incoming NVLink packets from the GPU and will throw away all NVLink requests/responses from CQ destined for the GPU. This mode is used for debug purposes only when the NPU is not connected over NVLink to a GPU.
7	RW	P9_TO_P9_MODE: When 0b1, NTL will set UT = 1 for all incoming Read, Write, and Atomic NVLink packets before sending to CQ. This mode is used for debug purposes only when the NPU is connected to another/same NPU over NVLink.
8:9	RW	CONFIG2_Reserved1: Reserved.
10:15	RW	CAM256_MAX_CNT: This field specifies the number of entries in the CAM that holds information to send Responses for 256 byte operations that require a Response. (max value = 48).
16	RW	NDL_RX_PARITY_ENA: When 0b1, NTL will check parity on the incoming NDL RX signals.
17	RW	NDL_TX_PARITY_ENA: When 0b1, NTL will check parity on the incoming NDL TX (that is, TX Credits) signals.
18	RW	NDL_PRI_PARITY_ENA: When 0b1, NTL will check parity on the incoming NDL Priority Register Interface signals.
19	RW	RCV_CREDIT_OVERFLOW_ENA: When 0b1, NTL will check for overflows on any Received Credits from the GPU, NDL, and NDL Wrapper.
20	RW	HDR_ARR_ECC_CORR_ENA: When 0b1, NTL will correct ECC SBEs when reading the Rx Header Array.
21	RW	DAT_ARR_ECC_CORR_ENA: When 0b1, NTL will correct ECC SBEs when reading the Rx Data Array. NTL will only correct ECC on reads of the Rx Data Array that require NTL to update the data before sending to CQ_DAT (for example, BE flit or Data flits for Atomic CAS ops).
22	RW	TX_DATA_ECC_CORR_ENA: When 0b1, NTL will correct ECC SBEs when reading Tx Data from CQ_DAT.
23	RW	CONFIG2_Reserved2: Reserved.
24	RW	PARITY_ERROR_SUE_ENA: When 0b1, NTL will drive SUE on all Data transfers to CQ_DAT for a packet that has a parity error on an incoming Data flit.
25	RW	DATA_POISON_SUE_ENA: When 0b1, NTL will drive SUE on all Data transfers to CQ_DAT for a packet that receives LMD = Data Poison.
26	RW	HDR_ARR_ECC_SUE_ENA: When 0b1, NTL will drive SUE on all Data transfers to CQ_DAT for a packet that has an ECC UE/SUE on the header info read from the Rx Header Array.
27	RW	DAT_ARR_ECC_SUE_ENA: When 0b1, NTL will drive SUE on all Data transfers to CQ_DAT for a packet that has an ECC UE/SUE on data read from the Rx Data Array. NTL will only check ECC on reads of the Rx Data Array that require NTL to update the data before sending to CQ_DAT (for example, BE flit or Data flits for Atomic CAS ops).
28	RW	TX_ECC_DATA_POISON_ENA: When 0b1, NTL will send LMD = Data Poison for an outgoing NVLink packet that encounters an ECC UE/SUE on data read from CQ_DAT.
29:31	RW	CONFIG2_Reserved3: Reserved.
32	RW	PRI_STATE_MACHINE_RESET: Reset Priority Register Interface (PRI) state machine to Idle state (Debug use only).
33:63	RW	CONFIG2_Reserved4: Reserved.

Register Name	NTL Miscellaneous Configuration 3 Register
Mnemonic	NPU.STCK2.NTL1.REGS.CONFIG3
Address	00000000050112E1 (SCOM)
Description	The NTL Miscellaneous Configuration 3 Register is used for future control of internal NTL functions. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CONFIG3_Reserved1: Reserved.

Register Name	NTL CERR Hold 1 Register
Mnemonic	NPU.STCK2.NTL1.REGS.CERR_HOLD1
Address	00000000050112E2 (SCOM)
Description	c_err_rpt hold latches read-write-clear reg

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	NTL_HOLD1_0: ERROR - NTL RX - Unsupported command or ExCmd field encode received in an incoming NVLink packet.
1	RWX_WCLRREG	NTL_HOLD1_1: ERROR - NTL RX - AN / = 1 in an incoming NVLink packet where Rx Vld = 1 and Rx Hdr Vld = 1.

Register Name	NTL CERR First Mask 2 Register
Mnemonic	NPU.STCK2.NTL1.REGS.CERR_FIRST_MASK2
Address	00000000050112E9 (SCOM)
Description	2 error mask register Mask errors from being captured in the First-2 Error registers and the RAS Error Message registers

Bits	SCOM	Field Mnemonic: Description
0	RW	NTL_FIRST_MASK2_0: ERROR - NTL TX - Parity error on incoming NDL Tx Credit signals.
1	RW	NTL_FIRST_MASK2_1: ERROR - NTL TX - ECC Uncorrectable Error (UE) on Data(0:63) read from CQ_DAT.
2	RW	NTL_FIRST_MASK2_2: ERROR - NTL TX - ECC Uncorrectable Error (UE) on Data(64:127) read from CQ_DAT.
3	RW	NTL_FIRST_MASK2_3: ERROR - NTL TX - ECC Special Uncorrectable Error (SUE) on Data(0:63) read from CQ_DAT.
4	RW	NTL_FIRST_MASK2_4: ERROR - NTL TX - ECC Special Uncorrectable Error (SUE) on Data(64:127) read from CQ_DAT.
5	RW	NTL_FIRST_MASK2_5: ERROR - NTL TX - Read or Atomic request with a length that is not a power of 2.
6	RW	NTL_FIRST_MASK2_6: ERROR - NTL TX - New CREQ request received from CQ when one already existed (overflow).
7	RW	NTL_FIRST_MASK2_7: ERROR - NTL TX - New DGD request received from CQ when one already existed (overflow).
8	RW	NTL_FIRST_MASK2_8: ERROR - NTL TX - New ATSD request received from CQ when one already existed (overflow).
9	RW	NTL_FIRST_MASK2_9: ERROR - NTL TX - New RSP request received from CQ when two already existed (overflow).
10	RW	NTL_FIRST_MASK2_10: ERROR - NTL TX - A data beat was received from CQ_DAT when one was not expected.
11	RW	NTL_FIRST_MASK2_11: ERROR - NTL TX - More than 1 type of flit was attempted to be sent to NDL at the same time.
12	RW	NTL_FIRST_MASK2_12: ERROR - NTL TX - More than 1 entry in the 256B Ops CAM was hit at the same time.
13	RW	NTL_FIRST_MASK2_13: ERROR - NTL TX - More than 1 entry in the CREQ Sticky CAM was hit at the same time.
14	RW	NTL_FIRST_MASK2_14: ERROR - NTL TX - More than 1 entry in the DGD Sticky CAM was hit at the same time.
15	RW	NTL_FIRST_MASK2_15: ERROR - NTL TX - Reserved.
16	RW	NTL_FIRST_MASK2_16: ERROR - NTL TX - Reserved.
17	RW	NTL_FIRST_MASK2_17: ERROR - NTL TX - Reserved.
18	RW	NTL_FIRST_MASK2_18: ERROR - NTL TX - Reserved.
19	RW	NTL_FIRST_MASK2_19: ERROR - NTL TX - Reserved.
20	RW	NTL_FIRST_MASK2_20: ERROR - NTL TX - Reserved.
21	RW	NTL_FIRST_MASK2_21: ERROR - NTL TX - Reserved.
22	RW	NTL_FIRST_MASK2_22: ERROR - NTL TX - Reserved.
23	RW	NTL_FIRST_MASK2_23: ERROR - NTL TX - Reserved.
24	RW	NTL_FIRST_MASK2_24: ERROR - NTL TX - ECC Correctable Error (CE) on Data(0:63) read from CQ_DAT.

Bits	SCOM	Field Mnemonic: Description
25	RW	NTL_FIRST_MASK2_25: ERROR - NTL TX - ECC Correctable Error (CE) on Data(64:127) read from CQ_DAT.
26	RW	NTL_FIRST_MASK2_26: ERROR - NTL TX - Reserved.

Register Name	**NTL Scratch 2 Register**
Mnemonic	NPU.STCK2.NTL1.REGS.SCRATCH2
Address	00000000050112EA (SCOM)
Description	The NTL Scratch 2 Register is provided in case a new control function is required in the future. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH2: Scratch register.

Register Name	**NTL Scratch 3 Register**
Mnemonic	NPU.STCK2.NTL1.REGS.SCRATCH3
Address	00000000050112EB (SCOM)
Description	The NTL Scratch 3 Register is provided in case a new control function is required in the future. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH3: Scratch register.

Register Name	**NTL Debug0 Configuration Register**
Mnemonic	NPU.STCK2.NTL1.REGS.DEBUG0_CONFIG
Address	00000000050112EC (SCOM)
Description	The NTL Debug Trace 0 Configuration Register is used to configure what debug information is sent on the Debug Trace 0 bus outputs of NTL.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG0_CONFIG_POD0: Multiplexer control for byte 0 of Debug Trace 0. 0x00 = Debug Trace 0 byte 0 inputs. 0x01 = Debug Trace 0 byte 1 inputs. 0x02 = Debug Trace 0 byte 2 inputs. 0x03 = Debug Trace 0 byte 3 inputs. 0x04 = Debug Trace 0 byte 4 inputs. 0x05 = Debug Trace 0 byte 5 inputs. 0x06 = Debug Trace 0 byte 6 inputs. 0x07 = Debug Trace 0 byte 7 inputs. 0x08 = Debug Trace 0 byte 8 inputs. 0x09 = Debug Trace 0 byte 9 inputs. 0x0A = Debug Trace 0 byte 10 inputs. 0x0B = RX Debug Group 0. 0x0C = RX Debug Group 1. 0x0D = RX Debug Group 2. 0x0E = RX Debug Group 3. 0x0F = RX Debug Group 4. 0x10 = RX Debug Group 5. 0x11 = RX Debug Group 6. 0x12 = RX Debug Group 7. 0x13 = RX Debug Group 8. 0x14 = TX Debug Group 0. 0x15 = TX Debug Group 1. 0x16 = TX Debug Group 2. 0x17 = TX Debug Group 3. 0x18 = TX Debug Group 4. 0x19 = TX Debug Group 5. 0x1A = TX Debug Group 6. 0x1B = REGS Debug Group 0.
5:9	RW	DEBUG0_CONFIG_POD1: Multiplexer control for byte 1 of Debug Trace 0.
10:14	RW	DEBUG0_CONFIG_POD2: Multiplexer control for byte 2 of Debug Trace 0.
15:19	RW	DEBUG0_CONFIG_POD3: Multiplexer control for byte 3 of Debug Trace 0.
20:24	RW	DEBUG0_CONFIG_POD4: Multiplexer control for byte 4 of Debug Trace 0.
25:29	RW	DEBUG0_CONFIG_POD5: Multiplexer control for byte 5 of Debug Trace 0.
30:34	RW	DEBUG0_CONFIG_POD6: Multiplexer control for byte 6 of Debug Trace 0.
35:39	RW	DEBUG0_CONFIG_POD7: Multiplexer control for byte 7 of Debug Trace 0.
40:44	RW	DEBUG0_CONFIG_POD8: Multiplexer control for byte 8 of Debug Trace 0.
45:49	RW	DEBUG0_CONFIG_POD9: Multiplexer control for byte 9 of Debug Trace 0.
50:54	RW	DEBUG0_CONFIG_POD10: Multiplexer control for byte 10 of Debug Trace 0.
55:62	RW	DEBUG0_CONFIG_Reserved1: Reserved.
63	RW	DEBUG0_CONFIG_ACT: Enable clock gates for Debug Trace latches.

Register Name	**NTL Debug1 Configuration Register**
Mnemonic	NPU.STCK2.NTL1.REGS.DEBUG1_CONFIG
Address	00000000050112ED (SCOM)
Description	The NTL Debug Trace 1 Configuration Register is used to configure what debug information is sent on the Debug Trace 1 bus outputs of NTL.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG1_CONFIG_POD0: Multiplexer control for byte 0 of Debug Trace 1. 0x00 = Debug Trace 1 byte 0 inputs. 0x01 = Debug Trace 1 byte 1 inputs. 0x02 = Debug Trace 1 byte 2 inputs. 0x03 = Debug Trace 1 byte 3 inputs. 0x04 = Debug Trace 1 byte 4 inputs. 0x05 = Debug Trace 1 byte 5 inputs. 0x06 = Debug Trace 1 byte 6 inputs. 0x07 = Debug Trace 1 byte 7 inputs. 0x08 = Debug Trace 1 byte 8 inputs. 0x09 = Debug Trace 1 byte 9 inputs. 0x0A = Debug Trace 1 byte 10 inputs. 0x0B = RX Debug Group 0. 0x0C = RX Debug Group 1. 0x0D = RX Debug Group 2. 0x0E = RX Debug Group 3. 0x0F = RX Debug Group 4. 0x10 = RX Debug Group 5. 0x11 = RX Debug Group 6. 0x12 = RX Debug Group 7. 0x13 = RX Debug Group 8. 0x14 = TX Debug Group 0. 0x15 = TX Debug Group 1. 0x16 = TX Debug Group 2. 0x17 = TX Debug Group 3. 0x18 = TX Debug Group 4. 0x19 = TX Debug Group 5. 0x1A = TX Debug Group 6. 0x1B = REGS Debug Group 0.
5:9	RW	DEBUG1_CONFIG_POD1: Multiplexer control for byte 1 of Debug Trace 1.
10:14	RW	DEBUG1_CONFIG_POD2: Multiplexer control for byte 2 of Debug Trace 1.
15:19	RW	DEBUG1_CONFIG_POD3: Multiplexer control for byte 3 of Debug Trace 1.
20:24	RW	DEBUG1_CONFIG_POD4: Multiplexer control for byte 4 of Debug Trace 1.
25:29	RW	DEBUG1_CONFIG_POD5: Multiplexer control for byte 5 of Debug Trace 1.
30:34	RW	DEBUG1_CONFIG_POD6: Multiplexer control for byte 6 of Debug Trace 1.
35:39	RW	DEBUG1_CONFIG_POD7: Multiplexer control for byte 7 of Debug Trace 1.
40:44	RW	DEBUG1_CONFIG_POD8: Multiplexer control for byte 8 of Debug Trace 1.
45:49	RW	DEBUG1_CONFIG_POD9: Multiplexer control for byte 9 of Debug Trace 1.

51:63	RW	PERF_CONFIG_Reserved: Reserved.

Register Name	NTL Performance Count Register
Mnemonic	NPU.STCK2.NTL1.REGS.PERF_COUNT
Address	00000000050112EF (SCOM)
Description	The NTL Performance Count Register holds the performance counts from the NTL PMULet.

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	IDIAL_PERF_COUNT0: Performance Counter 0.
16:31	RWX_WCLRREG	IDIAL_PERF_COUNT1: Performance Counter 1.
32:47	RWX_WCLRREG	IDIAL_PERF_COUNT2: Performance Counter 2.
48:63	RWX_WCLRREG	IDIAL_PERF_COUNT3: Performance Counter 3.

Register Name	NTL CREQ Header Array Pointer Register
Mnemonic	NPU.STCK2.NTL1.REGS.CREQ_HA_PTR
Address	00000000050112F0 (SCOM)
Description	The NTL CREQ Header Array Pointer Register is used to change the start and/or end entry in the NTL Header Array for holding CREQ header information.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	CREQ_HA_PTR_Reserved1: Reserved.
5:11	RW	CREQ_HA_PTR_START: Starting header array location for CREQ headers received from the GPU. The header array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
12:16	RW	CREQ_HA_PTR_Reserved2: Reserved.
17:23	RW	CREQ_HA_PTR_END: Ending Header Array location for CREQ headers received from the GPU. The Header Array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL PRB Header Array Pointer Register
Mnemonic	NPU.STCK2.NTL1.REGS.PRB_HA_PTR
Address	00000000050112F1 (SCOM)
Description	The NTL PRB Header Array Pointer Register is used to change the start and/or end entry in the NTL Header Array for holding PRB header information.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	PRB_HA_PTR_Reserved1: Reserved.
5:11	RW	PRB_HA_PTR_START: Starting Header Array location for PRB headers received from the GPU. The Header Array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
12:16	RW	PRB_HA_PTR_Reserved2: Reserved.
17:23	RW	PRB_HA_PTR_END: Ending Header Array location for PRB headers received from the GPU. The Header Array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL ATR Header Array Pointer Register
Mnemonic	NPU.STCK2.NTL1.REGS.ATR_HA_PTR
Address	00000000050112F2 (SCOM)
Description	The NTL ATR Header Array Pointer Register is used to change the start and/or end entry in the NTL Header Array for holding ATR header information.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	ATR_HA_PTR_Reserved1: Reserved.
5:11	RW	ATR_HA_PTR_START: Starting Header Array location for ATR headers received from the GPU. The Header Array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
12:16	RW	ATR_HA_PTR_Reserved2: Reserved.
17:23	RW	ATR_HA_PTR_END: Ending Header Array location for ATR headers received from the GPU. The Header Array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL RSP Header Array Pointer Register
Mnemonic	NPU.STCK2.NTL1.REGS.RSP_HA_PTR
Address	00000000050112F3 (SCOM)
Description	The NTL RSP Header Array Pointer Register is used to change the start and/or end entry in the NTL Header Array for holding RSP header information.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	RSP_HA_PTR_Reserved1: Reserved.
5:11	RW	RSP_HA_PTR_START: Starting Header Array location for RSP headers received from the GPU. The Header Array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.

Bits	SCOM	Field Mnemonic: Description
12:16	RW	RSP_HA_PTR_Reserved2: Reserved.
17:23	RW	RSP_HA_PTR_END: Ending Header Array location for RSP headers received from the GPU. The Header Array is 128 entries and is divided into four sections to hold CREQ, PRB, ATR, and RSP headers. These four sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL CREQ Data Array Pointer Register
Mnemonic	NPU.STCK2.NTL1.REGS.CREQ_DA_PTR
Address	00000000050112F4 (SCOM)
Description	The NTL CREQ Data Array Pointer Register is used to change the start and/or end entry in the NTL Data Array for holding CREQ data flits.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	CREQ_DA_PTR_Reserved1: Reserved.
3:11	RW	CREQ_DA_PTR_START: Starting Data Array location for CREQ data flits received from the GPU. The Data Array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
12:14	RW	CREQ_DA_PTR_Reserved2: Reserved.
15:23	RW	CREQ_DA_PTR_END: Ending Data Array location for CREQ data flits received from the GPU. The Data Array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL RSP Data Array Pointer Register
Mnemonic	NPU.STCK2.NTL1.REGS.RSP_DA_PTR
Address	00000000050112F5 (SCOM)
Description	The NTL RSP Data Array Pointer Register is used to change the start and/or end entry in the NTL Data Array for holding RSP data flits.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	RSP_DA_PTR_Reserved1: Reserved.
3:11	RW	RSP_DA_PTR_START: Starting Data Array location for RSP data flits received from the GPU. The Data Array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
12:14	RW	RSP_DA_PTR_Reserved2: Reserved.
15:23	RW	RSP_DA_PTR_END: Ending Data Array location for RSP data flits received from the GPU. The Data Array is 512 entries and is divided into two sections to hold CREQ and RSP data flits. These two sections cannot overlap.
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NTL Private Register Interface (PRI) Configuration Register
Mnemonic	NPU.STCK2.NTL1.REGS.PRI_CONFIG
Address	00000000050112F6 (SCOM)
Description	The NTL PRI Configuration Register is used to set up the Private Register Interface settings for this NTL. This register must be configured before any PRI requests are attempted to NDL or PHY registers.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	PRI_CONFIG_NDL: NDL indication sent in the PRI Read/Write access: 00 = NDL 0. 01 = NDL 1. 10 = NDL 2. 11 = Disable (this will disable NTL from decoding the NDL register space).
2:3	RW	PRI_CONFIG_PHY: Indicates if this NTL should decode a PHY register space: 00 = Decode PHY0 register space (one and only one NTL that is connected to PHY 0 must be set to this value). 01 = Decode PHY1 register space (one and only one NTL that is connected to PHY 1 must be set to this value). 1- = Do not decode any PHY register space.
4:63	RO	Constant = 0b0000000000000000000000000000000000000000000000000000000000000000

Register Name	NTL Miscellaneous Configuration 1 Register
Mnemonic	NPU.STCK2.NTL1.REGS.CONFIG1
Address	00000000050112F8 (SCOM)
Description	The NVLink transaction layer (NTL) Miscellaneous Configuration 1 Register is used to control NVLink packet formatting by the POWER9 processor. It also controls resetting of the POWER9 NTL.

Bits	SCOM	Field Mnemonic: Description
0	RW	COMPRESSED_RSP_ENA: When 0b1, NTL will attempt to compress responses that it sends to the GPU whenever possible.
1:3	RW	CONFIG1_Reserved1: Reserved.
4	RW	CREQ_AE_ALWAYS: When 0b1, NTL will always send an AE flit when it sends a CREQ packet to the GPU.
5	RW	DGD_AE_ALWAYS: When 0b1, NTL will always send an AE flit when it sends a Downgrade packet to the GPU.
6	RW	RSP_AE_ALWAYS: When 0b1, NTL will always send an AE flit when it sends a Response packet to the GPU.
7	RW	CONFIG1_Reserved2: Reserved.
8:9	RW	NTL_RESET: This field indicates the NTL Reset mode: 00 - Reset disabled. 11 - Reset (Fence) both NTL and the processor bus for this Brick. 10 - Reset (Fence) only the processor bus for this Brick, NTL will be operational. 01 - Reserved. The only legal sequence is 00->11->10->00. This field should not be changed unless bits 0:1 in the CQ Fence Status register equals the value in this field.
10:63	RW	CONFIG1_Reserved3: Reserved.

Register Name	NTL Scratch 1 Register
Mnemonic	NPU.STCK2.NTL1.REGS.SCRATCH1
Address	00000000050112FA (SCOM)
Description	The NTL Scratch 1 Register is provided in case a new control function is required in the future. It has no control function at this time.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IDIAL_SCRATCH1: Scratch register.

Register Name	NTL Low Power Configuration Register
Mnemonic	NPU.STCK2.NTL1.REGS.LOW_PWR
Address	00000000050112FC (SCOM)
Description	The NTL Low Power Configuration Register is used to enable the NPU to request that the NVLink interconnect be placed into low-power mode. The register also defines the conditions under which the NPU turns its low-power request on or off.

Bits	SCOM	Field Mnemonic: Description
0	RW	LP_MODE_ENABLE: When 0b1, this NTL is allowed to activate the Low Power Requested signal to NDL when the Low Power Count > = Low Power Count Threshold.
1	RW	LP_ONLY_MODE: When 0b1, this NTL will activate the Low Power Requested signal to NDL continuously. This can be used for lab stress/debug.
2:7	RW	LP_TIMER_TICK_CONFIG: Rate for the Low Power timer tick (2^n cycles).
8:19	RW	LP_MIN_CRED_THRESH: Whenever the NDL Replay Buffer Credits < this threshold, the Low Power Requested signal to NDL will be de-activated. This value must be greater than 0 and less than the Max Credit Threshold.
20:31	RW	LP_MAX_CRED_THRESH: Whenever the NDL Replay Buffer Credits > = this threshold and the Low Power timer tick is active, then the Low Power Count will be incremented by 1. This value must be greater than the Min Credit Threshold.
32:43	RW	LP_CNT_THRESH: Whenever the Low Power Count > = this threshold, this NTL will activate the Low Power Requested signal to NDL until the NDL Replay Buffer Credits < Low Power Min Credit Threshold. This value must be greater than 0.
44:63	RO	Constant = 0b00000000000000000000

Register Name	NPU ATS PMU Control Register
Mnemonic	NPU.ATS.REG.NPU_AT_PMU_CTRL
Address	0000000005011300 (SCOM)
Description	The PMU Count Control Register contains configuration information for the PMULet counters in ATS. Note ATS also counts events from MISC macro.

Bits	SCOM	Field Mnemonic: Description
0	RW	PERF_CONFIG_ENABLE: 0b1 - PMULet enabled.
1	RW	PERF_CONFIG_RESETMODE: PMULet resetmode.
2	RW	PERF_CONFIG_FREEZEMODE: PMULet freezemode.
3	RW	PERF_CONFIG_DISABLE_PMISC: PMULet disable_pmisc.
4	RW	PERF_CONFIG_PMISC_MODE: PMULet pmisc_mode.

Bits	SCOM	Field Mnemonic: Description
5:7	RW	PERF_CONFIG_CASCADE: PMULet cascade.
8:9	RW	PERF_CONFIG_PRESCALE_C0: PMULet prescale_c0.
10:11	RW	PERF_CONFIG_PRESCALE_C1: PMULet prescale_c1.
12:13	RW	PERF_CONFIG_PRESCALE_C2: PMULet prescale_c2.
14:15	RW	PERF_CONFIG_PRESCALE_C3: PMULet prescale_c3.
16:17	RW	PERF_CONFIG_OPERATION_C0: PMULet operation_c0.
18:19	RW	PERF_CONFIG_OPERATION_C1: PMULet operation_c1.
20:21	RW	PERF_CONFIG_OPERATION_C2: PMULet operation_c2.
22:23	RW	PERF_CONFIG_OPERATION_C3: PMULet operation_c3.
24:26	RW	PERF_CONFIG_EVENTS: Choose 1 of 8 groups of events to route to PMULet for counting.
27:31	RW	CFG_PMU_PE_MATCH0: bit 0 - 0b1 Enable event gate by PE, match 0. bits 1 to 4 - PE ID.
32:36	RW	CFG_PMU_PE_MATCH1: bit 0 - 0b1 Enable event gate by PE, match 1. bits 1 to 4 - PE ID. Used for group 3 where the same event is counted for two PE IDs.
37:41	RW	PERF_CONFIG_SPARE: Reserved.
42:63	RO	Constant = 0b00000000000000000000

Register Name	NPU ATS PMU Count Register
Mnemonic	NPU.ATS.REG.NPU_AT_PMU_CNT
Address	0000000005011301 (SCOM)
Description	The NPU ATS PMULet Count Register contains the PMULet counters in ATS (4 x 16b). Note ATS also counts events from MISC macro

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	PMU_CNT0: PMULet Counter 0.
16:31	ROX	PMU_CNT1: PMULet Counter 1.
32:47	ROX	PMU_CNT2: PMULet Counter 2.
48:63	ROX	PMU_CNT3: PMULet Counter 3.

Register Name	NPU ATS Error Inject Register
Mnemonic	NPU.ATS.REG.NPU_AT_ECC
Address	0000000005011302 (SCOM)
Description	The NPU ATS Error Inject Register is used to inject errors into the arrays in ATS.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	INJECT_MODE: 0b10 - Inject Once. 0b01 - Inject continuously.
2:3	RW	INJECT_TYPE: 0b01 - Inject CE (inverts b41). 0b10 - Inject UE (inverts b23 and b53).
4	RW	INJECT_ENABLE: 0b1 - Error inject enabled.

Bits	SCOM	Field Mnemonic: Description
5:8	RW	ARRAY_SELECT: 0b1xxx - TCE Cache Directory (parity protected). 0bx1xx - TCE Data Array (parity protected). 0bxx1x - XLT_EA Array (ecc protected). 0bxxx1 - TDR_mem Array (ecc protected). Note >1 array may be injected simultaneously.
9:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	NPU ATS Debug/Trace Control Register
Mnemonic	NPU.ATS.REG.NPU_ATS_DEBUG
Address	0000000005011303 (SCOM)
Description	The NPU ATS Debug/Trace Control Register is used to control what information is placed on the debug bus by ATS.

Bits	SCOM	Field Mnemonic: Description
0	RW	DEBUG_ENABLE: Debug bus 0 and 1 enable clocks.
1:3	RW	DEBUG_0_SELECT: Debug bus 0 select. 0b001 = arb_reg_trace(0 to 51) and td(52 to 87). 0b010 = xpl_reg_trace(0 to 87). 0b011 = rrc_debug_vec(0 to 87). 0b100 = mlc_reg_trace_bus_0(0 to 87). 0b101 = mlc_reg_trace_bus_1(0 to 87). else = debug0_in_q(0 to 87).
4:6	RW	DEBUG_1_SELECT: Debug bus 1 select. 0b001 = arb_reg_trace(0 to 51) and td(52 to 87). 0b010 = xpl_reg_trace(0 to 87). 0b011 = rrc_debug_vec(0 to 87). 0b100 = mlc_reg_trace_bus_0(0 to 87). 0b101 = mlc_reg_trace_bus_1(0 to 87). else = debug1_in_q(0 to 87).
7:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	NPU ATS Chicken Switch Register
Mnemonic	NPU.ATS.REG.ATS_CKSW
Address	0000000005011304 (SCOM)
Description	The NPU ATS Chicken Switch Register is used to disable logic functions.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ATS_CKSW_SPARE: 0b1 - Disable logic function. Spare / not used.

Register Name	NPU ATS Hold Register
Mnemonic	NPU.ATS.REG.ATS_HOLD
Address	0000000005011305 (SCOM)
Description	The NPU ATS Error Report Register (c_err_rpt) indicates which address translation error conditions have occurred and been captured by a c_err_rpt macro. These errors are routed to MISC for FIR, interrupt, freeze and fence logic (maskable by SCAN-only latches).

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	TVT_ENTRY_INVALID_ESR: 0b1 - An address translation request attempted to use a TVE that was not valid (TCE Table Size = 0b00000). Classification: ER-single.
1	RWX_WCLRREG	TVT_ADDR_RANGE_ERR_ESR: 0b1 - A DMA address failed the range check specified in the TVE. Translate mode: 1) TVT configured to use > max EA (49b) or 2) non-used EA bits are not zero. No-translate mode: EA out of range. Classification: ER-single.
2	RWX_WCLRREG	TCE_PAGE_ACCESS_ERR_ESR: 0b1: An address translation request attempted to access a page in a way that is not allowed by the access permissions in the referenced TCE. For example, attempting to write to a read-only page. Error occurred during TCE Cache lookup. Classification: ER-single.
3	RWX_WCLRREG	TCE_CACHE_MULT_HIT_ERR_ESR: 0b1: An address translation request hit multiple entries in the TCE cache. Classification: ER-single.
4	RWX_WCLRREG	MLC_ACCESS_ERR_ESR: 0b1 - An address translation request attempted to access a page in a way that. is not allowed by the access permissions in the referenced TCE. For example, attempting to write to a read-only page. Error occurred during cache miss table-walk. Classification: ER-single.
5	RWX_WCLRREG	TCE_REQ_TO_ERR_ESR: 0b1 - A TCE table-walk fetch request timed out. Classification: Fatal.
6	RWX_WCLRREG	TCD_PERR_ESR: 0b1 - A parity error was detected on the TCE cache directory array. Classification: Informational.
7	RWX_WCLRREG	TDR_PERR_ESR: 0b1 - A parity error was detected on the TCE cache data array. Classification: Informational.
8	RWX_WCLRREG	AT_EA_UE_ESR: 0b1 - An uncorrectable error was detected on the TCE effective address array (XLT_EA) Classification: Fatal.
9	RWX_WCLRREG	AT_EA_CE_ESR: 0b1 - A correctable error was detected on the TCE effective address array (XLT_EA) Classification: Informational.
10	RWX_WCLRREG	AT_TDRMEM_UE_ESR: 0b1 - Uncorrectable ECC error from TDR_mem array (MLC table-walk state machine also hangs). Classification: Fatal.
11	RWX_WCLRREG	AT_TDRMEM_CE_ESR: 0b1 - Correctable ECC error from TDR_mem array. Classification: Informational.
12	RWX_WCLRREG	RSPOUT_UE_ESR: 0b1 - Uncorrectable ECC error from CQ CTL DMA Read data to TDR_mem array during table-walk. Classification: Fatal.
13	RWX_WCLRREG	RSPOUT_CE_ESR: 0b1 - Correctable ECC error from CQ CTL DMA Read data to TDR_mem array during table_walk. Classification: Informational.
14	RWX_WCLRREG	TVT_PERR_ESR: 0b1 - A parity error has been detected on the registers that make up the TVT (checked every cycle). Classification: Fatal.
15	RWX_WCLRREG	IODA_ADDR_PERR_ESR: 0b1 - A parity error has been detected on the IODA Address Register (checked every cycle). Classification: Fatal.
16	RWX_WCLRREG	ATS_CTRLR_PERR_ESR: 0b1 - A parity error has been detected on the ATS Control Register (checked every cycle). Classification: Fatal.
17	RWX_WCLRREG	ATS_TOR_PERR_ESR: 0b1 - A parity error has been detected on the ATS Timeout Control Register (checked every cycle). Classification: Fatal.
18	RWX_WCLRREG	INVAL_IODA_TBL_SEL_ESR: 0b1 - An invalid table select encode was used in the IODA Address Register (checked on IODA Table Data register read/write). Classification: Informational.
19	RWX_WCLRREG	ESR_RSVD_19: Reserved.
20:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000

Register Name	NPU ATS Mask Register
Mnemonic	NPU.ATS.REG.ATS_MASK
Address	0000000005011306 (SCOM)
Description	The NPU ATS Error Mask Register (c_err_rpt) enables masking of address translation error conditions before routing to MISC for FIR, interrupt, freeze and fence logic. See NPU ATS Error Report Register for a description of error bits. writable via SCAN-only latches.

Bits	SCOM	Field Mnemonic: Description
0:19	RO	IDIAL_ATS_MASK: 0b0 = no mask, 0b1 = mask.
20:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NPU ATS Control Register
Mnemonic	NPU.ATS.REG.ATS_CTRL
Address	0000000005011320 (SCOM)
Description	The NPU ATS Control Register is used to control logic behavior.

Bits	SCOM	Field Mnemonic: Description
0	RW	ATS_ARB_STOP: 0b1 - The NPU ATS rerun logic is stopped. Must also assert ats_arb_stall. TCE table-walks and TCE Kills complete normally.
1	RW	ATS_ARB_STALL: 0b1 - The NPU ATS arbiter blocks all new TCE translate requests from CQ CTL. TCE table walks, translate requests waiting for TCE table walks and TCE Kills complete normally.
2	RW	ATS_TCE_CACHE_DISABLE: 0b1 - The NPU ATS TCE cache will be disabled. All translate requests require table-walk.
3	RW	ATS_TCE_CACHE_1W: 0b1 - The NPU ATS TCE cache will be 1w associative (vs. default 4w associative).
4	RW	ATS_CONFIG_BRAZOS: 0b1 - The NPU ATS uses Brazos mode when expanding GPU Real Address to POWER9 Real Address (vs. default Coral mode). Affects only TVE no-translate mode operations.
5:9	RW	CONFIG_SYNC_WAIT: Number of clock cycles from CTL sync request to CTL sync valid (masks round-trip staging latency ATS->CTL->ATS).
10:63	RW	ATS_CTRL_SPARE: spare config bits.

Register Name	NPU ATS IODA Table Address Register
Mnemonic	NPU.ATS.REG.IODA_ADDR
Address	0000000005011321 (SCOM)
Description	The NPU ATS IODA Table Address register sets the address for accessing one of the architected IODA tables in the NPU. A DMA Quiesce is required before accessing any c8t array (see idial table_select).

Bits	SCOM	Field Mnemonic: Description
0	RW	AUTO_INCREMENT: 0b1 = Automatically increment the Table Address field after the IODA Table Data Register is accessed.
1:10	RO	Constant = 0b0000000000

Bits	SCOM	Field Mnemonic: Description
11:15	RW	TABLE_SELECT: This encoding selects the table to access. 0b01001 - TCE Validation Table (TVT, 16 entries, must be quiesced). 0b01010 - TCE Cache Directory (TCD, 1k entries, must be quiesced). 0b01011 - TCE Cache Data (TDR, 1k entries, must be quiesced). 0b01100 - TCE Tree Walk Data (TDRmem, 24 entries (of 32 entry array), must be quiesced). 0b10000 - AT Effective Address (XLT_EA, 96 entries (of 128 entry array), must be quiesced). others - return random data on reads, ignore writes.
16:53	RO	Constant = 0b00000000000000000000000000000000000000000000
54:63	RWX	TABLE_ADDRESS: This value defines the address for read and write accesses to the selected IODA table. If the Auto Increment bit is set, this value increments after every read or write. of the IODA Table Data Register 0, and advances through the entire 10b range, then wraps to zero. Note, if a table address space is < 10b (TVT, XLT_EA and TDRmem) the least significant address bits are used. Note, the TCD and TDR are implemented using 4x256 entry arrays: (54:55) = array number. (56:63) = hash number.

Register Name	**NPU ATS IODA Table Data 0 Register**
Mnemonic	NPU.ATS.REG.IODA_DAT0
Address	0000000005011322 (SCOM)
Description	The NPU ATS IODA Table Data Register contains the data for writing to or reading from an IODA table in the NPU. A read of this register generates a read of the table and address contained in the IODA Table Address Register. The read data is returned with the read operation. Read data of all 0b1 indicates error (invalid Table Address, invalid offset into Table Address read data parity error, read data ecc ue or sue). A write to this register generates a write to the table and address contained in the IODA Table Address Register. Reads or writes to this register increment the IODA Table Address Register Table Address if the Auto Increment bit is set. c8t arrays may only read/write when ATS is quiesced.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	TABLE_DATA: Data to write or read result data.

Register Name	NPU ATS DMA Synchronization Register
Mnemonic	NPU.ATS.REG.DMA_SYNC
Address	0000000005011323 (SCOM)
Description	This register is used to indicate that all DMA reads or writes that are in progress when the register is written have completed. In this case, in progress means CTL has requested a TCE address translation, and the ATS arbiter has selected the request and begun processing. A sync is typically used during purge cache operations to ensure all old DMA operations have finished using old pages in memory. Firmware must ensure all accesses to an old page have ceased before reallocating a page to another process or thread. Note there is no distinction between read and write sync (all operations must complete for both types of request). Note a DMA sync is also initiated (by hardware) before sending an interrupt request, or by a DMA Quiesce request (by software). This may delay a Firmware sync complete if the requests collide, but will not reset a sync that has completed. A DMA sync may not be cancelled.

Bits	SCOM	Field Mnemonic: Description
0	RWX	START_READ_SYNC: 0b0 - no effect. 0b1 = Starts the DMA Read Synchronization Process.
1	ROX	READ_SYNC_COMPLETE: 0b0 - DMA Read operations that were active when the Start Sync bit. was written to 0b1 are still pending. 0b1 - All DMA read operations that were active when the Start Sync bit. was written have completed.
2	RWX	START_WRITE_SYNC: 0b0 - no effect. 0b1 = Starts the DMA Write Synchronization Process.
3	ROX	WRITE_SYNC_COMPLETE: 0b0 - DMA Write operations that were active when the Start Sync bit. was written to 0b1 are still pending. 0b1 - All DMA write operations that were active when the Start Sync bit. was written have completed.
4:63	RO	Constant = 0b0000000000000000000000000000000000000000000000000000000000000000

Register Name	NPU ATS TCE Kill Register
Mnemonic	NPU.ATS.REG.TCE_KILL
Address	0000000005011324 (SCOM)
Description	The TCE Kill Register provides a mechanism to support Firmware Managed TCE Coherency. Software has the ability to invalidate any potential TCE system address that may be cached in the NPU. Invalidates to non-cached entries have no affect. Writing this register has a side effect of generating an invalidate/kill to the TCE Cache.

Bits	SCOM	Field Mnemonic: Description
0	RWX	INVALIDATE_ALL: 0b1 - TCE Kill entire cache Note: Bits 0 and 2 cannot both be set!.
1	RO	Constant = 0b0
2	RWX	INVALIDATE_ONE: 0b1 - TCE Kill the Effective address specified in this register Note: Bits 0 and 2 cannot both be set!.
3	RO	Constant = 0b0
4:7	RW	INVALIDATE_PE_NUMBER: PE number of the cache entry or entries to invalidate. Required for invalidate_operation '001' and not required for invalidate_operation '1xx'.
8:14	RO	Constant = 0b0000000

Bits	SCOM	Field Mnemonic: Description
15:51	RW	INVALIDATE_ADDRESS: NV-Link address for the specified PE number for which the corresponding direct TCE is to be invalidated. I/O page aligned. Register bits 15:51 aligns with NV-Link address 51:15. Since this field is I/O page aligned, some of the low order bits of this field will need to be '0' for the I/O page sizes larger than 4 KB. Required for invalidate_operation '001' and not required for invalidate_operation '1xx'.
52:63	RO	Constant = 0b000000000000

Register Name	**NPU ATS Quiesce DMA Register**
Mnemonic	NPU.ATS.REG.NPU_Q_DMA_R
Address	0000000005011325 (SCOM)
Description	The NPU ATS Quiesce DMA Register is used to temporarily block the internal NPU logic from processing new DMA reads or writes from the NV-Link transaction layer interface. This is accomplished via the following sequence: 1) ATS arbiter blocks new TCE translate requests from CTL 2) Wait for all TCE translate requests that are in progress to complete This includes ATS pipeline latency, TCE cache miss table-walk and reruns) 3) Reset bit 6 to 0b0 (all TCE translation requests complete) 4) Wait for CTL to complete all DMA commands 5) Reset bit 4 to 0b0 (all DMAs complete) The quiesce may be cancelled before completion by writing bit 0 to 0b0. ATS is DMA quiesced when bit 1 = 0b1 and bit 4 = 0b0

Bits	SCOM	Field Mnemonic: Description
0	RWX	QUIESCE_DMA: 0b0: UT = 1 commands from the NV-Link interface are processed normally. 0b1: UT = 1 commands from the NV-Link interface are accepted but not processed (ATS arbiter stops selecting new requests). If bit 1 = 0b1, hardware will reset this bit when the dma quiesce is complete, exiting the quiesce state.
1	RWX	QUIESCE_AUTO_RESET: 0b0 - Only software can reset bit 0 of this register. 0b1 - Software can reset bit 0 or hardware will reset bits 0:1 when bits 4 and 6 of this register are both equal to 0b0.
2:3	RO	Constant = 0b00
4	ROX	DMA_RESPONSE: 0b0 - quiesce request has completed (No UT = 1 DMA commands are outstanding on the Powerbus). 0b1 - quiesce request is in progress (UT = 1 DMA commands are outstanding on the Powerbus). Only valid when bit 0 = 0b1.
5	RO	Constant = 0b0
6	ROX	TCE_RESPONSE: 0b0 - quiesce request has partially completed (No TCE translations are in progress). 0b1 - quiesce request is in progress (TCE translations are in progress). Only valid when bit 0 = 0b1.
7:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000000

Register Name	**NPU ATS TCE Response Timeout Control Register**
Mnemonic	NPU.ATS.REG.ATS_TCR
Address	0000000005011326 (SCOM)
Description	The NPU ATS TCE Response Timeout Control Register controls the timeout counters in the ATS internal logic. The timeout applies to each DMA read of a TCE Table Walk.

Bits	SCOM	Field Mnemonic: Description
0:9	RO	Constant = 0b0000000000
10:15	RW	TCE_TIMEOUT: TCE Response Timeout Value. Timeout minimum is $2^{((n) \times 32)}$ cycles Timeout maximum is $2^{((n) \times 48)}$ cycles 0b1xxxxx = disables the timeout. 0b010100 = provides timeout of ~14 to 21 ms (default).
16:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	NPU ATS Error Status Register
Mnemonic	NPU.ATS.REG.NPU_AT_ESR
Address	0000000005011327 (SCOM)
Description	The NPU ATS Error Status Register indicates which address translation error conditions have occurred. Errors are maskable via NPU ATS Error Status Mask Register. Same as c_err_rpt register except that reporting is maskable via SCOM independent of FIR reporting.

Bits	SCOM	Field Mnemonic: Description
0:19	RWX	IDIAL_ATS_ESR: See NPU ATS Error Report Register (c_err_rpt) for details.
20:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NPU ATS Error Status Mask Register
Mnemonic	NPU.ATS.REG.NPU_AT_ESMR
Address	0000000005011328 (SCOM)
Description	The NPU AT Error Status Mask Register gates which address translation related error conditions will be logged in the NPU AT Error Status Register.

Bits	SCOM	Field Mnemonic: Description
0:19	RW	IDIAL_ATS_ESR_MSK: 0b1 = An error will not be logged in the NPU ATS Error Status Register. See NPU ATS Error Report Register (c_err_rpt) for details.
20:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	NPU ATS First Error Status Register
Mnemonic	NPU.ATS.REG.NPU_AT_FESR
Address	0000000005011329 (SCOM)
Description	The NPU ATS First Error Status Register indicates which address translation related error conditions occurred first. The register freezes after the first error is detected. The value in this register remains frozen until the entire register is cleared by firmware.

Bits	SCOM	Field Mnemonic: Description
0	RWX	FIRST_ERROR_CAPTURED: 0b1 = Error capture information is valid.
1:2	RWX	FIRST_ERROR_SPARE: Reserved.
3:7	RWX	FIRST_ERROR_DECODE: 5-bit encode of first error source. See NPU ATS Error Report Register (c_err_rpt) for details.
8:63	RWX	FIRST_ERROR_INFO: Debug Information for the selected error. See vhdl for details.

Register Name	NPU ATS First Error Status Mask Register
Mnemonic	NPU.ATS.REG.NPU_AT_FESMR
Address	000000000501132A (SCOM)
Description	The ATS First Error Status Mask Register gates which address translation related error conditions will be logged in the NPU ATS First Error Status Register.

Bits	SCOM	Field Mnemonic: Description
0:19	RW	IDIAL_ATS_FER_MSK: 0b1 = An error will not be logged in the NPU ATS First Error Status Register. See NPU ATS Error Report Register (c_err_rpt) for details.
20:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	XTS Error Hold Register
Mnemonic	NPU.XTS.REG.ERR_HOLD
Address	0000000005011340 (SCOM)
Description	XTS error c_err_rpt status and clear register

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLEAR	DEBUG0_CONFIG_P_ERR: debug0 configuration register parity error.
1	RWX_WCLEAR	DEBUG1_CONFIG_P_ERR: debug1 configuration register parity error.
2	RWX_WCLEAR	XTS_CONFIG_P_ERR: xts configuration register parity error.
3:7	RWX_WCLEAR	ERR_UNUSED1: Unused.
8	RWX_WCLEAR	SNP_REG_ERR0: PBus Snoop 0 address parity error.
9	RWX_WCLEAR	SNP_REG_ERR1: PBus Snoop 0 ttag parity error.
10	RWX_WCLEAR	SNP_REG_ERR2: PBus Snoop 1 address parity error.
11	RWX_WCLEAR	SNP_REG_ERR3: PBus Snoop 1 ttag parity error.
12	RWX_WCLEAR	SNP_REG_ERR4: PBus Snoop bad operation error.
13	RWX_WCLEAR	SNP_REG_ERR5: PBus Snoop sequence parity error.
14	RWX_WCLEAR	SNP_REG_ERR6: PBus Snoop time out.
15	RWX_WCLEAR	ATR_ERR_SM_STATE: ATR state machine parity error.
16	RWX_WCLEAR	ATSD_ERR_SM_STATE: ATSD state machine parity error.
17	RWX_WCLEAR	ATR_ERR_TIMEOUT: ATR state machine time out.
18	RWX_WCLEAR	ATSD_ERR_TIMEOUT: ATSD state machine time out.
19	RWX_WCLEAR	ATSD_ERR_BAD_TAG: unexpected ATSD response tag.
20	RWX_WCLEAR	MAP_REG_ERR2: ATR BDF table lookup parity error.
21	RWX_WCLEAR	MAP_REG_ERR3: ATR PID table lookup parity error.
22	RWX_WCLEAR	MAP_REG_ERR4: ATSD BDF table lookup parity error.
23	RWX_WCLEAR	ATR_ERR_ARBSTATE: ATR arbiter state not on-hot during selection phase.
24:31	RWX_WCLEAR	ERR_UNUSED2: Unused.
32	RWX_WCLEAR	IFC_REG_CERR0: stack 0 MMU response correctable ECC error.

Bits	SCOM	Field Mnemonic: Description
33	RWX_WCLEAR	IFC_REG_CERR1: stack 1 MMU response correctable ECC error.
34	RWX_WCLEAR	IFC_REG_CERR2: stack 2 MMU response correctable ECC error.
35	RWX_WCLEAR	MAP_REG_CERR0: AMR SRAM correctable ECC error.
36	RWX_WCLEAR	MAP_REG_CERR1: SEIDR SRAM correctable ECC error.
37:47	RWX_WCLEAR	ERR_UNUSED3: Unused.
48	RWX_WCLEAR	IFC_REG_ERR0: stack 0 MMU response uncorrectable ECC error.
49	RWX_WCLEAR	IFC_REG_ERR1: stack 0 MMU response special uncorrectable ECC error.
50	RWX_WCLEAR	IFC_REG_ERR2: stack 0 MMU response bad tag.
51	RWX_WCLEAR	IFC_REG_ERR3: stack 1 MMU response uncorrectable ECC error.
52	RWX_WCLEAR	IFC_REG_ERR4: stack 1 MMU response special uncorrectable ECC error.
53	RWX_WCLEAR	IFC_REG_ERR5: stack 1 MMU response bad tag.
54	RWX_WCLEAR	IFC_REG_ERR6: stack 2 MMU response uncorrectable ECC error.
55	RWX_WCLEAR	IFC_REG_ERR7: stack 2 MMU response special uncorrectable ECC error.
56	RWX_WCLEAR	IFC_REG_ERR8: stack 2 MMU response bad tag.
57	RWX_WCLEAR	MAP_REG_ERR0: AMR SRAM uncorrectable ECC error.
58	RWX_WCLEAR	MAP_REG_ERR1: SEIDR SRAM uncorrectable ECC error.
59:62	RWX_WCLEAR	ERR_UNUSED4: Unused.
63	RWX_WCLEAR	ATR_MISS_IRQ: atr miss interrupt.

Register Name	**XTS CERR Error Injection Test Register**
Mnemonic	NPU.XTS.REG.TEST_CERR
Address	0000000005011341 (SCOM)
Description	XTS c_err_rpt error injection test register

Bits	SCOM	Field Mnemonic: Description
0	ROX	ATR_ERR_INJ_PEND: Indicates that an ATR SRAM error injection has been started, but the error has not been injected yet. The error will be injected when the next ATR response is assembled by the XTS.
1	ROX	MAP_ERR_INJ_PEND: Indicates that an MAP SRAM error injection has been started, but the error has not been injected yet. The error will be injected the next time the SEIDR or AMR SRAM is written via MMIO or SCOM.
2:55	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000
56:57	WO	TEST_CERR_REGSEL: Selects c_err_rpt to inject an error 00b = none. 01b = fir. 10b = ATR SRAM. 11b = SEIDR/AMR SRAM.
58:63	WO	TEST_CERR_BITSEL: Selects the FIR bit to inject the error 0 = The MSB 1 = The second MSB, ..., 63: The LSB); select CE (0) or UE (1) for SRAM injection.

Register Name	XTS Error Mask Register
Mnemonic	NPU.XTS.REG.ERR_MASK
Address	0000000005011342 (SCOM)
Description	XTS error c_err_rpt mask register

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	ERR_MASK_BITS: XTS error c_err_rpt mask bits.

Register Name	XTS Error First Register
Mnemonic	NPU.XTS.REG.ERR_FIRST
Address	0000000005011343 (SCOM)
Description	XTS error first register

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLEAR	ERR_FIRST_BITS: XTS error first bits.

Register Name	XTS Configuration Register
Mnemonic	NPU.XTS.REG.XTS_CONFIG
Address	0000000005011344 (SCOM)
Description	XTS Configuration Register

Bits	SCOM	Field Mnemonic: Description
0	RW	XTS_CONFIG_BRAZOS: Enables brazos style physical address compression.
1	RW	XTS_CONFIG_MMIOSD: Enables MMIO controlled translation shoot downs.
2	RW	XTS_CONFIG_BIG_RSP: Enables ATR response sizes matching exactly the request.
3	RW	XTS_CONFIG_CHOP1G: Split 1G page into 16 2M pages.
4	RW	XTS_CONFIG_DIS_NCNP: Disable NCNP flag on inhibited/guarded pages.
5	RW	XTS_CONFIG_OVR_PM: Override PM bit in ATR with PR bit in PID table.
6	RW	XTS_CONFIG_TRY_ATR_RO: Retry RW checkouts as RO on protection fault.
7	RW	XTS_CONFIG_SPLURGE: Use all 8 NMMU channels for prefetches if available.
8	RW	XTS_CONFIG_LIM_PS: Limit valid page sizes to 64K/2M/1G; if 1G splitting is enabled, only 64K/2MB ATR responses will be sent.
9	RW	XTS_CONFIG_PREF2DMD: Convert NMMU prefetch requests to demand types, forcing table walk on NMMU cache miss.
10	RW	XTS_CONFIG_PREFEVOD: Walks even addresses, then odd addresses for prefetches, or vice versa.
11	RW	XTS_CONFIG_EAINJ: When set to 1, injects 3 random bits into EA[12:14] for CO requests.
12	RW	XTS_CONFIG_SPL_ONLY: If set and splurge active, preferred slot no longer wins for prefetches.
13:15	RW	XTS_CONFIG_UNUSED1: XTS configuration unused/reserved bits for future use.
16:23	RW	XTS_CONFIG_TLBIE_DEC_RATE: TLBI temperature dec pulse every n+1 cycles.
24:31	RW	XTS_CONFIG_TLBIE_INC_RATE: TLBI temperature inc pulse every n+1 cycles.
32:39	RW	XTS_CONFIG_TLBIE_CNT_THRESH: throttle if global TLBI temperature counter exceeds this threshold.

Bits	SCOM	Field Mnemonic: Description
40	RW	XTS_CONFIG_UNUSED2: XTS configuration unused/Reserved bits for future use.
41:43	RW	XTS_CONFIG_PREF_TIMEOUT: Delay after which an ATR state machine no longer issues prefetches.
44:47	RW	XTS_CONFIG_PREF_DEPTH: Maximum number of prefetches returned in addition to demand for single ATR request.
48:51	RW	XTS_CONFIG_PREF_THRSH0: Number of concurrent ATR prefetches when no request is queued in front of ATR state machines.
52:55	RW	XTS_CONFIG_PREF_THRSH1: Number of concurrent ATR prefetches when one request is queued in front of ATR state machines.
56:59	RW	XTS_CONFIG_PREF_THRSH2: Number of concurrent ATR prefetches when two requests are queued in front of ATR state machines.
60:63	RW	XTS_CONFIG_PREF_THRSH3: Number of concurrent ATR prefetches when three requests are queued in front of ATR state machines.

Register Name	**XTS Configuration 2 Register**
Mnemonic	NPU.XTS.REG.XTS_CONFIG2
Address	0000000005011345 (SCOM)
Description	XTS Config2 Register

Bits	SCOM	Field Mnemonic: Description
0	RW	XTS_CONFIG2_PERF_ENABLE: PMULet Enable (clocks enable).
1	RW	XTS_CONFIG2_PERF_RESETMODE: 0 = reset-on-read. 1= reset-on-write.
2	RW	XTS_CONFIG2_PERF_FREEZEMODE: 0 = freeze-on-any-max. 1 = freerun-mode.
3	RW	XTS_CONFIG2_PERF_DISABLE_PMISC: 0 = enable-pmisc 1 = disable-pmisc control of counters.
4	RW	XTS_CONFIG2_PERF_PMISC_MODE: 0 = Global pmu pmisc no reset. 1 = Global pmu miscellaneous reset-on-enable.
5:7	RW	XTS_CONFIG2_PERF_CASCADE: pmulet cascade configuration.
8:9	RW	XTS_CONFIG2_PERF_PRESCALE_C0: Prescale configuration for counter 0.
10:11	RW	XTS_CONFIG2_PERF_PRESCALE_C1: Prescale configuration for counter 1.
12:13	RW	XTS_CONFIG2_PERF_PRESCALE_C2: Prescale configuration for counter 2.
14:15	RW	XTS_CONFIG2_PERF_PRESCALE_C3: Prescale configuration for counter 3.
16:23	RW	XTS_CONFIG2_PERF_EVENT0: Event 0 select.
24:31	RW	XTS_CONFIG2_PERF_EVENT1: Event 1 select.
32:39	RW	XTS_CONFIG2_PERF_EVENT2: Event 2 select.
40:47	RW	XTS_CONFIG2_PERF_EVENT3: Event 3 select.
48:55	RW	XTS_CONFIG2_UNUSED: XTS config2 unused/reserved bits for future use.
56:59	RW	XTS_CONFIG2_ATSD_TIMEOUT: Time out select for ATSD.
60:63	RW	XTS_CONFIG2_ATR_TIMEOUT: Time out select for ATR (NMMU response time-out).

Register Name	XTS Debug0 Configuration Register
Mnemonic	NPU.XTS.REG.DEBUG0_CONFIG
Address	0000000005011346 (SCOM)
Description	XTS Debug0 Configuration Register

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG0_CONFIG_POD0: Multiplexer control for byte 0 of trace-0.
5:9	RW	DEBUG0_CONFIG_POD1: Multiplexer control for byte 1 of trace-0.
10:14	RW	DEBUG0_CONFIG_POD2: Multiplexer control for byte 2 of trace-0.
15:19	RW	DEBUG0_CONFIG_POD3: Multiplexer control for byte 3 of trace-0.
20:24	RW	DEBUG0_CONFIG_POD4: Multiplexer control for byte 4 of trace-0.
25:29	RW	DEBUG0_CONFIG_POD5: Multiplexer control for byte 5 of trace-0.
30:34	RW	DEBUG0_CONFIG_POD6: Multiplexer control for byte 6 of trace-0.
35:39	RW	DEBUG0_CONFIG_POD7: Multiplexer control for byte 7 of trace-0.
40:44	RW	DEBUG0_CONFIG_POD8: Multiplexer control for byte 8 of trace-0.
45:49	RW	DEBUG0_CONFIG_POD9: Multiplexer control for byte 9 of trace-0.
50:54	RW	DEBUG0_CONFIG_POD10: Multiplexer control for byte 10 of trace-0.
55:62	RW	DEBUG0_CONFIG_Reserved1: Reserved.
63	RW	DEBUG0_CONFIG_ACT: Enable clock-gates for debug trace latches.

Register Name	XTS Debug1 Configuration Register
Mnemonic	NPU.XTS.REG.DEBUG1_CONFIG
Address	0000000005011347 (SCOM)
Description	XTS Debug1 Configuration Register

Bits	SCOM	Field Mnemonic: Description
0:4	RW	DEBUG1_CONFIG_POD0: Multiplexer control for byte 0 of trace-1.
5:9	RW	DEBUG1_CONFIG_POD1: Multiplexer control for byte 1 of trace-1.
10:14	RW	DEBUG1_CONFIG_POD2: Multiplexer control for byte 2 of trace-1.
15:19	RW	DEBUG1_CONFIG_POD3: Multiplexer control for byte 3 of trace-1.
20:24	RW	DEBUG1_CONFIG_POD4: Multiplexer control for byte 4 of trace-1.
25:29	RW	DEBUG1_CONFIG_POD5: Multiplexer control for byte 5 of trace-1.
30:34	RW	DEBUG1_CONFIG_POD6: Multiplexer control for byte 6 of trace-1.
35:39	RW	DEBUG1_CONFIG_POD7: Multiplexer control for byte 7 of trace-1.
40:44	RW	DEBUG1_CONFIG_POD8: Multiplexer control for byte 8 of trace-1.
45:49	RW	DEBUG1_CONFIG_POD9: Multiplexer control for byte 9 of trace-1.
50:54	RW	DEBUG1_CONFIG_POD10: Multiplexer control for byte 10 of trace-1.
55:62	RW	DEBUG1_CONFIG_Reserved1: Reserved.
63	RW	DEBUG1_CONFIG_ACT: Enable clock-gates for debug trace latches.

Register Name	NPU XTS PMULet Count Register
Mnemonic	NPU.XTS.REG.XTS_PMU_CNT
Address	0000000005011348 (SCOM)
Description	The NPU XTS PMULet Count Register contains the PMULet counters in XTS (4 x 16b)

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	XTS_PMU_CNT0: PMULet Counter 0.
16:31	ROX	XTS_PMU_CNT1: PMULet Counter 1.
32:47	ROX	XTS_PMU_CNT2: PMULet Counter 2.
48:63	ROX	XTS_PMU_CNT3: PMULet Counter 3.

Register Name	XTS ATRMiss Register
Mnemonic	NPU.XTS.REG.XTS_ATRMISS
Address	000000000501134A (SCOM)
Description	XTS ATRMiss Register

Bits	SCOM	Field Mnemonic: Description
0:14	RO	Constant = 0b000000000000000
15:51	RWX	XTS_ATRMISS_ADDR: Holds captured effective address.
52:53	RO	Constant = 0b00
54	RW	XTS_ATRMISS_FLAG_OTHER: Enable IRQ and capture for misses caused by other issues, that is,, prefetch page size mismatch.
55	RW	XTS_ATRMISS_FLAG_PREF: Enable IRQ and capture for misses caused by prefetch NMMU requests.
56	RW	XTS_ATRMISS_FLAG_DMD: Enable IRQ and capture for misses caused by demand NMMU requests.
57	RW	XTS_ATRMISS_FLAG_MAP: Enable IRQ and capture for misses caused by BDF/PASID map look-up.
58	RW	XTS_ATRMISS_FLAG_FENCE: Enable IRQ and capture for misses caused by fencing.
59	RW	XTS_ATRMISS_RETIRE: If set, launch IRQ after ATR response sent to GPU, otherwise launch IRQ immediately on miss.
60	RW	XTS_ATRMISS_IRQENA: If set, triggers interrupt on qualifying ATR miss (IRQ is independent from capture).
61	RWX	XTS_ATRMISS_SECOND: Set to one by second ATR miss capture.
62	RWX	XTS_ATRMISS_TRIGGERED: Capture only if this bit is clear, set to one by HW on first ATR miss capture.
63	RW	XTS_ATRMISS_ENA: Enable ATR attribute capture on miss.

Register Name	XTS ATRMiss Clear Register
Mnemonic	NPU.XTS.REG.XTS_ATRMISSCLR
Address	000000000501134B (SCOM)
Description	XTS ATRMissClear Register

Bits	SCOM	Field Mnemonic: Description
0:14	RO	Constant = 0b000000000000000
15:51	ROX	XTS_ATRMISS_ADDR: Holds captured effective address.
52:53	RO	Constant = 0b00
54	ROX	XTS_ATRMISS_FLAG_OTHER: Enable IRQ and capture for misses caused by other issues, that is,, prefetch page size mismatch.
55	ROX	XTS_ATRMISS_FLAG_PREF: Enable IRQ and capture for misses caused by prefetch NMMU requests.
56	ROX	XTS_ATRMISS_FLAG_DMD: Enable IRQ and capture for misses caused by demand NMMU requests.
57	ROX	XTS_ATRMISS_FLAG_MAP: Enable IRQ and capture for misses caused by BDF/PASID map look-up.
58	ROX	XTS_ATRMISS_FLAG_FENCE: Enable IRQ and capture for misses caused by fencing.
59	ROX	XTS_ATRMISS_RETIRE: If set, launch IRQ after ATR response sent to GPU, otherwise launch IRQ immediately on miss.

Bits	SCOM	Field Mnemonic: Description
60	ROX	XTS_ATRMISS_IRQENA: if set, triggers interrupt on qualifying ATR miss (IRQ is independent from capture).
61	ROX	XTS_ATRMISS_SECOND: set to one by second ATR miss capture.
62	ROX	XTS_ATRMISS_TRIGGERED: capture only if this bit is clear, set to one by HW on first ATR miss capture.
63	ROX	XTS_ATRMISS_ENA: Enable ATR attr capture on miss.

Register Name	**XTS ATRMiss 2 Register**
Mnemonic	NPU.XTS.REG.XTS_ATRMISS2
Address	000000000501134C (SCOM)
Description	XTS ATRMiss Register 2

Bits	SCOM	Field Mnemonic: Description
0:26	RO	Constant = 0b00000000000000000000000000
27	RWX	XTS_ATRMISS_GPA: Holds captured GPU flag.
28:43	RWX	XTS_ATRMISS_BDF: Holds captured BDF.
44:63	RWX	XTS_ATRMISS_PASID: Holds capture PASID.

Register Name	**XTS MMIO ATSD0 LPARID Register**
Mnemonic	NPU.XTS.ATSD.XTS_ATSD_HYP0
Address	0000000005011360 (SCOM)
Description	XTS MMIO ATSD0 LPARID register

Bits	SCOM	Field Mnemonic: Description
0:51	RO	Constant = 0b000000000000000000000000000000000000000000000000000000
52:63	RW	XTS_ATSD_HYP0_LPARID: LPARID value for MMIO ATSD control entry 0.

Register Name	**XTS MMIO ATSD1 LPARID Register**
Mnemonic	NPU.XTS.ATSD.XTS_ATSD_HYP1
Address	0000000005011361 (SCOM)
Description	XTS MMIO ATSD1 LPARID register

Bits	SCOM	Field Mnemonic: Description
0:51	RO	Constant = 0b000000000000000000000000000000000000000000000000000000
52:63	RW	XTS_ATSD_HYP1_LPARID: LPARID value for MMIO ATSD control entry 1.

Register Name	**XTS MMIO ATSD2 LPARID Register**
Mnemonic	NPU.XTS.ATSD.XTS_ATSD_HYP2
Address	0000000005011362 (SCOM)
Description	XTS MMIO ATSD2 LPARID register

Bits	SCOM	Field Mnemonic: Description
0:51	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000
52:63	RW	XTS_ATSD_HYP2_LPARID: LPARID value for MMIO ATSD control entry 2.

Register Name	XTS MMIO ATSD3 LPARID Register
Mnemonic	NPU.XTS.ATSD.XTS_ATSD_HYP3
Address	0000000005011363 (SCOM)
Description	XTS MMIO ATSD3 LPARID register

Bits	SCOM	Field Mnemonic: Description
0:51	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000
52:63	RW	XTS_ATSD_HYP3_LPARID: LPARID value for MMIO ATSD control entry 3.

Register Name	XTS MMIO ATSD4 LPARID Register
Mnemonic	NPU.XTS.ATSD.XTS_ATSD_HYP4
Address	0000000005011364 (SCOM)
Description	XTS MMIO ATSD4 LPARID register

Bits	SCOM	Field Mnemonic: Description
0:51	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000
52:63	RW	XTS_ATSD_HYP4_LPARID: LPARID value for MMIO ATSD control entry 4.

Register Name	XTS MMIO ATSD5 LPARID Register
Mnemonic	NPU.XTS.ATSD.XTS_ATSD_HYP5
Address	0000000005011365 (SCOM)
Description	XTS MMIO ATSD5 LPARID register

Bits	SCOM	Field Mnemonic: Description
0:51	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000
52:63	RW	XTS_ATSD_HYP5_LPARID: LPARID value for MMIO ATSD control entry 5.

Register Name	XTS MMIO ATSD6 LPARID Register
Mnemonic	NPU.XTS.ATSD.XTS_ATSD_HYP6
Address	0000000005011366 (SCOM)
Description	XTS MMIO ATSD6 LPARID register

Bits	SCOM	Field Mnemonic: Description
0:51	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000
52:63	RW	XTS_ATSD_HYP6_LPARID: LPARID value for MMIO ATSD control entry 6.

Register Name	XTS MMIO ATSD7 LPARID Register
Mnemonic	NPU.XTS.ATSD.XTS_ATSD_HYP7
Address	0000000005011367 (SCOM)
Description	XTS MMIO ATSD7 LPARID register

Bits	SCOM	Field Mnemonic: Description
0:51	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000
52:63	RW	XTS_ATSD_HYP7_LPARID: LPARID value for MMIO ATSD control entry 7.

Register Name	Debug Configuration Register
Mnemonic	NPU.MISC.REGS.DEBUG_CONFIG
Address	0000000005011380 (SCOM)
Description	Debug Configuration Register Selects which of 3 internal / 1 miscellaneous macro debug buses to route the to the 2 external debug buses. The debug bus is 11 bytes wide, with each byte selected independently using 2 bit control. 0b00 = NPU internal debug bus 0 0b01 = NPU internal debug bus 1 0b10 = NPU internal debug bus 2 0b11 = MISC macro debug bus

Bits	SCOM	Field Mnemonic: Description
0:1	RW	MISC_DEBUG_CONFIG_BUS0BYTE0: 2b select for external bus 0, byte 0.
2:3	RW	MISC_DEBUG_CONFIG_BUS0BYTE1: 2b select for external bus 0, byte 1.
4:5	RW	MISC_DEBUG_CONFIG_BUS0BYTE2: 2b select for external bus 0, byte 2.
6:7	RW	MISC_DEBUG_CONFIG_BUS0BYTE3: 2b select for external bus 0, byte 3.
8:9	RW	MISC_DEBUG_CONFIG_BUS0BYTE4: 2b select for external bus 0, byte 4.
10:11	RW	MISC_DEBUG_CONFIG_BUS0BYTE5: 2b select for external bus 0, byte 5.
12:13	RW	MISC_DEBUG_CONFIG_BUS0BYTE6: 2b select for external bus 0, byte 6.
14:15	RW	MISC_DEBUG_CONFIG_BUS0BYTE7: 2b select for external bus 0, byte 7.
16:17	RW	MISC_DEBUG_CONFIG_BUS0BYTE8: 2b select for external bus 0, byte 8.
18:19	RW	MISC_DEBUG_CONFIG_BUS0BYTE9: 2b select for external bus 0, byte 9.
20:21	RW	MISC_DEBUG_CONFIG_BUS0BYTE10: 2b select for external bus 0, byte 10.
22:23	RW	MISC_DEBUG_CONFIG_BUS1BYTE0: 2b select for external bus 1, byte 0.
24:25	RW	MISC_DEBUG_CONFIG_BUS1BYTE1: 2b select for external bus 1, byte 1.
26:27	RW	MISC_DEBUG_CONFIG_BUS1BYTE2: 2b select for external bus 1, byte 2.
28:29	RW	MISC_DEBUG_CONFIG_BUS1BYTE3: 2b select for external bus 1, byte 3.
30:31	RW	MISC_DEBUG_CONFIG_BUS1BYTE4: 2b select for external bus 1, byte 4.
32:33	RW	MISC_DEBUG_CONFIG_BUS1BYTE5: 2b select for external bus 1, byte 5.
34:35	RW	MISC_DEBUG_CONFIG_BUS1BYTE6: 2b select for external bus 1, byte 6.
36:37	RW	MISC_DEBUG_CONFIG_BUS1BYTE7: 2b select for external bus 1, byte 7.
38:39	RW	MISC_DEBUG_CONFIG_BUS1BYTE8: 2b select for external bus 1, byte 8.
40:41	RW	MISC_DEBUG_CONFIG_BUS1BYTE9: 2b select for external bus 1, byte 9.

Bits	SCOM	Field Mnemonic: Description
42:43	RW	MISC_DEBUG_CONFIG_BUS1BYTE10: 2b select for external bus 1, byte 10.
44:62	RW	Reserved: Reserved.
63	RW	ACT_DEBUG: Clock activate MISC macro debug logic.

Register Name	Relaxed Ordering Configuration Register
Mnemonic	NPU.MISC.REGS.RLX_CONFIG
Address	0000000005011381 (SCOM)
Description	Relaxed Ordering brick to cluster mapping and sync control

Bits	SCOM	Field Mnemonic: Description
0:2	RW	CONFIG_BRK0_CLUSTER: Cluster # (0-5) that brick 0 belongs to. Do not change unless the brick is quiesced.
3:5	RW	CONFIG_BRK1_CLUSTER: Cluster # (0-5) that brick 1 belongs to. Do not change unless the brick is quiesced.
6:8	RW	CONFIG_BRK2_CLUSTER: Cluster # (0-5) that brick 2 belongs to. Do not change unless the brick is quiesced.
9:11	RW	CONFIG_BRK3_CLUSTER: Cluster # (0-5) that brick 3 belongs to. Do not change unless the brick is quiesced.
12:14	RW	CONFIG_BRK4_CLUSTER: Cluster # (0-5) that brick 4 belongs to. Do not change unless the brick is quiesced.
15:17	RW	CONFIG_BRK5_CLUSTER: Cluster # (0-5) that brick 5 belongs to. Do not change unless the brick is quiesced.
18:19	RW	RLX_Reserved1: Reserved.
20:25	RW	CONFIG_SYNC_BRK: Mask of bricks to sync.
26:31	ROX	IDIAL_RLX_ISSYNC: Mask of bricks which are synced.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	LCO Configuration Register
Mnemonic	NPU.MISC.REGS.LCO_CONFIG
Address	0000000005011382 (SCOM)
Description	Lateral-castout target selection configuration

Bits	SCOM	Field Mnemonic: Description
0:11	RW	CONFIG_LCO_V_TARG: LCO valid-targets vector.
12:15	RW	CONFIG_LCO_E_TARG_MIN: LCO minimum number of eligible targets.
16:19	RW	CONFIG_LCO_RAND_EVENT: LCO Random event rate.
20:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	Optical I/O Configuration for Bricks 0 Register
Mnemonic	NPU.MISC.REGS.OPTICAL_IO_CONFIG
Address	0000000005011383 (SCOM)
Description	Optical I/O used for A-Link or NVLink, bricks 0 - 2

Bits	SCOM	Field Mnemonic: Description
0:2	RW	NDLMUX_BRK0TO2: 0 = A-Link 1 = NVLink for Bricks 0-2.
3:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000000

Register Name	Miscellaneous Hold Register
Mnemonic	NPU.MISC.REGS.MISC_HOLD
Address	0000000005011384 (SCOM)
Description	c_err_rpt hold latches read-with-clear register

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	IDIAL_NDL0_STALL: Interrupt Request NDL Brick0 Stall.
1	RWX_WCLRREG	IDIAL_NDL0_NOSTALL: Interrupt Request NDL Brick0 No-Stall.
2	RWX_WCLRREG	IDIAL_NDL1_STALL: Interrupt Request NDL Brick1 Stall.
3	RWX_WCLRREG	IDIAL_NDL1_NOSTALL: Interrupt Request NDL Brick1 No-Stall.
4	RWX_WCLRREG	IDIAL_NDL2_STALL: Interrupt Request NDL Brick2 Stall.
5	RWX_WCLRREG	IDIAL_NDL2_NOSTALL: Interrupt Request NDL Brick2 No-Stall.
6	RWX_WCLRREG	IDIAL_NDL3_STALL: Interrupt Request NDL Brick3 Stall.
7	RWX_WCLRREG	IDIAL_NDL3_NOSTALL: Interrupt Request NDL Brick3 No-Stall.
8	RWX_WCLRREG	IDIAL_NDL4_STALL: Interrupt Request NDL Brick4 Stall.
9	RWX_WCLRREG	IDIAL_NDL4_NOSTALL: Interrupt Request NDL Brick4 No-Stall.
10	RWX_WCLRREG	IDIAL_NDL5_STALL: Interrupt Request NDL Brick5 Stall.
11	RWX_WCLRREG	IDIAL_NDL5_NOSTALL: Interrupt Request NDL Brick5 No-Stall.
12	RWX_WCLRREG	IDIAL_MISC_RING_ERRP: NPU Register Ring error (ie noack).
13	RWX_WCLRREG	IDIAL_MISC_IBAR_ERRP: Parity error from interrupt base real address register.

Bits	SCOM	Field Mnemonic: Description
14	RWX_WCLRREG	IDIAL_MISC_SCOMDAA_ERRP: Parity error on Indirect SCOM Address register.
15	RWX_WCLRREG	IDIAL_MISC_CNTL_ERRP: Parity error on MISC Control register.
16	RWX_WCLRREG	IDIAL_MM_LOCAL_XSTOP: NMMU signaled Local Checkstop.
17:63	RO	Constant = 0b00000000000000000000000000000000000000000000000

Register Name	Miscellaneous Mask Register
Mnemonic	NPU.MISC.REGS.MISC_MASK
Address	0000000005011385 (SCOM)
Description	c_err_rpt mask latches read-only register

Bits	SCOM	Field Mnemonic: Description
0:16	ROX	IDIAL_MISC_MASK: c_err_rpt mask latches read-only register.
17:63	RO	Constant = 0b00000000000000000000000000000000000000000000000

Register Name	Miscellaneous Configuration Register
Mnemonic	NPU.MISC.REGS.MISC_CONFIG
Address	0000000005011386 (SCOM)
Description	Configures MISC

Bits	SCOM	Field Mnemonic: Description
0:4	RW	CONFIG_SYNC_WAIT: Number of clock cycles from sync request to sync valid. (masks round-trip staging latency MISC/ATS/CTL). Must be > = ATS config_sync_wait + 8.
5	RW	PERF_CONFIG_ENABLE: 0b1 Enables performance monitor events.
6	RW	PERF_CONFIG_PE_MASK: 0b1 Enables the selection of performance monitor events by PE ID.
7:10	RW	PERF_CONFIG_PE_MATCH: PE ID to select for performance monitor events (when enabled).
11	RW	IPI_PS: Inter-processor interrupt page size 0b0 = 4 kB. 0b1 = 64 kB.
12	RW	IPI_OS: Inter-processor interrupt operating system 0b0 = AIX. 0b1 = Linux.
13:63	RW	CONFIG_MISC_RSVD: Reserved.

Register Name	Inhibit Configuration Register
Mnemonic	NPU.MISC.REGS.INHIBIT_CONFIG
Address	0000000005011387 (SCOM)
Description	Configures Inhibits for MISC

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CONFIG_INHIBIT_LFREQ: Base LFSR frequency 0: 0..11 = 1/2^(n+1). 12 = 1/2^14. 13 = 1/2^16. 14 = 1/2^18. 15 = 1/2^20.
4	RW	CONFIG_INHIBIT_IFREQ: 0/1 = don't invert/invert base frequency.
5:7	RW	CONFIG_INHIBIT_DEST: Destination of the inhibit. 0 = No destination. 1 = Restore on lco sent. 2 = Restore on lco cr_long. 3 = Restore on lco sent/cr_long. 4 = Gen-id inc head. 5 = Gen-id inc tail. 6 = Gen-id inc head/tail. 7 = All of the above.
8:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	NPU Freeze 0 Configuration Register
Mnemonic	NPU.MISC.REGS.FREEZE_0_CONFIG
Address	0000000005011388 (SCOM)
Description	on-error Enable for FIR Register 0 NPU Freeze-on-error Enable 0. 0b1 = enable

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CONFIG_FREEZE_0: Enable for FIR Register 0.

Register Name	NPU Freeze 1 Configuration Register
Mnemonic	NPU.MISC.REGS.FREEZE_1_CONFIG
Address	0000000005011389 (SCOM)
Description	On-error enable for FIR Register 1 NPU freeze-on-error enable 0. 0b1 = enable.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CONFIG_FREEZE_1: Enable for FIR Register 1.

Register Name	NPU Fence 0 Configuration Register
Mnemonic	NPU.MISC.REGS.FENCE_0_CONFIG
Address	000000000501138A (SCOM)
Description	On-error Enable for FIR Register 0 NPU Fence-on-error Enable. 0b1 = enable.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CONFIG_FENCE_0: Enable for FIR Register 0.

Register Name	NPU Fence 1 Configuration Register
Mnemonic	NPU.MISC.REGS.FENCE_1_CONFIG
Address	000000000501138B (SCOM)
Description	On-error Enable for FIR Register 1 NPU Fence-on-error Enable. 0b1 = enable.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CONFIG_FENCE_1: Enable for FIR Register 1.

Register Name	NPU Interrupt 0 Configuration Register
Mnemonic	NPU.MISC.REGS.INT_0_CONFIG
Address	000000000501138C (SCOM)
Description	On-error Enable for FIR Register 0 NPU Interrupt-on-error Enable. 0b1 = Enable.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CONFIG_INT_0: Enable for FIR Register 0.

Register Name	NPU Interrupt 1 Configuration Register
Mnemonic	NPU.MISC.REGS.INT_1_CONFIG
Address	000000000501138D (SCOM)
Description	on-error Enable for FIR Register 1 NPU Interrupt-on-error Enable. 0b1 = Enable.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CONFIG_INT_1: Enable for FIR Register 1.

Register Name	NPU Indirect SCOM Address Register
Mnemonic	NPU.MISC.REGS.DA_ADDR
Address	000000000501138E (SCOM)
Description	NPU Indirect SCOM Address register For usage, see NPU Indirect SCOM Data register

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MISC_DA_ADDR: Indirect SCOM Address.
24:25	RW	MISC_DA_LEN: Indirect SCOM Length. 0b00 = 1B 0b01 = 2B 0b10 = 4B 0b11 = 8B.
26:63	RW	MISC_DA_RSVD: Reserved.

Register Name	NPU Indirect SCOM Data Register
Mnemonic	NPU.MISC.REGS.DA_DATA
Address	000000000501138F (SCOM)
Description	NPU Indirect SCOM data register. A SCOM read/write of this register performs an indirect SCOM NPU ring read/write of the register at the address stored in the NPU indirect SCOM address register.

Bits	SCOM	Field Mnemonic: Description
0:63	RO	Constant = 0b0000000000000000000000000000000000000000000000000000000000000000

Register Name	NPU Version Register
Mnemonic	NPU.MISC.REGS.NPU_VERSION
Address	0000000005011390 (SCOM)
Description	NPU Version Register Scan-only latches with default initialization value x000000A200000001

Bits	SCOM	Field Mnemonic: Description
0:23	RO	NPU_VERSION_RSVD0: Reserved.
24:31	RO	NPU_VERSION_MAJOR: Major Revision ID. Indicates that the NPU implements version 2 of the NVLink specification.
32:47	RO	NPU_VERSION_RSVD1: Reserved.
48:63	RO	NPU_VERSION_MINOR: EC version of the NPU.

Register Name	NPU Error Scope Control Configuration Register
Mnemonic	NPU.MISC.REGS.ERR_SCOPE_CTL_CONFIG
Address	0000000005011391 (SCOM)
Description	NPU Scope for CQ CTL/SM Errors. See FIR register for error details.

Bits	SCOM	Field Mnemonic: Description
0:15	RW	CONFIG_ERR_SCOPE_CTL: 0b0 = brick(s) scope. 0b1 = NPU scope.
16:63	RO	Constant = 0b0000000000000000000000000000000000000000000000000000000000000000

Register Name	NPU Ring Address Error Register
Mnemonic	NPU.MISC.REGS.ERR_INFO_NPU_RING_ADDR
Address	0000000005011392 (SCOM)
Description	NPU Ring ACK error information from the MISC master (SCOM direct or indirect)

Bits	SCOM	Field Mnemonic: Description
0:23	RWX	MISC_NPU_RING_ERR_ADDR: NPU ring address.
24:25	RWX	MISC_NPU_RING_ERR_LENR: NPU ring length.
26	RWX	MISC_NPU_RING_ERR_RNW: NPU ring read/not-write.

Bits	SCOM	Field Mnemonic: Description
27	RWX	MISC_NPU_RING_ERR_DA_OP: NPU ring indirect SCOM.
28:63	RO	Constant = 0b00000000000000000000000000000000000000000

Register Name	NPU Interrupt Base Address Register
Mnemonic	NPU.MISC.REGS.INT_BAR
Address	0000000005011393 (SCOM)
Description	NPU Interrupt Base Address Register

Bits	SCOM	Field Mnemonic: Description
0:38	RW	CONFIG_INT_BAR: Powerbus address(13 to 51). Bits used depend on the configuration. 4 kB AIX (13 to 45). 4 kB Linux (13 to 46). 64 kB AIX (13 to 41). 64 kB Linux (13 to 42). (47 to 51) never used.
39:63	RO	Constant = 0b00000000000000000000000000

Register Name	NPU Error Brick Group Configuration Register
Mnemonic	NPU.MISC.REGS.ERROR_BRICK_GROUP_CONFIG
Address	0000000005011394 (SCOM)
Description	NPU Error Brick Group for Freeze and Fence

Bits	SCOM	Field Mnemonic: Description
0:5	RW	CONFIG_ERR_GROUP_BRK0: Error brick group for brick 0.
6:11	RW	CONFIG_ERR_GROUP_BRK1: Error brick group for brick 1.
12:17	RW	CONFIG_ERR_GROUP_BRK2: Error brick group for brick 2.
18:23	RW	CONFIG_ERR_GROUP_BRK3: Error brick group for brick 3.
24:29	RW	CONFIG_ERR_GROUP_BRK4: Error brick group for brick 4.
30:35	RW	CONFIG_ERR_GROUP_BRK5: Error brick group for brick 5.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	NPU Freeze State Register
Mnemonic	NPU.MISC.REGS.FREEZE_STATE
Address	0000000005011395 (SCOM)
Description	NPU freeze state per BDF-to-PE map. Read returns freeze state. Write 0b1 to set freeze. Write 0b0 to clear freeze. May also be set by hardware error.

Bits	SCOM	Field Mnemonic: Description
0	RWX	FREEZE_BDF2PE_00: brick0, entry 0.

Bits	SCOM	Field Mnemonic: Description
1	RWX	FREEZE_BDF2PE_01: brick0, entry 1.
2	RWX	FREEZE_BDF2PE_02: brick0, entry 2.
3	RWX	FREEZE_BDF2PE_10: brick1, entry 0.
4	RWX	FREEZE_BDF2PE_11: brick1, entry 1.
5	RWX	FREEZE_BDF2PE_12: brick1, entry 2.
6	RWX	FREEZE_BDF2PE_20: brick2, entry 0.
7	RWX	FREEZE_BDF2PE_21: brick2, entry 1.
8	RWX	FREEZE_BDF2PE_22: brick2, entry 2.
9	RWX	FREEZE_BDF2PE_30: brick3, entry 0.

Register Name	System Interrupt Log for PE 0 Register
Mnemonic	NPU.MISC.REGS.INT_LOG_PE0
Address	00000000050113E0 (SCOM)
Description	Records which error caused a System Interrupt for each PE

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_LOG_ERR_PE0_VLD: Contents valid (freeze on 1st capture).
1:23	RWX	INT_LOG_ERR_PE0_LVL: Interrupt requester (see Interrupt Level).
24:35	RWX	INT_LOG_ERR_PE0_CQ: Interrupt requester, additional detail. CQ events: CTL0 brk0/1, CTL1 brk2/3, CTL2 brk4/5, DAT0 brk0/1, DAT1 brk2/3, DAT2 brk4/5.
36:55	RWX	INT_LOG_ERR_PE0_DETAIL: Error detail for requester (see FIR 0/1 register). If >1 simultaneous interrupt requester to same PE, capture priority is Interrupt Level 0 (highest) to Level 22. If redundant interrupt request to different PE, capture details for new PE. (for example, ATS interrupt to PE A in progress, then ATS interrupt to PE B).
56:63	RWX	INT_LOG_ERR_PE0_RSVD0: Reserved.

Register Name	System Interrupt Log for PE 1 Register
Mnemonic	NPU.MISC.REGS.INT_LOG_PE1
Address	00000000050113E1 (SCOM)
Description	Records which error caused a System Interrupt for each PE

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_LOG_ERR_PE1_VLD: Contents valid (freeze on 1st capture).
1:23	RWX	INT_LOG_ERR_PE1_LVL: Interrupt requester (see Interrupt Level).
24:35	RWX	INT_LOG_ERR_PE1_CQ: Interrupt requester, additional detail. CQ events: CTL0 brk0/1, CTL1 brk2/3, CTL2 brk4/5, DAT0 brk0/1, DAT1 brk2/3, DAT2 brk4/5.
36:55	RWX	INT_LOG_ERR_PE1_DETAIL: Error detail for requester (see FIR 0/1 register). If >1 simultaneous interrupt requester to same PE, capture priority is Interrupt Level 0 (highest) to Level 22. If redundant interrupt request to different PE, capture details for new PE. (for example, ATS interrupt to PE A in progress, then ATS interrupt to PE B).
56:63	RWX	INT_LOG_ERR_PE1_RSVD0: Reserved.

Register Name	System Interrupt Log for PE 2 Register
Mnemonic	NPU.MISC.REGS.INT_LOG_PE2
Address	00000000050113E2 (SCOM)
Description	Records which error caused a System Interrupt for each PE

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_LOG_ERR_PE2_VLD: Contents valid (freeze on 1st capture).
1:23	RWX	INT_LOG_ERR_PE2_LVL: Interrupt requester (see Interrupt Level).
24:35	RWX	INT_LOG_ERR_PE2_CQ: Interrupt requester, additional detail. CQ events: CTL0 brk0/1, CTL1 brk2/3, CTL2 brk4/5, DAT0 brk0/1, DAT1 brk2/3, DAT2 brk4/5.

Bits	SCOM	Field Mnemonic: Description
36:55	RWX	INT_LOG_ERR_PE2_DETAIL: Error detail for requester (see FIR 0/1 register). If >1 simultaneous interrupt requester to same PE, capture priority is Interrupt Level 0 (highest) to Level 22. If redundant interrupt request to different PE, capture details for new PE. (for example, ATS interrupt to PE A in progress, then ATS interrupt to PE B).
56:63	RWX	INT_LOG_ERR_PE2_RSVD0: Reserved.

Register Name	System Interrupt Log for PE 3 Register
Mnemonic	NPU.MISC.REGS.INT_LOG_PE3
Address	00000000050113E3 (SCOM)
Description	Records which error caused a System Interrupt for each PE

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_LOG_ERR_PE3_VLD: Contents valid (freeze on 1st capture).
1:23	RWX	INT_LOG_ERR_PE3_LVL: Interrupt requester (see Interrupt Level).
24:35	RWX	INT_LOG_ERR_PE3_CQ: Interrupt requester, additional detail. CQ events: CTL0 brk0/1, CTL1 brk2/3, CTL2 brk4/5, DAT0 brk0/1, DAT1 brk2/3, DAT2 brk4/5.
36:55	RWX	INT_LOG_ERR_PE3_DETAIL: Error detail for requester (see FIR 0/1 register). If >1 simultaneous interrupt requester to same PE, capture priority is Interrupt Level 0 (highest) to Level 22. If redundant interrupt request to different PE, capture details for new PE. (for example, ATS interrupt to PE A in progress, then ATS interrupt to PE B).
56:63	RWX	INT_LOG_ERR_PE3_RSVD0: Reserved.

Register Name	System Interrupt Log for PE 4 Register
Mnemonic	NPU.MISC.REGS.INT_LOG_PE4
Address	00000000050113E4 (SCOM)
Description	Records which error caused a System Interrupt for each PE

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_LOG_ERR_PE4_VLD: Contents valid (freeze on 1st capture).
1:23	RWX	INT_LOG_ERR_PE4_LVL: Interrupt requester (see Interrupt Level).
24:35	RWX	INT_LOG_ERR_PE4_CQ: Interrupt requester, additional detail. CQ events: CTL0 brk0/1, CTL1 brk2/3, CTL2 brk4/5, DAT0 brk0/1, DAT1 brk2/3, DAT2 brk4/5.
36:55	RWX	INT_LOG_ERR_PE4_DETAIL: Error detail for requester (see FIR 0/1 register). If >1 simultaneous interrupt requester to same PE, capture priority is Interrupt Level 0 (highest) to Level 22. If redundant interrupt request to different PE, capture details for new PE. (for example, ATS interrupt to PE A in progress, then ATS interrupt to PE B).
56:63	RWX	INT_LOG_ERR_PE4_RSVD0: Reserved.

Register Name	System Interrupt Log for PE 5 Register
Mnemonic	NPU.MISC.REGS.INT_LOG_PE5
Address	00000000050113E5 (SCOM)
Description	Records which error caused a System Interrupt for each PE

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_LOG_ERR_PE5_VLD: Contents valid (freeze on 1st capture).
1:23	RWX	INT_LOG_ERR_PE5_LVL: Interrupt requester (see Interrupt Level).
24:35	RWX	INT_LOG_ERR_PE5_CQ: Interrupt requester, additional detail. CQ events: CTL0 brk0/1, CTL1 brk2/3, CTL2 brk4/5, DAT0 brk0/1, DAT1 brk2/3, DAT2 brk4/5.
36:55	RWX	INT_LOG_ERR_PE5_DETAIL: Error detail for requester (see FIR 0/1 register). If >1 simultaneous interrupt requester to same PE, capture priority is Interrupt Level 0 (highest) to Level 22. If redundant interrupt request to different PE, capture details for new PE. (for example, ATS interrupt to PE A in progress, then ATS interrupt to PE B).
56:63	RWX	INT_LOG_ERR_PE5_RSVD0: Reserved.

Register Name	System Interrupt Log for PE 6 Register
Mnemonic	NPU.MISC.REGS.INT_LOG_PE6
Address	00000000050113E6 (SCOM)
Description	Records which error caused a System Interrupt for each PE

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_LOG_ERR_PE6_VLD: Contents valid (freeze on 1st capture).
1:23	RWX	INT_LOG_ERR_PE6_LVL: Interrupt requester (see Interrupt Level).
24:35	RWX	INT_LOG_ERR_PE6_CQ: Interrupt requester, additional detail. CQ events: CTL0 brk0/1, CTL1 brk2/3, CTL2 brk4/5, DAT0 brk0/1, DAT1 brk2/3, DAT2 brk4/5.
36:55	RWX	INT_LOG_ERR_PE6_DETAIL: Error detail for requester (see FIR 0/1 register). If >1 simultaneous interrupt requester to same PE, capture priority is Interrupt Level 0 (highest) to Level 22. If redundant interrupt request to different PE, capture details for new PE. (for example, ATS interrupt to PE A in progress, then ATS interrupt to PE B).
56:63	RWX	INT_LOG_ERR_PE6_RSVD0: Reserved.

Register Name	System Interrupt Log for PE 7 Register
Mnemonic	NPU.MISC.REGS.INT_LOG_PE7
Address	00000000050113E7 (SCOM)
Description	Records which error caused a System Interrupt for each PE

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_LOG_ERR_PE7_VLD: Contents valid (freeze on 1st capture).
1:23	RWX	INT_LOG_ERR_PE7_LVL: Interrupt requester (see Interrupt Level).
24:35	RWX	INT_LOG_ERR_PE7_CQ: Interrupt requester, additional detail. CQ events: CTL0 brk0/1, CTL1 brk2/3, CTL2 brk4/5, DAT0 brk0/1, DAT1 brk2/3, DAT2 brk4/5.
36:55	RWX	INT_LOG_ERR_PE7_DETAIL: Error detail for requester (see FIR 0/1 register). If >1 simultaneous interrupt requester to same PE, capture priority is Interrupt Level 0 (highest) to Level 22. If redundant interrupt request to different PE, capture details for new PE. (for example, ATS interrupt to PE A in progress, then ATS interrupt to PE B).
56:63	RWX	INT_LOG_ERR_PE7_RSVD0: Reserved.

Register Name	System Interrupt Log for PE 8 Register
Mnemonic	NPU.MISC.REGS.INT_LOG_PE8
Address	00000000050113E8 (SCOM)
Description	Records which error caused a System Interrupt for each PE

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_LOG_ERR_PE8_VLD: Contents valid (freeze on 1st capture).
1:23	RWX	INT_LOG_ERR_PE8_LVL: Interrupt requester (see Interrupt Level).
24:35	RWX	INT_LOG_ERR_PE8_CQ: Interrupt requester, additional detail. CQ events: CTL0 brk0/1, CTL1 brk2/3, CTL2 brk4/5, DAT0 brk0/1, DAT1 brk2/3, DAT2 brk4/5.
36:55	RWX	INT_LOG_ERR_PE8_DETAIL: Error detail for requester (see FIR 0/1 register). If >1 simultaneous interrupt requester to same PE, capture priority is Interrupt Level 0 (highest) to Level 22. If redundant interrupt request to different PE, capture details for new PE. (for example, ATS interrupt to PE A in progress, then ATS interrupt to PE B).
56:63	RWX	INT_LOG_ERR_PE8_RSVD0: Reserved.

Register Name	System Interrupt Log for PE 9 Register
Mnemonic	NPU.MISC.REGS.INT_LOG_PE9
Address	00000000050113E9 (SCOM)
Description	Records which error caused a System Interrupt for each PE

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_LOG_ERR_PE9_VLD: Contents valid (freeze on 1st capture).
1:23	RWX	INT_LOG_ERR_PE9_LVL: Interrupt requester (see Interrupt Level).
24:35	RWX	INT_LOG_ERR_PE9_CQ: Interrupt requester, additional detail. CQ events: CTL0 brk0/1, CTL1 brk2/3, CTL2 brk4/5, DAT0 brk0/1, DAT1 brk2/3, DAT2 brk4/5.
36:55	RWX	INT_LOG_ERR_PE9_DETAIL: Error detail for requester (see FIR 0/1 register). If >1 simultaneous interrupt requester to same PE, capture priority is Interrupt Level 0 (highest) to Level 22. If redundant interrupt request to different PE, capture details for new PE. (for example, ATS interrupt to PE A in progress, then ATS interrupt to PE B).
56:63	RWX	INT_LOG_ERR_PE9_RSVD0: Reserved.

Register Name	System Interrupt Log for PE 10 Register
Mnemonic	NPU.MISC.REGS.INT_LOG_PE10
Address	00000000050113EA (SCOM)
Description	Records which error caused a System Interrupt for each PE

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_LOG_ERR_PE10_VLD: Contents valid (freeze on 1st capture).
1:23	RWX	INT_LOG_ERR_PE10_LVL: Interrupt requester (see Interrupt Level).
24:35	RWX	INT_LOG_ERR_PE10_CQ: Interrupt requester, additional detail. CQ events: CTL0 brk0/1, CTL1 brk2/3, CTL2 brk4/5, DAT0 brk0/1, DAT1 brk2/3, DAT2 brk4/5.

Bits	SCOM	Field Mnemonic: Description
36:55	RWX	INT_LOG_ERR_PE10_DETAIL: Error detail for requester (see FIR 0/1 register). If >1 simultaneous interrupt requester to same PE, capture priority is Interrupt Level 0 (highest) to Level 22. If redundant interrupt request to different PE, capture details for new PE. (for example, ATS interrupt to PE A in progress, then ATS interrupt to PE B).
56:63	RWX	INT_LOG_ERR_PE10_RSVD0: Reserved.

Register Name	System Interrupt Log for PE 11 Register
Mnemonic	NPU.MISC.REGS.INT_LOG_PE11
Address	00000000050113EB (SCOM)
Description	Records which error caused a System Interrupt for each PE

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_LOG_ERR_PE11_VLD: Contents valid (freeze on 1st capture).
1:23	RWX	INT_LOG_ERR_PE11_LVL: Interrupt requester (see Interrupt Level).
24:35	RWX	INT_LOG_ERR_PE11_CQ: Interrupt requester, additional detail. CQ events: CTL0 brk0/1, CTL1 brk2/3, CTL2 brk4/5, DAT0 brk0/1, DAT1 brk2/3, DAT2 brk4/5.
36:55	RWX	INT_LOG_ERR_PE11_DETAIL: Error detail for requester (see FIR 0/1 register). If >1 simultaneous interrupt requester to same PE, capture priority is Interrupt Level 0 (highest) to Level 22. If redundant interrupt request to different PE, capture details for new PE. (for example, ATS interrupt to PE A in progress, then ATS interrupt to PE B).
56:63	RWX	INT_LOG_ERR_PE11_RSVD0: Reserved.

Register Name	System Interrupt Log for PE 12 Register
Mnemonic	NPU.MISC.REGS.INT_LOG_PE12
Address	00000000050113EC (SCOM)
Description	Records which error caused a System Interrupt for each PE

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_LOG_ERR_PE12_VLD: Contents valid (freeze on 1st capture).
1:23	RWX	INT_LOG_ERR_PE12_LVL: Interrupt requester (see Interrupt Level).
24:35	RWX	INT_LOG_ERR_PE12_CQ: Interrupt requester, additional detail. CQ events: CTL0 brk0/1, CTL1 brk2/3, CTL2 brk4/5, DAT0 brk0/1, DAT1 brk2/3, DAT2 brk4/5.
36:55	RWX	INT_LOG_ERR_PE12_DETAIL: Error detail for requester (see FIR 0/1 register). If >1 simultaneous interrupt requester to same PE, capture priority is Interrupt Level 0 (highest) to Level 22. If redundant interrupt request to different PE, capture details for new PE. (for example, ATS interrupt to PE A in progress, then ATS interrupt to PE B).
56:63	RWX	INT_LOG_ERR_PE12_RSVD0: Reserved.

Register Name	System Interrupt Log for PE 13 Register
Mnemonic	NPU.MISC.REGS.INT_LOG_PE13
Address	00000000050113ED (SCOM)
Description	Records which error caused a System Interrupt for each PE

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_LOG_ERR_PE13_VLD: Contents valid (freeze on 1st capture).
1:23	RWX	INT_LOG_ERR_PE13_LVL: Interrupt requester (see Interrupt Level).
24:35	RWX	INT_LOG_ERR_PE13_CQ: Interrupt requester, additional detail. CQ events: CTL0 brk0/1, CTL1 brk2/3, CTL2 brk4/5, DAT0 brk0/1, DAT1 brk2/3, DAT2 brk4/5.
36:55	RWX	INT_LOG_ERR_PE13_DETAIL: Error detail for requester (see FIR 0/1 register). If >1 simultaneous interrupt requester to same PE, capture priority is Interrupt Level 0 (highest) to Level 22. If redundant interrupt request to different PE, capture details for new PE. (for example, ATS interrupt to PE A in progress, then ATS interrupt to PE B).
56:63	RWX	INT_LOG_ERR_PE13_RSVD0: Reserved.

Register Name	System Interrupt Log for PE 14 Register
Mnemonic	NPU.MISC.REGS.INT_LOG_PE14
Address	00000000050113EE (SCOM)
Description	Records which error caused a System Interrupt for each PE

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_LOG_ERR_PE14_VLD: Contents valid (freeze on 1st capture).
1:23	RWX	INT_LOG_ERR_PE14_LVL: Interrupt requester (see Interrupt Level).
24:35	RWX	INT_LOG_ERR_PE14_CQ: Interrupt requester, additional detail. CQ events: CTL0 brk0/1, CTL1 brk2/3, CTL2 brk4/5, DAT0 brk0/1, DAT1 brk2/3, DAT2 brk4/5.
36:55	RWX	INT_LOG_ERR_PE14_DETAIL: Error detail for requester (see FIR 0/1 register). If >1 simultaneous interrupt requester to same PE, capture priority is Interrupt Level 0 (highest) to Level 22. If redundant interrupt request to different PE, capture details for new PE. (for example, ATS interrupt to PE A in progress, then ATS interrupt to PE B).
56:63	RWX	INT_LOG_ERR_PE14_RSVD0: Reserved.

Register Name	System Interrupt Log for PE 15 Register
Mnemonic	NPU.MISC.REGS.INT_LOG_PE15
Address	00000000050113EF (SCOM)
Description	Records which error caused a System Interrupt for each PE

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_LOG_ERR_PE15_VLD: Contents valid (freeze on 1st capture).
1:23	RWX	INT_LOG_ERR_PE15_LVL: Interrupt requester (see Interrupt Level).
24:35	RWX	INT_LOG_ERR_PE15_CQ: Interrupt requester, additional detail. CQ events: CTL0 brk0/1, CTL1 brk2/3, CTL2 brk4/5, DAT0 brk0/1, DAT1 brk2/3, DAT2 brk4/5.
36:55	RWX	INT_LOG_ERR_PE15_DETAIL: Error detail for requester (see FIR 0/1 register). If >1 simultaneous interrupt requester to same PE, capture priority is Interrupt Level 0 (highest) to Level 22. If redundant interrupt request to different PE, capture details for new PE. (for example, ATS interrupt to PE A in progress, then ATS interrupt to PE B).
56:63	RWX	INT_LOG_ERR_PE15_RSVD0: Reserved.

Register Name	NPU FIR 0 Register
Mnemonic	NPU.MISC.FIR_REG_0
Address	0000000005011400 (SCOM) 0000000005011401 (SCOM1) 0000000005011402 (SCOM2)
Description	Local FIR register for the NPU (1 of 2)

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	NTL_ARRAY_CE: NTL array CE.
1	RWX	WOX_AND	WOX_OR	NTL_ARRAY_HDR_UE: NTL header array UE.
2	RWX	WOX_AND	WOX_OR	NTL_ARRAY_DATA_UE: NTL data array UE.
3	RWX	WOX_AND	WOX_OR	NTL_NVL_FLIT_PERR: NTL NVLInk Control/Header/AE Parity error.
4	RWX	WOX_AND	WOX_OR	NTL_NVL_DATA_PERR: NTL NVLink Data Parity error.
5	RWX	WOX_AND	WOX_OR	NTL_NVL_PKT_MALFOR: NTL NVLink Malformed Packet (illegal command encode, etc.).
6	RWX	WOX_AND	WOX_OR	NTL_NVL_PKT_UNSUPPORTED: NTL NVLink Unsupported Packet (receiving DGD, receiving Atomic with unsupported DatLen, etc).
7	RWX	WOX_AND	WOX_OR	NTL_NVL_CONFIG_ERR: NTL NVLink Config errors (Credits received > max configured).
8	RWX	WOX_AND	WOX_OR	NTL_NVL_CRC_ERR: NTL NVLink CRC errors or LMD = Stomp.
9	RWX	WOX_AND	WOX_OR	NTL_PRI_ERR: NTL PRI errors (errors returned by NDL Wrapper on PRI interface).
10	RWX	WOX_AND	WOX_OR	NTL_LOGIC_ERR: NTL logic error (overflow, underflow, etc).
11	RWX	WOX_AND	WOX_OR	NTL_LMD_POISON: NTL LMD = Data Poison.
12	RWX	WOX_AND	WOX_OR	NTL_ARRAY_DATA_SUE: NTL data array SUE.
13	RWX	WOX_AND	WOX_OR	CTL_ARRAY_CE: CQ CTL/SM ASBE Array single-bit correctable error.
14	RWX	WOX_AND	WOX_OR	CTL_PBUS_RECOV_ERR: CQ CTL/SM PBR processor bus recoverable (ex: abort_trm CResp).
15	RWX	WOX_AND	WOX_OR	CTL_REG_RING_ERR: CQ CTL/SM REG Register ring error (ie noack).
16	RWX	WOX_AND	WOX_OR	CTL_MMIO_ST_DATA_UE: CQ CTL/SM DUE Data Uncorrectable error for MMIO store data.
17	RWX	WOX_AND	WOX_OR	CTL_PEF: CQ CTL/SM PE-Frozen.
18	RWX	WOX_AND	WOX_OR	CTL_NVL_CFG_ERR: CQ CTL/SM NCF NVLink configuration error (ex: Probe missed its GPUBAR).
19	RWX	WOX_AND	WOX_OR	CTL_NVL_FATAL_ERR: CQ CTL/SM NVF NVLink fatal (ex: rcv data resp to write req).
20	RWX	WOX_AND	WOX_OR	Reserved_1: CQ CTL/SM Rsv1 Reserved.
21	RWX	WOX_AND	WOX_OR	CTL_ARRAY_UE: CQ CTL/SM AUE Array uncorrectable error.
22	RWX	WOX_AND	WOX_OR	CTL_PBUS_PERR: CQ CTL/SM PBP processor bus parity error.
23	RWX	WOX_AND	WOX_OR	CTL_PBUS_FATAL_ERR: CQ CTL/SM PBF processor bus Fatal (ex: addr_error CResp).
24	RWX	WOX_AND	WOX_OR	CTL_PBUS_CONFIG_ERR: CQ CTL/SM PBC processor bus configuration error (ex: group > 3).
25	RWX	WOX_AND	WOX_OR	CTL_FWD_PROGRESS_ERR: CQ CTL/SM FWD Forward-Progress (internal timer or rpt_hang.data).

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
26	RWX	WOX_AND	WOX_OR	CTL_LOGIC_ERR: CQ CTL/SM NLG NPU Logic error (ex: invalid state, missed table lookup, etc.).
27	RWX	WOX_AND	WOX_OR	CTL_PEST_DIS: CQ CTL/SM UT = 1 to frozen PE.
28	RWX	WOX_AND	WOX_OR	CTL_RSVD_15: CQ CTL/SM Reserved, macro bit 15.
29	RWX	WOX_AND	WOX_OR	DAT_DATA_BE_UE: CQ DAT ECC UE on data/BE arrays. Relevant word is marked with SUE.
30	RWX	WOX_AND	WOX_OR	DAT_DATA_BE_CE: CQ DAT ECC CE on data/BE arrays.
31	RWX	WOX_AND	WOX_OR	DAT_DATA_BE_PERR: CQ DAT parity error on data/BE latches. Relevant word is marked with SUE.
32	RWX	WOX_AND	WOX_OR	DAT_CREG_PERR: CQ DAT parity errors on configuration registers.
33	RWX	WOX_AND	WOX_OR	DAT_RTAG_PERR: CQ DAT parity errors on received processor bus RTAG.
34	RWX	WOX_AND	WOX_OR	DAT_STATE_PERR: CQ DAT parity errors on internal state latches.
35	RWX	WOX_AND	WOX_OR	DAT_LOGIC_ERR: CQ DAT logic error (invalid state bit patterns, credit overflow, etc.).
36	RWX	WOX_AND	WOX_OR	DAT_DATA_BE_SUE: CQ_DAT ECC SUE on data/BE arrays that can be due to poisoned data from GPU.
37	RWX	WOX_AND	WOX_OR	DAT_PBRX_SUE: CQ_DAT ECC SUE on PB receive data (CANNOT be due to poisoned data from GPU).
38	RWX	WOX_AND	WOX_OR	DAT_RSVD_9: CQ DAT Reserved, macro bit 9.
39	RWX	WOX_AND	WOX_OR	DAT_RSVD_10: CQ DAT Reserved, macro bit 10.
40	RWX	WOX_AND	WOX_OR	XTS_INT: XTS internal logic error.
41	RWX	WOX_AND	WOX_OR	XTS_SRAM_CE: XTS correctable errors in XTS internal SRAM.
42	RWX	WOX_AND	WOX_OR	XTS_SRAM_UE: XTS uncorrectable errors in XTS internal SRAM.
43	RWX	WOX_AND	WOX_OR	XTS_PROTOCOL_CE: XTS correctable error on incoming stack transactions.
44	RWX	WOX_AND	WOX_OR	XTS_PROTOCOL_UE: XTS uncorrectable/protocol errors on incoming stack transaction.
45	RWX	WOX_AND	WOX_OR	XTS_PBUS_PROTOCOL: XTS protocol errors on incoming PBUS transaction.
46	RWX	WOX_AND	WOX_OR	XTS_RSVD_6: XTS Translate Request Fail.
47	RWX	WOX_AND	WOX_OR	XTS_RSVD_7: XTS Reserved, macro bit 7.
48	RWX	WOX_AND	WOX_OR	XTS_RSVD_8: XTS Reserved, macro bit 8.
49	RWX	WOX_AND	WOX_OR	XTS_RSVD_9: XTS Reserved, macro bit 9.
50	RWX	WOX_AND	WOX_OR	XTS_RSVD_10: XTS Reserved, macro bit 10.
51	RWX	WOX_AND	WOX_OR	XTS_RSVD_11: XTS Reserved, macro bit 11.
52	RWX	WOX_AND	WOX_OR	XTS_RSVD_12: XTS Reserved, macro bit 12.
53	RWX	WOX_AND	WOX_OR	XTS_RSVD_13: XTS Reserved, macro bit 13.
54	RWX	WOX_AND	WOX_OR	XTS_RSVD_14: XTS Reserved, macro bit 14.
55	RWX	WOX_AND	WOX_OR	XTS_RSVD_15: XTS Reserved, macro bit 15.
56	RWX	WOX_AND	WOX_OR	XTS_RSVD_16: XTS Reserved, macro bit 16.
57	RWX	WOX_AND	WOX_OR	XTS_RSVD_17: XTS Reserved, macro bit 17.
58	RWX	WOX_AND	WOX_OR	XTS_RSVD_18: XTS Reserved, macro bit 18.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
59	RWX	WOX_AND	WOX_OR	XTS_RSVD_19: XTS Reserved, macro bit 19.
60	RWX	WOX_AND	WOX_OR	SCOMSAT00_ERR: MISC Pervasive SCOM satellite signaled internal FSM error (ring 0, sat 0).
61	RWX	WOX_AND	WOX_OR	SCOMSAT01_ERR: MISC Pervasive SCOM satellite signaled internal FSM error (ring 0, sat 1).
62	RWX	WOX_AND	WOX_OR	FIR_PARITY_ERR2_0: Local FIR Parity Error RAS duplicate (ring 1, sat 0).
63	RWX	WOX_AND	WOX_OR	FIR_PARITY_ERR_0: Local FIR Parity Error of ACTION/MASK registers (ring 1, sat 0).

Register Name	**NPU FIR Mask 0 Register**
Mnemonic	NPU.MISC.FIR_MASK_REG_0
Address	0000000005011403 (SCOM) 0000000005011404 (SCOM1) 0000000005011405 (SCOM2)
Description	Mask Select for the FIR bits

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:63	RW	WO_AND	WO_OR	FIR_MASK_0: Mask select for corresponding bit in FIR. (Action0, Action1, Mask) = Action Select. (0,0,0) = Checkstop Error. (0,1,0) = Recoverable Error. (1,0,0) = Not Used. (1,1,0) = Local Core Checkstop / GX freeze. (x,x,1) = Masked.

Register Name	**NPU FIR 0 Action 0 Register**
Mnemonic	NPU.MISC.FIR_ACTION0_REG_0
Address	0000000005011406 (SCOM)
Description	Action Select for the FIR bits

Bits	SCOM	Field Mnemonic: Description
0:63	RW	FIR_ACTION0_0: MSB of action select for corresponding bit in FIR. (Action0, Action1, Mask) = Action Select. (0,0,0) = Checkstop Error. (0,1,0) = Recoverable Error. (1,0,0) = Not Used. (1,1,0) = Local Core Checkstop / GX freeze. (x,x,1) = MaskedD.

Register Name	**NPU FIR 0 Action 1 Register**
Mnemonic	NPU.MISC.FIR_ACTION1_REG_0
Address	0000000005011407 (SCOM)
Description	Action Select for the FIR bits

Bits	SCOM	Field Mnemonic: Description
0:63	RW	FIR_ACTION1_0: MSB of action select for corresponding bit in FIR. (Action0, Action1, Mask) = Action Select. (0,0,0) = Checkstop Error. (0,1,0) = Recoverable Error. (1,0,0) = Not Used. (1,1,0) = Local Core Checkstop / GX freeze. (x,x,1) = Masked.

Register Name	Pervasive FIR WOF 0 Register
Mnemonic	NPU.MISC.FIR_WOF_REG_0
Address	0000000005011408 (SCOM)
Description	Who is on first register indicates which error occurred first.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	FIR_WOF_0: WOF Register locks on first error.

Register Name	NPU FIR 1 Register
Mnemonic	NPU.MISC.FIR_REG_1
Address	0000000005011440 (SCOM) 0000000005011441 (SCOM1) 0000000005011442 (SCOM2)
Description	Local FIR register for the NPU (2 of 2)

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	NDL_BRK0_STALL: NDL Brick0 stall.
1	RWX	WOX_AND	WOX_OR	NDL_BRK0_NOSTALL: NDL Brick0 nostall.
2	RWX	WOX_AND	WOX_OR	NDL_BRK1_STALL: NDL Brick1 stall.
3	RWX	WOX_AND	WOX_OR	NDL_BRK1_NOSTALL: NDL Brick1 nostall.
4	RWX	WOX_AND	WOX_OR	NDL_BRK2_STALL: NDL Brick2 stall.
5	RWX	WOX_AND	WOX_OR	NDL_BRK2_NOSTALL: NDL Brick2 nostall.
6	RWX	WOX_AND	WOX_OR	NDL_BRK3_STALL: NDL Brick3 stall.
7	RWX	WOX_AND	WOX_OR	NDL_BRK3_NOSTALL: NDL Brick3 nostall.
8	RWX	WOX_AND	WOX_OR	NDL_BRK4_STALL: NDL Brick4 stall.
9	RWX	WOX_AND	WOX_OR	NDL_BRK4_NOSTALL: NDL Brick4 nostall.
10	RWX	WOX_AND	WOX_OR	NDL_BRK5_STALL: NDL Brick5 stall.
11	RWX	WOX_AND	WOX_OR	NDL_BRK5_NOSTALL: NDL Brick5 nostall.
12	RWX	WOX_AND	WOX_OR	MISC_REG_RING_ERR: MISC Register ring error (noack, >1 ack).
13	RWX	WOX_AND	WOX_OR	MISC_INT_RA_PERR: MISC Parity error from interrupt base real address register.
14	RWX	WOX_AND	WOX_OR	MISC_DA_ADDR_PERR: MISC Parity error on Indirect SCOM Address register.
15	RWX	WOX_AND	WOX_OR	MISC_CTRL_PERR: MISC Parity error on MISC Control register.
16	RWX	WOX_AND	WOX_OR	MISC_NMMU_ERR: MISC NMMU signaled Local Checkstop.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
17	RWX	WOX_AND	WOX_OR	ATS_TVT_ENTRY_INVALID: ATS Invalid TVT entry (TCE Table Size = 0b00000).
18	RWX	WOX_AND	WOX_OR	ATS_TVT_ADDR_RANGE_ERR: ATS TVT Address range error (no xlate: EA out of range; xlate: unused EA bits non-zero, TVE uses > max # EA bits).
19	RWX	WOX_AND	WOX_OR	ATS_TCE_PAGE_ACCESS_CA_ERR: ATS TCE Page access error during TCE cache lookup.
20	RWX	WOX_AND	WOX_OR	ATS_TCE_CACHE_MULT_HIT_ERR: ATS Effective Address hit multiple TCE cache entries.
21	RWX	WOX_AND	WOX_OR	ATS_TCE_PAGE_ACCESS_TW_ERR: ATS TCE Page access error during TCE table-walk.
22	RWX	WOX_AND	WOX_OR	ATS_TCE_REQ_TO_ERR: ATS Timeout on TCE tree walk.
23	RWX	WOX_AND	WOX_OR	ATS_TCD_PERR: ATS Parity error on TCE cache directory array.
24	RWX	WOX_AND	WOX_OR	ATS_TDR_PERR: ATS Parity error on TCE cache data array.
25	RWX	WOX_AND	WOX_OR	ATS_AT_EA_UE: ATS ECC UE on Effective Address array.
26	RWX	WOX_AND	WOX_OR	ATS_AT_EA_CE: ATS ECC CE on Effective Address array.
27	RWX	WOX_AND	WOX_OR	ATS_AT_TDRMEM_UE: ATS ECC UE on TDRmem array (table-walk state machine also hangs).
28	RWX	WOX_AND	WOX_OR	ATS_AT_TDRMEM_CE: ATS ECC CE on TDRmem array.
29	RWX	WOX_AND	WOX_OR	ATS_AT_RSPOUT_UE: ATS ECC UE on CQ CTL DMA Read data to TDR_mem array during table-walk.
30	RWX	WOX_AND	WOX_OR	ATS_AT_RSPOUT_CE: ATS ECC CE on CQ CTL DMA Read data to TDR_mem array during table-walk.
31	RWX	WOX_AND	WOX_OR	ATS_TVT_PERR: ATS Parity error on TVT entry.
32	RWX	WOX_AND	WOX_OR	ATS_IODA_ADDR_PERR: ATS Parity error on IODA Address Register.
33	RWX	WOX_AND	WOX_OR	ATS_NPU_CTRL_PERR: ATS Parity error on ATS Control Register.
34	RWX	WOX_AND	WOX_OR	ATS_NPU_TOR_PERR: ATS Parity error on ATS Timeout Control register.

Register Name	Power Bus PB West Mode Configuration Register
Mnemonic	PB.COM.PB_WEST_MODE
Address	000000000501180A (SCOM)
Description	Power Bus west mode configuration register

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved.
1:3	RO	Constant = 0b000
4	RWX	PB_CFG_CHIP_IS_SYSTEM: Configures whether there are other POWER9s in the system.
5:7	RW	Reserved.
8	RWX	PB_CFG_HNG_CHK_DISABLE: Hang Check Disable.
9	RWX	PB_DBG_CLR_MAX_HANG_STAGE: Resets the maximum hang state level (pb_hang_level).
10:11	RW	Reserved.
12:15	RWX	PB_CFG_SW_AB_WAIT: Adds delay to tc_pb_switch_ab input from TPC during hot plug sequence.
16:22	RWX	PB_CFG_SP_HW_MARK: configures the maximum system pumps an IO unit may issue.
23:29	RWX	PB_CFG_GP_HW_MARK: configures the maximum group pumps this chip may issue.
30:35	RWX	PB_CFG_LCL_HW_MARK: configures the maximum local pumps this chip may issue.
36:41	RWX	Reserved.
42:56	RW	Reserved.
57	RWX	PB_CFG_REQ_GATHER_ENABLE: Enable data OW gathering on all chiplet/link requests. {default = on}.
58	RW	PB_CFG_SWITCH_CD_PULSE: Controls switch_cd pulse width. Uses pb_cfg_sw_ab_wait to extend pulse. Default = long pulse. Requires pb_cfg_sw_ab_wait > cnt_5 for 6 cycle pulse.
59	RWX	PB_CFG_SWITCH_OPTION_AB: SCOM access to determine what signal drives pb_cfg_switch_cd. on = tc_pb_switch_ab, off = tc_pb_switch_cd.
60:62	RW	Reserved.
63	RWX	Reserved.

Register Name	Power Bus PB West HP Mode Next Register
Mnemonic	PB.COM.PB_WEST_HP_MODE_NEXT
Address	000000000501180B (SCOM)
Description	Power Bus West High-Performance Mode Next Register

Bits	SCOM	Field Mnemonic: Description
0	RWX	PB_CFG_MASTER_CHIP_NEXT: Processor bus master.
1	RWX	PB_CFG_TM_MASTER_NEXT: Configure chip as the processor bus TM master.
2	RWX	PB_CFG_CHG_RATE_GP_MASTER_NEXT: Sets the group pump change rate master. This master gathers all general-purpose chg_rate.reqs and issues a chg_rate.gnt.
3	RWX	PB_CFG_CHG_RATE_SP_MASTER_NEXT: Sets the system pump change rate master. This master gathers all special-purpose chg_rate.reqs and issues a chg_rate.gnt.
4	RWX	PB_CFG_LINK_A0_EN_NEXT: Link A0 enabled.
5	RWX	PB_CFG_LINK_A1_EN_NEXT: Link A1 enabled.
6	RWX	PB_CFG_LINK_A2_EN_NEXT: Link A2 enabled.

Bits	SCOM	Field Mnemonic: Description
7	RWX	PB_CFG_LINK_A3_EN_NEXT: Link A3 enabled.
8	RWX	PB_CFG_LINK_NA0_ADDR_DIS_NEXT: Link A0 address broadcast disabled.
9	RWX	PB_CFG_LINK_NA1_ADDR_DIS_NEXT: Link A1 address broadcast disabled.
10	RWX	PB_CFG_LINK_NA2_ADDR_DIS_NEXT: Link A2 address broadcast disabled.
11	RWX	PB_CFG_LINK_NA3_ADDR_DIS_NEXT: Link A3 address broadcast disabled.
12:15	RWX	PB_CFG_LINK_A0_GROUPID_NEXT: Group ID of chip connected to A0 link.
16:19	RWX	PB_CFG_LINK_A1_GROUPID_NEXT: Group ID of chip connected to A1 link.
20:23	RWX	PB_CFG_LINK_A2_GROUPID_NEXT: Group ID of chip connected to A2 link.
24:27	RWX	PB_CFG_LINK_A3_GROUPID_NEXT: Group ID of chip connected to A3 link.
28	RWX	PB_CFG_A_AGGREGATE_NEXT: Processor bus A links are configured as parallel buses to the same chip.
29	RWX	PB_CFG_HOP_MODE_NEXT: Sets SMP hop mode. 0 = 1-hop or 2-hop SMP topology. 1 = 3-hop SMP topology.
30	RWX	PB_CFG_SMP_OPTICS_MODE_NEXT: Sets SMP optics mode. 0 = Optic Links are configured as X-bus SMP protocol. 1 = Optic Links are configured as A-bus SMP protocol.
31	RWX	PB_CFG_CAPI_MODE_NEXT: Indicates a CAPI 2.0 link is attached in the SMP system.
32:33	RWX	PB_CFG_OPT0_MODE_NEXT: Optical Link 0 configuration.
34:35	RWX	PB_CFG_OPT1_MODE_NEXT: Optical Link 1 configuration.
36:37	RWX	PB_CFG_OPT2_MODE_NEXT: Optical Link 2 configuration.
38:39	RWX	PB_CFG_OPT3_MODE_NEXT: Optical Link 3 configuration.
40:46	RWX	PB_CFG_XLATE_ADDR_TO_ID_WEST_NEXT: Configures the translation of the address to topology ID XOR mask.
47:48	RW	Reserved.
49	RWX	Reserved.
50	RWX	PB_CFG_A_GATHER_ENABLE_NEXT: Enable data OW gathering on A links.
51	RW	Reserved.
52	RWX	PB_CFG_PHYP_IS_GROUP_NEXT: Configures the PHYP boundary. 0 = phyp_is_system 1 = phyp_is_group
53	RWX	PB_CFG_ADDR_BAR_MODE_NEXT: Address BAR Mode. The SMP is limited to two or four sockets. When 1, pb_cfg_pump_mode must also be set to 1.
54	RWX	PB_CFG_PUMP_MODE_NEXT: Configures the physical broadcast. 0 = Chip_is_node (default). 1 = Chip_is_group.
55	RWX	PB_CFG_DCACHE_CAPP_MODE_NEXT: Dcache CAPP mode. 0 = off (default). 1 = on.
56:63	RWX	PB_CFG_A_CMD_RATE_WEST_NEXT: Configures the paced command rate to not overrun the A link.

Register Name	Power Bus PB West HP Mode Current Register

7	RWX	PB_CFG_LINK_A3_EN_CURR: Link A3 enabled.
8	RWX	PB_CFG_LINK_NA0_ADDR_DIS_CURR: Link A0 address broadcast disabled.
9	RWX	PB_CFG_LINK_NA1_ADDR_DIS_CURR: Link A1 address broadcast disabled.
10	RWX	PB_CFG_LINK_NA2_ADDR_DIS_CURR: Link A2 address broadcast disabled.
11	RWX	PB_CFG_LINK_NA3_ADDR_DIS_CURR: Link A3 address broadcast disabled.
12:15	RWX	PB_CFG_LINK_A0_GROUPID_CURR: Group ID of chip connected to A0 link.
16:19	RWX	PB_CFG_LINK_A1_GROUPID_CURR: Group ID of chip connected to A1 link.
20:23	RWX	PB_CFG_LINK_A2_GROUPID_CURR: Group ID of chip connected to A2 link.
24:27	RWX	PB_CFG_LINK_A3_GROUPID_CURR: Group ID of chip connected to A3 link.
28	RWX	PB_CFG_A_AGGREGATE_CURR: Processor bus A links are configured as parallel buses to same chip.
29	RWX	PB_CFG_HOP_MODE_CURR: Sets SMP hop mode. 0 = 1-hop or 2-hop SMP topology. 1 = 3-hop SMP topology.
30	RWX	PB_CFG_SMP_OPTICS_MODE_CURR: Sets SMP optics mode. 0 = Optic links are configured as X-bus SMP protocol. 1 = Optic links are configured as A-bus SMP protocol.
31	RWX	PB_CFG_CAPI_MODE_CURR: Indicates a CAPI 2.0 link is attached in the SMP system.
32:33	RWX	PB_CFG_OPT0_MODE_CURR: Optical link 0 configuration.
34:35	RWX	PB_CFG_OPT1_MODE_CURR: Optical link 1 configuration.
36:37	RWX	PB_CFG_OPT2_MODE_CURR: Optical link 2 configuration.
38:39	RWX	PB_CFG_OPT3_MODE_CURR: Optical link 3 configuration.
40:46	RWX	PB_CFG_XLATE_ADDR_TO_ID_WEST_CURR: Configures the translation of the address to topology ID XOR mask.
47:48	RW	Reserved.
49	RWX	Reserved.
50	RWX	PB_CFG_A_GATHER_ENABLE_CURR: Enable data OW gathering on A links.
51	RW	Reserved.

Bits	SCOM	Field Mnemonic: Description
52	RWX	PB_CFG_PHYP_IS_GROUP_CURR: Configures the PHYP boundary. 0 = phyp_is_system. 1 = phyp_is_group.
53	RWX	PB_CFG_ADDR_BAR_MODE_CURR: Address BAR Mode. The SMP is limited to two or four sockets. When 1, pb_cfg_pump_mode must also be set to 1.
54	RWX	PB_CFG_PUMP_MODE_CURR: Configures the physical broadcast. 0 = Chip_is_node (default). 1 = Chip_is_group.
55	RWX	PB_CFG_DCACHE_CAPP_MODE_CURR: Dcache CAPP mode. 0 = off (default). 1 = on.
56:63	RWX	PB_CFG_A_CMD_RATE_WEST_CURR: configures the paced command rate to not overrun the A link.

Description	Processor bus PB EAST nest domain FIR Action 1 Register

Bits	SCOM	Field Mnemonic: Description
0:33	RW	PB_EAST_FIR_ACTION1: Processor bus PB EAST nest domain FIR LSB of action select for corresponding bit in FIR. (Action0,Action1) = Action Select. (0,0) = Checkstop. (0,1) = Recoverable Error to Service Processor. (1,0) = Recoverable Interrupt to Processor. (1,1) = Invalid.
34:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Power Bus PB East Mode Configuration Register
Mnemonic	PB.COM.PB_EAST_MODE
Address	000000000501200A (SCOM)
Description	00 = pb_east_pbixxx_init 01:03 = spare 04 pb_= cfg_east_chip_is_system 05:07 = spare 08 = pb_cfg_east_hng_chk_disable 09 = pb_cfg_east_dbg_clr_max_hang_stage 10:11 = spare 12:15 pb_cfg_east_sw_ab_wait(0:3) 16:22 = pb_cfg_east_sp_hw_mark(0:6) 23:29 = pb_cfg_east_gp_hw_mark(0:6) 30:35 = pb_cfg_east_lcl_hw_mark(0:5) 36:41 = pb_cfg_east_cpu_ratio_override(0:5) 42:56 = spare 57 = pb_cfg_east_req_gather_enable 58 = spare 59 = pb_cfg_east_switch_option_ab 60:62 = spare 63 pb_cfg_east_reset_error_capture

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved.
1:3	RO	Constant = 0b000
4	RWX	PB_CFG_CHIP_IS_SYSTEM: configures whether there are other POWER9s in the system.
5:7	RW	Reserved.
8	RWX	PB_CFG_HNG_CHK_DISABLE: Hang Check Disable.
9	RWX	PB_DBG_CLR_MAX_HANG_STAGE: Resets the maximum hang state level (pb_hang_level).
10:11	RW	Reserved.
12:15	RWX	PB_CFG_SW_AB_WAIT: Adds delay to tc_pb_switch_ab input from TPC during hot plug sequence.
16:22	RWX	PB_CFG_SP_HW_MARK: configures the maximum system pumps an IO unit may issue.
23:29	RWX	PB_CFG_GP_HW_MARK: configures the maximum group pumps this chip may issue.
30:35	RWX	PB_CFG_LCL_HW_MARK: configures the maximum local pumps this chip may issue.
36:41	RWX	Reserved.
42:56	RW	Reserved.
57	RWX	PB_CFG_REQ_GATHER_ENABLE: Enable data OW gathering on all chiplet/link requests. {default = on}.
58	RW	PB_CFG_SWITCH_CD_PULSE: Controls switch_cd pulse width. Uses pb_cfg_sw_ab_wait to extend pulse. Default = long pulse. Requires pb_cfg_sw_ab_wait > cnt_5 for 6 cycle pulse.
59	RWX	PB_CFG_SWITCH_OPTION_AB: SCOM access to determine what signal drives pb_cfg_switch_cd. on = tc_pb_switch_ab, off = tc_pb_switch_cd.
60:62	RW	Reserved.
63	RWX	Reserved.

Register Name	**Power Bus PB East HP Mode Configuration Register**

Bits	SCOM	Field Mnemonic: Description
0	RWX	PB_CFG_MASTER_CHIP_NEXT: Processor bus master.
1	RWX	PB_CFG_TM_MASTER_NEXT: configure Chip as PB TM Master.
2	RWX	PB_CFG_CHG_RATE_GP_MASTER_NEXT: Sets the Group pump change rate master. This master gathers all GP chg_rate.reqs and issues a chg_rate.gnt.
3	RWX	PB_CFG_CHG_RATE_SP_MASTER_NEXT: Sets the System pump change rate master. This master gathers all SP chg_rate.reqs and issues a chg_rate.gnt.
4	RWX	PB_CFG_LINK_A0_EN_NEXT: Link A0 enabled.
5	RWX	PB_CFG_LINK_A1_EN_NEXT: Link A1 enabled.
6	RWX	PB_CFG_LINK_A2_EN_NEXT: Link A2 enabled.
7	RWX	PB_CFG_LINK_A3_EN_NEXT: Link A3 enabled.
8	RWX	PB_CFG_LINK_NA0_ADDR_DIS_NEXT: Link A0 address broadcast disabled.
9	RWX	PB_CFG_LINK_NA1_ADDR_DIS_NEXT: Link A1 address broadcast disabled.
10	RWX	PB_CFG_LINK_NA2_ADDR_DIS_NEXT: Link A2 address broadcast disabled.
11	RWX	PB_CFG_LINK_NA3_ADDR_DIS_NEXT: Link A3 address broadcast disabled.
12:15	RWX	PB_CFG_LINK_A0_GROUPID_NEXT: Group ID of chip connected to A0 link.

Bits	SCOM	Field Mnemonic: Description
16:19	RWX	PB_CFG_LINK_A1_GROUPID_NEXT: Group ID of chip connected to A1 link.
20:23	RWX	PB_CFG_LINK_A2_GROUPID_NEXT: Group ID of chip connected to A2 link.
24:27	RWX	PB_CFG_LINK_A3_GROUPID_NEXT: Group ID of chip connected to A3 link.
28	RWX	PB_CFG_A_AGGREGATE_NEXT: Processor bus A links are configured as parallel buses to same chip.
29	RWX	PB_CFG_HOP_MODE_NEXT: Sets SMP hop mode. 0 = 1-hop or 2-hop SMP topology. 1 = 3-hop SMP topology.
30	RWX	PB_CFG_SMP_OPTICS_MODE_NEXT: Sets SMP optics mode. 0 = Optic Links are configured as X-bus SMP protocol. 1 = Optic Links are configured as A-bus SMP protocol.
31	RWX	PB_CFG_CAPI_MODE_NEXT: Indicates a CAPI 2.0 link is attached in the SMP system.
32:33	RWX	PB_CFG_OPT0_MODE_NEXT: Optical Link 0 configuration.
34:35	RWX	PB_CFG_OPT1_MODE_NEXT: Optical Link 1 configuration.
36:37	RWX	PB_CFG_OPT2_MODE_NEXT: Optical Link 2 configuration.
38:39	RWX	PB_CFG_OPT3_MODE_NEXT: Optical Link 3 configuration.
40:46	RWX	PB_CFG_XLATE_ADDR_TO_ID_EAST_NEXT: Configures the translation of address to topology ID XOR mask.
47:48	RW	Reserved.
49	RWX	Reserved.
50	RWX	PB_CFG_A_GATHER_ENABLE_NEXT: Enable data OW gathering on A links.
51	RW	Reserved.
52	RWX	PB_CFG_PHYP_IS_GROUP_NEXT: Configures phyp boundary. 0 = phyp_is_system. 1 = phyp_is_group.
53	RWX	PB_CFG_ADDR_BAR_MODE_NEXT: Address BAR Mode. The SMP is limited to 2 or 4 sockets. When 1, pb_cfg_pump_mode must also be set to 1.
54	RWX	PB_CFG_PUMP_MODE_NEXT: configures the physical broadcast. 0 = Chip_is_node (Default). 1 = Chip_is_group.
55	RWX	PB_CFG_DCACHE_CAPP_MODE_NEXT: Dcache CAPP mode. 0 = off (Default). 1 = on.
56:63	RWX	PB_CFG_A_CMD_RATE_EAST_NEXT: Configures the paced command rate to not overrun the A link.

Mnemonic	PB.PB_PPE.PB_PPE_LFIR
Address	0000000005012400 (SCOM) 0000000005012401 (SCOM1) 0000000005012402 (SCOM2)
Description	FBC_PPE_SCOM LFIR

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	PB_PPE_LFIR_PPE_INTERNAL_ERROR: PPE asserted an internally detected error condition that caused it to halt. This indication is intended to be reported to both Core PPM macros to be forwarded to the OCC complex as an error interrupt.
1	RWX	WOX_AND	WOX_OR	PB_PPE_LFIR_PPE_EXTERNAL_ERROR: PPE detected an error condition on an external interface to the Memory Bolt-on that caused it to halt. This indication is intended to be reported to both Core PPM macros to be forwarded to the OCC complex as an error interrupt.
2	RWX	WOX_AND	WOX_OR	PB_PPE_LFIR_PPE_PROGRESS_ERROR: PPE detected a lack of forward progress that caused it to halt.
3	RWX	WOX_AND	WOX_OR	PB_PPE_LFIR_PPE_BREAKPOINT_ERROR: PPE halted either upon a hardware debug or software-requested breakpoint event.
4	RWX	WOX_AND	WOX_OR	PB_PPE_LFIR_PPE_WATCHDOG: PPE asserted a watchdog timeout condition. Will likely be masked, for debug information only.
5	RWX	WOX_AND	WOX_OR	PB_PPE_LFIR_PPE_HALTED: PPE asserted a halt condition. Will likely be masked since there are several sources of halt that may be valid.
6	RWX	WOX_AND	WOX_OR	PB_PPE_LFIR_PPE_DEBUG_TRIGGER: PPE asserted a debug trigger.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
7	RWX	WOX_AND	WOX_OR	PB_PPE_LFIR_SRAM_UE: SRAM Uncorrectable Error. FBC_PPE will get a MCHK. Should be marked as as a recoverable error for Runtime Diagnostics reporting.
8	RWX	WOX_AND	WOX_OR	PB_PPE_LFIR_SRAM_CE: SRAM Correctable Error. FBC_PPE received corrected data, but SRAM content is bad until next scrub to that line. (Should be masked in the product; unmasked and marked as a recoverable error in manufacturing test).
9	RWX	WOX_AND	WOX_OR	PB_PPE_LFIR_SRAM_SCRUB_ERR: Scrub timer tick occurred when scrub is still pending.
10	RWX	WOX_AND	WOX_OR	PB_PPE_LFIR_BCE_ERROR: Block Copy Engine Error: Not applicable to the FBC_PPE.
11	RWX	WOX_AND	WOX_OR	PB_PPE_LFIR_SPARE11: Implemented but not used. Inputs tied to 0.
12	RWX	WOX_AND	WOX_OR	PB_PPE_LFIR_FIR_PARITY_ERR_DUP: Internal FIR parity error duplicate (same as fir_parity_err).
13	RWX	WOX_AND	WOX_OR	PB_PPE_LFIR_FIR_PARITY_ERR: Internal FIR parity error.
14:63	RO	RO	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000

Description	FBC_PPE_SCOM LFIR Action1

Bits	SCOM	Field Mnemonic: Description
0:13	RW	PB_PPE_LFIRACT1_FIR_ACTION1: LSB of action select for corresponding bit in FIR.
14:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000

Register Name	PPE Local SRAM Control Register
Mnemonic	PB.PB_PPE.PPE.ARB.CSCR
Address	000000000501240A (SCOM) 000000000501240B (SCOM1) 000000000501240C (SCOM2)
Description	PPE Local SRAM Control Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_CLEAR	WO_OR	CSCR_SRAM_ACCESS_MODE: SRAM Access Mode.
1	RWX	WOX_CLEAR	WOX_OR	CSCR_SRAM_SCRUB_ENABLE: Enable background scrub (atomic read-write) to periodically check, and if needed correct, the data in the SRAM for bit flips due to alpha particles. This bit is cleared by the hardware when a UE is detected to assist with fault analysis.
2	RW	WO_CLEAR	WO_OR	CSCR_ECC_CORRECT_DIS: Do not correct the data coming out of the array on ECC detected correctable errors. This will cause CEs to report an error back to the PPE in addition to the usual UEs.
3	RW	WO_CLEAR	WO_OR	CSCR_ECC_DETECT_DIS: Do not flag an error back to PPE for ECC miscompares. Data from the SRAM is always treated as good. Note that errors are always detected and reported to the FIR and must be masked there independently from this bit.
4	RW	WO_CLEAR	WO_OR	CSCR_ECC_INJECT_TYPE: Used only when ECC_INJECT_ERR is set. When set to 1, causes an ECC error to be reported on every SRAM read. When 0, causes a single ECC error to be indicated on the next SRAM read to occur, since it also clears ECC_INJECT_ERR when that happens.
5	RWX	WOX_CLEAR	WOX_OR	CSCR_ECC_INJECT_ERR: When set, the hardware will inject or cause a fake uncorrectable error (UE) to be reported to both the PPE and the FIR on all SRAM reads. The SRAM contents are not modified. Type of error to inject is determined by the previous bit. If ECC_INJECT_TYPE = 1, then this bit clears when the first error is injected. Note this bit can also be set by the PPE local register CFMSR.
6:7	RW	WO_CLEAR	WO_OR	CSCR_SPARE_6_7: Implemented but unused.
8:46	RO	RO	RO	Constant = 0b00000000000000000000000000000000000000000000000
47:59	RWX	WOX_CLEAR	WOX_OR	CSCR_SRAM_SCRUB_INDEX: 32KB Scrub Index. This field is auto-incremented by hardware for every scrub operation. Upon a UE detection, this field is over-written with the index of the doubleword containing the error. Note: SRAM_SCRUB_ENABLE should be set to 0 when writing this field to prevent one cycle window from ignoring this write if a scrub update happens to occur concurrently.
60:63	RO	RO	RO	Constant = 0b0000

Register Name	PPE Local SRAM Address Register
Mnemonic	PB.PB_PPE.PPE.ARB.CSAR
Address	000000000501240D (SCOM)
Description	PPE Local SRAM Address Register

Bits	SCOM	Field Mnemonic: Description
0:15	RO	Constant = 0b0000000000000000
16:28	RW	CSAR_SRAM_ADDRESS: Address of an 8B SRAM entry in the 32KB SRAM array.
29:63	RO	Constant = 0b00000000000000000000000000000000000000

Register Name	PPE Local SRAM Data Register
Mnemonic	PB.PB_PPE.PPE.ARB.CSDR
Address	000000000501240E (SCOM)
Description	PPE Local SRAM Data Register

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	CSDR_SRAM_DATA: 8 B SRAM data entry for the address given by the SRAM_ADDRESS. Reads cause this register to be written with data from the Local SRAM. Writes cause the local SRAM to be written with the contents of this register.

Register Name	Power Bus Electrical Link Power Save Configuration Register
Mnemonic	PB.PB_PPE.PB_PSAVE_CFG
Address	000000000501241A (SCOM)
Description	Processor bus Electrical Link PowerSave Configuration Register

Bits	SCOM	Field Mnemonic: Description
0	RW	PSAVE_ENABLE: Enable power-saving mode. Cuts the link width in half during low-utilization periods.
1	WO_1P	X0_ACT: set to 1 to make X0 config reg be written with data from bit 5:39. This bit self-resets to 0.
2	WO_1P	X1_ACT: set to 1 to make X1 config reg be written with data from bit 5:39. This bit self-resets to 0.
3	WO_1P	X2_ACT: set to 1 to make X2 config reg be written with data from bit 5:39. This bit self-resets to 0.
4	RW	PS_SPARE1: ps spare1.
5:7	RW	PSAVE_WSIZE: psave sample window size - size = $2^{(n+8)}$ useable cycles. Generally, ~80% of the cycles are useable in normal mode (the other 20% are occupied by link overhead). When the link is in psave mode, the sample window size is automatically cut in half by the logic, which makes the psave sample window the same length of time as the normal window.
8:15	RW	PSAVE_LUC: psave Low Utilization Count - how many consecutive sample windows need to be below the low utilization threshold to kick the link into psave mode.
16:23	RW	PSAVE_HUC: psave High Utilization Count - how many consecutive sample windows need to be above the high utilization threshold to kick the link into normal mode.
24:26	RW	Reserved.

Bits	SCOM	Field Mnemonic: Description
27:31	RW	PSAVE_LUT: psave Low Utilization Threshold - if in normal mode, and utilization during a sample window is below (n+1)/32, (n = 0 to 31, 3.125% steps) increment the low utilization consecutive window counter. If above, reset it. Note: the logic only looks at the 5 most significant bits of interest, and thus is effectively doing a rounddown function when checking the utilization count against the threshold. The n+1 accounts for this behavior.
32:34	RW	Reserved.
35:39	RW	PSAVE_HUT: psave High Utilization Threshold - if in psave mode, and utilization during a sample window is above n/32, (n = 0 to 31, 3.125% steps) increment the high utilization consecutive window counter. If below, reset it. Note: the logic only looks at the 5 most significant bits of interest, and thus is effectively doing a rounddown function when checking the utilization count against the threshold, but the n/32 properly accounts for this behavior.

Register Name	Power Bus Electrical Link Power Save Monitor Register
Mnemonic	PB.PB_PPE.PB_PSAVE_MON_CFG
Address	000000000501241B (SCOM)
Description	Processor bus Electrical Link PowerSave Monitor Register

Register Name	TX and Common Control Status Register
Mnemonic	BRIDGE.PSI.PSI_WRAP.TX_CTRL_STAT_REG
Address	0000000005012800 (SCOM)
Description	TX and Common Control Status Register

Bits	SCOM	Field Mnemonic: Description
0	RW	ENABLE_SCWR_TO_TXRF: OFF: Disable SCOM write to TX RF. ON: Enable SCOM write to TX RF.
1	RW	DISABLE_ECC_COR_GXC_PSI: OFF: Enable ECC Correction GXC PSI. ON: Disable ECC Correction GXC PSI.
2	RW	DISABLE_ECC_COR_TXRF_PSI: OFF: Enable ECC Correction TXRF PSI. ON: Disable ECC Correction TXRF PSI.
3	RW	TX_CRC_MODE: OFF: TX_CRC-16 Mode. ON: TX_CRC-32 Mode.
4	RW	TX_CHIP_PERSONALISATION: OFF: TX Processor Chip. ON: TX FSP-1 Chip.
5	RW	TX_ENABLE_STREAMING_MODE: OFF: TX Disable Streaming Mode. ON: TX Enable Streaming Mode.
6	RW	TX_CHIP_INTERFACEMODE: ON: Processor Chip. ON: FSP-1 Chip.
7	RW	DISABLE_TIMEOUT_AND_RETRY: OFF: Enable Timeout and Retry Function. ON: Disable Timeout and Retry Function.
8	RW	FENCE_IO_INTERFACE: OFF: no fence I/O interface. ON: Fence the I/O interface.
9	RW	FENCE_GX_INTERFACE: OFF: no fence gx interface. ON: Fence the gx interface.
10	RW	GX_ENABLE_OVERWRITE: OFF: no gx_enable_overwrite. ON: gx_enable_overwrite.

Bits	SCOM	Field Mnemonic: Description
11	RW	Reserved.
12:31	RO	Constant = 0b00000000000000000000

Register Name	TX Timeout Retry Register
Mnemonic	BRIDGE.PSI.PSI_WRAP.TX_TO_RT_REG
Address	0000000005012801 (SCOM)
Description	TX Timeout Retry Register

Bits	SCOM	Field Mnemonic: Description
0:3	RW	TX_TIMEOUT_VALUE: Defines timout value, for example: 2exp17*(nclk*2) = 104,8576us (@ 5 GHz core frequency).
4:7	RW	TX_RETRY_VALUE: Defines retry value.
8:31	RO	Constant = 0b00000000000000000000000000

Register Name	TX Error Register
Mnemonic	BRIDGE.PSI.PSI_WRAP.TX_ERROR_REG
Address	0000000005012802 (SCOM) 0000000005012804 (SCOM1)
Description	TX Error Register

Register Name	PBA Local Fault Isolation Register
Mnemonic	BRIDGE.PBA.PBAFIR
Address	0000000005012840 (SCOM) 0000000005012841 (SCOM1) 0000000005012842 (SCOM2)
Description	PBA Local Fault Isolation Register. Register bits are set for any error condition detected by the PBA. The PBAFIR will freeze upon logging the first error not masked in PBAFIRMASK.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	PBAFIR_OCI_APAR_ERR: OCI Address Parity Error Det Address parity error detected by PBA OCI Slave logic for any valid address. OCI Operation is ignored.
1	RWX	WOX_AND	WOX_OR	PBAFIR_PB_RDADRERR_FW: PB CRESP Addr Error Received for Forwarded Read Request. processor bus request by PBA for a forwarded OCI Read Request received a CRESP error response. See PBAERRRPT0 for per-queue information. The Buffer allocated for this request will continue unless PBACFG[chsw_hang_on_adrerror] = 1. addr_error combined response.
2	RWX	WOX_AND	WOX_OR	PBAFIR_PB_RDDATATO_FW: PB Read Data Timeout for Forwarded Request processor bus Read Request for a forwarded OCI Request timed out waiting for data. PBA is reporting a data hang condition to the processor bus. The Buffer allocated for this request is hung and may be reset by following the PBA Slave Reset Sequence. See PBAERRRPT0 for per-queue information.
3	RWX	WOX_AND	WOX_OR	PBAFIR_PB_SUE_FW: PB Read Data SUE Error for Forwarded Request processor bus Read data for a forwarded OCI Request contained SUE Error.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
4	RWX	WOX_AND	WOX_OR	PBAFIR_PB_UE_FW: PB Read Data UE Error for Forwarded Request processor bus Read data for a forwarded OCI Request contained UE Error.
5	RWX	WOX_AND	WOX_OR	PBAFIR_PB_CE_FW: PB Read Data CE Error for Forwarded Request processor bus Read data for a forwarded OCI Request contained CE Error.
6	RWX	WOX_AND	WOX_OR	PBAFIR_OCI_SLAVE_INIT: PBA OCI Slave Initialization Error This is asserted when the upper two OCI address bits indicate they target the PBA Slave but the PBA slave is not setup properly. : No buffer allocated in targetted PBASLVCTLn PBASLVCTLn not enabled for master_id Multiple PBASLVCTLn are enabled for a master_id.
7	RWX	WOX_AND	WOX_OR	PBAFIR_OCI_WRPAR_ERR: OCI Write Data Parity Error Detected Data parity error detected by PBA OCI Slave logic. This write and any previous gathered writes are not forwarded.
8	RWX	WOX_AND	WOX_OR	PBAFIR_Reserved_8: Spare -was OCI Re-Request Timeout.
9	RWX	WOX_AND	WOX_OR	PBAFIR_PB_UNEXPCRESP: PB Unexpected CRESP processor bus Combined Response was received unexpectedly with PBA transfer tag. . Response is ignored. See PBAERRRPT0 for per-queue information.
10	RWX	WOX_AND	WOX_OR	PBAFIR_PB_UNEXPDATA: PB Unexpected Data processor bus data received for transaction ID that was not expecting data. Data is ignored. This does not check for duplicate OW_ID. See PBAERRRPT0 for per-queue information.
11	RWX	WOX_AND	WOX_OR	PBAFIR_PB_PARITY_ERR: PB Tag parity Error Detected Powerbus CRESP TTAG, ATAG, or DPX RTAG Parity error detected. FIR set only.
12	RWX	WOX_AND	WOX_OR	PBAFIR_PB_WRADRERR_FW: PB CRESP Addr Error Received for Forwarded Write Request processor bus request by PBA for a forwarded OCI Write Request received a CRESP error response. See PBAERRRPT0 for per-queue information. addr_error combined response.
13	RWX	WOX_AND	WOX_OR	PBAFIR_PB_BADCRESP: PB Invalid CRESP An invalid CRESP was received for a pending request. PBA will retry the request unless PBACFG[chsw_hang_on_invalid_cresp] = 1. See PBAERRRPT1 for per-queue information.
14	RWX	WOX_AND	WOX_OR	PBAFIR_PB_ACKDEAD_FW_RD: PB CRESP ACK Dead response received for Forwarded Read request to a foreign link. The Buffer allocated for this request will continue unless PBACFG[chsw_hang_on_adrerror] = 1. See PBAERRRPT0 for per-queue information.
15	RWX	WOX_AND	WOX_OR	PBAFIR_PB_OPERTO: PB OPERATIONAL Timeout detected when PBACFG[EXIT_ON_HANG] = 1. The processor bus request is terminated so the OCI request can complete. See PBAERRRPT1 for per queue information.
16	RWX	WOX_AND	WOX_OR	PBAFIR_BCUE_SETUP_ERR: BCUE Setup Error Block Copy Unload Engine Setup Errors. See PBAERRRPT1. Unexpected 'Start' received while running Timeout Response for OCI Request.
17	RWX	WOX_AND	WOX_OR	PBAFIR_BCUE_PB_ACK_DEAD: BCUE processor bus Link Dead ack_dead combined response for processor bus Write.
18	RWX	WOX_AND	WOX_OR	PBAFIR_BCUE_PB_ADRERR: PB CRESP Addr Error Received for BCUE Write Request addr_error combined response.
19	RWX	WOX_AND	WOX_OR	PBAFIR_BCUE_OCI_DATERR: BCUE Read Data Parity Error OR MRDERR Asserted Block Copy Unload Engine detected parity error on read data from the OCI.
20	RWX	WOX_AND	WOX_OR	PBAFIR_BCDE_SETUP_ERR: BCDE Setup Error Block Copy Download Engine Setup Errors. See PBAERRRPT1 Unexpected 'Start' received while running Timeout Response for OCI Request (OCI Address error).

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
21	RWX	WOX_AND	WOX_OR	PBAFIR_BCDE_PB_ACK_DEAD: BCDE processor bus Link Dead ack_dead combined response for processor bus Read.
22	RWX	WOX_AND	WOX_OR	PBAFIR_BCDE_PB_ADRERR: PB CRESP Addr Error Received for BCDE Read Request addr_error combined response.
23	RWX	WOX_AND	WOX_OR	PBAFIR_BCDE_RDDATATO_ERR: PB Read Data Timeout for BCDE Request processor bus Read Request for a BCDE Request timed out waiting for data. Timer is based on the hang pulse.
24	RWX	WOX_AND	WOX_OR	PBAFIR_BCDE_SUE_ERR: PB Read Data SUE Error for BCDE Request processor bus Read data for a BCDE Request contained SUE Error.
25	RWX	WOX_AND	WOX_OR	PBAFIR_BCDE_UE_ERR: PB Read Data UE Error for BCDE Request processor bus Read data for a BCDE Request contained UE Error.
26	RWX	WOX_AND	WOX_OR	PBAFIR_BCDE_CE: PB Read Data CE Error for BCDE Request processor bus Read data for a BCDE Request contained CE Error.
27	RWX	WOX_AND	WOX_OR	PBAFIR_BCDE_OCI_DATERR: BCDE Write Data error indicated by OCI Slave Block Copy Download Engine received WRDERR indication from OCI Slave.
28	RWX	WOX_AND	WOX_OR	PBAFIR_INTERNAL_ERR: Internal Logic Error. See PBAERRRPT2 for more detailed information.
29	RWX	WOX_AND	WOX_OR	PBAFIR_ILLEGAL_CACHE_OP: Byte count is less than full cache line: Write operation did not start gathering on a cache line boundary OR the write address was not contiguous before writing the full cache line.
30	RWX	WOX_AND	WOX_OR	PBAFIR_OCI_BAD_REG_ADDR: Illegal access to OCI Register. Invalid address, read to write-only, write to read-only.
31	RWX	WOX_AND	WOX_OR	PBAFIR_AXPUSH_WRERR: Push Write Error. Push queue did not get OCI ADDRACK for push write request. Either the address is invalid or the targeted detected and address parity error. See PBAERRRPT2 for per queue information.
32	RWX	WOX_AND	WOX_OR	PBAFIR_AXRCV_DLO_ERR: PBAXRCV Low data before High Data. See PBAXRCVSTAT[rcv_capture] for more information.
33	RWX	WOX_AND	WOX_OR	PBAFIR_AXRCV_DLO_TO: PBAXRCV Low data timeout. See PBAXRCVSTAT[rcv_capture] for more information.
34	RWX	WOX_AND	WOX_OR	PBAFIR_AXRCV_RSVDATA_TO: PBAXRCV Reservation data timeout. Reservation acquired but phase1 data never seen. This could happen if PBAXSND is unable to get access to the processor bus. See PBAXRCVSTAT[rcv_capture] for more information.
35	RWX	WOX_AND	WOX_OR	PBAFIR_AXFLOW_ERR: Illegal PBAX Flow. See PBAERRRPT2 for more info. Write to PBAXSNDTX when PBAXSNDSTAT[snd_in_progress] = 1 OR PBAXCFG[pbax_en] = 0 Per queue Push queue underflow: Store to PBAXSHINC when PBAXSHCS[push_empty]. Per queue Push queue overflow: PBAXRCV decode but Push Q is full.
36	RWX	WOX_AND	WOX_OR	PBAFIR_AXSND_DHI_RTYTO: PBAXSND engine retry threshold reached sending Phase 1.
37	RWX	WOX_AND	WOX_OR	PBAFIR_AXSND_DLO_RTYTO: PBAXSND engine retry threshold reached sending Phase 2.
38	RWX	WOX_AND	WOX_OR	PBAFIR_AXSND_RSVTO: PBAXSND Reservation Timeout.
39	RWX	WOX_AND	WOX_OR	PBAFIR_AXSND_RSVERR: PBAXSND Reservation Error. Reservation request and Reservations not enabled, push queue not enabled, or push queue is full.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
40	RWX	WOX_AND	WOX_OR	PBAFIR_PB_ACKDEAD_FW_WR: PB CRESP ACK Dead response received for Forwarded Write request to a foreign link. The Buffer allocated for this request will continue unless PBACFG[chsw_hang_on_adrerror] = 1. See PBAERRRPT0 for per-queue information.
41	RWX	WOX_AND	WOX_OR	PBAFIR_Reserved_41: Spare.

Register Name	OCC Local Fault Isolation Action 1 Register
Mnemonic	BRIDGE.PBA.PBAFIRACT1
Address	0000000005012847 (SCOM)
Description	OCC Local Fault Isolation Action1 Register. All Errors are configured as 'Recoverable' in this register by the hardware as the default value.

Bits	SCOM	Field Mnemonic: Description
0:45	RW	PBAFIRACT1_FIR_ACTION1: MSB of action select for corresponding bit in FIR (Action0, Action1, Mask) = Action Select (0,0,x) = No Error reported (0,1,0) = Recoverable Error (PBA_TC_RECOV) (1,0,0) = Checkstop Error (PBA_TC_XSTOP) (1,1,0) = No Error reported (x,x,1) = MASKED.
46:63	RO	Constant = 0b000000000000000000

Register Name	PBA OCC Action Register
Mnemonic	BRIDGE.PBA.PBAOCCACT
Address	000000000501284A (SCOM)
Description	This register controls whether an error input to the FIR will pulse the pba_occ_error indication to the OCC logic. This register resets to all zero and is must be initialized by OCC Firmware. It is recommended that the following bits be set: 7, 14, 18:25, 27:28, 35.

Bits	SCOM	Field Mnemonic: Description
0:43	RW	PBAOCCACT_OCC_ACTION_SET: OCC Action Set 0 = FIR Input does not cause pba_occ_error to be pulsed. 1 = FIR input causes pba_occ_error to be pulsed.
44:63	RO	Constant = 0b00000000000000000000

Register Name	PBA Configuration Register
Mnemonic	BRIDGE.PBA.PBACFG
Address	000000000501284B (SCOM)
Description	specific settings for the processor bus and for Debug Chicken Switches

Bits	SCOM	Field Mnemonic: Description
0	RW	PBACFG_PBREQ_SLVFW_MAX_PRIORITY: Max processor bus Drop Priority for Forwarded requests This bit controls the Maximum processor bus Drop Priority that can be used to forward OCI requests. It should be set to 'HI'.
1	RW	PBACFG_PBREQ_EXIT_ON_HANG: Exit processor bus RdWr operation on Operational Hang When set, the PBA will abort a processor bus Read or Write request using the tc_pba_hang_pulse detected when a processor bus command is outstanding. (new for POWER9).
2	RW	PBACFG_PBREQ_BCE_MAX_PRIORITY: Max processor bus Drop Priority for Block Copy Engine requests This bit controls the Maximum processor bus Drop Priority that can be used by the Block copy Engine. It should be set to 'HI'.

Bits	SCOM	Field Mnemonic: Description
3	RW	PBACFG_PBREQ_EXIT_ON_HANG_PBAX: Exit processor bus PBAX operation on Operational Hang When set, the PBA will abort a processor bus PBAX request using the tc_pba_hang_pulse detected when a processor bus command is outstanding. (new for POWER9).
4:8	RW	PBACFG_PBREQ_DATA_HANG_DIV: Processor bus Data Hang Timeout Divider. Initializes when clocks are started. Divides the processor bus Data hang pulse to control the Read Data Timeout.
9:13	RW	PBACFG_PBREQ_OPER_HANG_DIV: Processor bus Operational Hang Timeout Divider. Initializes when clocks are started. Divides the processor bus Operational hang pulse to control the Livelockhang rty_other response to the processor bus Hang Check command.
14:19	RW	PBACFG_PBREQ_DROP_PRIORITY_MASK: Processor bus Drop Priority Mask Mask to control the probability that a request that received a rty_drop CRESP should increase its priority. Mask bits control probability from 1:1 (all ones) to 64:1 (all zeroes).
20:23	RW	PBACFG_PBREQ_EXIT_HANG_DIV: Processor bus Exit Hang divider. Initializes to zero when clocks are started. Used for the upper 4 bits of a 5-bit divider of the tc_pba_hang pulse to use for the exit_hang function enabled in pbreq_exit_on_hang andor pbreq_exit_on_hang_pbax.
24	RW	PBACFG_CHSW_HANG_ON_ADRERROR: Enable PBA OCI Slave Hang on processor bus Address error. 0 = Address error on processor bus request will self-recover (Default). 1 = Address error on processor bus request will need SLVRST to recover otherwise it will hang.
25	RW	PBACFG_CHSW_DIS_OCIABUSPAR_CHECK: Disable OCI Address Parity Checking and Generation OFF - PBA OCI Slave uses oci_pba_s_addrparen to control whether address parity is checked. PBA OCI Master asserts pba_oci_m_addrparen. ON - PBA OCI Slave does not check address parity. PBA OCI Master does not assert pba_oci_m_addrparen.
26	RW	PBACFG_CHSW_DIS_OCIBEPAR_CHECK: Disable OCI BE Parity Checking and Generation OFF - PBA OCI Slave uses oci_pba_s_beparen to control whether BE parity is checked. PBA OCI Master asserts pba_oci_m_beparen. ON - PBA OCI Slave does not check BE parity. PBA OCI Master does not assert pba_oci_m_beparen.
27	RW	PBACFG_CHSW_HANG_ON_DERROR: Enable PBA OCI Slave hang on processor bus Data Error 0 = Processor bus data error will self-recover after sending RDDACK w an error response to the OCI Master (Default) 1 = Processor bus data error will cause hang after sending RDDACK w an error response. Buffer FSM cannot be reset.
28	RW	PBACFG_Reserved_28: Spare.
29	RW	PBACFG_CHSW_DIS_WRITE_MATCH_REARB: Disable PBA OCI Slave Write Ordering Match. Disable Rearb for incoming write that matches in the same cache line as a pending write. This will allow sequential, non-gathered writes to get queued. This will allow overlapping writes to get out of order if the pending write is retried by the Memory Controller.
30	RW	PBACFG_CHSW_DIS_OCIDATAPAR_GEN: Disable OCI Data Parity Generation This bit is used to control data parity generate by the PBA OCI Master and OCI Slave. OFF = BA OCI Slave assert pba_oci_s_rdbusparen with valid read data. PBA OCI Master assert pba_oci_m_wrbusparen with valid write data. ON = PBA OCI Slave does not assert pba_oci_s_rdbusparen with valid read data. PBA OCI Master does not assert pba_oci_m_wrbusparen with valid write data.
31	RW	PBACFG_CHSW_DIS_OCIDATAPAR_CHECK: Disable OCI Data Parity Checking OFF = PBA OCI Slave uses oci_pba_s_wrbusparen to control whether the write data parity is checked. PBA OCI Master uses pba_oci_m_rdbusparen to control whether the read data parity is checked. ON = PBA OCI Slave does not check write data parity. PBA OCI Master does not check read data parity.
32	RW	PBACFG_CHSW_DIS_OPER_HANG: Disable Operational Hang Pulse preventing processor bus Livelock Warning.
33	RW	PBACFG_CHSW_DIS_DATA_HANG: Disable Data Hang pulse preventing processor bus Timeout.
34	RW	PBACFG_CHSW_DIS_ECC_CHECK: Disable ECC Checking on inbound processor bus data.
35	RW	PBACFG_CHSW_DIS_RETRY_BACKOFF: Disable Retry Backoff on processor bus.

Bits	SCOM	Field Mnemonic: Description
36	RW	PBACFG_CHSW_EXIT_ON_INVALID_CRESP: Enable Exit on Invalid processor bus CRESP. (otherwise will retry).
37	RW	PBACFG_Reserved_37: Spare.
38	RW	PBACFG_CHSW_DIS_GROUP_SCOPE: Disable Group Scope Used to eliminate Group Scope for debugproblem workaround. If the starting scope or an increased scope from a nodal scope is required, the scopeis Vg(S).
39	RW	PBACFG_CHSW_DIS_RTAG_PARITY_CHK: Disable Powerbus parity check on dpx_RTAG. Only used in designer sim.
40	RW	PBACFG_CHSW_DIS_PB_PARITY_CHK: Disable processor bus parity check on RCMD0 addr, CRESP ATAG and ttag. Only used in designer sim.
41	RW	PBACFG_CHSW_SKIP_GROUP_SCOPE: Skip group scope on rty_inc . Does not eliminate Group scope. Used in a chip = group to control the masters scope progression. For PBA only atomic ops make use of this bit On a rty_inc, next scope is Vg(S).
42	RW	PBACFG_CHSW_USE_PR_DMA_INJ: Force pr_dma_inj as default Controls the starting processor bus write ttype to use when PBASLVCTL[write_ttype] = DMA for a partial cache line op. (new for POWER9) 0-- Starting ttype is dma_pr_w 1-- Starting ttype is pr_dma_inj.
43	RW	PBACFG_CHSW_USE_CL_DMA_INJ: Force cl_dma_inj as default Controls the starting processor bus write ttype to use when PBASLVCTL[write_ttype] = DMA for a cache line op. (new for POWER9) 0-- Starting ttype is cl_dma_w 1-- Starting ttype is cl_dma_inj.
44:47	RW	PBACFG_Reserved_44_47: Spare.
48:63	RO	Constant = 0b0000000000000000

Register Name	**PBA Error Report 0 Register**
Mnemonic	BRIDGE.PBA.PBAERRRPT0
Address	000000000501284C (SCOM)
Description	PBA Error Report Register 0 (read/clear c_err_rpt) shows the 'hold' condition from the c_err_rpt logic for each individual error detected by the PBA. Writing any value to the PBAERRRPT0 will force a reset to clear all hold bits in all the PBAERRPTn. CERR_RST: CERR reset for PBA.

Bits	SCOM	Field Mnemonic: Description
0:5	RWX_WCLRPART	PBAERRRPT0_CERR_PB_RDDATATO_FW: CERR_OBS: PBAFIR(2) PB Read Data Timeout for Forwarded Request 0:5 - Per Read queue(0:5).

Register Name	PBA Read Buffer Value 0 Register
Mnemonic	BRIDGE.PBA.PBARBUFVAL0
Address	0000000005012850 (SCOM)
Description	These are read only status registers for the PBA Slave that contain vital information regarding the processor bus Read data buffer state. These registers are used for debug and error recovery.

Bits	SCOM	Field Mnemonic: Description
0:1	ROX	PBARBUFVAL0_RD_SLVNUM: Rd_slvnum This is the pbaslvctl that defines the the master_id, and buffer controls for this OCI address. It is set by the OCI Slave Control logic when the buffer is selected.
2:24	ROX	PBARBUFVAL0_CUR_RD_ADDR: Current Rd Address 128-byte cache line address for the current buffer. It is set by the OCI Slave Control logic when the buffer is selected.
25:27	RO	Constant = 0b000
28	ROX	PBARBUFVAL0_PREFETCH: Prefetch Status This bit is set when the next cache line is prefetched and is used as extra info to decide if the buffer can be reused for another operation and forced to the Timeout state when the buffer is in the Valid, PB CRESP Error, or PB Data Error state. This bit is cleared when an OCI Request matches the address or when the Rd Buffer Status goes to the Empty State. 0FF - OCI Read Address requested this buffered address ON - processor bus Read request kicked off for next cache line prefetch.
29:30	RO	Constant = 0b00
31	ROX	PBARBUFVAL0_ABORT: Abort Status This bit is set when the OCI Master has aborted the request or the PBASLVRST[SLV Reset] was written while the read data is being fetched. This bit clears when the Rd Buffer Status goes to the Empty State. OFF - Request has not been aborted ON - Request has been aborted.
32	RO	Constant = 0b0
33:39	ROX	PBARBUFVAL0_BUFFER_STATUS: Rd Buffer Status These bits indicate which bit is set in the one-hot Read in Progress state machine. Zero is not a valid state after clocks have started.

Bits	SCOM	Field Mnemonic: Description
40	RO	Constant = 0b0
41:43	ROX	PBARBUFVAL0_MASTERID: Master Id These bits indicate the Master Id that requested the read operation.
44:63	RO	Constant = 0b00000000000000000000

Register Name	PBA Read Buffer Value 1 Register
Mnemonic	BRIDGE.PBA.PBARBUFVAL1
Address	0000000005012851 (SCOM)
Description	These are read only status registers for the PBA Slave that contain vital information regarding the processor bus Read data buffer state. These registers are used for debug and error recovery.

Bits	SCOM	Field Mnemonic: Description
0:1	ROX	PBARBUFVAL1_RD_SLVNUM: Rd_slvnum This is the pbaslvctl that defines the the master_id, and buffer controls for this OCI address. It is set by the OCI Slave Control logic when the buffer is selected.
2:24	ROX	PBARBUFVAL1_CUR_RD_ADDR: Current Rd Address 128-byte cache line address for the current buffer. It is set by the OCI Slave Control logic when the buffer is selected.
25:27	RO	Constant = 0b000
28	ROX	PBARBUFVAL1_PREFETCH: Prefetch Status This bit is set when the next cache line is prefetched and is used as extra info to decide if the buffer can be reused for another operation and forced to the Timeout state when the buffer is in the Valid, PB CRESP Error, or PB Data Error state. This bit is cleared when an OCI Request matches the address or when the Rd Buffer Status goes to the Empty State. 0FF - OCI Read Address requested this buffered address ON - processor bus Read request kicked off for next cache line prefetch.
29:30	RO	Constant = 0b00
31	ROX	PBARBUFVAL1_ABORT: Abort Status This bit is set when the OCI Master has aborted the request or the PBASLVRST[SLV Reset] was written while the read data is being fetched. This bit clears when the Rd Buffer Status goes to the Empty State. OFF - Request has not been aborted ON - Request has been aborted.
32	RO	Constant = 0b0
33:39	ROX	PBARBUFVAL1_BUFFER_STATUS: Rd Buffer Status These bits indicate which bit is set in the one-hot Read in Progress state machine. Zero is not a valid state after clocks have started.
40	RO	Constant = 0b0
41:43	ROX	PBARBUFVAL1_MASTERID: Master Id These bits indicate the Master Id that requested the read operation.
44:63	RO	Constant = 0b00000000000000000000

Register Name	PBA Read Buffer Value 2 Register
Mnemonic	BRIDGE.PBA.PBARBUFVAL2
Address	0000000005012852 (SCOM)
Description	These are read only status registers for the PBA Slave that contain vital information regarding the processor bus Read data buffer state. These registers are used for debug and error recovery.

Bits	SCOM	Field Mnemonic: Description
0:1	ROX	PBARBUFVAL2_RD_SLVNUM: Rd_slvnum This is the pbaslvctl that defines the the master_id, and buffer controls for this OCI address. It is set by the OCI Slave Control logic when the buffer is selected.

Bits	SCOM	Field Mnemonic: Description
2:24	ROX	PBARBUFVAL2_CUR_RD_ADDR: Current Rd Address 128-byte cache line address for the current buffer. It is set by the OCI Slave Control logic when the buffer is selected.
25:27	RO	Constant = 0b000
28	ROX	PBARBUFVAL2_PREFETCH: Prefetch Status This bit is set when the next cache line is prefetched and is used as extra info to decide if the buffer can be reused for another operation and forced to the Timeout state when the buffer is in the Valid, PB CRESP Error, or PB Data Error state. This bit is cleared when an OCI Request matches the address or when the Rd Buffer Status goes to the Empty State. OFF - OCI Read Address requested this buffered address ON - processor bus read request kicked off for next cache line prefetch.
29:30	RO	Constant = 0b00
31	ROX	PBARBUFVAL2_ABORT: Abort Status This bit is set when the OCI Master has aborted the request or the PBASLVRST[SLV Reset] was written while the read data is being fetched. This bit clears when the Rd Buffer Status goes to the Empty State. OFF - Request has not been aborted ON - Request has been aborted.
32	RO	Constant = 0b0
33:39	ROX	PBARBUFVAL2_BUFFER_STATUS: Rd Buffer Status These bits indicate which bit is set in the one-hot Read in Progress state machine. Zero is not a valid state after clocks have started.
40	RO	Constant = 0b0
41:43	ROX	PBARBUFVAL2_MASTERID: Master Id These bits indicate the Master Id that requested the read operation.
44:63	RO	Constant = 0b00000000000000000000

Register Name	PBA Read Buffer Value 3 Register
Mnemonic	BRIDGE.PBA.PBARBUFVAL3
Address	0000000005012853 (SCOM)
Description	These are read only status registers for the PBA Slave that contain vital information regarding the processor bus Read data buffer state. These registers are used for debug and error recovery.

Bits	SCOM	Field Mnemonic: Description
0:1	ROX	PBARBUFVAL3_RD_SLVNUM: Rd_slvnum This is the pbaslvctl that defines the the master_id, and buffer controls for this OCI address. It is set by the OCI Slave Control logic when the buffer is selected.
2:24	ROX	PBARBUFVAL3_CUR_RD_ADDR: Current Rd Address 128-byte cache line address for the current buffer. It is set by the OCI Slave Control logic when the buffer is selected.
25:27	RO	Constant = 0b000
28	ROX	PBARBUFVAL3_PREFETCH: Prefetch Status This bit is set when the next cache line is prefetched and is used as extra info to decide if the buffer can be reused for another operation and forced to the Timeout state when the buffer is in the Valid, PB CRESP Error, or PB Data Error state. This bit is cleared when an OCI Request matches the address or when the Rd Buffer Status goes to the Empty State. OFF - OCI Read Address requested this buffered address ON - processor bus Read request kicked off for next cache line prefetch.
29:30	RO	Constant = 0b00
31	ROX	PBARBUFVAL3_ABORT: Abort Status This bit is set when the OCI Master has aborted the request or the PBASLVRST[SLV Reset] was written while the read data is being fetched. This bit clears when the Rd Buffer Status goes to the Empty State. OFF - Request has not been aborted ON - Request has been aborted.
32	RO	Constant = 0b0

Bits	SCOM	Field Mnemonic: Description
33:39	ROX	PBARBUFVAL3_BUFFER_STATUS: Rd Buffer Status These bits indicate which bit is set in the one-hot Read in Progress state machine. Zero is not a valid state after clocks have started.
40	RO	Constant = 0b0
41:43	ROX	PBARBUFVAL3_MASTERID: Master Id These bits indicate the Master ID that requested the read operation.
44:63	RO	Constant = 0b00000000000000000000

Register Name	PBA Read Buffer Value 4 Register
Mnemonic	BRIDGE.PBA.PBARBUFVAL4
Address	0000000005012854 (SCOM)
Description	These are read only status registers for the PBA Slave that contain vital information regarding the processor bus Read data buffer state. These registers are used for debug and error recovery.

Bits	SCOM	Field Mnemonic: Description
0:1	ROX	PBARBUFVAL4_RD_SLVNUM: Rd_slvnum This is the pbaslvctl that defines the the master_id, and buffer controls for this OCI address. It is set by the OCI Slave Control logic when the buffer is selected.
2:24	ROX	PBARBUFVAL4_CUR_RD_ADDR: Current Rd Address 128-byte cache line address for the current buffer. It is set by the OCI Slave Control logic when the buffer is selected.
25:27	RO	Constant = 0b000
28	ROX	PBARBUFVAL4_PREFETCH: Prefetch Status This bit is set when the next cache line is prefetched and is used as extra info to decide if the buffer can be reused for another operation and forced to the Timeout state when the buffer is in the Valid, PB CRESP Error, or PB Data Error state. This bit is cleared when an OCI Request matches the address or when the Rd Buffer Status goes to the Empty State. OFF - OCI Read Address requested this buffered address ON - processor bus Read request kicked off for next cache line prefetch.
29:30	RO	Constant = 0b00
31	ROX	PBARBUFVAL4_ABORT: Abort Status This bit is set when the OCI Master has aborted the request or the PBASLVRST[SLV Reset] was written while the read data is being fetched. This bit clears when the Rd Buffer Status goes to the Empty State. OFF - Request has not been aborted ON - Request has been aborted.
32	RO	Constant = 0b0
33:39	ROX	PBARBUFVAL4_BUFFER_STATUS: Rd Buffer Status These bits indicate which bit is set in the one-hot Read in Progress state machine. Zero is not a valid state after clocks have started.
40	RO	Constant = 0b0
41:43	ROX	PBARBUFVAL4_MASTERID: Master Id These bits indicate the Master ID that requested the read operation.
44:63	RO	Constant = 0b00000000000000000000

Register Name	PBA Read Buffer Value 5 Register
Mnemonic	BRIDGE.PBA.PBARBUFVAL5
Address	0000000005012855 (SCOM)
Description	These are read only status registers for the PBA Slave that contain vital information regarding the processor bus Read data buffer state. These registers are used for debug and error recovery.

Bits	SCOM	Field Mnemonic: Description
0:1	ROX	PBARBUFVAL5_RD_SLVNUM: Rd_slvnum This is the pbaslvctl that defines the the master_id, and buffer controls for this OCI address. It is set by the OCI Slave Control logic when the buffer is selected.
2:24	ROX	PBARBUFVAL5_CUR_RD_ADDR: Current Rd Address 128-byte cache line address for the current buffer. It is set by the OCI Slave Control logic when the buffer is selected.
25:27	RO	Constant = 0b000
28	ROX	PBARBUFVAL5_PREFETCH: Prefetch Status This bit is set when the next cache line is prefetched and is used as extra info to decide if the buffer can be reused for another operation and forced to the Timeout state when the buffer is in the Valid, PB CRESP Error, or PB Data Error state. This bit is cleared when an OCI Request matches the address or when the Rd Buffer Status goes to the Empty State. OFF - OCI Read Address requested this buffered address ON - processor bus Read request kicked off for next cache line prefetch.
29:30	RO	Constant = 0b00
31	ROX	PBARBUFVAL5_ABORT: Abort Status This bit is set when the OCI Master has aborted the request or the PBASLVRST[SLV Reset] was written while the read data is being fetched. This bit clears when the Rd Buffer Status goes to the Empty State. OFF - Request has not been aborted ON - Request has been aborted.
32	RO	Constant = 0b0
33:39	ROX	PBARBUFVAL5_BUFFER_STATUS: Rd Buffer Status These bits indicate which bit is set in the one-hot Read in Progress state machine. Zero is not a valid state after clocks have started.
40	RO	Constant = 0b0
41:43	ROX	PBARBUFVAL5_MASTERID: Master Id These bits indicate the Master Id that requested the read operation.
44:63	RO	Constant = 0b00000000000000000000

Register Name	PBA Write Buffer Value 0 Register
Mnemonic	BRIDGE.PBA.PBAWBUFVAL0
Address	0000000005012858 (SCOM)
Description	These are read only status registers for the PBA Slave that contain vital information regarding the processor bus Write data buffer state. These registers are used for debug and error recovery.

Bits	SCOM	Field Mnemonic: Description
0:1	ROX	PBAWBUFVAL0_WR_SLVNUM: Wr_slvnum This is the pbaslvctl that defines the the master_id, and buffer controls for this OCI address. It is set by the OCI Slave Control logic when the buffer is selected.
2:31	ROX	PBAWBUFVAL0_START_WR_ADDR: Starting Write Address These bits save the starting OCI address for the gathered write operation and are valid only If the write buffer status is not EMPTY.
32:34	RO	Constant = 0b000
35:39	ROX	PBAWBUFVAL0_WR_BUFFER_STATUS: Write Buffer Status These bits indicate which bit is set in the one-hot Write in Progress state machine. Zero is not a valid state after clocks have started.
40	RO	Constant = 0b0
41:47	ROX	PBAWBUFVAL0_WR_BYTE_COUNT: Write Byte Count These bits are the number of bytes in the gathered write operation. Starting Write Address plus Write Byte Count is the Next Write Address from the same master required to continue gathering. 0000000 - 128 bytes 0000001 - 1 byte 0000010 - 2 bytes 0000011 - 3 bytes . . . 1111111 - 127 bytes.
48:63	RO	Constant = 0b0000000000000000

Register Name	PBA Write Buffer Value 1 Register
Mnemonic	BRIDGE.PBA.PBAWBUFVAL1
Address	0000000005012859 (SCOM)
Description	These are read only status registers for the PBA Slave that contain vital information regarding the processor bus Write data buffer state. These registers are used for debug and error recovery.

Bits	SCOM	Field Mnemonic: Description
0:1	ROX	PBAWBUFVAL1_WR_SLVNUM: Wr_slvnum This is the pbaslvctl that defines the the master_id, and buffer controls for this OCI address. It is set by the OCI Slave Control logic when the buffer is selected.
2:31	ROX	PBAWBUFVAL1_START_WR_ADDR: Starting Write Address These bits save the starting OCI address for the gathered write operation and are valid only If the write buffer status is not EMPTY.
32:34	RO	Constant = 0b000
35:39	ROX	PBAWBUFVAL1_WR_BUFFER_STATUS: Write Buffer Status These bits indicate which bit is set in the one-hot Write in Progress state machine. Zero is not a valid state after clocks have started.
40	RO	Constant = 0b0
41:47	ROX	PBAWBUFVAL1_WR_BYTE_COUNT: Write Byte Count These bits are the number of bytes in the gathered write operation. Starting Write Address plus Write Byte Count is the Next Write Address from the same master required to continue gathering. 0000000 = 128 bytes 0000001 = 1 byte 0000010 - 2 bytes 0000011 = 3 bytes . . . 1111111 - 127 bytes.
48:63	RO	Constant = 0b0000000000000000

Register Name	HTM Collection Mode Register
Mnemonic	BRIDGE.NHTM.NHTM0.SC.HTM_MODE
Address	0000000005012880 (SCOM)
Description	HTM Collection Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	HTMSC_MODE_HTM_ENABLE: HTM enable, must be set by software to start HTM trace.
1:2	RW	HTMSC_MODE_CONTENT_SEL: These bits define the NHTM Trace Mode.
3	RW	HTMSC_MODE_SPARE3: Spare bit.

Bits	SCOM	Field Mnemonic: Description
4:12	RW	HTMSC_MODE_CAPTURE: HTM capture mode bit definition according to Trace Mode. When htm_mode_q(1 TO 2) = = 00, that is, FABRIC. 456789012. 0xxxx0000 = Ignore HTM generated data writes. 1xxxx0000 = Capture htm generated data writes. x0xxx0000 = Filtering ignored on PMISC (always trace PMISC and Report Hang). x1xxx0000 = Filtering applied on ttype = PMISC and ttype = report hang. xx00x0000 = CRESP Mode: Flush CRESP Queue to avoid overrun (default). xx01x0000 = CRESP Mode: Reserved. xx10x0000 = CRESP Mode: Enable Precise CRESP Mode. xx11x0000 = CRESP Mode: Ignore CRESP. xxxx00000 = Pre-Allocate maximum memory buffers (8). xxxx10000 = Pre-Allocate fewer memory buffers (4). When htm_mode_q(1 TO 2) = = 01, that is, OTHER. 00000xxxx = Pre-Allocate maximum memory buffers (8). 00001xxxx = Pre-Allocate fewer memory buffers (4). 0000xmmmx = mmm for optional external multiplexer control. 0000xxxx0 = Both -other- trace buses to NHTM0. 0000xxxx1 = Other trace bus0 to nhtm0, trace bus1 to nhtm1. High BW. When htm_mode_q(1 TO 2) = = 10, that is, OCC. 00000xxx0 = Pre-Allocate maximum memory buffers (8). 00001xxx0 = Pre-Allocate fewer memory buffers (4). 0000xmmm0 = mmm for optional external multiplexer control.
13	RW	HTMSC_MODE_WRAP: Enable Trace Wrap Mode. 0 = Stop trace when top of Trace Memory is reached. 1 = Wrap trace to beginning of Trace Memory.
14	RW	HTMSC_MODE_DIS_TSTAMP: Disable TimeStamp Writes. 0 = Write of timestamps enabled to indicate elapsed time between records. 1 = Timestamps written only to indicate record loss.
15	RW	HTMSC_MODE_SINGLE_TSTAMP: Disable Overflow Timestamps. 0 = Timestamp written to indicate elapsed time overflow. 1 = Only one timestamp is written between entries, overflow indication is lost.
16	RW	HTMSC_MODE_SPARE16: Not used in NHTM.
17	RW	HTMSC_MODE_MARKERS_ONLY: Enable Stamp/Marker Only Mode. 0 = Normal trace. 1 = Ignore incoming trace data and save only markers caused by HTM_TRIG writes, Global HTM markers enabled to be inserted into the trace record and enabled stamps.
18	RW	HTMSC_MODE_DIS_FORCE_GROUP_SCOPE: Disable Group Scope. This is a processor bus debug bit. 0 = htm write ops sent with group scope. 1 = htm write ops sent with Vg scope using programmed target bits.
19:21	RW	HTMSC_MODE_SYNC_STAMP_FORCE: Control the number of cycles to wait to force a synchronization stamp or reset the timer.
22	RW	HTMSC_MODE_WRITETOIO: HTM Trace memory in IO space, use ci_pr_st op. 0 = Use HTM_CL_Write operation to target system memory. Do pre-allocation sequence. (default). 1 = Use ci_pr_st operation to target anywhere else. Dont do pre-allocate sequence.
23	RW	HTMSC_MODE_SPARE23: Not used in NHTM.
24:39	RW	HTMSC_MODE_VGTARGET: Vg Target bits should be configured if HTM_MEM[scope] is Vg. or if Disable Group Scope = 1.
40:43	RW	HTMSC_MODE_SPARE4043: NOt used in NHTM.
44:63	RO	Constant = 0b00000000000000000000

Register Name	HTM Memory Configuration Register
Mnemonic	BRIDGE.NHTM.NHTM0.SC.HTM_MEM
Address	0000000005012881 (SCOM)
Description	HTM Memory Configuration Register

Bits	SCOM	Field Mnemonic: Description
0	RW	HTMSC_MEM_ALLOC: 0 = memory based address not configured, 1 = memory address configured. This bit must be written to zero before setting since the HTM looks for. the 0 -> 1 transition on this bit to indicate the memory address has. been updated.
1:3	RW	HTMSC_MEM_SCOPE: Processor bus Scope to use when writing the HTM Trace memory. If the scope is not large enough, the HTM will get an address error. If the scope is too large, HTM will experience excessive delay.
4	RW	HTMSC_MEM_PRIORITY: Starting processor bus Priority. Configure the Starting priority used when writing the HTM Trace memory. Leave at default 000 unless there is a very good reason to change.
5	RW	HTMSC_MEM_SIZE_SMALL: Trace Memory Size Range. 0 = Trace Mem Size from 512M to 256G. 1 = Trace Mem Size from 16M to 8G.
6:7	RW	HTMSC_MEM_SPARE67: Not Used.
8:39	RW	HTMSC_MEM_BASE: Trace memory base address (8:39). The Trace Memory Base Address must be aligned on a Trace Memory Size boundary.
40:48	RW	HTMSC_MEM_SIZE: Trace Memory Size. When htmsc_mem_size_small = 0, these bits define the mask to bits (26:35) of the Trace Memory Base Address and define the size of the trace memory between 512MB and 256GB. When htmsc_mem_size_small = 1, these bits define the mask to bits (31:39) of the Trace Memory Base address and define the size of the trace memory between 16MB and 8GB.
49:63	RO	Constant = 0b000000000000000

Register Name	HTM Status Register
Mnemonic	BRIDGE.NHTM.NHTM0.SC.HTM_STAT
Address	0000000005012882 (SCOM)
Description	HTM Status Register

Bits	SCOM	Field Mnemonic: Description
0:1	ROX	HTMCO_STATUS_SPARE: Spare bits.
2	ROX	HTMCO_STATUS_CRESP_OV: Asserted on detection of a CRESP queue overwrite condition. Cleared on the writing of 1 to the Reset Trigger bit, htmsc_trig_reset.
3	ROX	HTMCO_STATUS_REPAIR: Asserted on occurence of address error to indicate the need of software to clear and update HTM_MEM. Will stay high until HTM_MEM updated.
4	ROX	HTMCO_STATUS_BUF_WAIT: Asserted on condition of data buffers full in tracing state. Any markers, stamps, and trace data recieved when this bit is set will be lost.
5	ROX	STATUS_TRIG_DROPPED_Q: Asserted on buffer overrun due to trigger lost at least once in the last trace. Cleared on the writing of 1 to the Reset Trigger bit, htmsc_trig_reset.
6	ROX	HTMCO_STATUS_ADDR_ERROR: Asserted on address error when write buffer was allocated. Need to set new address range after htmco_status_repair is asserted.
7	ROX	STATUS_REC_DROPPED_Q: Asserted on buffer overrun due to trace data lost at least once in the last trace. Cleared on the writing of 1 to the Reset Trigger bit, htmsc_trig_reset.

Bits	SCOM	Field Mnemonic: Description
8	ROX	HTMCO_STATUS_INIT: Asserted when htm_cofsm is in Init state.
9	ROX	HTMCO_STATUS_PREREQ: Asserted when htm_cofsm is in Pre-req state.
10	ROX	HTMCO_STATUS_READY: Asserted when htm_cofsm is in Ready state.
11	ROX	HTMCO_STATUS_TRACING: Asserted when htm_cofsm is in Tracing state.
12	ROX	HTMCO_STATUS_PAUSED: Asserted when htm_cofsm is in Paused state.
13	ROX	HTMCO_STATUS_FLUSH: Asserted when htm_cofsm is in Flush state.
14	ROX	HTMCO_STATUS_COMPLETE: Asserted when htm_cofsm is in Complete state.
15	ROX	HTMCO_STATUS_ENABLE: Asserted when htm_cofsm is in Enable state.
16	ROX	HTMCO_STATUS_STAMP: Asserted when htm_cofsm is in Stamp state.
17	ROX	STATUS_SCOM_ERROR: Asserted to indicate that a SCOM error indication was received from the SCOM satellite. Cleared on the writing of 1 to the Reset Trigger bit, htmsc_trig_reset.
18	ROX	STATUS_PARITY_ERROR: Asserted to indicate a parity error was detected on the processor bus. Cleared on the writing of 1 to the Reset Trigger bit, htmsc_trig_reset.
19	ROX	STATUS_INVALID_CRESP: Asserted to indicate an invalid CRESP was received from the processor bus. NHTM is hung. Cleared on the writing of 1 to the Reset Trigger bit, htmsc_trig_reset.
20:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	HTM Last Address Register
Mnemonic	BRIDGE.NHTM.NHTM0.SC.HTM_LAST
Address	0000000005012883 (SCOM)
Description	HTM Last Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	Constant = 0b00000000
8:56	ROX	HTM_LAST_ADDRESS: The last cache line address of the memory trace. Guaranteed valid only when HTM is in the Complete state.
57:63	RO	Constant = 0b0000000

Register Name	HTM SCOM Trigger Register
Mnemonic	BRIDGE.NHTM.NHTM0.SC.HTM_TRIG
Address	0000000005012884 (SCOM)
Description	HTM SCOM Trigger Register

Bits	SCOM	Field Mnemonic: Description
0	RW	HTMSC_TRIG_START: Start trigger.
1	RW	HTMSC_TRIG_STOP: Stop trigger.
2	RW	HTMSC_TRIG_PAUSE: Pause trigger.
3	RW	HTMSC_TRIG_STOP_ALT: Stop trigger 2. Legacy bit that used to be the Freeze Trigger in POWER6 implementation.
4	RW	HTMSC_TRIG_RESET: Reset trigger.
5	RW	HTMSC_TRIG_MARK_VALID: Mark type valid.

Bits	SCOM	Field Mnemonic: Description
6:15	RW	HTMSC_TRIG_MARK_TYPE: Mark type is put into Mark Record when bit 5 is set.
16:63	RO	Constant = 0b0000000000000000000000000000000000000000000000000000

Register Name	HTM Trigger Control Register
Mnemonic	BRIDGE.NHTM.NHTM0.SC.HTM_CTRL
Address	0000000005012885 (SCOM)
Description	HTM Trigger Control Register

Bits	SCOM	Field Mnemonic: Description
0:1	RW	HTMSC_CTRL_TRIG: Trigger Control. 00 = local triggers are not forwarded to the processor bus, it is inserted into the trace when tracing. Both local and global triggers control the HTM. 01 = local triggers are not forwarded to the processor bus, it is inserted into the trace when tracing. Only local triggers control the HTM. 1x = local triggers are forwarded to the processor bus, it is not inserted into the trace when tracing. Only global triggers control the HTM.
2:3	RW	Reserved.
4:5	RW	HTMSC_CTRL_MARK: Marker Control. 00 local markers are not forwarded to the processor bus. Both local and global markers are inserted into the trace. 01 = local markers are not forwarded to the processor bus. Only local markers are inserted into the trace. 10 = local markers are forwarded to the processor bus. Only global markers are inserted into the trace. 11 = local markers are forwarded to the processor bus. Markers are not inserted into the trace (Fabric Trace Mode).
6	RW	HTMSC_CTRL_DBG0_STOP: Enable Stop on PB Chiplet Debug Trigger 0.
7	RW	HTMSC_CTRL_DBG1_STOP: Enable Stop on PB Chiplet Debug Trigger 1.
8	RW	HTMSC_CTRL_RUN_STOP: Enable Stop on falling edge of PB Chiplet trace_run.
9	RW	HTMSC_CTRL_OTHER_DBG0_STOP: Enable Stop using OCC Control.
10:12	RW	HTMSC_CTRL_SPARE1012: Spare bits.
13	RW	HTMSC_CTRL_XSTOP_STOP: Enable Stop on chiplet XSTOP.
14:15	RW	HTMSC_CTRL_SPARE1415: Spare bits.
16:63	RO	Constant = 0b0000000000000000000000000000000000000000000000000000

Register Name	HTM Filter Control Register
Mnemonic	BRIDGE.NHTM.NHTM0.SC.HTM_FILT
Address	0000000005012886 (SCOM)
Description	HTM Filter Control Register

Bits	SCOM	Field Mnemonic: Description
0:22	RW	HTMSC_FILT_PAT: Filter Pattern. In Fabric Trace Mode, Defines the TTAG/Scope/Source pattern to Match in the RCMD and CRESP. 0:3 = RCMD_ttag(0:2) Group ID Pattern for RCMD and CRESP filtering. 4:6 = RCMD_ttag(3:5) Chip ID Pattern for RCMD and CRESP filtering. 7:16 = RCMD_ttag(6:13) Unit ID Pattern for RCMD and CRESP (if from this chip) filtering. 17:19 = RCMD_scope(0:2) Scope Pattern for RCMD and CRESP filtering. 20:21 = RCMD_source(0:1) Source Pattern for RCMD filtering. 22 = Powerbus PORT pattern for RCMD and CRESP filtering. In OCC Trace Mode, Defines the occ_trace_data(0:22) pattern to match. 0:22 = occ_trace_data(0:22) Pattern.
23:26	RW	Reserved.
27:31	RW	HTMSC_FILT_CRESP_PAT: CRESP Filter Pattern. In Fabric Trace Mode, Defines the CRESP pattern to match.
32:54	RW	HTMSC_FILT_MASK: Pattern mask. Bits set to 1 in this mask do not need to match w/ the Filter Pattern. If all mask bits are set, No pattern matching is done.
55:58	RW	Reserved.
59:63	RW	HTMSC_FILT_CRESP_MASK: CRESP Filter Mask. Bits set to 1 in this mask do not need to match w/ the CRESP Filter Pattern. If all mask bits are set, no pattern matching is done.

Register Name	**HTM TTYPE Filter Control Register**
Mnemonic	BRIDGE.NHTM.NHTM0.SC.HTM_TTYPEFILT
Address	0000000005012887 (SCOM)
Description	HTM Ttype Filter Control Register

Bits	SCOM	Field Mnemonic: Description
0	RW	Reserved.
1:7	RW	HTMSC_TTYPEFILT_PAT: TTYPE Pattern. In Fabric Trace Mode, Defines the TTYPE pattern to Match.
8:15	RW	HTMSC_TSIZEFILT_PAT: TSIZE Pattern. In Fabric Trace Mode, Defines the TSIZE pattern to Match.
16	RW	Reserved.
17:23	RW	HTMSC_TTYPEFILT_MASK: TTYPE Pattern mask. TTYPE Bits set to 1 in this mask do not need to match w/ the Pattern. If all mask bits are set, No TTYPE pattern/masking is done.
24:31	RW	HTMSC_TSIZEFILT_MASK: TSIZE Pattern mask. TSIZE Bits set to 1 in this mask do not need to match w/ the Pattern. If all mask bits are set, No TSIZE pattern/masking is done.
32	RW	HTMSC_TTYPEFILT_INVERT: TTYPE/TSIZE Capture Invert. 0 = Capture record based on ttype/tsize pattern matching. 1 = Capture record based on ttype/tsize pattern NOT matching.
33	RW	HTMSC_CRESPFILT_INVERT: CRESP Filter Capture Invert. 0 = Capture record based on CRESP filter pattern matching. 1 = Capture record based on CRESP filter pattern NOT matching.

Register Name	HTM Collection Mode Register
Mnemonic	BRIDGE.NHTM.NHTM1.SC.HTM_MODE
Address	00000000050128C0 (SCOM)
Description	HTM Collection Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	HTMSC_MODE_HTM_ENABLE: HTM enable, must be set by software to start HTM trace.
1:2	RW	HTMSC_MODE_CONTENT_SEL: These bits define the NHTM Trace Mode.
3	RW	HTMSC_MODE_SPARE3: Spare bit.
4:12	RW	HTMSC_MODE_CAPTURE: HTM capture mode bit definition according to Trace Mode. When htm_mode_q(1 TO 2) = = 00, that is, FABRIC. 456789012. 0xxxx0000 = Ignore HTM generated data writes. 1xxxx0000 = Capture htm generated data writes. x0xxx0000 = Filtering ignored on PMISC (always trace PMISC and Report Hang). x1xxx0000 = Filtering applied on ttype = PMISC and ttype = report hang. xx00x0000 = CRESP Mode: Flush CRESP Queue to avoid overrun (default). xx01x0000 = CRESP Mode: Reserved. xx10x0000 = CRESP Mode: Enable Precise CRESP Mode. xx11x0000 = CRESP Mode: Ignore CRESP. xxxx00000 = Pre-Allocate maximum memory buffers (8). xxxx10000 = Pre-Allocate fewer memory buffers (4). When htm_mode_q(1 TO 2) = = 01, that is, OTHER. 00000xxxx = Pre-Allocate maximum memory buffers (8). 00001xxxx = Pre-Allocate fewer memory buffers (4). 0000xmmmx = mmm for optional external multiplexer control. 0000xxxx0 = Both -other- trace buses to NHTM0. 0000xxxx1 = Other trace bus0 to nhtm0, trace bus1 to nhtm1. High BW. When htm_mode_q(1 TO 2) = = 10, that is, OCC. 00000xxx0 = Pre-Allocate maximum memory buffers (8). 00001xxx0 = Pre-Allocate fewer memory buffers (4). 0000xmmm0 = mmm for optional external multiplexer control.
13	RW	HTMSC_MODE_WRAP: Enable Trace Wrap Mode. 0 = Stop trace when top of Trace Memory is reached. 1 = Wrap trace to beginning of Trace Memory.
14	RW	HTMSC_MODE_DIS_TSTAMP: Disable TimeStamp Writes. 0 = Write of timestamps enabled to indicate elapsed time between records. 1 = Timestamps written only to indicate record loss.
15	RW	HTMSC_MODE_SINGLE_TSTAMP: Disable Overflow Timestamps. 0 = Timestamp written to indicate elapsed time overflow. 1 = Only one timestamp is written between entries, overflow indication is lost.
16	RW	HTMSC_MODE_SPARE16: Not used in NHTM.
17	RW	HTMSC_MODE_MARKERS_ONLY: Enable Stamp/Marker Only Mode. 0 = Normal trace. 1 = Ignore incoming trace data and save only markers caused by HTM_TRIG writes, Global HTM markers enabled to be inserted into the trace record and enabled stamps.

Bits	SCOM	Field Mnemonic: Description
18	RW	HTMSC_MODE_DIS_FORCE_GROUP_SCOPE: Disable Group Scope. This is a processor bus debug bit. 0 = htm write ops sent with group scope. 1 = htm write ops sent with Vg scope using programmed target bits.
19:21	RW	HTMSC_MODE_SYNC_STAMP_FORCE: Control the number of cycles to wait to force a synchronization stamp or reset the timer.
22	RW	HTMSC_MODE_WRITETOIO: HTM Trace memory in IO space, use ci_pr_st op. 0 = Use HTM_CL_Write operation to target system memory. Do pre-allocation sequence. (default). 1 = Use ci_pr_st operation to target anywhere else. Dont do pre-allocate sequence.
23	RW	HTMSC_MODE_SPARE23: Not used in NHTM.
24:39	RW	HTMSC_MODE_VGTARGET: Vg Target bits should be configured if HTM_MEM[scope] is Vg. or if Disable Group Scope = 1.
40:43	RW	HTMSC_MODE_SPARE4043: NOt used in NHTM.
44:63	RO	Constant = 0b00000000000000000000

Register Name	HTM Memory Configuration Register
Mnemonic	BRIDGE.NHTM.NHTM1.SC.HTM_MEM
Address	00000000050128C1 (SCOM)
Description	HTM Memory Configuration Register

Bits	SCOM	Field Mnemonic: Description
0	RW	HTMSC_MEM_ALLOC: 0 = memory based address not configured, 1 = memory address configured. This bit must be written to zero before setting since the HTM looks for. the 0 -> 1 transition on this bit to indicate the memory address has. been updated.
1:3	RW	HTMSC_MEM_SCOPE: Processor bus Scope to use when writing the HTM Trace memory. If the scope is not large enough, the HTM will get an address error. If the scope is too large, HTM will experience excessive delay.
4	RW	HTMSC_MEM_PRIORITY: Starting processor bus Priority. Configure the Starting priority used when writing the HTM Trace memory. Leave at default 000 unless there is a very good reason to change.
5	RW	HTMSC_MEM_SIZE_SMALL: Trace Memory Size Range. 0 = Trace Mem Size from 512M to 256G. 1 = Trace Mem Size from 16M to 8G.
6:7	RW	HTMSC_MEM_SPARE67: Not Used.
8:39	RW	HTMSC_MEM_BASE: Trace memory base address (8:39). The Trace Memory Base Address must be aligned on a Trace Memory Size boundary.
40:48	RW	HTMSC_MEM_SIZE: Trace Memory Size. When htmsc_mem_size_small = 0, these bits define the mask to bits (26:35) of the Trace Memory Base Address and define the size of the trace memory between 512MB and 256GB. When htmsc_mem_size_small = 1, these bits define the mask to bits (31:39) of the Trace Memory Base address and define the size of the trace memory between 16MB and 8GB.
49:63	RO	Constant = 0b000000000000000

Register Name	HTM Status Register
Mnemonic	BRIDGE.NHTM.NHTM1.SC.HTM_STAT
Address	00000000050128C2 (SCOM)
Description	HTM Status Register

Bits	SCOM	Field Mnemonic: Description
0:1	ROX	HTMCO_STATUS_SPARE: Spare bits.
2	ROX	HTMCO_STATUS_CRESP_OV: Asserted on detection of a CRESP queue overwrite condition. Cleared on the writing of 1 to the Reset Trigger bit, htmsc_trig_reset.
3	ROX	HTMCO_STATUS_REPAIR: Asserted on occurence of address error to indicate the need of software to clear and update HTM_MEM. Will stay high until HTM_MEM updated.
4	ROX	HTMCO_STATUS_BUF_WAIT: Asserted on condition of data buffers full in tracing state. Any markers, stamps, and trace data recieved when this bit is set will be lost.
5	ROX	STATUS_TRIG_DROPPED_Q: Asserted on buffer overrun due to trigger lost at least once in the last trace. Cleared on the writing of 1 to the Reset Trigger bit, htmsc_trig_reset.
6	ROX	HTMCO_STATUS_ADDR_ERROR: Asserted on address error when write buffer was allocated. Need to set new address range after htmco_status_repair is asserted.
7	ROX	STATUS_REC_DROPPED_Q: Asserted on buffer overrun due to trace data lost at least once in the last trace. Cleared on the writing of 1 to the Reset Trigger bit, htmsc_trig_reset.
8	ROX	HTMCO_STATUS_INIT: Asserted when htm_cofsm is in Init state.
9	ROX	HTMCO_STATUS_PREREQ: Asserted when htm_cofsm is in Pre-req state.
10	ROX	HTMCO_STATUS_READY: Asserted when htm_cofsm is in Ready state.
11	ROX	HTMCO_STATUS_TRACING: Asserted when htm_cofsm is in Tracing state.
12	ROX	HTMCO_STATUS_PAUSED: Asserted when htm_cofsm is in Paused state.
13	ROX	HTMCO_STATUS_FLUSH: Asserted when htm_cofsm is in Flush state.
14	ROX	HTMCO_STATUS_COMPLETE: Asserted when htm_cofsm is in Complete state.
15	ROX	HTMCO_STATUS_ENABLE: Asserted when htm_cofsm is in Enable state.
16	ROX	HTMCO_STATUS_STAMP: Asserted when htm_cofsm is in Stamp state.
17	ROX	STATUS_SCOM_ERROR: Asserted to indicate that a SCOM error indication was received from the SCOM satellite. Cleared on the writing of 1 to the Reset Trigger bit, htmsc_trig_reset.
18	ROX	STATUS_PARITY_ERROR: Asserted to indicate a parity error was detected on the processor bus. Cleared on the writing of 1 to the Reset Trigger bit, htmsc_trig_reset.
19	ROX	STATUS_INVALID_CRESP: Asserted to indicate an invalid CRESP was received from the processor bus. NHTM is hung. Cleared on the writing of 1 to the Reset Trigger bit, htmsc_trig_reset.
20:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	HTM Last Address Register
Mnemonic	BRIDGE.NHTM.NHTM1.SC.HTM_LAST
Address	00000000050128C3 (SCOM)
Description	HTM Last Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	Constant = 0b00000000

Bits	SCOM	Field Mnemonic: Description
8:56	ROX	HTM_LAST_ADDRESS: The last cache line address of the memory trace. Guaranteed valid only when HTM is in the Complete state.
57:63	RO	Constant = 0b0000000

Register Name	HTM SCOM Trigger Register
Mnemonic	BRIDGE.NHTM.NHTM1.SC.HTM_TRIG
Address	00000000050128C4 (SCOM)
Description	HTM SCOM Trigger Register

Bits	SCOM	Field Mnemonic: Description
0	RW	HTMSC_TRIG_START: Start trigger.
1	RW	HTMSC_TRIG_STOP: Stop trigger.
2	RW	HTMSC_TRIG_PAUSE: Pause trigger.
3	RW	HTMSC_TRIG_STOP_ALT: Stop trigger 2. Legacy bit that used to be the Freeze Trigger in POWER6 implementation.
4	RW	HTMSC_TRIG_RESET: Reset trigger.
5	RW	HTMSC_TRIG_MARK_VALID: Mark type valid.
6:15	RW	HTMSC_TRIG_MARK_TYPE: Mark type is put into Mark Record when bit 5 is set.
16:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	HTM Trigger Control Register
Mnemonic	BRIDGE.NHTM.NHTM1.SC.HTM_CTRL
Address	00000000050128C5 (SCOM)
Description	HTM Trigger Control Register

Bits	SCOM	Field Mnemonic: Description
0:1	RW	HTMSC_CTRL_TRIG: Trigger Control. 00 = local triggers are not forwarded to the processor bus, it is inserted into the trace when tracing. Both local and global triggers control the HTM. 01 = local triggers are not forwarded to the processor bus, it is inserted into the trace when tracing. Only local triggers control the HTM. 1x = local triggers are forwarded to the processor bus, it is not inserted into the trace when tracing. Only global triggers control the HTM.
2:3	RW	Reserved.
4:5	RW	HTMSC_CTRL_MARK: Marker Control. 00 local markers are not forwarded to the processor bus. Both local and global markers are inserted into the trace. 01 = local markers are not forwarded to the processor bus. Only local markers are inserted into the trace. 10 = local markers are forwarded to the processor bus. Only global markers are inserted into the trace. 11 = local markers are forwarded to the processor bus. Markers are not inserted into the trace (Fabric Trace Mode).
6	RW	HTMSC_CTRL_DBG0_STOP: Enable Stop on PB Chiplet Debug Trigger 0.
7	RW	HTMSC_CTRL_DBG1_STOP: Enable Stop on PB Chiplet Debug Trigger 1.
8	RW	HTMSC_CTRL_RUN_STOP: Enable Stop on falling edge of PB Chiplet trace_run.

Bits	SCOM	Field Mnemonic: Description
9	RW	HTMSC_CTRL_OTHER_DBG0_STOP: Enable Stop using OCC Control.
10:12	RW	HTMSC_CTRL_SPARE1012: Spare bits.
13	RW	HTMSC_CTRL_XSTOP_STOP: Enable Stop on chiplet XSTOP.
14:15	RW	HTMSC_CTRL_SPARE1415: Spare bits.
16:63	RO	Constant = 0b0000000000000000000000000000000000000000000000000000000000000000

Register Name	**HTM Filter Control Register**
Mnemonic	BRIDGE.NHTM.NHTM1.SC.HTM_FILT
Address	00000000050128C6 (SCOM)
Description	HTM Filter Control Register

Bits	SCOM	Field Mnemonic: Description
0:22	RW	HTMSC_FILT_PAT: Filter Pattern. In Fabric Trace Mode, Defines the TTAG/Scope/Source pattern to Match in the RCMD and CRESP. 0:3 = RCMD_ttag(0:2) Group ID Pattern for RCMD and CRESP filtering. 4:6 = RCMD_ttag(3:5) Chip ID Pattern for RCMD and CRESP filtering. 7:16 = RCMD_ttag(6:13) Unit ID Pattern for RCMD and CRESP (if from this chip) filtering. 17:19 = RCMD_scope(0:2) Scope Pattern for RCMD and CRESP filtering. 20:21 = RCMD_source(0:1) Source Pattern for RCMD filtering. 22 = Powerbus PORT pattern for RCMD and CRESP filtering. In OCC Trace Mode, Defines the occ_trace_data(0:22) pattern to match. 0:22 = occ_trace_data(0:22) Pattern.
23:26	RW	Reserved.
27:31	RW	HTMSC_FILT_CRESP_PAT: CRESP Filter Pattern. In Fabric Trace Mode, Defines the CRESP pattern to match.
32:54	RW	HTMSC_FILT_MASK: Pattern mask. Bits set to 1 in this mask do not need to match w/ the Filter Pattern. If all mask bits are set, No pattern matching is done.
55:58	RW	Reserved.
59:63	RW	HTMSC_FILT_CRESP_MASK: CRESP Filter Mask. Bits set to 1 in this mask do not need to match w/ the CRESP Filter Pattern. If all mask bits are set, no pattern matching is done.

4	RWX	WOX_AND	WOX_OR	INTERRUPT_FROM_FSP: Interrupt from FSP is being processed.
5	RWX	WOX_AND	WOX_OR	FSP_ECC_ERR_CE: CE from PSILL data.
6	RWX	WOX_AND	WOX_OR	FSP_ECC_ERR_UE: UE from PSILL data.
7	RWX	WOX_AND	WOX_OR	ERROR_STATE: Error bit set, ignores the interrupt mask.
8	RWX	WOX_AND	WOX_OR	INVALID_TTYPE: Invalid TType Hit on PHB or FSP bar.
9	RWX	WOX_AND	WOX_OR	INVALID_CRESP: Invalid CRESP returned to command issued by PSIHB.
10	RWX	WOX_AND	WOX_OR	PB_DATA_TIME_OUT: Processor bus time out waiting for data grant.
11	RWX	WOX_AND	WOX_OR	PB_PARITY_ERROR: PB parity error.
12	RWX	WOX_AND	WOX_OR	FSP_ACCESS_TRUSTED_SPACE: FSP tried access to trusted space.
13	RWX	WOX_AND	WOX_OR	UNEXPECTED_PB: Unexpected PB CRESP or DATA.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
14	RWX	WOX_AND	WOX_OR	INTERRUPT_REG_CHANGE_WHILE_ACTIVE: Interrupt register change while interrupt still pending.
15	RWX	WOX_AND	WOX_OR	INTERRUPT0_ADDRESS_ERROR: PSI Interrupt address Error.
16	RWX	WOX_AND	WOX_OR	INTERRUPT1_ADDRESS_ERROR: OCC Interrupt address Error.
17	RWX	WOX_AND	WOX_OR	INTERRUPT2_ADDRESS_ERROR: FSI Interrupt address Error.
18	RWX	WOX_AND	WOX_OR	INTERRUPT3_ADDRESS_ERROR: LPC Interrupt address Error.
19	RWX	WOX_AND	WOX_OR	INTERRUPT4_ADDRESS_ERROR: LOCAL ERROR Interrupt address Error.
20	RWX	WOX_AND	WOX_OR	INTERRUPT5_ADDRESS_ERROR: HOST ERROR Interrupt address Error.
21	RWX	WOX_AND	WOX_OR	TCBR_TP_PSI_GLB_ERR_0: PSI global error bit 0.
22	RWX	WOX_AND	WOX_OR	TCBR_TP_PSI_GLB_ERR_1: PSI global error bit 1.
23	RWX	WOX_AND	WOX_OR	UPSTREAM_FIR: Upstream error.
24:26	RWX	WOX_AND	WOX_OR	SPARE_FIR: Spare fir.
27	RWX	WOX_AND	WOX_OR	SCOM_ERROR: SCOM error.
28	RWX	WOX_AND	WOX_OR	FIR_PARITY_ERROR: FIR parity Error.
29:45	RO	RO	RO	Constant = 0b00000000000000000

Register Name	PSI Host Bridge FIR Mask Register
Mnemonic	BRIDGE.PSIHB.PSIHB_FIR_MASK_REG
Address	0000000005012903 (SCOM) 0000000005012904 (SCOM1) 0000000005012905 (SCOM2)
Description	PSI Host Bridge FIR Mask Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_AND	WO_OR	PB_ECC_ERR_CE_MASK: Mask for CE from processor bus data.
1	RW	WO_AND	WO_OR	PB_ECC_ERR_UE_MASK: Mask for UE from processor bus data.
2	RW	WO_AND	WO_OR	PB_ECC_ERR_SUE_MASK: Mask for SUE from processor bus data.
3	RW	WO_AND	WO_OR	INTERRUPT_FROM_ERROR_MASK: Mask for Interrupt Condition present in PSIHB.
4	RW	WO_AND	WO_OR	INTERRUPT_FROM_FSP_MASK: Mask for Interrupt from FSP is being processed.
5	RW	WO_AND	WO_OR	FSP_ECC_ERR_CE_MASK: Mask for CE from PSILL data.
6	RW	WO_AND	WO_OR	FSP_ECC_ERR_UE_MASK: Mask for UE from PSILL data.
7	RW	WO_AND	WO_OR	ERROR_STATE_MASK: Mask for Error bit set, ignores the interrupt mask.
8	RW	WO_AND	WO_OR	INVALID_TTYPE_MASK: Mask for Invalid TType Hit on PHB or FSP bar.
9	RW	WO_AND	WO_OR	INVALID_CRESP_MASK: Mask for Invalid CRESP returned to command issued by PSIHB.
10	RW	WO_AND	WO_OR	PB_DATA_TIME_OUT_MASK: Mask for processor bus time out waiting for data grant.
11	RW	WO_AND	WO_OR	PB_PARITY_ERROR_MASK: PB parity error.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
12	RW	WO_AND	WO_OR	FSP_ACCESS_TRUSTED_SPACE_MASK: FSP tried access to trusted space.
13	RW	WO_AND	WO_OR	UNEXPECTED_PB_MASK: Unexpected PB CRESP or DATA.
14	RW	WO_AND	WO_OR	INTERRUPT_REG_CHANGE_WHILE_ACTIVE_MASK: Interrupt register change while interrupt still pending.
15	RW	WO_AND	WO_OR	INTERRUPT0_ADDRESS_ERROR_MASK: PSI Interrupt address error_mask.
16	RW	WO_AND	WO_OR	INTERRUPT1_ADDRESS_ERROR_MASK: OCC Interrupt address error_mask.
17	RW	WO_AND	WO_OR	INTERRUPT2_ADDRESS_ERROR_MASK: FSI Interrupt address error_mask.
18	RW	WO_AND	WO_OR	INTERRUPT3_ADDRESS_ERROR_MASK: LPC Interrupt address error_mask.
19	RW	WO_AND	WO_OR	INTERRUPT4_ADDRESS_ERROR_MASK: LOCAL error_mask Interrupt address error_mask.
20	RW	WO_AND	WO_OR	INTERRUPT5_ADDRESS_ERROR_MASK: HOST error_mask Interrupt address error_mask.
21	RW	WO_AND	WO_OR	TCBR_TP_PSI_GLB_ERR_0_MASK: PSI global_mask error bit 0.
22	RW	WO_AND	WO_OR	TCBR_TP_PSI_GLB_ERR_1_MASK: PSI global_mask error bit 1.
23	RW	WO_AND	WO_OR	UPSTREAM_FIR_MASK: Upstream error.
24:26	RW	WO_AND	WO_OR	SPARE_FIR_MASK: Spare fir.
27	RW	WO_AND	WO_OR	SCOM_ERROR_MASK: SCOM Error.
28	RW	WO_AND	WO_OR	FIR_PARITY_ERROR_MASK: FIR parity Error.
29:45	RO	RO	RO	Constant = 0b00000000000000000

Register Name	PSI Host Bridge FIR Action0 Register
Mnemonic	BRIDGE.PSIHB.PSIHB_FIR_ACTION0_REG
Address	0000000005012906 (SCOM)
Description	PSI Host Bridge FIR Action0 Register Action select for corresponding bit in FIR (Action0,Action1) = Action Select (0,0) = No Error (0,1) = recoverable error (1,0) = Checkstop Error (1,1) = unused

Bits	SCOM	Field Mnemonic: Description
0	RO	PB_ECC_ERR_CE_ACTION0: Action0 for CE from processor bus data.
1	RO	PB_ECC_ERR_UE_ACTION0: Action0 for UE from processor bus data.
2	RO	PB_ECC_ERR_SUE_ACTION0: Action0 for SUE from processor bus data.
3	RO	INTERRUPT_FROM_ERROR_ACTION0: Action0 for Interrupt Condition present in PSIHB.
4	RO	INTERRUPT_FROM_FSP_ACTION0: Action0 for Interrupt from FSP is being processed.
5	RO	FSP_ECC_ERR_CE_ACTION0: Action0 for CE from PSILL data.
6	RO	FSP_ECC_ERR_UE_ACTION0: Action0 for UE from PSILL data.

Bits	SCOM	Field Mnemonic: Description
7	RO	ERROR_STATE_ACTION0: Action0 for Error bit set, ignores the interrupt mask.
8	RO	INVALID_TTYPE_ACTION0: Action0 for Invalid TType Hit on PHB or FSP bar.
9	RO	INVALID_CRESP_ACTION0: Action0 for Invalid CRESP returned to command issued by PSIHB.
10	RO	PB_DATA_TIME_OUT_ACTION0: Action0 for processor bus time out waiting for data grant.
11	RO	PB_PARITY_ERROR_ACTION0: PB parity error.
12	RO	FSP_ACCESS_TRUSTED_SPACE_ACTION0: FSP tried access to trusted space.
13	RO	UNEXPECTED_PB_ACTION0: Unexpected PB CRESP or DATA.
14	RO	INTERRUPT_REG_CHANGE_WHILE_ACTIVE_ACTION0: Interrupt register change while interrupt still pending.
15	RO	INTERRUPT0_ADDRESS_ERROR_ACTION0: PSI Interrupt address error_action0.
16	RO	INTERRUPT1_ADDRESS_ERROR_ACTION0: OCC Interrupt address error_action0.
17	RO	INTERRUPT2_ADDRESS_ERROR_ACTION0: FSI Interrupt address error_action0.
18	RO	INTERRUPT3_ADDRESS_ERROR_ACTION0: LPC Interrupt address error_action0.
19	RO	INTERRUPT4_ADDRESS_ERROR_ACTION0: LOCAL error_action0 Interrupt address error_action0.
20	RO	INTERRUPT5_ADDRESS_ERROR_ACTION0: HOST error_action0 Interrupt address error_action0.
21	RO	TCBR_TP_PSI_GLB_ERR_0_ACTION0: PSI global_action0 error bit 0.
22	RO	TCBR_TP_PSI_GLB_ERR_1_ACTION0: PSI global_action0 error bit 1.
23	RO	UPSTREAM_FIR_ACTION0: Upstream error.
24:26	RO	SPARE_FIR_ACTION0: Spare fir.
27	RO	SCOM_ERROR_ACTION0: SCOM Error.
28	RO	FIR_PARITY_ERROR_ACTION0: FIR parity Error.
29:49	RO	Constant = 0b00000000000000000000

Register Name	**PSI Host Bridge FIR Action1 Register**
Mnemonic	BRIDGE.PSIHB.PSIHB_FIR_ACTION1_REG
Address	0000000005012907 (SCOM)
Description	PSI Host Bridge FIR action1 Register Action select for corresponding bit in FIR (Action0,Action1) = Action Select (0,0) = No Error (0,1) = recoverable error (1,0) = Checkstop Error (1,1) = unused

Bits	SCOM	Field Mnemonic: Description
0	RO	PB_ECC_ERR_CE_ACTION1: Action1 for CE from processor bus data.
1	RO	PB_ECC_ERR_UE_ACTION1: Action1 for UE from processor bus data.
2	RO	PB_ECC_ERR_SUE_ACTION1: Action1 for SUE from processor bus data.
3	RO	INTERRUPT_FROM_ERROR_ACTION1: Action1 for Interrupt Condition present in PSIHB.
4	RO	INTERRUPT_FROM_FSP_ACTION1: Action1 for Interrupt from FSP is being processed.
5	RO	FSP_ECC_ERR_CE_ACTION1: Action1 for CE from PSILL data.
6	RO	FSP_ECC_ERR_UE_ACTION1: Action1 for UE from PSILL data.

Bits	SCOM	Field Mnemonic: Description
7	RO	ERROR_STATE_ACTION1: Action1 for Error bit set, ignores the interrupt mask.
8	RO	INVALID_TTYPE_ACTION1: Action1 for Invalid TType Hit on PHB or FSP bar.
9	RO	INVALID_CRESP_ACTION1: Action1 for Invalid CRESP returned to command issued by PSIHB.
10	RO	PB_DATA_TIME_OUT_ACTION1: Action1 for processor bus time out waiting for data grant.
11	RO	PB_PARITY_ERROR_ACTION1: PB parity error.
12	RO	FSP_ACCESS_TRUSTED_SPACE_ACTION1: FSP tried access to trusted space.
13	RO	UNEXPECTED_PB_ACTION1: Unexpected PB CRESP or DATA.
14	RO	INTERRUPT_REG_CHANGE_WHILE_ACTIVE_ACTION1: Interrupt register change while interrupt still pending.
15	RO	INTERRUPT0_ADDRESS_ERROR_ACTION1: PSI Interrupt address error_action1.
16	RO	INTERRUPT1_ADDRESS_ERROR_ACTION1: OCC Interrupt address error_action1.
17	RO	INTERRUPT2_ADDRESS_ERROR_ACTION1: FSI Interrupt address error_action1.
18	RO	INTERRUPT3_ADDRESS_ERROR_ACTION1: LPC Interrupt address error_action1.
19	RO	INTERRUPT4_ADDRESS_ERROR_ACTION1: LOCAL error_action1 Interrupt address error_action1.
20	RO	INTERRUPT5_ADDRESS_ERROR_ACTION1: HOST error_action1 Interrupt address error_action1.
21	RO	TCBR_TP_PSI_GLB_ERR_0_ACTION1: PSI global_action1 error bit 0.
22	RO	TCBR_TP_PSI_GLB_ERR_1_ACTION1: PSI global_action1 error bit 1.
23	RO	UPSTREAM_FIR_ACTION1: Upstream error.
24:26	RO	SPARE_FIR_ACTION1: Spare fir.
27	RO	SCOM_ERROR_ACTION1: SCOM Error.
28	RO	FIR_PARITY_ERROR_ACTION1: FIR parity Error.
29:49	RO	Constant = 0b00000000000000000000

Register Name	PSI Host Bridge BAR Register
Mnemonic	BRIDGE.PSIHB.PSI_BRIDGE_BAR_REG
Address	000000000501290A (SCOM)
Description	PSI Host Bridge Base Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	Constant = 0b00000000
8:43	RWX	PSI_BRIDGE_BAR: The Bridge Base Address Register contains the address range which contains the MMIO accessible PSIHB unit registers. Address bits 8 to 43 of the PSI unit base address are specified with this IDial.
44:62	RO	Constant = 0b00000000000000000000
63	RWX	PSI_BRIDGE_BAR_EN: this Switch is set to ON to indicate the base address contained in the PSIHB Base Address Register is valid and enabled.

Register Name	PSI Host Bridge FSP BAR Register
Mnemonic	BRIDGE.PSIHB.PSI_BRIDGE_FSP_BAR_REG
Address	000000000501290B (SCOM)
Description	FSP Base Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	Constant = 0b00000000
8:43	RWX	FSP_BAR: The FSP Base Address Register contains the address range which contains the MMIO accessible FSP unit registers. Address bits 8 to 43 of the FSP base address are specified with this IDial.

Register Name	PSI Host Bridge FSP MMR Register
Mnemonic	BRIDGE.PSIHB.PSI_FSP_MMR_REG
Address	000000000501290C (SCOM)
Description	FSP Memory Mask Register

Bits	SCOM	Field Mnemonic: Description
0:31	RO	Constant = 0b00000000000000000000000000000000
32:43	RWX	FSP_MMR: The FSP Mem ory Mask Register contains the mask which modifies which bits of the FSP Base Address are used in the detection of matching addresses. Bits 32 to 43 of the memory mask are specified with this IDial.

Register Name	PSI Host Bridge Status Control Register
Mnemonic	BRIDGE.PSIHB.PSIHB_STATUS_CTL_REG
Address	000000000501290E (SCOM) 0000000005012912 (SCOM1) 0000000005012913 (SCOM2)
Description	PSI Host Bridge Control/Status Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_OR	WOX_CLEAR	FSP_CMD_ENABLE: When set to 0 , all DMA and Interrupt commands issued by the FSP are ignored by the GX unit. When set to 1 , all DMA and interrupt commands issued by the FSP are accepted and executed.
1	RWX	WOX_OR	WOX_CLEAR	FSP_MMIO_ENABLE: When set to 0 , the FSPBAR is ignored and no MMIO operations are issued to the FSP. When set to 1 , MMIO operations to the FSP memory region defined by the FSPBAR are accepted and transmitted to the FSP.
2	RWX	WOX_OR	WOX_CLEAR	PHBCSR_SPARE: Spare.
3	RWX	WOX_OR	WOX_CLEAR	FSP_INT_ENABLE: Enables incoming PSI interrupt commands to interrupt the CEC when set to 1.
4	RWX	WOX_OR	WOX_CLEAR	FSP_ERR_RSP_ENABLE: Enables launch of error response packet from GXC to FSP when errors are detected on incoming DMA commands.
5	RWX	WOX_OR	WOX_CLEAR	PSI_LINK_ENABLE: This bit indicates the PSI link is enabled when set to 1. A 0 indicates the PSI link is disabled.
6	RWX	WOX_OR	WOX_CLEAR	FSP_RESET: When this bit transitions from 0 to 1 , an encoded reset sequence is sent to the FSP.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
7	WOX_6P	WOX_6P	NCX	PSIHBC_RESET: When this bit transitions from 0 to 1 , the internal state machines in the GX FSP attach function are erset to idle.
8:11	RWX	WOX_OR	WOX_CLEAR	FSP_MMIO_MASK: This LDial controls the use of system address bits 32:35 when transmitting an address to the FSP. The mask size selected corresponds to an address mask which is ANDed with address bits 32:35 of addresses passed from the CEC to the PSI/FSP. All upper address bits, 18:31, are stripped and replaced with 0s.
12:15	RO	RO	RO	Constant = 0b0000
16	ROX	NCX	NCX	CEC_PSI_INTERRUPT: Read Only - Set to 1 by hardware when an interruption is present in the GXC FSP attachment function.
17	RWX	WOX_OR	WOX_CLEAR	FSP_INTERRUPT: Set to 1 when an Interrupt set command is received from the incoming PSI interface. Set to 0 when an Interrupt reset command is received from the incoming PSI interface.
18	ROX	NCX	NCX	FSP_LINK_ACTIVE: Set to 1 when the PSI link is active and working.
19	ROX	NCX	NCX	FSP_OUTBOUND_ACTIVE: Set to 1 when the outbound queue or controls are busy.
20	ROX	NCX	NCX	FSP_INBOUND_ACTIVE: Set to 1 when the inbound queue or controls are busy.
21	ROX	NCX	NCX	PSIFSP_LOAD_OUTSTANDING: Set to 1 when an MMIO is received, reset when data is delivered to fabric.
22	ROX	NCX	NCX	PSIFSP_DMAR_OUTSTANDING: Set to 1 when a dmar is received, reset when data is delivered to PSI.
23	ROX	NCX	NCX	PSIFSP_INT_BUSY: Set to 1 whenever int state machine is not idle.
24:31	RO	RO	RO	Constant = 0b00000000
32	ROX	NCX	NCX	PSI_XMIT_ERROR: Set to 1 when the PSI macro detects a fatal error.
33	RWX	WOX_OR	WOX_CLEAR	PSI_LINK_INACTIVE_TRANS: Set to 1 when the PSI link transitions from 1 to 0.
34	RWX	WOX_OR	WOX_CLEAR	PSIFSP_ACK_TIMEOUT: Set when a command to the FSP interface has not been acknowledged within TBD cycles.
35	RWX	WOX_OR	WOX_CLEAR	PSIFSP_MMIO_LOAD_TIMEOUT: Set when a reply packet is not received within TBD cycles after an MMIO is sent to the FSP.
36	RWX	WOX_OR	WOX_CLEAR	PSIFSP_MMIO_LENGTH_ERR: Set when an MMIO is targets the region defined by the PSIBAR and has a length of anything other than 8 bytes.
37	RWX	WOX_OR	WOX_CLEAR	PSIFSP_MMIO_ADDR_ERR: Set when an MMIO operation targets the region defined by the PSIBAR but does not target one of the defined registers.
38	RWX	WOX_OR	WOX_CLEAR	PSIFSP_MMIO_TYPE_ERR: Set when an operation targets the region defined by the PSIBAR or FSPBAR but does not have a valid ttype.
39	RWX	WOX_OR	WOX_CLEAR	PSI_UE: Set when an uncorrectable error is detected on the incoming PSI link.
40	RWX	WOX_OR	WOX_CLEAR	PSIFSP_PERR: Set when a parity error is detected in the PSI FSP attach function.
41	RWX	WOX_OR	WOX_CLEAR	PSI_ALERT1: Set the FSP detects an error with an MMIO command, but is able to continue processing MMIO commands.
42	RWX	WOX_OR	WOX_CLEAR	PSI_ALERT2: Set the FSP detects an error with an MMIO command, and is unable to continue processing MMIO commands.
43	RWX	WOX_OR	WOX_CLEAR	PSIFSP_DMA_ERR: Set the PSIC detects any error with an incoming DMA command.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
44:47	RO	RO	RO	Constant = 0b0000
48	RWX	WOX_OR	WOX_CLEAR	PSIFSP_DMA_ADDR_ERR: Set when a DMA access targets a system memory address that does not exist.
49	RWX	WOX_OR	WOX_CLEAR	PSIFSP_TCE_EXTENT_ERR: Set when a DMA access would result in a TCE fetch beyond the end of the TCE table in system memory.
50	RWX	WOX_OR	WOX_CLEAR	PSIFSP_PAGE_FAULT: Set when a DMA access uses a TCE entry that is inconsistent with the access control bits of the TCE.
51	RWX	WOX_OR	WOX_CLEAR	PSIFSP_INV_OP: Set when an incoming PSI command does not contain a valid opcode.
52	RWX	WOX_OR	WOX_CLEAR	FSP_INV_READ: Set when a read DMA operation is received before read response data has been received for a prior DMA read.

Register Name	**PSI Host Bridge Error Mask Register**
Mnemonic	BRIDGE.PSIHB.PSIHB_ERROR_MASK_REG
Address	000000000501290F (SCOM)
Description	PSI Host Bridge Error Mask Register

Bits	SCOM	Field Mnemonic: Description
0:15	RO	Constant = 0b0000000000000000
16:27	RWX	ERROR_DISABLE_1: Any bit when set to 1 prevents hardware from setting the corresponding bit in PSIHBC bits 32:43. Entry into the error state is also prevented.
28:31	RO	Constant = 0b0000
32:43	RWX	INTERRUPT_DISABLE: Any bit when set to 1 prevents hardware from signaling an interrupt to the INTP when the corresponding bit in the PSIHBC bits 32:43 is set.
44:47	RO	Constant = 0b0000
48:52	RWX	ERROR_DISABLE_2: Any bit when set to 1 prevents hardware from setting the corresponding bit in PSIHBC bits 48:52.

Register Name	**PSI Host Bridge Debug Register**
Mnemonic	BRIDGE.PSIHB.PSIHB_DEBUG_REG
Address	0000000005012911 (SCOM)
Description	PSI Host Bridge Debug Service Register

Bits	SCOM	Field Mnemonic: Description
0:1	RWX	PSIHB2FSP_INJ_ERR_BITS: Setting a single bit will cause a correctable error when inject once or constant is set. Setting both bits will cause an uncorrectable error when inject once or constant is set.
2	RWX	PSIHB2FSP_INJ_ONCE: This bit will cause a single CE or UE depending on how the error bits are set.
3	RWX	PSIHB2FSP_INJ_CONST: This bit will cause a constant CE or UE depending on how the error bits are set.
4:7	RO	Constant = 0b0000
8:9	RWX	PSIHB2PB_INJ_ERR_BITS: Setting a single bit will cause a correctable error when inject once or constant is set. Setting both bits will cause an uncorrectable error when inject once or constant is set.
10	RWX	PSIHB2PB_INJ_ONCE: This bit will cause a single CE or UE depending on how the error bits are set.
11	RWX	PSIHB2PB_INJ_CONST: This bit will cause a constant CE or UE depending on how the error bits are set.

Bits	SCOM	Field Mnemonic: Description
12:15	RO	Constant = 0b0000
16:19	RWX	TRACE_SEL: Used to select different sets of signals to be traced.

Register Name	PSI Host Bridge DMA Upper Bits Address Register
Mnemonic	BRIDGE.PSIHB.DMA_UP_ADDR
Address	0000000005012914 (SCOM)
Description	DMA ADDR Upper bits

Bits	SCOM	Field Mnemonic: Description
0:7	RWX	DMA_BASE_UPPER_BITS: DMA base upper bits 8:15.
8:15	RO	Constant = 0b00000000
16:63	RW	DMA_ESCAPE_ADDRESS: DMA escape address 16:63, defaults to FFFFFFFFFFF8. It actually inverts the output of the register to create this default.

Register Name	PSI Host Bridge Interrupt Control Register
Mnemonic	BRIDGE.PSIHB.PSIHB_INTERRUPT_CONTROL
Address	0000000005012915 (SCOM)
Description	PSI Host Bridge Interrupt Control Register

Bits	SCOM	Field Mnemonic: Description
0	RWX	ESB_OR_LSI_INTERRUPTS: Selects ESB or LSI interrupt handling, 0 - ESB.
1	WOX_6P	INTERRUPT_SM_RESET: When this bit transitions from 0 to 1, an encoded reset sequence is sent to the Interrupt.

Register Name	PSI Host Bridge ESB CI Base Address Register
Mnemonic	BRIDGE.PSIHB.ESB_CI_BASE
Address	0000000005012916 (SCOM)
Description	ESB CI Base address

Bits	SCOM	Field Mnemonic: Description
0:7	RO	Constant = 0b00000000
8:47	RWX	ESB_BASE: ESB CI BASE 8:51.
48:62	RO	Constant = 0b000000000000000
63	RWX	ESB_BASE_VALID: ESB CI Base valid.

Register Name	PSI Host Bridge ESB Notification Address Register
Mnemonic	BRIDGE.PSIHB.ESB_NOTIFY
Address	0000000005012917 (SCOM)
Description	ESB Notification address

Bits	SCOM	Field Mnemonic: Description
0:7	RO	Constant = 0b00000000
8:60	RWX	ESB_NOTIFY_ADDR: ESB Notify Address 8:60.
61:62	RO	Constant = 0b00
63	RWX	ESB_NOTIFY_VALID: ESB Notify Address valid.

Register Name	PSI Host Bridge IVT Offset Register
Mnemonic	BRIDGE.PSIHB.IVT_OFFSET
Address	0000000005012918 (SCOM)
Description	ESB Notification address

Bits	SCOM	Field Mnemonic: Description
0:27	RWX	IVT_OFFSET_PAYLOAD: IVT OFFSET.
28:63	RO	Constant = 0b000000000000000000000000000000000000

Register Name	PSI Interrupt Level Register
Mnemonic	BRIDGE.PSIHB.PSIHB_INTERRUPT_LEVEL
Address	0000000005012919 (SCOM)
Description	PSI Interrupt Level Register

Bits	SCOM	Field Mnemonic: Description

Register Name	Write to HCA BAR and Range Register
Mnemonic	BRIDGE.HCA.HCA_BAR
Address	000000000501298A (SCOM)
Description	Write to HCA BAR and Range Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	Constant = 0b00000000
8:31	RW	HCA_BAR_ADDR: HCA Base Address. These bits and the hca_bar_range bits define how the address is mapped to the Power Bus. Bits(8:22) - Used as is on the processor bus. Bits(23:31) - Maskable w/ hca_bar_range.
32:42	RW	HCA_BAR_RANGE: Memory size. These bits indicate memory size behind the MC. It is used to define the Bar address.
43:61	RO	Constant = 0b0000000000000000000
62	RW	PAGE_SIZE_64K: Page size 64K enable.
63	RW	HCA_BAR_VALID: Bar valid. Indicates that the BAR is valid.

Register Name	Read HCA Count BAR Register
Mnemonic	BRIDGE.HCA.HCA_COUNT_BAR
Address	000000000501298B (SCOM)
Description	Read HCA COUNT BAR Register

Bits	SCOM	Field Mnemonic: Description
0:20	RO	Constant = 0b00000000000000000000
21:44	RW	HCA_COUNT_BAR_ADDR: HCA Counter Base Address. These bits and the hca_count_bar_range bits define how the address is mapped to the Power Bus. Bits(21:31) - Maskable with hca_bar_range. Bits(31:40) - Maskable with hca_bar_range - 4 K page mode. Bits(32:33) - Used as is on the processor bus - 64 K page mode. Bits(34:44) - Maskable with hca_bar_range - 64 K page mode.
45:62	RO	Constant = 0b000000000000000000
63	RW	HCA_COUNT_BAR_VALID: Count Bar valid. Indicates that the COUNT BAR is valid.

Register Name	Read HCA REF BAR Register
Mnemonic	BRIDGE.HCA.HCA_REF_BAR
Address	000000000501298E (SCOM)
Description	Read HCA REF BAR Register

Bits	SCOM	Field Mnemonic: Description
0:20	RO	Constant = 0b00000000000000000000

Bits	SCOM	Field Mnemonic: Description
21:45	RW	HCA_REF_BAR_ADDR: HCA ref Base Address. These bits and the hca_bar_range bits define how the address is mapped to the Power Bus. Bits(21:31) - Maskable with hca_bar_range. Bits(31:41) - Maskable with hca_bar_range - 4K page mode. Bits(32:34) - Used as is on the processor bus - 64K page mode. Bits(35:45) - Maskable with hca_bar_range - 64K page mode.
46:62	RO	Constant = 0b00000000000000000
63	RW	HCA_REF_BAR_VALID: ref Bar valid. Indicates that the ref BAR is valid.

Register Name	**HCA Mode Register**
Mnemonic	BRIDGE.HCA.HCA_MODES
Address	000000000501298F (SCOM)
Description	HCA MODE Register

Bits	SCOM	Field Mnemonic: Description
0:4	RO	Constant = 0b00000
5:12	RW	HCA_FULLMASK: HCA Counter Full Mask. These bits specify how many bit the counter will be used. The counter is 12 bits, so each bit will disable each corresponding upper bits.
13:16	RW	HCA_ERROR_INJECT: HCA Error Inject to Counter Cache. Bits(0:1) - Inversion mask for Tag portion of array. Bits(2:3) - Inversion mask for counter portion of array.
17:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000

Register Name	**HCA Flush Register**
Mnemonic	BRIDGE.HCA.HCA_FLUSH
Address	0000000005012990 (SCOM)
Description	HCA FLUSH Register

Bits	SCOM	Field Mnemonic: Description
0:8	RWX	HCA_FLUSH_INDEX: HCA Index of Counter Cache to flush. Bits(0:8) - Specify the address into the Counter cache to flush.
9:16	RWX	HCA_FLUSH_CONG: HCA Congruent set to flush. Bits(0:7) - By setting any bits and in conjuntion with hca_flush_index. the HCA Castout the counter address by hca_flush_index and. the set specified by hca_flush_cong. These bits will stay. on until the operation is completed.
17:25	RWX	HCA_FLUSH_COUNT: HCA flush repeat count.
26:63	RO	Constant = 0b00000000000000000000000000000000000000

Register Name	HCA Drop Register
Mnemonic	BRIDGE.HCA.HCA_DROP
Address	0000000005012991 (SCOM)
Description	HCA DROP Register

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	HCA_PIPE_DROP_COUNTER: HCA Count RCMD dropped due to lack of pipeline resources to access the array.
16:31	ROX	HCA_WRITE_DROP_COUNTER: HCA Count RCMD dropped due to lack of write resources into the array.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	HCA Reset Register
Mnemonic	BRIDGE.HCA.HCA_RESET
Address	0000000005012992 (SCOM)
Description	HCA RESET Register

Bits	SCOM	Field Mnemonic: Description
0:63	RO	not implemented.

Register Name	HCA Mirror BAR and Range Register
Mnemonic	BRIDGE.HCA.HCA_MIRROR_BAR
Address	0000000005012993 (SCOM)
Description	HCA Mirror BAR and Range Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	Constant = 0b00000000
8:32	RW	HCA_MIRROR_BAR_ADDR: HCA mirror_Base Address. These bits and the hca_mirror_bar_range bits define how the address is mapped to the Power Bus. Bits(8:24) - Used as is on the processor bus. Bits(25:32) - Maskable with hca_mirror_bar_range.
33:62	RO	Constant = 0b00000000000000000000000000000000
63	RW	HCA_MIRROR_BAR_VALID: Bar valid. Indicates that the BAR is valid.

Register Name	LPC Synchronize FIR Register
Mnemonic	BRIDGE.LPC.SYNC_FIR_REG
Address	00000000050129C0 (SCOM) 00000000050129C1 (SCOM1) 00000000050129C2 (SCOM2)
Description	PBAM low sped part FIR Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	INVALID_TRANSFER_SIZE: OPB Master LS received a transfer size value unequal to 1- or 2- or 4-Byte.
1	RWX	WOX_AND	WOX_OR	INVALID_COMMAND: OPB Master LS received a invalid command no_ci store and no_ci_load.
2	RWX	WOX_AND	WOX_OR	INVALID_ADDRESS_ALIGNMENT: OPB Master LS received a address which was not aligned to the received transfer size.
3	RWX	WOX_AND	WOX_OR	OPB_ERROR: OPB Master LS detected OPB ErrAck which was activated by the accessed OPB slave.
4	RWX	WOX_AND	WOX_OR	OPB_TIMEOUT: The OPB Arbiter activated the OPB Timeout signal Typical reason is that the OPB access did not hit any available OPB slave.
5	RWX	WOX_AND	WOX_OR	OPB_MASTER_HANG_TIMEOUT: The OPB Master LS was not able to end the requested OPB access within the OPB Master LS hang timeout time.
6	RWX	WOX_AND	WOX_OR	CMD_BUFFER_PAR_ERR: A parity error was detected in the OPB Master LS command buffer.
7	RWX	WOX_AND	WOX_OR	DAT_BUFFER_PAR_ERR: A parity error was detected in the OPB Master LS data buffer.
8	RWX	WOX_AND	WOX_OR	RETURNQ_ERR: Reserved bit 1 tied to zero.
9	RWX	WOX_AND	WOX_OR	Reserved: Reserved bit 0 tied to zero.
10	RWX	WOX_AND	WOX_OR	FIR_PARITY_ERR2: Local FIR Parity Error RAS duplicate.
11	RWX	WOX_AND	WOX_OR	FIR_PARITY_ERR: Local FIR Parity Error of ACTION/MASK registers.
12:63	RO	RO	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	PBA Bar 0 Register
Mnemonic	BRIDGE.PBA.SCOMTRUST.PBABAR0
Address	0000000005012B00 (SCOM)
Description	This register is used with the PBABARMSK[n] to define the processor bus address range accessible by the request. It must be initialized by hypervisor before enabling and sending OCI transactions that target the PBA and before starting the Block Copy Engine. Even Data Parity is calculated and saved when this register is written. The 'PBA_FIR[Internal Err] indication is set when a parity error is detected.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	PBABAR0_CMD_SCOPE: Processor bus Command Scope These bits are initialized by hypervisor to indicate the command scope of the processor bus request. The PBA will always use the defined scope first. The request will be reissued with an increased scope if the original request gets a retry response that indicates a larger scope is required. Nodal Scope for dma and atomic write ttypes will be forced to a minimum of Group by PBA..
3	RW	PBABAR0_Reserved_3: Spare.
4:7	RO	Constant = 0b0000
8:43	RW	PBABAR0_ADDR: Processor bus_Base_Address These bits and the PBA Base Address Mask register define how the OCI address is mapped to the Power Bus by the PBA Slave and how the processor bus Address offset is mapped by the Block Copy Engine. 8:22 - PB Base Address bit not maskable. Used as-is on the Power Bus. 23:43 - PB Base Address bits maskable w PBABARMSKn.

Bits	SCOM	Field Mnemonic: Description
44:47	RO	Constant = 0b0000
48:63	RW	PBABAR0_VTARGET: Processor bus Vectored Group Target This may be initialized by software to specify the initial vectored group target when the cmd_scope is configured to Vectored Group Scope. If zero or not all 1's, PBA will update the Target value it uses when sending commands with scope = Vg based on the CRESP of the request when retrying the request. If set to FF, PBA will always drive the Target value to FF when sending commands with scope = Vg.

Register Name	PBA Bar 1 Register
Mnemonic	BRIDGE.PBA.SCOMTRUST.PBABAR1
Address	0000000005012B01 (SCOM)
Description	This register is used with the PBABARMSK[n] to define the processor bus address range accessible by the request. It must be initialized by hypervisor before enabling and sending OCI transactions that target the PBA and before starting the Block Copy Engine. Even Data Parity is calculated and saved when this register is written. The 'PBA_FIR[Internal Err] indication is set when a parity error is detected.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	PBABAR1_CMD_SCOPE: Processor bus Command Scope These bits are initialized by hypervisor to indicate the command scope of the processor bus request. The PBA will always use the defined scope first. The request will be reissued with an increased scope if the original request gets a retry response that indicates a larger scope is required. Nodal Scope for dma and atomic write ttypes will be forced to a minimum of Group by PBA..

Register Name	PSI TCE Address Register
Mnemonic	BRIDGE.PSIHB.PSI_TCE_ADDR_REG
Address	0000000005012B44 (SCOM)
Description	TCE Address Register

Bits	SCOM	Field Mnemonic: Description
0:13	RO	Constant = 0b00000000000000
14:47	RWX	TCE_ADDR: The TCE Address Register contains the address used to look up higher order bits of DMA addresses when translation is enabled. Bits 18 to 47 of the TCE address are specified with this IDial. For address bits 14 to 15, need to set PSIHB ADDR Upper bits.
48:60	RO	Constant = 0b0000000000000
61:63	RWX	TCE_ENTRIES: The TCE Address Register contains a 3-bits to indicate how many TCE entries there are. No bits set to 1 means there are 8K entries, while a 1 in bit pos 1 means there are 512K entries. If bit pos 2 is set and bit pos 1 is not set, then there are 256k entries. If only bit pos 0 is set, then there are 16k entries. Bits 61-63 of TARTCE Register are specified with this IDial in the following order: TARTCE(61) = tce_entries(1); TARTCE(62) = tce_entries(2); TARTCE(63) = tce_entries(0).

Register Name	Secure Boot Control Register
Mnemonic	BRIDGE.PSIHB.TRUST_CONTROL
Address	0000000005012B45 (SCOM)
Description	Secure Boot Control

Bits	SCOM	Field Mnemonic: Description
0:1	RO	Constant = 0b00
2	RWX	FSP_TCE_ENABLE: This bit controls the use of TCE s to translate incoming FSP addresses to system memory addresses. When set to 1 , DMA operations within the low 32 bit FSP address space use the TCE mechanism to access the 48 bit system address space. This bit is similar to the Winnipeg PHB Configuration Register, bit 2.
3	ROX	Reserved.

Register Name	PBI CQ FIR Register
Mnemonic	NMMU.MM_FBC.CQ_WRAP.NXCQ_SCOM.NX_CQ_FIR_REG
Address	0000000005012C00 (SCOM) 0000000005012C01 (SCOM1) 0000000005012C02 (SCOM2)
Description	PBI CQ FIR Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	PBI_PE_FIR: PBI internal parity error.
1	RWX	WOX_AND	WOX_OR	PBUS_CMD_HANG_FIR: Processor bus command hang error.

3	RW	DMA_WR_DISABLE_NN_RN: For DMA write machine requests 0: Master can request Nn or Rn scope. 1: Master shall not request Nn or Rn scope.
4	RW	DMA_RD_DISABLE_LN: For DMA read machine requests 0: Master may request Ln scope. 1: Master shall not request Ln scope.
5	RW	DMA_RD_DISABLE_GROUP: For DMA read machine requests 0: Master may request G scope. 1: Master shall not request G scope.
6	RW	DMA_RD_DISABLE_VG_NOT_SYS: For DMA read machine requests: 0: Master may request Vg scope. 1: Master shall not request Vg scope but may use Vg(sys).

Bits	SCOM	Field Mnemonic: Description
7	RW	DMA_RD_DISABLE_NN_RN: For DMA read machine requests 0: Master may request Nn or Rn scope. 1: Master shall not request Nn or Rn scope.
8:10	RW	LCO_CRED_MASK: 111: Increment LCO credit count for 1 out of every 8 read commands sent. 011: Increment LCO credit count for 1 out of every 4 read commands sent. 001: Increment LCO credit count for 1 out of every 2 read commands sent. 000: Increment LCO credit count for 1 out of every 1 read commands sent.
11:14	RW	LCO_TARG_MIN: Minimum number of eligible LCO targets.
15:26	RW	LCO_TARG_CONFIG: Bit vector where there is one bit per valid LCO target.
27:30	RW	UNUSED: Unused.
31:32	RW	NX_FREEZE_MODES: Data arbitration priority percentage 00: Behaviour unchanged. 01: Pass data/ECC as is. 10: Freeze data pattern with good ECC. 11: Illegal.
33	RW	ADDR_BAR_MODE: Specifies the address mapping mode in use for the system. 0: Small system address map. Reduces the number of group ID bits to 2 and eliminates the chip ID bits. All chips have an ID of 0. Nn scope is not available in this mode. 1: Large system address map. Uses a 4 bits for the group ID and 3 bits for the chip id.
34	RW	SKIP_G: Scope mode control set by firmware when the topology is chip = group. Note that this CS does not disable the use of group scope. It modifies the progression of scope when the command starts at nodal scope. 0: The progression from nodal to group scope is followed when the combined response indicates rty_inc or sfStat (as applicable to the command) is set. 1: When the scope of the command is nodal and the command is in the Read, RWITM, or is an Atomic RMW and Fetch command (found in the Ack_BK group), and the combined response is rty_inc or the sfStat is set in the data, the command scope progression skips group and goes to Vg scope.
35:36	RW	Reserved.
37	RW	NXCQ_HANG_SM_ON_ARE: This is the control to enable or disable hanging the master FSM on a combined response of addr_error. When asserted (set to 1), a master getting an addr_error combined response will hang; this is used as a debug aid and should be disabled (set to 0) when shipped to the customer.
38	RW	NXCQ_HANG_SM_ON_LINK_FAIL: this is the control to enable or disable hanging the master FSM on a combined response of ack_*dead. When asserted (set to 1), a master getting an ack_*dead combined response will hang; this is used as a debug aid and should be disabled (set to 0) when shipped to the customer.
39	RW	CFG_PUMP_MODE: NX uses this control only for unit random backoff 0 chip_is_node. Ln scope is constrained to the master's chip Group scope is constrained to all chips specified by the topology as part of the group (coherent logical X link connections). 1 chip_is_group. Both Ln and G scope are constrained to the master's chip. In this mode is recommended that skip_g be set for best performance.
40:47	RW	DMA_RD_VG_RESET_TIMER_MASK: Mask for timer to reset read Vg scope predictor FF 64K cycles FE 32K cycles FC 16K cycles F8 8K cycles 80 512 cycles.
48:55	RW	DMA_WR_VG_RESET_TIMER_MASK: Mask for timer to reset write Vg scope predictor FF 64K cycles FE 32K cycles FC 16K cycles F8 8K cycles 80 512 cycles.

Description	NMMU Partition Table Control Register (PTCR)

Bits	SCOM	Field Mnemonic: Description
0:63	RW	MM_CFG_XLAT_CTL_PTCR: Details the Partition Table Control Register set up by the hypervisor. 0 - valid, 1:52 - PPTB (table base addr), 59:63 - PPTS (table size).

Register Name	NMMU SEID Base Address Register
Mnemonic	NMMU.MM_CFG_NMMU_XLAT_CTL_REG2
Address	0000000005012C4C (SCOM)
Description	NMMU SEID Base Address Register (SEIDBAR)

Bits	SCOM	Field Mnemonic: Description
0:63	RW	MM_CFG_XLAT_CTL_SEIDBAR: Details the base address for the hashed SEID table as set up by ultravisor for ACM/Redbox support.

Register Name	NMMU State Machine Control Register
Mnemonic	NMMU.MM_CFG_NMMU_CTL_SM
Address	0000000005012C52 (SCOM)
Description	NMMU State Machine Control Register

Bits	SCOM	Field Mnemonic: Description
0:11	RW	MM_CFG_NMMU_CTL_SM_TWSM_DIS: Per sm disables for tablewalk state machines. At least one must always be enabled w/i NMMU.
12:19	RW	MM_CFG_NMMU_CTL_SM_CKINSM_DIS: Per sm disables for check-in state machines. At least one must always be enabled w/i NMMU.
20	RW	MM_CFG_NMMU_CTL_SM_INV_SINGLE_THREAD_EN: Enables single-thread mode for snoop invalidates within fbc macro.
21	RW	MM_CFG_NMMU_CTL_TW_CXT_CAC_DIS: Disables twsm from allocating into the Context cache.
22:23	RW	Reserved.
24	RW	MM_CFG_NMMU_CTL_SM_ISS487_EN: Enables fix for iss487 where NX traffic runs as ST under DMT mode.
25	RW	Reserved.
26	RW	MM_CFG_NMMU_CTL_SM_ISS526_EN: Enables fix for iss526 where snp inv ops run as ST under DMT mode.
27:29	RW	Reserved.
30	RW	MM_CFG_NMMU_CTL_DYN_ST_FREQ_MULT: For dynamic single-thread mode, defines the interval over which slowdown pulses will be counted 0b00000 = Triggers frequency period of 1 k cycles 0b00001 = Triggers frequency period of 2 k cycles 0b00010 = Triggers frequency period of 3 k cycles 0b00100 = Triggers frequency period of 4 k cycles 0b00111 = Triggers frequency period of 8k cycles 0b01111 = Triggers frequency period of 16k cycles 0b11111 = Triggers frequency period of 32k cycles.
31	RW	MM_CFG_NMMU_CTL_TW_MPSS_DIS: Disable TW from finding MPSS (HPT) PTE hits.
32:39	RW	MM_CFG_NMMU_CTL_NCU_SNP_TLBIE_CNT_THRESH: Defines ncscoms_cfg_tlbie_cnt_thresh in nmmu ncu snooper for tlbie throttling mechanism.

Bits	SCOM	Field Mnemonic: Description
40	RW	MM_CFG_NMMU_CTL_TW_ATT_HPT_SAO_FOLD_DIS: Disables twsm from allowing SAO WIMG encoding for HPT to fold into normal mem category.
41	RW	MM_CFG_NMMU_CTL_TW_ATT_RDX_SAO_FOLD_DIS: Disables twsm from allowing SAO WIMG encoding for Rdx to fold into normal mem category.
42	RW	MM_CFG_NMMU_CTL_TW_ATT_RDX_NIO_FOLD_DIS: Disables twsm from allowing non-idempotent i/o encoding for Rdx to fold into cache-inh mem category.
43	RW	MM_CFG_NMMU_CTL_TW_ATT_RDX_TIO_FOLD_DIS: Disables twsm from allowing tolerant i/o encoding for Rdx to fold into cache-inh mem category.
44	RW	MM_CFG_NMMU_CTL_TW_LCO_RDX_EN: Enables twsm to attempt lateral castouts for all Radix guest and host pte cache lines for performance.
45	RW	MM_CFG_NMMU_CTL_TW_LCO_RDX_P_DIS: Disables twsm from attempting lateral castouts for Radix parent host/guest pte cache lines.
46	RW	MM_CFG_NMMU_CTL_TW_LCO_RDX_C_DIS: Disables twsm from attempting lateral castouts for Radix child host pte cache lines.
47	RW	MM_CFG_NMMU_CTL_TW_LCO_RDX_PWC_L2_DIS: Disables twsm from attempting lateral castouts for Radix pwc l2 pte cache lines.
48	RW	MM_CFG_NMMU_CTL_TW_LCO_RDX_PWC_L3_DIS: Disables twsm from attempting lateral castouts for Radix pwc l3 pte cache lines.
49	RW	MM_CFG_NMMU_CTL_TW_LCO_RDX_PWC_L4_DIS: Disables twsm from attempting lateral castouts for Radix pwc l4 pte cache lines.
50	RW	MM_CFG_NMMU_CTL_TW_LCO_RDX_PDE_EN: Enables twsm to attempt lateral castouts for Radix pde cache lines.
51	RW	Reserved.
52	RW	MM_CFG_NMMU_CTL_TW_RDX_PWC_DIS: Disables twsm from allocating into Radix page-walk cache.
53	RW	MM_CFG_NMMU_CTL_TW_RDX_INT_PWC_DIS: Disables twsm from allocating intermediate xlatns into Radix page-walk cache.
54	RW	MM_CFG_NMMU_CTL_TW_RDX_INT_TLB_DIS: Disables twsm from allocating intermediate xlatns into TLB.
55	RW	MM_CFG_NMMU_CTL_TW_RDX_PWC_SPLIT_EN: Drives twsm to split Radix page-walk cache in half for guest and half for host entries.
56	RW	MM_CFG_NMMU_CTL_TW_RDX_PWC_VA_HASH: Radix page-walk cache CGC hash only uses VA bits, Lpid,Pid treated as zeros.
57	RW	Reserved.
58	RW	MM_CFG_NMMU_CTL_TW_PTE_UPD_INTR_EN: Force Atomic PTE Update exception whenever a PTE Update is required.
59	RW	MM_CFG_NMMU_CTL_NCU_SNP_TLBIE_PACING_CNT_EN: Defines ncscoms_cfg_tlbie_pacing_cnt_en in nmmu ncu snooper for tlbie throttling mechanism.
60:63	RW	MM_CFG_NMMU_CTL_DYN_ST_FREQ_MULT: For dynamic single-thread mode, defines the interval over which slowdown pulses will be counted: 0b00000 = Triggers frequency period of 1 k cycles 0b00001 = Triggers frequency period of 2 k cycles 0b00010 = Triggers frequency period of 3 k cycles 0b00100 = Triggers frequency period of 4 k cycles 0b00111 = Triggers frequency period of 8 k cycles 0b01111 = Triggers frequency period of 16 k cycles 0b11111 = Triggers frequency period of 32 k cycles.

Register Name	NMMU Miscellaneous Control Register
Mnemonic	NMMU.MM_CFG_NMMU_CTL_MISC
Address	0000000005012C53 (SCOM)
Description	NMMU Miscellaneous Control Register

Bits	SCOM	Field Mnemonic: Description
0	RW	Reserved.
1	RW	MM_CFG_NMMU_CTL_MISC_BKINV_INTERLOCK_DIS: Disables ctl sm interlock on lower-barrier phase of a back-invalidate sequence.
2	RW	MM_CFG_NMMU_CTL_MISC_DYN_ST_MODE_EN: Enables dynamic single-thread mode under multi-thread operation (that is, single-thread mode disabled).
3	RW	MM_CFG_NMMU_CTL_MISC_DYN_ST_MODE_HANGP_EN: Enables dynamic single-thread mode with every unit hang pulse under multi-thread operation.
4:7	RW	MM_CFG_NMMU_CTL_MISC_DYN_ST_MODE_THRESHOLD: Defines threshold of slowdown condition determintes pulses before engaging dynamic single-thread mode. 0b00000000 = Triggers dynamic state mode sequence w/ every slowdown condition determines pulse during frequency period/interval 0b00000001 = Triggers dynamic state mode sequence w/ every other slowdown condition determines pulse during frequency period/interval 0b00000010 = Triggers dynamic state mode sequence w/ every 1/3 slowdown condition determines pulse during frequency period/interval 0b00000011 = Triggers dynamic state mode sequence w/ every 1/4 slowdown condition determines pulse during frequency period/interval 0b00000111 = Triggers dynamic state mode sequence w/ every 1/8 slowdown condition determines pulse during frequency period/interval 0b00001111 = Triggers dynamic state mode sequence w/ every 1/16 slowdown condition determines pulse during frequency period/interval 0b00011111 = Triggers dynamic state mode sequence w/ every 1/32 slowdown condition determines pulse during frequency period/interval 0b00111111 = Triggers dynamic state mode sequence w/ every 1/64 slowdown condition determines pulse during frequency period/interval 0b01111111 = Triggers dynamic state mode sequence w/ every 1/128 slowdown condition determines pulse during frequency period/interval 0b11111111 = Triggers dynamic state mode sequence w/ every 1/256 slowdown condition determines pulse during frequency period/interval.
8	RW	MM_CFG_NMMU_CTL_MISC_CTL_LFSR_DIS: Disables ctl lbs LFSR.
9	RW	MM_CFG_NMMU_CTL_MISC_FBC_LFSR_DIS: Disables fbc lbs LFSR.
10	RW	MM_CFG_NMMU_CTL_MISC_FBC_INV_AMORT_DIS: Disables fbc bkinvsm from amortizing multiple inv ops under a single barrier to inclusive agent.
11	RW	Reserved.
12	RW	MM_CFG_NMMU_CTL_MISC_FBC_DIN_ECC_CHK_DIS: Disables fbc din mstr rd array ecc checks.
13	RW	MM_CFG_NMMU_CTL_MISC_FBC_XLAT_ECC_CHK_DIS: Disables fbc din xlat array ecc checks.
14	RW	MM_CFG_NMMU_CTL_MISC_FBC_XLAT_PROT_ERR_CHK_DIS: Disables fbc xlat protocol error checks.
15	RW	MM_CFG_NMMU_CTL_MISC_FBC_XLAT_TIMEOUT_CHK_DIS: Disables fbc xlat timeout error checks.
16	RW	MM_CFG_NMMU_CTL_MISC_CO_PROT_ERR_CHK_DIS: Disables castout sm protocol error checks.
17	RW	MM_CFG_NMMU_CTL_MISC_CO_TIMEOUT_CHK_DIS: Disables castout sm timeout error checks.
18	RW	MM_CFG_NMMU_CTL_MISC_CKIN_PROT_ERR_CHK_DIS: Disables checkin sm protocol error checks.
19	RW	MM_CFG_NMMU_CTL_MISC_CKIN_TIMEOUT_CHK_DIS: Disables checkin sm timeout error checks.
20	RW	MM_CFG_NMMU_CTL_MISC_INV_PROT_ERR_CHK_DIS: Disables inv sm protocol error checks.

Bits	SCOM	Field Mnemonic: Description
21	RW	MM_CFG_NMMU_CTL_MISC_INV_TIMEOUT_CHK_DIS: Disables inv sm timeout error checks.
22	RW	MM_CFG_NMMU_CTL_MISC_TW_PROT_ERR_CHK_DIS: Disables twalk sm protocol error checks.
23	RW	MM_CFG_NMMU_CTL_MISC_TW_TIMEOUT_CHK_DIS: Disables twalk sm timeout error checks.
24	RW	MM_CFG_NMMU_CTL_MISC_FBC_SNP_PROT_ERR_CHK_DIS: Disables fbc snp protocol error checks.
25	RW	MM_CFG_NMMU_CTL_MISC_FBC_SNP_TIMEOUT_CHK_DIS: Disables fbc snp timeout error checks.
26	RW	MM_CFG_NMMU_CTL_MISC_FBC_CMD_PROT_ERR_CHK_DIS: Disables fbc command protocol error checks.
27	RW	Reserved.
28:31	RW	MM_CFG_NMMU_CTL_MISC_DYN_ST_MODE_THRESHOLD: Defines threshold of slowdown cond det pulses before engaging dynamic single-thread mode. 0b00000000 = Triggers dynamic state mode sequence with every slowdown condition determines pulse during frequency period/interval 0b00000001 = Triggers dynamic state mode sequence with every other slowdown condition determines pulse during frequency period/interval 0b00000010 = Triggers dynamic state mode sequence with every 1/3 slowdown condition determines pulse during frequency period/interval 0b00000011 = Triggers dynamic state mode sequence with every 1/4 slowdown condition determines pulse during frequency period/interval 0b00000111 = Triggers dynamic state mode sequence with every 1/8 slowdown condition determines pulse during frequency period/interval 0b00001111 = Triggers dynamic state mode sequence with every 1/16 slowdown condition determines pulse during frequency period/interval 0b00011111 = Triggers dynamic state mode sequence with every 1/32 slowdown condition determines pulse during frequency period/interval 0b00111111 = Triggers dynamic state mode sequence with every 1/64 slowdown condition determines pulse during frequency period/interval 0b01111111 = Triggers dynamic state mode sequence with every 1/128 slowdown condition determines pulse during frequency period/interval 0b11111111 = Triggers dynamic state mode sequence with every 1/256 slowdown condition determines pulse during frequency period/interval.
32:47	RW	MM_CFG_NMMU_CTL_MISC_HANG_PLS_MULT: Defines base hang pulse multiplier in forming unit hang pulse timer. Base pulse is every 1 k cycles.
48:55	RW	MM_CFG_NMMU_CTL_MISC_NCU_SNP_TLBIE_INC_RATE: Defines ncscoms_cfg_tlbie_inc_rate in nmmu ncu snooper for tlbie throttling mechanism.
56:63	RW	MM_CFG_NMMU_CTL_MISC_NCU_SNP_TLBIE_DEC_RATE: Defines ncscoms_cfg_tlbie_dec_rate in nmmu ncu snooper for tlbie throttling mechanism.

Register Name	**NMMU SLB Control Register**
Mnemonic	NMMU.MM_CFG_NMMU_CTL_SLB
Address	0000000005012C54 (SCOM)
Description	NMMU SLB Control Register

Bits	SCOM	Field Mnemonic: Description
0:15	RW	MM_CFG_NMMU_CTL_SLB_MBR_DIS: Per member disables for slb dir/cache per cgc. Coarse-granularity for disables, as follows. no configuration disables set for any mbr = ways 00-15 enabled - configuration disables for any mbr 00-03 = ways 00-15 enabled - configuration disables for any mbr 04-07 = ways 04-15 disabled - configuration disables for any mbr 08-11 = ways 08-15 disabled - configuration disables for any mbr 12-15 = ways 12-15 disabled.

Bits	SCOM	Field Mnemonic: Description
16	RW	MM_CFG_NMMU_CTL_SLB_SNGL_THD_EN: Enables single-thread mode for xlat ops through slb pipe.
17	RW	MM_CFG_NMMU_CTL_SLB_CAC_ALLOC_DIS: Disables all SLB cache allocations. Instead, forces tablewalk always. -- Reserved BIT.
18	RW	MM_CFG_NMMU_CTL_SLB_DMAP_MODE_EN: Enables SLB direct-mapped mode. Not used in p9 dd1.
19	RW	MM_CFG_NMMU_CTL_SLB_ALT_SEGSZ_DIS: Disables use of alternate segment size within SLB.
20	RW	MM_CFG_NMMU_CTL_SLB_DIR_PERR_CHK_DIS: Disables slb directory parity error checks.
21	RW	MM_CFG_NMMU_CTL_SLB_CAC_PERR_CHK_DIS: Disables slb cache parity error checks.
22	RW	MM_CFG_NMMU_CTL_SLB_LRU_PERR_CHK_DIS: Disables slb lru parity error checks.
23	RW	MM_CFG_NMMU_CTL_SLB_MULTIHIT_CHK_DIS: Disables slb multi-hit error checks.
24	RW	MM_CFG_NMMU_CTL_SLB_ISS505_FIX_DIS: Disable fix for issue505 override of tw_dir_wr status for lock release xltype.
25	RW	MM_CFG_NMMU_CTL_SLB_ISS510_FIX_DIS: Disable fix for issue510 tags active SLS override of lock_snp_val.
26	RW	MM_CFG_NMMU_CTL_SLB_ISS511_FIX_DIS: Disable fix for issue511 abort operation holdoff of chkout slow_retry generator.
27	RW	MM_CFG_NMMU_CTL_SLB_ISS544_FIX_DIS: Disable fix for issue544 for tag compare of error promote operation with current single-thd operation.
28	RW	MM_CFG_NMMU_CTL_SLB_ISS554_FIX_DIS: Disable fix for issue554 for holding off TLBIE commands until subsequent st wdw grants token to TLBIE command.
29:31	RW	Reserved.
32:35	RW	MM_CFG_NMMU_CTL_SLB_DBG_BUS0_STG0_SEL: NMMU SLB macro bus0 stage0 multiplexer select.
36:39	RW	MM_CFG_NMMU_CTL_SLB_DBG_BUS1_STG0_SEL: NMMU SLB macro bus1 stage0 multiplexer select.
40:51	RW	Reserved.
52	RW	MM_CFG_NMMU_CTL_SLB_ISS542_FIX_DIS: Disables slb fix for iss542 where inuse bits are allowed to impact lru state calculation.
53:63	RW	Reserved.

Register Name	NMMU TLB Control Register
Mnemonic	NMMU.MM_CFG_NMMU_CTL_TLB
Address	0000000005012C55 (SCOM)
Description	NMMU TLB Control Register

Bits	SCOM	Field Mnemonic: Description
0:15	RW	MM_CFG_NMMU_CTL_TLB_MBR_DIS: Per member disables for tlb dir/cache per cgc. Coarse-granularity for disables, as follows. no configuration disables set for any mbr = ways 00-15 enabled - configuration disables for any mbr 00-03 = ways 00-15 enabled - configuration disables for any mbr 04-07 = ways 04-15 disabled - configuration disables for any mbr 08-11 = ways 08-15 disabled - configuration disables for any mbr 12-15 = ways 12-15 disabled.
16	RW	MM_CFG_NMMU_CTL_TLB_SNGL_THD_EN: Enables single-thread mode for xlat ops through tlb pipe.
17	RW	MM_CFG_NMMU_CTL_TLB_CAC_ALLOC_DIS: Disables all TLB cache allocations. Instead, forces tablewalk always. -- Reserved bit.
18	RW	MM_CFG_NMMU_CTL_TLB_DMAP_MODE_EN: Enables TLB direct-mapped mode.

Bits	SCOM	Field Mnemonic: Description
19	RW	MM_CFG_NMMU_CTL_TLB_MPSS_DIS: Disables mpss mode within TLB.
20	RW	MM_CFG_NMMU_CTL_TLB_HASH_LPID_DIS: Disables lpid influence within tlb hash.
21	RW	MM_CFG_NMMU_CTL_TLB_HASH_PID_DIS: Disables pid influence within tlb hash.
22	RW	MM_CFG_NMMU_CTL_TLB_DIR_PERR_CHK_DIS: Disables tlb directory parity error checks.
23	RW	MM_CFG_NMMU_CTL_TLB_CAC_PERR_CHK_DIS: Disables tlb cache parity error checks.
24	RW	MM_CFG_NMMU_CTL_TLB_LRU_PERR_CHK_DIS: Disables tlb lru parity error checks.
25	RW	MM_CFG_NMMU_CTL_TLB_MULTIHIT_CHK_DIS: Disables tlb multi-hit error checks.
26	RW	MM_CFG_NMMU_CTL_TLB_EA_RANGE_CHK_DIS: Disables tlb ea(2:11) range check for exerciser purposes.
27	RW	MM_CFG_NMMU_CTL_TLB_ISS426_FIX_DIS: Disables fix for iss426 for twsm handoff of mpss cgc, instead of base cgc, for nearhit.
28	RW	MM_CFG_NMMU_CTL_TLB_ISS486_FIX_DIS: Disable fix for issue486 generating a stat = x6 for sec resv behind another sec resv/lock.
29	RW	MM_CFG_NMMU_CTL_TLB_ISS505_FIX_DIS: Disable fix for issue505 override of tw_dir_wr status for lock release xltype.
30	RW	MM_CFG_NMMU_CTL_TLB_ISS510_FIX_DIS: Disable fix for issue510 TA-SLS and virt_real terms into car0 host_replay calc.
31	RW	MM_CFG_NMMU_CTL_TLB_ISS512_FIX_DIS: Disable fix for issue512 slb recyc release all locks sending promote with ST arbiter error flag.
32:35	RW	MM_CFG_NMMU_CTL_TLB_DBG_BUS0_STG0_SEL: NMMU TLB macro bus0 stage0 multiplexer select.
36:39	RW	MM_CFG_NMMU_CTL_TLB_DBG_BUS1_STG0_SEL: NMMU TLB macro bus1 stage0 multiplexer select.
40	RW	MM_CFG_NMMU_CTL_TLB_ISS534_FIX_DIS: Disable fix for issue534 for fast retry of an operation immediately following a recycle with exception.
41	RW	MM_CFG_NMMU_CTL_TLB_ISS537_FIX_DIS: Disable fix for issue537 of sending Radix demote operation from TLB to SLB to clear local inUse latches.
42	RW	MM_CFG_NMMU_CTL_TLB_ISS540_FIX_DIS: Disable fix for issue540 for DD2 only.
43	RW	MM_CFG_NMMU_CTL_TLB_ISS543_FIX_DIS: Disables tlb fix for iss543 to override xltype dependency on the flush operation behind int dir read.
44:47	RW	MM_CFG_NMMU_CTL_TLB_GUEST_PREF_PGSZ: Defines preferred Radix guest page size when mpss is disabled within the TLB pipe.
48:51	RW	MM_CFG_NMMU_CTL_TLB_HOST_PREF_PGSZ: Defines preferred Radix host page size when mpss is disabled within the TLB pipe.
52	RW	MM_CFG_NMMU_CTL_TLB_ISS542_FIX_DIS: Disables tlb fix for iss542 where inuse bits are allowed to impact lru state calculation.
53	RW	MM_CFG_NMMU_CTL_TLB_ISS543B_FIX_EN: Enables tlb fix for iss543 part b to broaden fast-retry for any adjacent operation to a flush.
54:63	RW	Reserved.

Register Name	**NMMU Error Log Register**
Mnemonic	NMMU.MM_NMMU_ERR_LOG
Address	0000000005012C57 (SCOM)
Description	NMMU Error Log Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	MM_ERR_LOG: Details the NMMU Error Log Register - TBD.

Register Name	NMMU Error Inject Register
Mnemonic	NMMU.MM_NMMU_ERR_INJ
Address	0000000005012C58 (SCOM)
Description	NMMU Error Inject Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	MM_ERR_INJ: Details the NMMU Error Inject Register - TBD.

Register Name	NMMU Debug Mode Register
Mnemonic	NMMU.MM_NMMU_DBG_MODE
Address	0000000005012C59 (SCOM)
Description	NMMU Debug Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	MM_DBG_MODE_EN: Enables NMMU Debug Bus mode latches.
1	RW	MM_DBG_MODE_PRV_BUS0_STG2_SEL: NMMU prv macro bus0 stage2 multiplexer select.
2	RW	MM_DBG_MODE_PRV_BUS1_STG2_SEL: NMMU prv macro bus1 stage2 multiplexer select.
3	RW	MM_DBG_MODE_FBC_BUS0_STG2_SEL: NMMU fbc macro bus0 stage2 multiplexer select.
4	RW	MM_DBG_MODE_FBC_BUS1_STG2_SEL: NMMU fbc macro bus1 stage2 multiplexer select.
5	RW	MM_DBG_MODE_MSC_BUS0_STG2_SEL: NMMU msc macro bus0 stage2 multiplexer select.
6	RW	MM_DBG_MODE_MSC_BUS1_STG2_SEL: NMMU msc macro bus1 stage2 multiplexer select.
7	RW	MM_DBG_MODE_SLB_BUS0_STG2_SEL: NMMU SLB macro bus0 stage2 multiplexer select.
8	RW	MM_DBG_MODE_SLB_BUS1_STG2_SEL: NMMU SLB macro bus1 stage2 multiplexer select.
9	RW	MM_DBG_MODE_TW_BUS0_STG2_SEL: NMMU TW macro bus0 stage2 multiplexer select.
10	RW	MM_DBG_MODE_TW_BUS1_STG2_SEL: NMMU TW macro bus1 stage2 multiplexer select.
11	RW	MM_DBG_MODE_RDX_BUS0_STG2_SEL: NMMU RDX macro bus0 stage2 multiplexer select.
12	RW	MM_DBG_MODE_RDX_BUS1_STG2_SEL: NMMU RDX macro bus1 stage2 multiplexer select.
13	RW	MM_DBG_MODE_TLB_BUS0_STG2_SEL: NMMU TLB macro bus0 stage2 multiplexer select.
14	RW	MM_DBG_MODE_TLB_BUS1_STG2_SEL: NMMU TLB macro bus1 stage2 multiplexer select.
15	RW	MM_DBG_MODE_FBC_BUS0_STG1_SEL: NMMU fbc macro bus0 stage1 multiplexer select.
16	RW	MM_DBG_MODE_FBC_BUS1_STG1_SEL: NMMU fbc macro bus1 stage1 multiplexer select.
17	RW	MM_DBG_MODE_MSC_BUS0_STG1_SEL: NMMU msc macro bus0 stage1 multiplexer select.
18	RW	MM_DBG_MODE_MSC_BUS1_STG1_SEL: NMMU msc macro bus1 stage1 multiplexer select.
19	RW	MM_DBG_MODE_SLB_BUS0_STG1_SEL: NMMU SLB macro bus0 stage1 multiplexer select.
20	RW	MM_DBG_MODE_SLB_BUS1_STG1_SEL: NMMU SLB macro bus1 stage1 multiplexer select.
21	RW	MM_DBG_MODE_TW_BUS0_STG1_SEL: NMMU TW macro bus0 stage1 multiplexer select.
22	RW	MM_DBG_MODE_TW_BUS1_STG1_SEL: NMMU TW macro bus1 stage1 multiplexer select.

Bits	SCOM	Field Mnemonic: Description
23	RW	MM_DBG_MODE_RDX_BUS0_STG1_SEL: NMMU RDX macro bus0 stage1 multiplexer select.
24	RW	MM_DBG_MODE_RDX_BUS1_STG1_SEL: NMMU RDX macro bus1 stage1 multiplexer select.
25	RW	MM_DBG_MODE_TLB_BUS0_STG1_SEL: NMMU TLB macro bus0 stage1 multiplexer select.
26	RW	MM_DBG_MODE_TLB_BUS1_STG1_SEL: NMMU TLB macro bus1 stage1 multiplexer select.
27:31	RW	Reserved.
32:35	RW	MM_DBG_MODE_FBC_BUS0_STG0_SEL: NMMU FBC macro bus0 stage0 multiplexer select.
36:39	RW	MM_DBG_MODE_FBC_BUS1_STG0_SEL: NMMU FBC macro bus1 stage0 multiplexer select.
40:43	RW	MM_DBG_MODE_MSC_BUS0_STG0_SEL: NMMU MSC macro bus0 stage0 multiplexer select.
44:47	RW	MM_DBG_MODE_MSC_BUS1_STG0_SEL: NMMU MSC macro bus1 stage0 multiplexer select.
48:53	RW	MM_DBG_MODE_TW_BUS0_STG0_SEL: NMMU TW macro bus0 stage0 multiplexer select.
54:59	RW	MM_DBG_MODE_TW_BUS1_STG0_SEL: NMMU TW macro bus1 stage0 multiplexer select.
60:61	RW	MM_DBG_MODE_RDX_BUS0_STG0_SEL: NMMU RDX macro bus0 stage0 multiplexer select.
62:63	RW	MM_DBG_MODE_RDX_BUS1_STG0_SEL: NMMU RDX macro bus1 stage0 multiplexer select.

Register Name	**Software Initiated Interrupt Response Register**
Mnemonic	INT.INT_CQ.INT_CQ_SWI_RSP
Address	0000000005013009 (SCOM)
Description	This register is cleared whenever software writes to any of the above five Software Initiated Interrupt Command ports. When the command completes on the processor bus, this register will be loaded with the result. A write to this register has no effect.

Bits	SCOM	Field Mnemonic: Description
0	ROX	INT_CQ_SWI_RSP_HIST_DONE: Histogram command completed.
1	ROX	INT_CQ_SWI_RSP_POLL_DONE: Poll command completed.
2	ROX	INT_CQ_SWI_RSP_BCAST_DONE: Broadcast command completed.
3	ROX	INT_CQ_SWI_RSP_ASSIGN_DONE: Assign command completed.
4	ROX	INT_CQ_SWI_RSP_BLK_UPDT_DONE: Block Update command completed.
5	ROX	INT_CQ_SWI_RSP_Z: Zero responders. For the Poll-group commands (Poll, Assign, Broadcast), this equates to Ack types of: Ack0, AckC, AckP. For the Ack-group commands (Histogram, Block Update), this equates to Ack types of: HAck0, HAckP.
6	ROX	INT_CQ_SWI_RSP_O: One responder. For the Poll-group commands (Poll, Assign, Broadcast), this equates to Ack types of: Ack1, Ack1x. For the Ack-group commands (Histogram, Block Update), this equates to the Ack type of: HAckN. Please note that for these commands, there is no need. to distinguish between one responder vs. multiple responders.
7	ROX	INT_CQ_SWI_RSP_M: Multiple responders. For the Poll-group commands (Poll, Assign, Broadcast), this equates to the Ack type of: AckN. For the Ack-group commands (Histogram, Block Update), this equates to the Ack type of: HAckN.
8:12	ROX	INT_CQ_SWI_RSP_CRESP_0_4: Combined Response - cResp(0:4).
13	ROX	INT_CQ_SWI_RSP_Reserved_13: Reserved.
14	ROX	INT_CQ_SWI_RSP_COLLISON: Collision - ATAG(17).
15	ROX	INT_CQ_SWI_RSP_PRECLUDE: Precluded - ATAG(16).

Bits	SCOM	Field Mnemonic: Description
16:31	ROX	INT_CQ_SWI_RSP_ATAG_0_15: Combined Response ATAG(0:15). This is the final sequential ATAG, after having rearranged the bits by moving bit 18 into bit 12s position.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Power Bus General Configuration Register
Mnemonic	INT.INT_CQ.INT_CQ_CFG_PB_GEN
Address	000000000501300A (SCOM)
Description	General processor bus configuration information. The bits in this register must be set to the same value across all INT units in the system.

Bits	SCOM	Field Mnemonic: Description
0	RW	INT_CQ_CFG_PB_GEN_ADDR_BAR_MODE: System Address Mapping Mode - INT_CQ uses this for initial scope selection during master commands.
1	RW	INT_CQ_CFG_PB_GEN_PUMP_MODE: Pump Mode - This alters the physical reach of G scope, and it allows the INT unit to infer the system topology. Both Ln and G scope are constrained to the masters chip. While in this mode, it is recommended that skip_G be set for best performance.
2	RW	INT_CQ_CFG_PB_GEN_PHYP_SCOPE: Hypervisor scope range - This is used to determine the scope of certain commands that are intended to stay within a pHyps span of control. When. chip_is_node, I use this pHyp scope to distinguish between a HE 4x4 system or a 16x4 CCSM system.
3	ROX	INT_CQ_CFG_PB_GEN_PB_INIT: Processor bus initialized. This read-only bit is equal to the pb_int_pb_init input.
4	RW	INT_CQ_CFG_PB_GEN_MODE_128K_VP: 128K VP Mode - The block offset field in Interrupt commands is limited to 17 bits (128K) rather than the normal 19-bits. Therefore, the upper two. bits are always zero. INT_CQ uses this fact to shuffle address bits on the processor bus during Interrupt commands to guarantee that Addr(17:18) are. always equal to the two LSBs of my Group ID. This mode is related to the processor bus Fabrics behavior of using Addr(15:18) to create the target vector. during Vg scope commands. It is anticipated that this mode will only be enabled in HE system configurations (4x4). Please note that this mode bit. must be set consistent across all INT units.
5:15	RW	INT_CQ_CFG_PB_GEN_Reserved_5_15: Reserved.
16:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	Processor Cores Enabled for Message Send Register
Mnemonic	INT.INT_CQ.INT_CQ_MSGSND
Address	000000000501300B (SCOM)
Description	Identifies which of the 24 possible core chiplets are enabled and available to receive the MsgSnd processor bus command. A MsgSnd command that targets an enabled core will be given a pResp of lpc_ack. A MsgSnd command that targets a disabled core will be ignored. Note that CQ does not need to be explicitly aware of Normal-core vs. Fused-core mode. Regardless of the mode, CQ will always use PB Addr(23:27) to index into this register.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	INT_CQ_MSGSND_CORES_ENABLED_0_23: In Normal Core Mode, these 24 bits reference the 24 logical 4-threaded cores. bit 0 = core 0 (0 is dead, 1 is active). bit 1 = core 1. bit 2 = core 2. (and so on). In Fused Core Mode, these 12 pairs of bits reference the 12 logical 8-threaded cores. bits 0:1 = core 0 (set to either 00 or 11). bits 2:3 = core 1. bits 4:5 = core 2. (and so on).
24:63	RO	Constant = 0b000000000000000000000000000000000000000000000000

Register Name	**INT Unit Event Selection for CNPM Register**
Mnemonic	INT.INT_CQ.INT_CQ_CNPM_SEL
Address	000000000501300F (SCOM)
Description	Controls the 32-bit POWER9 Event Bus outputs of the INT unit, which go to the Common Nest Performance Monitor (CNPM) logic.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	INT_CQ_CNPM_SEL_PMON_MUX_BYTE0_0_2: Controls events sent to CNPM event bus, byte 0. 0 = zeros. 1 = PC events. 2 = VC events. 3 = CQ events.
3:5	RW	INT_CQ_CNPM_SEL_PMON_MUX_BYTE1_0_2: Controls events sent to CNPM event bus, byte 1. (same selection encodes as listed for byte 0).
6:8	RW	INT_CQ_CNPM_SEL_PMON_MUX_BYTE2_0_2: Controls events sent to CNPM event bus, byte 2. (same selection encodes as listed for byte 0).
9:11	RW	INT_CQ_CNPM_SEL_PMON_MUX_BYTE3_0_2: Controls events sent to CNPM event bus, byte 3. (same selection encodes as listed for byte 0).
12:23	RW	INT_CQ_CNPM_SEL_Reserved_12_23: Reserved.
24:39	RW	INT_CQ_CNPM_SEL_EBUS_ENABLE_0_15: Drives the INT_PB_EBUS_ENABLE(0:15) outputs of INT.
40:63	RO	Constant = 0b000000000000000000000000

Register Name	**Interrupt Controller Base Address Register**
Mnemonic	INT.INT_CQ.INT_CQ_IC_BAR
Address	0000000005013010 (SCOM)
Description	Used during inbound cache inhibited (CI) reads/writes. This BAR points to a fixed size of eight pages (either eight 4 K pages resulting in a 32 K range, or eight 64 K pages resulting in a 512 K range).

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_CQ_IC_BAR_VALID: Valid - When this bit is a 1, the BAR is enabled to actively participate in comparing its memory pointer to inbound operations.
1	RWX	INT_CQ_IC_BAR_PAGE_SIZE_64K: Page size for IC BAR: 0 = 4 K, 1 = 64 K.
2:7	RO	Constant = 0b000000

Bits	SCOM	Field Mnemonic: Description
8:48	RWX	INT_CQ_IC_BAR_ADDR_8_48: Pointer to a 32 K range in memory.
49:63	RO	Constant = 0b0000000000000000

Register Name	Thread Management Base Address 1 Register
Mnemonic	INT.INT_CQ.INT_CQ_TM1_BAR
Address	0000000005013012 (SCOM)
Description	Used during inbound cache inhibited (CI) reads/writes. Each BAR points to a fixed size of four pages (either four 4K pages resulting in a 16 K range, or four 64 K pages resulting in a 256 K range).

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_CQ_TM1_BAR_VALID: Valid - When this bit is a 1, the BAR is enabled to actively participate in comparing its memory pointer to inbound operations.
1	RWX	INT_CQ_TM1_BAR_PAGE_SIZE_64 K: Page size for TM BAR: 0 = 4 K, 1 = 64 K.
2:7	RO	Constant = 0b000000
8:49	RWX	INT_CQ_TM1_BAR_ADDR_8_49: Pointer to a 16K range in memory.
50:63	RO	Constant = 0b00000000000000

Register Name	Thread Management Base Address 2 Register
Mnemonic	INT.INT_CQ.INT_CQ_TM2_BAR
Address	0000000005013014 (SCOM)
Description	Used during inbound cache inhibited (CI) reads/writes. Each BAR points to a fixed size of four pages (either four 4 K pages resulting in a 16 K range, or four 64 K pages resulting in a 256 K range).

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_CQ_TM2_BAR_VALID: Valid - When this bit is a 1, the BAR is enabled to actively participate in comparing its memory pointer to inbound operations.
1	RWX	INT_CQ_TM2_BAR_PAGE_SIZE_64K: Page size for TM BAR: 0 = 4 K, 1 = 64 K.
2:7	RO	Constant = 0b000000
8:49	RWX	INT_CQ_TM2_BAR_ADDR_8_49: Pointer to a 16 K range in memory.
50:63	RO	Constant = 0b00000000000000

Register Name	Presentation Controller Base Address Register
Mnemonic	INT.INT_CQ.INT_CQ_PC_BAR
Address	0000000005013016 (SCOM)
Description	Used during inbound cache inhibited (CI) reads/writes. This BAR points to a variable size range, between 32 M - 256 G, by using the mask register described below.

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_CQ_PC_BAR_VALID: Valid - When this bit is a 1, the BAR is enabled to actively participate in comparing its memory pointer to inbound operations.
1:7	RO	Constant = 0b0000000

Bits	SCOM	Field Mnemonic: Description
8:38	RWX	INT_CQ_PC_BAR_ADDR_8_38: Pointer to a variable size range in memory (from 32 M to 256 G).
39:63	RO	Constant = 0b00000000000000000000000000

Register Name	Presentation Controller Base Address Mask Register
Mnemonic	INT.INT_CQ.INT_CQ_PC_BARM
Address	0000000005013017 (SCOM)
Description	Used in conjunction with the PC_BAR register described above. The mask register selects which bits of the PC_BAR are used during address compares, and thus dictates the size of the memory range.

Bits	SCOM	Field Mnemonic: Description
0:25	RO	Constant = 0b00000000000000000000000000
26:38	RW	INT_CQ_PC_BARM_ADDR_26_38: Mask bits. 0 = Exclude the corresponding address bit in the compare. 1 = Include the corresponding address bit in the compare. 0b1111111111111 = selects a 32 M range. 0b1111111111110 = selects a 64 M range. - - - 0b1000000000000 = selects a 128 G range. 0b0000000000000 = selects a 256 G range.
39:63	RO	Constant = 0b00000000000000000000000000

Register Name	Virtualization Controller Base Address Register
Mnemonic	INT.INT_CQ.INT_CQ_VC_BAR
Address	0000000005013018 (SCOM)
Description	Used during inbound cache inhibited (CI) reads/writes. This BAR points to a variable size range, between 64 M - 8 T, by using the mask register described below.

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_CQ_VC_BAR_VALID: Valid - When this bit is a 1, the BAR is enabled to actively participate in comparing its memory pointer to inbound operations.
1:7	RO	Constant = 0b0000000
8:37	RWX	INT_CQ_VC_BAR_ADDR_8_37: Pointer to a variable size range in memory (from 64 M to 8 T).
38:63	RO	Constant = 0b00000000000000000000000000

Register Name	Virtualization Controller Base Address Mask Register
Mnemonic	INT.INT_CQ.INT_CQ_VC_BARM
Address	0000000005013019 (SCOM)
Description	Used in conjunction with the VC_BAR register described above. The mask register selects which bits of the VC_BAR are used during address compares, and thus dictates the size of the memory range.

Bits	SCOM	Field Mnemonic: Description
0:20	RO	Constant = 0b00000000000000000000

Bits	SCOM	Field Mnemonic: Description
21:37	RW	INT_CQ_VC_BARM_ADDR_21_37: Mask bits. 0 = Exclude the corresponding address bit in the compare. 1 = Include the corresponding address bit in the compare. 0b11111111111111111 = selects a 64 M range. 0b11111111111111110 = selects a 128 M range. - - - 0b10000000000000000 = selects a 4 T range. 0b00000000000000000 = selects a 8 T range.
38:63	RO	Constant = 0b00000000000000000000000000

Register Name	Table Address Register
Mnemonic	INT.INT_CQ.INT_CQ_TAR
Address	000000000501301E (SCOM)
Description	Used in conjunction with the Table Data Register (below) to read/write various tables within CQ. Software first loads the Table Address Register to point to the desired table (and the entry within that table), then software can access that specific entry via reading/writing the Table Data Register.

Bits	SCOM	Field Mnemonic: Description
0	RW	INT_CQ_TAR_AUTO_INC: Auto Increment - When this bit is a 1, any access to the Table Data Register will increment the Entry Pointer (in bits 26:31).
1:11	RO	Constant = 0b00000000000
12:15	RW	INT_CQ_TAR_TABLE_SEL_0_3: Table Select (0:3) - Selects which table is being accessed.
16:25	RO	Constant = 0b0000000000
26:31	RWX	INT_CQ_TAR_ENTRY_SEL_0_5: Entry Pointer (0:5) - When the Auto Increment bit is a 1, any access to the Table Data Register will increment this Entry Pointer.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Power Bus Input Control Register
Mnemonic	INT.INT_CQ.INT_CQ_PBI_CTL
Address	0000000005013020 (SCOM)
Description	Controls various functions relating to the processor bus input logic.

Bits	SCOM	Field Mnemonic: Description
0	RW	INT_CQ_PBI_CTL_DIS_ECCCHK_PBI: Disable ECC data correction on the processor bus Data Ramp inputs.
1	RW	INT_CQ_PBI_CTL_DIS_ECCCHK_STO: Disable ECC data correction while reading the Store Data array.
2	RW	INT_CQ_PBI_CTL_Reserved_2: Reserved.
3	RW	INT_CQ_PBI_CTL_Reserved_3: Reserved.
4	RW	INT_CQ_PBI_CTL_Reserved_4: Reserved.
5	RW	INT_CQ_PBI_CTL_PAGE_SIZE_64K_PC: Page size for PC BAR: 0 = 4K, 1 = 64K.
6	RW	INT_CQ_PBI_CTL_PAGE_SIZE_64K_VC: Page size for VC BAR: 0 = 4K, 1 = 64K.
7	RW	INT_CQ_PBI_CTL_LINUX_TRIG_MODE: Linux Trigger Mode - During accesses to the Virtualization Controller BAR, if the EDT set type is "01", then rather than having a pair of pages (IPI.Trigger / EOI) selected by Addr(51), the PB command type (CI Write vs. CI Read) will determine whether the operation is a IPI Trigger or IVE SB EOI.

Bits	SCOM	Field Mnemonic: Description
8:9	RW	INT_CQ_PBI_CTL_TRACE_BUS_SEL_0_1: Controls source of the INT debug trace bus: int_tc_0_trace_bus(0:87). 0 = zeros. 1 = PC trace bus. 2 = VC trace bus. 3 = CQ trace bus.
10:11	RW	INT_CQ_PBI_CTL_CQ_TRACE_SEL_0_1: Controls source of CQs trace bus contribution. 0 = zeros. 1 = CI Store and CI Load FSM state information. 2 = Outbound Read and Write FSM state information. 3 = Outbound Interrupt FSM state information.
12	RW	INT_CQ_PBI_CTL_DIS_DMA_W: Disable accepting DMA Writes as IPI triggers through the VC BAR.
13	RW	INT_CQ_PBI_CTL_STRICT_IPI_RULES: Strict enforcement that IPI triggers target only even pages in the IPI range of the VC BAR (while not in Linux Trigger Mode).
14	WOX	INT_CQ_PBI_CTL_FORCE_ECC_CE: Force a single-shot ECC correctable error on the next cycle that data is written into the selected array. Data bit 0 is flipped.
15	WOX	INT_CQ_PBI_CTL_FORCE_ECC_UE: Force a single-shot ECC uncorrectable error on the next cycle that data is written into the selected array. Data bits 0 and 1 are flipped.
16	RW	INT_CQ_PBI_CTL_FORCE_ECC_SEL: Array selection when forcing ECC errors.
17	RW	INT_CQ_PBI_CTL_SPEC_CILD_G: Speculative CI Load scope requirement.
18	RW	INT_CQ_PBI_CTL_EN_SPEC_CILD_IVE: Enable speculative CI Load on AIB for IVE SB EOI (to VC).
19	RW	INT_CQ_PBI_CTL_EN_SPEC_CILD_EQD: Enable speculative CI Load on AIB for EQD SB EOI (to VC).
20	RW	INT_CQ_PBI_CTL_EN_SPEC_CILD_VPC_HW: Enable speculative CI Load on AIB for VPC access (to PC) when the command does not come from a processor core (TTAG bit 10 = 0).
21	RW	INT_CQ_PBI_CTL_EN_SPEC_CILD_VPC_SW: Enable speculative CI Load on AIB for VPC access (to PC) when the command comes from a processor core (TTAG bit 10 = 1).
22:31	RW	INT_CQ_PBI_CTL_Reserved_22_31: Reserved.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	**Power Bus Output Control Register**
Mnemonic	INT.INT_CQ.INT_CQ_PBO_CTL
Address	0000000005013021 (SCOM)
Description	Controls various functions relating to the processor bus output logic.

Bits	SCOM	Field Mnemonic: Description
0	RW	INT_CQ_PBO_CTL_DIS_ECCCHK_LDO: Disable ECC data correction while reading the Load Data array.
1	RW	INT_CQ_PBO_CTL_DIS_ECCCHK_WRO: Disable ECC data correction while reading the Write Data array.
2	RW	INT_CQ_PBO_CTL_DIS_ECCCHK_CLO: Disable ECC data correction while reading the Cache Line Buffer.
3	RW	INT_CQ_PBO_CTL_Reserved_3: Reserved.
4	RW	INT_CQ_PBO_CTL_STRICT_ORDER: Force strict ordering on all outbound processor bus operations. In other words, all operations are sent on the processor bus in the exact order that they are. received on AIB.
5	RW	INT_CQ_PBO_CTL_FORCE_MAX_SCOPE_INTRP: Force the maximum scope on outbound Interrupt commands that is typical for the current system configuration. This applies to the four Interrupt commands. which access the Block Scope Table (Histogram, Poll, Assign, Broadcast).

Bits	SCOM	Field Mnemonic: Description
6	RW	INT_CQ_PBO_CTL_FORCE_VG_SYS_INTRP: Force Vg(sys) scope on outbound Interrupt commands. This applies to the four Interrupt commands which access the Block Scope Table (Histogram, Poll, Assign, Broadcast).
7	RW	INT_CQ_PBO_CTL_DROP_PRI_INTRP: Initial Drop Priority when issuing Interrupt commands. This applies to all five Interrupt commands (Histogram, Poll, Assign, Broadcast, BlkUpdate).
8	RW	INT_CQ_PBO_CTL_DROP_PRI_HPC_READ: Initial Drop Priority when issuing HPC Read commands.
9	RW	INT_CQ_PBO_CTL_DROP_PRI_DMA: Initial Drop Priority for the Read and Write machines.
10:15	RW	INT_CQ_PBO_CTL_DROP_MASK_0_5: Drop Priority Algorithm Mask - Used to adjust the probability of increasing the drop priority when rty_drp CRESP is received. ...
16	RW	INT_CQ_PBO_CTL_SLOW_CMD_RATE: Reduce the maximum master command rate to every other cycle.
17	RW	INT_CQ_PBO_CTL_EN_RANDOM_BACKOFF: Enable the random back-off mechanism of master commands.
18	RW	INT_CQ_PBO_CTL_EN_POLL_BACKOFF: Enable the AckC retry back-off mechanism of master Interrupt commands (Poll-group only). If three consecutive AckC retries occur, then that third. retry (and any subsequent consecutive AckC retry) must incur a random back off of 63-126 cycles prior to retry.
19	RW	INT_CQ_PBO_CTL_Reserved_19: Reserved.
20	WOX	INT_CQ_PBO_CTL_FORCE_ECC_CE: Force a single-shot ECC correctable error on the next cycle that data is written into the selected array. Data bit 0 is flipped.
21	WOX	INT_CQ_PBO_CTL_FORCE_ECC_UE: Force a single-shot ECC uncorrectable error on the next cycle that data is written into the selected array. Data bits 0 and 1 are flipped.
22:23	RW	INT_CQ_PBO_CTL_FORCE_ECC_SEL_0_1: Array selection when forcing ECC errors.
24	RW	INT_CQ_PBO_CTL_DISABLE_INJECT: Disable use of Inject group commands. This is a total disabling of any inject commands. The Inject attribute is ignored on AIB In when receiving. cmds from VC/PC, and I ignore any combined response direction to convert to an inject group command.
25	RW	INT_CQ_PBO_CTL_FORCE_CL_INJECT: Force all cache line DMA Writes to be cl_dma_inj, even though VC/PC may not assert the Inject attribute within the AIB command. This bit only. modifies the command as it is received on AIB; a CRESP directing me to change to a non-Inject command is still honored.
26	RW	INT_CQ_PBO_CTL_FORCE_PR_INJECT: Force all partial DMA Writes to be pr_dma_inj, even though VC/PC may not assert the Inject attribute within the AIB command. This bit only modifies. the command as it is received on AIB; a CRESP directing me to change to a non-Inject command is still honored.
27	RW	INT_CQ_PBO_CTL_HANG_ON_ADDR_ERROR: When set to 1, master write machines will hang and preserve their state if they receive an addr_error combined response. This bit has no effect on. master read or master interrupt machines (which will always hang on this condition).
28	RW	INT_CQ_PBO_CTL_HANG_ON_ACK_DEAD: When set to 1, master write machines will hang and preserve their state if they receive an ack_dead combined response. This bit has no effect on. master read or master interrupt machines (which will always hang on this condition).
29	RW	INT_CQ_PBO_CTL_POLL_BCST_RTY_MON: Whenever any master Poll or Broadcast command has received 3+ consecutive retries, then the max_poll_bcast_1(0:4) value is temporarily reduced to the. max_poll_bcast_2(0:4) level until this retry condition no longer exists. This bit controls which types of Poll and Broadcast count consecutive. retries.
30:34	RW	INT_CQ_PBO_CTL_MAX_POLL_BCAST_1_0_4: Maximum number of outstanding master Poll and Broadcast commands. (all types) allowed at any given time.

Bits	SCOM	Field Mnemonic: Description
35:39	RW	INT_CQ_PBO_CTL_MAX_POLL_BCAST_2_0_4: Maximum number of outstanding master Poll and Broadcast commands (Group) allowed at any given time. This must be equal to or less than max_poll_bcast_1(0:4).
40:44	RW	INT_CQ_PBO_CTL_MAX_POLL_BCAST_3_0_4: Maximum number of outstanding master Poll and Broadcast commands ("remote" Group) allowed at any given time. This must be equal to or less than max_poll_bcast_2(0:4). The term "remote" has a different meaning depending on the system configuration. A group poll/broadcast is "remote" when: chip_is_group: I am targeting beyond my group of four chips. 4x4 system: I am using Vg scope. 64s system: Never, since the pHyp scope is constrained to 4 chips.
45	RW	INT_CQ_PBO_CTL_DISABLE_NN_RN: Never use Nn or Rn scope while mastering a command on the processor bus. Scope calculations are modified as follows: Nn -> G, Rn -> Vg(0). This bit does not apply to Interrupt commands.
46	RW	INT_CQ_PBO_CTL_DISABLE_VG_NOT_SYS: Disable Vg scope with the exception of Vg(sys). Scope calculation is modified as follows: Vg(x) -> Vg(sys). This bit does not apply to Interrupt commands.
47	RW	INT_CQ_PBO_CTL_DISABLE_G: Never use G scope while mastering a command on the processor bus. Scope calculation is modified as follows: G -> Vg(sys). This bit does not apply to Interrupt commands.
48	RW	INT_CQ_PBO_CTL_DISABLE_LN: Never use Ln scope while mastering a command on the processor bus. Scope calculation is modified as follows: Ln -> G. This bit does not apply to Interrupt commands.
49	RW	INT_CQ_PBO_CTL_SKIP_G: This bit does not disable the use of group scope, it causes P3CQ to modify the progression of scope when the command starts at nodal scope. In other. words, if the scope is currently at Ln or Nn, and if I am instructed to increment the scope (via CRESP or sfstat), then skip G scope, and go straight. to Vg(sys) scope. It is recommended to set this bit to a 1 when chip_is_group. This bit does not apply to Interrupt commands.
50:63	RW	INT_CQ_PBO_CTL_Reserved_50_63: Reserved.

Register Name	AIB Control Register
Mnemonic	INT.INT_CQ.INT_CQ_AIB_CTL
Address	0000000005013022 (SCOM)
Description	Controls various functions relating to the AIB logic.

Bits	SCOM	Field Mnemonic: Description
0	RW	INT_CQ_AIB_CTL_DIS_ECCCHK_AIB_IN: Disable ECC data correction while receiving data on AIB.
1:3	RW	INT_CQ_AIB_CTL_EXTRA_CMD_SPACING_0_2: The AIB arbiter allows a peak command rate of one command every two cycles. The value in this field is added to that minimum spacing of one cycle. With regard to the requirement that "responses" on certain AIB paths be limited to once every four cycles, the value in this field must be greater than two before it will begin to have any effect on such responses. Valid values for this field are 0 - 6.
4:7	RW	INT_CQ_AIB_CTL_EXTRA_DAT_SPACING_0_3: The AIB arbiter allows back-to-back data transfers with zero cycle separation. The value in this field is added to that minimum spacing of zero cycles. Valid values for this field are 0 - 8.
8:11	RW	INT_CQ_AIB_CTL_PC_PRIORITY_LIMIT_0_3: As the AIB arbiter selects between CQ and VC in sending commands to the PC, CQ has top priority. This field specifies the number of consecutive times that VC will lose, after which VC will be given top priority for one command.

Bits	SCOM	Field Mnemonic: Description
12:15	RW	INT_CQ_AIB_CTL_VC_PRIORITY_LIMIT_0_3: As the AIB arbiter selects between CQ and PC in sending commands to VC, CQ has top priority. This field specifies the number of consecutive times that PC will lose, after which PC will be given top priority for one command.
16:19	RW	INT_CQ_AIB_CTL_CQ_PRIORITY_LIMIT_0_3: As the AIB arbiter selects between VC and PC in sending commands to CQ, VC has top priority. This field specifies the number of consecutive times that PC will lose, after which PC will be given top priority for one command.
20	RW	INT_CQ_AIB_CTL_BLOCK_CMD_OVERLAP: Modify AIB arbitration to block command overlap. Overlap is defined as allowing a command-only operation to begin during the data transfer cycles (except for the last data transfer cycle) of a previous command-data operation; whereas any kind of operation (command-only or command-data) is permitted to begin on the last data transfer cycle of a previous command-data operation. Also, when this bit is a 1, responses that require a minimum four-cycle separation with other responses will not allow any kind of command to begin during the subsequent three dead cycles.
21:31	RW	INT_CQ_AIB_CTL_Reserved_21_31: Reserved.
32:37	RW	INT_CQ_AIB_CTL_CH0_CMD_CREDITS_0_5: Available channel 0 command credits advertised to both PC and VC, for use during outbound write requests (DMA or CI).
38:43	RW	INT_CQ_AIB_CTL_CH1_CMD_CREDITS_0_5: Available channel 1 command credits advertised to both PC and VC, for use during outbound read requests (DMA, CI, or RWITM).
44:49	RW	INT_CQ_AIB_CTL_CH1_DAT_CREDITS_0_5: Available channel 1 data credits advertised to both PC and VC, for use during outbound RWITM.
50:55	RW	INT_CQ_AIB_CTL_CH2_CMD_CREDITS_PC_0_5: Available channel 2 command credits advertised to PC, for use during outbound interrupt requests.
56:61	RW	INT_CQ_AIB_CTL_CH2_CMD_CREDITS_VC_0_5: Available channel 2 command credits advertised to VC, for use during outbound interrupt requests.
62	RW	INT_CQ_AIB_CTL_Reserved_62: Reserved.
63	WOX	INT_CQ_AIB_CTL_REINIT_CREDITS: When this bit is loaded with a 1, CQ re-advertises its credits to PC and VC by asserting the CRD_INIT signals just as is done at POR or a synchronous. reset. This bit auto-resets.

Register Name	Interrupt Unit Reset Control Register
Mnemonic	INT.INT_CQ.INT_CQ_RST_CTL
Address	0000000005013023 (SCOM)
Description	Interrupt Unit Reset Control Register

Bits	SCOM	Field Mnemonic: Description
0	WOX	INT_CQ_RST_CTL_SYNC_RESET: Interrupt unit synchronous reset. This bit auto-resets after 128 cycles.
1	RWX	INT_CQ_RST_CTL_QUIESCE_PB: Quiesce the processor bus in preparation for a warm boot.
2	ROX	INT_CQ_RST_CTL_MASTER_IDLE: Processor bus master (outbound) machines are all idle - the Read, Write and Interrupt machines.
3	ROX	INT_CQ_RST_CTL_SLAVE_IDLE: Processor bus slave (inbound) machines are all idle - the Store and Load machines.
4	WOX	INT_CQ_RST_CTL_PB_BAR_RESET: Processor bus BAR Reset - Writing a 1 to this bit will cause the four BARs (IC_BAR, TM[n]_BAR, PC_BAR, VC_BAR) to be reset to all zeros. This bit auto- resets. The four BARs are not affected by the normal synchronous reset (see bit 0), and thus this bit gives software the flexibility to either reset. or preserve the BAR contents when resetting the Interrupt unit.
5:7	WOX	INT_CQ_RST_CTL_Reserved_5_7: Reserved.

Bits	SCOM	Field Mnemonic: Description
8:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	CI Store Queue Configuration 1 Register
Mnemonic	INT.INT_CQ.INT_CQ_CFG_STQ1
Address	0000000005013024 (SCOM)
Description	Configuration settings for the CI Store Queue.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	INT_CQ_CFG_STQ1_STQ_IPI_MIN_0_4: Number of dedicated CI Store machines for IPI interrupt triggers.
5:9	RW	INT_CQ_CFG_STQ1_STQ_IPI_MAX_0_4: Max allowed CI Store machines for IPI interrupt triggers.
10:14	RW	INT_CQ_CFG_STQ1_STQ_HW_MIN_0_4: Number of dedicated CI Store machines for HW interrupt triggers.
15:19	RW	INT_CQ_CFG_STQ1_STQ_HW_MAX_0_4: Max allowed CI Store machines for HW interrupt triggers.
20:24	RW	INT_CQ_CFG_STQ1_STQ_OS_MIN_0_4: Number of dedicated CI Store machines for OS level escalation.
25:29	RW	INT_CQ_CFG_STQ1_STQ_OS_MAX_0_4: Max allowed CI Store machines for OS level escalation.
30:34	RW	INT_CQ_CFG_STQ1_STQ_HYP_MIN_0_4: Number of dedicated CI Store machines for Hyp level escalation.
35:39	RW	INT_CQ_CFG_STQ1_STQ_HYP_MAX_0_4: Max allowed CI Store machines for Hyp level escalation.
40:44	RW	INT_CQ_CFG_STQ1_STQ_RDI_MIN_0_4: Number of dedicated CI Store machines for Redistribution triggers.
45:49	RW	INT_CQ_CFG_STQ1_STQ_RDI_MAX_0_4: Max allowed CI Store machines for Redistribution triggers.
50:54	RW	INT_CQ_CFG_STQ1_STQ_THR_MIN_0_4: Number of dedicated CI Store machines for Thread Mgmt accesses.
55:59	RW	INT_CQ_CFG_STQ1_STQ_THR_MAX_0_4: Max allowed CI Store machines for Thread Mgmt accesses.
60:63	RW	INT_CQ_CFG_STQ1_Reserved_60_63: Reserved.

Register Name	CI Store Queue Configuration 2 Register
Mnemonic	INT.INT_CQ.INT_CQ_CFG_STQ2
Address	0000000005013025 (SCOM)
Description	Configuration settings for the CI Store Queue.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	INT_CQ_CFG_STQ2_STQ_VPC_MIN_0_4: Number of dedicated CI Store machines for VPC accesses.
5:9	RW	INT_CQ_CFG_STQ2_STQ_VPC_MAX_0_4: Max allowed CI Store machines for VPC accesses.
10:14	RW	INT_CQ_CFG_STQ2_STQ_REG_MIN_0_4: Number of dedicated CI Store machines for Internal Reg / LSI trig.
15:19	RW	INT_CQ_CFG_STQ2_STQ_REG_MAX_0_4: Max allowed CI Store machines for Internal Reg / LSI trig.
20:31	RW	INT_CQ_CFG_STQ2_Reserved_20_31: Reserved.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	CI Load Queue Configuration Register
Mnemonic	INT.INT_CQ.INT_CQ_CFG_LDQ
Address	0000000005013026 (SCOM)
Description	Configuration settings for the CI Load Queue.

Bits	SCOM	Field Mnemonic: Description
0:4	RW	INT_CQ_CFG_LDQ_LDQ_IVE_MIN_0_4: Number of dedicated CI Load machines for IVE SB EOI.
5:9	RW	INT_CQ_CFG_LDQ_LDQ_IVE_MAX_0_4: Max allowed CI Load machines for IVE SB EOI.
10:14	RW	INT_CQ_CFG_LDQ_LDQ_EQD_MIN_0_4: Number of dedicated CI Load machines for EQD SB EOI.
15:19	RW	INT_CQ_CFG_LDQ_LDQ_EQD_MAX_0_4: Max allowed CI Load machines for EDQ SB EOI.
20:24	RW	INT_CQ_CFG_LDQ_LDQ_THR_MIN_0_4: Number of dedicated CI Load machines for Thread Mgmt accesses.
25:29	RW	INT_CQ_CFG_LDQ_LDQ_THR_MAX_0_4: Max allowed CI Load machines for Thread Mgmt accesses.
30:34	RW	INT_CQ_CFG_LDQ_LDQ_VPC_MIN_0_4: Number of dedicated CI Load machines for VPC accesses.
35:39	RW	INT_CQ_CFG_LDQ_LDQ_VPC_MAX_0_4: Max allowed CI Load machines for VPC accesses.
40:44	RW	INT_CQ_CFG_LDQ_LDQ_REG_MIN_0_4: Number of dedicated CI Load machines for Internal Reg / LSI EOI.
45:49	RW	INT_CQ_CFG_LDQ_LDQ_REG_MAX_0_4: Max allowed CI Load machines for Internal Reg / LSI EOI.
50	RW	INT_CQ_CFG_LDQ_LDQ_REG_ORDER_ALL: Force the CI Load response for accesses to internal registers to be ordered behind all previous CI Stores.
51:63	RW	INT_CQ_CFG_LDQ_Reserved_51_63: Reserved.

Register Name	Performance Counter Control
Mnemonic	INT.INT_CQ.INT_CQ_PM_CTL
Address	0000000005013027 (SCOM)
Description	Controls the behavior of the eight common performance counters within the INT unit.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	INT_CQ_PM_CTL_ENABLE_0_7: Enable / Freeze individual counters 0-7. 0 = Freeze (or hold) current counter value. 1 = Enable counter to increment.
8:15	WOX	INT_CQ_PM_CTL_RESET_0_7: Reset individual counters 0-7 (non-persistent). Can be done anytime (for example, simultaneous with enabling counter).
16:17	RW	INT_CQ_PM_CTL_SOURCE_SUBUNIT_0_1: Sub-unit selection to increment the counters. 0 = (none, all zeros). 1 = PC events. 2 = VC events. 3 = CQ events.
18:22	RW	INT_CQ_PM_CTL_CQ_GROUP_SEL_0_4: CQ group select - The decode of these 5-bits selects one of 32 8-bit groups to be used as the "CQ events" for both the internal performance counters. (controlled by this register) and the external common nest performance monitor logic (see INT_CQ_CNPM_SEL).
23:63	RO	Constant = 0b00000000000000000000000000000000000000000000000

Register Name	Performance Counter 0 Register
Mnemonic	INT.INT_CQ.INT_CQ_PMC_0
Address	0000000005013028 (SCOM)
Description	Performance Counter 0 Register. CQ contains a common set of eight performance counters that can be utilized by all components of INT (VC, PC and CQ). Both VC and PC send a group of counter increment signals to CQ, which CQ merges to form the final increment signal for each counter. Each counter has the following characteristics: - 48-bits wide (39 hours to hit the maximum value when counting all cycles) - Enabled / disabled / reset functions are all under software control (see PM_CTL) - All counters freeze their current value if any counter reaches all 1s

Bits	SCOM	Field Mnemonic: Description
0:15	RO	Constant = 0b0000000000000000
16:63	ROX	INT_CQ_PMC_0_COUNT_0_47: Performance counter contents.

Register Name	Performance Counter 1 Register
Mnemonic	INT.INT_CQ.INT_CQ_PMC_1
Address	0000000005013029 (SCOM)
Description	CQ contains a common set of eight performance counters that can be utilized by all components of INT (VC, PC and CQ). Both VC and PC send a group of counter increment signals to CQ, which CQ merges to form the final increment signal for each counter. Each counter has the following characteristics: - 48-bits wide (39 hours to hit maximum value when counting all cycles) - Enabled / Disabled / Reset functions are all under software control (see PM_CTL) - All counters freeze their current value if any counter reaches all 1s

Bits	SCOM	Field Mnemonic: Description
0:15	RO	Constant = 0b0000000000000000
16:63	ROX	INT_CQ_PMC_1_COUNT_0_47: Performance counter contents.

Register Name	Performance Counter 2 Register
Mnemonic	INT.INT_CQ.INT_CQ_PMC_2
Address	000000000501302A (SCOM)
Description	CQ contains a common set of eight performance counters that can be utilized by all components of INT (VC, PC and CQ). Both VC and PC send a group of counter increment signals to CQ, which CQ merges to form the final increment signal for each counter. Each counter has the following characteristics: - 48-bits wide (39 hours to hit maximum value when counting all cycles) - Enabled / Disabled / Reset functions are all under software control (see PM_CTL) - All counters freeze their current value if any counter reaches all 1s

Bits	SCOM	Field Mnemonic: Description
0:15	RO	Constant = 0b0000000000000000
16:63	ROX	INT_CQ_PMC_2_COUNT_0_47: Performance counter contents.

Register Name	Performance Counter 3 Register
Mnemonic	INT.INT_CQ.INT_CQ_PMC_3
Address	000000000501302B (SCOM)
Description	CQ contains a common set of eight performance counters that can be utilized by all components of INT (VC, PC and CQ). Both VC and PC send a group of counter increment signals to CQ, which CQ merges to form the final increment signal for each counter. Each counter has the following characteristics: - 48-bits wide (39 hours to hit maximum value when counting all cycles) - Enabled / Disabled / Reset functions are all under software control (see PM_CTL) - All counters freeze their current value if any counter reaches all 1s

Bits	SCOM	Field Mnemonic: Description
0:15	RO	Constant = 0b0000000000000000
16:63	ROX	INT_CQ_PMC_3_COUNT_0_47: Performance counter contents.

Register Name	Performance Counter 4 Register
Mnemonic	INT.INT_CQ.INT_CQ_PMC_4
Address	000000000501302C (SCOM)
Description	CQ contains a common set of eight performance counters that can be utilized by all components of INT (VC, PC and CQ). Both VC and PC send a group of counter increment signals to CQ, which CQ merges to form the final increment signal for each counter. Each counter has the following characteristics: - 48-bits wide (39 hours to hit maximum value when counting all cycles) - Enabled / Disabled / Reset functions are all under software control (see PM_CTL) - All counters freeze their current value if any counter reaches all 1s

Bits	SCOM	Field Mnemonic: Description
0:15	RO	Constant = 0b0000000000000000
16:63	ROX	INT_CQ_PMC_4_COUNT_0_47: Performance counter contents.

Register Name	Performance Counter 5 Register
Mnemonic	INT.INT_CQ.INT_CQ_PMC_5
Address	000000000501302D (SCOM)
Description	CQ contains a common set of eight performance counters that can be utilized by all components of INT (VC, PC and CQ). Both VC and PC send a group of counter increment signals to CQ, which CQ merges to form the final increment signal for each counter. Each counter has the following characteristics: - 48-bits wide (39 hours to hit maximum value when counting all cycles) - Enabled / Disabled / Reset functions are all under software control (see PM_CTL) - All counters freeze their current value if any counter reaches all 1s

Bits	SCOM	Field Mnemonic: Description
0:15	RO	Constant = 0b0000000000000000
16:63	ROX	INT_CQ_PMC_5_COUNT_0_47: Performance counter contents.

Register Name	Performance Counter 6 Register
Mnemonic	INT.INT_CQ.INT_CQ_PMC_6
Address	000000000501302E (SCOM)
Description	CQ contains a common set of eight performance counters that can be utilized by all components of INT (VC, PC and CQ). Both VC and PC send a group of counter increment signals to CQ, which CQ merges to form the final increment signal for each counter. Each counter has the following characteristics: - 48-bits wide (39 hours to hit maximum value when counting all cycles) - Enabled / Disabled / Reset functions are all under software control (see PM_CTL) - All counters freeze their current value if any counter reaches all 1s

Bits	SCOM	Field Mnemonic: Description
0:15	RO	Constant = 0b0000000000000000
16:63	ROX	INT_CQ_PMC_6_COUNT_0_47: Performance counter contents.

Register Name	Performance Counter 7 Register
Mnemonic	INT.INT_CQ.INT_CQ_PMC_7
Address	000000000501302F (SCOM)
Description	CQ contains a common set of eight performance counters that can be utilized by all components of INT (VC, PC and CQ). Both VC and PC send a group of counter increment signals to CQ, which CQ merges to form the final increment signal for each counter. Each counter has the following characteristics: - 48-bits wide (39 hours to hit maximum value when counting all cycles) - Enabled / Disabled / Reset functions are all under software control (see PM_CTL) - All counters freeze their current value if any counter reaches all 1s

Bits	SCOM	Field Mnemonic: Description
0:15	RO	Constant = 0b0000000000000000
16:63	ROX	INT_CQ_PMC_7_COUNT_0_47: Performance counter contents.

Register Name	INT CQ FIR Register
Mnemonic	INT.INT_CQ.INT_CQ_FIR
Address	0000000005013030 (SCOM) 0000000005013031 (SCOM1) 0000000005013032 (SCOM2)
Description	Primary Error Register for INT_CQ. This contains all of the individual errors detected by INT_CQ, plus summary error indicators from VC and PC (see bits 49:63).

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_PI_ECC_CE: Correctable ECC error detected while consuming data from the processor bus data ramp. See INT_CQ_ERR_INFO2 for details. Recoverable error.
1	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_PI_ECC_UE: Uncorrectable ECC error detected while consuming data from the processor bus data ramp. See INT_CQ_ERR_INFO2 for details. Fatal error.
2	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_PI_ECC_SUE: Special uncorrectable ECC error detected while consuming data from the processor bus data ramp. Fatal error.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
3	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_ST_ECC_CE: Correctable ECC error detected while reading the CI Store Data Array. See INT_CQ_ERR_INFO2 for details. Recoverable error.
4	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_ST_ECC_UE: Uncorrectable ECC error detected while reading the CI Store Data Array. See INT_CQ_ERR_INFO2 for details. Fatal error.
5	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_LD_ECC_CE: Correctable ECC error detected while reading the CI Load Data Array. See INT_CQ_ERR_INFO2 for details. Recoverable error.
6	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_LD_ECC_UE: Uncorrectable ECC error detected while reading the CI Load Data Array. See INT_CQ_ERR_INFO2 for details. Fatal error.
7	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_CL_ECC_CE: Correctable ECC error detected while reading the Cache Line Buffer. See INT_CQ_ERR_INFO2 for details. Recoverable error.
8	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_CL_ECC_UE: Uncorrectable ECC error detected while reading the Cache Line Buffer. See INT_CQ_ERR_INFO2 for details. Fatal error.
9	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_WR_ECC_CE: Correctable ECC error detected while reading the DMA Write Data Array. See INT_CQ_ERR_INFO2 for details. Recoverable error.
10	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_WR_ECC_UE: Uncorrectable ECC error detected while reading the DMA Write Data Array. See INT_CQ_ERR_INFO2 for details. Fatal error.
11	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_RD_ECC_CE: Correctable ECC error detected while reading the DMA Read Data Array. See INT_CQ_ERR_INFO2 for details. Recoverable error.
12	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_RD_ECC_UE: Uncorrectable ECC error detected while reading the DMA Read Data Array. See INT_CQ_ERR_INFO2 for details. Fatal error.
13	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_AI_ECC_CE: Correctable ECC error detected while consuming data on the AIB Data Bus. See INT_CQ_ERR_INFO2 for details. Recoverable error.
14	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_AI_ECC_UE: Uncorrectable ECC error detected while consuming data on the AIB Data Bus. See INT_CQ_ERR_INFO2 for details. Fatal error.
15	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_AIB_IN_CMD_CTL_PERR: Parity error detected on AIB Command Control. Fatal error.
16	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_AIB_IN_CMD_PERR: Parity error detected on AIB Command Bus. Fatal error.
17	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_AIB_IN_DAT_CTL_PERR: Parity error detected on AIB Data Control. Fatal error.
18	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_PB_PARITY_ERROR: Parity error detected on one of the following processor bus interfaces (RCMDx, cRespx, Data RTAG). See INT_CQ_ERR_INFO0 for details. Fatal error.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
19	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_PB_RCMDX_CI_ERR1: Slave CI Store or CI Load to an improper location. See INT_CQ_ERR_INFO1 for details. Fatal error.
20	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_PB_RCMDX_CI_ERR2: Slave CI Store or CI Load to an invalid domain table entry. See INT_CQ_ERR_INFO1 for details. Fatal error.
21	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_PB_RCMDX_CI_ERR3: Slave CI Store or CI Load with an unsupported tsize for the specific category selected, or the starting address is not byte aligned based on the. transfer size specified. See INT_CQ_ERR_INFO1 for details. Fatal error.
22	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_RCVD_POISONED_CIST_DATA: Poisoned data received during a slave CI store operation. Recoverable error.
23	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_MRT_ERR_NOT_VALID: Migration Register Table (MRT) access - invalid entry selected. When this error occurs, the operation proceeds as if it was not a migration operation. - Fatal error --
24	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_MRT_ERR_PSIZE: Migration Register Table (MRT) access - The Table Size received in the AIB command is greater than the Target Page Size in the MRT entry. This error detection is done "on the side," and its occurrence has no effect on the flow of the DMA operation. - Fatal error --
25	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_SCOM_S_ERR: SCOM satellite error. - Fatal error --
26	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_TCTXT_PRESP_ERROR: pResp received from TCTXT but it was not expected, or I expected a pResp from TCTXT but it was not received. - Fatal error --
27	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_WRQ_OP_HANG: Master Write Queue has flagged a processor bus operational hang. - Recoverable error --
28	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_RDQ_OP_HANG: Master Read Queue has flagged a processor bus operational hang. - Recoverable error --
29	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_INTQ_OP_HANG: Master Interrupt Queue has flagged a processor bus operational hang. - Recoverable error --
30	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_RDQ_DATA_HANG: Master Read Queue has flagged a processor bus data hang. - Recoverable error --
31	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_STQ_DATA_HANG: CI Store Queue has flagged a processor bus data hang. - Recoverable error --

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
32	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_LDQ_DATA_HANG: CI Load Queue has flagged an AIB data hang - Once a CI Load request has been sent on AIB, you can use the processor bus data hang timer mechanism (the.rpt_hang.data cmd) as a timer tick while waiting for the data response on AIB. - Recoverable error --
33	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_WRQ_BAD_CRESP: Bad CRESP received during a Master Write command. This means CRESP = addr_error or CRESP = ack_dead. - Fatal error --
34	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_RDQ_BAD_CRESP: Bad CRESP received during a Master Read command. This means CRESP = addr_error, CRESP = ack_dead or CRESP = ack_ed_dead. In addition, for Read Group command, this includes a CRESP of {go_me_ed, go_me_lpc, go_mu_ed, go_me_cond_ed, go_mu_cond_ed}. - Fatal error --
35	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_INTQ_BAD_CRESP: Bad CRESP received during a Master Interrupt command. For the Poll-group interrupt commands (Poll, Assign, Broadcast), this is caused by either CRESP = poll_error, or by a consistency check fail where the. cResp and ATAG values do not agree with each other. For the Ack-group interrupt commands (Histogram, Block Update), this is caused by CRESP = addr_error or CRESP = ack_dead. - Fatal error --
36	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_BAD_128K_VP_OP: An interrupt command is received on AIB while "128K VP mode" is enabled, but the upper two bits of the Block Offset are non-zero. - Fatal error --
37	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_RDQ_ABORT_OP: A processor bus abort_op received that matches an outbound Read machine that is waiting for data. - Informational error --
38	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_PC_CRD_PERR: Parity error detected on AIB credit signals from PC. - Fatal error --
39	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_PC_CRD_AVAIL_PERR: Parity error detected on AIB credit available signals from PC. - Fatal error --
40	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_VC_CRD_PERR: Parity error detected on AIB credit signals from VC. - Fatal error --
41	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_VC_CRD_AVAIL_PERR: Parity error detected on AIB credit available signals from VC. - Fatal error --
42	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_CMD_QX_SEVERE_ERR: Command Queue (FSM) severe error summary. See INT_CQ_ERR_INFO3 for details. This includes queue overflows and FSM parity errors. - Fatal error --
43	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_RDQ_ABORT_TRM: A Master Read machine received CRESP of abort_trm or abort_trm_ed. In addition to setting this error bit, the Read machine behaved as if the CRESP was. rty. - Recoverable error --

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
44	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_UNSOLICITED_CRESP: Received an unsolicited master Combined Response - The master CRESP TTAG(0:14) matched my topology ID, but TTAG(15:21) pointed to TxIDs associated. with slave machines or to master machines that either do not exist or which are not expecting a CRESP. - Fatal error --
45	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_UNSOLICITED_PBDATA: Received unsolicited processor bus data - The RTAG(0:14) of incoming PB data matched my topology ID, but RTAG(15:21) pointed to TxIDs that never receive. data or to machines which receive data but which are not expecting any data. - Fatal error --
46	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_FIR_PARITY_ERR: The Local Error Module (c_local_fir) asserted it parity error output. - Fatal error --
47	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_PGM_DBG_ACCESS: An inbound CI Read or CI Write targeted either of the two INT_CQ_PGM_DBG[n] registers. - Informational error --
48	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_Reserved_48: Reserved.
49:51	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_PC_FATAL_ERROR_0_2: PC fatal error summary, as indicated on pc_cq_fatal_error(0:2).
52:54	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_PC_RECOV_ERROR_0_2: PC recoverable error summary, as indicated on pc_cq_recov_error(0:2).
55:57	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_PC_INFO_ERROR_0_2: PC informational error summary, as indicated on pc_cq_info_error(0:2).
58:59	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_VC_FATAL_ERROR_0_1: VC fatal error summary, as indicated on vc_cq_fatal_error(0:1). For bit 58, look next at the INT_VC_FATAL_ERR_G0 register. For bit 59, look next at the INT_VC_FATAL_ERR_G1 register.
60:61	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_VC_RECOV_ERROR_0_1: VC recoverable error summary, as indicated on vc_cq_recov_error(0:1). For bit 60, look next at the INT_VC_RECOV_ERR_G0 register. For bit 61, look next at the INT_VC_RECOV_ERR_G1 register.
62:63	RWX	WOX_AND	WOX_OR	INT_CQ_FIR_VC_INFO_ERROR_0_1: VC informational error summary, as indicated on vc_cq_info_error(0:1). For bit 62, look next at the INT_VC_INFO_ERR_G0 register. For bit 63, look next at the INT_VC_INFO_ERR_G1 register.

Register Name	**INT CQ FIR Mask Register**
Mnemonic	INT.INT_CQ.INT_CQ_FIRMASK
Address	0000000005013033 (SCOM) 0000000005013034 (SCOM1) 0000000005013035 (SCOM2)
Description	This register allow software the ability to mask off individual FIR bits.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:63	RW	WO_AND	WO_OR	INT_CQ_FIRMASK_FIR_MASK: A mask register for INT_CQ_FIR.

Register Name	INT CQ Action 0 Register
Mnemonic	INT.INT_CQ.INT_CQ_ACTION0
Address	0000000005013036 (SCOM)
Description	This register, in conjunction with the Action 1 register, defines how errors are reported. These two vectors are used pairwise to select: 00 = Checkstop error 01 = Recoverable error 10 = Recoverable interrupt 11 = Reserved, nothing reported The Action registers only look at unmasked error bits. In other words, the sequence of observation is: FIR -> FIR_MASK -> ACTION -> Output error pins.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	INT_CQ_ACTION0_ACTION0: Action 0 register.

Register Name	INT CQ Action 1 Register
Mnemonic	INT.INT_CQ.INT_CQ_ACTION1
Address	0000000005013037 (SCOM)
Description	This register, in conjunction with the Action 0 register, defines how errors are reported. These two vectors are used pairwise to select: 00 = Checkstop error 01 = Recoverable error 10 = Recoverable interrupt 11 = Reserved, nothing reported The Action registers only look at unmasked error bits. In other words, the sequence of observation is: FIR -> FIR_MASK -> ACTION -> Output error pins.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	INT_CQ_ACTION1_ACTION1: Action 1 register.

Register Name	CQ Error Hold Out Register
Mnemonic	INT.INT_CQ.INT_CQ_ERR_RPT_HOLD
Address	0000000005013039 (SCOM)
Description	This register presents the error_hold output of CQs c_err_rpt macro. Reading this register resets the hold latches within the c_err_rpt.

Bits	SCOM	Field Mnemonic: Description
0:48	ROX	INT_CQ_ERR_RPT_HOLD_ERR_HOLD_0_48: This is the output of the c_err_rpt macro within CQ. The unlatched error outputs of the c_err_rpt feed the c_local_fir. When this register is read. by software, that action will cause the hold latches in the c_err_rpt to be reset.
49:63	RO	Constant = 0b000000000000000

Register Name	Error Information 0 Register
Mnemonic	INT.INT_CQ.INT_CQ_ERR_INFO0
Address	000000000501303A (SCOM)
Description	This register contains details relating to all processor bus parity errors (FIR bit 18). This information is captured when the first applicable error occurs, and will be held until reset by software. Writing this register with any data will clear the whole register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRPART	INT_CQ_ERR_INFO0_INFO_CAPTURED: A 1 indicates that an error has occurred, information has been captured, and the contents below are valid.
1	RWX_WCLRPART	INT_CQ_ERR_INFO0_RCMD0_ADDR_PERR: RCMD0 Address Parity Error.
2	RWX_WCLRPART	INT_CQ_ERR_INFO0_RCMD1_ADDR_PERR: RCMD1 Address Parity Error.
3	RWX_WCLRPART	INT_CQ_ERR_INFO0_RCMD2_ADDR_PERR: RCMD2 Address Parity Error.
4	RWX_WCLRPART	INT_CQ_ERR_INFO0_RCMD3_ADDR_PERR: RCMD3 Address Parity Error.
5	RWX_WCLRPART	INT_CQ_ERR_INFO0_RCMD0_TTAG_PERR: RCMD0 TTAG Parity Error.
6	RWX_WCLRPART	INT_CQ_ERR_INFO0_RCMD1_TTAG_PERR: RCMD1 TTAG Parity Error.
7	RWX_WCLRPART	INT_CQ_ERR_INFO0_RCMD2_TTAG_PERR: RCMD2 TTAG Parity Error.
8	RWX_WCLRPART	INT_CQ_ERR_INFO0_RCMD3_TTAG_PERR: RCMD3 TTAG Parity Error.
9	RWX_WCLRPART	INT_CQ_ERR_INFO0_CR0_TTAG_PERR: cResp0 TTAG Parity Error.
10	RWX_WCLRPART	INT_CQ_ERR_INFO0_CR1_TTAG_PERR: cResp1 TTAG Parity Error.
11	RWX_WCLRPART	INT_CQ_ERR_INFO0_CR2_TTAG_PERR: cResp2 TTAG Parity Error.
12	RWX_WCLRPART	INT_CQ_ERR_INFO0_CR3_TTAG_PERR: cResp3 TTAG Parity Error.
13	RWX_WCLRPART	INT_CQ_ERR_INFO0_CR0_ATAG_PERR: cResp0 ATAG Parity Error.
14	RWX_WCLRPART	INT_CQ_ERR_INFO0_CR1_ATAG_PERR: cResp1 ATAG Parity Error.
15	RWX_WCLRPART	INT_CQ_ERR_INFO0_CR2_ATAG_PERR: cResp2 ATAG Parity Error.
16	RWX_WCLRPART	INT_CQ_ERR_INFO0_CR3_ATAG_PERR: cResp3 ATAG Parity Error.
17	RWX_WCLRPART	INT_CQ_ERR_INFO0_RTAG_PERR: Data In Routing Tag Parity Error.
18:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000

Register Name	Error Information 1 Register
Mnemonic	INT.INT_CQ.INT_CQ_ERR_INFO1
Address	000000000501303B (SCOM)
Description	This register contains details relating to CI Store/Load errors (FIR bits 19, 20, 21). This information is captured when the first applicable error occurs, and will be held until reset by software. Writing this register with any data will clear the whole register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRPART	INT_CQ_ERR_INFO1_INFO_CAPTURED: A 1 indicates that an error has occurred, information has been captured, and the contents below are valid.
1	RWX_WCLRPART	INT_CQ_ERR_INFO1_CI_WRITE: The offending PB command was a CI Write.
2	RWX_WCLRPART	INT_CQ_ERR_INFO1_CI_READ: The offending PB command was a CI Read.
3	RWX_WCLRPART	INT_CQ_ERR_INFO1_DMA_WRITE: The offending PB command was a DMA Write (aka IPI trigger).
4:6	RWX_WCLRPART	INT_CQ_ERR_INFO1_TSIZE_4_6: The 3-bit size field of a CI Write or CI Read.
7:10	RWX_WCLRPART	INT_CQ_ERR_INFO1_BAR_VEC_0_3: BAR compare vector (0:3). bit 0 = PB address matched the IC BAR. bit 1 = PB address matched the TM BAR. bit 2 = PB address matched the PC BAR. bit 3 = PB address matched the VC BAR.
11:27	RWX_WCLRPART	INT_CQ_ERR_INFO1_TTAG_0_16: The processor bus TTAG (0:16) of the offending command. bits 0:3 = Group ID of the master. bits 4:6 = Chip ID of the master. bits 7:16 = Unit ID of the master.
28:63	RWX_WCLRPART	INT_CQ_ERR_INFO1_ADDRESS_28_63: The processor bus Address (28:63) of the offending command.

Register Name	Error Information 2 Register
Mnemonic	INT.INT_CQ.INT_CQ_ERR_INFO2
Address	000000000501303C (SCOM)
Description	This register contains details relating to correctable and uncorrectable ECC errors (FIR 0, 1, 3-14). Here are the seven sources of ECC errors and the information that is captured for each one: PB Data In - (Hi, Lo, Syndrome hi, Syndrome lo) CI Store Data Array - (Lo, Read address, Syndrome lo) CI Load Data Array - (Hi, Lo, Syndrome hi, Syndrome lo) DMA Read Data Array - (Hi, Lo, Read address, Syndrome hi, Syndrome lo) DMA Write Data Array - (Hi, Lo, Read address, Syndrome hi, Syndrome lo) CL Buffer Array - (Hi, Lo, Read address, Syndrome hi, Syndrome lo) AIB Data In - (Hi, Lo, Syndrome hi, Syndrome lo) This information is captured when the first applicable error occurs, and will be held until reset by software. Writing this register with any data will clear the whole register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRPART	INT_CQ_ERR_INFO2_INFO_CAPTURED: A 1 indicates that an error has occurred, information has been captured, and the contents within the fields below are valid.
1:5	RWX_WCLRPART	INT_CQ_ERR_INFO2_Reserved_1_5: Reserved.
6	RWX_WCLRPART	INT_CQ_ERR_INFO2_HI: Error occurred on the high 8 bytes of data.

Bits	SCOM	Field Mnemonic: Description
7	RWX_WCLRPART	INT_CQ_ERR_INFO2_LO: Error occurred on the low 8 bytes of data.
8:15	RWX_WCLRPART	INT_CQ_ERR_INFO2_RD_ADDR_0_7: For errors involved with reading an SRAM, this field contains the Read Address of the SRAM.
16:23	RWX_WCLRPART	INT_CQ_ERR_INFO2_SYN_HI_0_7: The syndrome of the high 8 bytes.
24:31	RWX_WCLRPART	INT_CQ_ERR_INFO2_SYN_LO_0_7: The syndrome of the low 8 bytes.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Error Information 3 Register
Mnemonic	INT.INT_CQ.INT_CQ_ERR_INFO3
Address	000000000501303D (SCOM)
Description	This register contains details relating to Command Queue (or FSM) severe errors (FIR bit 42). This information is captured when the first applicable error occurs, and will be held until reset by software. Writing this register with any data will clear the whole register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRPART	INT_CQ_ERR_INFO3_INFO_CAPTURED: A 1 indicates that an error has occurred, information has been captured, and the contents below are valid.
1	RWX_WCLRPART	INT_CQ_ERR_INFO3_STQ_FSM_PERR: Slave CI Store Queue - FSM Parity Error.
2	RWX_WCLRPART	INT_CQ_ERR_INFO3_LDQ_FSM_PERR: Slave CI Load Queue - FSM Parity Error.
3	RWX_WCLRPART	INT_CQ_ERR_INFO3_WRQ_FSM_PERR: Master Write Queue - FSM Parity Error.
4	RWX_WCLRPART	INT_CQ_ERR_INFO3_RDQ_FSM_PERR: Master Read Queue - FSM Parity Error.
5	RWX_WCLRPART	INT_CQ_ERR_INFO3_INTQ_FSM_PERR: Master Interrupt Queue - FSM Parity Error.
6	RWX_WCLRPART	INT_CQ_ERR_INFO3_WRQ_OVERFLOW: Master Write Queue Overflow.
7	RWX_WCLRPART	INT_CQ_ERR_INFO3_RDQ_OVERFLOW: Master Read Queue Overflow.
8	RWX_WCLRPART	INT_CQ_ERR_INFO3_INTQ_OVERFLOW: Master Interrupt Queue Overflow.
9:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	TCTXT Configuration Register
Mnemonic	INT.INT_PC.INT_TCTXT_CFG
Address	0000000005013100 (SCOM)
Description	Thread context configuration register

Bits	SCOM	Field Mnemonic: Description
0	RW	INT_TCTXT_CFG_CFG_BLOCK_GROUP_EN: Enables block grouping.

Bits	SCOM	Field Mnemonic: Description
1	RW	INT_TCTXT_CFG_CFG_TARGET_EN: Enables Hypervisor target mode support.
2	RW	INT_TCTXT_CFG_Reserved_2: Spare.
3	RW	INT_TCTXT_CFG_CFG_ACM_EN: Enables ACM support.
4	RW	INT_TCTXT_CFG_CFG_FUSE_CORE_EN: Enables Fused core mode (for LSI and MsgSnd broadcast notify selection).
5	RW	INT_TCTXT_CFG_Reserved_5: Spare.
6:7	RW	INT_TCTXT_CFG_CFG_SMT_MODE: Configures the core MST mode (only used for clockgating). "00": ST. "01": SMT2. "10": SMT4. "11": SMT8 (default, no additional clockgating).
8	RW	INT_TCTXT_CFG_CFG_HARD_CHIPID_IN_BLOCK_EN: Moves the chipid into block field for hardwired CAM compares. Block offset value is adjusted to 0b0..01 and ThrdId.
9	RW	INT_TCTXT_CFG_CFG_CHIPID_OVERRIDE: Overrides hardwired chip ID with the chip ID field (bits12:15).
10:11	RW	INT_TCTXT_CFG_Reserved_10_11: Spare.
12:15	RW	INT_TCTXT_CFG_CFG_CHIPID: Chip ID for thread context thas is applied as override.
16	RW	INT_TCTXT_CFG_CFG_INT_TCTXT_EN: Enables the interrupt lines to the cores (EBB, OS, Hyp).
17	RW	INT_TCTXT_CFG_CFG_INT_MSGSND: Enables the MsgSnd line to the cores.
18:19	RW	INT_TCTXT_CFG_Reserved_18_19: Spare.
20:23	RW	INT_TCTXT_CFG_CFG_INT_PULSE_WIDTH: Configures the length of interrupt pulses (MsgSnd).
24:63	RO	Constant = 0b00000000000000000000000000000000000000000000

Register Name	TCTXT Track Register
Mnemonic	INT.INT_PC.INT_TCTXT_TRACK
Address	0000000005013101 (SCOM)
Description	Thread context block track configuration register

Bits	SCOM	Field Mnemonic: Description
0	RW	INT_TCTXT_TRACK_CFG_BLOCK_TRACK_EN: Enables block tracking and exchange of block ownership information between Interrupt controllers.
1:3	RW	INT_TCTXT_TRACK_Reserved_1_3: Spare.
4	RW	INT_TCTXT_TRACK_CFG_BLOCK_FILTER_EN: Enables filtering of incomint Interrupt RCMDs based on the target BlockID such that commands for non-owned blocks are not sent to the thread context. and do not need ro reserve a CRESP CAM entry.
5	RW	INT_TCTXT_TRACK_CFG_BLOCK_FILTER_VPC_EN: Enables block ownership for which the NVT is owned irrespective of whether the blocks are active in any thread context.
6:9	RW	INT_TCTXT_TRACK_Reserved_6_9: Spare.
10:15	RW	INT_TCTXT_TRACK_CFG_BLOCK_RESET_DELAY: Configures the delay after which a block update is triggered once the number of enabled thread contexts using that block ID has reached 0.
16:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	Indirect Thread Context Access 0 Register
Mnemonic	INT.INT_PC.INT_TCTXT_INDIR0
Address	0000000005013104 (SCOM)
Description	Indirect thread access register0

Bits	SCOM	Field Mnemonic: Description
0	RW	INT_TCTXT_INDIR0_INDIR_VLD: Indirect access valid.
1:8	RO	Constant = 0b00000000
9:15	RW	INT_TCTXT_INDIR0_INDIR_THRDID: Indirect access thread id.
16:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	Indirect Thread Context Access 1 Register
Mnemonic	INT.INT_PC.INT_TCTXT_INDIR1
Address	0000000005013105 (SCOM)
Description	Indirect thread access register0

Bits	SCOM	Field Mnemonic: Description
0	RW	INT_TCTXT_INDIR1_INDIR_VLD: Indirect access valid.
1:8	RO	Constant = 0b00000000
9:15	RW	INT_TCTXT_INDIR1_INDIR_THRDID: Indirect access thread id.
16:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	Indirect Thread Context Access 2 Register
Mnemonic	INT.INT_PC.INT_TCTXT_INDIR2
Address	0000000005013106 (SCOM)
Description	Indirect thread access register0

Bits	SCOM	Field Mnemonic: Description
0	RW	INT_TCTXT_INDIR2_INDIR_VLD: Indirect access valid.
1:8	RO	Constant = 0b00000000

Register Name	Physical Thread Enable 0 Register
Mnemonic	INT.INT_PC.INT_TCTXT_EN0
Address	0000000005013108 (SCOM)
Description	Physical Thread Enable register for fused cores 0:7

Bits	SCOM	Field Mnemonic: Description
0:7	RW	INT_TCTXT_EN0_CFG_THRD_C0_EN: Thread enable for fused core 0.
8:15	RW	INT_TCTXT_EN0_CFG_THRD_C1_EN: Thread enable for fused core 1.
16:23	RW	INT_TCTXT_EN0_CFG_THRD_C2_EN: Thread enable for fused core 2.
24:31	RW	INT_TCTXT_EN0_CFG_THRD_C3_EN: Thread enable for fused core 3.
32:39	RW	INT_TCTXT_EN0_CFG_THRD_C4_EN: Thread enable for fused core 4.
40:47	RW	INT_TCTXT_EN0_CFG_THRD_C5_EN: Thread enable for fused core 5.
48:55	RW	INT_TCTXT_EN0_CFG_THRD_C6_EN: Thread enable for fused core 6.
56:63	RW	INT_TCTXT_EN0_CFG_THRD_C7_EN: Thread enable for fused core 7.

Register Name	Physical Thread Enable 1 Register
Mnemonic	INT.INT_PC.INT_TCTXT_EN1
Address	000000000501310C (SCOM)
Description	Physical Thread Enable register for fused cores 8:11

Bits	SCOM	Field Mnemonic: Description
0:7	RW	INT_TCTXT_EN1_CFG_THRD_C8_EN: Thread enable for fused core 8.
8:15	RW	INT_TCTXT_EN1_CFG_THRD_C9_EN: Thread enable for fused core 9.
16:23	RW	INT_TCTXT_EN1_CFG_THRD_C10_EN: Thread enable for fused core 10.
24:31	RW	INT_TCTXT_EN1_CFG_THRD_C11_EN: Thread enable for fused core 11.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	P3PC Global Configuration Register
Mnemonic	INT.INT_PC.INT_PC_GLOBAL_CFG
Address	0000000005013110 (SCOM)
Description	P3VC global configuration register

Bits	SCOM	Field Mnemonic: Description
0:31	RO	Constant = 0b00000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
32	RW	INT_PC_GLOBAL_CFG_INDIRECT_MODE: When set, access to memory structures may be indirect. Software must set this bit if the "i" bit is set in any VSD.
33:39	RW	INT_PC_GLOBAL_CFG_Reserved_33_39: Spare.
40:63	RO	Constant = 0b000000000000000000000000

Register Name	VSD Table Address Register
Mnemonic	INT.INT_PC.INT_PC_VSD_TABLE_ADDR
Address	0000000005013111 (SCOM)
Description	This register along with the VSD table data register allows Software to load VSDs in the ATX BAR SRAM

Bits	SCOM	Field Mnemonic: Description
0	RW	INT_PC_VSD_TABLE_ADDR_AUTO_INCREMENT: When set, each rd/wr access to the BAR data register increments the table_address field once the current operation is completed.
1:3	RW	INT_PC_VSD_TABLE_ADDR_Reserved_1_3: Spare.
4:11	RO	Constant = 0b00000000
12	RW	INT_PC_VSD_TABLE_ADDR_Reserved_12: Spare.
13:15	RW	INT_PC_VSD_TABLE_ADDR_TABLE_SELECT: Table select: "000":IVE. "001": Reserved. "010":EQD. "011":VPD. "1xx":Reserved.
16:23	RO	Constant = 0b00000000
24:26	RW	INT_PC_VSD_TABLE_ADDR_Reserved_24_26: Spare.
27:31	RWX	INT_PC_VSD_TABLE_ADDR_TABLE_ADDRESS: Offset within the selected table. Blockid 0 to 31 if selected table is VPD. Blockid 0 to 15 if selected table is IVE, or EQD.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	IVE Block Mode Register
Mnemonic	INT.INT_PC.INT_PC_IVE_BLOCK_MODE
Address	0000000005013113 (SCOM)
Description	This register holds the mode defined for each ive block. Whenever the Software does a write to ive VSDs in BAR SRAM, the defined mode bits are also copied in this register. This register should never be written except for debug.

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	INT_PC_IVE_BLOCK_MODE_IVE_BLOCK_MODE: (2*n:n*2+1) IVE block n. 00invalid, 01shared, 10exclusive, 11forward.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	EQD Block Mode Register
Mnemonic	INT.INT_PC.INT_PC_EQD_BLOCK_MODE
Address	0000000005013114 (SCOM)
Description	This register holds the mode defined for each EQD block. Whenever the Software does a write to EQD VSDs in BAR SRAM, the defined mode bits are also copied in this register. This register should never be written except for debug.

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	INT_PC_EQD_BLOCK_MODE_EQD_BLOCK_MODE: (2*n:n*2+1) EQD block n. 00invalid, 01shared, 10exclusive, 11forward.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	VPD Block Mode Register
Mnemonic	INT.INT_PC.INT_PC_VPD_BLOCK_MODE
Address	0000000005013115 (SCOM)
Description	This register holds the mode defined for each VPD block. Whenever the Software does a write to VPD VSDs in BAR SRAM, the defined mode bits are also copied in this register. This register should never be written except for debug.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	INT_PC_VPD_BLOCK_MODE_VPD_BLOCK_MODE: (2*n:n*2+1) VPD block n. 00invalid, 01shared, 10exclusive, 11forward.

Register Name	AT Indirect Kill Register
Mnemonic	INT.INT_PC.INT_PC_AT_KILL
Address	0000000005013116 (SCOM)
Description	This registers, along with kill mask register is used to kill entries in AT CAM.

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_PC_AT_KILL_VALID: Valid bit. Set per Software to initiate a kill command. Cleared by hardware when kill command is completed. Software must have written the kill mask. register prior of setting this bit.
1:23	RO	Constant = 0b00000000000000000000000
24:26	RW	INT_PC_AT_KILL_Reserved_24_26: Spare.
27:31	RW	INT_PC_AT_KILL_BLOCKID: 5-bit BlockId.
32:47	RO	Constant = 0b0000000000000000
48:60	RW	INT_PC_AT_KILL_OFFSET: 13-bit offset.
61:63	RW	INT_PC_AT_KILL_Reserved_61_63: Spare.

Register Name	AT Indirect Kill Mask Register
Mnemonic	INT.INT_PC.INT_PC_AT_KILL_MASK
Address	0000000005013117 (SCOM)
Description	This register, along with kill register is used to kill entries in AT CAM. CAM entries are killed if (blockid and blockid_mask) = (cam_blockid and blockid_mask) AND (offset and offset_mask) = (cam_offset and offset_mask)

Bits	SCOM	Field Mnemonic: Description
0:23	RO	Constant = 0b000000000000000000000000
24:26	RW	INT_PC_AT_KILL_MASK_Reserved_24_26: Spare.
27:31	RW	INT_PC_AT_KILL_MASK_BLOCKID: 5-bit BlockId mask.
32:47	RO	Constant = 0b0000000000000000
48:60	RW	INT_PC_AT_KILL_MASK_OFFSET: 13-bit offset mask.
61:63	RW	INT_PC_AT_KILL_MASK_Reserved_61_63: Spare.

Register Name	PCMD Arbiter Register
Mnemonic	INT.INT_PC.INT_PC_PCMD_ARB
Address	0000000005013118 (SCOM)
Description	Pcmd Arbiter Configuration Register

Bits	SCOM	Field Mnemonic: Description
0	RW	INT_PC_PCMD_ARB_Reserved_0: Spare.
1:3	RW	INT_PC_PCMD_ARB_CFG_PCMD_ARB_PRIO_LSI: Priority for LSI requests. 0XX - Use round robin. 100 - Priority 0 (highest). 101 - Priority 1. 110 - Priority 2. 111 - Priority 3 (lowest). Note: Max of 1 source can use each of Priority 0-3.
4	RW	INT_PC_PCMD_ARB_Reserved_4: Spare.
5:7	RW	INT_PC_PCMD_ARB_CFG_PCMD_ARB_PRIO_MMIO: Priority for MMIO requests. 0XX - Use round robin. 100 - Priority 0 (highest). 101 - Priority 1. 110 - Priority 2. 111 - Priority 3 (lowest). Note: Max of 1 source can use each of Priority 0-3.
8	RW	INT_PC_PCMD_ARB_Reserved_8: Spare.
9:11	RW	INT_PC_PCMD_ARB_CFG_PCMD_ARB_PRIO_VRQ_REQ: Priority for VRQ requests. 0XX - Use round robin. 100 - Priority 0 (highest). 101 - Priority 1. 110 - Priority 2. 111 - Priority 3 (lowest). Note: Max of 1 source can use each of Priority 0-3.
12	RW	INT_PC_PCMD_ARB_Reserved_12: Spare.

Bits	SCOM	Field Mnemonic: Description

Mnemonic	INT.INT_PC.INT_PC_DBG_ECC
Address	0000000005013131 (SCOM)
Description	This register holds the ECC correction and error injection information used in the PC logic.

Bits	SCOM	Field Mnemonic: Description
0	RW	INT_PC_DBG_ECC_DIS_CRESP_ECC_CORR: Disable CRESP array ECC correction.
1:2	RW	INT_PC_DBG_ECC_DIS_ARX_DAT_ECC_CORR: Disable ARX data ECC correction.
3	RW	INT_PC_DBG_ECC_DIS_ARX_TAG_ECC_CORR: Disable ARX tag array ECC correction.
4	RW	INT_PC_DBG_ECC_DIS_MMIO_LDST_ECC_CORR: Disable MMIO LDST array ECC correction.
5	RW	INT_PC_DBG_ECC_DIS_MMIO_RSP_ECC_CORR: Disable MMIO RSP array ECC correction.
6	RW	INT_PC_DBG_ECC_DIS_VRQ_QUEUE_ECC_CORR: Disable VRQ Queue array ECC correction.
7	RW	INT_PC_DBG_ECC_DIS_AVX_ECC_CORR: Disable AVX data ECC correction.
8	RW	INT_PC_DBG_ECC_DIS_ATX_CMD_ECC_CORR: Disable ATX command array ECC correction.
9	RW	INT_PC_DBG_ECC_DIS_ATX_BAR_ECC_CORR: Disable ATX Bar array ECC correction.
10	RW	INT_PC_DBG_ECC_DIS_ATX_AT_ECC_CORR: Disable ATX AT array ECC correction.
11:15	RW	INT_PC_DBG_ECC_Reserved_11_15: Spare.
16	RWX	INT_PC_DBG_ECC_FORCE_SINGLE_BIT_ECC_ERR: Force single bit ECC error. Set by Software. Cleared by hardware when selected array is written (array datain lsb bit is flipped).

Bits	SCOM	Field Mnemonic: Description
17	RWX	INT_PC_DBG_ECC_FORCE_DOUBLE_BIT_ECC_ERR: Force double bit ECC error. Set by Software. Cleared by hardware when selected array is written (array datain 2 lsb bits are flipped).
18	RW	INT_PC_DBG_ECC_ARY_SELECT_CRESP_SRAM: Force error on CRESP SRAM.
19	RW	INT_PC_DBG_ECC_Reserved_19: Spare.
20	RW	INT_PC_DBG_ECC_ARY_SELECT_CMD_RSP_SRAM: Force error on command Rsp SRAM.
21	RW	INT_PC_DBG_ECC_ARY_SELECT_CMD_VRQ_SRAM: Force error on command Vrq SRAM.
22:23	RW	INT_PC_DBG_ECC_ARY_SELECT_ATX_CMD_SSA: Force error on ATX command SSA.
24:25	RW	INT_PC_DBG_ECC_ARY_SELECT_ATX_VPC_SSA: Force error on ATX VPC SSA.
26	RW	INT_PC_DBG_ECC_ARY_SELECT_ATX_BAR_SRAM: Force error on ATX BAR SRAM.
27	RW	INT_PC_DBG_ECC_ARY_SELECT_ATX_AT_SSA: Force error on ATX AT SSA.
28:29	RW	INT_PC_DBG_ECC_ARY_SELECT_ATX_AIB: Force error on ATX AIB data.
30:31	RW	INT_PC_DBG_ECC_Reserved_30_31: Spare.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Debug Trace Register
Mnemonic	INT.INT_PC.INT_PC_DBG_TRACE
Address	0000000005013133 (SCOM)
Description	This register holds the trace enable bits for the PC LBS1 trace logic.

Bits	SCOM	Field Mnemonic: Description
0	RW	INT_PC_DBG_TRACE_Reserved_0: TCTXT MMIO and Pipe trace enable.
1	RW	INT_PC_DBG_TRACE_Reserved_1: TCTXT-VPC trace enable.
2:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	Debug PMC Register
Mnemonic	INT.INT_PC.INT_PC_DBG_PMC
Address	0000000005013134 (SCOM)
Description	PC LBS1 PMC selection. At most one bit may be enabled to avoid interference among PMC signals

Bits	SCOM	Field Mnemonic: Description
0:1	RW	INT_PC_DBG_PMC_EN_ARX_PMC: ARX performance counter enable.
2:3	RW	INT_PC_DBG_PMC_EN_CRESP_PMC: CRESP performance counter enable.
4:13	RW	INT_PC_DBG_PMC_EN_CMD_PMC: command performance counter enable.
14:15	RW	INT_PC_DBG_PMC_Reserved_14_15: Spare.
16:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	Debug PMC ATX0 Register
Mnemonic	INT.INT_PC.INT_PC_DBG_PMC_ATX0
Address	0000000005013135 (SCOM)
Description	4-bit configuration for each possible performance event bit0: Enable count of request granted by the ATX arbiter bit 1:3 Performance counter selection.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	INT_PC_DBG_PMC_ATX0_CNT_R0: Count of request(0).
4:7	RW	INT_PC_DBG_PMC_ATX0_CNT_R1R: Count of request(1rsp).
8:11	RW	INT_PC_DBG_PMC_ATX0_CNT_R1W: Count of request(1w).
12:15	RW	INT_PC_DBG_PMC_ATX0_CNT_R2: Count of request(2).
16:19	RW	INT_PC_DBG_PMC_ATX0_CNT_R3: Count of request(3).
20:23	RW	INT_PC_DBG_PMC_ATX0_CNT_R4R: Count of request(4r).
24:27	RW	INT_PC_DBG_PMC_ATX0_CNT_R4W: Count of request(4w).
28:31	RW	INT_PC_DBG_PMC_ATX0_CNT_R5: Count of request(5).
32:35	RW	INT_PC_DBG_PMC_ATX0_CNT_R6: Count of request(6).
36:39	RW	INT_PC_DBG_PMC_ATX0_CNT_R7: Count of request(7).
40:43	RW	INT_PC_DBG_PMC_ATX0_CNT_R8: Count of request(8).
44:47	RW	INT_PC_DBG_PMC_ATX0_CNT_R9: Count of request(9).
48:63	RO	Constant = 0b0000000000000000

Register Name	Debug PMC ATX1 Register
Mnemonic	INT.INT_PC.INT_PC_DBG_PMC_ATX1
Address	0000000005013136 (SCOM)
Description	4-bit configuration for each possible performance event bit 0: Enable count of request not presented immediately to the ATX arbiter because lack of credit bit 1:3 Performance counter selection

Bits	SCOM	Field Mnemonic: Description
0:3	RW	INT_PC_DBG_PMC_ATX1_CNT_R0: Count of request(0).
4:7	RW	INT_PC_DBG_PMC_ATX1_CNT_R1R: Count of request(1rsp).
8:11	RW	INT_PC_DBG_PMC_ATX1_CNT_R1W: Count of request(1w).
12:15	RW	INT_PC_DBG_PMC_ATX1_CNT_R2: Count of request(2).
16:19	RW	INT_PC_DBG_PMC_ATX1_CNT_R3: Count of request(3).
20:23	RW	INT_PC_DBG_PMC_ATX1_CNT_R4R: Count of request(4r).
24:27	RW	INT_PC_DBG_PMC_ATX1_CNT_R4W: Count of request(4w).
28:31	RW	INT_PC_DBG_PMC_ATX1_CNT_R5: Count of request(5).
32:35	RW	INT_PC_DBG_PMC_ATX1_CNT_R6: Count of request(6).
36:39	RW	INT_PC_DBG_PMC_ATX1_CNT_R7: Count of request(7).
40:43	RW	INT_PC_DBG_PMC_ATX1_CNT_R8: Count of request(8).
44:47	RW	INT_PC_DBG_PMC_ATX1_CNT_R9: Count of request(9).

Bits	SCOM	Field Mnemonic: Description
48:63	RO	Constant = 0b0000000000000000

Register Name	Debug PMC ATX2 Register
Mnemonic	INT.INT_PC.INT_PC_DBG_PMC_ATX2
Address	0000000005013137 (SCOM)
Description	4-bit configuration for each possible performance event bit0: Enable count of request not served immediately because another requester is served bit 1:3 Performance counter selection

Bits	SCOM	Field Mnemonic: Description
0:3	RW	INT_PC_DBG_PMC_ATX2_CNT_R0: Count of request(0).
4:7	RW	INT_PC_DBG_PMC_ATX2_CNT_R1R: Count of request(1rsp).
8:11	RW	INT_PC_DBG_PMC_ATX2_CNT_R1W: Count of request(1w).
12:15	RW	INT_PC_DBG_PMC_ATX2_CNT_R2: Count of request(2).
16:19	RW	INT_PC_DBG_PMC_ATX2_CNT_R3: Count of request(3).
20:23	RW	INT_PC_DBG_PMC_ATX2_CNT_R4R: Count of request(4r).
24:27	RW	INT_PC_DBG_PMC_ATX2_CNT_R4W: Count of request(4w).
28:31	RW	INT_PC_DBG_PMC_ATX2_CNT_R5: Count of request(5).
32:35	RW	INT_PC_DBG_PMC_ATX2_CNT_R6: Count of request(6).
36:39	RW	INT_PC_DBG_PMC_ATX2_CNT_R7: Count of request(7).
40:43	RW	INT_PC_DBG_PMC_ATX2_CNT_R8: Count of request(8).
44:47	RW	INT_PC_DBG_PMC_ATX2_CNT_R9: Count of request(9).
48:63	RO	Constant = 0b0000000000000000

Register Name	Error 0 Configuration 0 Register
Mnemonic	INT.INT_PC.INT_PC_ERR0_CFG0
Address	0000000005013140 (SCOM)
Description	This register is used to configure P3PC error0. 2-bit configuration for each possible error. 00 - Disable 01 - Fatal 10 - Recoverable 11 - Informational

Bits	SCOM	Field Mnemonic: Description
0:63	RW	INT_PC_ERR0_CFG0_ERROR_CONFIG0: Bit n is config(0) for error0 bit n.

Register Name	Error 0 Configuration 1 Register
Mnemonic	INT.INT_PC.INT_PC_ERR0_CFG1
Address	0000000005013141 (SCOM)
Description	This register is used to configure P3PC error0. 2-bit configuration for each possible error. 00 - Disable 01 - Fatal 10 - Recoverable 11 - Informational.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	INT_PC_ERR0_CFG1_ERROR_CONFIG0: Bit n is config(1) for error0 bit n.

Register Name	Error 0 WOF (Who's On First) Register
Mnemonic	INT.INT_PC.INT_PC_ERR0_WOF
Address	0000000005013142 (SCOM)
Description	This register captures the first non disabled group0 error reported. This register is cleared on read.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX_CLRPART	INT_PC_ERR0_WOF_ERROR: Bit n in this register corresponds to error0 bit n.

Register Name	Error 0 WOF Detail Register
Mnemonic	INT.INT_PC.INT_PC_ERR0_WOF_DETAIL
Address	0000000005013143 (SCOM)
Description	This register captures the error detailed information of the error logged in corresponding WOF register.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	INT_PC_ERR0_WOF_DETAIL_DETAIL:

Register Name	Error 0 Fatal Error Register
Mnemonic	INT.INT_PC.INT_PC_ERR0_FATAL
Address	0000000005013144 (SCOM)
Description	This register accumulates all the error0 fatal errors This register is cleared on read.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX_CLRPART	INT_PC_ERR0_FATAL_ERROR: Bit n in this register corresponds to error0 bit n.

Register Name	Error 0 Recoverable Error Register
Mnemonic	INT.INT_PC.INT_PC_ERR0_RECOV
Address	0000000005013145 (SCOM)
Description	This register accumulates all the error0 recoverable errors This register is cleared on read.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX_CLRPART	INT_PC_ERR0_RECOV_ERROR: Bit n in this register corresponds to error0 bit n.

Register Name	Error 0 Informational Error Register
Mnemonic	INT.INT_PC.INT_PC_ERR0_INFO
Address	0000000005013146 (SCOM)
Description	This register accumulates all the error0 informational errors This register is cleared on read.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX_CLRPART	INT_PC_ERR0_INFO_ERROR: Bit n in this register corresponds to error0 bit n.

Register Name	Error 1 Configuration 0 Register
Mnemonic	INT.INT_PC.INT_PC_ERR1_CFG0
Address	0000000005013148 (SCOM)
Description	This register is used to configure P3PC error1. 2-bit configuration for each possible error. 00 - Disable 01 - Fatal 10 - Recoverable 11 - Informational.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	INT_PC_ERR1_CFG0_ERROR_CONFIG0: Bit n is config(0) for error1 bit n.

Register Name	Error 1 Configuration 1 Register
Mnemonic	INT.INT_PC.INT_PC_ERR1_CFG1
Address	0000000005013149 (SCOM)
Description	This register is used to configure P3PC error1. 2-bit configuration for each possible error. 00 - Disable 01 - Fatal 10 - Recoverable 11 - Informational.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	INT_PC_ERR1_CFG1_ERROR_CONFIG0: Bit n is config(1) for error1 bit n.

Register Name	Error 1 WOF (Who's On First) Register
Mnemonic	INT.INT_PC.INT_PC_ERR1_WOF
Address	000000000501314A (SCOM)
Description	This register captures the first non disabled group1 error reported. This register is cleared on read.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX_CLRPART	INT_PC_ERR1_WOF_ERROR: Bit n in this register corresponds to error1 bit n.

Register Name	Error 1 WOF Detail Register
Mnemonic	INT.INT_PC.INT_PC_ERR1_WOF_DETAIL
Address	000000000501314B (SCOM)
Description	This register captures the error detailed information of the error logged in corresponding WOF register.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	INT_PC_ERR1_WOF_DETAIL_DETAIL:

Register Name	Error 1 Fatal Error Register
Mnemonic	INT.INT_PC.INT_PC_ERR1_FATAL
Address	000000000501314C (SCOM)
Description	This register accumulates all the error1 fatal errors This register is cleared on read.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX_CLRPART	INT_PC_ERR1_FATAL_ERROR: Bit n in this register corresponds to error1 bit n.

Register Name	Error 1 Recoverable Error Register
Mnemonic	INT.INT_PC.INT_PC_ERR1_RECOV
Address	000000000501314D (SCOM)
Description	This register accumulates all the error1 recoverable errors This register is cleared on read.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX_CLRPART	INT_PC_ERR1_RECOV_ERROR: Bit n in this register corresponds to error1 bit n.

Register Name	Error 1 Informational Error Register
Mnemonic	INT.INT_PC.INT_PC_ERR1_INFO
Address	000000000501314E (SCOM)
Description	This register accumulates all the error1 informational errors This register is cleared on read.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX_CLRPART	INT_PC_ERR1_INFO_ERROR: Bit n in this register corresponds to error1 bit n.

Register Name	VPC Maximum Number of Outstanding Outbound Requests Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_MAX_OUTSTANDING_OUTB_CMD
Address	0000000005013160 (SCOM)
Description	Defines the maximum number of outstanding requests that VPC may issue. This register is located in VPC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:25	RWX	INT_PC_VPC_MAX_OUTSTANDING_OUTB_CMD_Reserved_0_25: Spare.

Bits	SCOM	Field Mnemonic: Description
26:31	RWX	INT_PC_VPC_MAX_OUTSTANDING_OUTB_CMD_CI_STORE_RMT_PC: VPC: CI Store Remote PC request.
32:33	RWX	INT_PC_VPC_MAX_OUTSTANDING_OUTB_CMD_Reserved_32_33: Spare.
34:39	RWX	INT_PC_VPC_MAX_OUTSTANDING_OUTB_CMD_CI_STORE_RMT_VC: VPC: CI Store Remote VC request.
40:41	RWX	INT_PC_VPC_MAX_OUTSTANDING_OUTB_CMD_Reserved_40_41: Spare.
42:47	RWX	INT_PC_VPC_MAX_OUTSTANDING_OUTB_CMD_CI_LOAD: VPC: CI Load Local or Remote request.
48:49	RWX	INT_PC_VPC_MAX_OUTSTANDING_OUTB_CMD_Reserved_48_49: Spare.
50:55	RWX	INT_PC_VPC_MAX_OUTSTANDING_OUTB_CMD_VPD_DMA_READ: VPC: VPD DMA Read request.
56:57	RWX	INT_PC_VPC_MAX_OUTSTANDING_OUTB_CMD_Reserved_56_57: Spare.
58:63	RWX	INT_PC_VPC_MAX_OUTSTANDING_OUTB_CMD_VPD_DMA_WRITE: VPC: VPD DMA Write request.

Register Name	**VPC Cache Enable Register**
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_CACHE_EN
Address	0000000005013161 (SCOM)
Description	This register enables the VPC cache. This register is located in VPC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	INT_PC_VPC_CACHE_EN_CACHE_ENABLE: 32-bit cache enable (one bit per blockid). May be cleared by scrub engine at flush completion.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	**VPC Cache Scrub Trigger Register**
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_SCRUB_TRIG
Address	0000000005013162 (SCOM)
Description	This register, along with scrub mask register, is used by Software to trigger a cache scrub. This register is located in VPC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_PC_VPC_SCRUB_TRIG_VALID: Scrub request. Set by Software to initiate a cache scrub. Reset by hardware when flush operation is completed.
1	RWX	INT_PC_VPC_SCRUB_TRIG_WANT_CACHE_DISABLE: Want cache disable. When set, cache is disabled for the selected blockid(s) at the end of scrub operation.
2	RWX	INT_PC_VPC_SCRUB_TRIG_WANT_INVALIDATE: Want invalidate. 0: Modified entries are written back. State is switched to exclusive 1: Exclusive entries are switched to invalidate. Modified entries are written back, state is switched to invalidate.
3:26	RO	Constant = 0b00000000000000000000000000
27:31	RWX	INT_PC_VPC_SCRUB_TRIG_BLOCKID: 5-bit scrub blockid.
32:44	RWX	INT_PC_VPC_SCRUB_TRIG_Reserved_32_44: Spare.
45:63	RWX	INT_PC_VPC_SCRUB_TRIG_OFFSET: 19-bit scrub offset.

Register Name	VPC Cache Scrub Mask Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_SCRUB_MASK
Address	0000000005013163 (SCOM)
Description	This register defines the block ids and offsets that need to be scrubbed. This register is located in VPC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:26	RO	Constant = 0b00000000000000000000000000
27:31	RWX	INT_PC_VPC_SCRUB_MASK_BLOCKID_MASK: 5-bit scrub blockid mask. 0:means ignore the corresponding blockid bit.
32:44	RWX	INT_PC_VPC_SCRUB_MASK_Reserved_32_44: Spare.
45:63	RWX	INT_PC_VPC_SCRUB_MASK_OFFSET_MASK: 19-bit scrub offset mask. 0:means ignore the corresponding offset bi t.

Register Name	VPC Configuration Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_CONFIG
Address	0000000005013164 (SCOM)
Description	Defines global VPC configuration. This register is located in VPC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:23	RO	Constant = 0b00000000000000000000000
24:25	RWX	INT_PC_VPC_CONFIG_Reserved_24_25: Spare.
26:31	RWX	INT_PC_VPC_CONFIG_PTAG_MAX_IN_USE: Maximum number of VPC ptags that can be in use at a time.
32	RWX	INT_PC_VPC_CONFIG_Reserved_32: Spare.
33:35	RWX	INT_PC_VPC_CONFIG_SYNC_DONE: 3-bit sync done. Cleared by Software. Set by hardware when sync operation is completed (33:vrq local pull, 34:vrq push local, 35:vrq push remote and vrq sw store).
36:39	RWX	INT_PC_VPC_CONFIG_Reserved_36_39: Spare.
40	RWX	INT_PC_VPC_CONFIG_LCL_FIRST_GRPSCAN_ENA: When '1', enable Pull Local First commands to do a Group Scan operation.
41	RWX	INT_PC_VPC_CONFIG_LCL_FIRST_GRPSCAN_RMT_ENA: When '1', enable Pull Local First commands to do a Remote Group Scan operation.
42	RWX	INT_PC_VPC_CONFIG_RMT_FIRST_GRPSCAN_ENA: When '1', enable Pull Remote First commands to do a Group Scan operation.
43	RWX	INT_PC_VPC_CONFIG_LSMFB_SCAN_ALL_PRIO_ENA: When '1', the LSMFB (Logical Server Most Favored Backlog) will look at all priority backlogs when doing a Group Scan. When '0', the LSMFB will only look at priority 7 up to the priority of the Pull command backlogs when doing a Group Scan.
44:46	RWX	INT_PC_VPC_CONFIG_P0_BACK2BACK_MODE_ENA: When '1', requests from the same source are allowed to win P0 arbitration in back-to-back arbitration cycles. When '0', at least one P0 arbitration cycle will occur between requests from the same source. 0: VRQ requests 1: Load requests 2: Local Group Scan requests.
47:51	RWX	INT_PC_VPC_CONFIG_Reserved_47_51: Spare.
52:55	RWX	INT_PC_VPC_CONFIG_BG_SCAN_RATE: 4-bit scrub background scan rate. 0:disable scan. Otherwise, scan rate = 2**n clock cycles (max of 16 micro-seconds).
56:58	RWX	INT_PC_VPC_CONFIG_Reserved_56_58: Spare.

Bits	SCOM	Field Mnemonic: Description
59:63	RWX	INT_PC_VPC_CONFIG_MAX_ENTRIES_IN_MODIFIED: 5-bit Max number of entries per set in modified state.

Register Name	VPC Cache Watch Specification Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_CACHE_WATCH_SPEC
Address	0000000005013167 (SCOM)
Description	This register along with cache watch data registers are used to Read and Write VPDs. Software specifies the VPD blockid and offset it wants to access. This register is located in VPC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0	NCX	INT_PC_VPC_CACHE_WATCH_SPEC_CONFLICT: Conflict: Forced to 0 when Software writes the register. Set to one by hardware if an internal VPC process references this VPD and its valid bit is on during the Software ReadModifyWrite sequence.
1:7	RWX	INT_PC_VPC_CACHE_WATCH_SPEC_Reserved_1_7: Spare.
8	RWX	INT_PC_VPC_CACHE_WATCH_SPEC_FULL: Full - if set to a one, then the contents of all data register fields replace the corresponding specified structure fields as long as the conflict bit is zero, else the structure is not modified; if F is set to a zero, then only the contents of data register fields that are hardware read-only replace the corresponding specific structure fields (everything except IPB and Backlogs), regardless of the state of the conflict bit.
9:26	RWX	INT_PC_VPC_CACHE_WATCH_SPEC_Reserved_9_26: Spare.
27:31	RWX	INT_PC_VPC_CACHE_WATCH_SPEC_BLOCKID: 5-bit blockid.
32:44	RWX	INT_PC_VPC_CACHE_WATCH_SPEC_Reserved_32_44: Spare.
45:63	RWX	INT_PC_VPC_CACHE_WATCH_SPEC_OFFSET: 19-bit VPD offset.

Register Name	VPC Cache Watch Data 0 Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_CACHE_WATCH_DATA0
Address	0000000005013168 (SCOM)
Description	Holds data for VPD words 0 and 1. This register is located in VPC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_PC_VPC_CACHE_WATCH_DATA0_VP: Valid bit for the VP portion (Words 0-7) of the VPD entry Read Modify Write operation : - Software writes cache watch specification register. This clears the Conflict bit. - Software does CI load of the data register 0. This triggers an internal read request of the targeted data defined in cache watch specification register - When the internal read operation is completed, data is loaded into the cache watch data registers - CI load response is generated - Software may issue CI load of data registers 1 to 7 to get full data - Software optionally does CI store of data registers 1 to 7. - Software writes data register 0. The write to data register 0 triggers an internal write of the VPD defined in cache watch specification register - The write operation is aborted if the hardware had set the Conflict bit and Full bit was 1. - Software reads the cache watch specification register. If C = 1 and F = 1 then Software has to retry the full sequence.
1:6	RO	Constant = 0b000000
7	RWX	INT_PC_VPC_CACHE_WATCH_DATA0_SECURE: Secure VP.
8:25	RO	Constant = 0b000000000000000000
26:31	RWX	INT_PC_VPC_CACHE_WATCH_DATA0_PGOFFIRSTLS: The physical grouping level of the first higher logical server.
32:35	RWX	INT_PC_VPC_CACHE_WATCH_DATA0_IVE_BLOCK: IVE Block for Pressure Relief interrupt.

Bits	SCOM	Field Mnemonic: Description
36:63	RWX	INT_PC_VPC_CACHE_WATCH_DATA0_IVE_INDEX: IVE Index for Pressure Relief interrupt.

Register Name	VPC Cache Watch Data 2 Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_CACHE_WATCH_DATA2
Address	000000000501316A (SCOM)
Description	Holds data for VPD words 4 and 5. This register is located in VPC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:15	RO	Constant = 0b0000000000000000
16:23	RWX	INT_PC_VPC_CACHE_WATCH_DATA2_IPB: Interrupt Pending Bits.
24:63	RO	Constant = 0b0000000000000000000000000000000000000000

Register Name	VPC Cache Watch Data 3 Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_CACHE_WATCH_DATA3
Address	000000000501316B (SCOM)
Description	Holds data for VPD words 6 and 7. This register is located in VPC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:3	RWX	INT_PC_VPC_CACHE_WATCH_DATA3_MIG_REG: Migration register number.
4:7	RO	Constant = 0b0000
8:55	RWX	INT_PC_VPC_CACHE_WATCH_DATA3_CL: VP reporting cache line.
56:63	RO	Constant = 0b00000000

Register Name	VPC Cache Watch Data 4 Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_CACHE_WATCH_DATA4
Address	000000000501316C (SCOM)
Description	Holds data for VPD words 8 and 9. This register is located in VPC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_PC_VPC_CACHE_WATCH_DATA4_VG: Valid bit for the Group portion (Words 8-F) of the VPD entry.
1:25	RO	Constant = 0b0000000000000000000000000
26:31	RWX	INT_PC_VPC_CACHE_WATCH_DATA4_PGOFNEXTLS: The physical grouping level of the next higher logical server.
32:35	RO	Constant = 0b0000
36:39	RWX	INT_PC_VPC_CACHE_WATCH_DATA4_EQD_BLOCK: EQD Block for Redistribution interrupt.
40:60	RWX	INT_PC_VPC_CACHE_WATCH_DATA4_EQD_INDEX: EQD Index for Redistribution interrupt.
61:63	RO	Constant = 0b000

Register Name	VPC Cache Watch Data 6 Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_CACHE_WATCH_DATA6
Address	000000000501316E (SCOM)
Description	Holds data for VPD words C and D. This register is located in VPC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:15	RWX	INT_PC_VPC_CACHE_WATCH_DATA6_BKLG0: Priority 0 Backlog counter.
16:31	RWX	INT_PC_VPC_CACHE_WATCH_DATA6_BKLG1: Priority 1 Backlog counter.
32:47	RWX	INT_PC_VPC_CACHE_WATCH_DATA6_BKLG2: Priority 2 Backlog counter.
48:63	RWX	INT_PC_VPC_CACHE_WATCH_DATA6_BKLG3: Priority 3 Backlog counter.

Register Name	VPC Cache Watch Data 7 Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_CACHE_WATCH_DATA7
Address	000000000501316F (SCOM)
Description	Holds data for VPD words E and F. This register is located in VPC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:15	RWX	INT_PC_VPC_CACHE_WATCH_DATA7_BKLG4: Priority 4 Backlog counter.
16:31	RWX	INT_PC_VPC_CACHE_WATCH_DATA7_BKLG5: Priority 5 Backlog counter.
32:47	RWX	INT_PC_VPC_CACHE_WATCH_DATA7_BKLG6: Priority 6 Backlog counter.
48:63	RWX	INT_PC_VPC_CACHE_WATCH_DATA7_BKLG7: Priority 7 Backlog counter.

Register Name	VPC Debug Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_DEBUG
Address	0000000005013170 (SCOM)
Description	This register holds ECC errors correction/injection and some VPC debug features. This register is located in VPC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:29	RWX	INT_PC_VPC_DEBUG_Reserved_0_29: Spare.
30	RWX	INT_PC_VPC_DEBUG_DIS_LD_ECC_CORRECTION: Disable VPC Load array ECC correction.
31:38	RWX	INT_PC_VPC_DEBUG_DIS_TAG_ECC_CORRECTION: Disable TAG [0:7] arrays ECC correction.
39:40	RWX	INT_PC_VPC_DEBUG_DIS_STATE_ECC_CORRECTION: Disable STATE [0:1] array ECC correction.
41:43	RWX	INT_PC_VPC_DEBUG_DIS_PTAG_ECC_CORRECTION: Disable P1 PTAG Cmd,Ctrl,CL array ECC correction.
44:47	RWX	INT_PC_VPC_DEBUG_DIS_DATA_ECC_CORRECTION: Disable P1 DATA Backlog0,Backlog1,Ctrl,CL array ECC correction.
48	RWX	INT_PC_VPC_DEBUG_FORCE_SINGLE_BIT_ECC_ERR: Force single bit ECC error. Set by Software. Cleared by hardware when selected array is written (array datain lsb bit is flipped).
49	RWX	INT_PC_VPC_DEBUG_FORCE_DOUBLE_BIT_ECC_ERR: Force double bit ECC error. Set by Software. Cleared by hardware when selected array is written (array datain 2 lsb bits are flipped).
50:51	RWX	INT_PC_VPC_DEBUG_ECC_ERR_INJ_PARTITION_SEL: Partition selection for ECC error injection 00 P0 pipeline 01 P1 Pipeline 10 VPC Load.

Bits	SCOM	Field Mnemonic: Description
52:55	RWX	INT_PC_VPC_DEBUG_ECC_ERR_INJ_ARRAY_SEL: Array selection for ECC error injection P0 pipeline 0xxx = P0 TAG array where xxx = 0 to 7 100x = P0 STATE array where X = 0 or1 0000 = Data Backlog0 array ECC0 0001 = Data Backlog1 array ECC0 0010 = Data Backlog0 array ECC1 0011 = Data Backlog1 array ECC1 0100 = Data Ctrl0 array ECC0 0101 = Data Ctrl1 array ECC0 0110 = Data Ctrl0 array ECC1 0111 = Data Ctrl1 array ECC1 1000 = Data CL0 array 1001 = Data CL1 array 1100 = Ptag command array 1101 = Ptag Ctrl array 1110 = Ptag CL array VPC Load xxxx = VPC Load array (this field is a don't care)
56	RWX	INT_PC_VPC_DEBUG_TRACE_ENABLE: Enable VPC trace bus.
57	RWX	INT_PC_VPC_DEBUG_PMC_ENABLE: Enable VPC PMC bus.
58:59	RWX	INT_PC_VPC_DEBUG_Reserved_58_59: Spare.
60	RWX	INT_PC_VPC_DEBUG_USE_WATCH_TO_READ_CTRL_ARY: Use watch engine to read cache control arrays. When set, a cache watch read is replaced by a read of the cache control arrays. In such case, Cache Watch Address reg (58:62) define set index.
61:63	RWX	INT_PC_VPC_DEBUG_CACHE_CTRL_ARY_SELECT: When bit 60 is set, this field defines which cache control arrays to read 000 Tag A Watch data reg 0 [13:31] = TAG0 Watch data reg 0 [45:63] = TAG1 Watch data reg 1 [13:31] = TAG8 Watch data reg 1 [45:63] = TAG9 Watch data reg 2 [13:31] = TAG16 Watch data reg 2 [45:63] = TAG17 Watch data reg 3 [13:31] = TAG24 Watch data reg 3 [45:63] = TAG25 001 Tag B Watch data reg 0 [13:31] = TAG2 Watch data reg 0 [45:63] = TAG3 Watch data reg 1 [13:31] = TAG10 Watch data reg 1 [45:63] = TAG11 Watch data reg 2 [13:31] = TAG18 Watch data reg 2 [45:63] = TAG19 Watch data reg 3 [13:31] = TAG26 Watch data reg 3 [45:63] = TAG27 010 Tag C Watch data reg 0 [13:31] = TAG4 Watch data reg 0 [45:63] = TAG5 Watch data reg 1 [13:31] = TAG12 Watch data reg 1 [45:63] = TAG13 Watch data reg 2 [13:31] = TAG20 Watch data reg 2 [45:63] = TAG21 Watch data reg 3 [13:31] = TAG28 Watch data reg 3 [45:63] = TAG29 011 Tag D Watch data reg 0 [13:31] = TAG6 Watch data reg 0 [45:63] = TAG7 Watch data reg 1 [13:31] = TAG14 Watch data reg 1 [45:63] = TAG15 Watch data reg 2 [13:31] = TAG22 Watch data reg 2 [45:63] = TAG23 Watch data reg 3 [13:31] = TAG30 Watch data reg 3 [45:63] = TAG31 1xx Tag State + LRU Watch data reg 1 = STATE(0 to 15) Watch data reg 2 = STATE(16 to 31) Watch data reg 3 [32:63] = LRU(0 to 31).

Register Name	VPC Performance Events Selection 1 Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_PERF_EVENT_SEL_1
Address	0000000005013171 (SCOM)
Description	4-bit configuration for each possible performance event bit0: Count enable. bits 1:3 Performance counter selection This register is located in VPC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:3	RWX	INT_PC_VPC_PERF_EVENT_SEL_1_CNT_VRQ_PULL: count of VRQ Pull commands processed.
4:7	RWX	INT_PC_VPC_PERF_EVENT_SEL_1_CNT_VRQ_PUSH_LOCAL: count of VRQ Push Local commands processed.
8:11	RWX	INT_PC_VPC_PERF_EVENT_SEL_1_CNT_VRQ_PUSH_REMOTE: count of VRQ Push Remote commands processed.
12:15	RWX	INT_PC_VPC_PERF_EVENT_SEL_1_CNT_NON_SPEC_VC_LOAD: count of non-speculative LocalRemote VC CI Ld commands processed.

Bits	SCOM	Field Mnemonic: Description
16:19	RWX	INT_PC_VPC_PERF_EVENT_SEL_1_CNT_NON_SPEC_SW_LOAD: count of non-speculative SW CI Ld commands processed.
20:23	RWX	INT_PC_VPC_PERF_EVENT_SEL_1_CNT_NON_SPEC_PC_LOAD: count of non-speculative PC CI Ld commands processed.
24:27	RWX	INT_PC_VPC_PERF_EVENT_SEL_1_CNT_LOCAL_GROUP_SCAN: count of Local Group Scan commands processed.
28:31	RWX	INT_PC_VPC_PERF_EVENT_SEL_1_CNT_VRQ_CACHE_HIT: count of VRQ commands with cache hit.
32:35	RWX	INT_PC_VPC_PERF_EVENT_SEL_1_CNT_LD_CACHE_HIT: count of CI Ld commands with cache hit.
36:39	RWX	INT_PC_VPC_PERF_EVENT_SEL_1_CNT_GROUP_SCAN_CACHE_HIT: count of Local Group Scan commands with cache hit.
40:43	RWX	INT_PC_VPC_PERF_EVENT_SEL_1_CNT_VICTIM_IS_LRU: count of selected victim is LRU.
44:47	RWX	INT_PC_VPC_PERF_EVENT_SEL_1_CNT_VICTIM_IS_FIRST_USABLE: count of selected victim is first usable entry.
48:51	RWX	INT_PC_VPC_PERF_EVENT_SEL_1_CNT_RETRY: count of command retry.
52:55	RWX	INT_PC_VPC_PERF_EVENT_SEL_1_CNT_TOO_MANY_ENTRIES: count of VPD writebacks due to too many entries in modified state.
56:63	RWX	INT_PC_VPC_PERF_EVENT_SEL_1_Reserved_56_63: Spare.

Register Name	VPC Performance Events Selection 2 Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_PERF_EVENT_SEL_2
Address	0000000005013172 (SCOM)
Description	4-bit configuration for each possible performance event bit0: Count enable. bits 1:3 Performance counter selection This register is located in VPC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:3	RWX	INT_PC_VPC_PERF_EVENT_SEL_2_CNT_VPD_WB: count of VPD Writebacks sent.
4:7	RWX	INT_PC_VPC_PERF_EVENT_SEL_2_CNT_VPD_FETCH: count of VPD Fetches sent.
8:11	RWX	INT_PC_VPC_PERF_EVENT_SEL_2_CNT_RSP_LCL_TCTXT: count of responses to local Tctxt sent.
12:15	RWX	INT_PC_VPC_PERF_EVENT_SEL_2_CNT_RSP_LCL_VC: count of responses to local VC sent.
16:19	RWX	INT_PC_VPC_PERF_EVENT_SEL_2_CNT_RSP_RMT_PC: count of responses to remote PC sent.
20:23	RWX	INT_PC_VPC_PERF_EVENT_SEL_2_CNT_RSP_RMT_VC: count of responses to remote VC sent.
24:27	RWX	INT_PC_VPC_PERF_EVENT_SEL_2_CNT_RSP_SW_LD: count of responses to SW Loads sent.
28:31	RWX	INT_PC_VPC_PERF_EVENT_SEL_2_CNT_RMT_PULL_1STVP: count of Pull Remote First VP commands sent.
32:35	RWX	INT_PC_VPC_PERF_EVENT_SEL_2_CNT_RMT_PULL_1STGRP: count of Pull Remote First Grp commands sent.
36:39	RWX	INT_PC_VPC_PERF_EVENT_SEL_2_CNT_RMT_PULL_VP: count of Pull Remote VP commands sent.
40:43	RWX	INT_PC_VPC_PERF_EVENT_SEL_2_CNT_RMT_PULL_GRP: count of Pull Remote Grp commands sent.
44:47	RWX	INT_PC_VPC_PERF_EVENT_SEL_2_CNT_LCL_PRESS_RELIEF: count of Local Pressure Relief commands sent.
48:51	RWX	INT_PC_VPC_PERF_EVENT_SEL_2_CNT_LCL_REDIST: count of Local Redistribution commands sent.
52:55	RWX	INT_PC_VPC_PERF_EVENT_SEL_2_CNT_RMT_PUSH_PC: count of Remote Push PC commands sent.
56:59	RWX	INT_PC_VPC_PERF_EVENT_SEL_2_CNT_RMT_PUSH_VC: count of Remote Push VC commands sent.

Bits	SCOM	Field Mnemonic: Description
60:63	RO	Constant = 0b0000

Register Name	VPC Performance Events Selection 3 Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_PERF_EVENT_SEL_3
Address	0000000005013173 (SCOM)
Description	4-bit configuration for each possible performance event bit0: Count enable. bits 1:3 Performance counter selection This register is located in VPC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:3	RWX	INT_PC_VPC_PERF_EVENT_SEL_3_CNT_LCL_GRPSCAN_REPLAY: count of Local Group Scan replay.
4:7	RWX	INT_PC_VPC_PERF_EVENT_SEL_3_CNT_VPD_FETCH_REPLAY: count of VPD Fetch replay.
8:11	RWX	INT_PC_VPC_PERF_EVENT_SEL_3_CNT_RSP_TCTXT_REPLAY: count of response to local Tctxt replay.
12:15	RWX	INT_PC_VPC_PERF_EVENT_SEL_3_CNT_RSP_ATX_REPLAY: count of response to ATX replay.
16:19	RWX	INT_PC_VPC_PERF_EVENT_SEL_3_CNT_LD_REQ_REPLAY: count of CI Load request replay.
20:23	RWX	INT_PC_VPC_PERF_EVENT_SEL_3_CNT_ST_LCL_REPLAY: count of CI Store Local replay.
24:27	RWX	INT_PC_VPC_PERF_EVENT_SEL_3_CNT_ST_RMT_PC_REPLAY: count of CI Store Remote PC replay.
28:31	RWX	INT_PC_VPC_PERF_EVENT_SEL_3_CNT_ST_RMT_VC_REPLAY: count of CI Store Remote VC replay.
32:35	RWX	INT_PC_VPC_PERF_EVENT_SEL_3_CNT_SAME_VPD_REPLAY: count of Group Scan to Same VPD replay.
36:63	RO	Constant = 0b00000000000000000000000000000

Register Name	VPC Additional Performance 1 Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_ADDITIONAL_PERF_1
Address	0000000005013174 (SCOM)
Description	This register is located in VPC sub-unit. MMIO offset = 0x7A0

Bits	SCOM	Field Mnemonic: Description
0	ROX	INT_PC_VPC_ADDITIONAL_PERF_1_P0_IS_IDLE: VPC P0 is idle.
1	ROX	INT_PC_VPC_ADDITIONAL_PERF_1_P1_IS_IDLE: VPC P1 is idle.
2:9	ROX	INT_PC_VPC_ADDITIONAL_PERF_1_Reserved_2_9: Spare.
10:15	ROX	INT_PC_VPC_ADDITIONAL_PERF_1_MAX_PTAG_IN_USE: Max reached number of ptag in use.
16:27	ROX	INT_PC_VPC_ADDITIONAL_PERF_1_Reserved_16_27: Spare.
28:31	ROX	INT_PC_VPC_ADDITIONAL_PERF_1_MAX_UNLOCK_IN_FIFO: Max reached number of unlock command in the unlock FIFO.
32:33	ROX	INT_PC_VPC_ADDITIONAL_PERF_1_Reserved_32_33: Spare.
34:39	ROX	INT_PC_VPC_ADDITIONAL_PERF_1_MAX_OUTSTANDING_WB: Max reached number of outstanding Writebacks.
40:63	RO	Constant = 0b000000000000000000000000

Register Name	VPC Additional Performance 2 Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_ADDITIONAL_PERF_2
Address	0000000005013175 (SCOM)
Description	This register is located in VPC sub-unit. MMIO offset = 0x7A8

Bits	SCOM	Field Mnemonic: Description
0:1	ROX	INT_PC_VPC_ADDITIONAL_PERF_2_Reserved_0_1: Spare.
2:7	ROX	INT_PC_VPC_ADDITIONAL_PERF_2_MAX_OUTSTANDING_VPD_FETCH: Max reached number of outstanding VPD fetch.
8:9	ROX	INT_PC_VPC_ADDITIONAL_PERF_2_Reserved_8_9: Spare.
10:15	ROX	INT_PC_VPC_ADDITIONAL_PERF_2_MAX_OUTSTANDING_CI_LOAD: Max reached number of outstanding CI Load request.
16:17	ROX	INT_PC_VPC_ADDITIONAL_PERF_2_Reserved_16_17: Spare.
18:23	ROX	INT_PC_VPC_ADDITIONAL_PERF_2_MAX_OUTSTANDING_ST_RMT_PC: Max reached number of outstanding CI Store Remote PC request.
24:25	ROX	INT_PC_VPC_ADDITIONAL_PERF_2_Reserved_24_25: Spare.
26:31	ROX	INT_PC_VPC_ADDITIONAL_PERF_2_MAX_OUTSTANDING_ST_RMT_VC: Max reached number of outstanding CI Store Remote VC request.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	VPC Errors Configuration 0 Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_ERR_CFG0
Address	0000000005013178 (SCOM)
Description	This register along with the next one is used to configure P3PC VPC errors. 2-bit configuration for each possible error. 00 - Disable, 01 - Fatal, 10 - Recoverable, 11 - Informational. MMIO offset = 0x7C0

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	INT_PC_VPC_ERR_CFG0_ERROR_CONFIG: Bit n is config(0) for error bit n.

Register Name	VPC Errors Configuration 1 Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_ERR_CFG1
Address	0000000005013179 (SCOM)
Description	Refer to INT_PC_VPC_ERR_CFG0 description. MMIO offset = 0x7C8

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	INT_PC_VPC_ERR_CFG1_ERROR_CONFIG: Bit n is config(1) for error bit n.

Register Name	VPC Who's On First Errors Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_WOF_ERR
Address	000000000501317A (SCOM)
Description	This register captures the first non disabled VPC error reported. This register is cleared on read. MMIO offset = 0x7D0

Bits	SCOM	Field Mnemonic: Description
0:63	ROX_CLRPART	INT_PC_VPC_WOF_ERR_ERROR: Bit n in this register corresponds to VPC error bit n.

Register Name	VPC Error WOF Detail Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_WOF_ERR_DETAIL
Address	000000000501317B (SCOM)
Description	This register captures the error detailed information of the error logged in corresponding WOF register. MMIO offset = 0x7D8

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	INT_PC_VPC_WOF_ERR_DETAIL_ERROR:

Register Name	VPC Fatal Errors Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_FATAL_ERR
Address	000000000501317C (SCOM)
Description	This register accumulates all the VPC fatal errors. This register is cleared on read. MMIO offset = 0x7E0

Bits	SCOM	Field Mnemonic: Description
0:63	ROX_CLRPART	INT_PC_VPC_FATAL_ERR_ERROR: Bit n in this register corresponds to VPC error bit n.

Register Name	VPC Recoverable Errors Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_RECOV_ERR
Address	000000000501317D (SCOM)
Description	This register accumulates all the VPC recoverable errors. This register is cleared on read. MMIO offset = 0x7E8

Bits	SCOM	Field Mnemonic: Description
0:63	ROX_CLRPART	INT_PC_VPC_RECOV_ERR_ERROR: Bit n in this register corresponds to VPC error bit n.

Register Name	VPC Informational Errors Register
Mnemonic	INT.INT_PC.LBS2.INT_PC_VPC_INFO_ERR
Address	000000000501317E (SCOM)
Description	This register accumulates all the VPC informational errors. This register is cleared on read. MMIO offset = 0x7F0

Bits	SCOM	Field Mnemonic: Description
0:63	ROX_CLRPART	INT_PC_VPC_INFO_ERR_ERROR: Bit n in this register corresponds to VPC error bit n.

Register Name	P3VC Global Configuration Register
Mnemonic	INT.INT_VC.INT_VC_GLOBAL_CONFIG
Address	0000000005013200 (SCOM)
Description	P3VC global configuration register.

Bits	SCOM	Field Mnemonic: Description
0:31	RO	Constant = 0b00000000000000000000000000000000
32	RWX	INT_VC_GLOBAL_CONFIG_INDIRECT_MODE: When set, access to memory structures may be indirect. Software must set this bit if the "i" bit is set in any VSD.
33:63	RWX	INT_VC_GLOBAL_CONFIG_Reserved_33_63: Spare bits.

Register Name	VSD Table Address Register
Mnemonic	INT.INT_VC.INT_VC_VSD_TABLE_ADDR
Address	0000000005013201 (SCOM)
Description	This register along with the VSD table data register allows Software to load VSDs in the ATX BAR SRAM.

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_VC_VSD_TABLE_ADDR_AUTO_INCREMENT: When set, each rd/wr access to the BAR data register increments the table_address field once the current operation is completed.
1:12	RO	Constant = 0b000000000000
13:15	RWX	INT_VC_VSD_TABLE_ADDR_TABLE_SELECT: Table select: 000 = IVE. 001 = ESB. 010 = EQD. 011 =VPD. 1xx = IRQ.
16:26	RWX	INT_VC_VSD_TABLE_ADDR_Reserved_16_26: Spare.
27:31	RWX	INT_VC_VSD_TABLE_ADDR_TABLE_ADDRESS: Offset within the selected table. Blockid 0 to 31 if selected table is VPD. Blockid 0 to 15 if selected table is IVE, ESB or EQD. IRQ 0 to 5 if selected table is IRQ (0:IPI, 1:HWD, 2:First escalate, 3:Second escalate, 4:Redistribution, 5:IPI cascaded queue).
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	IVE and ISB Blocks Mode Register
Mnemonic	INT.INT_VC.INT_VC_IVE_ISB_BLOCK_MODE
Address	0000000005013203 (SCOM)
Description	This register holds the mode defined for each IVE and ISB blocks. Whenever the Software does a write to IVE or ESB VSDs in BAR SRAM, the defined mode bits are also copied in this register. This register should never be written except for debug. Note that if the interrupt controller owns an IVE block, it must also own the corresponding ISB block.

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	INT_VC_IVE_ISB_BLOCK_MODE_IVE_BLOCK_MODE: (2*n:n*2+1) IVE block n. 00invalid, 01shared, 10exclusive, 11forward.

Bits	SCOM	Field Mnemonic: Description
32:63	RWX	INT_VC_IVE_ISB_BLOCK_MODE_ISB_BLOCK_MODE: 32+(2*n:n*2+1) ISB block n. 00invalid, 01shared, 10exclusive, 11forward.

Register Name	EQD Blocks Mode Register
Mnemonic	INT.INT_VC.INT_VC_EQD_BLOCK_MODE
Address	0000000005013204 (SCOM)
Description	This register holds the mode defined for each EQD block. Whenever the Software does a write to EQD VSDs in BAR SRAM, the defined mode bits are also copied in this register. This register should never be written except for debug.

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	INT_VC_EQD_BLOCK_MODE_EQD_BLOCK_MODE: (2*n:n*2+1) EQD block n. 00invalid, 01shared, 10exclusive, 11forward.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	VPS Blocks Mode Register
Mnemonic	INT.INT_VC.INT_VC_VPS_BLOCK_MODE
Address	0000000005013205 (SCOM)
Description	This register holds the mode defined for each VPS block. Whenever the Software does a write to VPS VSDs in BAR SRAM, the defined mode bits are also copied in this register. This register should never be written except for debug. Note that this register holds mode for 32 entries but the hardware only uses blocks 0 to 28.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	INT_VC_VPS_BLOCK_MODE_VPS_BLOCK_MODE: (2*n:n*2+1) VPS block n. 00invalid, 01shared, 10exclusive, 11forward.

Register Name	ATX-IRQ ECC Control And Debug Register
Mnemonic	INT.INT_VC.INT_VC_LBS6_DEBUG
Address	0000000005013206 (SCOM)
Description	ATX-IRQ ECC control and debug register This register holds ECC errors correction/injection for ARX, ATX and IRQ sub units.

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_VC_LBS6_DEBUG_DIS_AIB_IN_ECC_CORRECTION: Disable AIB IN ECC sbe correction.
1	RWX	INT_VC_LBS6_DEBUG_DIS_IRQ_ECC_CORRECTION: Disable IRQ elastic FIFO ECC sbe correction.
2	RWX	INT_VC_LBS6_DEBUG_DIS_AT_SRAM_ECC_CORRECTION: Disable ATX AT SRAM ECC sbe correction.
3	RWX	INT_VC_LBS6_DEBUG_DIS_BAR_SRAM_ECC_CORRECTION: Disable ATX BAR SRAM ECC sbe correction.
4	RWX	INT_VC_LBS6_DEBUG_DIS_TAG_SRAM_ECC_CORRECTION: Disable ARX TAG SRAM ECC sbe correction.
5	RWX	INT_VC_LBS6_DEBUG_IRQ_TRACE_ENABLE: IRQ trace enable.

Bits	SCOM	Field Mnemonic: Description
6	RWX	INT_VC_LBS6_DEBUG_FORCE_SINGLE_BIT_ECC_ERR: Force single bit ECC error. Set by Software. Cleared by hardware when selected array is written (array datain lsb bit is flipped).
7	RWX	INT_VC_LBS6_DEBUG_FORCE_DOUBLE_BIT_ECC_ERR: Force double bit ECC error. Set by Software. Cleared by hardware when selected array is written (array datain 2 lsb bits are flipped).
8:9	RWX	INT_VC_LBS6_DEBUG_Reserved_8_9: Spare bits.
10:15	RWX	INT_VC_LBS6_DEBUG_ECC_ERR_INJ_SELECTION: Selection for ECC error injection. "00xx00" = AIB out data(0:63). "00xx01" = AIB out data(64:127). "00xx1x" = ARX TAG SRAM. "01nnn0" = IRQ nnn data(0:63) where nnn may only be 0 to 5. "01nnn1" = IRQ nnn data(64:127). "1xxx00" = ATX WB SRAM(0:63). "1xxx01" = ATX WB SRAM(64:127). "1xxx10" = ATX BAR SRAM. "1xxx11" = ATX AT SRAM.
16:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	**IRQ Configuration 0 Register**
Mnemonic	INT.INT_VC.INT_VC_IRQ_CONFIG_0
Address	0000000005013208 (SCOM)
Description	This register holds the configuration for each Interrupt Request Queue. n = 0: IPI queue, n = 1:Hardware queue, n = 2:First level escalate queue, n = 3:Second level escalate queue, n = 4:Redistribution queue,n = 5:IPI cascaded queue. MMIO offsets = 0x840, 0x848, 0x850, 0x858, 0x860, 0x868

Bits	SCOM	Field Mnemonic: Description
0:20	RWX	INT_VC_IRQ_CONFIG_0_Reserved_0_20: Spare bits.
21:26	RWX	INT_VC_IRQ_CONFIG_0_PREFETCH_DISTANCE: Defines, in multiple of two int triggers, the maximum distance between prefetch and demand.
27:31	RWX	INT_VC_IRQ_CONFIG_0_MAX_CRD_TO_CQ: Max number of interrupt credits given to CQ.
32:34	RWX	INT_VC_IRQ_CONFIG_0_Reserved_32_34: Spare bits.
35:39	RWX	INT_VC_IRQ_CONFIG_0_MAX_CRD_TO_PC: Max number of interrupt credits given to PC. Reset value is 0xF for IPI and redistribution queues, 0 for other queues as PC never issues interrupt requests to these queues.
40:41	RWX	INT_VC_IRQ_CONFIG_0_Reserved_40_41: Spare bits.
42	RWX	INT_VC_IRQ_CONFIG_0_PREFETCH_DISABLE: When set, IRQ never issue IVC/SBC prefetch lookup operation.
43	RWX	INT_VC_IRQ_CONFIG_0_QUEUE_DISABLE: When set, IRQ does not forward any EQ trigger to EQC.
44	RWX	INT_VC_IRQ_CONFIG_0_IVC_INTF_DISABLE: When set, IRQ to IVC lookup interface is disabled.
45	RWX	INT_VC_IRQ_CONFIG_0_ENABLE_MEMORY_BACKING: When 0, IRQ does not use system memory as internal FIFO extension. The FIFO is limited to the hardware internal FIFO size.
46:51	RWX	INT_VC_IRQ_CONFIG_0_MEM_SIZE: Defines the size of the memory backing store, power of 2^(n+12) memory size.
52	RWX	INT_VC_IRQ_CONFIG_0_Reserved_52: Spare bit.
53:55	RWX	INT_VC_IRQ_CONFIG_0_NB_WRITE_SLOT: Number of slots used for write.
56	RWX	INT_VC_IRQ_CONFIG_0_Reserved_56: Spare bit.
57:59	RWX	INT_VC_IRQ_CONFIG_0_NB_CLEAN_SLOT: Number of slots that will be kept clean.

Bits	SCOM	Field Mnemonic: Description
60	RWX	INT_VC_IRQ_CONFIG_0_FULL_WRITEBACK_ENABLE: Full Writeback enable. When set, all lines are written back to system memory.
61	ROX	INT_VC_IRQ_CONFIG_0_QUEUE_NOT_EMPTY: Queue is not empty.
62	ROX	INT_VC_IRQ_CONFIG_0_CREDIT_UPDATE_PENDING: A credit update is pending.
63	ROX_CLRPART	INT_VC_IRQ_CONFIG_0_FIFO_FULL: Set by hardware when the fifo is full. Cleared on read.

Register Name	**IRQ Configuration 1 Register**
Mnemonic	INT.INT_VC.INT_VC_IRQ_CONFIG_1
Address	0000000005013209 (SCOM)
Description	This register holds the configuration for each Interrupt Request Queue. n = 0: IPI queue n = 1: Hardware queue n = 2: First level escalate queue n = 3: Second level escalate queue n = 4: Redistribution queue n = 5: IPI cascaded queue. MMIO offsets = 0x840, 0x848, 0x850, 0x858, 0x860, 0x868

Bits	SCOM	Field Mnemonic: Description
0:20	RWX	INT_VC_IRQ_CONFIG_1_Reserved_0_20: Spare bits.
21:26	RWX	INT_VC_IRQ_CONFIG_1_PREFETCH_DISTANCE: Defines, in multiple of two int triggers, the maximum distance between prefetch and demand.
27:31	RWX	INT_VC_IRQ_CONFIG_1_MAX_CRD_TO_CQ: Max number of interrupt credits given to CQ.
32:34	RWX	INT_VC_IRQ_CONFIG_1_Reserved_32_34: Spare bits.
35:39	RWX	INT_VC_IRQ_CONFIG_1_MAX_CRD_TO_PC: Max number of interrupt credits given to PC. Reset value is 0xF for IPI and redistribution queues, 0 for other queues as PC never issues interrupt requests to these queues.
40:41	RWX	INT_VC_IRQ_CONFIG_1_Reserved_40_41: Spare bits.
42	RWX	INT_VC_IRQ_CONFIG_1_PREFETCH_DISABLE: When set, IRQ never issue IVC/SBC prefetch lookup operation.
43	RWX	INT_VC_IRQ_CONFIG_1_QUEUE_DISABLE: When set, IRQ does not forward any EQ trigger to EQC.
44	RWX	INT_VC_IRQ_CONFIG_1_IVC_INTF_DISABLE: When set, IRQ to IVC lookup interface is disabled.
45	RWX	INT_VC_IRQ_CONFIG_1_ENABLE_MEMORY_BACKING: When 0, IRQ does not use system memory as internal FIFO extension. The FIFO is limited to the hardware internal FIFO size.
46:51	RWX	INT_VC_IRQ_CONFIG_1_MEM_SIZE: Defines the size of the memory backing store, power of 2^(n+12) memory size.
52	RWX	INT_VC_IRQ_CONFIG_1_Reserved_52: Spare bit.
53:55	RWX	INT_VC_IRQ_CONFIG_1_NB_WRITE_SLOT: Number of slots used for write.
56	RWX	INT_VC_IRQ_CONFIG_1_Reserved_56: Spare bit.
57:59	RWX	INT_VC_IRQ_CONFIG_1_NB_CLEAN_SLOT: Number of slots that will be kept clean.
60	RWX	INT_VC_IRQ_CONFIG_1_FULL_WRITEBACK_ENABLE: Full Writeback enable. When set, all lines are written back to system memory.
61	ROX	INT_VC_IRQ_CONFIG_1_QUEUE_NOT_EMPTY: Queue is not empty.
62	ROX	INT_VC_IRQ_CONFIG_1_CREDIT_UPDATE_PENDING: A credit update is pending.
63	ROX_CLRPART	INT_VC_IRQ_CONFIG_1_FIFO_FULL: Set by hardware when the fifo is full. Cleared on read.

Register Name	IRQ Configuration 2 Register
Mnemonic	INT.INT_VC.INT_VC_IRQ_CONFIG_2
Address	000000000501320A (SCOM)
Description	This register holds the configuration for each Interrupt Request Queue. n = 0: IPI queue n = 1: Hardware queue n = 2: First level escalate queue n = 3: Second level escalate queue n = 4: Redistribution queue n = 5: IPI cascaded queue. MMIO offsets = 0x840, 0x848, 0x850, 0x858, 0x860, 0x868

Bits	SCOM	Field Mnemonic: Description
0:20	RWX	INT_VC_IRQ_CONFIG_2_Reserved_0_20: Spare bits.
21:26	RWX	INT_VC_IRQ_CONFIG_2_PREFETCH_DISTANCE: Defines, in multiple of two int triggers, the maximum distance between prefetch and demand.
27:31	RWX	INT_VC_IRQ_CONFIG_2_MAX_CRD_TO_CQ: Max number of interrupt credits given to CQ.
32:34	RWX	INT_VC_IRQ_CONFIG_2_Reserved_32_34: Spare bits.
35:39	RWX	INT_VC_IRQ_CONFIG_2_MAX_CRD_TO_PC: Max number of interrupt credits given to PC. Reset value is 0xF for IPI and redistribution queues, 0 for other queues as PC never issues interrupt requests to these queues.
40:41	RWX	INT_VC_IRQ_CONFIG_2_Reserved_40_41: Spare bits.
42	RWX	INT_VC_IRQ_CONFIG_2_PREFETCH_DISABLE: When set, IRQ never issue IVC/SBC prefetch lookup operation.
43	RWX	INT_VC_IRQ_CONFIG_2_QUEUE_DISABLE: When set, IRQ does not forward any EQ trigger to EQC.
44	RWX	INT_VC_IRQ_CONFIG_2_IVC_INTF_DISABLE: When set, IRQ to IVC lookup interface is disabled.
45	RWX	INT_VC_IRQ_CONFIG_2_ENABLE_MEMORY_BACKING: When 0, IRQ does not use system memory as internal FIFO extension. The FIFO is limited to the hardware internal FIFO size.
46:51	RWX	INT_VC_IRQ_CONFIG_2_MEM_SIZE: Defines the size of the memory backing store, power of 2^(n+12) memory size.
52	RWX	INT_VC_IRQ_CONFIG_2_Reserved_52: Spare bit.
53:55	RWX	INT_VC_IRQ_CONFIG_2_NB_WRITE_SLOT: Number of slots used for write.
56	RWX	INT_VC_IRQ_CONFIG_2_Reserved_56: Spare bit.
57:59	RWX	INT_VC_IRQ_CONFIG_2_NB_CLEAN_SLOT: Number of slots that will be kept clean.
60	RWX	INT_VC_IRQ_CONFIG_2_FULL_WRITEBACK_ENABLE: Full Writeback enable. When set, all lines are written back to system memory.
61	ROX	INT_VC_IRQ_CONFIG_2_QUEUE_NOT_EMPTY: Queue is not empty.
62	ROX	INT_VC_IRQ_CONFIG_2_CREDIT_UPDATE_PENDING: A credit update is pending.
63	ROX_CLRPART	INT_VC_IRQ_CONFIG_2_FIFO_FULL: Set by hardware when the fifo is full. Cleared on read.

Register Name	IRQ Configuration 3 Register
Mnemonic	INT.INT_VC.INT_VC_IRQ_CONFIG_3
Address	000000000501320B (SCOM)
Description	This register holds the configuration for each Interrupt Request Queue. n = 0: IPI queue n = 1: Hardware queue n = 2: First level escalate queue n = 3: Second level escalate queue n = 4: Redistribution queue n = 5: IPI cascaded queue. MMIO offsets = 0x840, 0x848, 0x850, 0x858, 0x860, 0x868

Bits	SCOM	Field Mnemonic: Description
0:20	RWX	INT_VC_IRQ_CONFIG_3_Reserved_0_20: Spare bits.
21:26	RWX	INT_VC_IRQ_CONFIG_3_PREFETCH_DISTANCE: Defines, in multiple of two int triggers, the maximum distance between prefetch and demand.
27:31	RWX	INT_VC_IRQ_CONFIG_3_MAX_CRD_TO_CQ: Max number of interrupt credits given to CQ.
32:34	RWX	INT_VC_IRQ_CONFIG_3_Reserved_32_34: Spare bits.
35:39	RWX	INT_VC_IRQ_CONFIG_3_MAX_CRD_TO_PC: Max number of interrupt credits given to PC. Reset value is 0xF for IPI and redistribution queues, 0 for other queues as PC never issues interrupt requests to these queues.
40:41	RWX	INT_VC_IRQ_CONFIG_3_Reserved_40_41: Spare bits.
42	RWX	INT_VC_IRQ_CONFIG_3_PREFETCH_DISABLE: When set, IRQ never issue IVC/SBC prefetch lookup operation.
43	RWX	INT_VC_IRQ_CONFIG_3_QUEUE_DISABLE: When set, IRQ does not forward any EQ trigger to EQC.
44	RWX	INT_VC_IRQ_CONFIG_3_IVC_INTF_DISABLE: When set, IRQ to IVC lookup interface is disabled.
45	RWX	INT_VC_IRQ_CONFIG_3_ENABLE_MEMORY_BACKING: When 0, IRQ does not use system memory as internal FIFO extension. The FIFO is limited to the hardware internal FIFO size.
46:51	RWX	INT_VC_IRQ_CONFIG_3_MEM_SIZE: Defines the size of the memory backing store, power of 2^(n+12) memory size.
52	RWX	INT_VC_IRQ_CONFIG_3_Reserved_52: Spare bit.
53:55	RWX	INT_VC_IRQ_CONFIG_3_NB_WRITE_SLOT: Number of slots used for write.
56	RWX	INT_VC_IRQ_CONFIG_3_Reserved_56: Spare bit.
57:59	RWX	INT_VC_IRQ_CONFIG_3_NB_CLEAN_SLOT: Number of slots that will be kept clean.
60	RWX	INT_VC_IRQ_CONFIG_3_FULL_WRITEBACK_ENABLE: Full Writeback enable. When set, all lines are written back to system memory.
61	ROX	INT_VC_IRQ_CONFIG_3_QUEUE_NOT_EMPTY: Queue is not empty.
62	ROX	INT_VC_IRQ_CONFIG_3_CREDIT_UPDATE_PENDING: A credit update is pending.
63	ROX_CLRPART	INT_VC_IRQ_CONFIG_3_FIFO_FULL: Set by hardware when the fifo is full. Cleared on read.

Register Name	IRQ Configuration 4 Register
Mnemonic	INT.INT_VC.INT_VC_IRQ_CONFIG_4
Address	000000000501320C (SCOM)
Description	This register holds the configuration for each Interrupt Request Queue. n = 0: IPI queue n = 1: Hardware queue n = 2: First level escalate queue n = 3: Second level escalate queue n = 4: Redistribution queue n = 5: IPI cascaded queue. MMIO offsets = 0x840, 0x848, 0x850, 0x858, 0x860, 0x868

Bits	SCOM	Field Mnemonic: Description
0:20	RWX	INT_VC_IRQ_CONFIG_4_Reserved_0_20: Spare bits.
21:26	RWX	INT_VC_IRQ_CONFIG_4_PREFETCH_DISTANCE: Defines, in multiple of two int triggers, the maximum distance between prefetch and demand.
27:31	RWX	INT_VC_IRQ_CONFIG_4_MAX_CRD_TO_CQ: Max number of interrupt credits given to CQ.
32:34	RWX	INT_VC_IRQ_CONFIG_4_Reserved_32_34: Spare bits.
35:39	RWX	INT_VC_IRQ_CONFIG_4_MAX_CRD_TO_PC: Max number of interrupt credits given to PC. Reset value is 0xF for IPI and redistribution queues, 0 for other queues as PC never issues interrupt requests to these queues.
40:41	RWX	INT_VC_IRQ_CONFIG_4_Reserved_40_41: Spare bits.
42	RWX	INT_VC_IRQ_CONFIG_4_PREFETCH_DISABLE: When set, IRQ never issue IVC/SBC prefetch lookup operation.
43	RWX	INT_VC_IRQ_CONFIG_4_QUEUE_DISABLE: When set, IRQ does not forward any EQ trigger to EQC.
44	RWX	INT_VC_IRQ_CONFIG_4_IVC_INTF_DISABLE: When set, IRQ to IVC lookup interface is disabled.
45	RWX	INT_VC_IRQ_CONFIG_4_ENABLE_MEMORY_BACKING: When 0, IRQ does not use system memory as internal FIFO extension. The FIFO is limited to the hardware internal FIFO size.
46:51	RWX	INT_VC_IRQ_CONFIG_4_MEM_SIZE: Defines the size of the memory backing store, power of 2^(n+12) memory size.
52	RWX	INT_VC_IRQ_CONFIG_4_Reserved_52: Spare bit.
53:55	RWX	INT_VC_IRQ_CONFIG_4_NB_WRITE_SLOT: Number of slots used for write.
56	RWX	INT_VC_IRQ_CONFIG_4_Reserved_56: Spare bit.
57:59	RWX	INT_VC_IRQ_CONFIG_4_NB_CLEAN_SLOT: Number of slots that will be kept clean.
60	RWX	INT_VC_IRQ_CONFIG_4_FULL_WRITEBACK_ENABLE: Full Writeback enable. When set, all lines are written back to system memory.
61	ROX	INT_VC_IRQ_CONFIG_4_QUEUE_NOT_EMPTY: Queue is not empty.
62	ROX	INT_VC_IRQ_CONFIG_4_CREDIT_UPDATE_PENDING: A credit update is pending.
63	ROX_CLRPART	INT_VC_IRQ_CONFIG_4_FIFO_FULL: Set by hardware when the fifo is full. Cleared on read.

Register Name	IRQ Configuration 5 Register
Mnemonic	INT.INT_VC.INT_VC_IRQ_CONFIG_5
Address	000000000501320D (SCOM)
Description	This register holds the configuration for each Interrupt Request Queue. n = 0: IPI queue n = 1: Hardware queue n = 2: First level escalate queue n = 3: Second level escalate queue n = 4: Redistribution queue n = 5: IPI cascaded queue. MMIO offsets = 0x840, 0x848, 0x850, 0x858, 0x860, 0x868

Bits	SCOM	Field Mnemonic: Description
0:20	RWX	INT_VC_IRQ_CONFIG_5_Reserved_0_20: Spare bits.
21:26	RWX	INT_VC_IRQ_CONFIG_5_PREFETCH_DISTANCE: Defines, in multiple of two int triggers, the maximum distance between prefetch and demand.
27:31	RWX	INT_VC_IRQ_CONFIG_5_MAX_CRD_TO_CQ: Max number of interrupt credits given to CQ.
32:34	RWX	INT_VC_IRQ_CONFIG_5_Reserved_32_34: Spare bits.
35:39	RWX	INT_VC_IRQ_CONFIG_5_MAX_CRD_TO_PC: Max number of interrupt credits given to PC. Reset value is 0xF for IPI and redistribution queues, 0 for other queues as PC never issues interrupt requests to these queues.
40:41	RWX	INT_VC_IRQ_CONFIG_5_Reserved_40_41: Spare bits.
42	RWX	INT_VC_IRQ_CONFIG_5_PREFETCH_DISABLE: When set, IRQ never issue IVC/SBC prefetch lookup operation.
43	RWX	INT_VC_IRQ_CONFIG_5_QUEUE_DISABLE: When set, IRQ does not forward any EQ trigger to EQC.
44	RWX	INT_VC_IRQ_CONFIG_5_IVC_INTF_DISABLE: When set, IRQ to IVC lookup interface is disabled.
45	RWX	INT_VC_IRQ_CONFIG_5_ENABLE_MEMORY_BACKING: When 0, IRQ does not use system memory as internal FIFO extension. The FIFO is limited to the hardware internal FIFO size.
46:51	RWX	INT_VC_IRQ_CONFIG_5_MEM_SIZE: Defines the size of the memory backing store, power of 2^(n+12) memory size.
52	RWX	INT_VC_IRQ_CONFIG_5_Reserved_52: Spare bit.
53:55	RWX	INT_VC_IRQ_CONFIG_5_NB_WRITE_SLOT: Number of slots used for write.
56	RWX	INT_VC_IRQ_CONFIG_5_Reserved_56: Spare bit.
57:59	RWX	INT_VC_IRQ_CONFIG_5_NB_CLEAN_SLOT: Number of slots that will be kept clean.
60	RWX	INT_VC_IRQ_CONFIG_5_FULL_WRITEBACK_ENABLE: Full Writeback enable. When set, all lines are written back to system memory.
61	ROX	INT_VC_IRQ_CONFIG_5_QUEUE_NOT_EMPTY: Queue is not empty.
62	ROX	INT_VC_IRQ_CONFIG_5_CREDIT_UPDATE_PENDING: A credit update is pending.
63	ROX_CLRPART	INT_VC_IRQ_CONFIG_5_FIFO_FULL: Set by hardware when the fifo is full. Cleared on read.

Register Name	IRQ to EQC Credits and Priority Management Register
Mnemonic	INT.INT_VC.INT_VC_IRQ_TO_EQC_CREDITS
Address	000000000501320E (SCOM)
Description	Defines how the interface between IRQs and EQC behaves.

Bits	SCOM	Field Mnemonic: Description
0:2	RWX	INT_VC_IRQ_TO_EQC_CREDITS_IPI_PRIORITY: Defines priority for IPI queue (0 is the highest, 4 is the lowest, encoding 5 to 7 leads to priority 4). If multiple queues have same priority, round. robin is used to select which one to serve.
3:7	RWX	INT_VC_IRQ_TO_EQC_CREDITS_IPI_RSD_CREDITS: Define number of Reserved credits for IPI queue. Reserved credits are consumed first. If there is no longer Reserved credits, credits are consumed. from the pool.
8:10	RWX	INT_VC_IRQ_TO_EQC_CREDITS_HWD_PRIORITY: Same for hardware queue.
11:15	RWX	INT_VC_IRQ_TO_EQC_CREDITS_HWD_RSD_CREDITS: Same for hardware queue.
16:18	RWX	INT_VC_IRQ_TO_EQC_CREDITS_ESC1_PRIORITY: Same for first level escalate queue.
19:23	RWX	INT_VC_IRQ_TO_EQC_CREDITS_ESC1_RSD_CREDITS: Same for first level escalate queue.
24:26	RWX	INT_VC_IRQ_TO_EQC_CREDITS_ESC2_PRIORITY: Same for second level escalate queue.
27:31	RWX	INT_VC_IRQ_TO_EQC_CREDITS_ESC2_RSD_CREDITS: Same for second level escalate queue.
32:34	RWX	INT_VC_IRQ_TO_EQC_CREDITS_REDIS_PRIORITY: Same for redistribution queue.
35:39	RWX	INT_VC_IRQ_TO_EQC_CREDITS_REDIS_RSD_CREDITS: Same for redistribution queue.
40:42	RWX	INT_VC_IRQ_TO_EQC_CREDITS_Reserved_40_42: Spare bits.
43:47	RWX	INT_VC_IRQ_TO_EQC_CREDITS_POOL_CREDITS: Pool of credits that may be used when there is no longer Reserved credits available.
48:63	RO	Constant = 0b0000000000000000

Register Name	Maximum Number of Outstanding EQC Outbound Requests Register
Mnemonic	INT.INT_VC.INT_VC_MAX_OUTSTANDING_EQC_OUTB_CMD
Address	0000000005013210 (SCOM)
Description	Defines the maximum number of outstanding requests that EQC may issue. This register is located in EQC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:17	RWX	INT_VC_MAX_OUTSTANDING_EQC_OUTB_CMD_Reserved_0_17: Spare.
18:23	RWX	INT_VC_MAX_OUTSTANDING_EQC_OUTB_CMD_CI_STORE: CI store requests (Interrupt trigger forwarding).
24:25	RWX	INT_VC_MAX_OUTSTANDING_EQC_OUTB_CMD_Reserved_24_25: Spare.
26:31	RWX	INT_VC_MAX_OUTSTANDING_EQC_OUTB_CMD_INT_REQUEST: EQC: Interrupt request.
32:33	RWX	INT_VC_MAX_OUTSTANDING_EQC_OUTB_CMD_Reserved_32_33: Spare.
34:39	RWX	INT_VC_MAX_OUTSTANDING_EQC_OUTB_CMD_EQ_POST: EQC: EQ post.
40:41	RWX	INT_VC_MAX_OUTSTANDING_EQC_OUTB_CMD_Reserved_40_41: Spare.
42:47	RWX	INT_VC_MAX_OUTSTANDING_EQC_OUTB_CMD_CI_LOAD: EQC: Remote or local CI load request.
48:49	RWX	INT_VC_MAX_OUTSTANDING_EQC_OUTB_CMD_Reserved_48_49: Spare.
50:55	RWX	INT_VC_MAX_OUTSTANDING_EQC_OUTB_CMD_EQD_DMA_READ: EQC: EQD DMA Read.
56:57	RWX	INT_VC_MAX_OUTSTANDING_EQC_OUTB_CMD_Reserved_56_57: Spare.
58:63	RWX	INT_VC_MAX_OUTSTANDING_EQC_OUTB_CMD_EQD_DMA_WRITE: EQC: EQD DMA Write.

Register Name	EQC Cache Enable Register
Mnemonic	INT.INT_VC.INT_VC_EQC_CACHE_EN
Address	0000000005013211 (SCOM)
Description	This register enables EQC cache. This register is located in EQC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:15	RWX	INT_VC_EQC_CACHE_EN_CACHE_ENABLE: 16-bit cache enable (one bit per blockid). May be cleared by scrub engine at flush completion.
16:63	RO	Constant = 0b0000000000000000000000000000000000000000000000000000

Register Name	EQC Cache Scrub Trigger Register
Mnemonic	INT.INT_VC.INT_VC_EQC_SCRUB_TRIG
Address	0000000005013212 (SCOM)
Description	This register, along with scrub mask register, is used by Software to trigger a cache scrub. This register is located in EQC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_VC_EQC_SCRUB_TRIG_VALID: Scrub request. Set by Software to initiate a cache scrub. Reset by hardware when flush operation is completed.
1	RWX	INT_VC_EQC_SCRUB_TRIG_WANT_CACHE_DISABLE: Want cache disable. When set, cache is disabled for the selected blockid(s) at the end of scrub operation.
2	RWX	INT_VC_EQC_SCRUB_TRIG_WANT_INVALIDATE: Want invalidate. 0: Modified entries are written back. State is switched to exclusive. 1: Exclusive entries are switched to invalidate. Modified entries are written back, state is switched to invalidate.
3:27	RO	Constant = 0b00000000000000000000000000
28:31	RWX	INT_VC_EQC_SCRUB_TRIG_BLOCKID: 4-bit scrub blockid.
32:39	RWX	INT_VC_EQC_SCRUB_TRIG_Reserved_32_39: Spare.
40:63	RWX	INT_VC_EQC_SCRUB_TRIG_OFFSET: 24-bit scrub offset.

Register Name	EQC Cache Scrub Mask Register
Mnemonic	INT.INT_VC.INT_VC_EQC_SCRUB_MASK
Address	0000000005013213 (SCOM)
Description	This register defines the block ids and offsets that need to be scrubbed. This register is located in EQC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:27	RO	Constant = 0b00000000000000000000000000
28:31	RWX	INT_VC_EQC_SCRUB_MASK_BLOCKID_MASK: 4-bit scrub blockid mask. 0:means ignores the corresponding blockid bit.
32:39	RWX	INT_VC_EQC_SCRUB_MASK_Reserved_32_39: Spare.
40:63	RWX	INT_VC_EQC_SCRUB_MASK_OFFSET_MASK: 24-bit scrub offset mask. 0:means ignores the corresponding offset bit.

Register Name	EQC Configuration Register
Mnemonic	INT.INT_VC.INT_VC_EQC_CONFIG
Address	0000000005013214 (SCOM)
Description	Defines global EQC configuration. This register is located in EQC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:15	RO	Constant = 0b0000000000000000
16:31	RWX	INT_VC_EQC_CONFIG_PAGE_OFFSET_CFG: Defines which page offset to use when an EQ trigger has to be forwarded to another VC in the system. This field has 8 x 2-bit Encoding. "00" = Use offset 0x800 (goes to IPI queue). "01" = Use offset 0x880 (goes to HW queue). "10" = Use offset 0x900 (goes to 1esc queue). "11" = Use offset 0x980 (goes to 2esc queue). Note that if the EQ trigger comes from the redistribution queue, it is forwarded to redistribution queue using page offset 0xA00. bits 16:17 are used when EQ trigger comes from IPI. bits 18:19 are used when EQ trigger comes from HW. bits 20:21 are used when EQ trigger comes from 1esc. bits 22:23 are used when EQ trigger comes from 2esc. bits 24:25 are used when escalate is required and EQD H/W Dependent field(0:1) = "00". bits 26:27 are used when escalate is required and EQD H/W Dependent field(0:1) = "01". bits 28:29 are used when escalate is required and EQD H/W Dependent field(0:1) = "10". bits 30:31 are used when escalate is required and EQD H/W Dependent field(0:1) = "11".
32:36	RWX	INT_VC_EQC_CONFIG_SYNC_DONE: 5-bit sync done. Cleared by Software. Set by hardware when sync operation is completed (32:ipi, 33:hw, 34:1esc, 35:2esc, 36:redistrib).
37:45	RWX	INT_VC_EQC_CONFIG_Reserved_37_45: Spare bits.
46:51	RWX	INT_VC_EQC_CONFIG_MAX_PTAG_IN_USE: Defines the maximum number of ptag to be used.
52:55	RWX	INT_VC_EQC_CONFIG_BG_SCAN_RATE: 4-bit scrub background scan rate. 0:disable scan. Otherwise, scan rate = 2**n clock cycles (max of 16 micro-seconds).
56:58	RWX	INT_VC_EQC_CONFIG_Reserved_56_58: Spare bits.
59:63	RWX	INT_VC_EQC_CONFIG_MAX_ENTRIES_IN_MODIFIED: 5-bit Max number of entries per set in modified state.

Register Name	EQC Cache Watch Specification Register
Mnemonic	INT.INT_VC.INT_VC_EQC_CACHE_WATCH_SPEC
Address	0000000005013215 (SCOM)
Description	This register along with cache watch data registers are used to Read and Write EQDs. Software specifies the EQD blockid and offset it wants to access. This register is located in EQC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0	NCX	INT_VC_EQC_CACHE_WATCH_SPEC_CONFLICT: Conflict: Forced to 0 when Software writes the register. Set to one by hardware if an internal EQC process references this EQD and its valid bit is on. during the Software ReadModifyWrite sequence.
1:7	RWX	INT_VC_EQC_CACHE_WATCH_SPEC_Reserved_1_7: Spare.

Bits	SCOM	Field Mnemonic: Description
8	RWX	INT_VC_EQC_CACHE_WATCH_SPEC_FULL: Full - if set to a one, then the contents of all data register fields replace the corresponding specified structure fields as long as the conflict bit. is zero, else the structure is not modified; if "F" is set to a zero, then only the contents of data register fields that are hardware read-only. replace the corresponding specific structure fields (words 0 and 2-7), regardless of the state of the conflict bit.
9:27	RWX	INT_VC_EQC_CACHE_WATCH_SPEC_Reserved_9_27: Spare.
28:31	RWX	INT_VC_EQC_CACHE_WATCH_SPEC_BLOCKID: 4-bit blockid.
32:39	RWX	INT_VC_EQC_CACHE_WATCH_SPEC_Reserved_32_39: Spare.
40:63	RWX	INT_VC_EQC_CACHE_WATCH_SPEC_OFFSET: 24-bit EQD offset.

Register Name	**EQC Cache Watch Data 0 Register**
Mnemonic	INT.INT_VC.INT_VC_EQC_CACHE_WATCH_DATA0
Address	0000000005013216 (SCOM)
Description	Data register 0 holds EQD words 0 and 1. Data register 1 holds EQD words 2 and 3. Data register 2 holds EQD words 4 and 5. Data register 3 holds EQD words 6 and 7. These registers are located in EQC sub-unit. ,0x938,0x940,0x948

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	INT_VC_EQC_CACHE_WATCH_DATA0_DATA: Read Modify Write operation : - Software writes cache watch specification register. This clears the Conflict bit. - Software does CI load of the data register 0. This triggers an internal read request of the targeted data defined in cache watch specification. register. - When the internal read operation is completed, data is loaded into the cache watch data registers. - CI load response is generated. - Software may issue CI load of data registers 1 to 3 to get full data. - Software optionally does CI store of data registers 1 to 3. - Software write data register 0. - The write to register 0 triggers an internal write of the EQD defined in cache watch specification register. - The write operation is aborted if the hardware had set the "Conflict" bit and "Full" bit was 1. - Software reads the cache watch specification register. If C = 1 and F = 1 then Software has to retry the full sequence.

Register Name	**EQC Cache Watch Data 1 Register**
Mnemonic	INT.INT_VC.INT_VC_EQC_CACHE_WATCH_DATA1
Address	0000000005013217 (SCOM)
Description	Data register 0 holds EQD words 0 and 1. Data register 1 holds EQD words 2 and 3. Data register 2 holds EQD words 4 and 5. Data register 3 holds EQD words 6 and 7. These registers are located in EQC sub-unit. ,0x938,0x940,0x948

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	INT_VC_EQC_CACHE_WATCH_DATA1_DATA: Read Modify Write operation : - Software writes cache watch specification register. This clears the Conflict bit. - Software does CI load of the data register 0. This triggers an internal read request of the targeted data defined in cache watch specification. register. - When the internal read operation is completed, data is loaded into the cache watch data registers. - CI load response is generated. - Software may issue CI load of data registers 1 to 3 to get full data. - Software optionally does CI store of data registers 1 to 3. - Software write data register 0. - The write to register 0 triggers an internal write of the EQD defined in cache watch specification register. - The write operation is aborted if the hardware had set the "Conflict" bit and "Full" bit was 1. - Software reads the cache watch specification register. If C = 1 and F = 1 then Software has to retry the full sequence.

Register Name	EQC Cache Watch Data 2 Register
Mnemonic	INT.INT_VC.INT_VC_EQC_CACHE_WATCH_DATA2
Address	0000000005013218 (SCOM)
Description	Data register 0 holds EQD words 0 and 1. Data register 1 holds EQD words 2 and 3. Data register 2 holds EQD words 4 and 5. Data register 3 holds EQD words 6 and 7. These registers are located in EQC sub-unit. ,0x938,0x940,0x948

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	INT_VC_EQC_CACHE_WATCH_DATA2_DATA: Read Modify Write operation : - Software writes cache watch specification register. This clears the Conflict bit. - Software does CI load of the data register 0. This triggers an internal read request of the targeted data defined in cache watch specification. register. - When the internal read operation is completed, data is loaded into the cache watch data registers. - CI load response is generated. - Software may issue CI load of data registers 1 to 3 to get full data. - Software optionally does CI store of data registers 1 to 3. - Software write data register 0. - The write to register 0 triggers an internal write of the EQD defined in cache watch specification register. - The write operation is aborted if the hardware had set the "Conflict" bit and "Full" bit was 1. - Software reads the cache watch specification register. If C = 1 and F = 1 then Software has to retry the full sequence.

Register Name	EQC Cache Watch Data 3 Register
Mnemonic	INT.INT_VC.INT_VC_EQC_CACHE_WATCH_DATA3
Address	0000000005013219 (SCOM)
Description	Data register 0 holds EQD words 0 and 1. Data register 1 holds EQD words 2 and 3. Data register 2 holds EQD words 4 and 5. Data register 3 holds EQD words 6 and 7. These registers are located in EQC sub-unit. ,0x938,0x940,0x948

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	INT_VC_EQC_CACHE_WATCH_DATA3_DATA: Read Modify Write operation : - Software writes cache watch specification register. This clears the Conflict bit. - Software does CI load of the data register 0. This triggers an internal read request of the targeted data defined in cache watch specification. register. - When the internal read operation is completed, data is loaded into the cache watch data registers. - CI load response is generated. - Software may issue CI load of data registers 1 to 3 to get full data. - Software optionally does CI store of data registers 1 to 3. - Software write data register 0. - The write to register 0 triggers an internal write of the EQD defined in cache watch specification register. - The write operation is aborted if the hardware had set the "Conflict" bit and "Full" bit was 1. - Software reads the cache watch specification register. If C = 1 and F = 1 then Software has to retry the full sequence.

Register Name	EQC Debug Register
Mnemonic	INT.INT_VC.INT_VC_EQC_DEBUG
Address	000000000501321A (SCOM)
Description	This register holds ECC errors correction/injection and some EQC debug features. This register is located in EQC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:32	RWX	INT_VC_EQC_DEBUG_Reserved_0_32: Spare.
33	RWX	INT_VC_EQC_DEBUG_DIS_ARX_ECC_CORRECTION: Disable ARX interface ECC correction.
34:41	RWX	INT_VC_EQC_DEBUG_DIS_TAG_ECC_CORRECTION: Disable TAG [0:7] arrays ECC correction.
42:43	RWX	INT_VC_EQC_DEBUG_DIS_STATE_ECC_CORRECTION: Disable STATE [0:1] array ECC correction.
44	RWX	INT_VC_EQC_DEBUG_DIS_CTRLBUF_ECC_CORRECTION: Disable P1 CTRL array ECC correction.
45:48	RWX	INT_VC_EQC_DEBUG_DIS_DATA_ECC_CORRECTION: Disable P1 DATA [0:3] array ECC correction.
49	RWX	INT_VC_EQC_DEBUG_FORCE_SINGLE_BIT_ECC_ERR: Force single bit ECC error. Set by Software. Cleared by hardware when selected array is written (array datain lsb bit is flipped).
50	RWX	INT_VC_EQC_DEBUG_FORCE_DOUBLE_BIT_ECC_ERR: Force double bit ECC error. Set by Software. Cleared by hardware when selected array is written (array datain 2 lsb bits are flipped).
51:55	RWX	INT_VC_EQC_DEBUG_ECC_ERR_INJ_ARRAY_SEL: Array selection for ECC error injection. 00 xxx P0 TAG arrays. xxx = 0 to 7. 01 00x P0 STATE arrays x = 0-1. 10 000 P1 CTRL array. 11 xxy P1 data ecc xx = array 0 to 3, y = -left ecc/+right ecc.
56	RWX	INT_VC_EQC_DEBUG_TRACE_ENABLE: Enable EQC trace bus.
57:58	RWX	INT_VC_EQC_DEBUG_Reserved_57_58: Spare.
59	RWX	INT_VC_EQC_DEBUG_Reserved_59: Spare bit.
60	RWX	INT_VC_EQC_DEBUG_USE_WATCH_TO_READ_CTRL_ARY: Use watch engine to read cache control arrays. When set, a cache watch read is replaced by a read of the cache control arrays. In such case, Cache Watch Address reg (54-59) define set index.
61:63	RWX	INT_VC_EQC_DEBUG_CACHE_CTRL_ARY_SELECT: When bit 60 is set, this field defines which cache control arrays to read. 000 Tag A. Watch data reg 0 [9:31] = TAG0. Watch data reg 0 [41:63] = TAG1. Watch data reg 1 [9:31] = TAG8.

Bits	SCOM	Field Mnemonic: Description
		Watch data reg 1 [41:63] = TAG9. Watch data reg 2 [9:31] = TAG16. Watch data reg 2 [41:63] = TAG17. Watch data reg 3 [9:31] = TAG24. Watch data reg 3 [41:63] = TAG25. 001 Tag B. Watch data reg 0 [9:31] = TAG2. Watch data reg 0 [41:63] = TAG3. Watch data reg 1 [9:31] = TAG10. Watch data reg 1 [41:63] = TAG11. Watch data reg 2 [9:31] = TAG18. Watch data reg 2 [41:63] = TAG19. Watch data reg 3 [9:31] = TAG26. Watch data reg 3 [41:63] = TAG27. 010 Tag C. Watch data reg 0 [9:31] = TAG4. Watch data reg 0 [41:63] = TAG5. Watch data reg 1 [9:31] = TAG12. Watch data reg 1 [41:63] = TAG13. Watch data reg 2 [9:31] = TAG20. Watch data reg 2 [41:63] = TAG21. Watch data reg 3 [9:31] = TAG28. Watch data reg 3 [41:63] = TAG29. 011 Tag D. Watch data reg 0 [9:31] = TAG6. Watch data reg 0 [41:63] = TAG7. Watch data reg 1 [9:31] = TAG14. Watch data reg 1 [41:63] = TAG15. Watch data reg 2 [9:31] = TAG22. Watch data reg 2 [41:63] = TAG23. Watch data reg 3 [9:31] = TAG30. Watch data reg 3 [41:63] = TAG31. 1xx Tag State + LRU. Watch data reg 1 = STATE(0 to 15). Watch data reg 2 = STATE(16 to 31). Watch data reg 3 [32:63] = LRU(0 to 31).

Register Name	Maximum Number of Outstanding IVC Outbound Requests Register
Mnemonic	INT.INT_VC.INT_VC_MAX_OUTSTANDING_IVC_CMD
Address	0000000005013220 (SCOM)
Description	Defines the maximum number of outstanding requests that IVC may issue. This register is located in IVC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000
48:50	RWX	INT_VC_MAX_OUTSTANDING_IVC_CMD_Reserved_48_50: Spare.
51:55	RWX	INT_VC_MAX_OUTSTANDING_IVC_CMD_SBC_LOOKUP: SBC lookup.
56:58	RWX	INT_VC_MAX_OUTSTANDING_IVC_CMD_Reserved_56_58: Spare.
59:63	RWX	INT_VC_MAX_OUTSTANDING_IVC_CMD_DMA_READ: DMA Read.

Register Name	IVC Cache Enable Register
Mnemonic	INT.INT_VC.INT_VC_IVC_CACHE_EN
Address	0000000005013221 (SCOM)
Description	This register enables IVC cache. This register is located in IVC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:15	RWX	INT_VC_IVC_CACHE_EN_CACHE_ENABLE: 16-bit cache enable (one bit per blockid). May be cleared by scrub engine at flush completion.
16:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000

Register Name	IVC Cache Scrub Trigger Register
Mnemonic	INT.INT_VC.INT_VC_IVC_SCRUB_TRIG
Address	0000000005013222 (SCOM)
Description	This register, along with scrub mask register, is used by Software to trigger a cache scrub. This register is located in EQC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_VC_IVC_SCRUB_TRIG_VALID: Scrub request. Set by Software to initiate a cache scrub. Reset by hardware when flush operation is completed.
1	RWX	INT_VC_IVC_SCRUB_TRIG_WANT_CACHE_DISABLE: Want cache disable. When set, cache is disabled for the selected blockid(s) at the end of scrub operation.
2:27	RO	Constant = 0b00000000000000000000000000
28:31	RWX	INT_VC_IVC_SCRUB_TRIG_BLOCKID: 4-bit scrub blockid.
32:35	RWX	INT_VC_IVC_SCRUB_TRIG_Reserved_32_35: Spare.
36:63	RWX	INT_VC_IVC_SCRUB_TRIG_OFFSET: 28-bit scrub offset.

Register Name	IVC Cache Scrub Mask Register
Mnemonic	INT.INT_VC.INT_VC_IVC_SCRUB_MASK
Address	0000000005013223 (SCOM)
Description	This register defines the block ids and offsets that need to be scrubbed. This register is located in EQC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:27	RO	Constant = 0b00000000000000000000000000
28:31	RWX	INT_VC_IVC_SCRUB_MASK_BLOCKID_MASK: 4-bit scrub blockid mask. 0:means ignores the corresponding blockid bit.
32:35	RWX	INT_VC_IVC_SCRUB_MASK_Reserved_32_35: Spare.
36:63	RWX	INT_VC_IVC_SCRUB_MASK_OFFSET_MASK: 28-bit scrub offset mask. 0:means ignores the corresponding offset bit.

Register Name	IVC Cache Watch Address Register
Mnemonic	INT.INT_VC.INT_VC_IVC_CACHE_WATCH_ADDR
Address	0000000005013225 (SCOM)
Description	This register along with cache watch data register is used in debug mode to allow Software to read the cache control arrays. This register is located in IVC sub-unit. MMIO offset = 0x9A8

Bits	SCOM	Field Mnemonic: Description
0:53	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000
54:59	RWX	INT_VC_IVC_CACHE_WATCH_ADDR_SET_INDEX: 6-bit Set index.
60:63	RO	Constant = 0b0000

Register Name	IVC Cache Watch Data Register
Mnemonic	INT.INT_VC.INT_VC_IVC_CACHE_WATCH_DATA
Address	0000000005013226 (SCOM)
Description	This register is used in debug mode to allow Software to read the cache control arrays. This register is located in IVC sub-unit. MMIO offset = 0x9B0

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	INT_VC_IVC_CACHE_WATCH_DATA_DATA: Watch data. Software does CI load of the watch data register. This triggers an internal read request of the targeted array. When the internal read operation is completed, data is loaded into the cache watch data register and CI load response is generated.

Register Name	IVC Hash 1 Register
Mnemonic	INT.INT_VC.INT_VC_IVC_HASH_1
Address	0000000005013227 (SCOM)
Description	The IVC hash registers holds 7-bit hash configuration field for each possible hardware source and for IPI interrupts. This allows Software to limit the number of set indexes an interrupt source may use. The 7-bit encoding is : 1xxxxxx - 1 set - xxxxxx indicates the 6-bit set index. 01yyyyy - 2 sets - yyyyy indicates the 5-bit MSB set index, 1 LSB filled in using IVE offset(27). 001zzzz - 4 sets - zzzz indicated the 4-bit MSB set index, 2 LSBs filled in using IVE offset(26 to 27). 0001xxx - 8 sets - xxx indicates the 3-bit MSB set index, 3 LSBs filled in using IVE offset(25 to 27). 00001yy - 16 sets - yy indicates the 2-bit MSB set index, 4 LSBs filled in using IVE offset(24 to 27). 000001z - 32 sets - z indicates the MSB set index, 5 LSBs filled in using IVE offset(23 to 27). 000000x - 64 sets - set index bits filled in using IVE offset(22 to 27). This register is located in IVC sub-unit. MMIO offset = 0x9B8

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_VC_IVC_HASH_1_Reserved_0: Spare.
1:7	RWX	INT_VC_IVC_HASH_1_HWD_0: Hash configuration for hardware source 0.
8	RWX	INT_VC_IVC_HASH_1_Reserved_8: Spare.
9:15	RWX	INT_VC_IVC_HASH_1_HWD_1: Hash configuration for hardware source 1.
16	RWX	INT_VC_IVC_HASH_1_Reserved_16: Spare.
17:23	RWX	INT_VC_IVC_HASH_1_HWD_2: Hash configuration for hardware source 2.
24	RWX	INT_VC_IVC_HASH_1_Reserved_24: Spare.

Bits	SCOM	Field Mnemonic: Description
25:31	RWX	INT_VC_IVC_HASH_1_HWD_3: Hash configuration for hardware source 3.
32	RWX	INT_VC_IVC_HASH_1_Reserved_32: Spare.
33:39	RWX	INT_VC_IVC_HASH_1_HWD_4: Hash configuration for hardware source 4.
40	RWX	INT_VC_IVC_HASH_1_Reserved_40: Spare.
41:47	RWX	INT_VC_IVC_HASH_1_HWD_5: Hash configuration for hardware source 5.
48	RWX	INT_VC_IVC_HASH_1_Reserved_48: Spare.
49:55	RWX	INT_VC_IVC_HASH_1_HWD_6: Hash configuration for hardware source 6.
56	RWX	INT_VC_IVC_HASH_1_Reserved_56: Spare.
57:63	RWX	INT_VC_IVC_HASH_1_HWD_7: Hash configuration for hardware source 7.

Register Name	IVC Hash 2 Register
Mnemonic	INT.INT_VC.INT_VC_IVC_HASH_2
Address	0000000005013228 (SCOM)
Description	Refer to IVC hash register 1 description. This register is located in IVC sub-unit. MMIO offset = 0x9C0

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_VC_IVC_HASH_2_Reserved_0: Spare.
1:7	RWX	INT_VC_IVC_HASH_2_HWD_8: Hash configuration for hardware source 8.
8	RWX	INT_VC_IVC_HASH_2_Reserved_8: Spare.
9:15	RWX	INT_VC_IVC_HASH_2_HWD_9: Hash configuration for hardware source 9.
16	RWX	INT_VC_IVC_HASH_2_Reserved_16: Spare.
17:23	RWX	INT_VC_IVC_HASH_2_HWD_10: Hash configuration for hardware source 10.
24	RWX	INT_VC_IVC_HASH_2_Reserved_24: Spare.
25:31	RWX	INT_VC_IVC_HASH_2_HWD_11: Hash configuration for hardware source 11.
32	RWX	INT_VC_IVC_HASH_2_Reserved_32: Spare.
33:39	RWX	INT_VC_IVC_HASH_2_HWD_12: Hash configuration for hardware source 12.
40	RWX	INT_VC_IVC_HASH_2_Reserved_40: Spare.
41:47	RWX	INT_VC_IVC_HASH_2_HWD_13: Hash configuration for hardware source 13.
48	RWX	INT_VC_IVC_HASH_2_Reserved_48: Spare.
49:55	RWX	INT_VC_IVC_HASH_2_HWD_14: Hash configuration for hardware source 14.
56	RWX	INT_VC_IVC_HASH_2_Reserved_56: Spare.
57:63	RWX	INT_VC_IVC_HASH_2_HWD_15: Hash configuration for hardware source 15.

Register Name	IVC Hash 3 Register
Mnemonic	INT.INT_VC.INT_VC_IVC_HASH_3
Address	0000000005013229 (SCOM)
Description	Refer to IVC hash register 1 description. This register is located in IVC sub-unit. MMIO offset = 0x9C8

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_VC_IVC_HASH_3_Reserved_0: Spare.
1:7	RWX	INT_VC_IVC_HASH_3_IPI: Hash configuration for IPI queue.
8:63	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	IVC Debug Register
Mnemonic	INT.INT_VC.INT_VC_IVC_DEBUG
Address	000000000501322A (SCOM)
Description	This register holds ECC errors correction/injection and some IVC debug features. This register is located in IVC sub-unit. MMIO offset = 0x9D0

Bits	SCOM	Field Mnemonic: Description
0:31	RO	Constant = 0b00000000000000000000000000000000
32	RWX	INT_VC_IVC_DEBUG_Reserved_32: Spare.
33:37	RWX	INT_VC_IVC_DEBUG_MAX_PTAG_IN_USE: Defines the maximum number of ptag to be used.
38:41	RWX	INT_VC_IVC_DEBUG_DIS_TAG_ECC_CORRECTION: Disable TAG [0:3] array ECC correction.
42	RWX	INT_VC_IVC_DEBUG_DIS_STATE_ECC_CORRECTION: Disable STATE array ECC correction.
43:44	RWX	INT_VC_IVC_DEBUG_Reserved_43_44: Spare.
45:46	RWX	INT_VC_IVC_DEBUG_DIS_DATA_ECC_CORRECTION: Disable P1 DATA [0:1] array ECC correction.
47:48	RWX	INT_VC_IVC_DEBUG_Reserved_47_48: Spare.
49	RWX	INT_VC_IVC_DEBUG_FORCE_SINGLE_BIT_ECC_ERR: Force single bit ECC error. Set by Software. Cleared by hardware when selected array is written (array datain lsb bit is flipped).
50	RWX	INT_VC_IVC_DEBUG_FORCE_DOUBLE_BIT_ECC_ERR: Force double bit ECC error. Set by Software. Cleared by hardware when selected array is written (array datain 2 lsb bits are flipped).
51:55	RWX	INT_VC_IVC_DEBUG_ECC_ERR_INJ_ARRAY_SEL: Array selection for ECC error injection. 00 xxy P0 TAG arrays. xx = SRAM# 0 to 3, y = -ECC0/+ECC1. 01 000 P0 STATE array. 11 000 P1 data 0. 11 001 P1 data 1.
56	RWX	INT_VC_IVC_DEBUG_TRACE_ENABLE: Enable IVC trace bus.
57:58	RWX	INT_VC_IVC_DEBUG_Reserved_57_58: Spare.
59	RWX	INT_VC_IVC_DEBUG_FAST_SB_LOOKUP_DISABLE: 0: IVC is able to trigger SB lookup before IVE DMA read completion. 1: IVC waits for DMA read completion to trigger SB lookup.
60:63	RWX	INT_VC_IVC_DEBUG_CACHE_CTRL_ARY_SELECT: Defines which cache control arrays to read during cache watch operation. Data watch register mapping. [0:31] [32:63]. 0000 STATE STATE. 0001 LRU x"0000"&LRU. 1xxx TAG TAG(2*xxx) TAG(2*xxx+1).

Register Name	AIB Timeout Register
Mnemonic	INT.INT_VC.INT_VC_AIB_TIMEOUT
Address	000000000501322B (SCOM)
Description	This register controls the watchdog timers used on any AIB outbound read operation issued by P3VC.

Bits	SCOM	Field Mnemonic: Description
0:57	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000
58:63	RWX	INT_VC_AIB_TIMEOUT_DELAY: AIB Timeout is detected if AIB response comes later than 2**("delay"+4) x 3 clock cycles. In such case, a bit is set in FIR.

Register Name	AIB TX Command Ordering Tags 1 Register
Mnemonic	INT.INT_VC.INT_VC_AIB_TX_ORDERING_TAG_1
Address	000000000501322C (SCOM)
Description	This register holds the 8-bit AIB ordering tag to be used for each AIB TX commands.

Bits	SCOM	Field Mnemonic: Description
0:23	RO	Constant = 0b000000000000000000000000
24:31	RWX	INT_VC_AIB_TX_ORDERING_TAG_1_REGS_ORDERING_TAG: REGS: Registers read response.
32:39	RWX	INT_VC_AIB_TX_ORDERING_TAG_1_IRQ_ORDERING_TAG: IRQ: DMA Read/Write . 8-bit ordering tag is made of "5-bit configured tag and 3-bit Queue#" (bits 37:39 are overwritten by IRQ#).
40:47	RWX	INT_VC_AIB_TX_ORDERING_TAG_1_IVC_ORDERING_TAG: IVC: DMA Read.
48:55	RWX	INT_VC_AIB_TX_ORDERING_TAG_1_SBC_DMA_ORDERING_TAG: SBC: DMA Read/Write.
56:63	RWX	INT_VC_AIB_TX_ORDERING_TAG_1_SBC_EOI_ORDERING_TAG: SBC: EOI response.

Register Name	AIB TX Command Ordering Tags 2 Register
Mnemonic	INT.INT_VC.INT_VC_AIB_TX_ORDERING_TAG_2
Address	000000000501322D (SCOM)
Description	This register holds the 8-bit AIB ordering tag to be used for each AIB TX commands.

Bits	SCOM	Field Mnemonic: Description
0:19	RO	Constant = 0b00000000000000000000
20	RWX	INT_VC_AIB_TX_ORDERING_TAG_2_Reserved_20: Spare bits.
21	RWX	INT_VC_AIB_TX_ORDERING_TAG_2_RELAXED_WR_ORDERING_EQP: When asserted, Relaxed write ordering is asserted on aib for any EQ Post.
22	RWX	INT_VC_AIB_TX_ORDERING_TAG_2_RELAXED_WR_ORDERING_DMA: When asserted, Relaxed write ordering is asserted on aib for any EQD, SBC and IRQ DMA writes/push.
23	RWX	INT_VC_AIB_TX_ORDERING_TAG_2_DISABLE_IDX_IN_AIBTAG: When set, the AIB tag used for int, eq post requests and Software ESBn EOI responses are not overwritten by EQD offset (16:20).
24:31	RWX	INT_VC_AIB_TX_ORDERING_TAG_2_EQC_EOI_ESBE_ORDERING_TAG: EQC: EOI response for ESBe.
32:39	RWX	INT_VC_AIB_TX_ORDERING_TAG_2_EQC_CISTORE_ORDERING_TAG: EQC: EQ trigger forwarding.
40:47	RWX	INT_VC_AIB_TX_ORDERING_TAG_2_EQC_EOI_INT_EQP_ORDERING_TAG: EQC: EOI response for ESBn, Int request and EQ post. Ordering tag (3 to 7) are overwritten by EQD offset (16:20).

Bits	SCOM	Field Mnemonic: Description
48:55	RWX	INT_VC_AIB_TX_ORDERING_TAG_2_EQC_CILOAD_ORDERING_TAG: EQC: CI load request (local or remote). Could be VPS/LSS or EOI.
56:63	RWX	INT_VC_AIB_TX_ORDERING_TAG_2_EQC_DMA_ORDERING_TAG: EQC: EQD DMA Read/Write.

Register Name	Maximum Number of Outstanding SBC Outbound Requests Register
Mnemonic	INT.INT_VC.INT_VC_MAX_OUTSTANDING_SBC_CMD
Address	0000000005013230 (SCOM)
Description	Defines the maximum number of outstanding requests that SBC may issue. This register is located in SBC sub-unit. MMIO offset = 0xA00

Bits	SCOM	Field Mnemonic: Description
0:47	RO	Constant = 0b00000000000000000000000000000000000000000000000
48:50	RWX	INT_VC_MAX_OUTSTANDING_SBC_CMD_Reserved_48_50: Spare.
51:55	RWX	INT_VC_MAX_OUTSTANDING_SBC_CMD_MAX_OUTSTANDING_DMA_READ: SBE DMA Read.
56:58	RWX	INT_VC_MAX_OUTSTANDING_SBC_CMD_Reserved_56_58: Spare.
59:63	RWX	INT_VC_MAX_OUTSTANDING_SBC_CMD_MAX_OUTSTANDING_DMA_WRITE: SBE DMA Write.

Register Name	SBC Cache Enable Register
Mnemonic	INT.INT_VC.INT_VC_SBC_CACHE_EN
Address	0000000005013231 (SCOM)
Description	This register enables SBC cache. This register is located in SBC sub-unit. MMIO offset = 0xA08

Bits	SCOM	Field Mnemonic: Description
0:15	RWX	INT_VC_SBC_CACHE_EN_CACHE_ENABLE: 16-bit cache enable (one bit per blockid). May be cleared by scrub engine at flush completion.
16:63	RO	Constant = 0b0000000000000000000000000000000000000000000000000

Register Name	SBC Cache Scrub Trigger Register
Mnemonic	INT.INT_VC.INT_VC_SBC_SCRUB_TRIG
Address	0000000005013232 (SCOM)
Description	This register, along with scrub mask register, is used by Software to trigger a cache scrub. This register is located in SBC sub-unit. MMIO offset = 0xA10

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_VC_SBC_SCRUB_TRIG_VALID: Scrub request. Set by Software to initiate a cache scrub. Reset by hardware when flush operation is completed.
1	RWX	INT_VC_SBC_SCRUB_TRIG_WANT_CACHE_DISABLE: Want cache disable. When set, cache is disabled for the selected blockid(s) at the end of scrub operation.
2	RWX	INT_VC_SBC_SCRUB_TRIG_WANT_INVALIDATE: Want invalidate. 0: Modified entries are written back. State is switched to exclusive. 1: Exclusive entries are switched to invalidate. Modified entries are written back, state is switched to invalidate.

Bits	SCOM	Field Mnemonic: Description
3:27	RO	Constant = 0b000000000000000000000000
28:31	RWX	INT_VC_SBC_SCRUB_TRIG_BLOCKID: 4-bit scrub blockid.
32:40	RWX	INT_VC_SBC_SCRUB_TRIG_Reserved_32_40: Spare.
41:63	RWX	INT_VC_SBC_SCRUB_TRIG_OFFSET: 23-bit scrub offset.

Register Name	SBC Cache Scrub Mask Register
Mnemonic	INT.INT_VC.INT_VC_SBC_SCRUB_MASK
Address	0000000005013233 (SCOM)
Description	This register defines the block ids and offsets that need to be scrubbed. This register is located in SBC sub-unit. MMIO offset = 0xA18

Bits	SCOM	Field Mnemonic: Description
0:27	RO	Constant = 0b00000000000000000000000000
28:31	RWX	INT_VC_SBC_SCRUB_MASK_BLOCKID_MASK: 4-bit scrub blockid mask. 0:means ignores the corresponding blockid bit.
32:40	RWX	INT_VC_SBC_SCRUB_MASK_Reserved_32_40: Spare.
41:63	RWX	INT_VC_SBC_SCRUB_MASK_OFFSET_MASK: 23-bit scrub offset mask. 0:means ignores the corresponding offset bit.

Register Name	SBC Configuration Register
Mnemonic	INT.INT_VC.INT_VC_SBC_CONFIG
Address	0000000005013234 (SCOM)
Description	Defines how the SBC scrub engine controls the cache. This register is located in SBC sub-unit. MMIO offset = 0xA20

Bits	SCOM	Field Mnemonic: Description
0:43	RO	Constant = 0b00000000000000000000000000000000000000000000
44:46	RWX	INT_VC_SBC_CONFIG_Reserved_44_46: Spare.
47:51	RWX	INT_VC_SBC_CONFIG_MAX_PTAG_IN_USE: Defines the maximum number of ptag to be used.
52:55	RWX	INT_VC_SBC_CONFIG_BG_SCAN_RATE: 4-bit scrub background scan rate. 0:disable scan. Otherwhise, scan rate = 2**n clock cycles (max of 16 micro-seconds).
56:59	RWX	INT_VC_SBC_CONFIG_Reserved_56_59: Spare.
60:63	RWX	INT_VC_SBC_CONFIG_MAX_ENTRIES_IN_MODIFIED: 4-bit Max number of entries per set in modified state.

Register Name	SBC Cache Watch Address Register
Mnemonic	INT.INT_VC.INT_VC_SBC_CACHE_WATCH_ADDR
Address	0000000005013235 (SCOM)
Description	This register is used in debug mode to allow Software to read the cache control arrays. This register is located in SBC sub-unit. MMIO offset = 0xA28

Bits	SCOM	Field Mnemonic: Description
0:53	RO	Constant = 0b00000000000000000000000000000000000000000000000000000000000000
54:59	RWX	INT_VC_SBC_CACHE_WATCH_ADDR_SET_INDEX: 6-bit Set index.
60:63	RO	Constant = 0b0000

Register Name	SBC Cache Watch Data Register
Mnemonic	INT.INT_VC.INT_VC_SBC_CACHE_WATCH_DATA
Address	0000000005013236 (SCOM)
Description	This register is used in debug mode to allow Software to read the cache control arrays. This register is located in SBC sub-unit. MMIO offset = 0xA30

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	INT_VC_SBC_CACHE_WATCH_DATA_DATA: Watch data. Software does CI load of the watch data register. This triggers an internal read request of the targeted array. When the internal read operation is completed, data is loaded into the cache watch data register and CI load response is generated.

Register Name	SBC Soft Write Address Register
Mnemonic	INT.INT_VC.INT_VC_SBC_SOFTWR_ADDR
Address	0000000005013237 (SCOM)
Description	This register, along with Soft Write mask and data registers, is used to Write full cache line (Up to 32 PQ states). This register is located in SBC sub-unit. MMIO offset = 0xA38

Bits	SCOM	Field Mnemonic: Description
0:27	RO	Constant = 0b0000000000000000000000000000
28:31	RWX	INT_VC_SBC_SOFTWR_ADDR_BLOCKID: Block ID.
32:35	RWX	INT_VC_SBC_SOFTWR_ADDR_Reserved_32_35: Spare bits.
36:58	RWX	INT_VC_SBC_SOFTWR_ADDR_OFFSET: 23-bit cache line offset (32 PQ aligned). Auto incremented by hardware after operation completion.
59:63	RO	Constant = 0b00000

Register Name	SBC Soft Write Mask Register
Mnemonic	INT.INT_VC.INT_VC_SBC_SOFTWR_MASK
Address	0000000005013238 (SCOM)
Description	This register defines which PQ bits to update within the selected cache line. This register is located in SBC sub-unit. MMIO offset = 0xA40

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	INT_VC_SBC_SOFTWR_MASK_MSK: 1 means update the corresponding PQ state in cache line.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	SBC Soft Write Data Register
Mnemonic	INT.INT_VC.INT_VC_SBC_SOFTWR_DATA
Address	0000000005013239 (SCOM)
Description	This register defines new PQ state for the 32 cache line entries. This register is located in SBC sub-unit. MMIO offset = 0xA48

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	INT_VC_SBC_SOFTWR_DATA_PQ_STATE: Bits (n*2):(n*2+1) correspond to PQ state for offset n. Software sequence : 1) Write address register. 2) Write mask register. 3a) write data register. 3b) write data register (next cache line). 3c) write data register (next cache line). ..... and so on.

Register Name	SBC Debug Register
Mnemonic	INT.INT_VC.INT_VC_SBC_DEBUG
Address	000000000501323A (SCOM)
Description	This register holds ECC errors correction/injection and some SBC debug features . This register is located in SBC sub-unit. MMIO offset = 0xA50

Bits	SCOM	Field Mnemonic: Description
0:31	RO	Constant = 0b00000000000000000000000000000000
32:33	RWX	INT_VC_SBC_DEBUG_Reserved_32_33: Spare.
34:37	RWX	INT_VC_SBC_DEBUG_DIS_TAG_ECC_CORRECTION: Disable TAG [0:3] array ECC correction.
38:41	RWX	INT_VC_SBC_DEBUG_Reserved_38_41: Spare.
42	RWX	INT_VC_SBC_DEBUG_DIS_STATE_ECC_CORRECTION: Disable STATE array ECC correction.
43:44	RWX	INT_VC_SBC_DEBUG_Reserved_43_44: Spare.
45:46	RWX	INT_VC_SBC_DEBUG_DIS_DATA_ECC_CORRECTION: Disable P1 DATA [0:1] array ECC correction.
47:48	RWX	INT_VC_SBC_DEBUG_Reserved_47_48: Spare.
49	RWX	INT_VC_SBC_DEBUG_FORCE_SINGLE_BIT_ECC_ERR: Force single bit ECC error. Set by Software. Cleared by hardware when selected array is written (array datain lsb bit is flipped).
50	RWX	INT_VC_SBC_DEBUG_FORCE_DOUBLE_BIT_ECC_ERR: Force double bit ECC error. Set by Software. Cleared by hardware when selected array is written (array datain 2 lsb bits are flipped).
51:55	RWX	INT_VC_SBC_DEBUG_ECC_ERR_INJ_ARRAY_SEL: Array selection for ECC error injection. 00 0xx P0 TAG arrays. xx = 0 to 3. 01 000 P0 STATE array. 11 000 P1 data 0. 11 001 P1 data 1.
56	RWX	INT_VC_SBC_DEBUG_TRACE_ENABLE: Enable SBC trace bus.
57:59	RWX	INT_VC_SBC_DEBUG_Reserved_57_59: Spare.

Bits	SCOM	Field Mnemonic: Description
60:63	RWX	INT_VC_SBC_DEBUG_CACHE_CTRL_ARY_SELECT: Defines which cache control arrays to read during cache watch operation. Data watch register mapping. [0:31] [32:63]. 0000 STATE STATE(0:7) STATE(8:15). 0001 LRU x"0000"&LRU. 1xxx TAG TAG(2*xxx) TAG(2*xxx+1).

Register Name	Maximum Number of Outstanding IRQ DMA Operations Register
Mnemonic	INT.INT_VC.INT_VC_MAX_OUTSTANDING_IRQ_DMA
Address	000000000501323B (SCOM)
Description	This register defines the maximum number of outstanding DMA operations that IRQ may issue.

Bits	SCOM	Field Mnemonic: Description
0:17	RWX	INT_VC_MAX_OUTSTANDING_IRQ_DMA_Reserved_0_17: Spare bits.
18:23	RWX	INT_VC_MAX_OUTSTANDING_IRQ_DMA_MAX_IRQ_DMA_READ: IRQ: DMA Read.
24:25	RWX	INT_VC_MAX_OUTSTANDING_IRQ_DMA_Reserved_24_25: Spare bits.
26:31	RWX	INT_VC_MAX_OUTSTANDING_IRQ_DMA_MAX_IRQ_DMA_WRITE: IRQ: DMA Write.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	ATX Initial Credit Counters Value Register
Mnemonic	INT.INT_VC.INT_VC_ATX_INIT_CREDIT_COUNT
Address	000000000501323C (SCOM)
Description	This register defines the Reserved and pool credits for outbound read and write requests. MMIO offset = 0x8A0

Bits	SCOM	Field Mnemonic: Description
0:23	RO	Constant = 0b00000000000000000000000
24	RWX	INT_VC_ATX_INIT_CREDIT_COUNT_CRD_INIT_REQUEST: Credit init request. Set by Soft, Cleared by hardware.
25	RWX	INT_VC_ATX_INIT_CREDIT_COUNT_Reserved_25: Spare bit.
26:27	RWX	INT_VC_ATX_INIT_CREDIT_COUNT_RSD_CRD_DMA_READ: 2-bit Reserved crd count for all DMA reads other than AT macro.
28:29	RWX	INT_VC_ATX_INIT_CREDIT_COUNT_RSD_CRD_AT_MACRO: 2-bit Reserved crd count for AT macro DMA reads.
30:31	RWX	INT_VC_ATX_INIT_CREDIT_COUNT_RSD_CRD_EQC_DOING_CI_LOAD: 2-bit Reserved crd count for EQC doing either VPC CI load request or auto-generated EOI (remote PC only).
32:33	RWX	INT_VC_ATX_INIT_CREDIT_COUNT_Reserved_32_33: Spare bits.
34:39	RWX	INT_VC_ATX_INIT_CREDIT_COUNT_READ_CRD_POOL: Outbound reads credits pool. (Must = Total number of CQ read machines - Sum (all Reserved read credit counts, PC+VC) (assume 3 Reserved in PC).
40:47	RWX	INT_VC_ATX_INIT_CREDIT_COUNT_Reserved_40_47: Spare bits.
48:49	RWX	INT_VC_ATX_INIT_CREDIT_COUNT_RSD_CRD_DMA_WRITE: 2-bit Reserved crd count for all DMA Write other than EQ post.
50:51	RWX	INT_VC_ATX_INIT_CREDIT_COUNT_RSD_CRD_EQ_POST: 2-bit Reserved crd count for EQ post.

Bits	SCOM	Field Mnemonic: Description
52:53	RWX	INT_VC_ATX_INIT_CREDIT_COUNT_RSD_CRD_TRIG_FWD_1: 2-bit Reserved crd count for EQ trigger forwarded by EQC to IPI or hardware queues.
54:55	RWX	INT_VC_ATX_INIT_CREDIT_COUNT_RSD_CRD_TRIG_FWD_2: 2-bit Reserved crd count for EQ trigger forwarded by EQC to escalate or redistribution queues.
56:58	RWX	INT_VC_ATX_INIT_CREDIT_COUNT_Reserved_56_58: Spare bits.
59:63	RWX	INT_VC_ATX_INIT_CREDIT_COUNT_WRITE_CRD_POOL: Outbound writes credits pool. (Must = Total number of CQ write machines - Sum (all Reserved write credit counts, PC+VC) (assume 4 Reserved in PC).

Register Name	**AIB TX Commands Priority Register**
Mnemonic	INT.INT_VC.INT_VC_AIB_TX_CMD_PRIORITY
Address	000000000501323D (SCOM)
Description	This register defines the priority for each source of AIB TX commands. 0: High priority, 1: Medium priority, 2: Low priority. MMIO offset = 0x8A8

Bits	SCOM	Field Mnemonic: Description
0:31	RO	Constant = 0b00000000000000000000000000000000
32	RW	INT_VC_AIB_TX_CMD_PRIORITY_PREVENT_MTP_AT_DEM_IN_PIPE: 0: Multiple AT demand might be in ATX pipe. 1: Prevent multiple AT demand to be in ATX pipe.
33:43	RWX	INT_VC_AIB_TX_CMD_PRIORITY_Reserved_33_43: Spare bits.
44:45	RWX	INT_VC_AIB_TX_CMD_PRIORITY_ATX_PRIO_FOR_REGS: REGS: Registers read response.
46:47	RWX	INT_VC_AIB_TX_CMD_PRIORITY_ATX_PRIO_FOR_IRQ: IRQ: DMA Read/Write.
48:49	RWX	INT_VC_AIB_TX_CMD_PRIORITY_ATX_PRIO_FOR_IVC: IVC: DMA Read.
50:51	RWX	INT_VC_AIB_TX_CMD_PRIORITY_Reserved_50_51: Spare bits.
52:53	RWX	INT_VC_AIB_TX_CMD_PRIORITY_ATX_PRIO_FOR_SBC_EOI_RESP: SBC: EIO response.
54:55	RWX	INT_VC_AIB_TX_CMD_PRIORITY_ATX_PRIO_FOR_SBC_DMA: SBC: DMA Read/Write.
56:57	RWX	INT_VC_AIB_TX_CMD_PRIORITY_ATX_PRIO_FOR_INT_TRIG_FWD: EQC: Int trigger forwarding.
58:59	RWX	INT_VC_AIB_TX_CMD_PRIORITY_ATX_PRIO_FOR_EQC_EOI_INT_EQP: EQC: EOI response, Int request and EQ post.
60:61	RWX	INT_VC_AIB_TX_CMD_PRIORITY_ATX_PRIO_FOR_LSS_CI_LOAD: EQC: LSS CI load request (local or remote).
62:63	RWX	INT_VC_AIB_TX_CMD_PRIORITY_ATX_PRIO_FOR_EQD_DMA: EQC: EQD DMA Read/Write.

Register Name	**AIB AT Macro Indirect Kill Register**
Mnemonic	INT.INT_VC.INT_VC_AT_MACRO_KILL
Address	000000000501323E (SCOM)
Description	This registers, along with kill mask register is used to kill entries in AT CAM. MMIO offset = 0x8B0

Bits	SCOM	Field Mnemonic: Description
0	RWX	INT_VC_AT_MACRO_KILL_VALID: Valid bit. Set per Software to initiate a kill command. Cleared by hardware when kill command is completed. Software must have written the kill mask. register prior of setting this bit.

Bits	SCOM	Field Mnemonic: Description
1:13	RO	Constant = 0b0000000000000
14:15	RWX	INT_VC_AT_MACRO_KILL_VST_TYPE: 2-bit type (0:IRQ,1:IVC,2:SBC,3:EQD).
16:26	RO	Constant = 0b00000000000
27:31	RWX	INT_VC_AT_MACRO_KILL_BLOCKID: 5-bit blockid.
32:47	RO	Constant = 0b0000000000000000
48:60	RWX	INT_VC_AT_MACRO_KILL_OFFSET: 13-bit offset.
61:63	RO	Constant = 0b000

Register Name	**AIB AT Macro Indirect Kill Mask Register**
Mnemonic	INT.INT_VC.INT_VC_AT_MACRO_KILL_MASK
Address	000000000501323F (SCOM)
Description	This registers, along with kill register is used to kill entries in AT CAM. CAM entries are killed if (blockid and blockid_mask) = (cam_blockid and blockid_mask) AND (offset and offset_mask) = (cam_offset and offset_mask). MMIO offset = 0x8B8

Bits	SCOM	Field Mnemonic: Description
0:26	RO	Constant = 0b00000000000000000000000000000
27:31	RWX	INT_VC_AT_MACRO_KILL_MASK_BLOCKID: 5-bit blockid mask.
32:47	RO	Constant = 0b0000000000000000
48:60	RWX	INT_VC_AT_MACRO_KILL_MASK_OFFSET: 13-bit offset mask.
61:63	RO	Constant = 0b000

Register Name	**ATX Performance Events Selection 1 Register**
Mnemonic	INT.INT_VC.INT_VC_ATX_PERF_EVENT_SEL_1
Address	0000000005013240 (SCOM)
Description	4-bit configuration for each possible performance event. bit0: Enable count of request granted by the ATX arbiter. bit 1:3 Performance counter selection. MMIO offset = 0x8C0

Bits	SCOM	Field Mnemonic: Description
0:3	RWX	INT_VC_ATX_PERF_EVENT_SEL_1_CNT_R0: Count of request(0).
4:7	RWX	INT_VC_ATX_PERF_EVENT_SEL_1_CNT_R1R: Count of request(1r).
8:11	RWX	INT_VC_ATX_PERF_EVENT_SEL_1_CNT_R1W: Count of request(1w).

60:63	RWX	INT_VC_ATX_PERF_EVENT_SEL_2_CNT_R10W: Count of request(10w).

Register Name	**ATX Performance Events Selection 3 Register**
Mnemonic	INT.INT_VC.INT_VC_ATX_PERF_EVENT_SEL_3
Address	0000000005013242 (SCOM)
Description	4-bit configuration for each possible performance event. bit0: Enable count of request not served immediately because another requester is served. bit 1:3 Performance counter selection. MMIO offset = 0x8D0

Bits	SCOM	Field Mnemonic: Description
0:3	RWX	INT_VC_ATX_PERF_EVENT_SEL_3_CNT_R0: Count of request(0).
4:7	RWX	INT_VC_ATX_PERF_EVENT_SEL_3_CNT_R1R: Count of request(1r).

Bits	SCOM	Field Mnemonic: Description
8:11	RWX	INT_VC_ATX_PERF_EVENT_SEL_3_CNT_R1W: Count of request(1w).
12:15	RWX	INT_VC_ATX_PERF_EVENT_SEL_3_CNT_R2: Count of request(2).
16:19	RWX	INT_VC_ATX_PERF_EVENT_SEL_3_CNT_R3: Count of request(3).
20:23	RWX	INT_VC_ATX_PERF_EVENT_SEL_3_CNT_R4: Count of request(4).
24:27	RWX	INT_VC_ATX_PERF_EVENT_SEL_3_CNT_R5R: Count of request(5r).
28:31	RWX	INT_VC_ATX_PERF_EVENT_SEL_3_CNT_R5W: Count of request(5w).
32:35	RWX	INT_VC_ATX_PERF_EVENT_SEL_3_CNT_R6: Count of request(6).
36:39	RWX	INT_VC_ATX_PERF_EVENT_SEL_3_CNT_R7RSP: Count of request(7rsp).
40:43	RWX	INT_VC_ATX_PERF_EVENT_SEL_3_CNT_R7INT: Count of request(7int).
44:47	RWX	INT_VC_ATX_PERF_EVENT_SEL_3_CNT_R7EQP: Count of request(7eqp).
48:51	RWX	INT_VC_ATX_PERF_EVENT_SEL_3_CNT_R8: Count of request(8).
52:55	RWX	INT_VC_ATX_PERF_EVENT_SEL_3_CNT_R9: Count of request(9).
56:59	RWX	INT_VC_ATX_PERF_EVENT_SEL_3_CNT_R10R: Count of request(10r).
60:63	RWX	INT_VC_ATX_PERF_EVENT_SEL_3_CNT_R10W: Count of request(10w).

Register Name	EQC Performance Events Selection 1 Register
Mnemonic	INT.INT_VC.INT_VC_EQC_PERF_EVENT_SEL_1
Address	0000000005013250 (SCOM)
Description	4-bit configuration for each possible performance event. bit 0: Count enable. bits 1:3 Performance counter selection. This register is located in EQC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:3	RWX	INT_VC_EQC_PERF_EVENT_SEL_1_CNT_EQ_TRIGGER_FROM_IPI: count of number of EQ trigger from IPI queue processed.
4:7	RWX	INT_VC_EQC_PERF_EVENT_SEL_1_CNT_EQ_TRIGGER_FROM_HWD: count of number of EQ trigger from hardware processed.
8:11	RWX	INT_VC_EQC_PERF_EVENT_SEL_1_CNT_EQ_TRIGGER_FROM_1ESC: count of number of EQ trigger from 1st escalate queue processed.
12:15	RWX	INT_VC_EQC_PERF_EVENT_SEL_1_CNT_EQ_TRIGGER_FROM_2ESC: count of number of EQ trigger from 2nd escalate queue processed.
16:19	RWX	INT_VC_EQC_PERF_EVENT_SEL_1_CNT_EQ_TRIGGER_FROM_REDIS: count of number of EQ trigger from redistribution queue processed.
20:23	RWX	INT_VC_EQC_PERF_EVENT_SEL_1_CNT_NON_SPEC_EOI: count of number of non speculative EOI processed.
24:27	RWX	INT_VC_EQC_PERF_EVENT_SEL_1_CNT_LOCAL_ESCALATE: count of number of local escalate processed.
28:31	RWX	INT_VC_EQC_PERF_EVENT_SEL_1_CNT_EQ_TRIG_CACHE_HIT: count of EQ triggers command cache hit.
32:35	RWX	INT_VC_EQC_PERF_EVENT_SEL_1_CNT_EOI_CACHE_HIT: count of EOI command cache hit.
36:39	RWX	INT_VC_EQC_PERF_EVENT_SEL_1_CNT_LOCAL_ESC_CACHE_HIT: count of local escalate command cache hit.

Bits	SCOM	Field Mnemonic: Description
40:43	RWX	INT_VC_EQC_PERF_EVENT_SEL_1_CNT_VICTIM_IS_LRU: count of "selected victim is LRU".
44:47	RWX	INT_VC_EQC_PERF_EVENT_SEL_1_CNT_VICTIM_IS_FIRST_USABLE: count of "selected victim is first usable entry".
48:51	RWX	INT_VC_EQC_PERF_EVENT_SEL_1_CNT_RETRY: count of command retry.
52:55	RWX	INT_VC_EQC_PERF_EVENT_SEL_1_CNT_TOO_MANY_ENTRIES: count of number of EQD writeback due to too many entries in modified state.
56:63	RWX	INT_VC_EQC_PERF_EVENT_SEL_1_Reserved_56_63: Spare.

Register Name	EQC Performance Events Selection 2 Register
Mnemonic	INT.INT_VC.INT_VC_EQC_PERF_EVENT_SEL_2
Address	0000000005013251 (SCOM)
Description	4-bit configuration for each possible performance event. bit 0: Count enable. bits 1:3 Performance counter selection. This register is located in EQC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:3	RWX	INT_VC_EQC_PERF_EVENT_SEL_2_CNT_EQD_FETCH: count of EQD fetch sent.
4:7	RWX	INT_VC_EQC_PERF_EVENT_SEL_2_CNT_EQP: count of EQ Post sent.
8:11	RWX	INT_VC_EQC_PERF_EVENT_SEL_2_CNT_RESUME_INT: count of user level resume Interrupt sent.
12:15	RWX	INT_VC_EQC_PERF_EVENT_SEL_2_CNT_EBB_INT: count of user level EBB Interrupt sent.
16:19	RWX	INT_VC_EQC_PERF_EVENT_SEL_2_CNT_VP_INT: count of VP Interrupt sent.
20:23	RWX	INT_VC_EQC_PERF_EVENT_SEL_2_CNT_LS_INT: count of Logical Server interrupt sent.
24:27	RWX	INT_VC_EQC_PERF_EVENT_SEL_2_CNT_BROADCAST_BL: count of Broadcast Backlog sent.
28:31	RWX	INT_VC_EQC_PERF_EVENT_SEL_2_CNT_EQ_FWD: count of EQ trigger forwarding sent.
32:35	RWX	INT_VC_EQC_PERF_EVENT_SEL_2_CNT_ESCALATE: count of escalate sent.
36:39	RWX	INT_VC_EQC_PERF_EVENT_SEL_2_CNT_LOCAL_VPC_UPD: count of Local VPC update sent.
40:43	RWX	INT_VC_EQC_PERF_EVENT_SEL_2_CNT_REMOTE_VPC_UPD: count of Remote VPC update sent.
44:47	RWX	INT_VC_EQC_PERF_EVENT_SEL_2_CNT_LOCAL_SBC_UPD: count of Local SBC update sent.
48:51	RWX	INT_VC_EQC_PERF_EVENT_SEL_2_CNT_REMOTE_SBC_UPD: count of Remote SBC update sent.
52:63	RO	Constant = 0b000000000000

Register Name	EQC Performance Events Selection 3 Register
Mnemonic	INT.INT_VC.INT_VC_EQC_PERF_EVENT_SEL_3
Address	0000000005013252 (SCOM)
Description	4-bit configuration for each possible performance event. bit 0: Count enable. bits 1:3 Performance counter selection. This register is located in EQC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:3	RWX	INT_VC_EQC_PERF_EVENT_SEL_3_CNT_EQD_FETCH_REPLAY: count of EQD fetch replay.

Bits	SCOM	Field Mnemonic: Description
4:7	RWX	INT_VC_EQC_PERF_EVENT_SEL_3_CNT_EQP_REPLAY: count of EQ Post replay.
8:11	RWX	INT_VC_EQC_PERF_EVENT_SEL_3_CNT_INT_REPLAY: count of Interrupt replay.
12:15	RWX	INT_VC_EQC_PERF_EVENT_SEL_3_CNT_CI_STORE_REPLAY: count of CI store replay.
16:19	RWX	INT_VC_EQC_PERF_EVENT_SEL_3_CNT_LOCAL_ESC_REPLAY: count of Local escalate replay.
20:23	RWX	INT_VC_EQC_PERF_EVENT_SEL_3_CNT_REMOTE_CI_LOAD_REPLAY: count of Remote CI load replay.
24:27	RWX	INT_VC_EQC_PERF_EVENT_SEL_3_CNT_LOCAL_VPC_REPLAY: count of Local VPC CI load replay.
28:31	RWX	INT_VC_EQC_PERF_EVENT_SEL_3_CNT_LOCAL_SBC_REPLAY: count of Local SBC CI load replay.
32:35	RWX	INT_VC_EQC_PERF_EVENT_SEL_3_CNT_EOI_RESP_REPLAY: count of Software EOI response replay.
36:39	RWX	INT_VC_EQC_PERF_EVENT_SEL_3_CNT_NEW_CMD_STALLED: count number of commands processed by EQC P1 (could be new, replay, rearb or response).
40:63	RO	Constant = 0b00000000000000000000000

Register Name	EQC Additional Performance 1 Register
Mnemonic	INT.INT_VC.INT_VC_EQC_ADDITIONAL_PERF_1
Address	0000000005013253 (SCOM)
Description	This register is located in EQC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0	ROX	INT_VC_EQC_ADDITIONAL_PERF_1_P0_IS_IDLE: EQC P0 is idle.
1	ROX	INT_VC_EQC_ADDITIONAL_PERF_1_P1_IS_IDLE: EQC P1 is idle.
2:7	RO	Constant = 0b000000
8:15	ROX	INT_VC_EQC_ADDITIONAL_PERF_1_MAX_PTAG_IN_USE: Max reached number of ptag in use.
16:23	ROX	INT_VC_EQC_ADDITIONAL_PERF_1_MAX_OUTSTANDING_EOI: Max reached number of outstanding EOI.
24:31	ROX	INT_VC_EQC_ADDITIONAL_PERF_1_MAX_UNLOCK_IN_FIFO: Max reached number of unlock command in the unlock FIFO.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	EQC Additional Performance 2 Register
Mnemonic	INT.INT_VC.INT_VC_EQC_ADDITIONAL_PERF_2
Address	0000000005013254 (SCOM)
Description	This register is located in EQC sub-unit.

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	INT_VC_EQC_ADDITIONAL_PERF_2_MAX_OUTSTANDING_EQD_FETCH: Max reached number of outstanding EQD fetch.
8:15	ROX	INT_VC_EQC_ADDITIONAL_PERF_2_MAX_OUTSTANDING_EQP: Max reached number of outstanding EQ Post.
16:23	ROX	INT_VC_EQC_ADDITIONAL_PERF_2_MAX_OUTSTANDING_INT: Max reached number of outstanding Interrupt request.

Bits	SCOM	Field Mnemonic: Description
24:31	ROX	INT_VC_EQC_ADDITIONAL_PERF_2_MAX_OUTSTANDING_CI_LOAD: Max reached number of outstanding CI load.
32:39	ROX	INT_VC_EQC_ADDITIONAL_PERF_2_MAX_OUTSTANDING_CI_STORE: Max reached number of outstanding CI store.
40:47	ROX	INT_VC_EQC_ADDITIONAL_PERF_2_MAX_OUTSTANDING_EQD_WRITE: Max reached number of outstanding EQD writeback.
48:63	RO	Constant = 0b0000000000000000

Register Name	IVC Performance Events Selection 1 Register
Mnemonic	INT.INT_VC.INT_VC_IVC_PERF_EVENT_SEL_1
Address	0000000005013258 (SCOM)
Description	4-bit configuration for each possible performance event. bit0: Count enable. bits 1:3 Performance counter selection. This register is located in IVC sub-unit. MMIO offset = 0x9D8

Bits	SCOM	Field Mnemonic: Description
0:3	RWX	INT_VC_IVC_PERF_EVENT_SEL_1_CNT_IPI_DOES_PRF_IVE: count of IPI queue prefetch for IVE lookup.
4:7	RWX	INT_VC_IVC_PERF_EVENT_SEL_1_CNT_IPI_DOES_PRF_IVE_SBC: count of IPI queue prefetch for IVE+SBC lookup.
8:11	RWX	INT_VC_IVC_PERF_EVENT_SEL_1_CNT_HWD_DOES_PRF_IVE: count of HW queue prefetch for IVE lookup.
12:15	RWX	INT_VC_IVC_PERF_EVENT_SEL_1_CNT_IPI_DOES_DEM_IVE: count of IPI queue demand for IVE lookup.
16:19	RWX	INT_VC_IVC_PERF_EVENT_SEL_1_CNT_IPI_DOES_DEM_IVE_SBC: count of IPI queue demand for IVE+SBC lookup.
20:23	RWX	INT_VC_IVC_PERF_EVENT_SEL_1_CND_HWD_DOES_DEM_IVE: count of HW queue demand for IVE lookup.
24:27	RWX	INT_VC_IVC_PERF_EVENT_SEL_1_CNT_PRF_CACHE_HIT: count of cache hit for a prefetch request.
28:31	RWX	INT_VC_IVC_PERF_EVENT_SEL_1_CNT_DEM_CACHE_HIT: count of cache hit for a demand request.
32:35	RWX	INT_VC_IVC_PERF_EVENT_SEL_1_CNT_VICTIM_IS_LRU: count of "selected victim is LRU".
36:39	RWX	INT_VC_IVC_PERF_EVENT_SEL_1_CNT_VICTIM_IS_1ST_USABLE: count of "selected victim is first usable entry".

Bits	SCOM	Field Mnemonic: Description
0	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_FIFO_INVALID_STATE: IRQ elastic fifo internal error: invalid state (default:fatal).
1	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_FIFO_CRD_ERROR: IRQ elastic fifo internal error: credit error (default:fatal).
2	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_FIFO_OFFSET_ERROR: IRQ elastic fifo internal error: offset error (default:fatal).
3	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_FIFO_DATA_ERROR: IRQ elastic fifo internal error: data error (default:fatal).
4	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_FIFO_ACCESS_ERROR: IRQ elastic fifo internal error: sram access error (default:fatal).
5	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_FIFO_OVERFLOW: IRQ elastic fifo internal error: offset overflow (default:fatal).
6	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_FIFO_IDX_ERROR: IRQ elastic fifo internal error: index overflow or underflow (default:fatal).
7	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_FIFO_UNDERFLOW: IRQ elastic fifo internal error: offset underflow (default:fatal).
8	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_FIFO_DIR_STATE_ERROR: IRQ elastic fifo internal error: dir state error (default:fatal).
9	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_FIFO_DIR_WR_ERROR: IRQ elastic fifo internal error: dir wr offset error (default:fatal).
10	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_FIFO_DIR_RD_ERROR: IRQ elastic fifo internal error: dir rd offset error (default:fatal).
11	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_FIFO_ECC_UE: IRQ elastic FIFO SRAM uncorrectable ECC error (default:fatal).
12	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_EQC_CREDIT_ERROR: EQC credit error. A credit was returned by EQC whereas no credit was consumed (default:fatal).

Bits	SCOM	Field Mnemonic: Description
13	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_INT_TRIG_CRD_ERROR: Int trigger credit error. An int trigger is received whereas there is no credit (default:fatal).
14	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_EFIFO_DIN_ERROR: din_data_ack_err. din_data_ack is not asserted by efifo when din_data_vld is asserted (default:fatal).
15	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_INPUT_BUF_ERROR: Input buffer overflow: An int trigger comes in and both input buffers are busy (default:fatal).
16	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_EQ_ERROR: Interrupt trigger EQ error. Receiving an int trigger with EQ = 0 on a queue not connected to IVC (default:fatal).
17	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_INT_PQ_ERROR: Interrupt trigger PQ error. Receiving an int trigger with PQ = 0 on a queue not connected to IVC (default:fatal).
18	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_INT_EQPQ_ERROR: Interrupt trigger EQPQ error. Receiving an int trigger with EQ = 1 and PQ = 0 on IPI or HWD queue (default:fatal).
19	ROX_CLRPART	INT_VC_WOF_ERR_G0_IRQ_FIFO_ECC_CE: Elastic FIFO SRAM correctable ECC error (default:recov).
20	ROX_CLRPART	INT_VC_WOF_ERR_G0_ARX_CTRL_PTY_ERROR: aib control signals parity error (default:fatal).
21	ROX_CLRPART	INT_VC_WOF_ERR_G0_ARX_CMD_PTY_ERROR: aib command bus parity error (default:fatal).
22	ROX_CLRPART	INT_VC_WOF_ERR_G0_REGS_SCOM_INTERNAL_ERROR: SCOM satellite error (default:fatal).
23	ROX_CLRPART	INT_VC_WOF_ERR_G0_ARX_TAG_SRAM_ECC_UE: aib TAG sram uncorrectable ECC error (default:fatal).
24	ROX_CLRPART	INT_VC_WOF_ERR_G0_ARX_AIB_DATA_ECC_UE: AIB data bus uncorrectable ECC error (default:fatal).
25	ROX_CLRPART	INT_VC_WOF_ERR_G0_REGS_PARITY_ERROR: Register parity error. A parity error has been detected on one of the registers located in REGS (default:fatal).
26	ROX_CLRPART	INT_VC_WOF_ERR_G0_REGS_CMD_CRD_ERROR: aib regs access credit error. An inbound CI operation is received by REGS whereas there is no command. credit available (default:fatal).
27	ROX_CLRPART	INT_VC_WOF_ERR_G0_REGS_DATA_CRD_ERROR: aib regs write access credit error. An inbound CI store operation is received by REGS whereas there. is no data credit available (default:fatal).
28	ROX_CLRPART	INT_VC_WOF_ERR_G0_ARX_AIB_CMD_ERROR: aib command error. Receiving an AIB command that is not recognized (default:fatal).
29	ROX_CLRPART	INT_VC_WOF_ERR_G0_ARX_AIB_RESP_TIMEOUT: aib response timeout. An outbound request did not get response on defined time (default:fatal).
30	ROX_CLRPART	INT_VC_WOF_ERR_G0_ARX_AIB_DATA_ECC_CE: AIB data bus correctable ECC error (default:recov).
31	ROX_CLRPART	INT_VC_WOF_ERR_G0_ARX_TAG_SRAM_ECC_CE: aib TAG sram correctable ECC error (default:recov).
32	ROX_CLRPART	INT_VC_WOF_ERR_G0_ATX_LACK_OF_TAG: Lack of tag. ATX sends a command that requires an aib tag over the aib but there is no tag available (default:fatal).
33	ROX_CLRPART	INT_VC_WOF_ERR_G0_ATX_TAG_RELEASE_ERROR: AIB tag release error. An AIB tag is released whereas it was not in use (default:fatal).
34	ROX_CLRPART	INT_VC_WOF_ERR_G0_AT_BAD_CAM_STATE: AT macro internal error: Bad CAM entry state (default:fatal).
35	ROX_CLRPART	INT_VC_WOF_ERR_G0_AT_MULTIPLE_HIT: AT macro internal error: One BAR entry was found in multiple CAM cache slots (default:fatal).

Bits	SCOM	Field Mnemonic: Description
36	ROX_CLRPART	INT_VC_WOF_ERR_G0_AT_PARITY_ERROR: AT macro internal error: Parity error (default:fatal).
37	ROX_CLRPART	INT_VC_WOF_ERR_G0_AT_MULTIPLE_PRF_RQ: AT macro internal error: 1 ATX slot sent two prefetch requests (default:fatal).
38	ROX_CLRPART	INT_VC_WOF_ERR_G0_AT_TOO_LARGE_SLOTID: AT macro internal error: ATX used slotID that was too large (default:fatal).
39	ROX_CLRPART	INT_VC_WOF_ERR_G0_AT_PRF_OVERFLOW: AT macro internal error: Prefetch rd queue overflow (default:fatal).
40	ROX_CLRPART	INT_VC_WOF_ERR_G0_AT_PRF_UNDERFLOW: AT macro internal error: Prefetch rd queue underflow (default:fatal).
41	ROX_CLRPART	INT_VC_WOF_ERR_G0_AT_INVALID_CMD: AT macro internal error: Rd request was asked without valid command (default:fatal).
42	ROX_CLRPART	INT_VC_WOF_ERR_G0_AT_INVALID_IND_BAR: AT macro internal error: Requested indirect BAR entry is invalid (default:fatal).
43	ROX_CLRPART	INT_VC_WOF_ERR_G0_AT_INVALID_IND_PZ: AT macro internal error: Requested indirect BAR page size did not match root BAR page size (default:fatal).
44	ROX_CLRPART	INT_VC_WOF_ERR_G0_AT_INVALID_I: AT macro internal error: BAR entries that have the "i" bit set - which should not be the case (default:fatal).
45	ROX_CLRPART	INT_VC_WOF_ERR_G0_ATX_CRD_PARITY_ERROR: AIB credits parity error (default:fatal).
46	ROX_CLRPART	INT_VC_WOF_ERR_G0_ATX_AT_SRAM_ECC_UE: AT SRAM uncorrected ECC error (default:fatal).
47	ROX_CLRPART	INT_VC_WOF_ERR_G0_ATX_BAR_SRAM_ECC_UE: BAR SRAM uncorrectable ecc error (default:fatal).
48	ROX_CLRPART	INT_VC_WOF_ERR_G0_ATX_WB_SRAM_ECC_UE: Writeback SRAM uncorrectable ecc error (default:fatal).
49	ROX_CLRPART	INT_VC_WOF_ERR_G0_ATX_SLOT_OVERFLOW: Command slot overflow. Acommand is received from a sub unit whereas there is no slot available (default:fatal).
50	ROX_CLRPART	INT_VC_WOF_ERR_G0_ATX_CRD_OVERFLOW: AIB credit counter overflow. a credit is returned by AIB whereas the credit counter is at its max config value (default:fatal).
51	ROX_CLRPART	INT_VC_WOF_ERR_G0_ATX_CRD_UNDERFLOW: AIB credit counter underflow. AIB logic triggers a credit counter decrement whereas the counter value is zero (default:fatal).
52	ROX_CLRPART	INT_VC_WOF_ERR_G0_ATX_INVALID_BAR: Invalid BAR. A BAR SRAM lookup returns an invalid BAR. (default:fatal).
53	ROX_CLRPART	INT_VC_WOF_ERR_G0_ATX_PAGE_OVERFLOW: AIB command page overflow: The offset given in the command overflows the page size defined in the BAR SRAM (default:fatal).
54	ROX_CLRPART	INT_VC_WOF_ERR_G0_ATX_SRAM_ECC_CE: ATX sram Correctable ECC error (default:recov).
55:63	RO	Constant = 0b000000000

Register Name	Error Group 0 WOF Detail Register

34	RW	FP3_DISABLE_CMD_COMPRESSION: fp3 disable command compression.
35	RW	FP3_DISABLE_PRSP_COMPRESSION: fp3 disable prsp compression.
36:43	RW	FP3_LL_CREDIT_LO_LIMIT: fp3 ll credit low limit - normal frames in flight limit. Set to ROUNDUP(25.5 - (nest freq/elec freq)*10.75)).
44:51	RW	FP3_LL_CREDIT_HI_LIMIT: fp3 ll credit high limit - frames in flight limit during stop_cmds/replay.
52	RW	FP3_FMR_DISABLE: fp3 framer disable - turn the framer clocks OFF.
53:55	RW	FP3_FMR_SPARE: fp3 framer spare.
56	RW	FP3_RUN_AFTER_FRAME_ERROR: fp3 run after frame error.
57	RW	FP3_PRS_DISABLE: fp3 parser disable - turn the parser clocks OFF.
58:63	RW	FP3_PRS_SPARE: fp3 parser spare.

Register Name	Power Bus Electrical Framer/Parser 45 Configuration Register
Mnemonic	PB.IOE.SCOM.PB_FP45_CFG
Address	000000000501340C (SCOM)
Description	Processor bus Electrical Framer/Parser 45 configuration register

Bits	SCOM	Field Mnemonic: Description
0	RW	FP4_CREDIT_PRIORITY_4_NOT_8: fp4 credit priority 4 not 8.
1	RW	FP4_DISABLE_GATHERING: fp4 disable data gathering.
2	RW	FP4_DISABLE_CMD_COMPRESSION: fp4 disable command compression.
3	RW	FP4_DISABLE_PRSP_COMPRESSION: fp4 disable prsp compression.
4:11	RW	FP4_LL_CREDIT_LO_LIMIT: fp4 ll credit low limit - normal frames in flight limit. Set to ROUNDUP(25.5 - (nest freq/elec freq)*10.75)).
12:19	RW	FP4_LL_CREDIT_HI_LIMIT: fp4 ll credit high limit - frames in flight limit during stop_cmds/replay.
20	RW	FP4_FMR_DISABLE: fp4 framer disable - turn the framer clocks OFF.
21	RW	FP4_FMR_SPARE: fp4 framer spare.
22:23	RW	FP45_CMD_EXP_TIME: obs/fmr/prs command expiration time = (value * 2) + 9.
24	RW	FP4_RUN_AFTER_FRAME_ERROR: fp4 run after frame error.
25	RW	FP4_PRS_DISABLE: fp4 parser disable - turn the parser clocks OFF.
26:31	RW	FP4_PRS_SPARE: fp4 parser spare.
32	RW	FP5_CREDIT_PRIORITY_4_NOT_8: fp5 credit priority 4 not 8.
33	RW	FP5_DISABLE_GATHERING: fp5 disable data gathering.
34	RW	FP5_DISABLE_CMD_COMPRESSION: fp5 disable command compression.

Bits	SCOM	Field Mnemonic: Description
35	RW	FP5_DISABLE_PRSP_COMPRESSION: fp5 disable prsp compression.
36:43	RW	FP5_LL_CREDIT_LO_LIMIT: fp5 ll credit low limit - normal frames in flight limit. Set to ROUNDUP(25.5 - (nest freq/elec freq)*10.75)).
44:51	RW	FP5_LL_CREDIT_HI_LIMIT: fp5 ll credit high limit - frames in flight limit during stop_cmds/replay.
52	RW	FP5_FMR_DISABLE: fp5 framer disable - turn the framer clocks OFF.
53:55	RW	FP5_FMR_SPARE: fp5 framer spare.
56	RW	FP5_RUN_AFTER_FRAME_ERROR: fp5 run after frame error.
57	RW	FP5_PRS_DISABLE: fp5 parser disable - turn the parser clocks OFF.
58:63	RW	FP5_PRS_SPARE: fp5 parser spare.

Register Name	**Power Bus Electrical Link Delay 0123 Register**
Mnemonic	PB.IOE.SCOM.PB_ELINK_DLY_0123_REG
Address	000000000501340E (SCOM)
Description	Processor bus Electrical Link Delay 0123 Register

Bits	SCOM	Field Mnemonic: Description
0:3	RO	Constant = 0b0000
4:15	ROX	Reserved.
16:19	RO	Constant = 0b0000
20:31	ROX	Reserved.
32:35	RO	Constant = 0b0000
36:47	ROX	Reserved.
48:51	RO	Constant = 0b0000
52:63	ROX	Reserved.

Register Name	**Power Bus Electrical Link Delay 45 Register**
Mnemonic	PB.IOE.SCOM.PB_ELINK_DLY_45_REG
Address	000000000501340F (SCOM)
Description	Processor bus Electrical Link Delay 45 Register

Bits	SCOM	Field Mnemonic: Description
0:3	RO	Constant = 0b0000
4:15	ROX	Reserved.
16:19	RO	Constant = 0b0000
20:31	ROX	Reserved.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	Power Bus Electrical Link Data Buffer 01 Configuration Register
Mnemonic	PB.IOE.SCOM.PB_ELINK_DATA_01_CFG_REG
Address	0000000005013410 (SCOM)
Description	Processor bus Electrical Link Data Buffer 01 configuration register

Bits	SCOM	Field Mnemonic: Description
0	RW	Reserved.
1:7	RW	PB_CFG_LINK0_DOB_LIMIT: pb configuration link0 dob limit - total link credits avail.
8	RW	Reserved.
9:15	RW	PB_CFG_LINK0_DOB_VC0_LIMIT: pb configuration link0 dob vc0 limit - vc0 link credits max.
16	RW	Reserved.
17:23	RW	PB_CFG_LINK0_DOB_VC1_LIMIT: pb configuration link0 dob vc1 limit - vc1 link credits max.
24:28	RW	PB_CFG_LINK01_DIB_VC_LIMIT: pb configuration link01 dib vc limit - limit per VC for data inbound to pbien/s (set to 31/16/8 for 1/2/4 channels in use) (both links use same credit pool).
29:32	RW	Reserved.
33:39	RW	PB_CFG_LINK1_DOB_LIMIT: pb configuration link1 dob limit - total link credits avail.
40	RW	Reserved.
41:47	RW	PB_CFG_LINK1_DOB_VC0_LIMIT: pb configuration link1 dob vc0 limit - vc0 link credits max.
48	RW	Reserved.
49:55	RW	PB_CFG_LINK1_DOB_VC1_LIMIT: pb configuration link1 dob vc1 limit - vc1 link credits max.

Register Name	Power Bus Electrical Link Data Buffer 23 Configuration Register
Mnemonic	PB.IOE.SCOM.PB_ELINK_DATA_23_CFG_REG
Address	0000000005013411 (SCOM)
Description	Processor bus Electrical Link Data Buffer 23 configuration register

Bits	SCOM	Field Mnemonic: Description
0	RW	Reserved.
1:7	RW	PB_CFG_LINK2_DOB_LIMIT: pb configuration link2 dob limit - total link credits avail.
8	RW	Reserved.
9:15	RW	PB_CFG_LINK2_DOB_VC0_LIMIT: pb configuration link2 dob vc0 limit - vc0 link credits max.
16	RW	Reserved.
17:23	RW	PB_CFG_LINK2_DOB_VC1_LIMIT: pb configuration link2 dob vc1 limit - vc1 link credits max.
24:28	RW	PB_CFG_LINK23_DIB_VC_LIMIT: pb configuration link23 dib vc limit - limit per VC for data inbound to pbien/s (set to 31/16/8 for 1/2/4 channels in use) (both links use same credit pool).
29:32	RW	Reserved.
33:39	RW	PB_CFG_LINK3_DOB_LIMIT: pb configuration link3 dob limit - total link credits avail.
40	RW	Reserved.
41:47	RW	PB_CFG_LINK3_DOB_VC0_LIMIT: pb configuration link3 dob vc0 limit - vc0 link credits max.
48	RW	Reserved.
49:55	RW	PB_CFG_LINK3_DOB_VC1_LIMIT: pb configuration link3 dob vc1 limit - vc1 link credits max.

Register Name	Power Bus Electrical Link Data Buffer 45 Configuration Register
Mnemonic	PB.IOE.SCOM.PB_ELINK_DATA_45_CFG_REG
Address	0000000005013412 (SCOM)
Description	Processor bus Electrical Link Data Buffer 45 configuration register

Bits	SCOM	Field Mnemonic: Description
0	RW	Reserved.
1:7	RW	PB_CFG_LINK4_DOB_LIMIT: pb configuration link4 dob limit - total link credits avail.
8	RW	Reserved.
9:15	RW	PB_CFG_LINK4_DOB_VC0_LIMIT: pb configuration link4 dob vc0 limit - vc0 link credits max.
16	RW	Reserved.
17:23	RW	PB_CFG_LINK4_DOB_VC1_LIMIT: pb configuration link4 dob vc1 limit - vc1 link credits max.
24:28	RW	PB_CFG_LINK45_DIB_VC_LIMIT: pb configuration link45 dib vc limit - limit per VC for data inbound to pbien/s (set to 31/16/8 for 1/2/4 channels in use) (both links use same credit pool).
29:32	RW	Reserved.
33:39	RW	PB_CFG_LINK5_DOB_LIMIT: pb configuration link5 dob limit - total link credits avail.
40	RW	Reserved.
41:47	RW	PB_CFG_LINK5_DOB_VC0_LIMIT: pb configuration link5 dob vc0 limit - vc0 link credits max.
48	RW	Reserved.
49:55	RW	PB_CFG_LINK5_DOB_VC1_LIMIT: pb configuration link5 dob vc1 limit - vc1 link credits max.

Register Name	Power Bus Electrical Link 01 Syndrome Register
Mnemonic	PB.IOE.SCOM.PB_ELINK_SYN_01_REG
Address	0000000005013414 (SCOM)
Description	Processor bus Electrical Link 01 Syndrome Register

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	Reserved.
8:15	ROX	Reserved.
16:23	ROX	Reserved.
24:31	ROX	Reserved.

40:47	ROX	Reserved.
48:55	ROX	Reserved.
56:63	ROX	Reserved.

Register Name	Power Bus Electrical Link 45 Syndrome Register
Mnemonic	PB.IOE.SCOM.PB_ELINK_SYN_45_REG
Address	0000000005013416 (SCOM)
Description	Processor bus Electrical Link 45 Syndrome Register

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	Reserved.
8:15	ROX	Reserved.
16:23	ROX	Reserved.
24:31	ROX	Reserved.
32:39	ROX	Reserved.
40:47	ROX	Reserved.
48:55	ROX	Reserved.
56:63	ROX	Reserved.

Register Name	Power Bus Electrical Link UE/CE/SUE Register
Mnemonic	PB.IOE.SCOM.PB_EN_DOB_ECC_ERR_REG
Address	0000000005013418 (SCOM)
Description	Processor bus Electrical Link UE/CE/SUE Register

Bits	SCOM	Field Mnemonic: Description
0:3	ROX	Reserved.
4:7	ROX	Reserved.
8:11	ROX	Reserved.
12:15	ROX	Reserved.

Bits	SCOM	Field Mnemonic: Description
16:19	ROX	Reserved.
20:23	ROX	Reserved.
24:27	ROX	Reserved.
28:31	ROX	Reserved.
32:35	ROX	Reserved.

Register Name	Power Bus Electrical Round Trip Delay Control Register
Mnemonic	PB.IOE.SCOM.PB_ELINK_RT_DELAY_CTL_REG
Address	0000000005013419 (SCOM)
Description	Trip Delay Control Register

Bits	SCOM	Field Mnemonic: Description
0:5	WO_1P	PB_ELINK_RT_DELAY_CTL_SET: Setting a bit to 1 (auto reset to 0) causes the matching link to attempt to do a round-trip delay calculation. Results end up in the PB_ELINK_DLY_*_REG regs.
6:7	WO_1P	Reserved.
8:13	RWX_WCLRPART	PB_ELINK_RT_DELAY_CTL_STAT: A write of the reg resets these bits. They get set to 1 when a requested round-trip calculation completes.

Register Name	Power Bus Electrical Link Performance Monitor Control Register
Mnemonic	PB.IOE.SCOM.PB_ELINK_PMU_CTL_REG
Address	000000000501341A (SCOM)
Description	Processor bus Electrical Link Performance Monitor Control Register

Bits	SCOM	Field Mnemonic: Description
0	RW	PMU0_ENABLE: pmu0 enable (the selected half-link must also be active).
1	RW	PMU1_ENABLE: pmu1 enable (the selected half-link must also be active).
2	RW	PMU2_ENABLE: pmu2 enable (the selected half-link must also be active).
3	RW	PMU3_ENABLE: pmu3 enable (the selected half-link must also be active).
4	RW	PMU4_ENABLE: pmu4 enable (the selected half-link must also be active).
5	RW	PMU5_ENABLE: pmu5 enable (the selected half-link must also be active).
6	RW	PMU6_ENABLE: pmu6 enable (the selected half-link must also be active).
7	RW	PMU7_ENABLE: pmu7 enable (the selected half-link must also be active).
8	RW	PMULET_FREEZE_MODE: PMUlet freeze mode: 0 = freeze-on-full, 1 = freerun.
9	RW	COMMON_FREEZE_MODE: common freeze mode: 0 = independant per PMUlet, 1 = any counter full freezes all.
10	RW	PMULET_RESET_MODE: PMUlet reset mode: 0 = reset on read, 1 = reset on write.
11	RW	PMU_EVENT0_SEL: Event0 selection: 0 = cycles, 1 = available cycles.

Bits	SCOM	Field Mnemonic: Description
12:15	RW	PMU_EVENT1_SEL: Event1 selection - 16:1 encode selection 0 disabled - clocks gated off 1 any RCMD - event 2 CRESP - event 3 any presp - event 4 dhdr - event 5 data - event 6 credit - event 7 RCMD drop - event 8 presp drop - dropped at this chip - event 9 presp drop - dropped at remote chip - event A command utilization - 1 count per 16 B used per available cycle B presp util - 1 count per 16 B used per available cycle C dhdr + data util - 1 count per 16B used per available cycle D total utilization - 1 count per 16 B used per available cycle E cycles (available)(generally 4/5, unless replays happening) - event F tdm_mode cycles (raw) - event.
16:19	RW	PMU_EVENT2_SEL: Event2 selection - 16:1.
20:23	RW	PMU_EVENT3_SEL: Event3 selection - 16:1.
24:25	RW	PMU0_SIZE: pmu0 size 00 = 36 bits 01 = 32 bits 10 = 28 bits 11 = 20 bits (only the 16 MSB are readable).
26:27	RW	PMU1_SIZE: pmu1 size 00 = 36 bits 01 = 32 bits 10 = 28 bits 11 = 20 bits (only the 16 MSB are readable).
28:29	RW	PMU2_SIZE: pmu2 size 00 = 36 bits 01 = 32 bits 10 = 28 bits 11 = 20 bits (only the 16 MSB are readable).
30:31	RW	PMU3_SIZE: pmu3 size 00 = 36 bits 01 = 32 bits 10 = 28 bits 11 = 20 bits (only the 16 MSB are readable).
32	RW	PMU01_LINK_SELECT: pmu01 link select: 0 = X0, 1 = X1.
33	RW	PMU23_LINK_SELECT: pmu23 link select: 0 = X1, 1 = X0.
34	RW	PMU45_LINK_SELECT: pmu45 link select: 0 = X2, 1 = --
35	RW	PMU67_LINK_SELECT: pmu67 link select: 0 = --, 1 = X2.
36:37	RW	PMU0145_EVENT0_MODE: pmu0145 event0 mode: 10 = link_in, 01 = link_out, 11 = sum.
38:39	RW	PMU0145_EVENT1_MODE: pmu0145 event1 mode: 10 = link_in, 01 = link_out, 11 = sum.
40:41	RW	PMU0145_EVENT2_MODE: pmu0145 event2 mode: 10 = link_in, 01 = link_out, 11 = sum.
42:43	RW	PMU0145_EVENT3_MODE: pmu0145 event3 mode: 10 = link_in, 01 = link_out, 11 = sum.
44:45	RW	PMU2367_EVENT0_MODE: pmu2367 event0 mode: 10 = link_in, 01 = link_out, 11 = sum.
46:47	RW	PMU2367_EVENT1_MODE: pmu2367 event1 mode: 10 = link_in, 01 = link_out, 11 = sum.
48:49	RW	PMU2367_EVENT2_MODE: pmu2367 event2 mode: 10 = link_in, 01 = link_out, 11 = sum.
50:51	RW	PMU2367_EVENT3_MODE: pmu2367 event3 mode: 10 = link_in, 01 = link_out, 11 = sum.
52	RW	PMU_ENABLE_GLOBAL_RUN: Enable global controls 0 = ignore global run state; 1 = follow global run state.
53	RW	PMU_GLOBAL_RUN_MODE: Global behavior mode 0 = run/stop with global run state 1 = same as 0, plus reset upon rising edge of global run.
54:63	RW	PMU_SPARE: pmu spare.

Register Name	Power Bus Electrical Link Performance Monitor 0 Register
Mnemonic	PB.IOE.SCOM.PB_ELINK_PMU0
Address	000000000501341B (SCOM)
Description	Processor bus Electrical Link PerfMon0 Register

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	PMU0_COUNTER0: PMU0 performance counter0.
16:31	RWX_WCLRREG	PMU0_COUNTER1: PMU0 performance counter1.

Register Name	Power Bus Electrical Link Performance Trace Configuration Register
Mnemonic	PB.IOE.SCOM.PB_PERFTRACE_CFG_REG
Address	0000000005013429 (SCOM)
Description	Processor bus ELink Perftrace configuration register

Bits	SCOM	Field Mnemonic: Description
0	RW	PERFTRACE_HI_ENABLE: perftrace high enable - multiplexer perftrace data onto trace bus 0.
1	RW	PERFTRACE_HI_FIXED_WINDOW_MODE: perftrace high fixed window mode - take a sample every 255 or 255x128 cycles.
2	RW	PERFTRACE_HI_PRESCALE_MODE: perftrace high prescale mode - wide-angle view - perfcounts are prescaled by 128.
3	RW	PTSPARE6: ptspare6.
4	RW	PERFTRACE_LO_ENABLE: perftrace low enable - multiplexer perftrace data onto trace bus 1.

Bits	SCOM	Field Mnemonic: Description
5	RW	PERFTRACE_LO_FIXED_WINDOW_MODE: perftrace low fixed window mode - take a sample every 255 or 255x128 cycles.
6	RW	PERFTRACE_LO_PRESCALE_MODE: perftrace low prescale mode - wide-angle view - perfcounts are prescaled by 128.
7	RW	PTSPARE7: ptspare7.
8:11	RW	PERFTRACE_HI_SELECT: perftrace high select.
12:15	RW	PERFTRACE_LO_SELECT: perftrace low select.

Register Name	Power Bus Electrical Link Mailbox Control Register
Mnemonic	PB.IOE.SCOM.PBE_MAILBOX_CTL_REG
Address	000000000501342E (SCOM)
Description	Processor bus Electrical Link Mailbox Control Register

Bits	SCOM	Field Mnemonic: Description
0	RWX	MB_VALID: written to 1 to start operation, reads 1 if in progress, 0 when done.
1	RW	MB_WR_NOT_RD: Written to 1 for a write operation, 0 for a read. To do a write, first write the PBE_MAILBOX_DATA_REG, when write this reg with a write command, and the mailbox_id and link_id bits set for your desired destination. When the data reaches the other chip, that chip will fire a SP_ATTN, and the appropriate bit 36:47 of PB_ELINK_fir_reg will get set on that chip. To do a read, write this reg with a read command, and the mailbox_id and link_id bits set for your desired destination. Monitor this reg to see when complete, then read the PBE_MAILBOX_DATA_REG to extract the resulting data. When you do a read, you only have access to the two regs on the other chip that are assigned to the physical link that connects the two chips. (In other words, remote reads aren't nearly as effective a tool as remote writes.
2	RWX_WCLRPART	MB_BAD_ADDR: (read-only) set if last operation was invalid (bad address).
3	RWX_WCLRPART	MB_LINK_DOWN: (read-only) set if link goes down during the op.
4	RWX_WCLRPART	MB_CORRUPT: (read-only) set if last operation corrupted (return response address mismatch).
5	RWX_WCLRPART	MB_SENT: (read-only) set when operation is sent to framer.
6	RWX_WCLRPART	MB_BAD_WRITE: (read-only) set on write to this register when already active.
7	WO_1P	MB_RESET: Write to a 1 to reset hung mailbox logic caused by a link going down. Auto reset to 0.
8	RW	MAILBOX_ID: 0/1 - there are two mailboxes per link.
9:11	RW	MB_LINK_ID: 0-5 - each half of a 32-lane electrical link is independently accessible.
12:15	RW	MB_SPARE: mb spare.

Register Name	Power Bus Electrical Link Mailbox Data Movement Register
Mnemonic	PB.IOE.SCOM.PBE_MAILBOX_DATA_REG
Address	000000000501342F (SCOM)
Description	This is the data source for a write of a remote mailbox write, or the holding reg for remote mailbox read return dataprocessor bus Electrical Link Mailbox Data Movement Register. This is the data source for a write of a remote mailbox write, or the holding reg for remote mailbox read return data.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	Reserved.

Register Name	Power Bus Electrical Link Mailbox 00 Register
Mnemonic	PB.IOE.SCOM.PBE_MAILBOX_00_REG
Address	0000000005013430 (SCOM)
Description	Processor bus Electrical Link Mailbox 00 Register (X0_evn_0).

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	Reserved.

Register Name	Power Bus Electrical Link Mailbox 01 Register
Mnemonic	PB.IOE.SCOM.PBE_MAILBOX_01_REG
Address	0000000005013431 (SCOM)
Description	Processor bus Electrical Link Mailbox 01 Register (X0_evn_1).

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	Reserved.

Register Name	Power Bus Electrical Link Mailbox 10 Register
Mnemonic	PB.IOE.SCOM.PBE_MAILBOX_10_REG
Address	0000000005013432 (SCOM)
Description	Processor bus Electrical Link Mailbox 10 Register (X0_odd_0).

Bits	SCOM	Field Mnemonic: Description

Register Name	**Power Bus PBES IOE FIR Action 0 Register**
Mnemonic	PB.IOO.SCOM.PB_IOO_FIR_ACTION0_REG
Address	0000000005013806 (SCOM)
Description	Processor bus PBES IOE domain FIR Action 0 Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	PB_IOO_FIR_ACTION0: Processor bus PBES IOE domain action select for corresponding bit in FIR. (Action0,Action1) = Action Select. (0,0) = Checkstop. (0,1) = Recoverable Error to Service Processor. (1,0) = Special Attention to Service Processor. (1,1) = Invalid.

Register Name	**Power Bus PBES IOE domain FIR Action 1 Register**
Mnemonic	PB.IOO.SCOM.PB_IOO_FIR_ACTION1_REG
Address	0000000005013807 (SCOM)
Description	Processor bus PBES IOE domain FIR Action 1 Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	PB_IOO_FIR_ACTION1: Processor bus FIR LSB of action select for corresponding bit in FIR. (Action0,Action1) = Action Select. (0,0) = Checkstop. (0,1) = Recoverable Error to Service Processor. (1,0) = Special Attention to Service Processor. (1,1) = Invalid.

Register Name	Power Bus Optical Framer/Parser 01 Configuration Register
Mnemonic	PB.IOO.SCOM.PB_FP01_CFG
Address	000000000501380A (SCOM)
Description	Processor bus Optical Framer/Parser 01 configuration register

Bits	SCOM	Field Mnemonic: Description
0	RW	FP0_CREDIT_PRIORITY_4_NOT_8: fp0 credit priority 4 not 8.
1	RW	FP0_DISABLE_GATHERING: fp0 disable data gathering.
2	RW	FP0_DISABLE_CMD_COMPRESSION: fp0 disable command compression.
3	RW	FP0_DISABLE_PRSP_COMPRESSION: fp0 disable prsp compression.
4:11	RW	FP0_LL_CREDIT_LO_LIMIT: fp0 ll credit low limit - normal frames in flight limit. Set to ROUNDUP(((nest_freq/olink_freq) * -15.8)+54).
12:19	RW	FP0_LL_CREDIT_HI_LIMIT: fp0 ll credit high limit - frames in flight limit during stop_cmds/replay.
20	RW	FP0_FMR_DISABLE: fp0 framer disable - turn the framer clocks OFF.
21	RW	FP0_FMR_SPARE: fp0 framer spare.
22:23	RW	FP01_CMD_EXP_TIME: obs/fmr/prs command expiration time = (value * 2) + 9.
24	RW	FP0_RUN_AFTER_FRAME_ERROR: fp0 run after frame error.
25	RW	FP0_PRS_DISABLE: fp0 parser disable - turn the parser clocks OFF.
26:31	RW	FP0_PRS_SPARE: fp0 parser spare.
32	RW	FP1_CREDIT_PRIORITY_4_NOT_8: fp1 credit priority 4 not 8.
33	RW	FP1_DISABLE_GATHERING: fp1 disable data gathering.
34	RW	FP1_DISABLE_CMD_COMPRESSION: fp1 disable command compression.
35	RW	FP1_DISABLE_PRSP_COMPRESSION: fp1 disable prsp compression.
36:43	RW	FP1_LL_CREDIT_LO_LIMIT: fp1 ll credit low limit - normal frames in flight limit. Set to ROUNDUP(((nest_freq/olink_freq) * -15.8)+54).
44:51	RW	FP1_LL_CREDIT_HI_LIMIT: fp1 ll credit high limit - frames in flight limit during stop_cmds/replay.
52	RW	FP1_FMR_DISABLE: fp1 framer disable - turn the framer clocks OFF.
53:55	RW	FP1_FMR_SPARE: fp1 framer spare.
56	RW	FP1_RUN_AFTER_FRAME_ERROR: fp1 run after frame error.
57	RW	FP1_PRS_DISABLE: fp1 parser disable - turn the parser clocks OFF.
58:63	RW	FP1_PRS_SPARE: fp1 parser spare.

Register Name	Power Bus Optical Framer/Parser 23 Configuration Register
Mnemonic	PB.IOO.SCOM.PB_FP23_CFG
Address	000000000501380B (SCOM)
Description	Processor bus Optical Framer/Parser 23 configuration register

Bits	SCOM	Field Mnemonic: Description
0	RW	FP2_CREDIT_PRIORITY_4_NOT_8: fp2 credit priority 4 not 8.
1	RW	FP2_DISABLE_GATHERING: fp2 disable data gathering.
2	RW	FP2_DISABLE_CMD_COMPRESSION: fp2 disable command compression.

Bits	SCOM	Field Mnemonic: Description
3	RW	FP2_DISABLE_PRSP_COMPRESSION: fp2 disable prsp compression.
4:11	RW	FP2_LL_CREDIT_LO_LIMIT: fp2 ll credit low limit - normal frames in flight limit.
12:19	RW	FP2_LL_CREDIT_HI_LIMIT: fp2 ll credit high limit - frames in flight limit during stop_cmds/replay.

Description	Processor bus Optical Link 45 Syndrome Register

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	Reserved.
8:15	ROX	Reserved.
16:23	ROX	Reserved.
24:31	ROX	Reserved.

Bits	SCOM	Field Mnemonic: Description
32:39	ROX	Reserved.
40:47	ROX	Reserved.
48:55	ROX	Reserved.
56:63	ROX	Reserved.

Register Name	**Power Bus Optical Link 67 Syndrome Register**
Mnemonic	PB.IOO.SCOM.PB_OLINK_SYN_67_REG
Address	0000000005013817 (SCOM)
Description	Processor bus Optical Link 67 Syndrome Register

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	Reserved.
8:15	ROX	Reserved.
16:23	ROX	Reserved.
24:31	ROX	Reserved.
32:39	ROX	Reserved.
40:47	ROX	Reserved.
48:55	ROX	Reserved.
56:63	ROX	Reserved.

Register Name	**Power Bus Optical Link UE/CE/SUE Register**
Mnemonic	PB.IOO.SCOM.PB_EN_DOB_ECC_ERR_REG
Address	0000000005013818 (SCOM)
Description	Processor bus Optical Link UE/CE/SUE Register

Bits	SCOM	Field Mnemonic: Description
0:3	ROX	Reserved.
4:7	ROX	Reserved.
8:11	ROX	Reserved.
12:15	ROX	Reserved.
16:19	ROX	Reserved.
20:23	ROX	Reserved.
24:27	ROX	Reserved.
28:31	ROX	Reserved.
32:35	ROX	Reserved.
36:39	ROX	Reserved.
40:43	ROX	Reserved.
44:47	ROX	Reserved.

Register Name	Power Bus Optical Round Trip Delay Control Register
Mnemonic	PB.IOO.SCOM.PB_OLINK_RT_DELAY_CTL_REG
Address	0000000005013819 (SCOM)
Description	Trip Delay Control Register

Bits	SCOM	Field Mnemonic: Description
0:7	RW	PB_OLINK_RT_DELAY_CTL_SET: Setting a bit to 1 (auto reset to 0) causes the matching link to attempt to do a round-trip delay calculation. Results end up in the PB_OLINK_DLY_*_REG regs.
8:15	RW	PB_OLINK_RT_DELAY_CTL_STAT: A write of the reg resets these bits. They get set to 1 when a requested round-trip calculation completes.

Register Name	Power Bus Optical Performance Monitor Control Register
Mnemonic	PB.IOO.SCOM.PB_OLINK_PMU_CTL_REG
Address	000000005013814A (SCOM)
Description	Processor bus Optical Performance Monitor Control Register

Bits	SCOM	Field Mnemonic: Description
0	RW	PMU0_ENABLE: pmu0 enable (the selected half-link must also be active).
1	RW	PMU1_ENABLE: pmu1 enable (the selected half-link must also be active).
2	RW	PMU2_ENABLE: pmu2 enable (the selected half-link must also be active).
3	RW	PMU3_ENABLE: pmu3 enable (the selected half-link must also be active).
4	RW	PMU4_ENABLE: pmu4 enable (the selected half-link must also be active).
5	RW	PMU5_ENABLE: pmu5 enable (the selected half-link must also be active).
6	RW	PMU6_ENABLE: pmu6 enable (the selected half-link must also be active).
7	RW	PMU7_ENABLE: pmu7 enable (the selected half-link must also be active).
8	RW	PMULET_FREEZE_MODE: PMUlet freeze mode 0 = freeze-on-full. 1 = freerun.
9	RW	COMMON_FREEZE_MODE: Common freeze mode 0 = Independent per PMUlet 1 = Any counter full freezes all
10	RW	PMULET_RESET_MODE: PMUlet reset mode 0 = Reset on read 1 = Reset on write
11	RW	PMU_EVENT0_SEL: Event0 selection 0 = cycles 1 = available cycles

Bits	SCOM	Field Mnemonic: Description
12:15	RW	PMU_EVENT1_SEL: Event1 selection 16:1 = encode selection 0 = disabled - clocks gated off 1 = any RCMD - event 2 = CRESP - event 3 = any presp - event 4 = dhdr - event 5 = data - event 6 = credit - event 7 = RCMD drop - event 8 = presp drop - dropped at this chip - event 9 = presp drop - dropped at remote chip - event A = command utilization - 1 count per 16 B used per available cycle B = presp util - 1 count per 16 B used per available cycle C = dhdr+data util - 1 count per 16 B used per available cycle D = total utilization - 1 count per 16 B used per available cycle E = cycles (available)(generally 4/5, unless replays happening) - event F = tdm_mode cycles (raw) - event.
16:19	RW	PMU_EVENT2_SEL: Event2 selection - 16:1.
20:23	RW	PMU_EVENT3_SEL: Event3 selection - 16:1.
24:25	RW	PMU0_SIZE: pmu0 size 00 = 36 bits 01 = 32 bits 10 = 28 bits 11 = 20 bits (only the 16 MSB are readable).
26:27	RW	PMU1_SIZE: pmu1 size 00 = 36 bits 01 = 32 bits 10 = 28 bits 11 = 20 bits (only the 16 MSB are readable).
28:29	RW	PMU2_SIZE: pmu2 size 00 = 36 bits 01 = 32 bits 10 = 28 bits 11 = 20 bits (only the 16 MSB are readable).
30:31	RW	PMU3_SIZE: pmu3 size 00 = 36 bits 01 = 32 bits 10 = 28 bits 11 = 20 bits (only the 16 MSB are readable).
32	RW	PMU01_LINK_SELECT: pmu01 link select 0 = A0 1 = A1
33	RW	PMU23_LINK_SELECT: pmu23 link select 0 = A1 1 = A0
34	RW	PMU45_LINK_SELECT: pmu45 link select 0 = A2 1 = A3
35	RW	PMU67_LINK_SELECT: pmu67 link select 0 = A3 1 = A2

Bits	SCOM	Field Mnemonic: Description
36:37	RW	PMU0145_EVENT0_MODE: pmu0145 event0 mode 10 = link_in 01 = link_out 11 = sum
38:39	RW	PMU0145_EVENT1_MODE: pmu0145 event1 mode 10 = link_in 01 = link_out 11 = sum
40:41	RW	PMU0145_EVENT2_MODE: pmu0145 event2 mode 10 = link_in 01 = link_out 11 = sum
42:43	RW	PMU0145_EVENT3_MODE: pmu0145 event3 mode 10 = link_in 01 = link_out 11 = sum
44:45	RW	PMU2367_EVENT0_MODE: pmu2367 event0 mode 10 = link_in 01 = link_out 11 = sum
46:47	RW	PMU2367_EVENT1_MODE: pmu2367 event1 mode 10 = link_in 01 = link_out 11 = sum
48:49	RW	PMU2367_EVENT2_MODE: pmu2367 event2 mode 10 = link_in 01 = link_out 11 = sum
50:51	RW	PMU2367_EVENT3_MODE: pmu2367 event3 mode 10 = link_in 01 = link_out 11 = sum
52	RW	PMU_ENABLE_GLOBAL_RUN: Enable global controls 0 = ignore global run state 1 = follow global run state
53	RW	PMU_GLOBAL_RUN_MODE: Global behavior mode 0 = run/stop with global run state 1 = same as 0, plus reset upon rising edge of global run
54:63	RW	PMU_SPARE: pmu spare

Register Name	Power Bus Optical Link PMU0 Counters Register
Mnemonic	PB.IOO.SCOM.PB_OLINK_PMU0
Address	000000000501381B (SCOM)
Description	Processor bus optical link PMU0 counters

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	PMU0_COUNTER0: PMU0 performance counter0.
16:31	RWX_WCLRREG	PMU0_COUNTER1: PMU0 performance counter1.
32:47	RWX_WCLRREG	PMU0_COUNTER2: PMU0 performance counter2.

Bits	SCOM	Field Mnemonic: Description
48:63	RWX_WCLRREG	PMU0_COUNTER3: PMU0 performance counter3.

Register Name	Power Bus Optical Link PMU1 Counters Register
Mnemonic	PB.IOO.SCOM.PB_OLINK_PMU1
Address	000000000501381C (SCOM)
Description	Processor bus optical link PMU1 Counters

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	PMU1_COUNTER0: PMU1 performance counter0.
16:31	RWX_WCLRREG	PMU1_COUNTER1: PMU1 performance counter1.
32:47	RWX_WCLRREG	PMU1_COUNTER2: PMU1 performance counter2.
48:63	RWX_WCLRREG	PMU1_COUNTER3: PMU1 performance counter3.

Register Name	Power Bus Optical Link PMU2 Counters Register
Mnemonic	PB.IOO.SCOM.PB_OLINK_PMU2
Address	000000000501381D (SCOM)
Description	Processor bus optical link PMU2 counters

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	PMU2_COUNTER0: PMU2 performance counter0.
16:31	RWX_WCLRREG	PMU2_COUNTER1: PMU2 performance counter1.
32:47	RWX_WCLRREG	PMU2_COUNTER2: PMU2 performance counter2.
48:63	RWX_WCLRREG	PMU2_COUNTER3: PMU2 performance counter3.

Register Name	Power Bus Optical Link PMU3 Counters Register
Mnemonic	PB.IOO.SCOM.PB_OLINK_PMU3
Address	000000000501381E (SCOM)
Description	Processor bus optical link PMU3 counters

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	PMU3_COUNTER0: PMU3 performance counter0.
16:31	RWX_WCLRREG	PMU3_COUNTER1: PMU3 performance counter1.
32:47	RWX_WCLRREG	PMU3_COUNTER2: PMU3 performance counter2.
48:63	RWX_WCLRREG	PMU3_COUNTER3: PMU3 performance counter3.

Register Name	Power Bus Optical Link PMU4 Counters Register
Mnemonic	PB.IOO.SCOM.PB_OLINK_PMU4
Address	000000000501381F (SCOM)
Description	Processor bus optical link PMU4 counters

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	PMU4_COUNTER0: PMU4 performance counter0.
16:31	RWX_WCLRREG	PMU4_COUNTER1: PMU4 performance counter1.
32:47	RWX_WCLRREG	PMU4_COUNTER2: PMU4 performance counter2.
48:63	RWX_WCLRREG	PMU4_COUNTER3: PMU4 performance counter3.

Register Name	Power Bus Optical Link PMU5 Counters Register
Mnemonic	PB.IOO.SCOM.PB_OLINK_PMU5
Address	0000000005013820 (SCOM)
Description	Processor bus optical link PMU5 counters

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	PMU5_COUNTER0: PMU5 performance counter0.
16:31	RWX_WCLRREG	PMU5_COUNTER1: PMU5 performance counter1.
32:47	RWX_WCLRREG	PMU5_COUNTER2: PMU5 performance counter2.
48:63	RWX_WCLRREG	PMU5_COUNTER3: PMU5 performance counter3.

Register Name	Power Bus Optical Link PMU6 Counters Register
Mnemonic	PB.IOO.SCOM.PB_OLINK_PMU6
Address	0000000005013821 (SCOM)
Description	Processor bus optical link PMU6 counters

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	PMU6_COUNTER0: PMU6 performance counter0.
16:31	RWX_WCLRREG	PMU6_COUNTER1: PMU6 performance counter1.
32:47	RWX_WCLRREG	PMU6_COUNTER2: PMU6 performance counter2.
48:63	RWX_WCLRREG	PMU6_COUNTER3: PMU6 performance counter3.

Register Name	Power Bus Optical Link PMU7 Counters Register
Mnemonic	PB.IOO.SCOM.PB_OLINK_PMU7
Address	0000000005013822 (SCOM)
Description	Processor bus optical link PMU7 counters

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	PMU7_COUNTER0: PMU7 performance counter0.

Bits	SCOM	Field Mnemonic: Description
16:31	RWX_WCLRREG	PMU7_COUNTER1: PMU7 performance counter1.
32:47	RWX_WCLRREG	PMU7_COUNTER2: PMU7 performance counter2.
48:63	RWX_WCLRREG	PMU7_COUNTER3: PMU7 performance counter3.

Register Name	Power Bus Optical Miscellaneous Configuration Register
Mnemonic	PB.IOO.SCOM.PB_MISC_CFG
Address	0000000005013823 (SCOM)
Description	Processor bus optical miscellaneous configuration register

Bits	SCOM	Field Mnemonic: Description
0	RW	PB_CFG_IOO01_IS_LOGICAL_PAIR: Processor bus configuration ioo01 is logical pair.
1	RW	PB_CFG_IOO23_IS_LOGICAL_PAIR: Processor bus configuration ioo23 is logical pair.
2	RW	PB_CFG_IOO45_IS_LOGICAL_PAIR: Processor bus configuration ioo45 is logical pair.
3	RW	PB_CFG_IOO67_IS_LOGICAL_PAIR: Processor bus configuration ioo67 is logical pair.
4	WO_1P	SCOM_LINK01_RESET_KEEPER: link01 reset keeper.
5	WO_1P	SCOM_LINK23_RESET_KEEPER: link23 reset keeper.
6	WO_1P	SCOM_LINK45_RESET_KEEPER: link45 reset keeper.
7	WO_1P	SCOM_LINK67_RESET_KEEPER: link67 reset keeper.
8	RW	LINKS01_TOD_ENABLE: links01 TOD path enable.
9	RW	LINKS23_TOD_ENABLE: links23 TOD path enable.
10	RW	LINKS45_TOD_ENABLE: links45 TOD path enable.
11	RW	LINKS67_TOD_ENABLE: links67 TOD path enable.
12	RW	PB_LINK_CFG_AVP_MODE: pb link configuration AVP mode.
13	RW	SEL_03_NPU_NOT_PB: Choose what to multiplex onto the common transport bus 03 - +npu3/-pb05.
14	RW	SEL_04_NPU_NOT_PB: Choose what to multiplex onto the common transport bus 04 - +npu4/-pb06.
15	RW	SEL_05_NPU_NOT_PB: Choose what to multiplex onto the common transport bus 05 - +npu5/-pb07.
16:19	RW	MISC_SPARE: Miscellaneous spare.

Register Name	Power Bus Optical Link Trace Configuration Register
Mnemonic	PB.IOO.SCOM.PB_TRACE_CFG
Address	0000000005013824 (SCOM)
Description	Trace group encodes: 0 = disabled 1 = inbound link 2 = inbound dhdr position 0 3 = inbound dhdr position 1 4 = inbound dhdr position 2 5 = outbound link 6 = outbound dhdr position 0 7 = outbound dhdr position 1 8 = outbound dhdr position 2 9 = dob1 pos 0 A = dob1 pos 1 B = dob2 pos 0 C = dob2 pos D = dib pos 0 E = dib pos 1 F = Reserved.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	LINK00_HI_TRACE_CFG: link00 high trace configuration.
4:7	RW	LINK00_LO_TRACE_CFG: link00 low trace configuration.
8:11	RW	LINK01_HI_TRACE_CFG: link01 high trace configuration.
12:15	RW	LINK01_LO_TRACE_CFG: link01 low trace configuration.
16:19	RW	LINK02_HI_TRACE_CFG: link02 high trace configuration.
20:23	RW	LINK02_LO_TRACE_CFG: link02 low trace configuration.
24:27	RW	LINK03_HI_TRACE_CFG: link03 high trace configuration.
28:31	RW	LINK03_LO_TRACE_CFG: link03 low trace configuration.
32:35	RW	LINK04_HI_TRACE_CFG: link04 high trace configuration.
36:39	RW	LINK04_LO_TRACE_CFG: link04 low trace configuration.
40:43	RW	LINK05_HI_TRACE_CFG: link05 high trace configuration.
44:47	RW	LINK05_LO_TRACE_CFG: link05 low trace configuration.
48:51	RW	LINK06_HI_TRACE_CFG: link06 high trace configuration.
52:55	RW	LINK06_LO_TRACE_CFG: link06 low trace configuration.
56:59	RW	LINK07_HI_TRACE_CFG: link07 high trace configuration.
60:63	RW	LINK07_LO_TRACE_CFG: link07 low trace configuration.

Register Name	Power Bus Optical Link Framer0123 Error Readout Register
Mnemonic	PB.IOO.SCOM.PB_FM0123_ERR
Address	0000000005013825 (SCOM)
Description	Processor bus OLink Framer0123 Error Readout Register

Register Name	Power Bus Optical Link Performance Trace Configuration Register
Mnemonic	PB.IOO.SCOM.PB_PERFTRACE_CFG_REG
Address	0000000005013829 (SCOM)
Description	Processor bus OLink Perftrace Configuration Register

Bits	SCOM	Field Mnemonic: Description
0	RW	PERFTRACE_HI_ENABLE: perftrace high enable - multiplexer perftrace data onto trace bus 0.
1	RW	PERFTRACE_HI_FIXED_WINDOW_MODE: perftrace high fixed window mode - take a sample every 255 or 255x128 cycles.
2	RW	PERFTRACE_HI_PRESCALE_MODE: perftrace high prescale mode - wide-angle view - perfcounts are prescaled by 128.
3	RW	PTSPARE6: ptspare6.
4	RW	PERFTRACE_LO_ENABLE: perftrace low enable - multiplexer perftrace data onto trace bus 1.

Bits	SCOM	Field Mnemonic: Description
5	RW	PERFTRACE_LO_FIXED_WINDOW_MODE: perftrace low fixed window mode - take a sample every 255 or 255x128 cycles.
6	RW	PERFTRACE_LO_PRESCALE_MODE: perftrace low prescale mode - wide-angle view - perfcounts are prescaled by 128.
7	RW	PTSPARE7: ptspare7.
8:11	RW	PERFTRACE_HI_SELECT: perftrace high select.
12:15	RW	PERFTRACE_LO_SELECT: perftrace low select.

Register Name	Power Bus Optical Link Mailbox Control Register
Mnemonic	PB.IOO.SCOM.PBO_MAILBOX_CTL_REG
Address	000000000501382E (SCOM)
Description	Processor bus Optical Link Mailbox Control Register

Bits	SCOM	Field Mnemonic: Description
0	RWX	MB_VALID: written to 1 to start operation, reads 1 if in progress, 0 when done.
1	RW	MB_WR_NOT_RD: Written to 1 for a write operation, 0 for a read. To do a write, first write the PBO_MAILBOX_DATA_REG, when write this reg with a write command, and the mailbox_id and link_id bits set for your desired destination. To do a read, write this reg with a read command, and the mailbox_id and link_id bits set for your desired destination. Monitor this reg to see when complete, then read the PBO_MAILBOX_DATA_REG to extract the resulting data. When you do a read, you only have access to the two regs on the other chip that are assigned to the physical link that connects the two chips. (In other words, remote reads aren't nearly as effective a tool as remote writes.
2	RWX_WCLRPART	MB_BAD_ADDR: (read-only) set if last operation was invalid (bad address).
3	RWX_WCLRPART	MB_LINK_DOWN: (read-only) set if link goes down during the op.
4	RWX_WCLRPART	MB_CORRUPT: (read-only) set if last operation corrupted (return response address mismatch).
5	RWX_WCLRPART	MB_SENT: (read-only) set when operation is sent to framer.
6	RWX_WCLRPART	MB_BAD_WRITE: (read-only) set on write to this register when already active.
7	WO_1P	MB_RESET: Write to a 1 to reset hung mailbox logic caused by a link going down. Auto reset to 0.
8	RW	MAILBOX_ID: 0/1 - there are two mailboxes per link.
9:11	RW	MB_LINK_ID: 0-7 - each half of a 24-lane optical link is independently accessible.
12:15	RW	MB_SPARE: mb spare.

Register Name	Power Bus Optical Link Mailbox Data Movement Register
Mnemonic	PB.IOO.SCOM.PBO_MAILBOX_DATA_REG
Address	000000000501382F (SCOM)
Description	This is the data source for a write of a remote mailbox write, or the holding reg for remote mailbox read return data processor bus Optical Link Mailbox Data Movement Register. This is the data source for a write of a remote mailbox write, or the holding reg for remote mailbox read return data.

0:63	RWX	Reserved.

Register Name	Power Bus Optical Link Mailbox 71 Register
Mnemonic	PB.IOO.SCOM.PBO_MAILBOX_71_REG
Address	000000000501383F (SCOM)
Description	Processor bus Optical Link Mailbox 71 Register (A3_odd_1).

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	Reserved.

Register Name	Synchronization Configuration Register
Mnemonic	TP.TCN3.N3.SYNC_CONFIG
Address	0000000005030000 (SCOM)
Description	configuration of CC counters

Bits	SCOM	Field Mnemonic: Description
0:3	RW	SYNC_PULSE_DELAY: Delay incoming sync pulse. Default are 8 latches including Async. 0000 = 8 0010 = 3 0011 = 4 0100 = 5 0101 = 6 0110 = 7 0111 = 8 1000 = 9 1001 = 10 1010 = 11 1011 = 12 1100 = 13 1101 = 14 1110 = 15 1111 = 16 Delay of the reset of the phase counter.
4	RW	LISTEN_TO_SYNC_PULSE_DIS: Disable phase counter synchronization by sync_pulse signal (default is enabled) ATTENTION: when ENABLE listen_to_sync, chiplet gets corrupted for 200 cycles.
5	RW	SYNC_PULSE_INPUT_SEL: default is 0, when set to 1, the alternative input of the sync_pulse will be used ATTENTION: when toggle the input select, chiplet gets corrupted for 200 cycles.
6	RW	USE_SYNC_FOR_SCAN: if set, use opcg initial alignment for scan requests.
7	RW	CLEAR_CHIPLET_IS_ALIGNED: This bit will clear the chiplet_is_aligned bit - see cplt_stat register.
8	RW	UNIT_REGION_CLKCMD_ENABLE: Enable the unit interface to start/stop one dedicate region - Used for POWER9 Cache/Core.
9	RW	DISABLE_PCB_ITR: Disable interrupt generation within CC - interrupt sent on each hld event.
10	RW	ENABLE_VITL_ALIGN_CHECK: Enable the vitl align check to compare alignment of incoming sync pulse with 2:1 vitl lcb.
11	RW	SYNC_PULSE_OUT_DIS: Disable sync_pulse output when set to 1, master chiplet will not sending sync pulses to slave chiplets anymore.
12:19	RW	UNUSED1219: Unused.

Register Name	OPCG Alignment Register
Mnemonic	TP.TCN3.N3.OPCG_ALIGN
Address	0000000005030001 (SCOM)
Description	OPCG ALIGN

Bits	SCOM	Field Mnemonic: Description
0:3	RW	INOP_ALIGN: INOP phase alignment (0: none, 1: 2:1, 2: 3:1, 3: 4:1, 4: 6:1, 5: 8:1, 6: 12:1, 7: 16:1, 8: 24:1, 9-15: 48:1).
4:7	RW	SNOP_ALIGN: SNOP phase alignment (0: none, 1: 2:1, 2: 3:1, 3: 4:1, 4: 6:1, 5: 8:1, 6: 12:1, 7: 16:1, 8: 24:1, 9-15: 48:1).
8:11	RW	ENOP_ALIGN: ENOP phase alignment (0: none, 1: 2:1, 2: 3:1, 3: 4:1, 4: 6:1, 5: 8:1, 6: 12:1, 7: 16:1, 8: 24:1, 9-15: 48:1).
12:19	RW	INOP_WAIT: INOP cycle delay (0-255).
20:31	RW	SNOP_WAIT: SNOP cycle delay (0-4095).
32:39	RW	ENOP_WAIT: ENOP cycle delay (0-255).
40	RW	INOP_FORCE_SG: INOP: Set SG high during INOP.
41	RW	SNOP_FORCE_SG: SNOP: Set SG high during SNOP.
42	RW	ENOP_FORCE_SG: ENOP: Set SG high during ENOP (including LOOP phase).
43	RW	NO_WAIT_ON_CLK_CMD: 0: A clock change request will first wait the OPCG_WAIT cycles. 1: A clock change request will not wait, when not in flush.
44:45	RW	ALIGN_SOURCE_SELECT: 0: use inopa setting from opcg_reg0, 1: use rising edge of sync pulse, 2: use unit0_sync_lvl to align (for AVP - refresh0) 3: use unit1_sync_lvl to align (for AVP - refresh1).
46	RW	UNUSED46: Unused.
47:51	RW	SCAN_RATIO: scan_ratio (n = 0 - 15: (n + 1):1, 16: 24:1, 17: 32:1, 18: 48:1, 19: 64:1, 20: 128:1) - Default 4:1 = 00011.
52:63	RW	OPCG_WAIT_CYCLES: old PAD value, delay at the begin and end of the OPCG run, to allow DC signals to be there at the right time (0 4095), needs to be higher than plat depth ! Default = 0x020.

Register Name	OPCG Control 0 Register
Mnemonic	TP.TCN3.N3.OPCG_REG0
Address	0000000005030002 (SCOM)
Description	OPCG Control Register 0

Bits	SCOM	Field Mnemonic: Description
0	RW	RUNN_MODE: 0 = BIST-mode used for LBIST / 1 = RUNN-mode used for ABIST/IOBIST.
1	RWX	OPCG_GO: opcg go (start OPCG) - bit will b cleared when OPCG is done - poll for opcg_done in cplt_start reg.
2	RWX	RUN_SCAN0: run scan0 (will override all BIST mode settings but the scan_ratio) - will start a scan0 run, bit gets cleared when OPCG is done - poll for opcg_done in cplt_start reg.
3	RW	SCAN0_MODE: set PRPGs in scan0_mode but do not run automatic scan0 sequence.
4	RWX	OPCG_IN_SLAVE_MODE: when selected, OPCG will wait for Master chiplet to get started. When Keep_MS_Mode is 0, SLAVE_MODE will be cleared after incoming trigger.

Bits	SCOM	Field Mnemonic: Description
5	RWX	OPCG_IN_MASTER_MODE: when selected, OPCG will send out trigger to all Slave chiplets - When Keep_MS_MODE = 0, MASTER_MODE gets cleared after sending out one Master trigger.
6	RW	KEEP_MS_MODE: when set to 1, OPCG in M/S mode bits will not be cleared after one incoming OPCG trigger. Default is clear M/S mode bits.
7	RW	TRIGGER_OPCG_ON_UNIT0_SYNC_LVL: Unit pin used for AVP can trigger OPCG (unit0_sync_lvl).
8	RW	TRIGGER_OPCG_ON_UNIT1_SYNC_LVL: Unit pin used for AVP can trigger OPCG (unit1_sync_lvl).
9	RWX	RUN_CHIPLET_SCAN0: Run scan0 on all regions and types, will clear the chiplet at all.
10	RWX	RUN_CHIPLET_SCAN0_NO_PLL: Run scan0 on all regions and types, will clear the chiplet at all exclude PLL region PLL can keep running.
11	RW	RUN_OPCG_ON_UPDATE_DR: start opcg engine when scan updated (update_dr) received (set pulse) Cronus requires this bit = 1 for a setpulse WRITE.
12	RW	RUN_OPCG_ON_CAPTURE_DR: start opcg engine when scan updated (capture_dr) received (set pulse) Cronus requires this bit = 1 for a setpulse READ.
13	RW	STOP_RUNN_ON_XSTOP: runn-mode: stop RUNN on checkstop.
14	RW	OPCG_STARTS_BIST: runn-mode: OPCG engine controls start_bist for ABIST or IOBIST (see BIST register).
15:20	RW	UNUSED1520: Unused.
21:63	RWX	LOOP_COUNT: Loop counter for LBIST and RUNN - write: target value - read: current counter value - will count from 0 to target value.

Register Name	OPCG Control 1 Register
Mnemonic	TP.TCN3.N3.OPCG_REG1
Address	0000000005030003 (SCOM)
Description	OPCG Control Register 1

Bits	SCOM	Field Mnemonic: Description
0:11	RW	SCAN_COUNT: BIST mode: Channel scan count (s = 0-4095) runn-mode: start_bist match value(0:11).
12:23	RW	MISR_A_VAL: BIST mode: a value for MISR aperture, runn-mode: start_bist match value(12:23).
24:35	RW	MISR_B_VAL: BIST mode: b value for MISR aperture, runn-mode: start_bist match value(24:35).
36:47	RW	MISR_INIT_WAIT: BIST mode: delay MISR aperture, MISRs get active after this number of loops.
48	RW	OPCG_SUPPRESS_EVEN_CLK: OPCG will only create even and not odd clocks. Used for RUNN to create only one clock in fast domain. Default is 0.
49	RW	SCAN_CLK_USE_EVEN: Generate scan clock in even cycle instead of odd. Default is 0 = odd for scan.
50:51	RW	UNUSED2: Unused.
52	RW	RTIM_THOLD_FORCE: force rtim_thold low when not in test_dc mode (must be 0 at all time).
53	RW	DISABLE_ARY_CLK_DURING_FILL: LBIST and SCAN0: prevent fire of ARY HLD during NSL-fill.
54	RW	SG_HIGH_DURING_FILL: LBIST and SCAN0: Hold SG high during NSL-fill.
55:56	RW	LBIST_SKITTER_CTL: BIST mode: 00: Enable skitter during lbist_ip, 01: Enable skitter when misr_active - see misr_init_wait 10: skitter OPCG_GO mode - falling edge = start, rising edge = stop 11 - unused.
57	RW	MISR_MODE: BIST mode: MISR aperture mode (0: a-1 to b-1, 1: start to a and b to end).
58	RW	INFINITE_MODE: infinite mode - RUNN and LBIST will run forever and ignore the loop count.
59:63	RW	NSL_FILL_COUNT: BIST mode: NSL-fill count (0-31).

Register Name	OPCG Control 2 Register
Mnemonic	TP.TCN3.N3.OPCG_REG2
Address	0000000005030004 (SCOM)
Description	OPCG Control Register 2

Bits	SCOM	Field Mnemonic: Description
0	RWX	OPCG_GO2: opcg go for broadcast sequences (start sequence).
1:3	RW	PRPG_WEIGHTING: prpg_activate: 1/2, 1/4, 1/8, 1/16, 1/2, 3/4, 7/8, 15/16.
4:15	RWX	PRPG_VALUE: set to 0 for prpg always on, else seed.
16:27	RW	PRPG_A_VAL: a value for PRPG aperture.
28:39	RW	PRPG_B_VAL: b value for PRPG aperture.
40	RW	PRPG_MODE: PRPG aperture mode (0: a-1 to b-1, 1: start to a and b to end).
41:63	RW	UNUSED41_63: Unused.

Register Name	Scan Region and Type Register
Mnemonic	TP.TCN3.N3.SCAN_REGION_TYPE
Address	0000000005030005 (SCOM)
Description	Scan Region and Type

Bits	SCOM	Field Mnemonic: Description
0	RWX	SYSTEM_FAST_INIT: Default is 0, when its set to 1, the MASK bits in the CMSK chain decide, which part will be scanned or scan0. MASK = 1 = scan0, MASK = 0-part or scan chain.
1:2	RO	Constant = 0b00
3	NCX	SCAN_REGION_VITL: scan clock region vitl (Vital = Clock).
4	RWX	SCAN_REGION_PERV: scan clock region perv (Pervasive).
5	RWX	SCAN_REGION_UNIT1: scan clock region pb.
6	RWX	SCAN_REGION_UNIT2: scan clock region br - tp.
7	RWX	SCAN_REGION_UNIT3: scan clock region np - npu.
8	RWX	SCAN_REGION_UNIT4: scan clock region mm - nmmu.
9	RWX	SCAN_REGION_UNIT5: scan clock region int.
10	RWX	SCAN_REGION_UNIT6: scan clock region unused.
11	RWX	SCAN_REGION_UNIT7: scan clock region unused.
12	RWX	SCAN_REGION_UNIT8: scan clock region unused.
13	RWX	SCAN_REGION_UNIT9: scan clock region unused.
14	RWX	SCAN_REGION_UNIT10: scan clock region Reserved.
15:47	RO	Constant = 0b00000000000000000000000000000000
48	RW	SCAN_TYPE_FUNC: scan chain func (functional).
49	RW	SCAN_TYPE_CFG: scan chain mode (boot config and debug config).
50	RW	SCAN_TYPE_CCFG_GPTR: scan chain ccfg / gptr (Pervasive: CC config, Others: GPTR).
51	RW	SCAN_TYPE_REGF: scan chain regf (register files).
52	RW	SCAN_TYPE_LBIST: scan chain lbst (LBIST).

Bits	SCOM	Field Mnemonic: Description
53	RW	SCAN_TYPE_ABIST: scan chain abst (ABIST).
54	RW	SCAN_TYPE_REPR: scan chain repr (Array Repair).
55	RW	SCAN_TYPE_TIME: scan chain time (Array Timing).
56	RW	SCAN_TYPE_BNDY: scan chain bndy (Boundary IO's).
57	RW	SCAN_TYPE_FARR: scan chain farr (fast array unload).
58	RW	SCAN_TYPE_CMSK: scan chain cmsk (lbist channel mask).
59	RW	SCAN_TYPE_INEX: scan chain idex (c14 asic).
60:63	RO	Constant = 0b0000

Register Name	Clock Region Register
Mnemonic	TP.TCN3.N3.CLK_REGION
Address	0000000005030006 (SCOM)
Description	start/stop of Clocks

Bits	SCOM	Field Mnemonic: Description
0:1	RWX	CLOCK_CMD: command for clock control: 00 NOP 01 START 10 STOP 11 PULSE (one pulse).
2	RWX	SLAVE_MODE: when selected, Clock Command will wait for Master chiplet to get started. Bit gets cleared after incoming Slave trigger and Keep_MS_Mode_after_trigger is set to 0.
3	RWX	MASTER_MODE: when selected, Clock Command will send out trigger to all Slave chiplets - Bit gets cleared after sending out one Master trigger and Keep_MS_Mode_after_trigger is set to 0.
4	RWX	CLOCK_REGION_PERV: for clock region perv (Pervasive).
5	RWX	CLOCK_REGION_UNIT1: for clock region pb.
6	RWX	CLOCK_REGION_UNIT2: for clock region br - tp.
7	RWX	CLOCK_REGION_UNIT3: for clock region np - npu.
8	RWX	CLOCK_REGION_UNIT4: for clock region mm - nmmu.
9	RWX	CLOCK_REGION_UNIT5: for clock region int.
10	RWX	CLOCK_REGION_UNIT6: for clock region unused.
11	RWX	CLOCK_REGION_UNIT7: for clock region unused.
12	RWX	CLOCK_REGION_UNIT8: for clock region unused.
13	RWX	CLOCK_REGION_UNIT9: for clock region unused.
14	RWX	CLOCK_REGION_UNIT10: for clock region Reserved.
15:47	RO	Constant = 0b00000000000000000000000000000000
48	RWX	SEL_THOLD_SL: select sl tholds.
49	RWX	SEL_THOLD_NSL: select nsl tholds.
50	RWX	SEL_THOLD_ARY: select array thold.
51	RO	Constant = 0b0
52	RW	CLOCK_PULSE_USE_EVEN: For dual mesh support: default for pulse is ODD phase, when this bit is set, pulse will by applied on EVEN phase.
53:63	RO	Constant = 0b00000000000

Register Name	Clock Status SL Register
Mnemonic	TP.TCN3.N3.CLOCK_STAT_SL
Address	0000000005030008 (SCOM)
Description	Clocks running sl

Bits	SCOM	Field Mnemonic: Description
0:3	RO	Constant = 0b1111
4	ROX	CLOCK_STATUS_PERV_SL: status of perv sl hld 0 = run, 1 = stop.
5	ROX	CLOCK_STATUS_UNIT1_SL: status of pb sl hld 0 = run, 1 = stop.
6	ROX	CLOCK_STATUS_UNIT2_SL: status of br - tp sl hld 0 = run, 1 = stop.
7	ROX	CLOCK_STATUS_UNIT3_SL: status of np - npu sl hld 0 = run, 1 = stop.
8	ROX	CLOCK_STATUS_UNIT4_SL: status of mm - nmmu sl hld 0 = run, 1 = stop.
9	ROX	CLOCK_STATUS_UNIT5_SL: status of int sl hld 0 = run, 1 = stop.
10	ROX	CLOCK_STATUS_UNIT6_SL: status of unused sl hld 0 = run, 1 = stop.

Register Name	Error Status Register
Mnemonic	TP.TCN3.N3.ERROR_STATUS
Address	000000000503000F (SCOM)
Description	Error Status of CC

Bits	SCOM	Field Mnemonic: Description
0	RWX	PCB_WRITE_NOT_ALLOWED_ERR: write on read only register.
1	RWX	PCB_READ_NOT_ALLOWED_ERR: read not allowed, maybe write only register.
2	RWX	PCB_PARITY_ON_CMD_ERR: Parity error on command.
3	RWX	PCB_ADDRESS_NOT_VALID_ERR: invalid address.
4	RWX	PCB_PARITY_ON_ADDR_ERR: Parity error on address.
5	RWX	PCB_PARITY_ON_DATA_ERR: Parity error on data.

Bits	SCOM	Field Mnemonic: Description
6	RWX	PCB_PROTECTED_ACCESS_INVALID_ERR: protection violation.
7	RWX	PCB_PARITY_ON_SPCIF_ERR: Parity error on spcif.
8	RWX	PCB_WRITE_AND_OPCG_IP_ERR: pcb write while OPCG is running.
9	RWX	SCAN_READ_AND_OPCG_IP_ERR: scan read when opcg is running.
10	RWX	CLOCK_CMD_CONFLICT_ERR: clock command in progress.
11	RWX	SCAN_COLLISION_ERR: scan region selected of running region.
12	RWX	PREVENTED_SCAN_COLLISION_ERR: PCB request to set scan region which is running.
13	RWX	OPCG_TRIGGER_ERR: OPCG gets triggered while OPCG is running.
14	RWX	PHASE_CNT_CORRUPTION_ERR: phase counters inside chiplet out of sync.
15	RWX	CLOCK_CMD_PREVENTED_ERR: security or scan collision prevented a clock start.
16	RWX	PARITY_ON_OPCG_SM_ERR: Parity error on OPCG state machine.
17	RWX	PARITY_ON_CLOCK_MUX_REG_ERR: Parity error on scan/clock region/type or clock status reg.
18	RWX	PARITY_ON_OPCG_REG_ERR: Parity error on OPCG regs.
19	RWX	PARITY_ON_SYNC_CONFIG_REG_ERR: Parity error on sync config reg.
20	RWX	PARITY_ON_XSTOP_REG_ERR: Parity error on checkstop reg.
21	RWX	PARITY_ON_GPIO_REG_ERR: Parity error on GP0,4,5,6 regs.
22	RWX	CLKCMD_REQUEST_ERR: region clkcmd has one reqest pending but get a second one.
23	RWX	CBS_PROTOCOL_ERR: CBS protocol error - REQ / ACK sequence wrong.
24	RWX	VITL_ALIGN_ERR: VITL alignment is out of sync to sync pulse.
25	RWX	UNIT_SYNC_LVL_ERR: Unit0 and Unit1 sync lvl pulse are not in sync - AVP broken.
26	RWX	PARITY_ON_SELFBOOT_CMD_STATE_ERR: Parity error on selfboot command state.
27	RWX	UNUSED_ERROR27: Unused.
28	RWX	UNUSED_ERROR28: Unused.
29	RWX	UNUSED_ERROR29: Unused.
30	RWX	UNUSED_ERROR30: Unused.

Register Name	Debug CBS CC Register
Mnemonic	TP.TCN3.N3.DBG_CBS_CC
Address	0000000005030013 (SCOM)
Description	Debug CBS CC Register

Bits	SCOM	Field Mnemonic: Description
0	ROX	DBG_RESET_EP: Reset Endpoint - Is the CC and CTRL in reset state.
1	ROX	DBG_OPCG_IP: OPCG in progress, not in idle.
2	ROX	DBG_VITL_CLKOFF: VITL HLD stopped, when enabled, need plat-depth cycles to switch this latch.
3	ROX	DBG_TEST_ENABLE: Test Enable.
4	ROX	DBG_CBS_REQ: CBS Interface - Request (Latched).
5:7	ROX	DBG_CBS_CMD: CBS Interface - Command (Latched).
8:12	ROX	DBG_CBS_STATE: CBS Command State Machine 00000 = Idle.
13	ROX	DBG_SECURITY_DEBUG_MODE: status of the security mode bit.
14	ROX	DBG_CBS_PROTOCOL_ERROR: CBS Protocol Error - REQ raised, although state machine is not in IDLE - need reset_ep to clear this bit. No impact on IPL.
15	ROX	DBG_PCB_IDLE: PCB Interface in IDLE state.
16:19	ROX	DBG_CURRENT_OPCG_MODE: current / latest OPCG MODE - 0 = NOP 1 = LBIST 2 = ABIST 3 = RUNN 4 = SCAN0 5 = SCAN 6 = SCAN rotate 7 = SCAN with UpdateDR 8 = SCAN with CaptureDR 9 = CLK Change Request 10-15 = unused.
20:23	ROX	DBG_LAST_OPCG_MODE: previous OPCG MODE.

Bits	SCOM	Field Mnemonic: Description
24	ROX	DBG_PCB_ERROR: PCB Interface Error, read CC Error Reg or set CBS_CMD = 001 to switch FSI CBS Debug Information to CC Error Register.
25	ROX	DBG_PARITY_ERROR: Any Parity Error, non PCB Parity - read CC Error Reg or set CBS_CMD = 001 to switch FSI CBS Debug Information to CC Error Register.
26	ROX	DBG_CC_ERROR: Any other CC Error - read CC Error Reg or set CBS_CMD = 001 to switch FSI CBS Debug Information to CC Error Register.
27	ROX	DBG_CHIPLET_IS_ALIGNED: Is 1 when the a valid align pulse ws send out.
28	ROX	DBG_PCB_REQUEST_SINCE_RESET: RESET will clear that bit, the first PCB request will set it.
29	ROX	DBG_PARANOIA_TEST_ENABLE_CHANGE: rising or falling edge on test enable, after reset - need reset_ep to clear, no impact on IPL.
30	ROX	DBG_PARANOIA_VITL_CLKOFF_CHANGE: rising or falling edge on vitl_clkoff, after reset - need reset_ep to clear, no impact on IPL.
31	ROX	TP_TPFSI_CBS_ACK: only represenation of CC ack signal going to FSI.

Register Name	**CC Protect Mode Register**
Mnemonic	TP.TCN3.N3.CC_PROTECT_MODE_REG
Address	00000000050303FE (SCOM)
Description	CC Protect Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_READ_PROTECT_ENABLE: Enable read protection.
1	RW	CC_WRITE_PROTECT_ENABLE: Enable write protection.

Register Name	**Atomic Lock Register**
Mnemonic	TP.TCN3.N3.CC_ATOMIC_LOCK_REG
Address	00000000050303FF (SCOM)
Description	Atomic Lock Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_ATOMIC_LOCK_ENABLE: Enable atomic lock.
1:4	ROX	CC_ATOMIC_ID: Atomic ID.
5:7	RO	Constant = 0b000
8:15	ROX	CC_ATOMIC_ACTIVITY: Atomic lock counter.

Register Name	**Global Checkstop FIR Register**
Mnemonic	TP.TCN3.N3.XFIR
Address	0000000005040000 (SCOM)
Description	Global checkstop FIR

Bits	SCOM	Field Mnemonic: Description
0	RWX	XFIR_IN0: summary bit(any checkstop).

Bits	SCOM	Field Mnemonic: Description
1	RWX	XFIR_IN1: Checkstop broadcast via OOB.
2	RWX	XFIR_IN2: Unused.
3	RWX	XFIR_IN3: Checkstop from pervasive unit.
4	RWX	XFIR_IN4: Checkstop from MCS01_0.
5	RWX	XFIR_IN5: Checkstop from MCS01_1.
6	RWX	XFIR_IN6: Checkstop from PB_0 FIR.
7	RWX	XFIR_IN7: Checkstop from PB_1 FIR.
8	RWX	XFIR_IN8: Checkstop from PB_2 FIR.
9	RWX	XFIR_IN9: Checkstop from BR FIR.
10	RWX	XFIR_IN10: Checkstop from NP FIR.
11	RWX	XFIR_IN11: Checkstop from MM FIR.
12	RWX	XFIR_IN12: Checkstop from MM FIR Unstaged.
13	RWX	XFIR_IN13: Checkstop from PB_3 FIR.
14	RWX	XFIR_IN14: Checkstop from PB_4 FIR.
15	RWX	XFIR_IN15: Checkstop from PB_5 FIR.
16	RWX	XFIR_IN16: Checkstop from PB_5 FIR Unstaged.
17	RWX	XFIR_IN17: Checkstop from INT FIR.
18:25	RWX	XFIR_IN18: Unused.
26	RWX	XFIR_IN26: Checkstop on debug trigger.

Register Name	Global Recoverable FIR Register
Mnemonic	TP.TCN3.N3.RFIR
Address	0000000005040001 (SCOM)
Description	Global recoverable FIR

Bits	SCOM	Field Mnemonic: Description
0	ROX	RFIR_IN0: Unused.
1	ROX	LFIR_RECOV_ERR: recoverable error from pervasive unit.
2	ROX	RFIR_IN4: recov from MCS01_0.
3	ROX	RFIR_IN5: recov from MCS01_1.
4	ROX	RFIR_IN6: recov from PB_0 FIR.
5	ROX	RFIR_IN7: recov from PB_1 FIR.
6	ROX	RFIR_IN8: recov from PB_2 FIR.
7	ROX	RFIR_IN9: recov from BR FIR.
8	ROX	RFIR_IN10: recov from NP FIR.
9	ROX	RFIR_IN11: recov from MM FIR.
10	ROX	RFIR_IN12: recov from MM FIR Unstaged.
11	ROX	RFIR_IN13: recov from PB_3 FIR.
12	ROX	RFIR_IN14: recov from PB_4 FIR.

Bits	SCOM	Field Mnemonic: Description
13	ROX	RFIR_IN15: recov from PB_5 FIR.
14	ROX	RFIR_IN16: recov from PB_5 FIR Unstaged.
15	ROX	RFIR_IN17: recov from INT FIR.
16:23	ROX	RFIR_IN18: Unused.

Register Name	FIR Mask Register
Mnemonic	TP.TCN3.N3.FIR_MASK
Address	0000000005040002 (SCOM)
Description	FIR Mask

Bits	SCOM	Field Mnemonic: Description
0	RW	FIR_MASK_IN0: mask for xfir summary bit(any checkstop).
1	RW	FIR_MASK_IN1: mask for xfir from other chiplets.
2	RW	FIR_MASK_IN2: Unused.
3	RW	FIR_MASK_IN3: mask for xfir from pervasive unit.
4	RW	FIR_MASK_IN4: mask for MCS01_0 XFIR and RFIR.
5	RW	FIR_MASK_IN5: mask for MCS01_1 XFIR and RFIR.
6	RW	FIR_MASK_IN6: mask for PB_0 XFIR and RFIR.
7	RW	FIR_MASK_IN7: mask for PB_1 XFIR and RFIR.
8	RW	FIR_MASK_IN8: mask for PB_2 XFIR and RFIR.
9	RW	FIR_MASK_IN9: mask for BR XFIR and RFIR.
10	RW	FIR_MASK_IN10: mask for NP XFIR and RFIR.
11	RW	FIR_MASK_IN11: mask for MM XFIR and RFIR.
12	RW	FIR_MASK_IN12: mask for MM XFIR and RFIR Unstaged.
13	RW	FIR_MASK_IN13: mask for PB_3 XFIR and RFIR.
14	RW	FIR_MASK_IN14: mask for PB_4 XFIR and RFIR.
15	RW	FIR_MASK_IN15: mask for PB_5 XFIR and RFIR.
16	RW	FIR_MASK_IN16: mask for PB_5 XFIR and RFIR Unstaged.
17	RW	FIR_MASK_IN17: mask for INT XFIR and RFIR.
18:25	RW	FIR_MASK_IN18: Unused.
26	RW	FIR_MASK_IN26: mask for debug trigger and local checkstop to recoverable error.

Register Name	Special Attention Register
Mnemonic	TP.TCN3.N3.SPATTN
Address	0000000005040004 (SCOM) 0000000005040005 (SCOM1) 0000000005040006 (SCOM2)
Description	Special Attention

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	ROX	NCX	NCX	SPATTN_IN0: spec attn from mcs01_0.
1	ROX	NCX	NCX	SPATTN_IN1: spec attn from mcs01_1.
2	ROX	NCX	NCX	SPATTN_IN2: spec attn from PB_0.
3:5	ROX	NCX	NCX	SPATTN_IN3: Unused special attentions.
6	ROX	NCX	NCX	SPATTN_IN6: spec attn from INT.
7	ROX	NCX	NCX	SPATTN_IN7: spec attn from PB_3.
8	ROX	NCX	NCX	SPATTN_IN8: spec attn from PB_4.
9	ROX	NCX	NCX	SPATTN_IN9: spec attn from PB_5.

Register Name	Special Attention Mask Register
Mnemonic	TP.TCN3.N3.SPA_MASK
Address	0000000005040007 (SCOM)
Description	Special Attention Mask

Bits	SCOM	Field Mnemonic: Description
0:9	RW	SPA_MASK_IN: special attention mask.

Register Name	FIR Mode Register
Mnemonic	TP.TCN3.N3.EPS.FIR.MODE_REG
Address	0000000005040008 (SCOM)
Description	Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	MODE_IN0: Unused.
1	RW	MODE_IN1: Unused.
2	RW	MODE_IN2: Unused.
3	RW	MODE_IN3: Unused.
4	RW	MODE_IN4: Stop Chip TOD on Checkstop (Unused in POWER9).
5	RW	MODE_IN5: Stop Chip TOD on Recoverable (Unused in POWER9).
6	RW	MODE_IN6: Disable propagation of checkstop to other chips.
7	RW	MODE_IN7: Unused.
8	RW	MODE_IN8: Enable checkstop on special attention.
9	RW	MODE_IN9: mask_direct/local_error.
10	RW	MODE_IN10: Unused.
11	RW	MODE_IN11: Unused.
12:15	RW	MODE_IN: Unused.

Register Name	Host Attention Register
Mnemonic	TP.TCN3.N3.HOSTATTN
Address	0000000005040009 (SCOM)
Description	Host Attention

Bits	SCOM	Field Mnemonic: Description
0	ROX	HOSTATTN_IN0: Host Attention Summary Bit.
1	ROX	HOSTATTN_IN1: Host Attention from mcs01 bit 0.
2	ROX	HOSTATTN_IN2: Host Attention from mcs01 bit 1.
3	ROX	HOSTATTN_IN3: Unused.
4	ROX	HOSTATTN_IN4: Unused.
5	ROX	HOSTATTN_IN5: Unused.
6	ROX	HOSTATTN_IN6: Unused.
7	ROX	HOSTATTN_IN7: Unused.
8	ROX	HOSTATTN_IN8: Unused.
9	ROX	HOSTATTN_IN9: Unused.
10	ROX	HOSTATTN_IN10: Unused.
11	ROX	HOSTATTN_IN11: Unused.
12	ROX	HOSTATTN_IN12: Unused.
13	ROX	HOSTATTN_IN13: Unused.
14	ROX	HOSTATTN_IN14: Unused.
15	ROX	HOSTATTN_IN15: Unused.
16	ROX	HOSTATTN_IN16: Unused.
17	ROX	HOSTATTN_IN17: Unused.
18	ROX	HOSTATTN_IN18: Unused.
19	ROX	HOSTATTN_IN19: Unused.
20	ROX	HOSTATTN_IN20: Unused.
21	ROX	HOSTATTN_IN21: Unused.
22	ROX	HOSTATTN_IN22: Unused.

Register Name	Local FIR Register
Mnemonic	TP.TCN3.N3.LOCAL_FIR
Address	000000000504000A (SCOM) 000000000504000B (SCOM1) 000000000504000C (SCOM2)
Description	Local FIR

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	FIR_IN0: CFIR internal parity error.
1	RWX	WOX_AND	WOX_OR	FIR_IN1: Local errors from GPIO (PCB error).
2	RWX	WOX_AND	WOX_OR	FIR_IN2: Local errors from CC (PCB error).

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
3	RWX	WOX_AND	WOX_OR	FIR_IN3: Local errors from CC (OPCG, parity, scan collision, ...).
4	RWX	WOX_AND	WOX_OR	FIR_IN4: Local errors from PSC (PCB error).
5	RWX	WOX_AND	WOX_OR	FIR_IN5: Local errors from PSC (parity error).
6	RWX	WOX_AND	WOX_OR	FIR_IN6: Local errors from Thermal (parity error).
7	RWX	WOX_AND	WOX_OR	FIR_IN7: Local errors from Thermal (PCB error).
8	RWX	WOX_AND	WOX_OR	FIR_IN8: Local errors from Thermal (Trip error critical).
9	RWX	WOX_AND	WOX_OR	FIR_IN9: Local errors from Thermal (Trip error fatal).
10	RWX	WOX_AND	WOX_OR	FIR_IN10: therm volttrip error.
11	RWX	WOX_AND	WOX_OR	FIR_IN11: Local errors from Debug (error).
12	RWX	WOX_AND	WOX_OR	FIR_IN12: Local errors from Trace Array0 (SCOM error).
13	RWX	WOX_AND	WOX_OR	FIR_IN13: Local errors from Trace Array0.
14	RWX	WOX_AND	WOX_OR	FIR_IN14: Local errors from Trace Array1 (SCOM error).
15	RWX	WOX_AND	WOX_OR	FIR_IN15: Local errors from Trace Array1.
16	RWX	WOX_AND	WOX_OR	FIR_IN16: Local errors from Trace Array2 (SCOM error).
17	RWX	WOX_AND	WOX_OR	FIR_IN17: Local errors from Trace Array2.
18	RWX	WOX_AND	WOX_OR	FIR_IN18: Local errors from Trace Array3 (SCOM error).
19	RWX	WOX_AND	WOX_OR	FIR_IN19: Local errors from Trace Array3.
20	RWX	WOX_AND	WOX_OR	FIR_IN20: Local errors from Trace Array4 (SCOM error).
21	RWX	WOX_AND	WOX_OR	FIR_IN21: Local errors from Trace Array4.
22	RWX	WOX_AND	WOX_OR	FIR_IN22: Local errors from Trace Array5 (SCOM error).
23	RWX	WOX_AND	WOX_OR	FIR_IN23: Local errors from Trace Array5.
24	RWX	WOX_AND	WOX_OR	FIR_IN24: Errors from Bsense IO.
25	RWX	WOX_AND	WOX_OR	FIR_IN25: Unused.
26	RWX	WOX_AND	WOX_OR	FIR_IN26: Unused.
27	RWX	WOX_AND	WOX_OR	FIR_IN27: Unused.
28	RWX	WOX_AND	WOX_OR	FIR_IN28: Unused.
29	RWX	WOX_AND	WOX_OR	FIR_IN29: Unused.
30	RWX	WOX_AND	WOX_OR	FIR_IN30: Unused.
31	RWX	WOX_AND	WOX_OR	FIR_IN31: Unused.
32	RWX	WOX_AND	WOX_OR	FIR_IN32: Reserved for Firmware usage.
33	RWX	WOX_AND	WOX_OR	FIR_IN33: Reserved for Firmware usage.
34	RWX	WOX_AND	WOX_OR	FIR_IN34: Reserved for Firmware usage.
35	RWX	WOX_AND	WOX_OR	FIR_IN35: Reserved for Firmware usage.
36	RWX	WOX_AND	WOX_OR	FIR_IN36: Reserved for Firmware usage.
37	RWX	WOX_AND	WOX_OR	FIR_IN37: Reserved for Firmware usage.
38	RWX	WOX_AND	WOX_OR	FIR_IN38: Reserved for Firmware usage.
39	RWX	WOX_AND	WOX_OR	FIR_IN39: Reserved for Firmware usage.
40	RWX	WOX_AND	WOX_OR	FIR_IN40: Unused.
41	RWX	WOX_AND	WOX_OR	FIR_IN41: malfunction alert broadcast via OOB.

Register Name	Local FIR Mask Register
Mnemonic	TP.TCN3.N3.EPS.FIR.LOCAL_FIR_MASK
Address	000000000504000D (SCOM) 000000000504000E (SCOM1) 000000000504000F (SCOM2)
Description	Local FIR Mask

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:41	RW	WO_AND	WO_OR	LFIR_MASK_IN: mask for LEM error collection vector.

Register Name	Local FIR Action 0 Register
Mnemonic	TP.TCN3.N3.EPS.FIR.LOCAL_FIR_ACTION0
Address	0000000005040010 (SCOM)
Description	Local FIR Action0

Bits	SCOM	Field Mnemonic: Description
0:41	RW	FIR_ACTION0_IN: action0 mask.

Register Name	Local FIR Action 1 Register
Mnemonic	TP.TCN3.N3.EPS.FIR.LOCAL_FIR_ACTION1
Address	0000000005040011 (SCOM)
Description	Local FIR Action1

Bits	SCOM	Field Mnemonic: Description
0:41	RW	FIR_ACTION1_IN: action1 mask.

Register Name	Group Checkstop Mask Register
Mnemonic	TP.TCN3.N3.EPS.FIR.GXSTOP_TRIG_REG
Address	0000000005040013 (SCOM)
Description	Group Xstop MASK Register

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP_TRIG_IN0: Mask bit for System Checkstop.
1	RW	GXSTP_TRIG_IN1: Mask bit for Recoverable Error.
2	RW	GXSTP_TRIG_IN2: Mask bit for Special Attention.
3	RW	GXSTP_TRIG_IN3: Mask bit for Local Checkstop.
4	RW	GXSTP_TRIG_IN4: Mask bit for Type 4 Error (Host Attention).
5	RW	GXSTP_TRIG_IN5: Mask bit for OOB sys_checkstop Input (0).
6	RW	GXSTP_TRIG_IN6: Mask bit for OOB sys_checkstop Input (1).
7	RW	GXSTP_TRIG_IN7: Mask bit for group checkstop input (0).

Bits	SCOM	Field Mnemonic: Description
8	RW	GXSTP_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP_TRIG_IN9: Mask bit for Debug Checkstop on Trigger.
10	RW	GXSTP_TRIG_IN10: Unused.
11	RW	GXSTP_TRIG_IN11: Unused.

Register Name	Group0 Checkstop Mask Register
Mnemonic	TP.TCN3.N3.EPS.FIR.GXSTOP0_MASK_REG
Address	0000000005040014 (SCOM)
Description	Group0 Xstop Mask Reg

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP0_TRIG_IN0: Mask bit for System Checkstop.
1	RW	GXSTP0_TRIG_IN1: Mask bit for Recoverable Error.
2	RW	GXSTP0_TRIG_IN2: Mask bit for Special Attention.
3	RW	GXSTP0_TRIG_IN3: Mask bit for Local Checkstop.
4	RW	GXSTP0_TRIG_IN4: Mask bit for Type 4 Error (Host Attention).
5	RW	GXSTP0_TRIG_IN5: Mask bit for OOB sys_checkstop Input (0).
6	RW	GXSTP0_TRIG_IN6: Mask bit for OOB sys_checkstop Input (1).
7	RW	GXSTP0_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP0_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP0_TRIG_IN9: Mask bit for Debug Checkstop on Trigger.
10	RW	GXSTP0_TRIG_IN10: Unused.
11	RW	GXSTP0_TRIG_IN11: Unused.

Register Name	Group1 Checkstop Mask Register
Mnemonic	TP.TCN3.N3.EPS.FIR.GXSTOP1_MASK_REG
Address	0000000005040015 (SCOM)
Description	Group1 Xstop Mask Reg

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP1_TRIG_IN0: Mask bit for System Checkstop.
1	RW	GXSTP1_TRIG_IN1: Mask bit for Recoverable Error.
2	RW	GXSTP1_TRIG_IN2: Mask bit for Special Attention.
3	RW	GXSTP1_TRIG_IN3: Mask bit for Local Checkstop.
4	RW	GXSTP1_TRIG_IN4: Mask bit for Type 4 Error (Host Attention).
5	RW	GXSTP1_TRIG_IN5: Mask bit for OOB sys_checkstop Input (0).
6	RW	GXSTP1_TRIG_IN6: Mask bit for OOB sys_checkstop Input (1).
7	RW	GXSTP1_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP1_TRIG_IN8: Mask bit for group checkstop input (1).

Bits	SCOM	Field Mnemonic: Description
9	RW	GXSTP1_TRIG_IN9: Mask bit for Debug Checkstop on Trigger.
10	RW	GXSTP1_TRIG_IN10: Unused.
11	RW	GXSTP1_TRIG_IN11: Unused.

Register Name	Group2 Checkstop Mask Register
Mnemonic	TP.TCN3.N3.EPS.FIR.GXSTOP2_MASK_REG
Address	0000000005040016 (SCOM)
Description	Group2 Xstop Mask Reg

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP2_TRIG_IN0: Mask bit for System Checkstop.
1	RW	GXSTP2_TRIG_IN1: Mask bit for Recoverable Error.
2	RW	GXSTP2_TRIG_IN2: Mask bit for Special Attention.
3	RW	GXSTP2_TRIG_IN3: Mask bit for Local Checkstop.
4	RW	GXSTP2_TRIG_IN4: Mask bit for Type 4 Error (Host Attention).
5	RW	GXSTP2_TRIG_IN5: Mask bit for OOB sys_checkstop Input (0).
6	RW	GXSTP2_TRIG_IN6: Mask bit for OOB sys_checkstop Input (1).
7	RW	GXSTP2_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP2_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP2_TRIG_IN9: Mask bit for Debug Checkstop on Trigger.
10	RW	GXSTP2_TRIG_IN10: Unused.
11	RW	GXSTP2_TRIG_IN11: Unused.

Register Name	FIR Summary Mask Register
Mnemonic	TP.TCN3.N3.EPS.FIR.SUM_MASK_REG
Address	0000000005040017 (SCOM)
Description	Summary Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RW	SMASK_IN0: System Checkstop Summary Bit.
1	RW	SMASK_IN1: Recoverable Summary Bit.
2	RW	SMASK_IN2: Special Attention Summary Bit.
3	RW	SMASK_IN3: Local Checkstop Summary Bit.
4	RW	SMASK_IN4: Type4 (Host Attention Summary Bit.

Register Name	Local Checkstop Error Register
Mnemonic	TP.TCN3.N3.LOCAL_XSTOP_ERR
Address	0000000005040018 (SCOM)
Description	Local checkstop error

Bits	SCOM	Field Mnemonic: Description
0	ROX	LOCAL_XSTOP_IN0: Local checkstop summary bit.
1	ROX	LOCAL_XSTOP_IN1: Local checkstop from mcs01, bit 0.
2	ROX	LOCAL_XSTOP_IN2: Local checkstop from mcs01, bit 1.
3	ROX	LOCAL_XSTOP_IN3: Unused.
4	ROX	LOCAL_XSTOP_IN4: Unused.
5	ROX	LOCAL_XSTOP_IN5: Unused.
6	ROX	LOCAL_XSTOP_IN6: Local checkstop from np, bit 0.
7	ROX	LOCAL_XSTOP_IN7: Local checkstop from np, bit 1.
8	ROX	LOCAL_XSTOP_IN8: Local checkstop from mm bit 0.
9	ROX	LOCAL_XSTOP_IN9: Local checkstop from mm bit 1.
10	ROX	LOCAL_XSTOP_IN10: Unused.
11	ROX	LOCAL_XSTOP_IN11: Unused.
12	ROX	LOCAL_XSTOP_IN12: Unused.
13	ROX	LOCAL_XSTOP_IN13: Unused.
14	ROX	LOCAL_XSTOP_IN14: Unused.
15	ROX	LOCAL_XSTOP_IN15: Unused.
16	ROX	LOCAL_XSTOP_IN16: Unused.
17	ROX	LOCAL_XSTOP_IN17: Unused.
18	ROX	LOCAL_XSTOP_IN18: Unused.
19	ROX	LOCAL_XSTOP_IN19: Unused.
20	ROX	LOCAL_XSTOP_IN20: Unused.
21	ROX	LOCAL_XSTOP_IN21: Unused.
22	ROX	LOCAL_XSTOP_IN22: Unused.

Register Name	Local Checkstop Mask Register
Mnemonic	TP.TCN3.N3.LOCAL_XSTOP_MASK
Address	0000000005040019 (SCOM)
Description	Local Checkstop Mask

Bits	SCOM	Field Mnemonic: Description
0:21	RW	LOCAL_XSTOP_MASK_IN: Local checkstop mask.

Register Name	Host Attention Mask Register
Mnemonic	TP.TCN3.N3.HOSTATTN_MASK
Address	000000000504001A (SCOM)
Description	Host Attention Mask

Bits	SCOM	Field Mnemonic: Description
0:21	RW	HOSTATTN_MASK_IN: Host attention mask.

Register Name	DTS Thermal Sensor Result 0 Register
Mnemonic	TP.TCN3.N3.EPS.THERM.DTS_RESULT0
Address	0000000005050000 (SCOM)
Description	DTS Thermal Sensor loop1 Results

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	DTS_0_RESULT: Calibrated DTS result of sensor with ID 0.
16:31	ROX	DTS_1_RESULT: Calibrated DTS result of sensor with ID 1.
32:63	RO	Constant = 0b00000000000000000000000000000000

Register Name	DTS Trace Results Register
Mnemonic	TP.TCN3.N3.EPS.THERM.DTS_TRC_RESULT
Address	0000000005050003 (SCOM)
Description	DTS Trace Results

Bits	SCOM	Field Mnemonic: Description
0:43	ROX	TIMESTAMP_COUNTER_VALUE: Time stamp counter value during DTS trace mode.
44	ROX	TIMESTAMP_COUNTER_OVERFLOW_ERR: Over flow error bit of the time stamp counter value during DTS trace mode.
45:47	RO	Constant = 0b000
48:63	ROX	DTS_1_RESULT: Calibrated DTS result of sensor with ID 1.

Register Name	Thermal Mode Register
Mnemonic	TP.TCN3.N3.EPS.THERM.THERM_MODE_REG
Address	000000000505000F (SCOM)
Description	CPM and DTS enables and cntl's

Bits	SCOM	Field Mnemonic: Description
0	RW	THERM_DIS_CPM_BUBBLE_CORR: critical path result bubble correction active.
1	RW	THERM_FORCE_THRES_ACT: force tpc_therm_thres_mac clock gating off and activates clocks.
2:4	RW	THERM_THRES_TRIP_ENA: therm_thres_trip compare enables. 1xx: trip0 - warning. x1x: trip1 - critical. xx1: trip2 - fatal.

Bits	SCOM	Field Mnemonic: Description
5	RW	THERM_DTS_SAMPLE_ENA: 0: no dts sampling, 1: dts sampling is enabled and below counter compare match can occur.
6:9	RW	THERM_SAMPLE_PULSE_CNT: A 16 MHz sample pulse is feed into an 18 Bit counter, with the therm_sample_pulse_cnt it is possible to select a highorder bit of the counter. to enable a resolutions of sampling dtss between 2.5 us and 80 ms. An edge detection circuit detects the rising edge of the selected counter bit and this triggers a dts sample. 0000: 16 ms. 0001: 8 ms. 0010: 4 ms. 0011: 2 ms. 0100: 1 ms. 0101: 0.5 ms. 0110: 250 us. 0111: 125 us. 1000: 62 .5us. 1001: 31.3 us. 1010: 15.6 us. 1011: 7.8 us. 1100: 3.9 us. 1101: 2 us. 1110: 1 us. 1111: 0.5 us.
10:11	RW	THERM_THRES_MODE_ENA: forces max or min mode in threshold unit: 00: is off. 11: is ilegal. 10: max mode. 01: min mode.
12	RW	DTS_TRIGGER_MODE: Unused.
13	RW	DTS_TRIGGER_SEL: Unused.
14	RW	THERM_THRES_OVERFLOW_MASK: 0 - therm_overflow_err will be enabled. 1 - therm_overflow_err will be disabled.
15	RW	THERM_MODE_UNUSED: Unused.
16:19	RW	THERM_DTS_READ_SEL: Selects which dts result will be provided with pcb read addr_v(4): 0000: DTS 0. 0001: DTS 1. 0010: DTS 2. 0100: DTS 4. 1111: Worst Case Sensor.
20:21	RW	THERM_DTS_ENABLE_L1: loop1 dts enables: 1x: DTS 0 available. x1: DTS 1 available.
22:34	RO	Constant = 0b0000000000000
35:36	RW	Reserved.

Register Name	Skitter Control Register
Mnemonic	TP.TCN3.N3.EPS.THERM.SKITTER_MODE_REG
Address	0000000005050010 (SCOM)
Description	Skitter Control Register

Bits	SCOM	Field Mnemonic: Description
0	RW	SKITTER_HOLD_SAMPLE: forces skitter to hold current sample.

Bits	SCOM	Field Mnemonic: Description
1	RW	DISABLE_SKITTER_STICKINESS: if '0' accumulation mode, '1' samples new value each cycle and resets sticky value.
2:3	RW	SKITTER_MODE_UNUSED1: Unused.
4:5	RW	SKITTER_HOLD_DBGTRIG_SEL: bit0: hold_on_trigger0. bit1: _on_trigger1.
6:7	RW	SKITTER_RESET_TRIG_SEL: bit0: reset_sticky_on_trigger0. bit1: reset_sticky_on_trigger1.
8:9	RW	SKITTER_SAMPLE_GUTS: Selects guts to measure: 00: guts1. 01: guts2. 10: guts3. 11: guts4.
10:43	RO	Constant = 0b00000000000000000000000000000000
44	ROX	SKITTER_HOLD_SAMPLE_WITH_TRIGGER: forces skitter to hold current sample on dbg trigger, this has highest priority.
45	ROX	SKITTER_DATA_V_LT: if '1' the data requested by a skitter force read register has finished and data is present in skitter data register in the collector macro. The data be read by any combination of V25/V26/V27 pcb reads.

Register Name	Error Injection Control Register
Mnemonic	TP.TCN3.N3.EPS.THERM.INJECT_REG
Address	0000000005050011 (SCOM)
Description	Error Injection Control Register

Bits	SCOM	Field Mnemonic: Description
0:1	RW	THERM_INJECT_TRIP: 00: no injection. 01: warning trip level injection. 10: crtical trip level injection. 11: fatal trip level injection.
2:3	RW	THERM_INJECT_MODE: 00: no injection. 01: injection on the next dts sample. 10: solid injection for the next dts samples till bit setting changes. 11: not used.

Register Name	Control / Force Reset Register
Mnemonic	TP.TCN3.N3.EPS.THERM.CONTROL_REG
Address	0000000005050012 (SCOM)
Description	Control / Force Reset Register

Bits	SCOM	Field Mnemonic: Description
0	WO_1P	Reserved.
1	WO_1P	Reserved.
2	WO_1P	Reserved.
3	WO_1P	Reserved.
4	WO_1P	Reserved.

Bits	SCOM	Field Mnemonic: Description
5	WO_1P	Reserved.
6	WO_1P	Reserved.
7	WO_1P	Reserved.
8	WO_1P	Reserved.
9	WO_1P	Reserved.
10	WO_1P	Reserved.
11	WO_1P	Reserved.
12	WO_1P	Reserved.

Register Name	Thermal Error Status Register
Mnemonic	TP.TCN3.N3.EPS.THERM.ERR_STATUS_REG
Address	0000000005050013 (SCOM)
Description	Thermal Error Status Register

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved.
1	ROX	Reserved.
2	ROX	Reserved.
3	ROX	Reserved.
4	ROX	Reserved.
5	ROX	Reserved.
6	ROX	Reserved.
7	ROX	Reserved.
8	ROX	Reserved.
9	ROX	Reserved.
10	ROX	Reserved.
11	ROX	Reserved.
12	ROX	Reserved.
13	ROX	Reserved.
14	ROX	Reserved.
15	ROX	Reserved.
16	ROX	SERIAL_SHIFTCNT_MODEREG_PARITY_ERR_MASK: serial shift count parity error mask.
17	ROX	THERM_MODEREG_PARITY_ERR_MASK: therm mode reg parity error mask.
18	ROX	SKITTER_MODEREG_PARITY_ERR_MASK: skitter mode register parity error mask.
19	ROX	SKITTER_FORCEREG_PARITY_ERR_MASK: skitter force register parity error mask.
20	ROX	SCAN_INIT_VERSION_REG_PARITY_ERR_MASK: scan init version register parity error mask.
21	ROX	VOLT_MODEREG_PARITY_ERR_MASK: volt mode reg parity error mask.
22	RO	Constant = 0b0
23	ROX	COUNT_STATE_ERR_MASK: count state machine error mask.

Bits	SCOM	Field Mnemonic: Description
24	ROX	RUN_STATE_ERR_MASK: run state machine error mask.
25	ROX	THRES_STATE_ERR_MASK: thres state machine error mask.
26	ROX	OVERFLOW_ERR_MASK: DTS calibration calculation overflow error mask.
27	ROX	SHIFTER_PARITY_ERR_MASK: Shifter parity error mask.
28	ROX	SHIFTER_VALID_ERR_MASK: Shifter valid error mask.
29	ROX	TIMEOUT_ERR_MASK: Timeout error mask.
30	ROX	F_SKITTER_READ_ERR_MASK: force skitter read one hot error mask.
31	ROX	PCB_ERR_MASK: pervasive control bus error mask.
32:39	RO	Constant = 0b00000000
40:43	ROX	Reserved.
44:46	ROX	Reserved.
47	ROX	Reserved.
48	ROX	Reserved.
49:50	ROX	Reserved.
51:54	ROX	Reserved.
55	ROX	Reserved.
56	ROX	Reserved.
57	ROX	Reserved.
58	ROX	Reserved.
59	ROX	Reserved.
60:63	RO	Constant = 0b0000

Register Name	Skitter Force Read Register
Mnemonic	TP.TCN3.N3.EPS.THERM.SKITTER_FORCE_REG
Address	0000000005050014 (SCOM)
Description	Skitter Force Read Register

Bits	SCOM	Field Mnemonic: Description
0	RW	F_SKITTER_READ: Forces the read of that particular skitter.

Register Name	Skitter Clock Source Control Register
Mnemonic	TP.TCN3.N3.EPS.THERM.SKITTER_CLKSRC_REG
Address	0000000005050016 (SCOM)
Description	Skitter clock source control register

Bits	SCOM	Field Mnemonic: Description
0:2	RW	SKITTER0_CLKSRC: Selects clock to measure: 000 = Local mesh clock. 001 = External pin skitter_c1_1_in. 010 = Local d1clk only if d_mode = 1. 011 = External pin skitter_c1_2_in. 100 = Local lclk only if d_mode = 1. 101 = External pin skitter_c1_3_in. 110 = Unused. 111 = External pin skitter_c1_4_in.
3:35	RO	Constant = 0b00000000000000000000000000000000
36:37	RW	SKITTER0_DELAY_SELECT: To select delay to be added between clock source multiplexer and the inverter chain (base line delay is 12.2 psec) of skitter0. 00 = No delay. 01 = 0.6 psec. 10 = 1.8 psec. 11 = 5 psec.

Register Name	Skitter Data 0 Register
Mnemonic	TP.TCN3.N3.EPS.THERM.SKITTER_DATA0
Address	0000000005050019 (SCOM)
Description	Skitter data register read bit0:63

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved.

Register Name	Skitter Data 1 Register
Mnemonic	TP.TCN3.N3.EPS.THERM.SKITTER_DATA1
Address	000000005050001A (SCOM)
Description	Skitter data register read bit32:95

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved.

Register Name	Skitter Data 2 Register
Mnemonic	TP.TCN3.N3.EPS.THERM.SKITTER_DATA2
Address	000000005050001B (SCOM)
Description	Skitter data register read bit64:127

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved.

Register Name	Timestamp Counter Read Register
Mnemonic	TP.TCN3.N3.EPS.THERM.TIMESTAMP_COUNTER_READ
Address	000000000505001C (SCOM)
Description	Timestamp counter read

Bits	SCOM	Field Mnemonic: Description
0:43	ROX	TIMESTAMP_COUNTER_VALUE: Time stamp counter value during DTS trace mode.
44	ROX	TIMESTAMP_COUNTER_OVERFLOW_ERR: Overflow error bit of the time stamp counter value during DTS trace mode.
