Contents

Revision Log

Each release of this document supersedes all previously released versions. The revision log lists all significant changes made to the document since its initial release.

Version	Revision Date	Description
1.1	31 January 2017	Edited Section 8 PB Chiplet (Nest Chiplet 3).
1.0	30 August 2016	Initial release.

About this Document

This document describes the registers used by the IBM® POWER9 processor. To ensure you have the most current version of this document, visit the OpenPOWER Connect website.

Who Should Read this Document

This document is intended for system software and hardware developers and application programmers who are developing products that use the POWER9 registers. It is assumed that the reader understands operating systems, microprocessor system design, basic principles of reduced instruction set computer (RISC) processing, and details of the Power Instruction Set Architecture (ISA).

Organization

This document is divided into three volumes, of approximately equal sizes, organized by address ranges.

Volume	Address Range	Contents
1	0x0000_0000 - 0x050F_FFFF	Chip logic registers Processor bus registers
2	0x0600_0000 - 0x200F_FFFF	X bus chiplet registers[1] OB chiplet registers[1] PCI registers Cache and core registers
3	0x0700_0000 - 0x070F_FFFF	Memory controller registers[1]

1. These registers use indirect addresses in the range 0x8000_0000_0000_0000 - 0x8000_0000_0901143F.

In each volume, the table of contents lists the primary divisions in the document. Address maps at the beginning of each chapter list the registers in each chiplet in alphabetical order by mnemonic. Within each chapter, the registers themselves are arranged by their addresses. A register can have multiple addresses with different addresses for different chiplets.

Bit Significance

In the POWER9 documentation, the smallest bit number represents the most significant bit of a field, and the largest bit number represents the least significant bit of a field.

Representation of Numbers

Numbers are generally shown in decimal format, unless otherwise designated. One of the following conventions is used to indicate the numeral system, where "nn" or "NN" indicates the numerical value:

- Binary values are represented as 0bn, `nn'b, or `n'.
  Examples: 0b01, `01'b, or `01'
- Decimal values are represented as nn or `nn'd.
  Examples: 1 or `1'd
- Hexadecimal values are represented as 0xN, x`N', or `NN'h.
  Examples: 0x000000000204000D, x`000000000204000D', or `000000000204000D'h

Note: A bit value that is immaterial, which is called a “don't care” bit, is represented by an “X” or "x."

Representation of Enumerated Registers

To succinctly describe registers that are identical except for a numeral in the register name and mnemonic, a syntax is used that enables these “enumerated registers” to be described in a single register table.

The registers in the DP16 section are enumerated because there are five instances of the DP16 unit for each DDR PHY port. All five instances are required for each DDR PHY port, and, at the chip level, there are eight DDR PHY ports. Each DDR PHY unit is self-contained and comprises four independent ports that connect to DIMM slots. This unit is replicated twice on the POWER9 system to provide a maximum of eight ports. All of the DP16 registers are documented in one replication. The address is the only difference between the two. The first replication is on 0x0000_0000_0700_0000, and the second replication is on 0x0000_0000_0800_0000.

For example: IOM0.DDRPHY_DP16_DATA_BIT_ENABLE0_P0_[n]
8000000007 01103F (SCOM), +0x0400_0000_0000

IOM1.DDRPHY_DP16_DATA_BIT_ENABLE0_P0_[n]
8000000008 01103F (SCOM), +0x0400_0000_0000

Register Names

The following syntax is used for enumerated register names:

<register name> [n] (n = m:p) where m and p are integers

For example: TWG Control Register [n] (n = 0:15)

Mnemonic

The following syntax is used for enumerated mnemonics:

<mnemonic>_[n], where n is an integer from the enumerated register name

For example: REG_TWGDATA_[n]
REG[n]_TWGDATA

Address Offset

The following syntax is used for enumerated address offsets so that enumerated registers can be described in a single register table. The stride defines the hexadecimal integer to add to the address for each enumeration.

<address_offset>, +<stride>

For example: 0x80030, +0x10

Register Name	**DP16 DQ Enable 0 Register [n] (n=0:4)**
Mnemonic	IOM0.DDRPHY_DP16_DQ_BIT_ENABLE0_P0_[n]
Address	800000000701103F (SCOM), +0x0400_0000_0000
Description	A DP16 has 24 possible single-ended data pins that can send or receive data. This register is used to enable and disable each of the 24 pins for data sending or receiving. Any pins on the DP16 that are used as strobes or clocks to capture the data must not be marked as enabled in this register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b00000000000000000000000000000000000000000000000000000000
48:63	RW	DATA_BIT_ENABLE_0_15: 1b = Indicates that the DP16 bit is enabled, and is used for sending or receiving data to or from the memory device. This bit is calibrated as a data bit. 0b = Indicates that the DP16 bit is not used to send or receive data. Bit 48 controls MEMINTD00B(n). Bit 49 controls MEMINTD01B(n). Bit 50 controls MEMINTD02B(n). ... Bit 63 controls MEMINTD15B(n). where n is the DP16 instance number.

Related Documents

The following documents can be helpful when reading this specification. They are available through OpenPOWER Connect or Power.org.

POWER9 Processor User's Manual
POWER9 Processor Datasheets
Power ISA User Instruction Set Architecture - Book I (Version 3.0)
Power ISA Virtual Environment Architecture - Book II (Version 3.0)
Power ISA Operating Environment Architecture (Server Environment) - Book III-S (Version 3.0)

Terminolgy

The following terms are used in volumes 1, 2, or 3 of the *POWER9 Processor Registers Specification*.

Note: Acronyms are not typically expanded in the body of this document.

3DS	Three-dimensional stacking
AADR	Array Access Data Register
AAER	Array Access ECC Register
ABIST	Array built-in self test
ABIST/IOBIST	Array built-in self test / input/output built-in self test
ABUS	**Note:** This is not really an acronym but a name (A bus).
AC	Alternating current
ACK	Acknowledgment or acknowledge. A transmission that is sent as an affirmative response to a data transmission.
ACT	Activate
ACT#	Activate (inverted)
ADC	APSS with analog-to-digital converter
ADDR	Address
ADR	Address
ADU	Alter-display unit
AES	Advanced Encryption Standard
AFSR	Average Frequency Sample Register
AFTR	Average Frequency Threshold Register
AIB	1. ASIC interconnect bus 2. ASIC interface bus
AL	Additive latency. For more information, see the JEDEC DDR3 and DDR4 DRAM specifications.
AMF	Availability management framework
AMux	Analog multiplexer
ANA16	Analog 16 bits
AND write	Current register content is ANDed with write data and the result is stored in the register (access type WO_AND / WOX_AND).
AP	Auto-predischarge. For more information, see the JEDEC DDR3 and DDR4 DRAM specifications.
APB	Advanced peripheral bus
APIN	ADR pin. The logic macro inside DDR units for sending data to the ADR bus.
APSS	Analog power subsystem sweep. Provides real-time power measurements of voltage rails.
ARB	Architecture Review Board
ARE	Address error
ARY	Array
ASB	Advanced system bus

ASBE	Array single-bit error
ASIC	Application-specific integrated circuit
AT	Address translation
ATEST	Analog test pin
ATPG	Advanced test pattern generator
AUE	Array uncorrectable error (UE)
AVP	Architectural verification program. A custom payload used to test a processor or other host hardware or software function.
AVS	Adaptive voltage scaling
Âµ	Micron
Âµs	Microsecond
B	Byte
BA	Bank address
BAR	Base Address Register
BCDE	Block copy download engine
BCE	Block copy engine
BCEBAR	Block Copy Engine Base Address Register
BCECSR	Block Copy Engine Control and Status Register
BCUE	Block copy upload engine
BCW	Buffer control word
BDF	Bus device function
BE	1. Big-endian 2. Branch Trace Enable bit in the MSR (MSRBE) 3. Byte enable
BER	Bit error rate
BG	Bank group
BI	Burn in
BIST	Built-in self test
BL	Bit length
BL8	Burst length 8
BNDY	Boundary I/Os
BSC	Boundary scan cells
BW	Bandwidth
BYPASSN	Bypass low active
c_err_rpt	Common lib error report
CACCR	Core Analog Clock Control Register

CACSR	Core Analog Clocking Status Register
CAL	Calibration
CAM	Content-addressable memory
CAPI	Coherent Accelerator Processor Interface
CAPP	Coherent accelerator processor proxy
CAS	Column-address select
CASN	Column-address select (inverted)
CAW2	An internal pipeline stage designator
CBS	CFAM boot sequencer
CC	1. Clock controller 2. Congruence class
CCB	Change control board
CCFG	Clock control configuration
CCS	Configured command sequencer
CD	Compact disc
CDIMM	Custom dual in-line memory module
CDR	Clock and data recovery
CE	Correctable error. A hardware error that the firmware detects and corrects without impacting the state of the system.
CERR	Common lib error report
CFAM	Common field-replaceable unit (FRU) access macro
CFIR	Chiplet Fault Isolation Register
CGC	Congruence class
checkstop	A severe error inside a processor core that causes a processor core to stop all processing activities. This is the same as a system crash. The operating system is not functional.
chip select	A signal that selects one or more memory modules to respond to a command/address. An exact one-to-one correspondence exists between chip selects and ranks.
CI	1. Cache-inhibited 2. Cast-in
CID	Completer ID. When returning the completion for a transaction, the completer attaches its Bus/Dev/Func to the transaction as a CID. See also RID.
CIDSR	Core IVRM Dropout Sample Register
CK	Clock
CK#	Clock (inverted)
CKE	Clock enable
CKSW	Chicken switch: A programmable mode bit that disables a certain function or changes its behavior.

CL	Column-address select (CAS) latency
CLK	Clock
CMD, cmd	Command
CME	Core management engine
CMOS	Complementary metal-oxide semiconductor
CMSK	Logical built-in self test (LBIST) channel mask
CO	Cast-out
CP	Chip pump
CPB	Coprocessor parameter block
CPI	Cycles per instruction
CPLT	Chiplet
CPLT_CTRL	Chiplet control
CPM	Critical path monitor
CPPM	Core PCB-slave power management macro (PPM)
CPS	Cycle-per-step
CQ	1. Common queue. Refers to the interface to the SMP interconnect. 2. Completion queue
CRC	Cyclic redundancy check
CRESP	Combined response
CS	Chip select
CSID	Chip select ID
CSN	Chip select (inverted)
CTL	Control
CTLE	1. Continuous time linear equalization 2. Continuous time linear equalizer
CTRL	Control
D/A	Display/alter
DAC	Digital-to-analog converter
DACTEST	DAC test
DBG	Debug
DBSR	Debug Status Register
DC	Direct current
DCACHE	Data cache
DCBZ	Data cache block set to zero
DCD	Duty cycle distortion

DCM	Dual-chip module
DCTEST	This is a mode where test operations are executed at very low frequencies.
DDR	Double data rate
DDR3	Double data rate type three
DDR4	Double data rate type four
DDRPHY	Double data rate physical interface
DEC	Decrementer
DERR	Distributed elastic round robin
DFE	1. Decision feedback equalization 2. Decision feedback equalizer
DFI	DDR PHY interface bus
DFT	Design for test
DGEN	Data pattern generator
diag	Diagnostic
DIMM	Dual in-line memory module. A small circuit board with memory-integrated circuits containing signal and power pins on both sides of the board.
DIN	Data in
DL	Downlink
DLDCH	Downlink data channel
DLL	1. Delay-locked loop 2. Dynamic link library
DLL/VREG	Delay-locked loop/voltage regulator
DLL/ZCAL	Delay-locked loop/impedance (Z) calibrator
DMA	1. Direct memory access. A technique for using a special-purpose controller to generate the source and destination addresses for a memory or I/O transfer. 2. Direct memory attach
DP16	Data path 16
DPC	DIMMs per port
DPLL	Digital phase-locked loop
DPLLFREQ	DPLL frequency control
DQ	1. Data 2. Data bit
DQS	Data strobe
DQSCLK	Data strobe clock
DR	1. Data Relocate bit in MSR (MSRDR) 2. Dynamic reconfiguration. The capability of a system to adapt to changes in the hardware/firmware physical or logical configuration, and to be able to use the new configuration, all without having to turn the platform power off or restart the operating system. See the *Power Architecture Platform Requirements (PAPR)* document for more information.

DRAM	Dynamic random-access memory. Storage in which the cells require repetitive application of control signals to retain stored data.
DRTM	Dynamic root of trust for measurement
DSI	Data storage interrupt.
DSM	Digital state machine
DSMP	Distributed symmetric multiprocessing
DTS	Digital thermal sensor
EA	Effective address. An address generated or used by a program to reference memory. A memory-management unit translates an EA to a virtual address (VA), which it then translates to a real address (RA) that accesses real (physical) memory. The maximum size of the effective-address space is 264 bytes.
EAT	1. Effective address translation 2. Event assignment table
ECC	See error correction code
EDAT	Even data
EDI	Elastic differential interface. A bus that consists of high-speed differential I/O links. The memory bus instance of an EDI bus is a “DMI bus,” and the off-module, fabric bus (between processors) instance of an EDI bus is an “A bus.”
EDR	Error Data Register
eDRAM	Embedded dynamic random access memory
EH	Exclusive access hint
EICR	Error Inject Control Register
EIIR	External Interrupt Injection Register
EIMR	External Interrupt Mask Register
EINR	External Interrupt Input Register
EIPR	External Interrupt Polarity Register
EISR	External Interrupt Status Register
EITR	External Interrupt Type Register
ELPR	Error Log Pointer Register
EM	Electron migration
EMC	Extended memory controller
ENOP	End sync/wait step; no operation
EOT	End of transfer
EPS	1. Entry-level power supply 2. Pervasive end points
EQ	Event queue
ERAT	Effective-to-real-address translation, or a buffer or table that contains such translations, or a table entry that contains such a translation.
ERR	Error

error correction code	A code appended to a data block that can detect and correct bit errors within the block.
ERRSUM	Error summary
ERS	Early read start
ETE	Error threshold exceeded
ETU	Express transaction unit
EXT	JTAG EXTEST instruction mode
FARB	Final arbiter. Part of the memory interface command sequencer (scheduler).
FARR	Fast array unload
FBC	Fabric bus connection
FET	Field-effect transistor
FFDC	First failure data capture. A collection of data used upon fail to analyze the root cause of the failure.
FIFO	First in, first out. Refers to one way elements in a queue are processed. It is analogous to “people standing in line.”
FIR	Fault Isolation Register. Register bits that show which piece of hardware failed.
FMAX, fmax	Maximum frequency
FMIN, fmin	Minimum frequency
FMULT	Frequency multiplier
FPGA	Field-programmable gate array
FSAFE	Safe frequency
FSI	1. Flexible service interface. The FSI covers all resources, except FSI slave 0 and slave 1, when addressed from an external service element via the FSI. 2. FRU support interface
FSI2PIB	FRU support/service interface to the pervasive interconnect bus
FSM	Finite state machine
FSP	Flexible service processor. An embedded controller for internal system control tasks in IBM Power Systems™. In addition to the processor core, the following I/O interfaces are integrated into the embedded controller: I²C, JTAG, UART, GPIO, FSI.
FUNC	Functional
FW	Firmware
FWMR	Firmware Mode Register
Gbps	Gigabits per second
GCR	Global control ring
glsmux	Glitchless multiplexer
GND	Ground
GPE	General-purpose engine

GPIO	General-purpose input/output
GPO	Global PHY offset
GPR	General Purpose Register
GPTR	General Purpose Test Register
GZIP	A file format used for file compression and decompression.
H/W	Hardware
HCA	1. Host channel adapter 2. Hot/cold affinity
HID	Hardware implementation dependent
HIRES	High resolution
HLD	High-level design
HMER	Hypervisor Maintenance Exception Register
HMI	Hypervisor maintenance interrupt
HP	High performance
HPC	High-performance computing
HSS	High-speed serial
HTB	Hierarchical test block
HTML	Hypertext Markup Language
HW	Hardware
HWCTRL	Hardware control
HYP	Hypervisor
I/O	Input/output
IAR	Instruction Address Register
IAUE	Intermittent array uncorrectable error
IC	Integrated circuit
ICACHE	Instruction cache
ICE	Intermittent chip error
ICP	Interrupt control presenter
ICRR	Inter-CME Communication Receive Register
ICS	Interrupt controller source
ICSW	Initiate coprocessor store word
ID	Identification
IDCR	IVRM Dropout Configuration Register
IE	Input enable
IEEE	Institute of Electrical and Electronics Engineers

IF	Interface
IFU	Instruction fetch unit
IMA	In-memory accumulate
IMA/PPE/HTM	In-memory accumulate/Power PC® element/hardware trace macro
IMPE	Intermittent mark placed error (MPE)
INIT	Initialization
INOP	Initial sync/wait step; no operation
INT	INTEST instruction support. The INTEST instruction can be triggered through JTAG or through register control.
INTP	Interrupt presenter
INV	JTAG enable inversion macro
IO or I/O	Input/output
IOBIST	Input/output built-in self test
IOOPPE	PPE used for control of I/O macros
IOP	1. I/O processor 2. Internal operation
IOTK	I/O toolkit
IP	1. Interrupt Prefix bit in MSR (MSRIP) 2. Internet protocol
IPL	1. Initial program load. The time between when power is applied to the platform hardware and when the payload is fully functional. 2. Interrupt presenter layer
IPW	Initial pattern write
IR	1. Infrared 2. Instruction Relocate bit in the MSR register (MSRIR)
IRCD	Intermittent register clock driver
IS	Industry standard
ISA	Instruction set architecture
ISU	1. Instruction sequencing unit 2. Interrupt source unit
ITR	Inherent time redundancy
IUE	Intermittent uncorrectable error
IVRM	Internal Voltage Regulation Module
IVRMCR	IVRM Control Register
IVRMDVR	IVRM Data Value Register
JEDEC	Formerly the Joint Electron Device Engineering Council
KHz	Kilohertz
L2SFF	Level 2 (L2) star flip flop
LBIST	Logical built-in self test

LBS	LBIST
LBUS	Local bus
LCB	1. Local clock buffer 2. Logon control block
LEM	Local error macro
LFSR	Linear Feedback Shift Register
LPID	Logical partition identification
LRDIMM	Load-reduced dual in-line memory module
LSB	Least-significant bit or byte
M/S	Master/slave
MA	Memory address
malf	Malfunction alert
MASK	A pattern of bits used to accept or reject bit patterns in another set of data. Hardware interrupts are enabled and disabled by setting or clearing a string of bits, with each interrupt assigned a bit position in a mask register.
MB	1. Mailbox 2. Megabyte
MBA	Memory buffer asynchronous
MBASE	Memory base
Mbps	Megabits per second
MBR	Member
MBS	Memory buffer synchronous
MC	1. Memory channel 2. Memory controller
MCA	The portion of the memory controller that runs synchronously to the memory interface.
MCB	The portion of the memory controller that runs synchronously to the DMI interface.
MCBCM	Memory controller built-in self-test compare mask
MCBCMQ	Memory Controller Built-In Self-Test Compare Mask Register
MCBIST	Memory card built-in self test
MCBIST-RQ	Memory controller built-in self-test to sequencer reorder queue interface
MCBMCAT	Memory controller built-in self-test maintenance current address trap
MCD	Memory coherency directory
MCE	1. Machine check exception 2. Mark corrected error 3. Marked chip correctable error
MCHK	Machine check
MCU	Memory control unit

MDI	Memory directory indicator. The MDI bit specifies the current scope of the data (local versus global).
MEM	Memory
MEMCTL	Memory control
MEMCTLCLKI	Memory controller interface clock
MEMINT	Memory interface
MEMINTCLKO	Memory interface clock
MFSI	Master flexible service interface
MHz	Megahertz
MIB	Memory interface bolt-on. Enables the programmable PowerPC-lite engine (PPE) to access its local memory and pervasive interconnect bus (PIB) interface.
MISO	Master input/slave output
MISR	Multiple Input Shift Register
MMIO	Memory-mapped input/output. Refers to the mapping of the address space required by an I/O device for Load or Store operations into the system's address space.
MOSI	Master output/slave input
MPE	Mark placed error
MPR	Multipurpose Register
MPW	Modify pulse width
MR7	Mode Register 7
MRS	Mode register set
MSB	Most-significant byte
MSGSND	Message send
MSR	Machine State Register
MT/s	Megatransfers per second
MTMSR	Move to Machine State Register instruction
MTSPR	Move to Special Purpose Register instruction
MULT	Multiplier
Multiple ranks	More than one rank of memory modules, where the data buses from each rank are connected to a common data bus of a single port. Data bus connections have multiple drops equal to the number of ranks attached. When more than one rank exists, this memory is depth-expanded memory.
MUX	Multiplexer
N/A	Not applicable
N/M	Memory command throttling mechanism specifying how many (N) commands are allowed to be issued to memory within every M-wide time window.
N/P	N-channel or p-channel transistor type

N1L	The name of a type of latch
NA	Not applicable
NACK	Negative acknowledgment
NBTI	Negative bias temperature instability
NC	Not connected; that is, the data cannot be written or read by that access.
NCE	New correctable error
NCF	NVIDIA® NVLink™ configuration fatal
NCLK	Nest clock
NCU	Noncacheable unit
NCX	Same as NC, but unstable (can be changed functionally)
NFET	Negative field-effect transistor
NHTM	Nest hardware trace macro
NM	See N/M.
NMMU	Nest memory management unit
NOP	No operation. A single-cycle operation that does not affect registers or generate bus activity.
NPU	NVLink processing unit
NVF	NVLink fatal
NVLD	Non-valid read/write data address
NVT	NFET threshold voltage
NX	Nest accelerator
OCB	On-chip controller (OCC) control bridge
OCC	On-chip controller. Provides power and thermal management, power cap enforcement, over-temperature protection, and low-power mode management.
OCCERRPT	OCC Error Reporting Register
OCI	On-chip-controller interface. Interface used by power management.
ODAT	Odd data
ODT	On-die termination
OE	Output enable
OEAR	OCI Error Address Register
OESR	OCI Error Status Register
OF	Open firmware
OHA	On-chiplet hardware assist
OISR	OCC Interrupt Source Register
OITR	OCC Interrupt Type Register

OJCFG	OCC JTAG Configuration Register
OJIC	OCC JTAG Instruction and Control Register
OJSTAT	OCC JTAG Status Register
OJTDI	OCC JTAG TDI Register
OOB	Out-of-band bus
OPB	On-chip peripheral bus
OPCG	On-product clock generator
OPCGGO	On-product clock generator “GO” signal
OR write	Current register content is ORed with write data and the result is stored in the register (access type WO_OR/WOX_OR).
OS	1. Open source 2. Operating system
OSC	Oscillator
OSCSW	Oscillator switch
OTP	One-time programmable
OTPROM	One-time programmable read-only memory
p2s	Parallel-to-serial machine
PBA	1. Pending bit array 2. Per buffer addressability 3. Power management processor bus interface 4. Power bus access (used by power management)
PBAX	PBA messaging
PC	1. Performance counter 2. Personal computer 3. Pervasive core unit 4. PHY control
PCB	1. Pervasive control bus. Processor logic that provides a generic, modular structure for communication between pervasive (glue logic between chiplets) elements. The PCB is used for read and full write access. 2. Printed circuit board
PCBIF	Pervasive control bus interface
PCBMS	PCB multiplexer
PCBSLAVE	Pervasive control bus slave macro
PCI	Peripheral Component Interconnect. An all-encompassing term referring to conventional PCI, PCI-X, and PCI Express.
PCIEX	Peripheral Component Interface Express
PCIS	The synchronous part of the PCI domain
PCLK	Processor clock
PD	1. Power down 2. Presence detect
PDA	Per DRAM addressability

PDR	Power Down Register
PE	1. Parity error 2. Partitionable endpoint. The smallest entity that can be partitioned in endpoint partitioning. 3. Product engineering
PEC	PCI Express controller
PECE	Power-savings exit control enable
PECESR	PECE Sample Register
PERCAL	Periodic calibration
PERV	Pervasive
PF	1. Pad fill keyword 2. Physical function. The physical function of an IOV adapter. For more information, see the PCI-SIG *I/O Virtualization (IOV) Specifications*. 3. Prefetch machine
PFET	Positive field-effect transistor
phase rotator step	Phase rotators are used extensively within the DDR PHY to adjust delays of signals. Each phase rotator has 128 phase-rotator steps in a clock period. Therefore, delay values, or phase-rotator settings, have a granularity of 1/128 of a clock period.
PHB	1. PCIe host bridge. An entity that attaches a PCIe bus to the system. 2. Power Systems host bridge
PHY	Physical layer
PHYP	Power hypervisor
PHYTOP	Physical layer top of hierarchy
PIB	Pervasive interconnect bus. A bus that provides access from masters through external interfaces and internal masters to common PIB attached slaves. The PIB is used for read and full write access.
PIB/LPC	Pervasive interconnect bus/low pin count
PIBMEM	Memory attached to the PIB bus and used by the self-boot engine (SBE)
PID	Process ID
PIG	Programmable interrupt generator
PIN	External C4 chip input pin
PIT	Programmable interval timer
plat	Pipeline staging latch
PLL	Phase-locked loop
PLLREG	Phase-Locked Loop Register
PM	Power management
PMC	1. Performance monitor counter 2. Power management control
PMCR	Power Management Control Register

PMCRS	Power Management Control Register shadow
PMISC	Pervasive miscellaneous
PMU	Performance monitor unit
POR	Power-on reset
port	A memory interface of variable width, consisting of an address/command bus and a data bus, connected to one or more ranks of memory. When multiple ranks are connected to a port, this memory is depth-expanded memory.
PPE	Programmable PowerPC-lite engine
PPM	1. Parts per million 2. PCB-slave power-management component
PPMPIG	PPM programmable interrupt generator
PR	1. Phase rotator 2. Privileged bit in the MSR (MSRPR)
PRBS	Pseudo-random binary sequence
PRD	Processor runtime diagnostic
PRE	Mnemonic for the DDR3 and DDR4 precharge command
PRESP	Processor response
PRPG	Pseudo-random pattern generator
PSC	Parallel-to-serial communication
PSCOM	Parallel-to-serial communication
PSCOMLE	Parallel-to-serial communication light edition
PSCR	Processor Stop Control Register
PSCRS	Processor Stop Control Register shadow
PSI	Processor support interface
PSRO	Performance sort-ring oscillator
PSU	Power supply unit
PUP	Pull-up
PURR	Processor Utilization Resource Register
PVREF	Precision voltage reference
PVT	Process voltage temperature
PVTN	Process voltage temperature N-type field effect transistor
PVTP	Process voltage temperature P-type field effect transistor
PW	Partial write
QACSR	Quad Analog Clock Status Register
QCSR	Quad Configuration Status Register
QFMR	Quad Frequency Measurement Register

QIDSR	Quad/Cache IVRM Dropout Sample Register
QMFR	Quad Frequency Measurement Register
QOS, QoS	Quality of service. This usually relates to a guarantee of minimum bandwidth for streaming applications.
QPMMR	Quad Power Management Mode Register
QPMMR[FSAFE]	A field in the QPMMR register to indicate the safe frequency to drop to in the event a heartbeat is lost.
QPPM	Quad PCB slave power management (cache)
R/W	Read/write
RA	Real address. An address for physical storage, which includes physical memory, local storage, and memory-mapped I/O registers. The maximum size of the real address space is 262 bytes.
RAM	1. Random-access memory 2. Resource allocation management
RAMDBG	A register that provides access to the PPE core's XIR3 debug register
RAMEDR	A register that provides access to the PPE core's XIR4 debug register
RAMGA	A register that provides access to the PPE core's XIR2 debug register
RAMRA	A register that provides access to the PPE core's XIR1 debug register
Rank	One or more memory modules that have a common command/address bus, a common chip select, and separate data bus connections. When more than one memory module exists, this memory is width-expanded memory.
Rank group	Up to four ranks of memory that have nearly identical timing characteristics such that the same DDR PHY delay and configuration values can be used to access all ranks. This configuration allows resources in the DDR PHY to be shared.
RAS	1. Reliability, availability, and serviceability. A combination of design methodologies, system policies, and intrinsic capabilities that, taken together, balance improved hardware availability with the costs required to achieve it. Reliability is the degree to which the hardware remains free of faults. Availability is the ability of the system to continue operating despite predicted or experienced faults. Serviceability is how efficiently and nondisruptively broken hardware can be fixed. 2. Row-address strobe
RASN	Row-address strobe (inverted)
RC	1. Read control 2. Root complex. Connects a PCIe bus into the system.
RCD	Register clock driver
RCD/LRDIM	Register clock driver/load-reduced dual in-line memory module
RCE	Retry CE: A correctable data error (CE) that occurs on the retry of a previous read.
RD	Read
RDATA	Read data
RDCLK	Read clock
RDDACK	Read acknowledgment

RDIMM	Registered dual in-line memory module
RDIV	Reference clock divide
RECR	Read ECC Control Register
REF	Mnemonic used for the DDR3 and DDR4 refresh command.
REFCLK	Reference clock
REG	Register
REGF	Register file
REPR	Array repair
REQ	Request
RFIR	Recoverable FIR
RISC	Reduced instruction set computing
RISCTRACE	A tool used to reconstruct a code flow from a hardware debug trace
RJR	Receiver random jitter
RLDRAM	Reduced latency dynamic random access memory
RLO	Read latency offset
RMW	Read-modify-write
RNG	Random number generator
RO	Read only
ROM	Read-only memory
ROX	Read only but unstable. Can be changed functionally. Hardware can change the value between reads of the register.
RRQ	Read reorder queue
RTL	Register transfer level
RTT	Requester ID (RID) translation table
RTY	Retry
RUN-N, RUNN	Run the engine for N cycles
RUNTIMECTRQ	Runtime counter facility
RW	Readable and writable
RW_WAND	Readable and writable. A write ANDs written data with existing data and stores the result.
RW_WCLEAR	Readable and writable. Any write to the address clears the bits regardless of value.
RW_WOR	Readable and writable. A write ORs written data with existing data and stores the result.
RWITM	Read with intent to modify
RWX	Same as RW, but unstable. Can be changed functionally.
RWX_WAND	Same as RW_WAND, but unstable. Can be changed functionally.

RWX_WCLEAR	Same as RW_WCLEAR, but unstable. Can be changed functionally.
RWX_WCLRPART	Same as RW_WCLRPART, but unstable. Can be changed functionally.
RWX_WOR	Same as RW_WOR, but unstable. Can be changed functionally.
RWX_WSETPART	Same as RW_WSETPART, but unstable. Can be changed functionally.
RX	Receive
RXBIST	Receive built-in self test
RXCTL	Receive control
SAB	Secure access bit
SBASE	SRAM base address in the core management engine (CME), used by the CME block copy engine (BCE)
SBE	1. Self-boot engine. Initializes the processor chip and then loads or invokes the hostboot IPL firmware base image. 2. State bit entry
SC	Store clean (transactional memory value before a speculative store)
SCAN	Refers to shifting groups of latch states internal to a chip to read or write them when functionally not in use.
SCE	Symbol mark corrected error
SCM	Single-chip module
SCOM	Serial communications. SCOM is used for read and full write access.
SCOM1	Serial communications 1. SCOM1 is used for AND write access.
SCOM2	Serial communications 2. SCOM2 is used for OR write access.
SDM	Secure debug mode
SE	1. Scan enable 2. Single-step trace enabled bit in the MSR (MSRSE)
SEC	Single error correction
SEEPROM	Serial electrically erasable programmable read-only memory. An EEPROM memory device that can only be read, but which can be reprogrammed by an external programmer. Note that the hostboot is able to initiate writes to SEEPROMS connected to the circuit board through a serial bus.
SEL	Select
SEQ	Sequencer
SG	Scan gate
SHA	Secure hash algorithm
SIB	Service interface bolt-on. Allows the GPE to communicate with the PIB and the I^2C interface.
SICR	Stop Interface Control Register
Single rank	One rank of memory modules, where all the data bus connections are wired point-to-point to the DDR PHY. The data bus connections include read data, write data, read clocks/strobes, and write clock/strobes.
SIR	Security Isolation Register. Similar to a Fault Isolation Register.

SISR	Stop Interface Status Register
SKEWADJ	Analog clock skew adjust macro
SLB	Segment lookaside buffer. This buffer is used to map an effective address to a virtual address.
SM	State machine
SMDR	Same master rank, different slave rank
SMP	Symmetric multiprocessing
SMT	1. Simultaneous multithreading 2. Surface mount
SN	Snoop machine
SNOE	Scan net optimization enhancement
SNOP	Start sync/wait step; no operation
SOI	Silicon-on-insulator
SP	Service processor
SPATTN	Special attention
SPCIF	Specification
SPI	Serial peripheral interface. Refers to a 4-wire, serial, full-duplex bus with masters and slaves. Commonly used to interface with sensors, control devices, and so on in embedded systems.
SPR	Special-purpose register
SPRD	Special-purpose register data
SPS	1. Steps per sync 2. Sleep Pstate
SPURR	Scaled Processor Utilization Resource Register
SRAM	Static random access memory
SRC	Service reference code
SRQ	Store reorder queue
STEP	Supplier test enablement program
STR	Self time refresh
SUE	Special uncorrectable error
SUE/UE	Special uncorrectable error/uncorrectable error
SW	Software
SYNC	Synchronize
SYS	System
SYSCLK	System clock
TB	Time base
TBD	To be determined

TC	Traffic class. In PCIe, this defines a priority between PCI transactions within a virtual channel (VC).
TCE	1. Translation control entry. Used to translate an I/O address page number to a real page number in system memory. 2. Two-symbol correctable error
TCK	JTAG clock; test clock
TDI	Test data in
TDM	1. Time division multiplexed 2. Time domain multiplexing
TDM command mode	A DDR PHY configuration that supports two ports that share a common address/command bus. The addresses and commands for both ports are time division multiplexed on the common address/command bus. Individual chip selects select which ranks respond to a given address/command. Ranks connected to different ports can be selected to respond to the same command.
TDO	Test data out
TDR	1. Translation control entry (TCE) data random-access memory (RAM) 2. Time-domain reflectometry
TE	Test enable
TFMR	Time Facility Management Register
THD	Thread
TI	Terminate immediately
TID	Thread ID
TLB	Translation lookaside buffer. An on-chip cache that translates virtual addresses (VAs) to real addresses (RAs). A TLB caches page-table entries for the most recently accessed pages, thereby eliminating the necessity to access the page table from memory during load-store operations.
TLBI	Translation lookaside buffer invalidate
TLBIE	Translation lookaside buffer invalidate entry instruction
TM	Transactional memory
TMR	Timer
TMS	Test mode select
TOD	Time of day
TPM	1. Top of peripheral memory 2. Trusted platform module
TPMD	Trusted platform module
tREFI	Refresh interval
TSV	Trans silicon via
TWSM	Table walk state machine
TX	Transmit
TXBIST	Transmit built-in self test

TXCTL	Transmit control
TZ	Tile zone
UDE	Unconditional debug event
UE	Uncorrectable error
UI	1. User interface 2. Unit interval
UL	Uplink
ULCCH	Uplink control channel
ULDCH	Uplink data channel
UMAC	User-mode access control
VAS	Virtual accelerator switchboard
VC	Virtual channel
VCC	Voltage supply
VCO	Voltage controlled oscillator
VCTR	VDM Count Threshold Register
VDCR	VDM Droop Count Register
VDM	Voltage droop monitor
VDSR	VDM Data Sample Register
VECR	VDM Event Count Register
VGA	1. Variable gain amplifier 2. Video graphics array
VHDL	VHSIC hardware description language
VHSIC	Very high speed integrated circuit
VID	Voltage identification
VIO	Voltage I/O
VITL	Vital
VMEAS	Voltage measurement
VMX	Vector multimedia extension
VNCR	VDM Non-Droop Count Register
VPAD	Pad voltage
VPROTH	Voltage protect high
VREF	Voltage reference
VREG	1. Voltage regulator 2. Voltage regulation
VRM	Voltage regulator module
VSU	Vector scalar unit
VT	Voltage control

WAT	Workaround macro
WC	1. Worst case 2. Write control
Wdata, WDATA	Write data
WDF	Designator for the memory controller's read-modify-write data flow and associated control.
WDFCFG	Configuration facilities for the WDF logic.
WECR	Write ECC Control Register
WEN	Write enable
WLO	Write latency offset
WO	Write only
WO_1P	Write only; one pulse length is equal to one register cycle.
WO_AND	Same as RW_WAND, but the bits are write-only.
WO_CLEAR	Same as RW_WCLEAR, but the bits are write-only.
WO_CLRPART	Same as RW_WCLRPART, but the bits are write-only.
WO_n_mP	Write only pulsed. A write of ‘1’ creates a pulse for a minimum of n register clocks and a maximum of m register clocks. A read returns ‘0’.
WO_nP	Write only pulsed. A write of ‘1’ creates a pulse for n register clocks. A read returns ‘0’.
WO_OR	Same as RW_WOR, but the bits are write-only.
WO_SETPART	Same as RW_WSETPART, but the bits are write-only.
WOF	1. Who's on first? 2. Workload optimized frequency
WOX_AND	Same as WO_AND, but unstable. Can be changed functionally.
WOX_CLEAR	Same as WO_CLEAR, but unstable. Can be changed functionally.
WOX_CLRPART	Same as WO_CLRPART, but unstable. Can be changed functionally.
WOX_n_mP	Same as WO_n_mP, but unstable. Can be changed functionally.
WOX_nP	Same as WO_nP, but unstable. Can be changed functionally.
WOX_OR	Same as WO_OR, but unstable. Can be changed functionally.
WOX_SETPART	Same as WO_SETPART, but unstable. Can be changed functionally.
WR	Write
WRCNTL	Write control
WRD	Write data. Designator for the portion of the memory controller's write data flow that generates the outbound memory ECC check bits.
WRQ	Write reorder queue
WRT	Designator for the memory controller's write data flow.
WRTCFG	Configuration facilities for the memory controller's WRT logic.

XBUS	Note: This is not really an acronym but a name (X bus).
XCR	External Control Register
XER	Fixed-Point Exception Register
XFIR	X Fault Isolation Register
XIR	1. External Interface Register 2. External interface to the PPE IR Register
XIVR	External Interrupt Vector Register for the OCC (405)
XOR	Exclusive OR
XSCOM	Extended SCOM. Special, fast SCOM that allows the processor cores to directly SCOM the PIB. Processor buses must be enabled to the slave processor chips for the master processor to XSCOM them.
XSR	External Status Register for PPE
XSTOP	Checkstop
ZCAL	Impedance (Z) calibration
ZCNTLCPURO	Periodic impedance (Z) calibration
ZCONTROL	Impedance (Z) control
ZQ	I/O impedance
ZQCal	I/O impedance calibration

1. POWER9 Processor Overview

The POWER9 processor is a superscalar symmetric multiprocessor designed for use in servers and large-cluster systems. It uses 14 nm technology with 17 metal layers. The POWER9 processor can have up to 24 cores enabled on a single chip. It supports direct-attach memory. It supports a maximum symmetric multiprocessing (SMP) size of two sockets and is targeted for scale-out workloads. Each POWER9 core supports up to four threads using simultaneous multithreading (SMT). The SMT can be dynamically tuned so that each core has one, two, or four threads

This document describes the POWER9 registers and related accessing method.

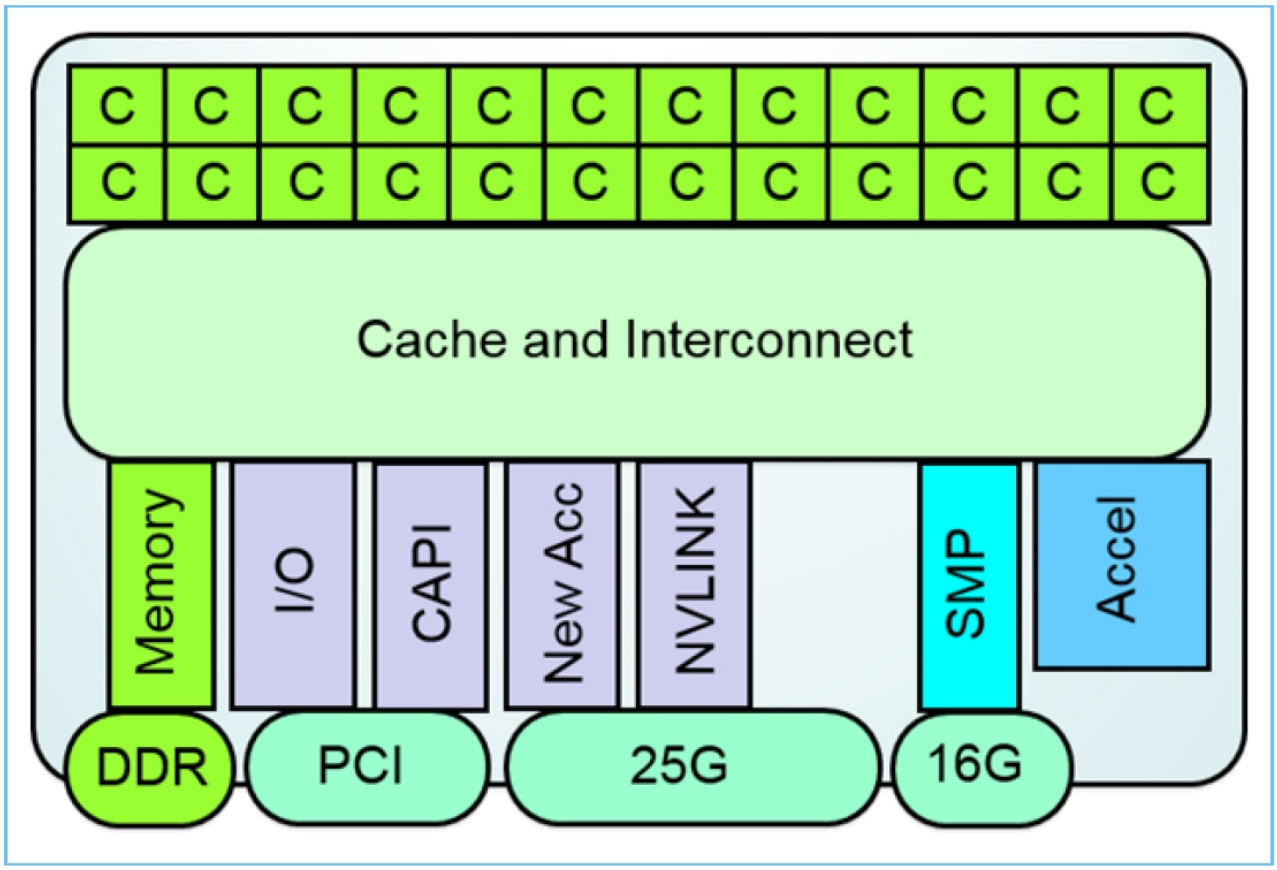
1.1 POWER9 Processor Features

Figure 1 on page 32 shows the POWER9 processor, which supports the following features:

- Twenty-four POWER9 chiplets, which contain one POWER9 core, an L2 cache, and an L3 cache.
  - On-chip accelerators.
  - Coherent Accelerator Processor Interface (CAPI), which enables an FPGA or ASIC to connect coherently to the POWER9 processor SMP interconnect via the PCIe bus.
  - On-chip compression, encryption, and data movement initiated by the hypervisor, GZIP engine, or nest MMU to enable user access to all accelerators.

    - In-core user invocation of encryption using the Advanced Encryption Standard (AES) and the secure hash algorithm (SHA).
- Two memory controllers that support direct-attached DDR4 memory:
    - Support four direct-attach memory buses (DDR 0, 1, 6, and 7).
    - Support ×4 and ×8, 4 - 16 Gb DRAMs and 3D stacked DRAMs.
    - Support registered dual in-line memory modules (RDIMMs) and lad-reduced dual in-line memory modules (LRDIMMs).
- Processor SMP interconnect.
    - Supports one inter-node SMP X bus link.
    - Maximum two-socket SMP.
- Three PCIe controllers (PEC) with 16 lanes of PCI Express Gen 4 I/O.
    - PEC0: one ×16 lanes.
    - PEC1: two ×8 lanes (bifurcation).
    - PEC2: one ×16 lane mode, two ×8 lanes (bifurcation), or one ×8 lane and two ×4 lanes (trifurcation).
    - PEC0 and PEC2 support CAPI 2.0.
- Power management.
- Pervasive interface.

Figure 1: POWER9 Processor General Diagram



1.2 POWER9 Processor Pervasive Structure

Figure 2 on page 33 shows the POWER9 chip from a pervasive-centric point of view. The different colors denote different chiplets from a pervasive perspective. Each chiplet consists of one global clock controller and multiple local clock controllers, which enable a chiplet to service multiple different clock regions. Multiple clock regions can run at the same frequency, but can be turned off independently. The chip contains 24 cores capable of running at different frequencies. The pervasive logic supports these 24 cores.

Figure 2: POWER9 Processor from a Pervasive Point of View

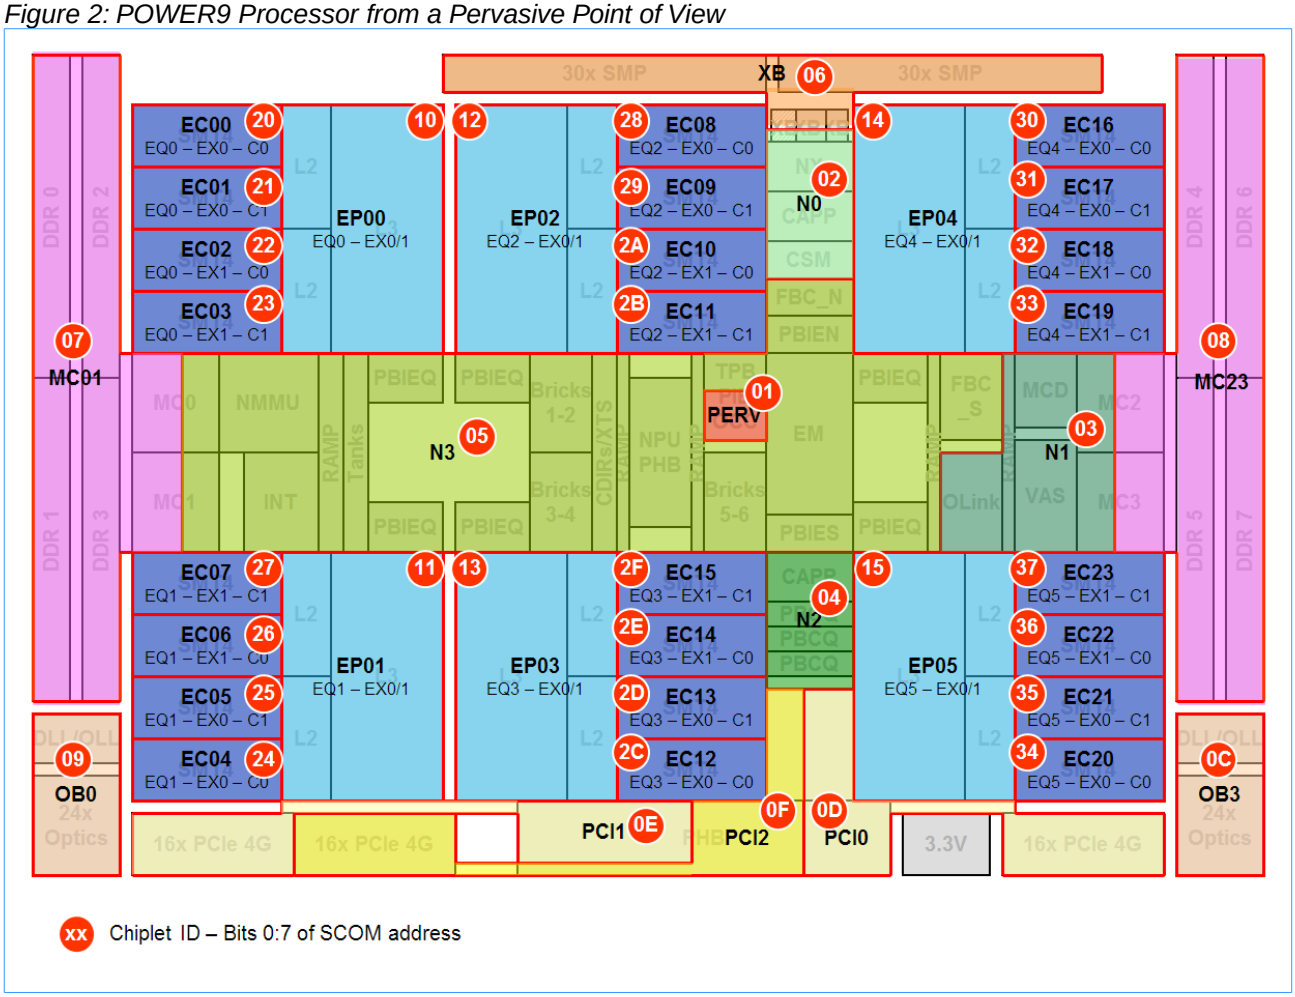


Figure 3 on page 34 lists the chiplets in the design, and their controlling pervasive blocks, by chiplet ID.

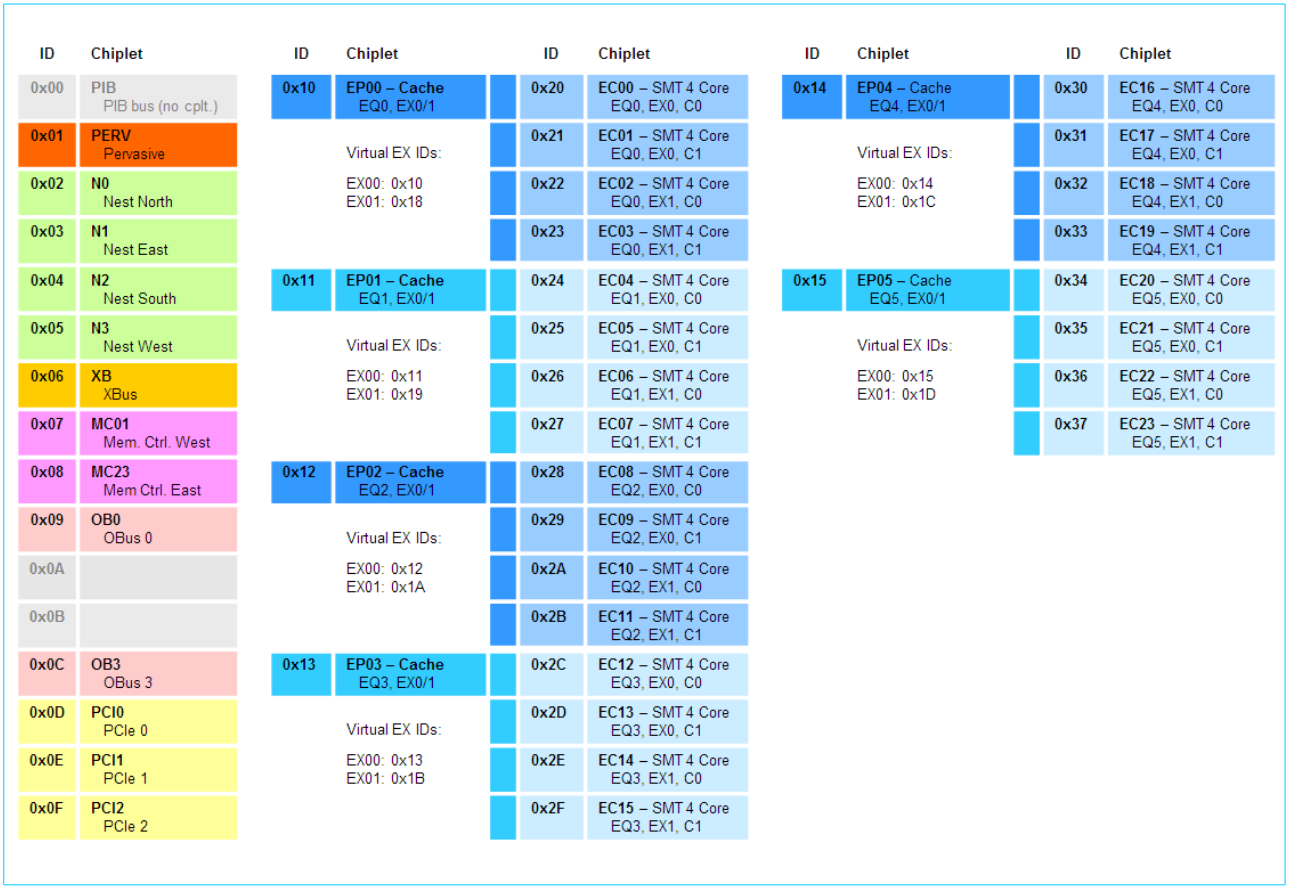
Figure 3 POWER9 Chiplets and IDs



ID	Chiplet
0x00	PIB PIB bus (no cplt.)
0x01	PERV Pervasive
0x02	N0 Nest North
0x03	N1 Nest East
0x04	N2 Nest South
0x05	N3 Nest West
0x06	XB XBus
0x07	MC01 Mem. Ctrl. West
0x08	MC23 Mem Ctrl. East
0x09	OB0 OBus 0
0x0A	
0x0B	
0x0C	OB3 OBus 3
0x0D	PCI0 PCIe 0
0x0E	PCI1 PCIe 1
0x0F	PCI2 PCIe 2

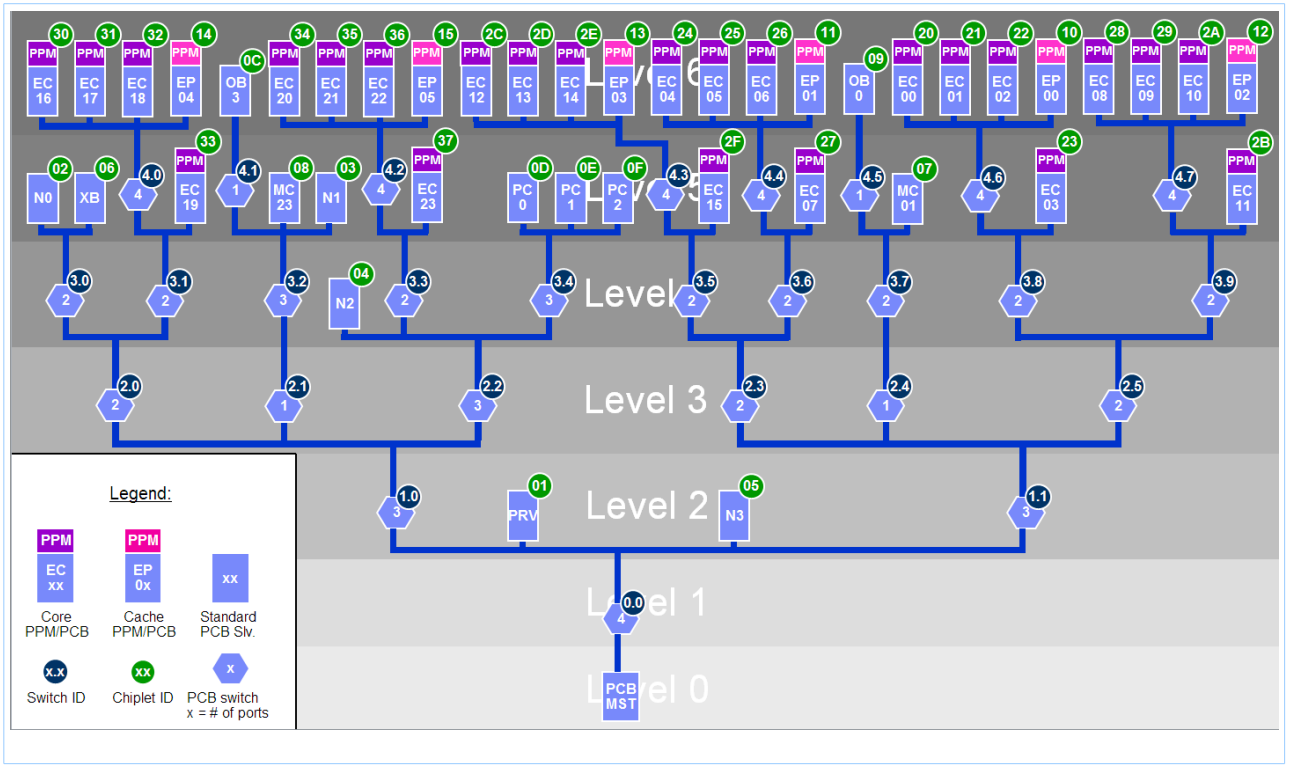
1.2.1 Pervasive Control Bus and Pervasive Interconnect Bus

The pervasive control bus (PCB) provides a generic, modular structure for communication between the pervasive elements. The PCB provides the POWER9 pervasive unit with an interface to the pervasive functions on the various POWER9 processor chiplets. For this purpose, a PCB master is implemented inside the POWER9 pervasive logic. This master, by means of the PCB interconnect, communicates with the PCB slave located in each chiplet. The PCB master sends commands, such as read and write requests, to the PCB slaves. The slaves, on the other hand, respond to the commands received from the master, and also notify the master of interrupts that occur in the slave's chiplet.

Figure 4 on page 35 shows the PCB structure that services all the chiplets.

Figure 4: Pervasive Control Bus Structure and Chiplets



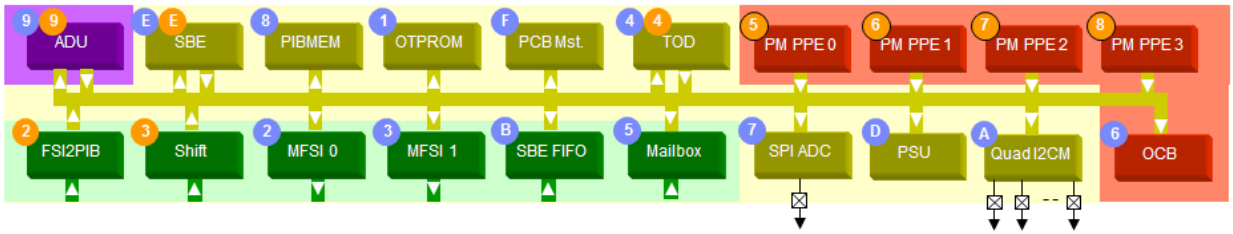
The PCB switch features two independent channels for the PCB topology. The downstream input channel provides a fan-out to the downstream output ports, which are connected either to another switch in a multistage topology or directly to a slave. The upstream output channel is arbitrated between requests from the upstream input ports, which is the case when replying to a multicast operation.

The pervasive interconnect bus (PIB) provides access from the masters via the external interfaces and the internal masters to the common PIB-attached slaves. *Figure 5* on page 36 shows the PIB masters and slaves.

- The external interfaces include the I²C slave and the flexible service interface (FSI).
- The internal masters include the FSI shift engine, FSI2PIB, and the XSCOM/alter-display unit (ADU).
- The PIB-attached slaves include the PCB master, PIB2OPB, general-purpose register (GPR), I²C master, and the I²C slave.

The PIB facilitates transactions between multiple PIB masters and multiple PIB slaves. For each transaction, the PIB arbiter establishes a point-to-point connection between a single requesting master and a single slave uniquely addressed by the master.

Figure 5: PIB Masters and Slaves



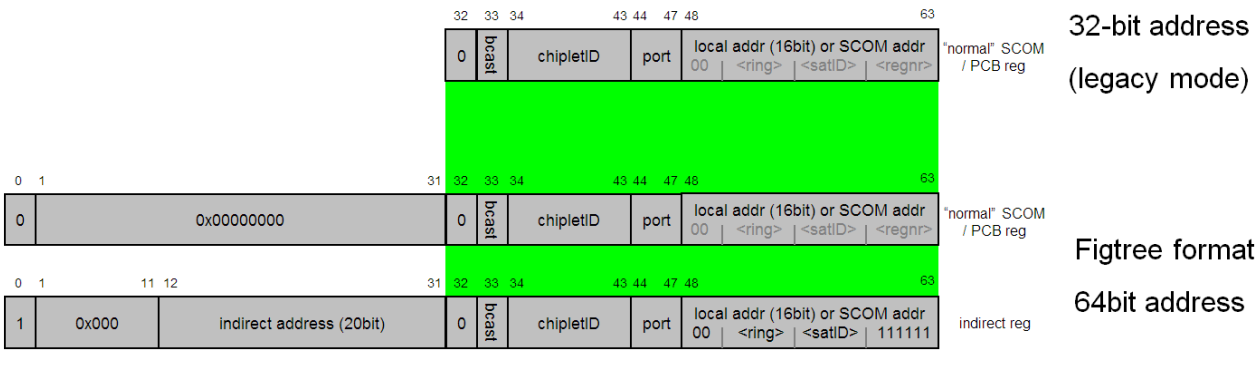
- Pervasive Interconnect Bus (PIB):
  - 9 PIB master (2x CFAM, 4x OCC, 1x Bridge, 2x PIB domain)
  - 13 PIB slaves (4x CFAM, 1x OCC, 1x Bridge, 7x PIB domain)
- Pervasive Connect Bus (PCB):
  - Root in PIB (PCB Master)
  - Provides tree-like switch network to all chiplets
  - 30 Chiplets defined as of now
- PIB & PCB domain run at 465 - 600 MHz (Nest Clock 4:1)
- PIB & PCB domain get initialized (scan0 & clock start) by the pervasive clock controller which is controlled by the new *CFAM Boot Sequencer* (CBS)
- PIB & PCB are trusted domains – no direct access from Service Elements (FSP/BMC) in secured chips

ID #	Master	Domain	Slave	Domain
0x0	LBUS		LBUS	
0x1	free		OTPROM	pib
0x2	FSI2PIB	cfam	FSI Master 0	cfam
0x3	FSISHIFT	cfam	FSI Master 1	cfam
0x4	TOD	pib	TOD	pib
0x5	PM PPE 0	occ	FSI Mailbox	cfam
0x6	PM PPE 1	occ	OCI Bridge	occ
0x7	PM PPE 2	occ	SPI ADC	pib
0x8	PM PPE 3	occ	PIBMEM	pib
0x9	ADU	bridge	ADU	bridge
0xA	free		I2C master	pib
0xB	free		SBE FIFO	cfam
0xC	free		free	
0xD	free		PSU	pib
0xE	SBE	pib	SBE	pib
0xF	CME		PCB Master	pib

1.2.2 PCB Address Space

Figure 6 shows the address format used to access all pervasive facilities. The legacy 32-bit format is shown as well as the translation in the 64-bit format (add 32 zeros as the most-significant bits). The new extended address format that enables access to the large address SCOM satellites (up to 31 bits) is also listed. The most significant bit is '1' in that case.

Figure 6: Common Pervasive Address Map Format

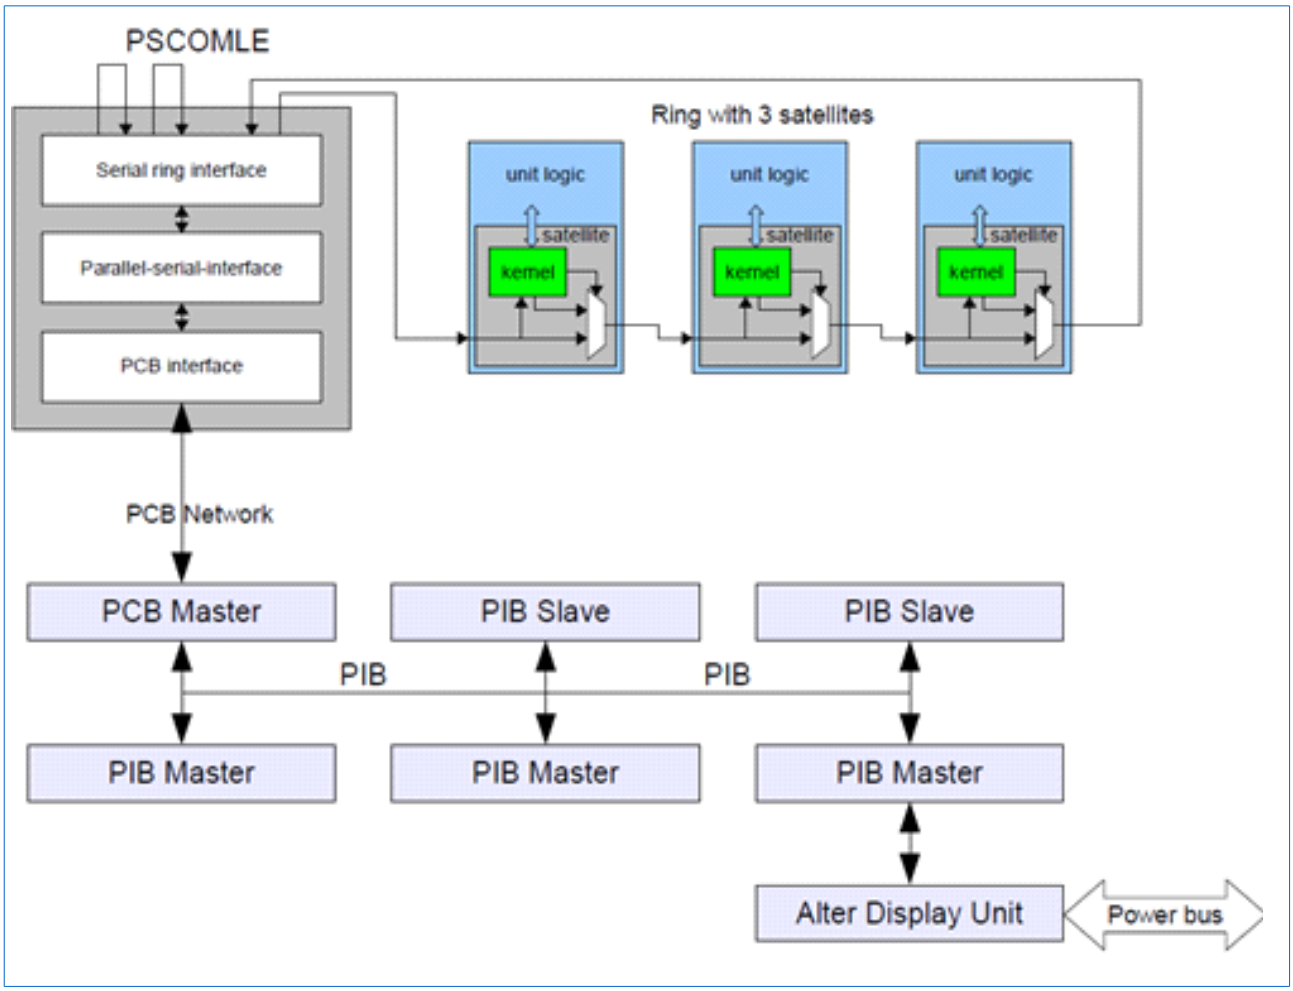


1.2.3 SCOM

SCOM provides a serial communication infrastructure within the pervasive infrastructure. The central control unit is referred to as the parallel-to-serial communication light edition (PSCOMLE). It controls all communication with respect to the serial interface. The end-point nodes are referred to as satellites. A satellite is located in the unit logic. The satellites are connected to the PSCOMLE and each other in a physical ring. The PSCOMLE can support up to 15 rings. Each ring has a local address space that is used to address an individual satellite in a given ring and within the unit logic that uses the satellite with a dedicated register. If this address space is not sufficient, an indirect address can be used to further extend the address range within a satellite.

Figure 7 shows the principal pervasive infrastructure to access the SCOM-enabled registers in a chiplet. A SCOM access can be initiated from the masters connected to the PIB, such as the ADU. SCOM satellites are distributed inside the chiplet and are organized in serial SCOM rings. For each chiplet, there is one instance of the PSCOMLE macro that receives the request from the PCB network.

Figure 7: Infrastructure to Access SCOM Registers

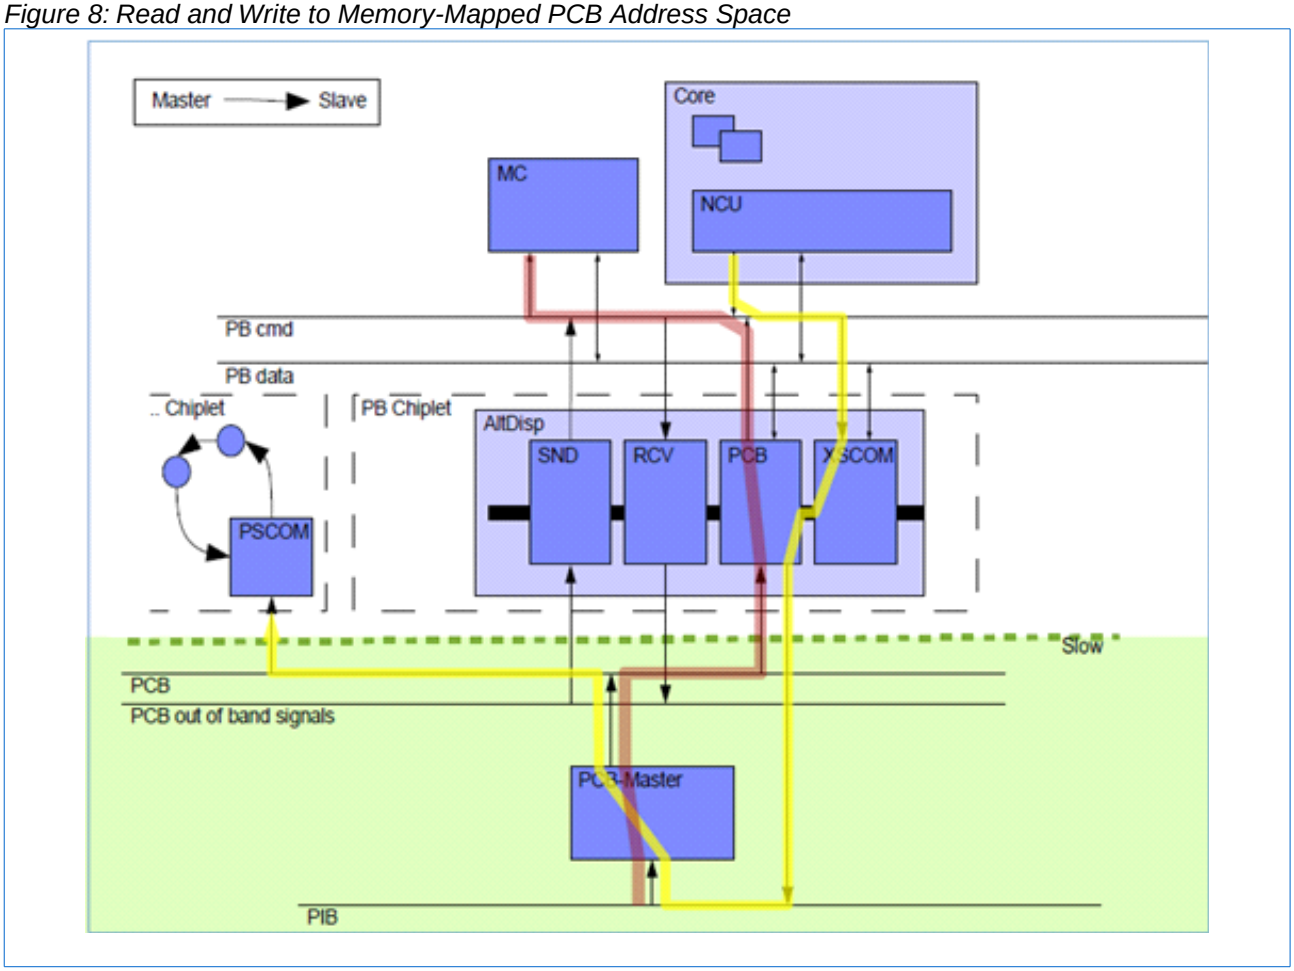


1.2.4 XSCOM

The alter/display unit (ADU) acts as a bridge between the processor bus and the PCB. The ADU enables access to any memory-mapped PIB/PCB register in the system by external SCOM (XSCOM.) The XSCOM is responsible for handling memory-mapped PIB/PCB register access, which originates from the non-pervasive logic of the processor. For example, a read/write operation can originate from a processor core and is presented on the processor bus by the non-cacheable unit (NCU). The alter/display unit XSCOM routes the request through a PIB master to the PIB. The PIB master notifies the ADU when it is complete. For a read operation, the ADU routes the resulting data to the processor bus, which sends the information back to the requester (in the example, the NCU). It then arrives at the core. The XSCOM memory-mapped address range, by default, locates at 0x0003FC0000000000.

Figure 8 shows an example of a read and write to a memory-mapped PCB address space.

Figure 8: Read and Write to Memory-Mapped PCB Address Space



1.3 Register Accessing Type

A register can have multiple addresses, with a different address for different chiplets. The types of access permitted can vary by chiplets. *Table 1* on page 39 summarizes the valid register access types.

Table 1: Register Access Types

Access Type	Description
NC	Not connected; the data cannot be written or read by that access.
NCX	Same as NC, but unstable. Can be changed functionally.
RO	Read only. Only to be used if a bit is tied. Status bits should be ROX.
ROX	Same as RO, but unstable. Can be changed functionally.
ROX_CLRPART	Same as ROX, but a read access clears the bits after they have been accessed.
RW	Readable and writable.
RW_WAND	Readable and writable. A write ANDs written data with existing data and stores the result.
RW_WCLEAR	Readable and writable. A write of a ‘1’ clears the bit. A write of a ‘0’ does nothing.
RW_WCLRPART	Readable and writable. Any write to the address clears the bits regardless of the value.
RW_WOR	Readable and writable. A write ORs written data with existing data and stores the result.
RW_WSETPART	Readable and writable. Any write to the address sets the bits regardless of the value.
RWX	Same as RW, but unstable. Can be changed functionally.
RWX_WAND	Same as RW_WAND, but unstable. Can be changed functionally.
RWX_WCLEAR	Same as RW_WCLEAR, but unstable. Can be changed functionally.
RWX_WCLRPART	Same as RW_WCLRPART, but unstable. Can be changed functionally.
RWX_WOR	Same as RW_WOR, but unstable. Can be changed functionally.
RWX_WSETPART	Same as RW_WSETPART, but unstable. Can be changed functionally.
WO	Same as RW, but bits are write-only.
WO_1P	Write only; one pulse length is equal to one register cycle.
WO_AND	Same as RW_WAND, but bits are write-only.
WO_CLEAR	Same as RW_WCLEAR, but bits are write-only.
WO_CLRPART	Same as RW_WCLRPART, but bits are write-only.
WO_n_mP	Write-only pulsed. A write of ‘1’ creates a pulse for a minimum of n register clocks and a maximum of m register clocks. A read returns ‘0’.
WO_nP	Write-only pulsed. A write of ‘1’ creates a pulse for n register clocks. A read returns ‘0’.
WO_OR	Same as RW_WOR, but bits are write-only.
WO_SETPART	Same as RW_WSETPART, but bits are write-only.
WOX	Same as WO, but unstable. Can be changed functionally.
WOX_AND	Same as WO_AND, but unstable. Can be changed functionally.
WOX_CLEAR	Same as WO_CLEAR, but unstable. Can be changed functionally.
WOX_CLRPART	Same as WO_CLRPART, but unstable. Can be changed functionally.
WOX_n_mP	Same as WO_n_mP, but unstable. Can be changed functionally.
WOX_nP	Same as WO_nP, but unstable. Can be changed functionally.

Access Type	Description
WOX_OR	Same as WO_OR, but unstable. Can be changed functionally.
WOX_SETPART	Same as WO_SETPART, but unstable. Can be changed functionally.

2. TP Chiplets

The POWER9 processor registers are listed alphabetically by mnemonic in the following address table.

Mnemonic	Address	Page
BRIDGE.AD.ADS_XSCOM_CMD_REG	0x000000000009001C	384
BRIDGE.AD.ADU_HANG_DIV_REG	0x0000000000090050	390
BRIDGE.AD.ALTD_ADDR_REG	0x0000000000090000	377
BRIDGE.AD.ALTD_CMD_REG	0x0000000000090001	378
BRIDGE.AD.ALTD_DATA_REG	0x0000000000090004	380
BRIDGE.AD.ALTD_OPTION_REG	0x0000000000090002	379
BRIDGE.AD.ALTD_STATUS_REG	0x0000000000090003	379
BRIDGE.AD.FORCE_ECC_REG	0x000000000009000D	380
BRIDGE.AD.IO_DATA_REG	0x0000000000090030	388
BRIDGE.AD.LPC_BASE_REG	0x0000000000090040	389
BRIDGE.AD.LPC_CMD_REG	0x0000000000090041	389
BRIDGE.AD.LPC_DATA_REG	0x0000000000090042	389
BRIDGE.AD.LPC_STATUS_REG	0x0000000000090043	390
BRIDGE.AD.PIB_CMD_REG	0x0000000000090031	388
BRIDGE.AD.PIB_DATA_REG	0x0000000000090032	388
BRIDGE.AD.PIB_RESET_REG	0x0000000000090033	389
BRIDGE.AD.RCV_ERRLOG0_REG	0x0000000000090022	386
BRIDGE.AD.RCV_ERRLOG1_REG	0x0000000000090023	387
BRIDGE.AD.SND_MODE_REG	0x0000000000090021	385
BRIDGE.AD.SND_STAT_REG	0x0000000000090020	384
BRIDGE.AD.TOD_CMD_REG	0x000000000009002A	388
BRIDGE.AD.TOD_DATA_RCV_REG	0x0000000000090029	387

The POWER9 processor registers are listed in the following tables.

Register Name	FIFO1 Register Read A
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.FIFO1_REGISTER_READ_A
Address	0000000000001800 (SCOM)
Description	FIFO1 Register Read A

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	FIFO_BITS_READ0_0: Because FIFO is not a normal register, it cannot be completely verified in REGCHK. Thus, this register is a dummy register that is used to maintain the address in HTML FIFO data byte 0. It should be able to read or write 1 byte.
8:31	RO	constant = 0b00000000000000000000000

Register Name	Command Register A
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.COMMAND_REGISTER_A
Address	0000000000001801 (SCOM)
Description	Command Register A

Bits	SCOM	Field Mnemonic: Description
0	RWX	WITH_START_0: Decides if the start command is issued during the beginning of the operation.
1	RWX	WITH_ADDRESS_0: Decides if the device address is sent during the beginning of the operation.
2	RWX	READ_CONTINUE_0: Decides if the next read operation is continuation of present operation.
3	RWX	WITH_STOP_0: Decides if the stop command is issued during the end of the operation.
4:7	RWX	NOT_USED_0: Not used.
8:14	RWX	DEVICE_ADDRESS_0: The device address of the slave on the I2C bus.
15	RWX	READ_NOT_WRITE_0: I2C read or write.
16:31	RWX	LENGTH_IN_BYTES_0: The length of bytes to be accessed through the I2C bus.

Register Name	Mode Register A
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.MODE_REGISTER_A
Address	0000000000001802 (SCOM)
Description	Mode Register A

Bits	SCOM	Field Mnemonic: Description
0:7	RWX	BIT_RATE_DIVISOR_0: Decides the speed on the I2C bus.

Bits	SCOM	Field Mnemonic: Description
8:9	RWX	BIT_RATE_DIVISOR_0: Decides the speed on the I2C bus.
10:15	RWX	BIT_RATE_DIVISOR_0: Decides the speed on the I2C bus.
16:21	RWX	PORT_NUMBER_0: Port number.
22:26	RO	constant = 0b00000
27	RWX	CHKSW_I2C_BUSY_0: A debug switch to switch between the Port Busy Register and I2C busy muxing logic. **Note**: If you do not enable the chicken switch, the older logic behavior occurs.
28	RWX	FGAT_MODE_0: FGAT mode.
29	RWX	DIAG_MODE_0: Diagnostic mode.
30	RWX	PACING_ALLOW_MODE_0: Pacing allow mode.
31	RWX	WRAP_MODE_0: Wrap mode.

Register Name	**Water Mark Register A**
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.WATER_MARK_REGISTER_A
Address	0000000000001803 (SCOM)
Description	Water Mark Register A

Bits	SCOM	Field Mnemonic: Description
0:15	RO	constant = 0b0000000000000000
16:31	RWX	WATERMARK_REG_0: Watermark register.

Register Name	**Interrupt Mask Register A**
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.INTERRUPT_MASK_REGISTER_A
Address	0000000000001804 (SCOM) 0000000000001805 (SCOM1) 0000000000001806 (SCOM2)
Description	Interrupt Mask Register A

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:15	RO	RO	RO	constant = 0b0000000000000000
16:31	WOX	WOX_OR	WOX_AND	INT_MASK_0: Interrupt mask register.

Register Name	**Interrupt Mask Register Read A**
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.INTERRUPT_MASK_REGISTER_READ_A
Address	0000000000001804 (SCOM)
Description	Interrupt Mask Register Read A

Bits	SCOM	Field Mnemonic: Description
0:15	RO	constant = 0b0000000000000000
16:31	ROX	INT_MASK_0: Interrupt mask register

Register Name	Interrupt Condition A
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.INTERRUPT_COND_A
Address	0000000000001805 (SCOM)
Description	Interrupt Condition A

Bits	SCOM	Field Mnemonic: Description
0:15	RO	Constant = 0b0000000000000000
16	ROX	INVALID_CMD_0: Invalid command. A new command was given when the old command was not yet completed.
17	ROX	LBUS_PARITY_ERROR_0: Local bus parity error.
18	ROX	BE_OV_ERROR_0: Back end overrun error. A write to a full or a read to an empty FIFO reply occurred.
19	ROX	BE_ACC_ERROR_0: Back end access error. More data than requested was written or read.
20	ROX	ARBITRATION_LOST_ERROR_0: Arbitration lost error. The I2C bus was held by some other master when access was attempted.
21	ROX	NACK_RECEIVED_ERROR_0: NACK received error. The slave did not respond with the acknowledgment.
22	ROX	DATA_REQUEST_0: Data request. The FIFO must be accessed more to fulfill the expectation.
23	ROX	INT_CONDS_CMD_COMPLETE_0
24	ROX	STOP_ERROR_0: Stop error. Cannot send the stop condition to the bus.
25	ROX	INT_CONDS_I2C_BUSY_0
26	ROX	INT_CONDS_NOT_I2C_BUSY_0
27	RO	constant = 0b0
28	ROX	INT_CONDS_SCL_EQ_1_0
29	ROX	INT_CONDS_SCL_EQ_0_0
30	ROX	INT_CONDS_SDA_EQ_1_0
31	ROX	INT_CONDS_SDA_EQ_0_0

Register Name	Interrupt Register A
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.INTERRUPTS_A
Address	0000000000001806 (SCOM)
Description	Interrupts Register A

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	INTS_0

Register Name	IMM Reset I2C A
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.IMM_RESET_I2C_A
Address	0000000000001807 (SCOM)
Description	IMM Reset I2C A

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_I2C_0: Resets the command, mode, watermark, interrupt mask, and status registers.

Register Name	Status Register Engine A
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.STATUS_REGISTER_ENGINE_A
Address	0000000000001807 (SCOM)
Description	Status Register Engine A

Bits	SCOM	Field Mnemonic: Description
0	ROX	INVALID_CMD_0: Invalid command. A new command was given when the old command was not yet completed.
1	ROX	LBUS_PARITY_ERROR_0: Local bus parity error.
2	ROX	BE_OV_ERROR_0: Back-end overrun error. A write to a full or a read to an empty FIFO reply occurred.
3	ROX	BE_ACC_ERROR_0: Back-end access error. More data than requested was written or read.
4	ROX	ARBITRATION_LOST_ERROR_0: Arbitration lost error. The I2C bus was held by some other master when access was attempted.
5	ROX	NACK_RECEIVED_ERROR_0: NACK received error. The slave did not respond with the acknowledgment.
6	ROX	DATA_REQUEST_0: Data request. The FIFO must be accessed more to fulfill the expectation.
7	ROX	CMD_COMPLETE_0: Indicates the completion of command.
8	ROX	STOP_ERROR_0: Stop error. Cannot send the stop condition to the bus.
9:15	ROX	MAX_NUM_OF_PORTS_0. The maximum number of ports that are defined for this engine.
16	ROX	ANY_I2C_INT_0
17:18	RO	constant = 0b00
19	ROX	I2C_PORT_HISTORY_BUSY_0
20	ROX	SCL_SYN_0
21	ROX	SDA_SYN_0
22	ROX	i2c_busy_0: The I2C bus is occupied.
23	ROX	SELF_BUSY_0: Self busy. The I2C bus is occupied by itself.
24:27	RO	constant = 0b0000
28:31	ROX	FIFO_ENTRY_COUNT_0: The number of bytes that are present in the FIFO.

Register Name	Extended Status A
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.EXTENDED_STATUS_A
Address	0000000000001808 (SCOM)
Description	Extended Status A

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	FIFO_SIZE_0: The total FIFO size.
8:10	RO	constant = 0b000
11:15	ROX	MSM_CURR_STATE_0: The current state.
16	ROX	SCL_SYN_EXT_0
17	ROX	SDA_SYN_EXT_0
18	ROX	S_SCL_0: The clock input for wrap mode.

Bits	SCOM	Field Mnemonic: Description
19	ROX	S_SDA_0: Data input for wrap mode.
20	ROX	M_SCL_0. The clock output for wrap mode.
21	ROX	M_SDA_0. The data output for wrap mode.
22	ROX	HIGH_WATER_0: The FIFO reached the highest water level.
23	ROX	LOW_WATER_0. The FIFO reached the lowest water level.
24	ROX	I2C_BUSY_EXT_0. The I2C bus is busy.
25	ROX	SELF_BUSY_0: Self busy. The I2C bus is occupied by itself.
26:31	RO	constant = 0b010111

Register Name	**IMM Reset ERR A**
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.IMM_RESET_ERR_A
Address	0000000000001808 (SCOM)
Description	IMM Reset ERR A

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_ERRORS_0. Resets the FIFO, some status bits, and the state machine.

Register Name	**IMM Sets SCL_A**
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.IMM_SET_S_SCL_A
Address	0000000000001809 (SCOM)
Description	IMM Sets SCL_A

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_SET_S_SCL_0. Sets output S_SCL.

Register Name	**Residual Front End Back End Length A**
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.RESIDUAL_FRONT_END_BACK_END_LENGTH_A
Address	0000000000001809 (SCOM)
Description	Residual Front End Back End Length A

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	RESID_FE_LEN_0: Residual front end length register.
16:31	ROX	RESID_BE_LEN_0: Residual back end length register.

Register Name	**I2C Busy Register A**
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.I2C_BUSY_REGISTER_A
Address	000000000000180A (SCOM)
Description	I2C Busy Register A

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	PORT_BUSY_0. The corresponding port is busy. If it is ‘1’, no one can access the port. If it is ‘0’, it can be accessed.

Register Name	IMM Resets SCL_A
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.IMM_RESET_S_SCL_A
Address	000000000000180B (SCOM)
Description	IMM Resets SCL_A

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_S_SCL_0: Resets output S_SCL.

Register Name	IMM Sets SDA_A
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.IMM_SET_S_SDA_A
Address	000000000000180C (SCOM)
Description	IMM Set S SDA A

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_SET_S_SDA_0: Sets output S_SDA.

Register Name	IMM Resets SDA_A
Mnemonic	TP.TPVSB.FSI.W.FSI_I2C.IMM_RESET_S_SDA_A
Address	000000000000180D (SCOM)
Description	IMM Resets SDA_A

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_S_SDA_0. Resets output S_SDA.

Register Name	Command Register Fast Mode
Mnemonic	TP.TPCHIP.PIB.OTP.OTPC_M.COMMAND_REGISTER
Address	0000000000010000 (SCOM)
Description	Command Register Fast Mode.

Bits	SCOM	Field Mnemonic: Description
0	RW	CMD_REG_BIT_WITHSTART: This bit is used to initiate operation. It is a don’t care for the OTP ROM controller.
1	RW	CMD_REG_BIT_WITHADDR: This bit is used to initiate operation. It is a don’t care for the OTP ROM controller.
2	RW	CMD_REG_BIT_READCONT: This bit is used to initiate operation. It is a don’t care for the OTP ROM controller.
3	RW	CMD_REG_BIT_WITHSTOP: This bit is used to initiate operation. It is a don’t care for the OTP ROM controller.

Bits	SCOM	Field Mnemonic: Description
4:7	RW	CMD_REG_LENGTH: The length of real data excluding register address. Permitted values are 4 and 8. 4 = Requesting for four bytes of read data. 8 = Requesting for eight bytes of read data. MAXIMUM_READ = 8. Only permitted value.
8:14	RW	UNUSED_8_14: Reserved. Not used.
15	RW	CMD_REG_BIT_RNW: To enable read, program a ‘1’. A ‘0’ is an invalid option.
16:22	RW	UNUSED_16_22: Reserved. Not used.
23:25	RW	REG_ADDR_LEN: 000 = Address increment if address field is ‘0’. 001= One byte of CMD_REG_ADDR is valid. 010= Two bytes of CMD_REG_ADDR are valid 011= Three bytes of CMD_REG_ADDR are valid. 111= Four bytes of CMD_REG_ADDR are valid.
26:31	RW	UNUSED_26_31: Reserved. Not used.
32:39	RW	CMD_REG_ADDR_1: Read the address read from the first byte.
40:47	RW	CMD_REG_ADDR_2: Read the address read from the second byte.
48:55	RW	CMD_REG_ADDR_3 Read the address read from the third byte.
56:63	RW	CMD_REG_ADDR_4: Read the address read from the fourth byte.

Register Name	Reset Register
Mnemonic	TP.TPCHIP.PIB.OTP.OTPC_M.RESET_REGISTER
Address	0000000000010001 (SCOM)
Description	Reset Register

Bits	SCOM	Field Mnemonic: Description
0	WO	CHICKEN_SWITCH: Used to enable or disable AR012 PIB error reporting enhancement feature. 0 = Enable 1 = Disable

Register Name	Status Register
Mnemonic	TP.TPCHIP.PIB.OTP.OTPC_M.STATUS_REGISTER
Address	0000000000010002 (SCOM)
Description	Status Register

Bits	SCOM	Field Mnemonic: Description
0	ROX	STATUS_ADDR_NVLD: Address is invalid.
1	ROX	STATUS_WRITE_NVLD: Write is invalid.
2	ROX	STATUS_READ_NVLD: Read is invalid.
3	ROX	STATUS_INVLD_CMD_ERR: Invalid command register fields are programmed.
4	ROX	STATUS_CORR_ERR: ECC correctable error.
5	ROX	STATUS_UNCORR_ERROR: ECC uncorrectable error.
6:37	ROX	STATUS_DATA_REG_0_31: First 4 bytes of read Data Register [0:31].
38	RO	constant = 0b0

Bits	SCOM	Field Mnemonic: Description
39:43	ROX	STATUS_UNUSED_39_43: Unused.
44	ROX	STATUS_CTRL_BUSY: OTP ROM controller is busy.
45	ROX	STATUS_DCOMP_ERR: Decompression engine error.
46	ROX	STATUS_INVLD_PRGM_ERR: Invalid program operation error.
47:51	ROX	STATUS_UNUSED_47_51: Unused.
52	ROX	STATUS_COMMAND_COMPLETE: Operation complete for a fast mode read operation or a programming operation.
53	ROX	STATUS_UNUSED_53: Unused.
54	ROX	STATUS_RDWR_OP_BUSY: Read/write operation controller logic busy.
55	ROX	STATUS_DCOMP_ENGINE_BUSY: Decompression engine busy.
56:63	ROX	STATUS_RD_DATA_COUNT: Valid read data count. 0x08 for OTP ROM.

Register Name	Data Register for Fast Mode Read Data
Mnemonic	TP.TPCHIP.PIB.OTP.OTPC_M.DATA_REGISTER
Address	0000000000010003 (SCOM)
Description	Data Register for Fast Mode Read Data

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	OTP_DATA_REGISTER: Fast mode read data.

Register Name	Security Switch Register
Mnemonic	TP.TPCHIP.PIB.OTP.OTPC_M.SECURITY_SWITCH_REGISTER
Address	0000000000010005 (SCOM) 0000000000010006 (SCOM1)
Description	Register for secure boot features

Bits	SCOM	SCOM1	Field Mnemonic: Description
0	RW_WOR	WO_CLEAR	SECURITY_SWITCH_SECURE_ACCESS: Indicates status of secure access bit from the FSI mailbox. It is used by the CFAM to disable the FSI2PIB (SCOM) and shift (SCAN and DMA) engines. Also, it is used to disable the CFAM I2CM access to the SBE SEEPROMs and emulated JTAG access path to OCC PowerPC.
1	RW_WOR	WO_CLEAR	SECURITY_SWITCH_LATE_LAUNCH_PRIMARY: Late launch primary security. Checks which chip is initiating DRTM late launch sequence.
2	RW_WOR	WO_CLEAR	SECURITY_SWITCH_LATE_LAUNCH_SECONDARY: Late launch secondary security. Checks which chip is initiating DRTM late launch sequence.
3	RW_WOR	WO_CLEAR	SECURITY_SWITCH_LOCAL_QUIESCE_ACHIEVED: Local quiesce achieved. Checks whether THE chip has been successfully quiesced. It is reset by local SBE/HFW during DRTM late launch code.
4	RW_WOR	NCX	SECURITY_SWITCH_SEEPROM_UPDATE_LOCK: Prevent write access to SEEPROM and prevent reset of THE SAB in the FSI mailbox by the PIB.
5	RW_WOR	WO_CLEAR	SECURITY_SWITCH_LOCALITY_4_ACCESS: Used by the PIB I2CM to gate all write access to TPMD. It is set by the local SBE after all chips in the system have been evaluated as quiesced.

Bits	SCOM	SCOM1	Field Mnemonic: Description
6	RW_WOR	WO_CLEAR	SECURITY_SWITCH_SECURE_DEBUG: Indicates secure chip debug mode. From FSI mailbox. Used by FSI2PIB engine to enable FSP SCOM access to the SBE. It is also used by the SBE to switch PPE into debug mode, which restricts PPE capabilities to read-out internal register space only.
7	RW_WOR	WO_CLEAR	SECURITY_SWITCH_CMFSI_ACCESS_PROTCT: Prevents any access to the CMFSI ports from the FSI slave if this bit is set.
8	RW_WOR	NCX	SECURITY_SWITCH_ABUS_SECURITY_LOCK: Consumed by ABUS logic (processor bus) and protects mailbox access.
9	RW_WOR	NCX	SECURITY_SWITCH_NX_RAND_NUM_GEN_LOCK: Consumed by NX random generator lock.
10	RW_WOR	WO_CLEAR	SECURITY_SWITCH_PROT_EX_SPARE0: Spare going to EX.
11	RW_WOR	WO_CLEAR	SECURITY_SWITCH_PROT_EX_SPARE1: Spare going to EX.
12	RW_WOR	WO_CLEAR	SECURITY_SWITCH_I2CM_TPM_DECONFIG_PROTECT: Security switch to control access to all five write I2C device IDs of the TPM.
13	RW_WOR	WO_CLEAR	SECURITY_SWITCH_PROT_TP_SPARE0: TP spare.
14	RW_WOR	WO_CLEAR	SECURITY_SWITCH_PROT_TP_SPARE1: TP spare.
15	RW_WOR	WO_CLEAR	SECURITY_SWITCH_PROT_TP_SPARE2: TP spare.

Register Name	Mode Register to Enable Features
Mnemonic	TP.TPCHIP.PIB.OTP.OTPC_M.MODE_REGISTER
Address	0000000000010008 (SCOM)
Description	Register to enable the decompression engine, run ECC checking operations, and programming enablement

Bits	SCOM	Field Mnemonic: Description
0	RW	MODE_DCOMP_ENABLE: Used to enable the decompression engine. The default value is ‘0’.
1	RW	MODE_ECC_ENABLE: Enable ECC checking (only for read operation). The default value = ‘1’. If ECC is enabled, set to ‘1’. Otherwise, set to ‘0’. If this bit is set to ‘1’, it assumes that ECC is stored in OTPROMs and follows ECC enabled addressing. For debug purposes, set this bit to ‘0’ to dump the all locations contents of OTPROM(s).
2	RW	MODE_PROGRAM_ENABLE: Enable programming in SCOM mode. Default value is ‘0’.
3	RW	MODE_ECC_CHK_DISABLE: Set this bit ‘1’ to disable ECC check. Set to ‘0’ to disable ECC check. Default value is ‘0’. This bit is valid only when bit 1 of this register set to ‘1’ and ECC is enabled.
4:15	RW	MODE_UNUSED_4_15: Unused.
16:31	RW	MODE_CLK_RATE_SEL: Used to select clock rate. Based on the Tprg requirement of OTP ROM. Current values are: 40 MHz: 0xC8 200 MHz: 0x3E8 800 MHz: 0xFA0.

Register Name	Program eFUSE Locations
Mnemonic	TP.TPCHIP.PIB.OTP.OTPC_M.PRGM_REGISTER
Address	0000000000010009 (SCOM)
Description	Used to program eFUSE locations

Bits	SCOM	Field Mnemonic: Description
0:31	RW	PRGM_PRGM_ADDR: The address of the OTP ROM location to be programmed.
32:37	RW	PRGM_PRG_BIT_LOCATION: The bit location in 64 bits to be fused.

Register Name	Probe Protection Control Outputs
Mnemonic	TP.TPCHIP.PIB.OTP.OTPC_M.PROBE_PROTECT_STATUS
Address	000000000001000A (SCOM)
Description	Probe Protection Control Outputs

Bits	SCOM	Field Mnemonic: Description
0:41	ROX	PROBE_PROTECT_STATUS_BITS: Status of probe protection outputs.

Register Name	Disable Force PFET
Mnemonic	TP.TPCHIP.PIB.OTP.OTPC_M.DISABLE_FORCE_PFET_OFF
Address	000000000001000D (SCOM)
Description	Register used to disable force PFET off control from fuse status.

Bits	SCOM	Field Mnemonic: Description
0:29	RW	DISABLE_FORCE_PFET_OFF_REG: 1 = Disable force PFET off (Disables fuse control on PFET control). PFET is forced to on (IFF FSI GP bit forced on). 0 = No overrides. Based on fuse content and FSI GP BIT. PFET is forced to on/off.
30:41	RW	RESERVED_DISABLE_FORCE_PFET_OFF: Reserved for future usage.

Register Name	Export Regulation Control Register
Mnemonic	TP.TPCHIP.PIB.OTP.OTPC_M.EXPORT_REGL_CTRL
Address	000000000001000E (SCOM)
Description	Export regulation control register

Bits	SCOM	Field Mnemonic: Description
0	RW	EXPORT_CTRL_TP_NX_ALLOW_CRYPTO_DC: 1 = Replicates the behavior of blown fuses for TP_NX_ALLOW_CYRPTO_DC regardless of fuse content. 0 = Allows the fuse to control the fuse bit. The initial value is ‘0’.
1	RW	EXPORT_CTRL_TP_EX_FUSE_VMX_CRYPTO_DIS_DC: 1 = Replicates the behavior of blown fuses for TP_EX_FUSE_MVX_CRYPTO_DIS_DC regardless of fuse content. 0 = Export regulation content based on the fuse content. The initial value is ‘0’.
2	RW	EXPORT_CTRL_TP_EX_FUSE_FP_THROTTLE_EN_DC: Used to disable TP_EX_FUSE_FP_THROTTLE_EN_DC without the fuse blown. 1 = Replicates the behavior of blown fuses for TP_EX_FUSE_FP_THROTTLE_EN_DC regardless of fuse content. 0 = Export regulation output is based on fuse content The initial value is ‘0’.

Bits	SCOM	Field Mnemonic: Description
3	RW	EXPORT_CTRL_TP_PB_FUSE_TOPOLOGY_2CHIP: Used to apply limits on chip topology without the fuse blown. 1 = Replicates the behavior of blown fuses for TP_PB_FUSE_TOPOLOGY_2CHIP regardless of fuse content. 0 = Export regulation output is based on fuse content. The initial value is '0'.
4:5	RW	EXPORT_CTRL_TP_PB_FUSE_TOPOLOGY_GROUP: Used to apply limits on chip topology without the fuse blown. 1 = Replicates the behavior of blown fuses for TP_PB_FUSE_TOPOLOGY_GROUP [0:1] regardless of fuse content. 0 = Export regulation output is based on fuse content.
6	RW	EXPORT_CTRL_TP_NP_NVLINK_DISABLE: Used to apply limits on chip topology without the fuse blown. 1 = Replicates the behavior blown fuses for TP_NP_NVLINK_DISABLE export regulation output. 0 = Export regulation output is based on fuse content.

Register Name	Part 0 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART0_REGISTER
Address	0000000000018000 (SCOM)
Description	Contains part 0 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_0: 0 address location.

Register Name	Part 1 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART1_REGISTER
Address	0000000000018001 (SCOM)
Description	Contains part 1 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_1: 1 address location.

Register Name	Part 2 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART2_REGISTER
Address	0000000000018002 (SCOM)
Description	Contains part 2 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_2: 2 address location.

Register Name	Part 3 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART3_REGISTER
Address	0000000000018003 (SCOM)
Description	Contains part 3 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_3: 3 address location.

Register Name	Part 4 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART4_REGISTER
Address	0000000000018004 (SCOM)
Description	Contains part 4 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_4: 4 address location.

Register Name	Part 5 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART5_REGISTER
Address	0000000000018005 (SCOM)
Description	Contains part 5 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_5: 5 address location.

Register Name	Part 6 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART6_REGISTER
Address	0000000000018006 (SCOM)
Description	Contains part 6 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_6: 6 address location.

Register Name	Part 7 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART7_REGISTER
Address	0000000000018007 (SCOM)
Description	Contains part 7 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_7: 7 address location.

Register Name	Part 8 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART8_REGISTER
Address	0000000000018008 (SCOM)
Description	Contains part 8 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_8: 8 address location.

Register Name	Part 9 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART9_REGISTER
Address	0000000000018009 (SCOM)
Description	Contains part 9 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_9: 9 address location.

Register Name	Part 10 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART10_REGISTER
Address	000000000001800A (SCOM)
Description	Contains part 10 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_10: 10 address location.

Register Name	Part 11 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART11_REGISTER
Address	000000000001800B (SCOM)
Description	Contains part 11 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_11: 11 address location.

Register Name	Part 12 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART12_REGISTER
Address	000000000001800C (SCOM)
Description	Contains part 12 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_12: 12 address location.

Register Name	Part 13 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART13_REGISTER
Address	000000000001800D (SCOM)
Description	Contains part 13 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_13: 13 address location.

Register Name	Part 14 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART14_REGISTER
Address	000000000001800E (SCOM)
Description	Contains part 14 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_14: 14 address location.

Register Name	Part 15 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART15_REGISTER
Address	000000000001800F (SCOM)
Description	Contains part 15 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_15: 15 address location.

Register Name	Part 16 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART16_REGISTER
Address	0000000000018010 (SCOM)
Description	Contains part 16 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_16: 16 address location.

Register Name	Part 17 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART17_REGISTER
Address	0000000000018011 (SCOM)
Description	Contains part 17 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_17: 17 address location.

Register Name	Part 18 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART18_REGISTER
Address	0000000000018012 (SCOM)
Description	Contains part 18 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_18: 18 address location.

Register Name	Part 19 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART19_REGISTER
Address	0000000000018013 (SCOM)
Description	Contains part 19 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_19: 19 address location.

Register Name	Part 20 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART20_REGISTER
Address	0000000000018014 (SCOM)
Description	Contains part 20 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_20: 20 address location.

Register Name	Part 21 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART21_REGISTER
Address	0000000000018015 (SCOM)
Description	Contains part 21 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_21: 21 address location.

Register Name	Part 22 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART22_REGISTER
Address	0000000000018016 (SCOM)
Description	Contains part 22 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_22: 22 address location.

Register Name	Part 23 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART23_REGISTER
Address	0000000000018017 (SCOM)
Description	Contains part 23 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_23: 23 address location.

Register Name	Part 24 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART24_REGISTER
Address	0000000000018018 (SCOM)
Description	Contains part 24 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_24: 24 address location.

Register Name	Part 25 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART25_REGISTER
Address	0000000000018019 (SCOM)
Description	Contains part 25 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_25: 25 address location.

Register Name	Part 26 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART26_REGISTER
Address	000000000001801A (SCOM)
Description	Contains part 26 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_26: 26 address location.

Register Name	Part 27 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART27_REGISTER
Address	000000000001801B (SCOM)
Description	Contains part 27 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_27: 27 address location.

Register Name	Part 28 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART28_REGISTER
Address	000000000001801C (SCOM)
Description	Contains part 28 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_28: 28 address location.

Register Name	Part 29 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART29_REGISTER
Address	000000000001801D (SCOM)
Description	Contains part 29 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_29: 29 address location.

Register Name	Part 30 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART30_REGISTER
Address	000000000001801E (SCOM)
Description	Contains part 30 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_30: 30 address location.

Register Name	Part 31 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART31_REGISTER
Address	000000000001801F (SCOM)
Description	Contains part 31 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_31: 31 address location.

Register Name	Part 32 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART32_REGISTER
Address	0000000000018020 (SCOM)
Description	Contains part 32 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_32: 32 address location.

Register Name	Part 33 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART33_REGISTER
Address	0000000000018021 (SCOM)
Description	Contains part 33 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_33: 33 address location.

Register Name	Part 34 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART34_REGISTER
Address	0000000000018022 (SCOM)
Description	Contains part 34 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_34: 34 address location.

Register Name	Part 35 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART35_REGISTER
Address	0000000000018023 (SCOM)
Description	Contains part 35 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_35: 35 address location.

Register Name	Part 36 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART36_REGISTER
Address	0000000000018024 (SCOM)
Description	Contains part 36 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_36: 36 address location.

Register Name	Part 37 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART37_REGISTER
Address	0000000000018025 (SCOM)
Description	Contains part 37 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_37: 37 address location.

Register Name	Part 38 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART38_REGISTER
Address	0000000000018026 (SCOM)
Description	Contains part 38 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_38: 38 address location.

Register Name	Part 39 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART39_REGISTER
Address	0000000000018027 (SCOM)
Description	Contains part 39 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_39: 39 address location.

Register Name	Part 40 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART40_REGISTER
Address	0000000000018028 (SCOM)
Description	Contains part 40 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_40: 40 address location.

Register Name	Part 41 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART41_REGISTER
Address	0000000000018029 (SCOM)
Description	Contains part 41 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_41: 41 address location.

Register Name	Part 42 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART42_REGISTER
Address	000000000001802A (SCOM)
Description	Contains part 42 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_42: 42 address location.

Register Name	Part 43 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART43_REGISTER
Address	000000000001802B (SCOM)
Description	Contains part 43 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_43: 43 address location.

Register Name	Part 44 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART44_REGISTER
Address	000000000001802C (SCOM)
Description	Contains part 44 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_44: 44 address location.

Register Name	Part 45 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART45_REGISTER
Address	000000000001802D (SCOM)
Description	Contains part 45 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_45: 45 address location.

Register Name	Part 46 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART46_REGISTER
Address	000000000001802E (SCOM)
Description	Contains part 46 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_46: 46 address location.

Register Name	Part 47 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART47_REGISTER
Address	000000000001802F (SCOM)
Description	Contains part 47 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_47: 47 address location.

Register Name	Part 48 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART48_REGISTER
Address	0000000000018030 (SCOM)
Description	Contains part 48 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_48: 48 address location.

Register Name	Part 49 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART49_REGISTER
Address	0000000000018031 (SCOM)
Description	Contains part 49 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_49: 49 address location.

Register Name	Part 50 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART50_REGISTER
Address	0000000000018032 (SCOM)
Description	Contains part 50 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_50: 50 address location.

Register Name	Part 51 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART51_REGISTER
Address	0000000000018033 (SCOM)
Description	Contains part 51 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_51: 51 address location.

Register Name	Part 52 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART52_REGISTER
Address	0000000000018034 (SCOM)
Description	Contains part 52 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_52: 52 address location.

Register Name	Part 53 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART53_REGISTER
Address	0000000000018035 (SCOM)
Description	Contains part 53 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_53: 53 address location.

Register Name	Part 54 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART54_REGISTER
Address	0000000000018036 (SCOM)
Description	Contains part 54 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_54: 54 address location.

Register Name	Part 55 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART55_REGISTER
Address	0000000000018037 (SCOM)
Description	Contains part 55 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_55: 55 address location.

Register Name	Part 56 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART56_REGISTER
Address	0000000000018038 (SCOM)
Description	Contains part 56 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_56: 56 address location.

Register Name	Part 57 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART57_REGISTER
Address	0000000000018039 (SCOM)
Description	Contains part 57 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_57: 57 address location.

Register Name	Part 58 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART58_REGISTER
Address	000000000001803A (SCOM)
Description	Contains part 58 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_58: 58 address location.

Register Name	Part 59 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART59_REGISTER
Address	000000000001803B (SCOM)
Description	Contains part 59 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_59: 59 address location.

Register Name	Part 60 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART60_REGISTER
Address	000000000001803C (SCOM)
Description	Contains part 60 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_60: 60 address location.

Register Name	Part 61 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART61_REGISTER
Address	000000000001803D (SCOM)
Description	Contains part 61 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_61: 61 address location.

Register Name	Part 62 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART62_REGISTER
Address	000000000001803E (SCOM)
Description	Contains part 62 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_62: 62 address location.

Register Name	Part 63 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#0.OTPROM.ECID_PART63_REGISTER
Address	000000000001803F (SCOM)
Description	Contains part 63 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_63: 63 address location.

Register Name	Part 0 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART0_REGISTER
Address	0000000000018040 (SCOM)
Description	Contains part 0 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_0: 0 address location.

Register Name	Part 1 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART1_REGISTER
Address	0000000000018041 (SCOM)
Description	Contains part 1 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_1: 1 address location.

Register Name	Part 2 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART2_REGISTER
Address	0000000000018042 (SCOM)
Description	Contains part 2 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_2: 2 address location.

Register Name	Part 3 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART3_REGISTER
Address	0000000000018043 (SCOM)
Description	Contains part 3 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_3: 3 address location.

Register Name	Part 4 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART4_REGISTER
Address	0000000000018044 (SCOM)
Description	Contains part 4 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_4: 4 address location.

Register Name	Part 5 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART5_REGISTER
Address	0000000000018045 (SCOM)
Description	Contains part 5 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_5: 5 address location.

Register Name	Part 6 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART6_REGISTER
Address	0000000000018046 (SCOM)
Description	Contains part 6 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_6: 6 address location.

Register Name	Part 7 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART7_REGISTER
Address	0000000000018047 (SCOM)
Description	Contains part 7 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_7: 7 address location.

Register Name	Part 8 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART8_REGISTER
Address	0000000000018048 (SCOM)
Description	Contains part 8 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_8: 8 address location.

Register Name	Part 9 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART9_REGISTER
Address	0000000000018049 (SCOM)
Description	Contains part 9 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_9: 9 address location.

Register Name	Part 10 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART10_REGISTER
Address	000000000001804A (SCOM)
Description	Contains part 10 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_10: 10 address location.

Register Name	Part 11 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART11_REGISTER
Address	000000000001804B (SCOM)
Description	Contains part 11 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_11: 11 address location.

Register Name	Part 12 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART12_REGISTER
Address	000000000001804C (SCOM)
Description	Contains part 12 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_12: 12 address location.

Register Name	Part 13 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART13_REGISTER
Address	000000000001804D (SCOM)
Description	Contains part 13 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_13: 13 address location.

Register Name	Part 14 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART14_REGISTER
Address	000000000001804E (SCOM)
Description	Contains part 14 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_14: 14 address location.

Register Name	Part 15 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART15_REGISTER
Address	000000000001804F (SCOM)
Description	Contains part 15 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_15: 15 address location.

Register Name	Part 16 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART16_REGISTER
Address	0000000000018050 (SCOM)
Description	Contains part 16 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_16: 16 address location.

Register Name	Part 17 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART17_REGISTER
Address	0000000000018051 (SCOM)
Description	Contains part 17 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_17: 17 address location.

Register Name	Part 18 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART18_REGISTER
Address	0000000000018052 (SCOM)
Description	Contains part 18 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_18: 18 address location.

Register Name	Part 19 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART19_REGISTER
Address	0000000000018053 (SCOM)
Description	Contains part 19 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_19: 19 address location.

Register Name	Part 20 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART20_REGISTER
Address	0000000000018054 (SCOM)
Description	Contains part 20 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_20: 20 address location.

Register Name	Part 21 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART21_REGISTER
Address	0000000000018055 (SCOM)
Description	Contains part 21 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_21: 21 address location.

Register Name	Part 22 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART22_REGISTER
Address	0000000000018056 (SCOM)
Description	Contains part 22 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_22: 22 address location.

Register Name	Part 23 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART23_REGISTER
Address	0000000000018057 (SCOM)
Description	Contains part 23 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_23: 23 address location.

Register Name	Part 24 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART24_REGISTER
Address	0000000000018058 (SCOM)
Description	Contains part 24 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_24: 24 address location.

Register Name	Part 25 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART25_REGISTER
Address	0000000000018059 (SCOM)
Description	Contains part 25 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_25: 25 address location.

Register Name	Part 26 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART26_REGISTER
Address	000000000001805A (SCOM)
Description	Contains part 26 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_26: 26 address location.

Register Name	Part 27 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART27_REGISTER
Address	000000000001805B (SCOM)
Description	Contains part 27 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_27: 27 address location.

Register Name	Part 28 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART28_REGISTER
Address	000000000001805C (SCOM)
Description	Contains part 28 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_28: 28 address location.

Register Name	Part 29 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART29_REGISTER
Address	000000000001805D (SCOM)
Description	Contains part 29 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_29: 29 address location.

Register Name	Part 30 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART30_REGISTER
Address	000000000001805E (SCOM)
Description	Contains part 30 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_30: 30 address location.

Register Name	Part 31 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART31_REGISTER
Address	000000000001805F (SCOM)
Description	Contains part 31 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_31: 31 address location.

Register Name	Part 32 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART32_REGISTER
Address	0000000000018060 (SCOM)
Description	Contains part 32 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_32: 32 address location.

Register Name	Part 33 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART33_REGISTER
Address	0000000000018061 (SCOM)
Description	Contains part 33 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_33: 33 address location.

Register Name	Part 34 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART34_REGISTER
Address	0000000000018062 (SCOM)
Description	Contains part 34 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_34: 34 address location.

Register Name	Part 35 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART35_REGISTER
Address	0000000000018063 (SCOM)
Description	Contains part 35 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_35: 35 address location.

Register Name	Part 36 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART36_REGISTER
Address	0000000000018064 (SCOM)
Description	Contains part 36 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_36: 36 address location.

Register Name	Part 37 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART37_REGISTER
Address	0000000000018065 (SCOM)
Description	Contains part 37 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_37: 37 address location.

Register Name	Part 38 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART38_REGISTER
Address	0000000000018066 (SCOM)
Description	Contains part 38 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_38: 38 address location.

Register Name	Part 39 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART39_REGISTER
Address	0000000000018067 (SCOM)
Description	Contains part 39 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_39: 39 address location.

Register Name	Part 40 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART40_REGISTER
Address	0000000000018068 (SCOM)
Description	Contains part 40 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_40: 40 address location.

Register Name	Part 41 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART41_REGISTER
Address	0000000000018069 (SCOM)
Description	Contains part 41 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_41: 41 address location.

Register Name	Part 42 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART42_REGISTER
Address	000000000001806A (SCOM)
Description	Contains part 42 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_42: 42 address location.

Register Name	Part 43 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART43_REGISTER
Address	000000000001806B (SCOM)
Description	Contains part 43 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_43: 43 address location.

Register Name	Part 44 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART44_REGISTER
Address	000000000001806C (SCOM)
Description	Contains part 44 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_44: 44 address location.

Register Name	Part 45 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART45_REGISTER
Address	000000000001806D (SCOM)
Description	Contains part 45 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_45: 45 address location.

Register Name	Part 46 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART46_REGISTER
Address	000000000001806E (SCOM)
Description	Contains part 46 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_46: 46 address location.

Register Name	Part 47 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART47_REGISTER
Address	000000000001806F (SCOM)
Description	Contains part 47 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_47: 47 address location.

Register Name	Part 48 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART48_REGISTER
Address	0000000000018070 (SCOM)
Description	Contains part 48 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_48: 48 address location.

Register Name	Part 49 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART49_REGISTER
Address	0000000000018071 (SCOM)
Description	Contains part 49 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_49: 49 address location.

Register Name	Part 50 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART50_REGISTER
Address	0000000000018072 (SCOM)
Description	Contains part 50 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_50: 50 address location.

Register Name	Part 51 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART51_REGISTER
Address	0000000000018073 (SCOM)
Description	Contains part 51 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_51: 51 address location.

Register Name	Part 52 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART52_REGISTER
Address	0000000000018074 (SCOM)
Description	Contains part 52 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_52: 52 address location.

Register Name	Part 53 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART53_REGISTER
Address	0000000000018075 (SCOM)
Description	Contains part 53 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_53: 53 address location.

Register Name	Part 54 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART54_REGISTER
Address	0000000000018076 (SCOM)
Description	Contains part 54 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_54: 54 address location.

Register Name	Part 55 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART55_REGISTER
Address	0000000000018077 (SCOM)
Description	Contains part 55 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_55: 55 address location.

Register Name	Part 56 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART56_REGISTER
Address	0000000000018078 (SCOM)
Description	Contains part 56 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_56: 56 address location.

Register Name	Part 57 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART57_REGISTER
Address	0000000000018079 (SCOM)
Description	Contains part 57 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_57: 57 address location.

Register Name	Part 58 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART58_REGISTER
Address	000000000001807A (SCOM)
Description	Contains part 58 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_58: 58 address location.

Register Name	Part 59 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART59_REGISTER
Address	000000000001807B (SCOM)
Description	Contains part 59 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_59: 59 address location.

Register Name	Part 60 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART60_REGISTER
Address	000000000001807C (SCOM)
Description	Contains part 60 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_60: 60 address location.

Register Name	Part 61 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART61_REGISTER
Address	000000000001807D (SCOM)
Description	Contains part 61 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_61: 61 address location.

Register Name	Part 62 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART62_REGISTER
Address	000000000001807E (SCOM)
Description	Contains part 62 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_62: 62 address location.

Register Name	Part 63 of the eFUSE
Mnemonic	TP.TPCHIP.OTPROM.MULT_OTPROM_WITH_ECC.OTPROM_GEN#1.OTPROM.ECID_PART63_REGISTER
Address	000000000001807F (SCOM)
Description	Contains part 63 of the eFUSE.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ECID_PART_63: 63 address location.

Register Name	FSI PIB2OPB Command and Write Data
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#0.P.CMD_WRDAT
Address	0000000000020000 (SCOM)
Description	The PIB2OPB Command and Write Data register is used to access FSI master ports through the PIB. FSI0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0	RW	WRITE_NOT_READ: Write not read.
1:31	RW	Reserved field.
32:63	RW	Reserved field.

Register Name	FSI PIB2OPB Status and Read Data
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#0.P.STAT_RDDAT_ERRES
Address	0000000000020001 (SCOM)
Description	The PIB2OPB Status and Read Data register is used to access FSI master ports by using the PIB. FSI0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0	RO	Reserved field.
1	RO	CMD_PARITY_ERROR: Command parity check.
2	RO	WR_DATA_PARITY_ERROR: Write data parity check.
3	RO	RD_DATA_PARITY_ERROR: Read data parity check.
4	RO	LCK_STATUS_PARITY_ERROR: Locked status parity check.
5	RO	FSM_PARITY_ERROR: OPB master protocol FSM parity check.
6	RO	Reserved.
7	RO	Reserved field.
8	RO	OPB_PARITY_ERROR: OPB read data parity check during valid.
9	RO	Reserved field.
10	RO	Reserved field.
11	RO	Reserved field.
12	RO	Reserved field.
13	RO	Reserved field.
14	RO	Reserved field.
15	RO	Reserved field.
16	RO	Reserved field.
17	RO	Reserved field.
18	RO	Reserved field.
19	RO	Reserved field.
20	RO	Reserved field.
21	RO	Reserved field.
22:23	RO	Reserved.
24	RO	Reserved field.
25	RO	Reserved field.
26	RO	Reserved field.
27	RO	Reserved field.
28	RO	Reserved field.
29	RO	Reserved field.
30:31	RO	Reserved.
32:63	RO	Reserved field.

Register Name	FSI PIB2OPB Locked Status
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#0.P.LSTAT
Address	0000000000020002 (SCOM)
Description	PIB2OPB FSI master ports locked status through the PIB. FSI0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:31	RO	Reserved.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	PIB2OPB Unit Reset
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#0.P.RESET
Address	0000000000020004 (SCOM)
Description	PIB2OPB unit reset.

Bits	SCOM	Field Mnemonic: Description
0	WO_1P	Unit reset.

Register Name	FSI PIB2OPB cMFSI Remote Slave Interrupt
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#0.P.CRSIC
Address	0000000000020005 (SCOM)
Description	PIB2OPB interrupts of the cMFSI port. Attached FSI slaves are read and cleared by using the PIB. FSI0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RW_WCLEAR	Reserved.

Register Name	FSI PIB2OPB cMFSI Remote Slave Interrupt Mask
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#0.P.CRSIM
Address	0000000000020006 (SCOM)
Description	PIB2OPB mask for interrupts of the cMFSI port. Attached FSI slaves are read and written by using the PIB. FSI0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	Reserved.

Register Name	FSI PIB2OPB cMFSI Remote Slave Interrupt Status
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#0.P.CRSIS
Address	0000000000020007 (SCOM)
Description	PIB2OPB status of interrupts of the cMFSI port. Attached FSI slaves PIB are read by using the PIB. FSI0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RO	Reserved.

Register Name	FSI PIB2OPB MFSI Remote Slave Interrupt
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#0.P.RSIC
Address	0000000000020008 (SCOM)
Description	PIB2OPB interrupts of the MFSI port. Attached FSI slaves are read and cleared by using the PIB. FSI0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RW_WCLEAR	Reserved.

Register Name	FSI PIB2OPB MFSI Remote Slave Interrupt Mask
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#0.P.RSIM
Address	0000000000020009 (SCOM)
Description	PIB2OPB mask for interrupts of the MFSI port. Attached FSI slaves are read and written by using PIB. FSI0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	Reserved.

Register Name	FSI PIB2OPB MFSI Remote Slave Interrupt Status
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#0.P.RSIS
Address	000000000002000A (SCOM)
Description	PIB2OPB status of Interrupts of MFSI port. Attached FSI slaves PIB read is by using the PIB. FSI0 host access through ports and lower address is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RO	Reserved.

Register Name	FSI PIB2OPB Command and Write Data
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#1.P.CMD_WRDAT
Address	0000000000020010 (SCOM)
Description	PIB2OPB Command and Write-Data Register is used to access the FSI master ports by using the PIB. FSI0 host accesses through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0	RW	WRITE_NOT_READ: Write not read.
1:31	RW	Reserved field.
32:63	RW	Reserved field.

Register Name	FSI PIB2OPB Status and Read Data
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#1.P.STAT_RDDAT_ERRES
Address	0000000000020011 (SCOM)
Description	PIB2OPB Status and Read-Data register is used to access the FSI master ports by using the PIB. FSI0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0	RO	Reserved field.
1	RO	CMD_PARITY_ERROR: Command parity check.
2	RO	WR_DATA_PARITY_ERROR: Write data parity check.
3	RO	RD_DATA_PARITY_ERROR: Read data parity check.
4	RO	LCK_STATUS_PARITY_ERROR: Locked status parity check.
5	RO	FSM_PARITY_ERROR: OPB master protocol FSM parity check.
6	RO	Reserved.
7	RO	Reserved field.
8	RO	OPB_PARITY_ERROR: OPB read data parity check during valid.
9	RO	Reserved field.
10	RO	Reserved field.
11	RO	Reserved field.
12	RO	Reserved field.
13	RO	Reserved field.
14	RO	Reserved field.
15	RO	Reserved field.
16	RO	Reserved field.
17	RO	Reserved field.
18	RO	Reserved field.
19	RO	Reserved field.

22:23	RO	Reserved.
24	RO	Reserved field.
25	RO	Reserved field.
26	RO	Reserved field.
27	RO	Reserved field.
28	RO	Reserved field.
29	RO	Reserved field.
30:31	RO	Reserved.
32:63	RO	Reserved field.

Register Name	FSI PIB2OPB Locked Status
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#1.P.LSTAT
Address	0000000000020012 (SCOM)
Description	PIB2OPB FSI master ports lock status is shown by using the PIB. FSI 0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:31	RO	Reserved.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	PIB2OPB Unit Reset
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#1.P.RESET
Address	0000000000020014 (SCOM)
Description	PIB2OPB unit reset

Bits	SCOM	Field Mnemonic: Description
0	WO_1P	Unit reset.

Register Name	FSI PIB2OPB cMFSI Remote Slave Interrupt
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#1.P.CRSIC
Address	0000000000020015 (SCOM)
Description	PIB2OPB interrupts of the cMFSI port. Attached FSI slaves are read and cleared by using the PIB. FSI 0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RW_WCLEAR	Reserved.

Register Name	FSI PIB2OPB cMFSI Remote Slave Interrupt Mask
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#1.P.CRSIM
Address	0000000000020016 (SCOM)
Description	PIB2OPB mask for interrupts of the cMFSI port. Attached FSI slaves are read and written by using the PIB. FSI 0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	Reserved.

Register Name	FSI PIB2OPB cMFSI Remote Slave Interrupt Status
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#1.P.CRSIS
Address	0000000000020017 (SCOM)
Description	PIB2OPB status of interrupts of cMFSI port. Attached FSI slaves PIB are read by using the PIB. FSI 0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RO	Reserved.

Register Name	FSI PIB2OPB MFSI Remote Slave Interrupt
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#1.P.RSIC
Address	0000000000020018 (SCOM)
Description	PIB2OPB Interrupts of MFSI port. Attached FSI slaves are read and cleared by using the PIB. FSI 0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RW_WCLEAR	Reserved.

Register Name	FSI PIB2OPB MFSI Remote Slave Interrupt Mask
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#1.P.RSIM
Address	0000000000020019 (SCOM)
Description	PIB2OPB mask for interrupts of the MFSI port. Attached FSI slaves are read and written by using the PIB. FSI 0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	Reserved.

Register Name	FSI PIB2OPB MFSI Remote Slave Interrupt Status
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_A.PIB2OPB.COMP.P#1.P.RSIS
Address	000000000002001A (SCOM)
Description	PIB2OPB status of interrupts of MFSI port. Attached FSI slaves PIB are read by using the PIB. FSI 0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RO	Reserved.

Register Name	FSI PIB2OPB Command and Write Data
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_B.PIB2OPB.COMP.P#0.P.CMD_WRDAT
Address	0000000000030000 (SCOM)
Description	The PIB2OPB command and write-data register is used to access FSI Master ports by using the PIB. FSI 0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0	RW	WRITE_NOT_READ: Write not read.
1:31	RW	Reserved field.
32:63	RW	Reserved field.

Register Name	FSI PIB2OPB Status and Read Data
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_B.PIB2OPB.COMP.P#0.P.STAT_RDDAT_ERRES
Address	0000000000030001 (SCOM)
Description	The PIB2OPB status and read data register is used to access FSI master ports by using the PIB. FSI 0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0	RO	Reserved field.
1	RO	CMD_PARITY_ERROR: Command parity check.
2	RO	WR_DATA_PARITY_ERROR: Write data parity check.
3	RO	RD_DATA_PARITY_ERROR: Read data parity check.
4	RO	LCK_STATUS_PARITY_ERROR: Locked status parity check.
5	RO	FSM_PARITY_ERROR: OPB master protocol FSM parity check.
6	RO	Reserved.
7	RO	Reserved field.
8	RO	OPB_PARITY_ERROR: OPB read data parity check during valid.

28	RO	Reserved field.
29	RO	Reserved field.
30:31	RO	Reserved.
32:63	RO	Reserved field.

Register Name	FSI PIB2OPB Locked Status
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_B.PIB2OPB.COMP.P#0.P.LSTAT
Address	0000000000030002 (SCOM)
Description	PIB2OPB FSI Master ports locked status by using the PIB. FSI 0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:31	RO	Reserved.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	PIB2OPB Unit Reset
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_B.PIB2OPB.COMP.P#0.P.RESET
Address	0000000000030004 (SCOM)
Description	PIB2OPB unit reset

Bits	SCOM	Field Mnemonic: Description
0	WO_1P	Unit reset.

Register Name	FSI PIB2OPB cMFSI Remote Slave Interrupt
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_B.PIB2OPB.COMP.P#0.P.CRSIC
Address	0000000000030005 (SCOM)
Description	PIB2OPB Interrupts of cMFSI port. Attached FSI slaves are read and cleared by using the PIB. FSI 0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RW_WCLEAR	Reserved.

Register Name	FSI PIB2OPB cMFSI Remote Slave Interrupt Mask
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_B.PIB2OPB.COMP.P#0.P.CRSIM
Address	0000000000030006 (SCOM)
Description	PIB2OPB Mask for Interrupts of cMFSI port. Attached FSI slaves are read and written by using the PIB. FSI 0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	Reserved.

Register Name	FSI PIB2OPB cMFSI Remote Slave Interrupt Status
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_B.PIB2OPB.COMP.P#0.P.CRSIS
Address	0000000000030007 (SCOM)
Description	PIB2OPB Status of Interrupts of cMFSI port. Attached FSI slaves PIB are read by using the PIB. FSI 0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RO	Reserved.

Register Name	FSI PIB2OPB MFSI Remote Slave Interrupt
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_B.PIB2OPB.COMP.P#0.P.RSIC
Address	0000000000030008 (SCOM)
Description	PIB2OPB interrupts of MFSI port. Attached FSI slaves are read and cleared by using the PIB. FSI 0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RW_WCLEAR	Reserved.

Register Name	FSI PIB2OPB MFSI Remote Slave Interrupt Mask
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_B.PIB2OPB.COMP.P#0.P.RSIM
Address	0000000000030009 (SCOM)
Description	PIB2OPB mask for interrupts of the MFSI port. Attached FSI slaves are read and written by using the PIB. FSI 0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	Reserved.

Register Name	FSI PIB2OPB MFSI Remote Slave Interrupt Status
Mnemonic	TP.TPVSB.FSI.W.FSI_SLAVE.CMFSI_INCLUDE.MFSI_B.PIB2OPB.COMP.P#0.P.RSIS
Address	000000000003000A (SCOM)
Description	PIB2OPB Status of Interrupts of MFSI port. Attached FSI slaves PIB are read by using the PIB. FSI 0 host access through ports and lower addresses is for the host only.

Bits	SCOM	Field Mnemonic: Description
0:63	RO	Reserved.

Register Name	TOD: Setup for Master Paths Control Register
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_M_PATH_CTRL_REG
Address	0000000000040000 (SCOM)
Description	Used for oscillator validity, step alignment, sync pulse frequency, and step check.

Bits	SCOM	Field Mnemonic: Description
0	RW	M_PATH_0_OSC_NOT_VALID: Indicates whether the oscillator attached to master path-0 is not valid. 0 = Valid oscillator is attached to master path-0. 1 = No valid oscillator is attached to master path-0.
1	RW	M_PATH_1_OSC_NOT_VALID: Indicates whether the oscillator attached to master path-1 is not valid. 0 = Valid oscillator is attached to master path-1. 1 = No valid oscillator is attached to master path-1.

Bits	SCOM	Field Mnemonic: Description
2	RW	M_PATH_0_STEP_ALIGN_DISABLE: Master path-0. Indicates alignment of master path-0 step to master path-1 step is active 0 = Alignment of master path-0 step to master path-1 step is active. 1 = Alignment of master path-0 step to master path-1 Step is not active.
3	RW	M_PATH_1_STEP_ALIGN_DISABLE: Indicates whether alignment of master path-1 step to master path-0 step is active. 0 = Alignment of master path-1 step to master path-0 step is active. 1 = Alignment of master path-1 step to master path-0 step is not active.
4	RW	M_PATH_STEP_CREATE_DUAL_EDGE_DISABLE: For master path-01 step creation, determines whether both edges or only the rising edge of the oscillator is sampled. 0 = Sample both edges of the oscillator. 1 = Sample only the rising edge of the oscillator.
5:7	RW	M_PATH_SYNC_CREATE_SPS_SELECT: Master path: sync create: steps per sync (SPS) select: number of STEP pulses per SYNC pulse.
8:11	RW	M_PATH_0_STEP_CHECK_CPS_DEVIATION: Master path-0: step check: CPS deviation.
12	RW	M_PATH_0_STEP_CHECK_CONSTANT_CPS_ENABLE: Determines whether measured CPS or constant CPS is used for step check CPS deviation for master path 0. 0 = Measured CPS is used for the step check CPS deviation 1 = Constant CPS is used for the step check CPS deviation
13:15	RW	M_PATH_0_STEP_CHECK_VALIDITY_COUNT: Master path-0 step check. Specifies the number of received steps before the step is declared as valid.
16:19	RW	M_PATH_1_STEP_CHECK_CPS_DEVIATION: The CPS deviation for master path-1 step check.
20	RW	M_PATH_1_STEP_CHECK_CONSTANT_CPS_ENABLE: Determines whether measured CPS or constant CPS is used for step check CPS deviation for master path 1. 0 = Measured CPS is used for the step check CPS deviation 1 = Constant CPS is used for the step check CPS deviation.
21:23	RW	M_PATH_1_STEP_CHECK_VALIDITY_COUNT: Master path-1: step check: validity count. Defines the number of received steps before the step is declared as valid.
24:25	RW	M_PATH_STEP_CHECK_CPS_DEVIATION_FACTOR: Master path-01: step check: CPS deviation factor.
26	RW	M_PATH_0_LOCAL_STEP_MODE_ENABLE: Master path-0: local step mode: enable. 0 = Steps are generated from the 16 MHz oscillator-0. 1 = Steps are generated locally using the mesh clock.
27	RW	M_PATH_1_LOCAL_STEP_MODE_ENABLE: Master path-1: local step mode: enable. 0 = Steps are generated from the 16 MHz oscillator-0. 1 = Steps are generated locally using the mesh clock.
28	RW	M_PATH_0_STEP_STEER_ENABLE: Master path-0: step steering enable. 0 = Steering of master path-0 step is not active. 1 = Steering of master path-0 step is active.
29	RW	M_PATH_1_STEP_STEER_ENABLE: Master path-1: step steering enable. 0 = Steering of master path-1 step is not active. 1 = Steering of master path-1 step is active.
30:31	RW	REG_0X00_SPARE_30_31: Spares.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	**TOD: Primary Configuration Distribution Port Control Register 0**
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_PRI_PORT_0_CTRL_REG
Address	0000000000040001 (SCOM)
Description	Control register 0 for the primary configuration distribution port.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	PRI_PORT_0_RX_SELECT: Distribution: primary configuration: port-0 RX select.
3	RW	REG_0X01_SPARE_03: Spares.

Register Name	**TOD: Timer Register**
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_TIMER_REG
Address	000000000004000D (SCOM)
Description	TOD: Timer Register

Bits	SCOM	Field Mnemonic: Description
0:59	RW	TIMER_VALUE: Timer value.
60:62	RW	REG_0X0D_SPARE_60_62: Spares.
63	ROX	TIMER_STATUS: Timer status 0 = Output is off. 1 = Output is on.

Register Name	**TOD: Master Path**
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_M_PATH_0_STEP_STEER_REG
Address	000000000004000E (SCOM)
Description	This is a 0-step steering register. It has step steering configuration and step steering status. Reading bits 33:63 shows the actual value of the step steering counter.

Bits	SCOM	Field Mnemonic: Description
0	RW	M_PATH_0_STEP_STEER_MODE: Master path-0: step steering: mode 0 = Increment mode. The step period increases, and the TOD ticks slower. 1 = Decrement mode. The step period decreases, and the TOD ticks faster.
1:31	RW	M_PATH_0_STEP_STEER_RATE: Master path-0: step steering: rate.

Bits	SCOM	Field Mnemonic: Description
32	RW	M_PATH_0_STEP_STEER_COUNTER_LOAD_FLAG: Master path-0: step steering: counter load flag 0 = Disable loading of the steer counter with data specified in bits 32:63. 1 = Enable loading of the steer counter with data specified in bits 32:63.
33:63	RWX	M_PATH_0_STEP_STEER_COUNTER_LOAD_VALUE: Master path-0: step steering: steer counter load value.

Register Name	**TOD: Master Path**
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_M_PATH_1_STEP_STEER_REG
Address	000000000004000F (SCOM)
Description	This is a 1-step steering register. It has step steering configuration and step steering status. Reading bits 33:63 shows the actual value of the step steering counter.

Bits	SCOM	Field Mnemonic: Description
0	RW	M_PATH_1_STEP_STEER_MODE: Master path-1: step steering: mode. 0 = Increment mode. The step period increases, and the TOD ticks slower 1 = Decrement mode. The step period decreases, and the TOD ticks faster.
1:31	RW	M_PATH_1_STEP_STEER_RATE: Master path-1: step steering: rate.
32	RW	M_PATH_1_STEP_STEER_COUNTER_LOAD_FLAG: Master path-1: step steering: counter load flag. 0 = Disable loading of the steer counter with data specified in bits 32:63 1 = Enable loading of the steer counter with data specified in bits 32:63.
33:63	RWX	M_PATH_1_STEP_STEER_COUNTER_LOAD_VALUE: Master path-1: step steering: steer counter load value.

Register Name	**TOD: Chip Control Register**
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_CHIP_CTRL_REG
Address	0000000000040010 (SCOM)
Description	TOD: Chip Control Register

Bits	SCOM	Field Mnemonic: Description
0	RW	TIMEBASE_ENABLE: Time base enable.
1:3	RW	I_PATH_CORE_SYNC_PERIOD_SELECT: Internal path: core SYNC period select.
4	RW	I_PATH_SYNC_CHECK_DISABLE: Internal path: SYNC check disable. 0 = TOD SYNC check enable. 1 = TOD SYNC check disable.
5	RW	TX_TTYPE_PIB_MST_FSM_STATE_DISABLE: TX TType: PIB master. FSM state: enable. 0 = Disabled. 1 = Enabled.
6	RW	RX_TTYPE_1_ON_STEP_ENABLE: RX TType-1: Enable the synchronization of the TType-1 on occurrence of a step. 0 = Disable. 1 = Enable.
7	RW	MOVE_TOD_TO_TB_ON_2X_SYNC_ENABLE: Move-TOD-to-time base on 2x sync boundary: enable 0 = Move-TOD-to-time base on 1x SYNC boundary. 1 = Move-TOD-to-time base on 2x SYNC boundary.

Bits	SCOM	Field Mnemonic: Description
8	RW	USE_TB_SYNC_MECHANISM: Use time base sync mechanism 0 = Use sync mechanism. 1 = Use the tb_enable signal as a sync event.
9	RW	USE_TB_STEP_SYNC: Use time base step sync. 0 = Use step-sync from the internal path 1 = Use programmable cycle counter for step.
10:15	RW	LOW_ORDER_STEP_VALUE: Low-order step value needed for USE_TB_STEP_SYNC as the programmable cycle counter for creating a step.
16	RW	DISTRIBUTION_BROADCAST_MODE_ENABLE: Distribution: enable broadcast mode. 0 = Distribution is done by specific routing of the signals from one TOD (master or slave) to another slave. 1 = Distribution is done by broadcasting the signals from the active master to any slave in the system.
17:18	RW	REG_0X10_SPARE_17_18: Spares.
19:23	RW	REG_0X10_SPARE_19_23: Spares.
24:25	RW	REG_0X10_SPARE_24_25: Spares.
26	WO	TX_TTYPE_PIB_MST_IF_RESET: TX TType: PIB master interface reset. Request a PIB master reset to the PIB arbiter. The reset request is sent to the PIB arbiter after a delay of four steps.
27	RW	REG_0X10_SPARE_27: Spares.
28	RW	M_PATH_CLOCK_OFF_ENABLE: Master path: clock gating enable. 0 = Disable. 1 = Enable clock gating function of the oscillator valid bits TOD_M_PATH_CTRL_REG (@0x00[0:1]).
29	RW	REG_0X10_SPARE_29: Spares.
30	RW	XSTOP_GATE: System checkstop gate. 0 = Stop TOD when a system checkstop occurs. 1 = Keep TOD running when a system checkstop occurs.
31	RW	STICKY_ERROR_INJECT_ENABLE: Sticky error inject enable.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	TOD: TX TTYPE
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_TX_TTYPE_0_REG
Address	0000000000040011 (SCOM)
Description	TX TType triggering register 0.

Bits	SCOM	Field Mnemonic: Description
0	WO	TX_TTYPE_0_TRIGGER: TX TTYPE-0 trigger.
1:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	TOD: TX TTYPE
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_TX_TTYPE_1_REG
Address	0000000000040012 (SCOM)
Description	TX TType triggering register 1.

Bits	SCOM	Field Mnemonic: Description
0	WO	TX_TTYPE_1_TRIGGER: TX TTYPE-1 trigger.

Bits	SCOM	Field Mnemonic: Description
1:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000000000

Register Name	TOD: TX TTYPE
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_TX_TTYPE_2_REG
Address	0000000000040013 (SCOM)
Description	TX TType triggering register 2.

Bits	SCOM	Field Mnemonic: Description
0	WO	TX_TTYPE_2_TRIGGER: TX TTYPE-2 trigger.
1:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000000000

Register Name	TOD: TX TTYPE
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_TX_TTYPE_3_REG
Address	0000000000040014 (SCOM)
Description	TX TType triggering register 3.

Bits	SCOM	Field Mnemonic: Description
0	WO	TX_TTYPE_3_TRIGGER: TX TTYPE-3 trigger.
1:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000000000

Register Name	TOD: TX TTYPE
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_TX_TTYPE_4_REG
Address	0000000000040015 (SCOM)
Description	TX TType triggering register 4.

Bits	SCOM	Field Mnemonic: Description
0	WO	TX_TTYPE_4_TRIGGER: TX TTYPE-4 trigger.
1:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000000000

Register Name	TOD: TX TTYPE
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_TX_TTYPE_5_REG
Address	0000000000040016 (SCOM)
Description	TX TType triggering register 5.

Bits	SCOM	Field Mnemonic: Description
0	WO	TX_TTYPE_5_TRIGGER: TX TTYPE-5 trigger.
1:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000000000

Register Name	TOD: Move
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_MOVE_TOD_TO_TB_REG
Address	0000000000040017 (SCOM)
Description	TOD-to-timebase triggering register.

Bits	SCOM	Field Mnemonic: Description
0	WO	MOVE_TOD_TO_TB_TRIGGER: Move TOD-to-timebase trigger.
1:63	RO	constant = 0b0000000000000000000000000000000000000000000000000000000000000000

Register Name	TOD: Load
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_LOAD_TOD_MOD_REG
Address	0000000000040018 (SCOM)
Description	TOD-mod triggering register. This register sets the FSM in NOT_SET state.

Bits	SCOM	Field Mnemonic: Description
0	WO	FSM_LOAD_TOD_MOD_TRIGGER: FSM: LOAD_TOD_MOD trigger.
1	WO	FSM_LOAD_TOD_MOD_SYNC_ENABLE: FSM: LOAD_TOD_MOD sync enable when the FSM is in NOT_SET state 0 = No sync sent to the core when the FSM is in NOT_SET state. 1 = Sync sent to the core when the FSM is in NOT_SET state.
2:63	RO	constant = 0b0000000000000000000000000000000000000000000000000000000000000000

Register Name	TOD: Trace Data Set Register 1
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_TRACE_DATA_1_REG
Address	000000000004001D (SCOM)
Description	Trace Data Set Register 1

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	TRACE_DATA_SET_1: Trace: data set-1.

Register Name	TOD: Trace Data Set Register 2
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_TRACE_DATA_2_REG
Address	000000000004001E (SCOM)
Description	Trace Data Set Register 2

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	TRACE_DATA_SET_2: Trace: data set-2.

Register Name	TOD: Trace Data Set Register 3
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_TRACE_DATA_3_REG
Address	000000000004001F (SCOM)
Description	Trace Data Set Register 3

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	TRACE_DATA_SET_3: Trace: data set-3.

Register Name	TOD: Time Value Register 60
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_VALUE_REG
Address	0000000000040020 (SCOM)
Description	Bit TOD and 4-bit who's-on-first (WOF) incrementers

Bits	SCOM	Field Mnemonic: Description
0:59	ROX	TOD_VALUE: Internal path: time-of-day register value.
60:63	RWX	WOF_COUNTER_VALUE: Who's-on-first (WOF): counter value.

Register Name	TOD: Load Register TOD Incrementer: 60
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_LOAD_TOD_REG
Address	0000000000040021 (SCOM)
Description	Bit TOD and 4-bit WOF on read: Returns all 0s when the TOD is not running. On write: go to wait for sync state when data bit 6) = ‘0’ (load TOD). Otherwise, go to stopped state (load TOD data63).

Bits	SCOM	Field Mnemonic: Description
0:59	RWX	LOAD_TOD_VALUE: Internal path: load TOD value.
60:63	RWX	WOF: who's-on-first (WOF) incrementer.

Register Name	TOD: Start TOD Triggering Register
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_START_TOD_REG
Address	0000000000040022 (SCOM)
Description	TOD: Start TOD triggering register. Goes to running state when data bit [02] = ‘0’. Otherwise, go to wait for sync state.

Bits	SCOM	Field Mnemonic: Description
0	WO	FSM_START_TOD_TRIGGER: FSM: Start TOD trigger.
1	RW	REG_0X22_SPARE_01: Spares.
2	WO	FSM_START_TOD_DATA02: FSM: Start TOD data 02 trigger.
3:7	RW	REG_0X22_SPARE_03_07: Spares.
8:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	TOD: Low-Order Step Register
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_LOW_ORDER_STEP_REG
Address	0000000000040023 (SCOM)
Description	TOD: Low-Order Step Register

Bits	SCOM	Field Mnemonic: Description
0:5	RWX	LOW_ORDER_STEP_COUNTER_VALUE: Low-order step. Counter value is used for use OSC B configuration for internal step creation.
6:7	RW	REG_0X23_SPARE_06_07: Spares.
8:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	TOD: FSM Register
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_FSM_REG
Address	0000000000040024 (SCOM)
Description	TOD: FSM Register

Bits	SCOM	Field Mnemonic: Description
0:3	RWX	I_PATH_FSM_STATE: Internal path. TOD FSM state (TOD is running in the following states: x‘02’, x‘0A’, x‘0E’). 0000 = Error.
4	ROX	TOD_IS_RUNNING: TOD running indicator.
5:7	RW	REG_0X24_SPARE_05_07: Spares.
8:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	TOD: TX TType Control Register
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_TX_TTYPE_CTRL_REG
Address	0000000000040027 (SCOM)
Description	TOD: TX TType Control Register

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MOVE_TOD_TO_TB_CORE_ADDRESS: TX TType: move TOD to timebase: configuration of core address. Must be configured before issuing a MOVE_CHIP_TOD_TO_TB command. Bits [0:31] are used to configure the core address. This mode is activated by enabling bit [35].
24:31	RW	MOVE_TOD_TO_TB_CORE_ID: TX TType: move TOD to timebase: configuration of core address. Must be configured before issuing a MOVE_CHIP_TOD_TO_TB command. 000 = Reserved. 001 = Multicast bit (0b1 for multicast) 011 … 100 = PIB slave address is 0b01xxxx where xxxx is the core ID.
32	RW	TX_TTYPE_4_SEND_MODE: TX TType: TType-4 send mode. Qualification of TType4 is sent out through Fabric when receiving a TType-3 by Fabric. Must be configured before issuing a TType-3 command. 0 = Send TType-4 if TOD is master. 1 = Send TType-4 if enabled (bit-33).
33	RW	TX_TTYPE_4_SEND_ENABLE: TX TType: TType-4 send enable. 0 = Disabled to send out TType-4. 1 = Enabled to send out TType-4.

Bits	SCOM	Field Mnemonic: Description
34	RW	REG_0X27_SPARE_34: Spares.
35	RW	MOVE_TOD_TO_TB_CORE_ADDRESS_ENABLE: TX TType: move TOD to timebase. Enables the full configuration of the core address.
36	RW	REG_0X27_SPARE_36: Spares.
37:39	ROX	TX_TTYPE_PIB_FSM_STATE: TX TType: PIB master FSM state.
40:63	RO	constant = 0b000000000000000000000000

Register Name	**TOD: RX TType Control Register**
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_RX_TTYPE_CTRL_REG
Address	0000000000040029 (SCOM)
Description	This register is used by the Alter Display Unit (ADU) to transmit the TType data it receives from the processor bus.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	RX_TTYPE_DATA: RX TType: Data. See the TType Format section of the workbook for the data format.

Register Name	**TOD: Error and Interrupt Register**
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_ERROR_REG
Address	0000000000040030 (SCOM)
Description	TOD: Error and Interrupt Register

Bits	SCOM	Field Mnemonic: Description
0	RWX	REG_0X00_DATA_PARITY_ERROR: Error: master path control register (0x00): Data parity error.
1	RWX	M_PATH_0_PARITY_ERROR: Error: master path-0: parity error.

63	WO	CORE_STEP_ERROR_INJECT: Error inject: to suppress one step to core timebase.

Register Name	**TOD: Error Mask Register Mask: Error Reporting Component (C_ERR_RPT)**
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_ERROR_MASK_REG
Address	0000000000040032 (SCOM)
Description	TOD: Error mask register mask of the error reporting component (c_err_rpt)

Bits	SCOM	Field Mnemonic: Description
0	RWX	REG_0X00_DATA_PARITY_ERROR_MASK: Error mask: master path control register (0x00): data parity error.
1	RWX	M_PATH_0_PARITY_ERROR_MASK: Error mask: master path-0: parity error.
2	RWX	M_PATH_1_PARITY_ERROR_MASK: Error mask: master path-1: parity error.
3	RWX	REG_0X01_DATA_PARITY_ERROR_MASK: Error mask: port-0 primary configuration register (0x01): data parity error.
4	RWX	REG_0X02_DATA_PARITY_ERROR_MASK: Error mask: port-1 primary configuration register (0x02): data parity error.
5	RWX	REG_0X03_DATA_PARITY_ERROR_MASK: Error mask: port-0 secondary configuration register (0x03): data parity error.
6	RWX	REG_0X04_DATA_PARITY_ERROR_MASK: Error mask: port-1 secondary configuration register (0x04): data parity error.
7	RWX	REG_0X05_DATA_PARITY_ERROR_MASK: Error mask: slave path control register (0x05): data parity error.
8	RWX	REG_0X06_DATA_PARITY_ERROR_MASK: Error mask: internal path control register (0x06): data parity error.
9	RWX	REG_0X07_DATA_PARITY_ERROR_MASK: Error mask: primary/secondary master/slave control register (0x07): data parity error.
10	RWX	S_PATH_0_PARITY_ERROR_MASK: Error mask: slave path-0: parity error.
11	RWX	REG_0X08_DATA_PARITY_ERROR_MASK: Error mask: primary/secondary master/slave status register (0x07): data parity error.
12	RWX	REG_0X09_DATA_PARITY_ERROR_MASK: Error mask: master path status register (0x09): data parity error.
13	RWX	REG_0X0A_DATA_PARITY_ERROR_MASK: Error mask: slave path status register (0x0a): data parity error.
14	RWX	M_PATH_0_STEP_CHECK_ERROR_MASK: Error mask: master path-0: step check error.
15	RWX	M_PATH_1_STEP_CHECK_ERROR_MASK: Error mask: master path-1: step check error.
16	RWX	S_PATH_0_STEP_CHECK_ERROR_MASK: Error mask: slave path-0: step check error.
17	RWX	I_PATH_STEP_CHECK_ERROR_MASK: Error mask: internal path: Step check error.
18	RWX	PSS_HAM_MASK: Error mask: PSS hamming distance.
19	RWX	REG_0X0B_DATA_PARITY_ERROR_MASK: Error mask: miscellaneous, reset register (0x0b): data parity error.
20	RWX	S_PATH_1_PARITY_ERROR_MASK: Error mask: slave path-0: parity error.

Bits	SCOM	Field Mnemonic: Description
21	RWX	S_PATH_1_STEP_CHECK_ERROR_MASK: Error mask: slave path-1: step check error.
22	RWX	I_PATH_DELAY_STEP_CHECK_PARITY_ERROR_MASK: Error mask: internal path: delay, step check components: parity error.
23	RWX	REG_0X0C_DATA_PARITY_ERROR_MASK: Error mask: data parity error of the following registers: Probe data select register (0x0c) Timer register (0x0d)
24	RWX	REG_0X11_0X12_0X13_0X14_0X15_0X16_DATA_PARITY_ERROR_MASK: Error mask: data parity error on one of the following TX-TType trigger registers: TX TType-0 triggering register (0x11) TX TType-1 triggering register (0x12) TX TType-2 triggering register (0x13) TX TType-3 triggering register (0x14) TX TType-4 triggering register (0x15) TX TType-5 triggering register (0x16)
25	RWX	REG_0X17_0X18_0X21_0X22_DATA_PARITY_ERROR_MASK: Error mask: data parity error on one of the following trigger registers: move-TOD-to-timebase triggering register (0x17) TX TType-0 triggering register (0x11)load-TOD-mod register (0x18) TX TType-0 triggering register (0x11)load register (0x21) TX TType-0 triggering register (0x11)start-TOD register (0x22)
26	RWX	REG_0X1D_0X1E_0X1F_DATA_PARITY_ERROR_MASK: Error mask: data parity error on one of the following trace data registers: TX TType-0 triggering register (0x11)trace data set-1 register (0x1d) TX TType-0 triggering register (0x11)trace data set-2 register (0x1e) TX TType-0 triggering register (0x11)trace data set-3 register (0x1f).
27	RWX	REG_0X20_DATA_PARITY_ERROR_MASK: Error mask: time value register (0x20): data parity error.
28	RWX	REG_0X23_DATA_PARITY_ERROR_MASK: Error mask: low-order step register (0x23): data parity error.
29	RWX	REG_0X24_DATA_PARITY_ERROR_MASK: Error mask: FSM register (0x24): data parity error.
30	RWX	REG_0X29_DATA_PARITY_ERROR_MASK: Error mask: RX-TType control register: data parity error.
31	RWX	REG_0X30_0X31_0X32_0X33_DATA_PARITY_ERROR_MASK: Error mask: data parity error on one of the following error handling registers: Error register (0x30) Error inject register (0x31) Error mask register (0x32) Error interrupt mask register (0x33)
32	RWX	REG_0X10_DATA_PARITY_ERROR_MASK: Error mask: chip control register (0x10): data parity error.
33	RWX	I_PATH_SYNC_CHECK_ERROR_MASK: Error mask: internal path: SYNC check.
34	RWX	I_PATH_FSM_STATE_PARITY_ERROR_MASK: Error mask: internal path: FSM state parity error.
35	RWX	I_PATH_TIME_REG_PARITY_ERROR_MASK: Error mask: internal path: time register: parity error.
36	RWX	I_PATH_TIME_REG_OVERFLOW_MASK: Error mask: internal path: time register overflow.
37	RWX	WOF_LOW_ORDER_STEP_COUNTER_PARITY_ERROR_MASK: Error mask: WOF counter or Low-Order-Step counter: parity error.
38	RWX	RX_TTYPE_0_MASK: Error mask: received TType-0.
39	RWX	RX_TTYPE_1_MASK: Error mask: received TType-1.
40	RWX	RX_TTYPE_2_MASK: Error mask: received TType-2.
41	RWX	RX_TTYPE_3_MASK: Error mask: received TType-3.
42	RWX	RX_TTYPE_4_MASK: Error mask: received TType-4.
43	RWX	RX_TTYPE_5_MASK: Error mask: received TType-5 when FSM is in running state.

Bits	SCOM	Field Mnemonic: Description
44	RWX	PIB_SLAVE_ADDR_INVALID_ERROR_MASK: Error mask: PIB slave: invalid address.
45	RWX	PIB_SLAVE_WRITE_INVALID_ERROR_MASK: Error mask: PIB slave: invalid write.
46	RWX	PIB_SLAVE_READ_INVALID_ERROR_MASK: Error mask: PIB slave: invalid read.
47	RWX	PIB_SLAVE_ADDR_PARITY_ERROR_MASK: Error mask: PIB slave: Address parity error.
48	RWX	PIB_SLAVE_DATA_PARITY_ERROR_MASK: Error mask: PIB slave: data parity error.
49	RWX	REG_0X27_DATA_PARITY_ERROR_MASK: Error mask: TType control register(0x27): data parity error.
50:52	RWX	PIB_MASTER_RSP_INFO_ERROR_MASK: Error mask: PIB master: response infoerror.
53	RWX	RX_TTYPE_INVALID_ERROR_MASK: Error mask: received invalid TType from register 0x21.
54	RWX	RX_TTYPE_4_DATA_PARITY_ERROR_MASK: Error mask: data parity error on received TType-4 from register 0x21.
55	RWX	PIB_MASTER_REQUEST_ERROR_MASK: Error mask: PIB master; request while busy error.
56	RWX	PIB_RESET_DURING_PIB_ACCESS_ERROR_MASK: Error mask: PIB reset received during a PIB master or PIB slave operation.
57	RWX	EXTERNAL_XSTOP_ERROR_MASK: Error mask: TOD received an external checkstop.
58	RWX	SPARE_ERROR_MASK_58: Error mask: spare.
59	RWX	SPARE_ERROR_MASK_59: Error mask: spare.
60	RWX	SPARE_ERROR_MASK_60: Error mask: spare.
61	RWX	SPARE_ERROR_MASK_61: Error mask: spare.
62	RWX	OSCSWITCH_INTERRUPT_MASK: Error mask: Interrupt from the oscillator switch.
63	RWX	SPARE_ERROR_MASK_63: Error mask: spare.

Register Name	**TOD: Route Specific Errors to the CORE or FIR**
Mnemonic	TP.TPCHIP.PIB.TOD.TOD_ERROR_ROUTING_REG
Address	0000000000040033 (SCOM)
Description	TOD: Routes specific errors either to the CORE or to the FIR

Bits	SCOM	Field Mnemonic: Description
0	RW	REG_0X00_DATA_PARITY_ERROR_ROUTING: Error routing: master path control register (0x00): data parity error.
1	RW	M_PATH_0_PARITY_ERROR_ROUTING: Error routing: master path-0: parity error.
2	RW	M_PATH_1_PARITY_ERROR_ROUTING: Error routing: master path-1: parity error.
3	RW	REG_0X01_DATA_PARITY_ERROR_ROUTING: Error routing: port-0 primary configuration register (0x01): data parity error.
4	RW	REG_0X02_DATA_PARITY_ERROR_ROUTING: Error routing: port-1 primary configuration register (0x02): data parity error.
5	RW	REG_0X03_DATA_PARITY_ERROR_ROUTING: Error routing: port-0 secondary configuration register (0x03): data parity error.
6	RW	REG_0X04_DATA_PARITY_ERROR_ROUTING: Error routing: port-1 secondary configuration register (0x04): data parity error.
7	RW	REG_0X05_DATA_PARITY_ERROR_ROUTING: Error routing: slave path control register (0x05): data parity error.

Bits	SCOM	Field Mnemonic: Description
8	RW	REG_0X06_DATA_PARITY_ERROR_ROUTING: Error routing: internal path control register (0x06): data parity error.
9	RW	REG_0X07_DATA_PARITY_ERROR_ROUTING: Error routing: primary/secondary or master/slave control register (0x07): data parity error.
10	RW	S_PATH_0_PARITY_ERROR_ROUTING: Error routing: slave path-0: parity error.
11	RW	REG_0X08_DATA_PARITY_ERROR_ROUTING: Error routing: primary/secondary or master/slave status register (0x07): data parity error.
12	RW	REG_0X09_DATA_PARITY_ERROR_ROUTING: Error routing: master path status register (0x09): data parity error.
13	RW	REG_0X0A_DATA_PARITY_ERROR_ROUTING: Error routing: slave path status register (0x0a): data parity error.
14	RW	M_PATH_0_STEP_CHECK_ERROR_ROUTING: Error routing: master path-0: step check error.
15	RW	M_PATH_1_STEP_CHECK_ERROR_ROUTING: Error routing: master path-1: step check error.
16	RW	S_PATH_0_STEP_CHECK_ERROR_ROUTING: Error routing: slave path-0: step check error.
17	RW	I_PATH_STEP_CHECK_ERROR_ROUTING: Error routing: internal path: step check error.
18	RW	PSS_HAM_CORE_INTERRUPT_MASK: Error routing: PSS hamming distance.
19	RW	REG_0X0B_DATA_PARITY_ERROR_ROUTING: Error routing: miscellaneous, reset register (0x0b): data parity error.
20	RW	S_PATH_1_PARITY_ERROR_ROUTING: Error routing: slave path-0: parity error.
21	RW	S_PATH_1_STEP_CHECK_ERROR_ROUTING: Error routing: slave path-1: step check error.
22	RW	I_PATH_DELAY_STEP_CHECK_PARITY_ERROR_ROUTING: Error routing: internal path: delay, step check components: parity error.
23	RW	REG_0X0C_DATA_PARITY_ERROR_ROUTING: Error routing: data parity error of the following registers: TX TType-0 triggering register (0x11) Probe data select register (0x0c) Timer register (0x0d)
24	RW	REG_0X11_0X12_0X13_0X14_0X15_0X16_DATA_PARITY_ERROR_ROUTING: Error routing: data parity error on one of the following TX-TType trigger registers: TX TType-0 triggering register (0x11) TX TType-1 triggering register (0x12) TX TType-2 triggering register (0x13) TX TType-3 triggering register (0x14) TX TType-4 triggering register (0x15) TX TType-5 triggering register (0x16)
25	RW	REG_0X17_0X18_0X21_0X22_DATA_PARITY_ERROR_ROUTING: Error routing: data parity error on one of the following trigger registers: Move-TOD-to-timebase triggering register (0x17) Load-TOD-mod register (0x18) Load register (0x21) Start-tod register (0x22)
26	RW	REG_0X1D_0X1E_0X1F_DATA_PARITY_ERROR_ROUTING: Error routing: data parity error on one of the following trace data registers: Trace data set-1 register (0x1d) Trace data set-2 register (0x1e) Trace data set-3 register (0x1f)
27	RW	REG_0X20_DATA_PARITY_ERROR_ROUTING: Error routing: time value register (0x20): data parity error.
28	RW	REG_0X23_DATA_PARITY_ERROR_ROUTING: Error routing: low-order step register (0x23): data parity error.
29	RW	REG_0X24_DATA_PARITY_ERROR_ROUTING: Error routing: FSM register (0x24): data parity error.

Bits	SCOM	Field Mnemonic: Description
30	RW	REG_0X29_DATA_PARITY_ERROR_ROUTING: Error routing: RX-TType control register: data parity error.
31	RW	REG_0X30_0X31_0X32_0X33_DATA_PARITY_ERROR_ROUTING: Error routing: data parity error on one of the following error handling registers: Error register (0x30) Error inject register (0x31) Error mask register (0x32) Core interrupt mask register (0x33)
32	RW	REG_0X10_DATA_PARITY_ERROR_ROUTING: Error routing: chip control register (0x10): data parity error.
33	RW	I_PATH_SYNC_CHECK_ERROR_ROUTING: Error routing: internal path: SYNC check.

58	RW	SPARE_ERROR_ROUTING_58: Error routing: spare.
59	RW	SPARE_ERROR_ROUTING_59: Error routing: spare.
60	RW	SPARE_ERROR_ROUTING_60: Error routing: spare.
61	RW	SPARE_ERROR_ROUTING_61: Error routing: spare.
62	RW	OSCSWITCH_INTERRUPT_ROUTING: Error routing: interrupt from the oscillator switch.
63	RW	SPARE_ERROR_ROUTING_63: Error routing: spare.

Register Name	CBS Control/Status Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.CBS_CS
Address	0000000000050001 (SCOM)
Description	CBS Control/Status Register

Bits	SCOM	Field Mnemonic: Description
0	RWX	CBS_CS_START_BOOT_SEQUENCER: Start boot sequencer explicitly.
1	RWX	CBS_CS_1_UNUSED: Unused.
2	RWX	CBS_CS_OPTION_SKIP_SCAN0_CLOCKSTART: If set, the SCAN0 and CLOCKSTART commands are skipped. Used for memory-preserved reIPL.
3	RWX	CBS_CS_OPTION_PREVENT_SBE_START: If set, start of SBE is suppressed.
4	RWX	CBS_CS_SECURE_ACCESS_BIT: Secure access bit (SAB).
5	ROX	CBS_CS_SAMPLED_SMD_PIN: Sampled state of secure mode disable (SMD) C4 pin.
6:15	RWX	CBS_CS_STATE_MACHINE_TRANSITION_DELAY: Defines transition delay of the boot sequencer state machine. Default value = 128 + 32 FSI cycles.
16:31	ROX	CBS_CS_INTERNAL_STATE_VECTOR: Current state of the CBS state machine.

Register Name	CBS Trace Register 0
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.CBS_TR
Address	0000000000050002 (SCOM)
Description	CBS Trace Register

Bits	SCOM	Field Mnemonic: Description
0:15	RWX	CBS_TR_SIGNATURE: CBS signature holds the visited states of the last boot sequence.
16:21	RWX	CBS_TR_UNUSED: Unused.
22:31	RWX	CBS_TR_TRANS_DELAY: Programmed transition delay of last boot sequence.

Register Name	CBS Trace Register 1
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.CBS_EL
Address	0000000000050003 (SCOM)
Description	CBS Trace Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	Reserved.

Register Name	CBS Trace Register 2
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.CBS_TR_HIST
Address	0000000000050005 (SCOM)
Description	CBS Trace Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	Reserved.

Register Name	CBS Trace Register 3
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.CBS_EL_HIST
Address	0000000000050006 (SCOM)
Description	CBS Trace Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	Reserved.

Register Name	Selfboot Control/Status Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.SB_CS
Address	0000000000050008 (SCOM)
Description	Selfboot Control/Status Register

Bits	SCOM	Field Mnemonic: Description
0	RW	SB_CS_SECURE_DEBUG_MODE: sticky bit: secure debug mode (SDM).
1:11	RW	Reserved.
12	RW	SB_CS_START_RESTART_VECTOR0: SBE start or restart IPL code execution.
13	RW	SB_CS_START_RESTART_VECTOR1: SBE start or restart runtime code execution.
14	RW	SB_CS_INTERRUPT_S0: SBE interrupt S0.
15	RW	SB_CS_INTERRUPT_S1: SBE interrupt S1.
16	RW	SB_CS_BYPASSING_RESET_SEQUENCE_PIB_I2CM: If set, the PIB I2CM reset command is skipped.
17	RW	SB_CS_SELECT_SECONDARY_SEEPROM: If set, the secondary SEEPROM is selected.
18:24	RW	Reserved.
25:31	RW	SB_CS_DEBUG_BOLT_ON_CONTROL_BITS: SBE debug bolt-on control bits.

Register Name	Selfboot Message Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.SB_MSG
Address	0000000000050009 (SCOM)
Description	Selfboot Message Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	Reserved.

Register Name	Debug CBS Pervasive Clock Controller
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.CBS_STAT
Address	000000000005000B (SCOM)
Description	Debug CBS Pervasive Clock Controller

Bits	SCOM	Field Mnemonic: Description
0	ROX	CBS_STAT_DBG_RESET_EP: Reset endpoint. The CC and CTRL are in reset state.
1	ROX	CBS_STAT_DBG_OPCG_IP: OPCG in progress, not in idle.
2	ROX	CBS_STAT_DBG_VITL_CLKOFF: VITL HLD stopped. When enabled, plat-depth cycles are required to switch this latch.
3	ROX	CBS_STAT_DBG_TEST_ENABLE: Test enable.
4	ROX	CBS_STAT_DBG_CBS_REQ: CBS interface - request (latched).
5:7	ROX	CBS_STAT_DBG_CBS_CMD: CBS interface - command (latched).
8:12	ROX	CBS_STAT_DBG_CBS_STATE: CBS command state machine. 00000 = Idle.
13	ROX	CBS_STAT_DBG_SECURITY_DEBUG_MODE: Status of the security mode bit.
14	ROX	CBS_STAT_DBG_PROTOCOL_ERROR: CBS Protocol Error - REQ raised. Although the state machine is not in idle state, a RESET_EP operation is required to clear this bit. There is no impact on IPL.
15	ROX	CBS_STAT_DBG_PCB_IDLE: PCB interface in idle state.
16:19	ROX	CBS_STAT_DBG_CURRENT_OPCG_MODE: Current or latest OPCG mode. 0000 = NOP 0001 = LBIST 0010 = ABIST 0011 = RUN-N 0100 = SCAN0 0101 = SCAN 0110 = SCAN rotate 0111 = SCAN wth update DR. 1000 = SCAN with capture DR 1001 = Clock change request, 10101 … 1111 = Unused.
20:23	ROX	CBS_STAT_DBG_LAST_OPCG_MODE: Previous OPCG mode.
24	ROX	CBS_STAT_DBG_PCB_ERROR: PCB interface error. Read the CC Error Register or set CBS_CMD = 001 to switch FSI CBS debug information to the CC Error Register.
25	ROX	CBS_STAT_DBG_PARITY_ERROR: Any parity error, non-PCB parity. Read the CC Error Register or set CBS_CMD = 001 to switch FSI CBS debug information to the CC Error Register.
26	ROX	CBS_STAT_DBG_CC_ERROR: Any other CC error. Read the CC Error Register or set CBS_CMD = 001 to switch FSI CBS debug information to the CC Error Register.
27	ROX	CBS_STAT_DBG_CHIPLET_IS_ALIGNED: This bit is set to 1 when the valid align pulse is sent out.
28	ROX	CBS_STAT_DBG_PCB_REQUEST_SINCE_RESET: A reset clears this bit and the first PCB request sets it.
29	ROX	CBS_STAT_DBG_PARANOIA_TEST_ENABLE_CHANGE: The rising or falling edge on test enable after reset. This bit requires a reset endpoint operation to clear. There is no impact on IPL.
30	ROX	CBS_STAT_DBG_PARANOIA_VITL_CLKOFF_CHANGE: The rising or falling edge on VITL_CLKOFF after a reset. This bit requires a reset endpoint operation to clear. There is no impact on IPL.
31	ROX	CBS_STAT_DBG_TP_TPFSI_CBS_ACK: A representation of a CC acknowledgment went to the FSI.

0:31	RWX	M1HC0A_MAILBOX_1_HEADER_COMMAND_0_A: Mailbox 1 header/command 0A information.

Register Name	Hold the Header/Command 1A Information for the Doorbell
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.MAILBOX_1_HEADER_COMMAND_1_A
Address	0000000000050022 (SCOM)
Description	Hold the header/command information for the doorbell.

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	M1HC1A_MAILBOX_1_HEADER_COMMAND_1_A: Mailbox1 header/command1A information.

Register Name	Hold the Header/Command 2A Information for the Doorbell
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.MAILBOX_1_HEADER_COMMAND_2_A
Address	0000000000050023 (SCOM)
Description	Hold the header/command information for the doorbell.

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	M1HC2A_MAILBOX_1_HEADER_COMMAND_2_A: Mailbox 1 header/command 2A information.

Register Name	Hold the Header/Command 0B Information for the Doorbell
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.MAILBOX_1_HEADER_COMMAND_0_B
Address	0000000000050025 (SCOM)
Description	Hold the header/command information for the doorbell.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	M1HC0B_MAILBOX_1_HEADER_COMMAND_0_B: Mailbox 1 header/command 0B information.

Register Name	Hold the Header/Command 1B Information for the Doorbell
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.MAILBOX_1_HEADER_COMMAND_1_B
Address	0000000000050026 (SCOM)
Description	Hold the header/command information for the doorbell.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	M1HC1B_MAILBOX_1_HEADER_COMMAND_1_B: Mailbox 1 header/command 1B information.

Register Name	Hold the Header/Command 2B Information for the Doorbell
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.MAILBOX_1_HEADER_COMMAND_2_B
Address	0000000000050027 (SCOM)
Description	Hold the header/command information for the doorbell

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	M1HC2B_MAILBOX_1_HEADER_COMMAND_2_B: Mailbox 1 header/command 2B information.

Register Name	Control the Doorbell 2 and Indicate Status
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.DOORBELL_STATUS_CONTROL_2A
Address	0000000000050028 (SCOM)
Description	Used to control the doorbell 2 and indicate status

Bits	SCOM	Field Mnemonic: Description
0	RWX	DSC2_PERMISSION_TO_SEND_DOORBELL_2: Permission to send doorbell 1.
1	RWX	DSC2_ABORT_DOORBELL_2: Abort Doorbell 1.
2	RWX	DSC2_LBUS_SLAVE_2B_PENDING: FSI/LBUS slave-B pending doorbell 1.
3	RWX_WCLEAR	DSC2_PIB_SLAVE_2A_PENDING: Host/PIB slave-A pending doorbell 1.
4	ROX	DSC2_UNUSED_2A_27: Reserved.
5	RWX	DSC2_XDN_DOORBELL_2: Xdn doorbell 1.
6	RWX_WCLEAR	DSC2_XUP_DOORBELL_2: Xup doorbell 1.
7	ROX	DSC2_UNUSED_2A_24: Reserved.
8:11	RWX	DSC2_HEADER_COUNT_2A: Header count (host/PIB slave-A).
12:19	RWX	DSC2_DATA_COUNT_2A: Data count (host/PIB slave-A).
20:23	RWX_WCLEAR	DSC2_HEADER_COUNT_2B: Header count (FSI/LBUS slave-B).
24:31	RWX_WCLEAR	DSC2_DATA_COUNT_2B: Data count (FSI/LBUS slave-B).

Register Name	Hold the Header/Command 0A Information for the Doorbell
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.MAILBOX_2_HEADER_COMMAND_0_A
Address	0000000000050029 (SCOM)
Description	Hold the header/command information for the doorbell

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	M2HC0A_MAILBOX_2_HEADER_COMMAND_0_A: Mailbox 2 header/command 0A information.

Register Name	Hold The Header/Command 1A Information for the Doorbell
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.MAILBOX_2_HEADER_COMMAND_1_A
Address	000000000005002A (SCOM)
Description	Hold the header/command information for the doorbell

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	M2HC1A_MAILBOX_2_HEADER_COMMAND_1_A: Mailbox 2 header/command 1A information.

Register Name	Hold the Header/Command 2A Information for the Doorbell
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.MAILBOX_2_HEADER_COMMAND_2_A
Address	000000000005002B (SCOM)
Description	Hold the header/command information for the doorbell

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	M2HC2A_MAILBOX_2_HEADER_COMMAND_2_A: Mailbox 2 header/command 2A information.

Register Name	Hold the Header/Command 0B Information for the Doorbell
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.MAILBOX_2_HEADER_COMMAND_0_B
Address	000000000005002D (SCOM)
Description	Hold the header/command information for the doorbell

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	M2HC0B_MAILBOX_2_HEADER_COMMAND_0_B: Mailbox 2 header/command 0B information.

Register Name	Hold the Header/Command 1B Information for the Doorbell
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.MAILBOX_2_HEADER_COMMAND_1_B
Address	000000000005002E (SCOM)
Description	Hold the header/command information for the doorbell.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	M2HC1B_MAILBOX_2_HEADER_COMMAND_1_B: Mailbox 2 header/command 1B information.

Register Name	Hold the Header/Command 2B Information for the Doorbell
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.MAILBOX_2_HEADER_COMMAND_2_B
Address	000000000005002F (SCOM)
Description	Hold the header/command information for the doorbell

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	M2HC2B_MAILBOX_2_HEADER_COMMAND_2_B: Mailbox 2 header/command 2B information.

Register Name	Failed Doorbell Operation Status
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.MAILBOX_SLAVE_B_DOORBELL_ERROR_STATUS
Address	0000000000050030 (SCOM)
Description	Contains the status of a failed doorbell operation.

Bits	SCOM	Field Mnemonic: Description
0:3	ROX	MSBDES_UNUSED_B_31_28: Reserved.
4	ROX	MSBDES_ILLEGAL_OPERATION_ATTEMPTED_1: Illegal operation attempted 1.
5	ROX	MSBDES_WRITE_FULL_PIB_SLAVE_A_MAILBOX_ERROR_1: Write full host/PIB slave-A mailbox error 1.
6	ROX	MSBDES_READ_EMPTY_PIB_SLAVE_A_MAILBOX_ERROR_1: Read empty host/PIB slave-A mailbox error 1.
7	ROX	MSBDES_PIB_SLAVE_A_RAM_PARITY_ERROR_DETECTED_1: Host/PIB slave-A RAM parity error detected 1.
8:14	ROX	MSBDES_ADDRESS_OF_PIB_PARITY_ERROR_1: The address of host/PIB slave-A RAM that caused parity error 1.
15	ROX	MSBDES_CLEAR_STATUS_1: Clear status error of bits [27:17]. Resets complete mailbox and arbiter state machine.
16:19	ROX	MSBDES_UNUSED_B_15_12: Reserved.
20	ROX	MSBDES_ILLEGAL_OPERATION_ATTEMPTED_2: Illegal operation attempted 2.
21	ROX	MSBDES_WRITE_FULL_PIB_SLAVE_A_MAILBOX_ERROR_2: Write full host/PIB slave-A mailbox error 2.
22	ROX	MSBDES_READ_EMPTY_PIB_SLAVE_A_MAILBOX_ERROR_2: Read empty host/PIB slave-A mailbox error 2.
23	ROX	MSBDES_PIB_SLAVE_A_RAM_PARITY_ERROR_DETECTED_2: Host/PIB slave-A RAM parity error detected 2.
24:30	ROX	MSBDES_ADDRESS_OF_PIB_PARITY_ERROR_2: The address of host/PIB slave-A RAM that caused parity error 2.
31	ROX	MSBDES_CLEAR_STATUS_2: Clear status errors bit [11:1]. Resets complete mailbox and arbiter state machine.

Register Name	Failed Doorbell Operation Status
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.MAILBOX_SLAVE_A_DOORBELL_ERROR_STATUS
Address	0000000000050031 (SCOM)
Description	Contains the status of a failed doorbell operation.

Bits	SCOM	Field Mnemonic: Description
0:3	ROX	MSADES_UNUSED_A_31_28: Reserved.
4	ROX	MSADES_ILLEGAL_OPERATION_ATTEMPTED_1: Illegal operation 1 attempted.
5	ROX	MSADES_WRITE_FULL_PIB_SLAVE_A_MAILBOX_ERROR_1: Write full host/PIB slave-A mail error 1 occurred.
6	ROX	MSADES_READ_EMPTY_PIB_SLAVE_A_MAILBOX_ERROR_1: Read empty host/PIB slave-A mail error 1 occurred.
7	ROX	MSADES_LBUS_SLAVE_B_RAM_PARITY_ERROR_DETECTED_1: Host/PIB slave-A RAM parity error detected 1.
8:14	ROX	MSADES_ADDRESS_OF_LBUS_PARITY_ERROR_1: The address of the FSI/LBUS slave-B RAM that caused parity error 1.
15	ROX	MSADES_CLEAR_STATUS_1: Clear status errors bit [27:17]. Resets complete mailbox and arbiter state machine.
16:19	ROX	MSADES_UNUSED_A_15_12: Reserved.
20	ROX	MSADES_ILLEGAL_OPERATION_ATTEMPTED_2: Illegal operation 2 attempted.

Bits	SCOM	Field Mnemonic: Description
21	ROX	MSADES_WRITE_FULL_PIB_SLAVE_A_MAILBOX_ERROR_2: Write full host/PIB slave-A mail error 2 occurred.
22	ROX	MSADES_READ_EMPTY_PIB_SLAVE_A_MAILBOX_ERROR_2: Read empty host/PIB slave-A mail error 2 occurred.
23	ROX	MSADES_LBUS_SLAVE_B_RAM_PARITY_ERROR_DETECTED_2: Host/PIB slave-A RAM parity error 2 detected.
24:30	ROX	MSADES_ADDRESS_OF_LBUS_PARITY_ERROR_2: The address of FSI/LBUS slave-B RAM caused parity error 2.
31	ROX	MSADES_CLEAR_STATUS_2: Clear status errors bit [11:1]. Resets complete mailbox and arbiter state machine.

Register Name	Interrupt Host/PIB Slave Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.MAILBOX_SLAVE_A_DOORBELL_INTERRUPT
Address	0000000000050032 (SCOM)
Description	Interrupt Host/PIB Slave Register.

Bits	SCOM	Field Mnemonic: Description
0:2	RWX_WCLEAR	MSADI_UNUSED_31_11:
3:7	ROX	MSADI_UNUSED_31_11:
8:10	RWX_WCLEAR	MSADI_UNUSED_31_11:
11:20	ROX	MSADI_UNUSED_31_11:
21	ROX	MSADI_PIB_SLAVE_A_DOORBELL_ERROR_MAILBOX_2: Host/PIB slave-A doorbell error mailbox 2 occurred.
22	ROX	MSADI_XUP_MAILBOX_2: Xup mailbox 2.
23	ROX	MSADI_PIB_SLAVE_A_PENDING_MAILBOX_2: Host/PIB slave-A pending mailbox 2.
24:28	ROX	MSADI_UNUSED_7_3:
29	ROX	MSADI_PIB_SLAVE_A_DOORBELL_ERROR_MAILBOX_1: Host/PIB slave-A doorbell error mailbox 1 occurred.
30	ROX	MSADI_XUP_MAILBOX_1: Xup mailbox 1.
31	ROX	MSADI_PIB_SLAVE_A_PENDING_MAILBOX_1: Host/PIB slave-A pending mailbox 1.

Register Name	Mask Bits for The Host/PIB Slave Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.MAILBOX_1_SLAVE_A_DOORBELL_INTERRUPT_MASK_1
Address	0000000000050033 (SCOM) 0000000000050034 (SCOM1)
Description	A doorbell interrupts

Bits	SCOM	SCOM1	Field Mnemonic: Description
0:28	RO	RO	constant = 0b00000000000000000000000000000
29	RWX_WOR	WOX_CLEAR	M1SASIM1_ENABLE_PIB_SLAVE_A_DOORBELL_ERROR_MAILBOX_1: Enable Host/PIB slave-A doorbell error mailbox 1.

Bits	SCOM	SCOM1	Field Mnemonic: Description
30	RWX_WOR	WOX_CLEAR	M1SASIM1_ENABLE_XUP_MAILBOX_1: Enable Xup mailbox 1.
31	RWX_WOR	WOX_CLEAR	M1SASIM1_ENABLE_PIB_SLAVE_A_PENDING_MAILBOX_1: Enable host/PIB slave-A pending mailbox 1.

Register Name	Interrupt FSI/LBUS Slave Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.MAILBOX_SLAVE_B_DOORBELL_INTERRUPT
Address	0000000000050035 (SCOM)
Description	Interrupt FSI/LBUS Slave Register

Bits	SCOM	Field Mnemonic: Description
0:23	RO	constant = 0b00000000000000000000000
24	ROX	Reserved field.
25	ROX	Reserved field.
26	ROX	MSBDI_LBUS_SLAVE_B_DOORBELL_ERROR_MAILBOX_2: FSI/LBUS slave-B doorbell error mailbox 2 occurred.
27	ROX	MSBDI_LBUS_SLAVE_B_DOORBELL_ERROR_MAILBOX_1: FSI/LBUS slave-B doorbell error mailbox 1 occurred.
28	ROX	MSBDI_XDN_MAILBOX_2: Xdn mailbox 2.
29	ROX	MSBDI_XDN_MAILBOX_1: Xdn mailbox 1.
30	ROX	MSBDI_LBUS_SLAVE_B_PENDING_MAILBOX_2: FSI/LBUS slave-B pending mailbox 2.
31	ROX	MSBDI_LBUS_SLAVE_B_PENDING_MAILBOX_1: FSI/LBUS slave-B pending mailbox 1.

Register Name	Mask Bits for the FSI/LBUS Slave Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.MAILBOX_SLAVE_B_DOORBELL_INTERRUPT_MASK_1
Address	0000000000050036 (SCOM)
Description	B doorbell interrupts.

Bits	SCOM	Field Mnemonic: Description
0:23	RO	constant = 0b00000000000000000000000
24	ROX	MSBDIM1_ENABLE_LBUS_SLAVE_B_PENDING_MAILBOX_1: FSI/LBUS slave-B pending mailbox 1.
25	ROX	MSBDIM1_ENABLE_LBUS_SLAVE_B_PENDING_MAILBOX_2: FSI/LBUS slave-B pending mailbox 2.
26	ROX	MSBDIM1_ENABLE_XDN_MAILBOX_1: Enable Xdn mailbox 1.
27	ROX	MSBDIM1_ENABLE_XDN_MAILBOX_2: Enable Xdn mailbox 2.
28	ROX	MSBDIM1_ENABLE_LBUS_SLAVE_B_DOORBELL_ERROR_MAILBOX_1: Enable FSI/LBUS slave-B doorbell error mailbox 1.
29	ROX	MSBDIM1_ENABLE_LBUS_SLAVE_B_DOORBELL_ERROR_MAILBOX_2: Enable FSI/LBUS slave-B doorbell error mailbox 2.
30	ROX	MSBDIM1_ENABLE_ABORT_MAILBOX_1: Enable abort mailbox 1.
31	ROX	MSBDIM1_ENABLE_ABORT_MAILBOX_2: Enable abort mailbox 2.

Register Name	Scratch Register Number 1
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.SCRATCH_REGISTER_1
Address	0000000000050038 (SCOM)
Description	Scratch Register Number 1

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	SR_SCRATCH_REGISTER_1: Scratch 1 register.

Register Name	Scratch Register Number 2
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.SCRATCH_REGISTER_2
Address	0000000000050039 (SCOM)
Description	Scratch Register Number 2

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	SR_SCRATCH_REGISTER_2: Scratch 2 register.

Register Name	Scratch Register Number 3
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.SCRATCH_REGISTER_3
Address	000000000005003A (SCOM)
Description	Scratch Register Number 3

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	SR_SCRATCH_REGISTER_3: Scratch 3 register.

Register Name	Scratch Register Number 4
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.SCRATCH_REGISTER_4
Address	000000000005003B (SCOM)
Description	Scratch Register Number 4

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	SR_SCRATCH_REGISTER_4: Scratch 4 register.

Register Name	Scratch Register Number 5
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.SCRATCH_REGISTER_5
Address	000000000005003C (SCOM)
Description	Scratch Register Number 5

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	SR_SCRATCH_REGISTER_5: Scratch 5 register.

Register Name	Scratch Register Number 6
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.SCRATCH_REGISTER_6
Address	000000000005003D (SCOM)
Description	Scratch Register Number 6

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	SR_SCRATCH_REGISTER_6: Scratch 6 register.

Register Name	Scratch Register Number 7
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.SCRATCH_REGISTER_7
Address	000000000005003E (SCOM)
Description	Scratch Register Number 7

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	SR_SCRATCH_REGISTER_7: Scratch 7 register.

Register Name	Scratch Register Number 8
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.SCRATCH_REGISTER_8
Address	000000000005003F (SCOM)
Description	Scratch Register Number 8

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	SR_SCRATCH_REGISTER_8: Scratch 8 register.

Register Name	Mailbox 1 Data Area (Host) Register 0
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M1A_DATA_AREA_0
Address	0000000000050040 (SCOM)
Description	Mailbox 1 Data Area (Host) Register 0

Bits	SCOM	Field Mnemonic: Description

Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M1B_DATA_AREA_1
Address	0000000000050081 (SCOM)
Description	Mailbox 1 Data Area (FSI) Register 1

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 1 Data Area (FSI) Register 2
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M1B_DATA_AREA_2
Address	0000000000050082 (SCOM)
Description	Mailbox 1 Data Area (FSI) Register 2

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 1 Data Area (FSI) Register 3
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M1B_DATA_AREA_3
Address	0000000000050083 (SCOM)
Description	Mailbox 1 Data Area (FSI) Register 3

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 1 Data Area (FSI) Register 4
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M1B_DATA_AREA_4
Address	0000000000050084 (SCOM)
Description	Mailbox 1 Data Area (FSI) Register 4

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 1 Data Area (FSI) Register 5
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M1B_DATA_AREA_5
Address	0000000000050085 (SCOM)
Description	Mailbox 1 Data Area (FSI) Register 5

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 1 Data Area (FSI) Register 6
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M1B_DATA_AREA_6
Address	0000000000050086 (SCOM)
Description	Mailbox 1 Data Area (FSI) Register 6

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 1 Data Area (FSI) Register 7
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M1B_DATA_AREA_7
Address	0000000000050087 (SCOM)
Description	Mailbox 1 Data Area (FSI) Register 7

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 1 Data Area (FSI) Register 8
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M1B_DATA_AREA_8
Address	0000000000050088 (SCOM)
Description	Mailbox 1 Data Area (FSI) Register 8

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 1 Data Area (FSI) Register 9
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M1B_DATA_AREA_9
Address	0000000000050089 (SCOM)
Description	Mailbox 1 Data Area (FSI) Register 9

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 1 Data Area (FSI) Register 10
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M1B_DATA_AREA_10
Address	000000000005008A (SCOM)
Description	Mailbox 1 Data Area (FSI) Register 10

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 1 Data Area (FSI) Register 11
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M1B_DATA_AREA_11
Address	000000000005008B (SCOM)
Description	Mailbox 1 Data Area (FSI) Register 11

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 1 Data Area (FSI) Register 12
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M1B_DATA_AREA_12
Address	000000000005008C (SCOM)
Description	Mailbox 1 Data Area (FSI) Register 12

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 1 Data Area (FSI) Register 13
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M1B_DATA_AREA_13
Address	000000000005008D (SCOM)
Description	Mailbox 1 Data Area (FSI) Register 13

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 1 Data Area (FSI) Register 14
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M1B_DATA_AREA_14
Address	000000000005008E (SCOM)
Description	Mailbox 1 Data Area (FSI) Register 14

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 1 Data Area (FSI) Register 15
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M1B_DATA_AREA_15
Address	000000000005008F (SCOM)
Description	Mailbox 1 Data Area (FSI) Register 15

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (Host) Register 0
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2A_DATA_AREA_0
Address	00000000000500C0 (SCOM)
Description	Mailbox 2 Data Area (Host) Register 0

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (Host) Register 1
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2A_DATA_AREA_1
Address	00000000000500C1 (SCOM)
Description	Mailbox 2 Data Area (Host) Register 1

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (Host) Register 2
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2A_DATA_AREA_2
Address	00000000000500C2 (SCOM)
Description	Mailbox 2 Data Area (Host) Register 2

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (Host) Register 3
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2A_DATA_AREA_3
Address	00000000000500C3 (SCOM)
Description	Mailbox 2 Data Area (Host) Register 3

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (Host) Register 4
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2A_DATA_AREA_4
Address	00000000000500C4 (SCOM)
Description	Mailbox 2 Data Area (Host) Register 4

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (Host) Register 5
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2A_DATA_AREA_5
Address	00000000000500C5 (SCOM)
Description	Mailbox 2 Data Area (Host) Register 5

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (Host) Register 6
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2A_DATA_AREA_6
Address	00000000000500C6 (SCOM)
Description	Mailbox 2 Data Area (Host) Register 6

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (Host) Register 7
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2A_DATA_AREA_7
Address	00000000000500C7 (SCOM)
Description	Mailbox 2 Data Area (Host) Register 7

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (Host) Register 8
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2A_DATA_AREA_8
Address	00000000000500C8 (SCOM)
Description	Mailbox 2 Data Area (Host) Register 8

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (Host) Register 9
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2A_DATA_AREA_9
Address	00000000000500C9 (SCOM)
Description	Mailbox 2 Data Area (Host) Register 9

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (Host) Register 10
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2A_DATA_AREA_10
Address	00000000000500CA (SCOM)
Description	Mailbox 2 Data Area (Host) Register 10

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (Host) Register 11
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2A_DATA_AREA_11
Address	00000000000500CB (SCOM)
Description	Mailbox 2 Data Area (Host) Register 11

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (Host) Register 12
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2A_DATA_AREA_12
Address	00000000000500CC (SCOM)
Description	Mailbox 2 Data Area (Host) Register 12

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (Host) Register 13
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2A_DATA_AREA_13
Address	00000000000500CD (SCOM)
Description	Mailbox 2 Data Area (Host) Register 13

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (Host) Register 14
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2A_DATA_AREA_14
Address	00000000000500CE (SCOM)
Description	Mailbox 2 Data Area (Host) Register 14

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (Host) Register 15
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2A_DATA_AREA_15
Address	00000000000500CF (SCOM)
Description	Mailbox 2 Data Area (Host) Register 15

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (FSI) Register 0
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2B_DATA_AREA_0
Address	0000000000050100 (SCOM)
Description	Mailbox 2 Data Area (FSI) Register 0

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (FSI) Register 1
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2B_DATA_AREA_1
Address	0000000000050101 (SCOM)
Description	Mailbox 2 Data Area (FSI) Register 1

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (FSI) Register 2
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2B_DATA_AREA_2
Address	0000000000050102 (SCOM)
Description	Mailbox 2 Data Area (FSI) Register 2

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (FSI) Register 3
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2B_DATA_AREA_3
Address	0000000000050103 (SCOM)
Description	Mailbox 2 Data Area (FSI) Register 3

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (FSI) Register 4
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2B_DATA_AREA_4
Address	0000000000050104 (SCOM)
Description	Mailbox 2 Data Area (FSI) Register 4

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (FSI) Register 5
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2B_DATA_AREA_5
Address	0000000000050105 (SCOM)
Description	Mailbox 2 Data Area (FSI) Register 5

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (FSI) Register 6
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2B_DATA_AREA_6
Address	0000000000050106 (SCOM)
Description	Mailbox 2 Data Area (FSI) Register 6

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (FSI) Register 7
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2B_DATA_AREA_7
Address	0000000000050107 (SCOM)
Description	Mailbox 2 Data Area (FSI) Register 7

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (FSI) Register 8
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2B_DATA_AREA_8
Address	0000000000050108 (SCOM)
Description	Mailbox 2 Data Area (FSI) Register 8

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (FSI) Register 9
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2B_DATA_AREA_9
Address	0000000000050109 (SCOM)
Description	Mailbox 2 Data Area (FSI) Register 9

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (FSI) Register 10
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2B_DATA_AREA_10
Address	000000000005010A (SCOM)
Description	Mailbox 2 Data Area (FSI) Register 10

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (FSI) Register 11
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2B_DATA_AREA_11
Address	000000000005010B (SCOM)
Description	Mailbox 2 Data Area (FSI) Register 11

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (FSI) Register 12
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2B_DATA_AREA_12
Address	000000000005010C (SCOM)
Description	Mailbox 2 Data Area (FSI) Register 12

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (FSI) Register 13
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2B_DATA_AREA_13
Address	000000000005010D (SCOM)
Description	Mailbox 2 Data Area (FSI) Register 13

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (FSI) Register 14
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2B_DATA_AREA_14
Address	000000000005010E (SCOM)
Description	Mailbox 2 Data Area (FSI) Register 14

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Mailbox 2 Data Area (FSI) Register 15
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.M2B_DATA_AREA_15
Address	000000000005010F (SCOM)
Description	Mailbox 2 Data Area (FSI) Register 15

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	Reserved field.

Register Name	Root Control Copy 0 Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.ROOT_CTRL0_COPY
Address	0000000000050110 (SCOM)
Description	Root Control Copy 0 Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	Reserved field.

Register Name	Root Control Copy 1 Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.ROOT_CTRL1_COPY
Address	0000000000050111 (SCOM)
Description	Root Control Copy 1 Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	Reserved field.

Register Name	Root Control Copy 2 Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.ROOT_CTRL2_COPY
Address	0000000000050112 (SCOM)
Description	Root Control Copy 2 Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	Reserved field.

Register Name	Root Control Copy 3 Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.ROOT_CTRL3_COPY
Address	0000000000050113 (SCOM)
Description	Root Control Copy 3 Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	Reserved field.

Register Name	Root Control Copy 4 Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.ROOT_CTRL4_COPY
Address	0000000000050114 (SCOM)
Description	Root Control Copy 4 Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	Reserved field.

Register Name	Root Control Copy 5 Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.ROOT_CTRL5_COPY
Address	0000000000050115 (SCOM)
Description	Root Control Copy 5 Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	Reserved field.

Register Name	Root Control Copy 6 Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.ROOT_CTRL6_COPY
Address	0000000000050116 (SCOM)
Description	Root Control Copy 6 Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	Reserved field.

Register Name	Root Control Copy 7 Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.ROOT_CTRL7_COPY
Address	0000000000050117 (SCOM)
Description	Root Control Copy 7 Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	Reserved field.

Register Name	Root Control Copy 8 Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.ROOT_CTRL8_COPY
Address	0000000000050118 (SCOM)
Description	Root Control Copy 8 Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	Reserved field.

Register Name	PERV Control Copy 0 Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.PERV_CTRL0_COPY
Address	000000000005011A (SCOM)
Description	PERV Control Copy 0 Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	Reserved field.

Register Name	PERV Control Copy 1 Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.PERV_CTRL1_COPY
Address	000000000005011B (SCOM)
Description	PERV Control Copy 1 Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	Reserved field.

Register Name	Set Function of Root Control 0 Register
Mnemonic	TP.TPVSB.FSI.W.FSI_MAILBOX.FSXCOMP.FSXLOG.ROOT_CTRL0_SET
Address	0000000000050120 (SCOM)
Description	SET function of Root Control 0 Register

Description	GPE Timer Select Register

Bits	SCOM	Field Mnemonic: Description
0:3	RW	GPETSEL_FIT_SEL: Selects the fixed interval timer rate.
4:7	RW	GPETSEL_WATCHDOG_SEL: Selects the watchdog timer rate
8:63	RO	constant = 0b0000000000000000000000000000000000000000000000000000000000000000

Register Name	GPE Interrupt Vector Prefix Register
Mnemonic	TP.TPCHIP.OCC.OCI.GPE0.GPEIVPR
Address	0000000000060001 (SCOM)
Description	GPE Interrupt Vector Prefix Register

Bits	SCOM	Field Mnemonic: Description
0:22	RW	GPEIVPR_IVPR: Interrupt Prefix Vector Register (Resets to 0xFFFFFE left justified).
23	RW	Reserved.

Bits	SCOM	Field Mnemonic: Description
24:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	GPE Debug Mode Register
Mnemonic	TP.TPCHIP.OCC.OCI.GPE0.GPEDBG
Address	0000000000060002 (SCOM)
Description	GPE Debug Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	GPEDBG_EN_DBG: Enables debug trace. This bit is the switch that enables clocks to the trace. This bit also causes RISCTrace to start on the Rising edge and stop on the falling edge when RISCTrace is enabled. (TRACE_DATA_SEL[0] = 0).
1	RW	GPEDBG_HALT_ON_XSTOP: Enable halt on checkstop input.
2	RW	GPEDBG_HALT_ON_TRIG: Enable halt on trigger input.
3	RW	GPEDBG_RESERVED3: Implemented but not used.
4	RW	GPEDBG_EN_INTR_ADDR: When RISCTrace is enabled, trace the full interrupt vector address; otherwise, trace ONLY the lower byte of the address.
5	RW	GPEDBG_EN_TRACE_EXTRA: When RISCTrace is enabled and this bit is set, extra trace data is recorded. This is not needed for 405 RISCTrace specification. When this bit is not set, MTMSR or MTSPRG0 data is not recorded and a new MSR on an RFI is not recorded.
6	RW	GPEDBG_EN_TRACE_STALL: When RISCTrace is enabled and this bit is set, cycles are stalled when the processor is not actively executing. Also, any instruction that is not already included in the previous event is recorded unless it is halted or in wait state. When this bit is not set, the RISCTrace is smaller but not time accurate.
7	RW	GPEDBG_EN_WAIT_CYCLES: When RISCTrace is enabled and this bit is set, stall events are used to record the number of cycles in the PPE that are in wait state. Otherwise, the cycles in wait state are ignored. When this bit is set, EN_TRACE_STALL must also be set.
8	RW	GPEDBG_EN_FULL_SPEED: When this bit is set, the trace valid is pulsed at 1:1 (4x faster than the debug data, which changes at PPE clock speed). This is required for CHTM and NHTM (in-memory trace). When this mode is not set, the trace valid is held constant for a full PPE cycle (four 1:1 cycles). When connected to a trace array this value should match the corresponding sampling speed of the array.
9	RW	GPEDBG_RESERVED9: Implemented but not used.
10:11	RW	GPEDBG_TRACE_MODE_SEL: Bit GPEDBG_EN_DBG (bit 0) chooses between 0 (PPE Core Debug Mode A) and 1 (Mode B). When bit GPEDBG_HALT_ON_XSTOP (bit 1) is set, it ORs in the secondary valid corresponding lower bits of the trace data when they are from a different source than bits 0:23. **Note:** When bit 1 = ‘0’ it is likely for HTM tracing.
12:15	RW	GPEDBG_RESERVED12_15: Implemented but not used.
16	RW	GPEDBG_FIR_TRIGGER: Programmatically asserts a FIR bit to inject a checkstop or send an attention to the service element.
17:19	RW	GPEDBG_SPARE: Spare (used for GPIO on other instances).

Bits	SCOM	Field Mnemonic: Description
20:23	RW	GPEDBG_TRACE_DATA_SEL: MUX select to choose debug data content on the trace bus. All 16 encodes are defined as per the table in the Debug Bolt-on chapter of the Power Management Specification. 0x0 chooses an 88-bit PPE-RISCTrace by default. b00XX enables RISCTrace records to be generated in the upper 64-bits of trace data. 0bXX00 selects the remaining 24 bits to form 88-bit trace packets to be generated on the debug bus to be sent to the hardware trace array. Otherwise, PPE, MIB, or EXT data is used. The other 12 encodes contain permutations of the PPE core, memory interface, and external debug buses instead of RISCTrace records.
24:63	RO	constant = 0b000000000000000000000000000000000000000000

Register Name	GPE SRAM Translation Register
Mnemonic	TP.TPCHIP.OCC.OCI.GPE0.GPESTR
Address	0000000000060003 (SCOM)
Description	GPE SRAM Translation Register

Bits	SCOM	Field Mnemonic: Description
0:11	RO	constant=0b000000000000
12:21	RW	GPESTR_PBASE: Specifies the physical base address for effective addresses starting at 0xFFFF8000 and extending upwards for the range indicated by GSTR[size]. GSTR[pbase] must imply a correctly aligned physical base address for any legal value of GSTR[size] detailed as follows: Size = 0b000 (1 KB) : pbase = 0bxxxxxxxxxx Size = 0b001 (2 KB) : pbase = 0bxxxxxxxxx0 Size = 0b010 (4 KB) : pbase = 0bxxxxxxxx00 Size = 0b011 (8 KB) : pbase = 0bxxxxxxx000 Size = 0b100 (16 KB) : pbase = 0bxxxxxx0000 Size = 0b101 (32 KB) : pbase = 0bxxxxx00000 **Note:** The reset value represents an illegal OCI address, which results in a machine check exception if a translatable effective address is accessed.
22:28	RO	constant =0b0000000
29:31	RW	GPESTR_SIZE: Specifies the size of the translated region : 0b000: 1 KB 0b001: 2 KB 0b010: 4 KB 0b011: 8 KB 0b100: 16 KB 0b101: 32 KB Other values are illegal and result in data or instruction storage exceptions as appropriate.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	MIB External Interface MEM Information
Mnemonic	TP.TPCHIP.OCC.OCI.GPE0.GPE.MIB.MIB_XIMEM
Address	0000000000060017 (SCOM)
Description	MIB External Interface MEM Information

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	MIB_XIMEM_MEM_ADDR: MEM transaction buffer: current or previous transaction byte address.
32	ROX	MIB_XIMEM_MEM_R_NW: MEM transaction buffer: current or previous transaction type. 0 = Write. 1 = Read.
33	ROX	MIB_XIMEM_MEM_BUSY: Indicates if the transaction buffer is occupied with an ongoing transaction. Busy is cleared when the transaction is completed.
34	ROX	MIB_XIMEM_MEM_IMPRECISE_ERROR_PENDING: Indicates that the current or previous transaction had an imprecise error. It is cleared when it is reported back to the PPE. **Note:** The address of the erroneous transaction is copied into the SGB address latches such that the memory interface can continue to service I-fetches.
35:42	ROX	MIB_XIMEM_MEM_BYTE_ENABLE: MEM transaction buffer: current or previous transaction byte enables.
43	ROX	MIB_XIMEM_MEM_LINE_MODE: MEM transaction buffer: current or previous transaction line mode. Indicates a 32 B read request when set to ‘1’.
44:48	RO	constant = 0b00000
49:51	ROX	MIB_XIMEM_MEM_ERROR: MEM transaction buffer error code. A current or previous transaction received an error on the memory interface when non-zero.
52:61	RO	constant = 0b0000000000

Bits	SCOM	Field Mnemonic: Description
62	ROX	MIB_XIMEM_MEM_IFETCH_PENDING: When set to ‘1’, indicates that an instruction fetch is pending on the MEM interface.
63	ROX	MIB_XIMEM_MEM_DATAOP_PENDING: When set to ‘1’, indicates that a data transaction is pending on the MEM interface.

Register Name	MIB External Interface Store Gather Buffer Information
Mnemonic	TP.TPCHIP.OCC.OCI.GPE0.GPE.MIB.MIB_XISGB
Address	0000000000060018 (SCOM)
Description	MIB External Interface Store Gather Buffer Information

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	MIB_XISGB_STORE_ADDRESS: Contains either the SGB address 4-byte tag or the address of an imprecise store error that occurred when a previous data transaction was done.
32:34	RO	constant = 0b000
35	ROX	MIB_XIMEM_MEM_IMPRECISE_ERROR_PENDING: Indicates that the current or previous transaction had an imprecise error. It is cleared when it is reported back to the PPE. **Note:** The address of the erroneous transaction is copied into the SGB address latches such that the memory interface can continue to service I-fetches.
36:39	ROX	MIB_XISGB_SGB_BYTE_VALID: Byte valid bits within the 4 B tag. Cleared when the SGB contents are committed, that is, when the SGB contents are either flushed to memory or copied into the transaction buffer. **Note:** These bits can never be set if a MEM IMPRECISE ERROR is pending.
40:62	RO	constant = 0b00000000000000000000000
63	ROX	MIB_XISGB_SGB_FLUSH_PENDING: When set to ‘1’, indicates that a store gather buffer flush to memory is pending on the MEM interface. This can happen only if MEM_BUSY in the MEM transaction buffer is ‘0’.

Register Name	MIB External Interface I-cache Information
Mnemonic	TP.TPCHIP.OCC.OCI.GPE0.GPE.MIB.MIB_XIICAC
Address	0000000000060019 (SCOM)
Description	MIB External Interface I-cache Information

Bits	SCOM	Field Mnemonic: Description

Mnemonic	TP.TPCHIP.OCC.OCI.GPE0.GPEXIEDR
Address	0000000000060023 (SCOM)
Description	Word EDR

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	PPE_XIRAMEDR_EDR: Error Data Register. Set on PPE interrupts that are caused by an error. See the PPE Specification for a definition.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	GPE External Interface OCI
Mnemonic	TP.TPCHIP.OCC.OCI.GPE0.GPEXIIR
Address	0000000000060024 (SCOM)
Description	Word IR

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	PPE_XIRAMRA_SPRG0: The SPRG0 register value is used by the PPE code to keep status. SPRG0 is a 32-bit scratch register. SPRG0 can be written only as an XIR when the processor is halted (XSR[HS] = ‘1’).
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	GPE External Interface OCI
Mnemonic	TP.TPCHIP.OCC.OCI.GPE0.GPEXIIAR
Address	0000000000060025 (SCOM)
Description	Word IAR

Bits	SCOM	Field Mnemonic: Description
0:29	RWX	Reserved field.
30:63	RO	constant = 0b00000000000000000000000000000000

Register Name	GPE Timer Select Register
Mnemonic	TP.TPCHIP.OCC.OCI.GPE1.GPETSEL
Address	0000000000062000 (SCOM)
Description	GPE Timer Select Register

Bits	SCOM	Field Mnemonic: Description
0:3	RW	GPETSEL_FIT_SEL: Selects the fixed interval timer rate.
4:7	RW	GPETSEL_WATCHDOG_SEL: Selects the watchdog timer rate.
8:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	GPE Interrupt Vector Prefix Register
Mnemonic	TP.TPCHIP.OCC.OCI.GPE1.GPEIVPR
Address	0000000000062001 (SCOM)
Description	GPE Interrupt Vector Prefix Register

Bits	SCOM	Field Mnemonic: Description
0:22	RW	GPEIVPR_IVPR: Interrupt Prefix Vector Register (Resets to 0xFFFFFE left justified).
23	RW	Reserved.
24:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	GPE Debug Mode Register
Mnemonic	TP.TPCHIP.OCC.OCI.GPE1.GPEDBG
Address	0000000000062002 (SCOM)
Description	GPE Debug Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	GPEDBG_EN_DBG: Enable Debug Trace. Master switch that enables clocks to the trace. Also causes RISCTrace to start on the rising edge and stop on the falling edge when RISCTrace is enabled (TRACE_DATA_SEL[0] = 0).
1	RW	GPEDBG_HALT_ON_XSTOP: Enable halt on checkstop input.
2	RW	GPEDBG_HALT_ON_TRIG: Enable halt on trigger input.
3	RW	GPEDBG_RESERVED3: Implemented but not used.

Bits	SCOM	Field Mnemonic: Description
4	RW	GPEDBG_EN_INTR_ADDR: When RISCTrace is enabled, trace the full interrupt vector address. Otherwise trace only the lower byte of the address.
5	RW	GPEDBG_EN_TRACE_EXTRA: When RISCTrace is enabled and this bit is set, records extra trace data not needed for the 405 RISCTrace specification. When this bit is not set: Does not record MTMSR or MTSPRG0 data Does not record new MSR on an RFI.
6	RW	GPEDBG_EN_TRACE_STALL: When RISCTrace is enabled and this bit is set, stalls cycles when the processor is not actively executing instructions. Cycles that are not already included in the previous event and cycles that are recorded unless they are halt or in wait state are also stalled. When this mode is not set, the RISCTrace is smaller but not time accurate.
7	RW	GPEDBG_EN_WAIT_CYCLES: When RISCTrace is enabled and this bit is set, stall events are used to record the number of cycles the PPE is in wait state. Otherwise, cycles in wait state are ignored. When this bit is set, EN_TRACE_STALL must also be set.
8	RW	GPEDBG_EN_FULL_SPEED: When set, the trace valid is pulsed at 1:1 (4x faster than the debug data, which changes at PPE clock speed). This is required for CHTM and NHTM (in-memory trace). When this mode is not set, trace valid is held constant for a full PPE cycle (four 1:1 cycles). When connected to a trace array, this value must match the corresponding sampling speed of the array.
9	RW	GPEDBG_RESERVED9: Implemented but not used.
10:11	RW	GPEDBG_TRACE_MODE_SEL: Bit GPEDBG_EN_DBG (bit 0) chooses between 0 (PPE Core Debug Mode A) and 1 (Mode B). When bit GPEDBG_HALT_ON_XSTOP (bit 1) is set, it ORs in the secondary valid corresponding lower bits of the trace data when they are from a different source than bits 0:23. **Note:** When bit 1 = ‘0’ it is likely for HTM tracing.
12:15	RW	GPEDBG_RESERVED12_15: Implemented but not used.
16	RW	GPEDBG_FIR_TRIGGER: Programmatically asserts a FIR bit to inject a checkstop or send an attention to the service element.
17:19	RW	GPEDBG_SPARE: Spare (used for GPIO on other instances).
20:23	RW	GPEDBG_TRACE_DATA_SEL: Mux select to choose debug data content on the trace bus. All 16 encodes are defined as per the table in the Debug Bolt-on chapter of the Power Management Specification. 0x0 chooses an 88-bit PPE-RISCTrace by default. b00XX enables RISCTrace records to be generated in the upper 64-bits of trace data. 0bXX00 selects the remaining 24 bits to form 88-bit Trace Packets to be generated on the debug bus to be sent to the hardware trace array (otherwise PPE, MIB, or EXT data will be used). The other 12 encodes contain permutations of the PPE Core, Memory Interface, and External debug buses instead of RISCTrace records.
24:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	GPE SRAM Translation Register
Mnemonic	TP.TPCHIP.OCC.OCI.GPE1.GPESTR
Address	0000000000062003 (SCOM)
Description	GPE SRAM Translation Register

Bits	SCOM	Field Mnemonic: Description
0:11	RO	constant = 0b000000000000

Bits	SCOM	Field Mnemonic: Description
12:21	RW	GPESTR_PBASE: Specifies the physical base address for effective addresses starting at 0xFFFF8000, and extending upwards for the range indicated by GSTR[size]. GSTR[pbase] must imply a correctly aligned physical base address for any legal value of GSTR[size] as detailed follows: Size = 0b000 (1 KB) pbase = 0bxxxxxxxxxx Size = 0b001 (2 KB) pbase = 0bxxxxxxxxx0 Size = 0b010 (4 KB) pbase = 0bxxxxxxxx00 Size = 0b011 (8 KB) pbase = 0bxxxxxxx000 Size = 0b100 (16 KB) pbase = 0bxxxxxx0000 Size = 0b101 (32 KB) pbase = 0bxxxxx00000 **Note:** The reset value represents an illegal OCI address, which results in a machine check exception if a translatable effective address is accessed.
22:28	RO	constant = 0b0000000
29:31	RW	GPESTR_SIZE: Specifies the size of the translated region: 0b000 = 1 KB 0b001 = 2 KB 0b010 = 4 KB 0b011 = 8 KB 0b100 = 16 KB 0b101 = 32 KB Other values are illegal and results in data or instruction storage exceptions as appropriate.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	**GPE Memory Access Configuration Register**
Mnemonic	TP.TPCHIP.OCC.OCI.GPE1.GPEMACR
Address	0000000000062004 (SCOM)
Description	GPE Memory Access Configuration Register

Bits	SCOM	Field Mnemonic: Description
0:1	RW	GPEMACR_MEM_LOW_PRIORITY: OCI priority to use for accessing main memory when address[0:1] = 10 and the PPE high priority output is ‘0’.
2:3	RW	GPEMACR_MEM_HIGH_PRIORITY: OCI priority to use for accessing main memory when address[0:1] = 10 and the PPE high priority output is ‘1’.
4:5	RW	GPEMACR_LOCAL_LOW_PRIORITY: OCI priority to use for accessing local registers when address[0:2] = 110 and the PPE high priority output is ‘0’.
6:7	RW	GPEMACR_LOCAL_HIGH_PRIORITY: OCI priority to use for accessing local registers when address[0:2] = 110 and the PPE high priority output is ‘1’.
8:9	RW	GPEMACR_SRAM_LOW_PRIORITY: OCI priority to use for accessing SRAM tank when address(0:2) = 111 and the PPE high priority output is ‘0’.
10:11	RW	GPEMACR_SRAM_HIGH_PRIORITY: OCI priority to use for accessing SRAM tank when address(0:2) = 111 and the PPE high priority output is ‘1’.

Register Name	MIB External Interface MEM Information
Mnemonic	TP.TPCHIP.OCC.OCI.GPE1.GPE.MIB.MIB_XIMEM
Address	0000000000062017 (SCOM)
Description	MIB External Interface MEM Information

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	MIB_XIMEM_MEM_ADDR: MEM transaction buffer: current or previous transaction byte address.
32	ROX	MIB_XIMEM_MEM_R_NW: MEM transaction buffer: current or previous transaction type. 0 = Write. 1 = Read.
33	ROX	MIB_XIMEM_MEM_BUSY: Indicates if the transaction buffer is occupied with an ongoing transaction. Busy is cleared when the transaction is completed.
34	ROX	MIB_XIMEM_MEM_IMPRECISE_ERROR_PENDING: Indicates that the current or previous transaction had an imprecise error. It is cleared when it is reported back to the PPE. **Note:** The address of the erroneous transaction is copied into the SGB address latches such that the memory interface can continue to service I-fetches.
35:42	ROX	MIB_XIMEM_MEM_BYTE_ENABLE: MEM transaction buffer: current or previous transaction byte enables.
43	ROX	MIB_XIMEM_MEM_LINE_MODE: MEM transaction buffer: current or previous transaction line mode. Indicates a 32 B read request when set to ‘1’.
44:48	RO	constant = 0b00000
49:51	ROX	MIB_XIMEM_MEM_ERROR: MEM transaction buffer error code. A current or previous transaction received an error on the memory interface when non-zero.
52:61	RO	constant = 0b0000000000
62	ROX	MIB_XIMEM_MEM_IFETCH_PENDING: When set to ‘1’, indicates that an instruction fetch is pending on the MEM interface.
63	ROX	MIB_XIMEM_MEM_DATAOP_PENDING: When set to ‘1’, indicates that a data transaction is pending on the MEM interface.

Register Name	MIB External Interface Store Gather Buffer Information
Mnemonic	TP.TPCHIP.OCC.OCI.GPE1.GPE.MIB.MIB_XISGB
Address	0000000000062018 (SCOM)
Description	MIB External Interface Store Gather Buffer Information

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	MIB_XISGB_STORE_ADDRESS: Contains either the SGB address 4-byte tag or the address of an imprecise store error that occurred when a previous data transaction was done.
32:34	RO	constant = 0b000
35	ROX	MIB_XIMEM_MEM_IMPRECISE_ERROR_PENDING: Indicates that the current or previous transaction had an imprecise error. It is cleared when it is reported back to the PPE. **Note:** The address of the erroneous transaction is copied into the SGB address latches such that the memory interface can continue to service I-fetches.
36:39	ROX	MIB_XISGB_SGB_BYTE_VALID: Byte valid bits within the 4 B tag. Cleared when the SGB contents are committed, that is, when the SGB contents are either flushed to memory or copied into the transaction buffer. **Note:** These bits can never be set if a MEM IMPRECISE ERROR is pending.
40:62	RO	constant = 0b00000000000000000000000
63	ROX	MIB_XISGB_SGB_FLUSH_PENDING: When set to ‘1’, indicates that a store gather buffer flush to memory is pending on the MEM interface. This can happen only if MEM_BUSY in the MEM transaction buffer is ‘0’.

Register Name	MIB External Interface I-cache Information
Mnemonic	TP.TPCHIP.OCC.OCI.GPE1.GPE.MIB.MIB_XIICAC
Address	0000000000062019 (SCOM)
Description	MIB External Interface I-cache Information

Bits	SCOM	Field Mnemonic: Description
0:26	ROX	Reserved field.
27:31	RO	constant = 0b00000
32	ROX	Reserved field.
33	RO	constant = 0b0
34	ROX	Reserved field.
35	ROX	MIB_XIMEM_MEM_IFETCH_PENDING: When set to ‘1’, indicates that an instruction fetch is pending on the MEM interface.
36:39	ROX	Reserved field.

Register Name	GPE External Interface OCI
Mnemonic	TP.TPCHIP.OCC.OCI.GPE1.GPEXISPRG0
Address	0000000000062022 (SCOM)
Description	Word SPRG0

Bits	SCOM	Field Mnemonic: Description
0:31	RW	PPE_XIRAMRA_SPRG0: The SPRG0 register value is used by the PPE code to keep status. SPRG0 is a 32-bit scratch register. SPRG0 can be written only as an XIR when the processor is halted (XSR[HS] = ‘1’).
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	GPE External Interface OCI
Mnemonic	TP.TPCHIP.OCC.OCI.GPE1.GPEXIEDR
Address	0000000000062023 (SCOM)
Description	Word EDR

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	PPE_XIRAMEDR_EDR: Error Data Register. Set on PPE interrupts that are caused by an error. See the PPE Specification for a definition.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	GPE External Interface OCI
Mnemonic	TP.TPCHIP.OCC.OCI.GPE1.GPEXIIR
Address	0000000000062024 (SCOM)
Description	Word IR

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	PPE_XIRAMRA_SPRG0: The SPRG0 register value is used by the PPE code to keep status. SPRG0 is a 32-bit scratch register. SPRG0 can be written only as an XIR when the processor is halted (XSR[HS] = ‘1’).
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	GPE External Interface OCI
Mnemonic	TP.TPCHIP.OCC.OCI.GPE1.GPEXIIAR
Address	0000000000062025 (SCOM)
Description	Word IAR

Bits	SCOM	Field Mnemonic: Description
0:29	RWX	Reserved field.
30:63	RO	constant = 0b00000000000000000000000000000000

Register Name	GPE Timer Select Register
Mnemonic	TP.TPCHIP.OCC.OCI.GPE2.GPETSEL
Address	0000000000064000 (SCOM)
Description	GPE Timer Select Register

Bits	SCOM	Field Mnemonic: Description
0:3	RW	GPETSEL_FIT_SEL: Selects the fixed interval timer rate.
4:7	RW	GPETSEL_WATCHDOG_SEL: Selects the watchdog timer rate.
8:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	GPE Interrupt Vector Prefix Register
Mnemonic	TP.TPCHIP.OCC.OCI.GPE2.GPEIVPR
Address	0000000000064001 (SCOM)
Description	GPE Interrupt Vector Prefix Register

Bits	SCOM	Field Mnemonic: Description
0:22	RW	GPEIVPR_IVPR: Interrupt Prefix Vector Register (Resets to 0xFFFFFE left justified).
23	RW	Reserved.
24:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	GPE Debug Mode Register
Mnemonic	TP.TPCHIP.OCC.OCI.GPE2.GPEDBG
Address	0000000000064002 (SCOM)
Description	GPE Debug Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	GPEDBG_EN_DBG: Enable Debug Trace. Master switch that enables clocks to the trace. Also causes RISCTrace to start on the rising edge and stop on the falling edge when RISCTrace is enabled (TRACE_DATA_SEL(0) = 0).
1	RW	GPEDBG_HALT_ON_XSTOP: Enable halt on checkstop input.
2	RW	GPEDBG_HALT_ON_TRIG: Enable halt on trigger input.
3	RW	GPEDBG_RESERVED3: Implemented but not used.
4	RW	GPEDBG_EN_INTR_ADDR: When RISCTrace is enabled, trace the full interrupt vector address. Otherwise, trace only the lower byte of the address.
5	RW	GPEDBG_EN_TRACE_EXTRA: When RISCTrace is enabled and this bit is set, records extra trace data not needed for 405 RISCTrace specification. When this bit is NOT set: Do not record MTMSR or MTSPRG0 data Do not record new MSR on an RFI
6	RW	GPEDBG_EN_TRACE_STALL: When RISCTrace is enabled and this bit is set, stalls cycles when the processor is not actively executing instructions, cycles that are not already included in the previous event, and cycles that are recorded unless they are halt or in wait state. When this mode is not set, the RISCTrace is smaller but not time accurate.
7	RW	GPEDBG_EN_WAIT_CYCLES: When RISCTrace is enabled and this bit is set, stall events are used to record the number of cycles the PPE is in wait state otherwise cycles in wait state are ignored. When this bit is set, EN_TRACE_STALL must also be set.
8	RW	GPEDBG_EN_FULL_SPEED: When set, the trace valid is pulsed at 1:1 (4x faster than the debug data, which changes at PPE clock speed). This is required for CHTM and NHTM (in-memory trace). When this mode is NOT set, trace valid is held constant for a full PPE cycle (four 1:1 cycles). When connected to a trace array this value should match the corresponding sampling speed of the array.
9	RW	GPEDBG_RESERVED9: Implemented but not used.
10:11	RW	GPEDBG_TRACE_MODE_SEL: Bit GPEDBG_EN_DBG (bit 0) chooses between 0 (PPE Core Debug Mode A) and 1 (Mode B). When bit GPEDBG_HALT_ON_XSTOP (bit 1) is set, it ORs in the secondary valid corresponding lower bits of the trace data when they are from a different source than bits 0:23. **Note:** When bit 1 = '0' it is likely for HTM tracing.
12:15	RW	GPEDBG_RESERVED12_15: Implemented but not used.
16	RW	GPEDBG_FIR_TRIGGER: Programmatically asserts a FIR bit to inject a checkstop or send an attention to the service element.
17:19	RW	GPEDBG_SPARE: Spare (used for GPIO on other instances).
20:23	RW	GPEDBG_TRACE_DATA_SEL: Mux select to choose debug data content on the trace bus. All 16 encodes are defined as per the table in the Debug Bolt-on chapter of the Power Management Specification. 0x0 chooses an 88-bit PPE-RISCTrace by default. b00XX enables RISCTrace records to be generated in the upper 64-bits of trace data. 0bXX00 selects the remaining 24 bits to form 88-bit Trace Packets to be generated on the debug bus to be sent to the hardware trace array (otherwise PPE, MIB, or EXT data is used). The other 12 encodes contain permutations of the PPE core, memory interface, and external debug buses instead of RISCTrace records.
24:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	GPE SRAM Translation Register
Mnemonic	TP.TPCHIP.OCC.OCI.GPE2.GPESTR
Address	0000000000064003 (SCOM)
Description	GPE SRAM Translation Register

Bits	SCOM	Field Mnemonic: Description
0:11	RO	constant = 0b000000000000
12:21	RW	GPESTR_PBASE: Specifies the physical base address for effective addresses starting at 0xFFFF8000, and extending upwards for the range indicated by GSTR[size]. GSTR[pbase] must imply a correctly aligned physical base address for any legal value of GSTR[size] detailed as follows: Size = 0b000 (1 KB) pbase = 0bxxxxxxxxxx Size = 0b001 (2 KB) pbase = 0bxxxxxxxxx0 Size = 0b010 (4 KB) pbase = 0bxxxxxxxx00 Size = 0b011 (8 KB) pbase = 0bxxxxxxx000 Size = 0b100 (16 KB) pbase = 0bxxxxxx0000 Size = 0b101 (32 KB) pbase = 0bxxxxx00000 The reset value represents an illegal OCI address, which results in a machine check exception if a translatable effective address be accessed.
22:28	RO	constant = 0b0000000
29:31	RW	GPESTR_SIZE: Specifies the size of the translated region. 0b000 = 1 KB 0b001 = 2 KB 0b010 = 4 KB 0b011 = 8 KB 0b100 = 16 KB 0b101 = 32 KB Other values are illegal and result in data or instruction storage exceptions as appropriate.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	GPE Memory Access Configuration Register
Mnemonic	TP.TPCHIP.OCC.OCI.GPE2.GPEMACR
Address	0000000000064004 (SCOM)
Description	GPE Memory Access Configuration Register

Bits	SCOM	Field Mnemonic: Description
0:1	RW	GPEMACR_MEM_LOW_PRIORITY: OCI priority to use for accessing main memory when address[0:1] = 10 and the PPE high priority output is ‘0’.
2:3	RW	GPEMACR_MEM_HIGH_PRIORITY: OCI priority to use for accessing main memory when address[0:1] = 10 and the PPE high priority output is ‘1’.
4:5	RW	GPEMACR_LOCAL_LOW_PRIORITY: OCI priority to use for accessing local registers when address[0:2] = 110 and the PPE high priority output is ‘0’.
6:7	RW	GPEMACR_LOCAL_HIGH_PRIORITY: OCI priority to use for accessing local registers when address[0:2] = 110 and the PPE high priority output is ‘1’.

Bits	SCOM	Field Mnemonic: Description
8:9	RW	GPEMACR_SRAM_LOW_PRIORITY: OCI priority to use for accessing SRAM tank when address[0:2] = 111 and the PPE high priority output is ‘0’.
10:11	RW	GPEMACR_SRAM_HIGH_PRIORITY: OCI priority to use for accessing SRAM tank when address[0:2] = 111 and the PPE high priority output is ‘1’.
12:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	MIB External Interface MEM Information
Mnemonic	TP.TPCHIP.OCC.OCI.GPE2.GPE.MIB.MIB_XIMEM
Address	0000000000064017 (SCOM)
Description	MIB External Interface MEM Information

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	MIB_XIMEM_MEM_ADDR: MEM transaction buffer: current or previous transaction byte address.
32	ROX	MIB_XIMEM_MEM_R_NW: MEM transaction buffer: current or previous transaction type. 0 = Write. 1 = Read.
33	ROX	MIB_XIMEM_MEM_BUSY: Indicates if the transaction buffer is occupied with an ongoing transaction. Busy is cleared when the transaction is completed.
34	ROX	MIB_XIMEM_MEM_IMPRECISE_ERROR_PENDING: Indicates that the current or previous transaction had an imprecise error. It is cleared when it is reported back to the PPE. **Note:** The address of the erroneous transaction is copied into the SGB address latches such that the memory interface can continue to service I-fetches.
35:42	ROX	MIB_XIMEM_MEM_BYTE_ENABLE: MEM transaction buffer: current or previous transaction byte enables.
43	ROX	MIB_XIMEM_MEM_LINE_MODE: MEM transaction buffer: current or previous transaction line mode. Indicates a 32 B read request when set to ‘1’.
44:48	RO	constant = 0b00000
49:51	ROX	MIB_XIMEM_MEM_ERROR: MEM transaction buffer error code. Current or previous transaction got an error on the memory interface when nonzero.
52:61	RO	constant = 0b0000000000

Bits	SCOM	Field Mnemonic: Description
62	ROX	MIB_XIMEM_MEM_IFETCH_PENDING: Indicates an instruction fetch is pending on the MEM interface when set to ‘1’.
63	ROX	MIB_XIMEM_MEM_DATAOP_PENDING: When set to ‘1’, indicates that a data transaction is pending on the MEM interface.

Register Name	MIB External Interface Store Gather Buffer Information
Mnemonic	TP.TPCHIP.OCC.OCI.GPE2.GPE.MIB.MIB_XISGB
Address	0000000000064018 (SCOM)
Description	MIB External Interface Store Gather Buffer Information

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	MIB_XISGB_STORE_ADDRESS: Contains either the SGB address 4-byte tag or the address of an imprecise store error that occurred when a previous data transaction was done.
32:34	RO	constant = 0b000
35	ROX	MIB_XIMEM_MEM_IMPRECISE_ERROR_PENDING: Indicates that the current or previous transaction had an imprecise error. This bit is cleared when it is reported back to PPE. **Note:** The address of the erroneous transaction is copied into the SGB address latches such that the memory interface can continue to service I-fetches.
36:39	ROX	MIB_XISGB_SGB_BYTE_VALID: Byte valid bits within the 4 B tag. This field is cleared when the SGB contents are committed, meaning that it is either flushed to memory or it is copied into the transaction buffer. **Note:** These bits can never be set if a MEM IMPRECISE ERROR is pending.
40:62	RO	constant = 0b000000000000000000000000
63	ROX	MIB_XISGB_SGB_FLUSH_PENDING: When set to ‘1’, indicates that a store gather buffer flush to memory is pending on the MEM interface. This can happen only if MEM_BUSY in the MEM transaction buffer is ‘0’.

Register Name	MIB External Interface I-cache Information
Mnemonic	TP.TPCHIP.OCC.OCI.GPE2.GPE.MIB.MIB_XIICAC
Address	0000000000064019 (SCOM)
Description	MIB External Interface I-cache Information

Bits	SCOM	Field Mnemonic: Description
0:26	ROX	Reserved field.
27:31	RO	constant = 0b00000
32	ROX	Reserved field.
33	RO	constant = 0b0
34	ROX	Reserved field.
35	ROX	MIB_XIMEM_MEM_IFETCH_PENDING: When set to ‘1’, indicates that an instruction fetch is pending on the MEM interface.
36:39	ROX	Reserved field.
40:43	ROX	Reserved field.
44	RO	constant = 0b0
45	ROX	Reserved field.
46	ROX	Reserved field.

Bits	SCOM	Field Mnemonic: Description
47	ROX	Reserved field.
48:63	RO	constant = 0b0000000000000000

Register Name	MIB External Interface D-cache Information
Mnemonic	TP.TPCHIP.OCC.OCI.GPE2.MIB_XIDCAC
Address	000000000006401A (SCOM)
Description	MIB External Interface D-cache Information

Bits	SCOM	Field Mnemonic: Description
0:26	ROX	MIB_XIDCAC_DCACHE_TAG_ADDR: 32 B data address tag for the current or previous cache content.
27:31	RO	constant = 0b00000
32	ROX	MIB_XIDCAC_DCACHE_ERR: Indicates the current or previous content of the cache is bad from an interface error during populate.
33:34	RO	constant = 0b00
35	ROX	Reserved field.
36:37	ROX	Reserved field.

Register Name	GPE External Interface OCI
Mnemonic	TP.TPCHIP.OCC.OCI.GPE2.GPEXISPRG0
Address	0000000000064022 (SCOM)
Description	Word SPRG0

Bits	SCOM	Field Mnemonic: Description
0:31	RW	PPE_XIRAMRA_SPRG0: The SPRG0 register value is used by the PPE code to keep status. SPRG0 is a 32-bit scratch register. SPRG0 can be written only as an XIR when the processor is halted (XSR[HS] = ‘1’).
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	GPE External Interface OCI
Mnemonic	TP.TPCHIP.OCC.OCI.GPE2.GPEXIEDR
Address	0000000000064023 (SCOM)
Description	Word EDR

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	PPE_XIRAMEDR_EDR: Error Data Register. This field is set on PPE interrupts that are caused by an error. See the PPE Specification for a definition.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	GPE External Interface OCI
Mnemonic	TP.TPCHIP.OCC.OCI.GPE2.GPEXIIR
Address	0000000000064024 (SCOM)
Description	Word IR

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	PPE_XIRAMRA_SPRG0: The SPRG0 register value is used by the PPE code to keep status. SPRG0 is a 32-bit scratch register. SPRG0 can be written only as an XIR when the processor is halted (XSR[HS] = ‘1’).
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	GPE External Interface OCI
Mnemonic	TP.TPCHIP.OCC.OCI.GPE2.GPEXIIAR
Address	0000000000064025 (SCOM)
Description	Word IAR

Bits	SCOM	Field Mnemonic: Description
0:29	RWX	Reserved field.
30:63	RO	constant = 0b00000000000000000000000000000000

Register Name	GPE Timer Select Register
Mnemonic	TP.TPCHIP.OCC.OCI.GPE3.GPETSEL
Address	0000000000066000 (SCOM)
Description	GPE Timer Select Register

Bits	SCOM	Field Mnemonic: Description
0:3	RW	GPETSEL_FIT_SEL: Selects the fixed interval timer rate.
4:7	RW	GPETSEL_WATCHDOG_SEL: Selects the watchdog timer rate.
8:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	GPE Interrupt Vector Prefix Register
Mnemonic	TP.TPCHIP.OCC.OCI.GPE3.GPEIVPR
Address	0000000000066001 (SCOM)
Description	GPE Interrupt Vector Prefix Register

Bits	SCOM	Field Mnemonic: Description
0:22	RW	GPEIVPR_IVPR: Interrupt Prefix Vector Register (Resets to 0xFFFFFE left justified).
23	RW	Reserved.
24:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	GPE Debug Mode Register
Mnemonic	TP.TPCHIP.OCC.OCI.GPE3.GPEDBG
Address	0000000000066002 (SCOM)
Description	GPE Debug Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	GPEDBG_EN_DBG: Enable Debug Trace. Master switch that enables clocks to the trace. Also causes RISCTrace to start on the rising edge and stop on the falling edge when RISCTrace is enabled (TRACE_DATA_SEL[0] = 0).
1	RW	GPEDBG_HALT_ON_XSTOP: Enable halt on checkstop input.
2	RW	GPEDBG_HALT_ON_TRIG: Enable halt on trigger input.
3	RW	GPEDBG_RESERVED3: Implemented but not used.

Bits	SCOM	Field Mnemonic: Description
4	RW	GPEDBG_EN_INTR_ADDR: When RISCTrace is enabled, trace the full interrupt vector address. Otherwise, only trace the lower byte of the address.
5	RW	GPEDBG_EN_TRACE_EXTRA: When RISCTrace is enabled and this bit is set, records extra trace data not needed for 405 RISCTrace specification. When this bit is NOT set: Do not record MTMSR or MTSPRG0 data Do not record new MSR on an RFI.
6	RW	GPEDBG_EN_TRACE_STALL: When RISCTrace is enabled and this bit is set, stall cycles when the processor is not actively executing and instruction that are not already included in the previous event and are recorded unless it is halted or in wait state. When this mode is not set, the RISCTrace is smaller but not time accurate.
7	RW	GPEDBG_EN_WAIT_CYCLES: When RISCTrace is enabled and this bit is set, stall events are used to record the number of cycles the PPE is in wait state. Otherwise, cycles in wait state are ignored. When this bit is set, EN_TRACE_STALL must also be set.
8	RW	GPEDBG_EN_FULL_SPEED: When set, the trace valid is pulsed at 1:1 (4x faster than the debug data, which changes at PPE clock speed). This is required for CHTM and NHTM (in-memory trace). When this mode is not set, trace valid is held constant for a full PPE cycle (four 1:1 cycles). When connected to a trace array this value should match the corresponding sampling speed of the array.
9	RW	GPEDBG_RESERVED9: Implemented but not used.
10:11	RW	GPEDBG_TRACE_MODE_SEL: Bit GPEDBG_EN_DBG (bit 0) chooses between 0 (PPE Core Debug Mode A) and 1 (Mode B). When bit GPEDBG_HALT_ON_XSTOP (bit 1) is set, it ORs in the secondary valid corresponding lower bits of the trace data when they are from a different source than bits 0:23. **Note:** When bit 1 = '0' it is likely for HTM tracing.
12:15	RW	GPEDBG_RESERVED12_15: Implemented but not used.
16	RW	GPEDBG_FIR_TRIGGER: Programmatically asserts a FIR bit to inject a checkstop or send an attention to the service element.
17:19	RW	GPEDBG_SPARE: Spare (used for GPIO on other instances).
20:23	RW	GPEDBG_TRACE_DATA_SEL: Mux select to choose debug data content on the trace bus. All 16 encodes are defined as per the table in the Debug Bolt-on chapter of the Power Management Spec. 0x0 chooses an 88-bit PPE-RISCTrace by default. - b00XX enables RISCTrace records to be generated in the upper 64-bits of trace data. - 0bXX00 selects the remaining 24 bits to form 88-bit Trace Packets to be generated on the debug bus to be sent to the hardware trace array (otherwise PPE, MIB, or EXT data will be used) The other 12 encodes contain permutations of the PPE Core, Memory Interface, and External debug buses instead of RISCTrace records.
24:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	GPE SRAM Translation Register
Mnemonic	TP.TPCHIP.OCC.OCI.GPE3.GPESTR
Address	0000000000066003 (SCOM)
Description	GPE SRAM Translation Register

Bits	SCOM	Field Mnemonic: Description
0:11	RO	constant = 0b000000000000

Bits	SCOM	Field Mnemonic: Description
12:21	RW	GPESTR_PBASE: Specifies the physical base address for effective addresses starting at 0xFFFF8000, and extending upwards for the range indicated by GSTR[size]. GSTR[pbase] must imply a correctly aligned physical base address for any legal value of GSTR[size] are detailed as follow: Size = 0b000 (1 KB) pbase = 0bxxxxxxxxxx Size = 0b001 (2 KB) pbase = 0bxxxxxxxxx0 Size = 0b010 (4 KB) pbase = 0bxxxxxxxx00 Size = 0b011 (8 KB) pbase = 0bxxxxxxx000 Size = 0b100 (16 KB) pbase = 0bxxxxxx0000 Size = 0b101 (32 KB) pbase = 0bxxxxx00000 The reset value represents an illegal OCI address, which results in a machine check exception if a translatable effective address be accessed.
22:28	RO	constant = 0b0000000
29:31	RW	GPESTR_SIZE: Specifies the size of the translated region. 0b000 = 1 KB 0b001 = 2 KB 0b010 = 4 KB 0b011 = 8 KB 0b100 = 16 KB 0b101 = 32 KB Other values are illegal and result in data or instruction storage exceptions as appropriate.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	GPE Memory Access Configuration Register
Mnemonic	TP.TPCHIP.OCC.OCI.GPE3.GPEMACR
Address	0000000000066004 (SCOM)
Description	GPE Memory Access Configuration Register

Bits	SCOM	Field Mnemonic: Description
0:1	RW	GPEMACR_MEM_LOW_PRIORITY: OCI priority to use for accessing main memory when address[0:1] = 10 and the PPE high priority output is ‘0’.
2:3	RW	GPEMACR_MEM_HIGH_PRIORITY: OCI priority to use for accessing main memory when address[0:1] = 10 and the PPE high priority output is ‘1’.
4:5	RW	GPEMACR_LOCAL_LOW_PRIORITY: OCI priority to use for accessing local registers when address[0:2] = 110 and the PPE high priority output is ‘0’.
6:7	RW	GPEMACR_LOCAL_HIGH_PRIORITY: OCI priority to use for accessing local registers when address[0:2] = 110 and the PPE high priority output is ‘1’.
8:9	RW	GPEMACR_SRAM_LOW_PRIORITY: OCI priority to use for accessing SRAM tank when Address(0:2) = 111 and the PPE high priority output is ‘0’.
10:11	RW	GPEMACR_SRAM_HIGH_PRIORITY: OCI priority to use for accessing SRAM tank when Address(0:2) = 111 and the PPE high priority output is ‘1’.

Register Name	MIB External Interface MEM Information
Mnemonic	TP.TPCHIP.OCC.OCI.GPE3.GPE.MIB.MIB_XIMEM
Address	0000000000066017 (SCOM)
Description	MIB External Interface MEM Information

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	MIB_XIMEM_MEM_ADDR: MEM transaction buffer: current or previous transaction byte address.
32	ROX	MIB_XIMEM_MEM_R_NW: MEM transaction buffer: current or previous transaction type. 0 = Write. 1 = Read.
33	ROX	MIB_XIMEM_MEM_BUSY: Indicates if the transaction buffer is occupied with an ongoing transaction. Busy is cleared when the transaction is completed.
34	ROX	MIB_XIMEM_MEM_IMPRECISE_ERROR_PENDING: Indicates that the current or previous transaction had an imprecise error. Cleared when it is reported back to PPE. **Note:** The address of the erroneous transaction is copied into the SGB address latches such that the memory interface can continue to service I-fetches.
35:42	ROX	MIB_XIMEM_MEM_BYTE_ENABLE: MEM transaction buffer: current or previous transaction byte enables.
43	ROX	MIB_XIMEM_MEM_LINE_MODE: MEM transaction buffer: current or previous transaction line mode. Indicates a 32 B read request when set to ‘1’.
44:48	RO	constant = 0b00000
49:51	ROX	MIB_XIMEM_MEM_ERROR: MEM transaction buffer error code. A current or previous transaction received an error on the memory interface when non-zero.
52:61	RO	constant = 0b0000000000
62	ROX	MIB_XIMEM_MEM_IFETCH_PENDING: When set to ‘1’, indicates that an instruction fetch is pending on the MEM interface.
63	ROX	MIB_XIMEM_MEM_DATAOP_PENDING: When set to ‘1’, indicates that a data transaction is pending on the MEM interface.

Register Name	MIB External Interface Store Gather Buffer Information
Mnemonic	TP.TPCHIP.OCC.OCI.GPE3.GPE.MIB.MIB_XISGB
Address	0000000000066018 (SCOM)
Description	MIB External Interface Store Gather Buffer Information

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	MIB_XISGB_STORE_ADDRESS: Contains either the SGB address 4-byte tag or the address of an imprecise store error that occurred when a previous data transaction was done.
32:34	RO	constant = 0b000
35	ROX	MIB_XIMEM_MEM_IMPRECISE_ERROR_PENDING: Indicates that the current or previous transaction had an imprecise error. Cleared when it is reported back to PPE. **Note:** The address of the erroneous transaction is copied into the SGB address latches such that the memory I interface can continue to service I-fetches.
36:39	ROX	MIB_XISGB_SGB_BYTE_VALID: Byte valid bits within the 4 B tag. Cleared when the SGB contents are committed, that is, when the SGB contents are either flushed to memory or copied into the transaction buffer. **Note:** These bits can never be set if a MEM IMPRECISE ERROR is pending.
40:62	RO	constant = 0b00000000000000000000000
63	ROX	MIB_XISGB_SGB_FLUSH_PENDING: When set to ‘1’, indicates that a store gather buffer flush to memory is pending on the MEM interface. This can happen only if MEM_BUSY in the MEM transaction buffer is ‘0’.

Register Name	MIB External Interface I-cache Information
Mnemonic	TP.TPCHIP.OCC.OCI.GPE3.GPE.MIB.MIB_XIICAC
Address	0000000000066019 (SCOM)
Description	MIB External Interface I-cache Information

Register Name	GPE External Interface OCI
Mnemonic	TP.TPCHIP.OCC.OCI.GPE3.GPEXISPRG0
Address	0000000000066022 (SCOM)
Description	Word SPRG0

Bits	SCOM	Field Mnemonic: Description
0:31	RW	PPE_XIRAMRA_SPRG0: The SPRG0 register value is used by the PPE code to keep status. SPRG0 is a 32-bit scratch register. SPRG0 can be written only as an XIR when the processor is halted (XSR[HS] = ‘1’).
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	GPE External Interface OCI
Mnemonic	TP.TPCHIP.OCC.OCI.GPE3.GPEXIEDR
Address	0000000000066023 (SCOM)
Description	Word EDR

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	PPE_XIRAMEDR_EDR: Error Data Register. Set on PPE interrupts that are caused by an error. See the PPE Specification for a definition.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	GPE External Interface OCI
Mnemonic	TP.TPCHIP.OCC.OCI.GPE3.GPEXIIR
Address	0000000000066024 (SCOM)
Description	Word IR

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	PPE_XIRAMRA_SPRG0: The SPRG0 register value is used by the PPE code to keep status. SPRG0 is a 32-bit scratch register. SPRG0 can be written only as an XIR when the processor is halted (XSR[HS] = ‘1’).
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	GPE External Interface OCI
Mnemonic	TP.TPCHIP.OCC.OCI.GPE3.GPEXIIAR
Address	0000000000066025 (SCOM)
Description	Word IAR

Bits	SCOM	Field Mnemonic: Description
0:29	RWX	Reserved field.
30:63	RO	constant = 0b00000000000000000000000000000000

Register Name	SRAM SRAM Mode Register
Mnemonic	TP.TPCHIP.OCC.SRAM.SRAM_CTL.SRAM_SRMR
Address	000000000006A001 (SCOM)
Description	SRAM SRAM Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	SRAM_SRMR_SRAM_ENABLE_REMAP: SRAM Enable Remap. When this bit is set, the SRAM remaps an OCI request that targets within the 64-byte address in the SRMAP [sram_remap_source] to the address defined in the SRMAP [sram_remap_dest].
1	RW	SRAM_SRMR_SRAM_ARB_EN_SEND_ALL_WRITES: SRAM Arbiter Send all Writes. 0 = The internal SRAM arbiter prioritizes one pending write-over-read operation when the dispatch logic indicated writes must be prioritized. 1 = The internal SRAM arbiter prioritizes all pending write operations over read operations when the dispatch logic indicated writes must be prioritized.
2	RW	SRAM_SRMR_SRAM_DISABLE_LFSR: SRAM Dispatcher LFSR Disable. 0 = Allows the LFSR in the dispatcher to pseudo randomly rearbitrate instead of address acknowledge a PLB request. 1 = Disables LFSR in dispatcher.
3:7	RW	SRAM_SRMR_SRAM_LFSR_FAIRNESS_MASK: LFSR Fairness Mask. This is a 5-bit mask for the LFSR prematch. Mask bits control probability from 2:1 to 64:1. (That is, all bits set in the mask and only one bit needs to match).
8	RW	SRAM_SRMR_SRAM_ERROR_INJECT_ENABLE: Error Injection Enable. 0 = Disable error inject logic in the SRAM tanks. 1 = Enables error inject logic in the SRAM tanks.
9	RW	SRAM_SRMR_SRAM_CTL_TRACE_EN: SRAM trace bus enable. Use this bit to turn on/off trace bus logic for power savings.

Bits	SCOM	Field Mnemonic: Description
10	RW	SRAM_SRMR_SRAM_CTL_TRACE_SEL: SRAM trace bus select. 0 = Select group 0. 1 = Selects group 1.
11:15	RW	SRAM_SRMR_SPARE: Implemented but unused.
16:63	RO	constant = 0b0000000000000000000000000000000000000000000000000000

Register Name	SRAM Remap Register
Mnemonic	TP.TPCHIP.OCC.SRAM.SRAM_CTL.SRAM_SRMAP
Address	000000000006A002 (SCOM)
Description	SRAM Remap Register

Bits	SCOM	Field Mnemonic: Description
0:13	RW	SRAM_SRMAP_SRAM_REMAP_SOURCE: SRAM source address to remap. A write or read that targets the SRAM and matches OCI address[12:25] is automatically remapped to the SRAM destination address instead. Use of this register must be enabled in SRMOD[sram_enable_remap].
14:15	RO	constant = 0b00
16:29	RW	SRAM_SRMAP_SRAM_REMAP_DEST: SRAM destination address to remap. When a remap match has occurred, the OCI address(12:25) is changed to this destination address when forwarded to the SRAM tanklets.
30:63	RO	constant = 0b00000000000000000000000000000000

Register Name	SRAM SRAM Error Address Register
Mnemonic	TP.TPCHIP.OCC.SRAM.SRAM_CTL.SRAM_SREAR
Address	000000000006A003 (SCOM)
Description	SRAM SRAM Error Address Register

Bits	SCOM	Field Mnemonic: Description
0:16	RWX	SRAM_SREAR_SRAM_ERROR_ADDRESS: SRAM error address. Capture of OCI address bits [12:28]. The first read error encountered causes the address to be stored. Subsequent read errors do not overwrite this initial captured address until this register is written. This register can be written by using an OCI write with any value. Thus, to clear it, an OCI write of all 0's is required.
17:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000

Register Name	SRAM Boot Vector Word 0 Register
Mnemonic	TP.TPCHIP.OCC.SRAM.SRAM_CTL.SRAM_SRBV0
Address	000000000006A004 (SCOM)
Description	SRAM Boot Vector Word 0 Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	SRAM_SRBV0_BOOT_VECTOR_WORD0: Boot vector word 0. Instruction word 0 is returned from SRAM when the PowerPC 405 fetches from the boot vector address. This register corresponds to address 0xFFFFFFF0 of the cache line holding the boot vector.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	SRAM Boot Vector Word1 Register
Mnemonic	TP.TPCHIP.OCC.SRAM.SRAM_CTL.SRAM_SRBV1
Address	000000000006A005 (SCOM)
Description	SRAM SRAM Boot Vector Word1 Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	SRAM_SRBV1_BOOT_VECTOR_WORD1: Boot vector word 1. Instruction word 1 is returned from SRAM when the PowerPC 405 core fetches from the boot vector address. This register corresponds to address 0xFFFFFFF4 of the cache line holding the boot vector.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	SRAM Boot Vector Word 2 Register
Mnemonic	TP.TPCHIP.OCC.SRAM.SRAM_CTL.SRAM_SRBV2
Address	000000000006A006 (SCOM)
Description	SRAM SRAM Boot Vector Word 2 Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	SRAM_SRBV2_BOOT_VECTOR_WORD2: Boot Vector Word 2. Instruction word 2 returned from SRAM when the PowerPC 405 core fetches from the boot vector address. This register corresponds to address 0xFFFFFFF8 of the cache line holding the boot vector.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	SRAM Boot Vector Word 3 Register
Mnemonic	TP.TPCHIP.OCC.SRAM.SRAM_CTL.SRAM_SRBV3
Address	000000000006A007 (SCOM)
Description	SRAM SRAM Boot Vector Word 3 Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	SRAM_SRBV3_BOOT_VECTOR_WORD3: Boot Vector Word 3. Instruction word 3 is returned from SRAM when the PowerPC 405 core fetches from the boot vector address. This register corresponds to address 0xFFFFFFFC of the cache line holding the boot vector. The initial value is a branch absolute 0x00000010.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	SRAM Chicken Switch Register
Mnemonic	TP.TPCHIP.OCC.SRAM.SRAM_CTL.SRAM_SRCHSW
Address	000000000006A008 (SCOM)
Description	SRAM SRAM Chicken Switch Register

Bits	SCOM	Field Mnemonic: Description
0	RW	SRAM_SRCHSW_CHKSW_WRFSM_DLY_DIS: Disables the default 3-cycle delay (PLB read request window) of a dispatched write machine's request to arbiter.
1	RW	SRAM_SRCHSW_CHKSW_ALLOW1_RD: Allows one read at a time.

Bits	SCOM	Field Mnemonic: Description
2	RW	SRAM_SRCHSW_CHKSW_ALLOW1_WR: Allows one write at a time.
3	RW	SRAM_SRCHSW_CHKSW_ALLOW1_RDWR: Allows one read or one write at a time.
4	RW	SRAM_SRCHSW_CHKSW_OCI_PARCHK_DIS: Disables parity checking on PLB inputs.
5	RW	SRAM_SRCHSW_CHKSW_TANK_RDDATA_PARCHK_DIS: Disables parity checking on tank read data.
6	RW	SRAM_SRCHSW_CHKSW_SPARE_6: spare.
7	RW	SRAM_SRCHSW_CHKSW_VAL_BE_ADDR_CHK_DIS: Disables valid byte enable and address checking in dispatcher.
8:9	RW	SRAM_SRCHSW_CHKSW_SO_SPARE: Spares.
10:63	RO	constant = 0b0000000000000000000000000000000000000000000000000000000000000000

Register Name	OCB OCI OCC Interrupt Source 0 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OISR0
Address	000000000006C000 (SCOM) 000000000006C001 (SCOM1) 000000000006C002 (SCOM2)
Description	OCB_OCI OCC Interrupt Source 0 Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_DEBUGGER: Debugger software on the FSP uses this bit to produce an interrupt. The physical input is tied low. The respective OITR bit must be set to edge so that a WOR to this register will produce an interrupt.
1	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_TRACE_TRIGGER: Asserted if the trace array logic analyzer logic has detected a trigger condition.
2	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_OCC_ERROR: Indicates an unmasked OCC FIR with action01 = 10 has asserted. Typical use is for the PowerPC 405 ICU and DCU uncorrectable errors but is based on the actual OCC mask and action01 settings.
3	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_PBA_ERROR: Indicates that the attached PBA detected an error. This signal is asserted for an error that sets a bit in the PBA_FIR and also has the corresponding bit set in the PBA_OCC_ACTION register. Normally used to report problems detected with the BCE.
4	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_SRT_ERROR: Indicates that an error has occurred in the attached SRAM tank. Errors include address parity, invalid address, and data uncorrectable ECC errors. The SRAM controller holds the address in error.
5	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_GPE0_ERROR: Indicates the GPE0 reported an error that caused it to halt.
6	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_GPE1_ERROR: Indicates the GPE1 reported an error that caused it to halt.
7	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_GPE2_ERROR: Indicates the GPE2 reported an error that caused it to halt.
8	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_GPE3_ERROR: Indicates the GPE3 reported an error that caused it to halt.
9	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_PPC405_HALT: Indicates the PowerPC 405 core hit a halt condition.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
10	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_OCB_ERROR: Indicates the OCB unit had an error.
11	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_SPARE_11: Implemented but unused. The physical input is tied low.
12	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_CHECK_STOP_PPC405: Indicates a system checkstop was detected. Use to interrupt the PowerPC 405 core.
13	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_CHECK_STOP_GPE0: Indicates a system checkstop was detected. Use to interrupt the GPE0.
14	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_CHECK_STOP_GPE1: Indicates a system checkstop was detected. Use to interrupt the GPE1.
15	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_CHECK_STOP_GPE2: Indicates a system checkstop was detected. Use to interrupt the GPE2.
16	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_CHECK_STOP_GPE3: Indicates a system checkstop was detected. Use to interrupt the GPE3.
17	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_OCC_MALF_ALERT: Malfunction alert classified FIR (used to be PMC LFIR).
18	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_ADU_MALF_ALERT: Indicates that a malfunction alert has been raised in the system.
19	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_EXTERNAL_TRAP: Comes from a chip pin to indicated that an external condition occurred in which the OCC FW is to take action, if enabled. This might be used to indicated that the power supplies are in over-subscription mode and that fast action to reduce socket and associated memory power is required.
20	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_IVRM_PVREF_ERROR: Indicates that the precision voltage reference (PVREF) circuit has detected an error and that iVRMs should be taken out of regulation.
21	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_OCC_TIMER0: Indicates that timer0 in the OCB has popped. Timer0 is a 16-bit counter that is incremented with a 1 us input pulse. It is implemented as an autoreload programmable interval timer (PIT).
22	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_OCC_TIMER1: Indicates that timer1 in the OCB has popped. Timer1 is a 16-bit counter incremented with a 1 us input pulse. It is implemented as an autoreload programmable interval timer (PIT).
23	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_AVS_SLAVE0: Indicates that the VRM slave attached to AVS bus 0 has signaled attention.
24	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_AVS_SLAVE1: Indicates that the VRM slave attached to AVS bus 1 has signaled attention.
25	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_IPI0_HI_PRIORITY: Inter-processor interrupt 0. This interrupt is treated as high priority by firmware. Allows synchronization between critical and non-critical code. The physical input is tied low. To inject an interrupt, see the engineering note in the OITR.
26	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_IPI1_HI_PRIORITY: Inter-processor interrupt 1.This interrupt is treated as high priority by firmware. Allows synchronization between critical and non-critical code. The physical input is tied low. To inject an interrupt, see the engineering note in the OITR.
27	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_IPI2_HI_PRIORITY: Inter-processor interrupt 2. This interrupt is treated as high priority by firmware. Allows synchronization between critical and non-critical code. The physical input is tied low. To inject an interrupt, see the engineering note in the OITR.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
28	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_IPI3_HI_PRIORITY: Inter-processor interrupt 3. This interrupt is treated as high priority by firmware. Allows synchronization between critical and non-critical code. The physical input is tied low. To inject an interrupt, see the engineering note in the OITR.
29	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_IPI4_HI_PRIORITY: Inter-processor interrupt 4. This interrupt is treated as high priority by firmware. Allows synchronization between critical and non-critical code. The physical input is tied low. To inject an interrupt, see the engineering note in the OITR.
30	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_ADCFSM_ONGOING: Indicates the A2D collection state machine in the PSS unit is currently busy.
31	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR0_I2CM_INTER: OR of four incoming I2CM interrupts.
32:63	RO	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCB_OCI OCC Interrupt Mask 0 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OIMR0
Address	000000000006C004 (SCOM) 000000000006C005 (SCOM1) 000000000006C006 (SCOM2)
Description	OCB_OCI OCC Interrupt Mask 0 Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:31	RW	WO_CLEAR	WO_OR	OCB_OCI_OIMR0_INTERRUPT_MASK_N: See the OCC interrupt source [n] for bit definitions. Masks the respective event from producing an interrupt to the OCC complex engines. The events are still captured in the OISR but are not reported through interrupt signals. 0 = Not masked (for example, enabled) 1 = Masked
32:63	RO	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCB_OCI OCC Interrupt Type 0 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OITR0
Address	000000000006C008 (SCOM) 000000000006C009 (SCOM1) 000000000006C00A (SCOM2)
Description	OCB_OCI OCC Interrupt Type 0 Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:31	RW	WO_CLEAR	WO_OR	OCB_OCI_OITR0_INTERRUPT_TYPE_N: See OCC Interrupt Source [n] for bit definitions. Establishes the type of interrupt that is monitored. 0 = Level 1 = Edge When set to level, the respective OISR[n] bit follows the value of the associated input source with the polarity defined by the OIEPR[n]. **Note:** With this setting, direct OCI writes to the OISR[n] bit must never be attempted because the value will not be held and will immediately return to its previous state. When set to edge: the respective OISR[n] bit will be set upon the transition (as defined by the OIEPR[n]) of the associated input source. Specifically, if the respective OIEPR[n] bit is set to rising, a transition from 0 to 1 sets the bit. If the respective OIEPR[n] bit is set to falling, a transition from 1 to 0 sets the bit. In this mode, the only way to clear the OISR[n] bit is from a direct OCI write-CLEAR. Additionally, firmware can inject interrupts by direct OISR write-OR to the bit (where the OIEPR[n] setting is a don't care). **Engineering Note:** For firmware testing, a potential interrupt injection technique for level interrupts is to override their definition to edge and then use the OR register associated with the OISR[n]. This allows the injected transition to stick because logic does not follow the input interrupt signal. However, if the firmware is expecting to find status in the driving unit, this technique might not be appropriate. Therefore, it makes more sense to have the driving unit provide an interrupt inject mechanism itself. Interrupt bits that intended for firmware use, that is, not driven by a hardware source, are typically tied low unless otherwise specified. The preferred mechanism for injecting interrupts is to configure these bits as an edge and use OR and CLEAR write operations to control the value of the interrupt.
32:63	RO	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	**OCB_OCI OCC Interrupt Edge/Polarity 0 Register**
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OIEPR0
Address	000000000006C00C (SCOM) 000000000006C00D (SCOM1) 000000000006C00E (SCOM2)
Description	OCB_OCI OCC Interrupt Edge/Polarity 0 Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:31	RW	WO_CLEAR	WO_OR	OCB_OCI_OIEPR0_INTERRUPT_EDGE_POL_N: See OCC Interrupt Source [n] for bit definitions. Establishes the edge or polarity of interrupt. 0 = Falling/Low 1 = Rising/High When set, the respective bit in the OITR[n] is set to level, then the low and high meanings apply as follows: If this bit is set to low, the respective OISR[n] bit follows the inverted input to the OISR from the unit driving the signal. If this bit is set to high, the respective OISR[n] bit follows the direct input to the OISR[n] from the unit driving the signal. When set, the respective bit in the OITR[n] is set to edge, then the falling and rising meanings apply as follows: If this bit is set to falling, a transition from 1 to 0 of the input signal to the OISR[n] sets the respective OISR[n] bit. If this bit is set to rising, a transition from 0 to 1 of the input signal to the OISR[n] sets the respective OISR[n] bit.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PBAX_OCC_SEND_ATTN: Indicates that the PBAX send engine is busy. Falling edge indicates it is complete.
1	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PBAX_OCC_PUSH0: Indicates that PBA streaming channel 0 push queue has detected interrupt condition.
2	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PBAX_OCC_PUSH1: Indicates that PBA streaming channel 1 push queue has detected interrupt condition.
3	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PBA_BCDE_ATTN: Indicates that BCDE in the attached PBA detected has an attention condition (non error). Typically, this indicates that a block copy download engine has completed a requested activity.
4	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PBA_BCUE_ATTN: Indicates that BCUE in the attached PBA detected has an attention condition (non error). Typically, this indicates that a block copy download engine has completed a requested activity.
5	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_OCC_STRM0_PULL: Indicates that streaming channel 0 pull queue has detected the condition enabled in OCBSLSC0.
6	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_OCC_STRM0_PUSH: Indicates that streaming channel 0 pull queue has detected the condition enabled in OCBSHSC0.
7	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_OCC_STRM1_PULL: Indicates that streaming channel 1 pull queue has detected the condition enabled in OCBSLSC1.
8	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_OCC_STRM1_PUSH: Indicates that streaming channel 1 pull queue has detected the condition enabled in OCBSHSC1.
9	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_OCC_STRM2_PULL: Indicates that streaming channel 2 pull queue has detected the condition enabled in OCBSLSC2.
10	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_OCC_STRM2_PUSH: Indicates that streaming channel 2 pull queue has detected the condition enabled in OCBSHSC2.
11	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_OCC_STRM3_PULL: Indicates that streaming channel 3 pull queue has detected the condition enabled in OCBSLSC3.
12	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_OCC_STRM3_PUSH: Indicates that streaming channel 3 push queue has detected the condition enabled in OCBSHSC3.
13	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PMC_PCB_INTR_TYPE0_PENDING: Indicates that a PCB type 0 interrupt is pending.
14	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PMC_PCB_INTR_TYPE1_PENDING: Indicates that a PCB type 1 interrupt is pending.
15	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PMC_PCB_INTR_TYPE2_PENDING: Indicates that a PCB type 2 interrupt is pending.
16	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PMC_PCB_INTR_TYPE3_PENDING: Indicates that a PCB type 3 interrupt is pending.
17	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PMC_PCB_INTR_TYPE4_PENDING: Indicates that a PCB type 4 interrupt is pending.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
18	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PMC_PCB_INTR_TYPE5_PENDING: Indicates that a PCB type 5 interrupt is pending.
19	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PMC_PCB_INTR_TYPE6_PENDING: Indicates that a PCB type 6 interrupt is pending.
20	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PMC_PCB_INTR_TYPE7_PENDING: Indicates that a PCB type 7 interrupt is pending.
21	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PMC_O2S_0A_ONGOING: Indicates the A O2S bridge for AVS interface 0 has an ongoing transaction.
22	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PMC_O2S_0B_ONGOING: Indicates the B O2S bridge for AVS interface 0 has an ongoing transaction.
23	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PMC_O2S_1A_ONGOING: Indicates the A O2S bridge for AVS interface 1 has an ongoing transaction.
24	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PMC_O2S_1B_ONGOING: Indicates the B O2S bridge for AVS interface 1 has an ongoing transaction.
25	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_PSSBRIDGE_ONGOING: The physical input is tied low. The respective OITR bit must be set to edge so that a WOR to this register by hypervisor firmware will produce an interrupt.
26	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_IPI0_LO_PRIORITY: Inter-processor interrupt 0 is treated as low priority by firmware. Allows synchronization between critical and non-critical code. The physical input is tied low. To inject an interrupt, see the engineering note in the OITR.
27	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_IPI1_LO_PRIORITY: Inter-processor interrupt 1 is treated as low priority by firmware. Allows synchronization between critical and non-critical code. The physical input is tied low. To inject an interrupt, see the engineering note in the OITR.
28	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_IPI2_LO_PRIORITY: Inter-processor interrupt 2 is treated as low priority by firmware. Allows synchronization between critical and non-critical code. The physical input is tied low. To inject an interrupt, see the engineering note in the OITR.
29	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_IPI3_LO_PRIORITY: Inter-processor interrupt 3 is treated as low priority by firmware. Allows synchronization between critical and non-critical code. The physical input is tied low. To inject an interrupt, see the engineering note in the OITR.
30	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_IPI4_LO_PRIORITY: Inter-processor interrupt 4 is treated as low priority by firmware. Allows synchronization between critical and non-critical code. The physical input is tied low. To inject an interrupt, see the engineering note in the OITR.
31	ROX	WOX_CLEAR	WOX_OR	OCB_OCI_OISR1_SPARE_31: Implemented but unused. The physical input is tied low.
32:63	RO	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	**OCB_OCI OCC Interrupt Mask 1 Register**
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OIMR1
Address	000000000006C024 (SCOM) 000000000006C025 (SCOM1) 000000000006C026 (SCOM2)
Description	OCB_OCI OCC Interrupt Mask 1 Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:31	RW	WO_CLEAR	WO_OR	OCB_OCI_OIMR1_INTERRUPT_MASK_N: See OCC interrupt source [n] for bit definitions. Masks the respective event from producing an interrupt to the OCC complex engines. The events are still captured in the OISR but are not reported through interrupt signals. 0 = Not masked (for example, enabled) 1 = Masked.
32:63	RO	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCB_OCI OCC Interrupt Type 1 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OITR1
Address	000000000006C028 (SCOM) 000000000006C029 (SCOM1) 000000000006C02A (SCOM2)
Description	OCB_OCI OCC Interrupt Type 1 Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:31	RW	WO_CLEAR	WO_OR	OCB_OCI_OITR1_INTERRUPT_TYPE_N: See OCC interrupt source [n] for bit definitions. This field establishes the type of interrupt that is monitored. 0 = Level 1 = Edge When set to level, the respective OISR[n] bit follows the value of the associated input source with the polarity defined by the OIEPR[n]. **Note:** With this setting, direct OCI writes to the OISR[n] bit must never be attempted because the value is not held and isl immediately return to its previous state. When set to edge, the respective OISR[n] bit is set upon the transition (as defined by the OIEPR[n]) of the associated input source. Specifically, if the respective OIEPR[n] bit is set to rising, a transition from 0 to 1 sets the bit. If the respective OIEPR[n] bit is set to falling, a transition from 1 to 0 sets the bit. In this mode, the only way to clear the OISR[n] bit is by a direct OCI write-clear. Additionally, firmware can inject interrupts by direct OISR write-OR to the bit (where the OIEPR[n] setting is a don't care). **Engineering Note:** For firmware testing, a potential interrupt injection technique for level interrupts is to override their definition to edge and then use the OR register associated with the OISR[n]. This allows the injected transition to stick because logic does not follow the input interrupt signal. However, if the firmware is expecting to find status in the driving unit, this technique might not be appropriate. Therefore, it makes more sense to have the driving unit provide an interrupt inject mechanism itself. Interrupt bits that intended for firmware use, that is, not driven by a hardware source, are typically tied low unless otherwise specified. The preferred mechanism for injecting interrupts is to configure these bits as an edge and use OR and CLEAR write operations to control the value of the interrupt.

Description	OCB_OCI OCC Interrupt Edge/Polarity 1 Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:31	RW	WO_CLEAR	WO_OR	OCB_OCI_OIEPR1_INTERRUPT_EDGE_POL_N: See OCC interrupt source [n] for bit definitions. This field establishes the type of interrupt that is monitored. 0 = Falling/Low 1 = Rising/High When set, the respective bit in the OITR[n] is set to level. The Low and high meanings apply as follows: If this bit is set to low, the respective OISR[n] bit follows the inverted input to the OISR from the unit driving the signal. If this bit is set to high, the respective OISR[n] bit follows the direct input to the OISR[n] from the unit driving the signal. When set the respective bit in the OITR[n] is set to edge, the the falling and rising meanings apply as follows: If this bit is set to falling, a transition from 1 to 0 of the input signal to the OISR[n] sets the respective OISR[n] bit. If this bit is set to rising, a transition from 0 to 1 of the input signal to the OISR[n] sets the respective OISR[n] bit.

Address	000000000006C080 (SCOM) 000000000006C081 (SCOM1) 000000000006C082 (SCOM2)
Description	OCB_OCI OCC Miscellaneous Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_CLEAR	WO_OR	OCB_OCI_OCCMISC_CORE_EXT_INTR: Core External Interrupt. Setting this bit to a 1 causes a wire to pulse to the PSI host bridge, which allows the presentation of an external interrupt to a core thread. The core thread to be interrupted is controlled by the XIVR OCC register, SCOM 02010916. For a subsequent interrupt to be requested, this bit must be reset to '0' and then set to '1' (for example, a rising edge must be created).
1:3	RW	WO_CLEAR	WO_OR	OCB_OCI_OCCMISC_SPARE_1_3: Implemented but not used.
4:5	RW	WO_CLEAR	WO_OR	OCB_OCI_OCCMISC_PVREF_ERROR_EN: Enables the PVREF_ERROR_GROSS and PVREF_ERROR_FINE inputs after they are captured by the next two bits of this register. After applying the respective enables, the two are then ORed to assert the PVREF_FAIL indication. This sets the OISR and is also sent as an output to be delivered unlatched to all VREGs and CMEs on the chip to indicate that on-chip voltage regulation is now suspect.
6	ROX	NCX	NCX	OCB_OCI_OCCMISC_PVREF_ERROR_GROSS: Gross error indication directly from the Precision Voltage Reference.
7	ROX	NCX	NCX	OCB_OCI_OCCMISC_PVREF_ERROR_FINE: Fine error indication directly from the Precision Voltage Reference.
8	RW	WO_CLEAR	WO_OR	OCB_OCI_OCCMISC_FIRMWARE_FAULT: Sets OCCLFIR[occ_complex_fault] to indicate an OCC error occurred.
9	RW	WO_CLEAR	WO_OR	OCB_OCI_OCCMISC_FIRMWARE_NOTIFY: Sets OCCLFIR[occ_complex_notify] to indicate an OCC event occurred that needs attention from another firmware entity.
10:15	RW	WO_CLEAR	WO_OR	OCB_OCI_OCCMISC_SPARE: Implemented but not used.
16:18	ROX	NCX	NCX	OCB_OCI_OCCMISC_I2CM_INTR_STATUS: Interrupt Status from I2CM.
19:63	RO	RO	RO	constant = 0b00000000000000000000000000000000000000000000000

Register Name	OCB_OCI OCC HTM Control Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OHTMCR
Address	000000000006C083 (SCOM)
Description	OCB_OCI OCC HTM Control Register

Bits	SCOM	Field Mnemonic: Description
0:1	RW	OCB_OCI_OHTMCR_HTM_SRC_SEL: Select OCC source to drive out HTM data. 00 = HTM off 01 = PLB data 10 = 405 data 11 = Selected GPE from HTM_GPE_SRC_SEL.
2	RW	OCB_OCI_OHTMCR_HTM_STOP: HTM Stop Signal. Setting this bit causes the HTM stop signal to be sent to the NHTM to indicate to stop collecting OCC.

Bits	SCOM	Field Mnemonic: Description
3:5	RW	OCB_OCI_OHTMCR_HTM_MARKER_SLAVE_ADRS: HTM Slave Address Marker. Used to match against the slave address in the PLB HTM stream to generate markers.
6:7	RW	OCB_OCI_OHTMCR_EVENT2HALT_MODE: Event to Halt Mode: 00 = Off 01 = Halt on event 10 = Halt some delay after event 11 = Unused (off)
8:18	RW	OCB_OCI_OHTMCR_EVENT2HALT_EN: Enable Trace Trigger Event(0:10) to cause a halt as programmed by field EVENT2HALT_MODE. 0 = Disabled 1 = Enabled
19	RO	constant = 0b0
20:21	RW	OCB_OCI_OHTMCR_HTM_GPE_SRC_SEL: Select GPE source to drive out HTM data. 00 = GPE0 01 = GPE1 10 = GPE2 11 = GPE3
22	RO	constant = 0b0
23	RW	OCB_OCI_OHTMCR_EVENT2HALT_OCC: Enabled halt event causes the PowerPC 405 core to halt.
24	RW	OCB_OCI_OHTMCR_EVENT2HALT_GPE0: Enabled halt event causes the GPE0 to halt.
25	RW	OCB_OCI_OHTMCR_EVENT2HALT_GPE1: Enabled halt event causes the GPE1 to halt.
26	RW	OCB_OCI_OHTMCR_EVENT2HALT_GPE2: Enabled halt event causes the GPE2 to halt.
27	RW	OCB_OCI_OHTMCR_EVENT2HALT_GPE3: Enabled halt event causes the GPE3 to halt.
28:30	RO	constant = 0b000
31	RWX_WCLRPART	OCB_OCI_OHTMCR_EVENT2HALT_HALT_STATE: Event-driven halt. This bit reflects the value of the event-driven halt condition that is sent to the targets as indicated in bits 23:27. Writing this register clears the event-driven halt condition.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	OCB_OCI OCC Event Halt Delay Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OEHDR
Address	000000000006C084 (SCOM)
Description	OCB_OCI OCC Event Halt Delay Register

Bits	SCOM	Field Mnemonic: Description
0:19	RWX	OCB_OCI_OEHDR_EVENT2HALT_DELAY: Event to Halt Delay Counter. This field contains the amount of delay to wait between a Trigger Event occurring and Debug Halt being asserted. Only valid if EVENT2HALT_MODE = 10.
20:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	OCB_OCI OCC OCI Configuration Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCICFG
Address	000000000006C085 (SCOM)
Description	OCB_OCI OCC OCI Configuration Register

Bits	SCOM	Field Mnemonic: Description
0:1	RW	OCB_OCI_OCICFG_M0_PRIORITY: Set OCI Master0 Arbitration Priority (GPE0). 00 = Lowest 01 = Low 10 = High 11 = Highest
2:3	RW	OCB_OCI_OCICFG_M1_PRIORITY: Set OCI Master1 Arbitration Priority (GPE1). 00 = Lowest 01 = Low 10 = High 11 = Highest
4:5	RW	OCB_OCI_OCICFG_M2_PRIORITY: Set OCI Master2 Arbitration Priority (GPE2). 00 = Lowest 01 = Low 10 = High 11 = Highest
6:7	RW	OCB_OCI_OCICFG_M3_PRIORITY: Set OCI Master3 Arbitration Priority (GPE3). 00 = Lowest 01 = Low 10 = High 11 = Highest
8:9	RW	OCB_OCI_OCICFG_M4_PRIORITY: Set OCI Master4 Arbitration Priority (PBA). 00 = Lowest 01 = Low 10 = High 11 = Highest
10:11	RW	OCB_OCI_OCICFG_M5_PRIORITY: Set OCI Master5 Arbitration Priority (PowerPC 405 core IC). 00 = Lowest 01 = Low 10 = High 11 = Highest
12:13	RW	OCB_OCI_OCICFG_M6_PRIORITY: Set OCI Master6 Arbitration Priority (OCB). 00 = Lowest 01 = Low 10 = High 11 = Highest
14:15	RW	OCB_OCI_OCICFG_M7_PRIORITY: Set OCI Master7 Arbitration Priority (PowerPC 405 core DC). 00 = Lowest 01 = Low 10 = High 11 = Highest
16	RW	OCB_OCI_OCICFG_M0_PRIORITY_SEL: Selects between the M0_PRIORITY register setting and the GPE0 requested priority value. 0 = Select M0_PRIORITY 1 = Select GPE0_OCI_M_PRIORITY
17	RW	OCB_OCI_OCICFG_M1_PRIORITY_SEL: Selects between the M1_PRIORITY register setting and the GPE1 requested priority value. 0 = Select M1_PRIORITY 1 = Select GPE1_OCI_M_PRIORITY
18	RW	OCB_OCI_OCICFG_M2_PRIORITY_SEL: Selects between the M2_PRIORITY register setting and the GPE2 requested priority value. 0 = Select M2_PRIORITY 1 = Select GPE2_OCI_M_PRIORITY

Bits	SCOM	Field Mnemonic: Description
19	RW	OCB_OCI_OCICFG_M3_PRIORITY_SEL: Selects between the M3_PRIORITY register setting and the GPE3 requested priority value. 0 = Select M3_PRIORITY 1 = Select GPE3_OCI_M_PRIORITY
20	RW	OCB_OCI_OCICFG_OCICFG_RESERVED_20: Implemented but not used. Master 4 (PBA) priority always come from the M4_PRIORITY field.
21	RW	OCB_OCI_OCICFG_M5_PRIORITY_SEL: Selects between the M5_PRIORITY register setting and the ICU 405 priority value. 0 = Select M5_PRIORITY 1 = Select C405ICU_OCI_M_PRIORITY.
22	RW	OCB_OCI_OCICFG_OCICFG_RESERVED_23: Implemented but not used. Master 6 (OCB) priority always come from the M6_PRIORITY field.
23	RW	OCB_OCI_OCICFG_M7_PRIORITY_SEL: Selects between the m7_PRIORITY register setting and the DCU 405 priority value. 0 = Select M7_PRIORITY 1 = Select C405DCU_OCI_M_PRIORITY
24	RW	OCB_OCI_OCICFG_PLBARB_LOCKERR: Causes PLB arbiter to lock up and hold the address and masteridof a request that gets a timeout.
25:31	RW	OCB_OCI_OCICFG_SPARE_24_31: Spare debug switches.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	OCB_OCI OCC Scratch 0
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCCS0
Address	000000000006C086 (SCOM)
Description	OCB_OCI OCC Scratch 0

Bits	SCOM	Field Mnemonic: Description
0:31	RW	OCB_OCI_OCCS0_OCC_SCRATCH_N: Scratch Data [n].
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	OCB_OCI OCC Scratch 1
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCCS1
Address	000000000006C087 (SCOM)
Description	OCB_OCI OCC Scratch 1

Bits	SCOM	Field Mnemonic: Description
0:31	RW	OCB_OCI_OCCS1_OCC_SCRATCH_N: Scratch Data [n].
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	OCB_OCI OCC Scratch 2
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCCS2
Address	000000000006C088 (SCOM)
Description	OCB_OCI OCC Scratch 2

Bits	SCOM	Field Mnemonic: Description
0:31	RW	OCB_OCI_OCCS2_OCC_SCRATCH_N: Scratch Data [n].
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	OCB_OCI OCC Flags
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCCFLG
Address	000000000006C08A (SCOM) 000000000006C08B (SCOM1) 000000000006C08C (SCOM2)
Description	OCB_OCI OCC Flags

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:31	RW	WO_CLEAR	WO_OR	OCB_OCI_OCCFLG_OCC_FLAGS: Flags that are defined by OCC firmware.
32:63	RO	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCB_OCI OCB OCC Heartbeat Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCCHBR
Address	000000000006C08F (SCOM)
Description	OCB_OCI OCB OCC Heartbeat Register

Bits	SCOM	Field Mnemonic: Description
0:15	RW	OCB_OCI_OCCHBR_OCC_HEARTBEAT_COUNT: When written, this field defines the starting value for a counter that increments at about 1us if OCC_HEARTBEAT_EN = 1 and the counter value is non-zero. If OCC_HEARTBEAT_EN = 0 or the counter value is 0, the counter does not increment. If OCC_HEARTBEAT_EN = 1 and this counter becomes 0 (either from a written value or from the counter wrapping) constitutes the loss of the OCC heartbeat and surfaces an attention through TBD LFIR(TBD). The pulses used for this field come from a free running pervasive hang timer pulse (PM_Hang_Pulse) programmed to be ~ 32 ns that has a 5-bit precounter whose carryout forms a resultant ~ 1us decrement pulse. Upon writing this register with OCC_HEARTBEAT_EN = 1, the precounter is cleared and will begin counting upon the next PM_Hang_Pulse. This PM_Hang_Pulse might arrive immediately or a full duration later. With a (215)-1 range and an ~1 us incrementation time yields a heartbeat range of 1us (+0-32ns) (value 0xFFFF) to 65.535 ms (+0-32ns) (value 0x0001). The value chosen to be written for debug purposes only, writing 0x0000 causes an immediate heartbeat_lost if OCC_HEARTBEAT_EN = 1. Reads return the current value of the counter value.
16	RW	OCB_OCI_OCCHBR_OCC_HEARTBEAT_EN: OCC Heartbeat Timer Enable.
17:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000

Register Name	OCB_OCI Core Configuration Status Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_CCSR
Address	000000000006C090 (SCOM) 000000000006C091 (SCOM1) 000000000006C092 (SCOM2)
Description	OCB_OCI Core Configuration Status Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:23	RW	WO_CLEAR	WO_OR	OCB_OCI_CCSR_CORE_CONFIG: The bit per core chiplet that indicates when it is set to 1, it is configured and therefore available to target. If a core is configured, its associated EX region must also be configured in the QCSR. Likewise, if a pair of cores is deconfigured, the corresponding EX region of the cache chiplet must also be deconfigured with them.
24:30	RW	WO_CLEAR	WO_OR	OCB_OCI_CCSR_RESERVED_24: Reserved Spare bit.
31	RW	WO_CLEAR	WO_OR	OCB_OCI_CCSR_CHANGE_IN_PROGRESS: Configuration change is in progress. When this bit is zero, all multicast groups and chiplet enables are consistent with the contents of this register.
32:63	RO	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCB_OCI Quad Configuration Status Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_QCSR
Address	000000000006C094 (SCOM) 000000000006C095 (SCOM1) 000000000006C096 (SCOM2)
Description	OCB_OCI Quad Configuration Status Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:23	RW	WO_CLEAR	WO_OR	OCB_OCI_QCSR_CORE_CONFIG: The bit per core chiplet that indicates when it is set to 1, it is configured and therefore available to target. **Note:** If both core pairs are deconfigured, by definition the L2 is also deconfigured with them. This register enables both core and L2 partial good support. **Note:** A bad L2 results in deconfiguration of both of its associated core chiplets. If a core is configured, its associated L3 must also be configured in the following field.
24:31	RW	WO_CLEAR	WO_OR	OCB_OCI_QCSR_RESERVED_24_31: Reserved Spare bit.
32:63	RO	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCB_OCI Quad Stop Status Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_QSSR
Address	000000000006C098 (SCOM) 000000000006C099 (SCOM1) 000000000006C09A (SCOM2)
Description	OCB_OCI Quad Stop Status Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:11	RW	WO_CLEAR	WO_OR	OCB_OCI_QSSR_L2_STOPPED: The bit per L2 cache in the cache chiplet that indicates when it is set to 1, it is stopped by the Stop GPE due to a Core Stop State or partial good condition. **Note:** Two core chiplets share each L2. Therefore, this bit implies that the core pair has also been put into a stop state.
12:23	RW	WO_CLEAR	WO_OR	OCB_OCI_QSSR_L3_STOPPED: The bit per L3 cache region in the cache chiplet that indicates when it is set to 1, it is stopped by the stop GPE from a Core Stop State or partial good condition. If an L3_STOPPED bit is set, the corresponding L2_STOPPED bit must also be set.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
24:29	RW	WO_CLEAR	WO_OR	OCB_OCI_QSSR_QUAD_STOPPED: The bit per quad that indicates when it is set to 1, the cache chiplet is stopped by the stop GPE from a Core Stop state. **Note:** If QUAD_STOPPED(X) is set then L3_STOPPED(2 * X : 2 * X + 1) must also be set.
30	RW	WO_CLEAR	WO_OR	OCB_OCI_QSSR_RESERVED_30: Reserved. Spare bit.
31	RW	WO_CLEAR	WO_OR	OCB_OCI_QSSR_CHANGE_IN_PROGRESS: The stop state change is in progress (entry or exit) for one or more quads that rely on the stop GPE.
32:63	RO	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCB_OCI OCB Timebase Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OTBR
Address	000000000006C09F (SCOM)
Description	OCB_OCI OCB Timebase Register

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	OCB_OCI_OTBR_TIMEBASE: OCB timebase free-running counter whose least-significant-bit increments every CME timer input pulse, which is configured to run at nest (processor bus) clock64. (At 2 GHz, this rises every 32 ns, and this counter will wrap every 137 seconds). Firmware must perform all delta calculations (including accounting for the wrap condition) to perform elapsed time functions.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	OCB_OCI OCC Timer Register 0
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OTR0
Address	000000000006C100 (SCOM)
Description	OCB_OCI OCC Timer Register 0

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLEAR	OCB_OCI_OTR0_TIMEOUT_N: This bit is set by hardware on any 1 0 transition of the timer. This value of this bit is provided to the interrupt controller as the occ_timer[n] status. The interrupt controller is typically be programmed to recognize occ_timer[n] as an active-high, level sensitive interrupt. This bit is reset by writing the register with a ‘1’ in this bit position. If the hardware timer value transition from 1 0 occurs concurrently with the updating of this register to perform a reset, this bit is reset and the hardware transition is lost.
1	WO	OCB_OCI_OTR0_CONTROL_N: Reading this bit always returns 0. If the register is written with a ‘1’ in this bit position, all other fields other than timeout are updated. Otherwise, the write has no effect other than to clear the timeout_[n] field if the timeout_[n] bit is set in the write data. If the register is written with a ‘1’ in this bit position and a ‘0’ in the timeout bit position which occurs concurrently with the hardware timer value making a 1 0 transition, the timeout_[n] bit is set per the previous timer_[n] settings.
2	RW	OCB_OCI_OTR0_AUTO_RELOAD_N: If set, the timer operates in autoreload mode. In autoreload mode, every timeout of the timer sets the timeout_[n] bit and reinitializes the timer counter from the hidden autoreload value. If clear, a timeout of the timer simply sets the timeout_[n] bit. This field can be written only if the control_[n] bit is set on a write of the register.
3:15	RW	OCB_OCI_OTR0_SPARE_N: Writes store the value only if the control_[n] bit is set on a write of this register. Reads return the last value written.

Bits	SCOM	Field Mnemonic: Description
16:31	RWX	OCB_OCI_OTR0_TIMER_N: When the register is read, this field returns the current value of the hardware timer. When written, the value of the field goes into the hardware timer and the hidden autoreload register, and the hardware timer begins to decrement. This field can only be written if the control_[n] bit is set on a write of the register.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	OCB_OCI OCC Timer Register 1
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OTR1
Address	000000000006C101 (SCOM)
Description	OCB_OCI OCC Timer Register 1

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLEAR	OCB_OCI_OTR1_TIMEOUT_N: This bit is set by hardware on any 1 0 transition of the timer. This value of this bit is provided to the interrupt controller as the occ_timer[n] status. The interrupt controller is typically programmed to recognize occ_timer[n] as an active-high, level sensitive interrupt. This bit is reset by writing the register with a '1' in this bit position. If the hardware timer value transition from 1 0 occurs concurrently with the updating of this register to perform a reset, this bit is reset and the hardware transition is lost.
1	WO	OCB_OCI_OTR1_CONTROL_N: Reading this bit always returns 0. If the register is written with a '1' in this bit position, all other fields other than timeout are updated. Otherwise, the write has no effect other than to clear the timeout_[n] field if the timeout_[n] bit is set in the write data. If the register is written with a '1' in this bit position and a '0' in the timeout bit position occurs concurrently with the hardware timer value making a 1 0 transition, the timeout_[n] bit will be set per the previous timer_[n] settings.
2	RW	OCB_OCI_OTR1_AUTO_RELOAD_N: If set, the timer operates in autoreload mode. In autoreload mode, every timeout of the timer sets the timeout_[n] bit and reinitializes the timer counter from the hidden autoreload value. If clear, a timeout of the timer simply sets the timeout_[n] bit. This field can be written only if the control_[n] bit is set on a write of the register.
3:15	RW	OCB_OCI_OTR1_SPARE_N: Writes store the value only if the control_[n] bit is set on a write of this register. Reads return the last value written.
16:31	RWX	OCB_OCI_OTR1_TIMER_N: When the register is read, this field returns the current value of the hardware timer. When written, the value of the field goes into the hardware timer and the hidden autoreload register, and the hardware timer begins to decrement. This field can only be written if the control_[n] bit is set on a write of the register.

Register Name	**OCB_OCI OCB Stream Push Base 0 Register**
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCBSHBR0
Address	000000000006C203 (SCOM)
Description	OCB_OCI OCB Stream Push Base 0 Register

Bits	SCOM	Field Mnemonic: Description
0:2	RW	OCB_OCI_OCBSHBR0_PUSH_OCI_REGION: Push OCI Region Allowed values: 10X = Processor bus memory 111 = SRAM Others are reserved.
3:28	RW	OCB_OCI_OCBSHBR0_PUSH_START: Starting address of Push Queue (8 B alignment).
29:63	RO	constant = 0b00000000000000000000000000000000000

Register Name	**OCB_OCI OCB Stream Push Control/Status 0 Register**
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCBSHCS0
Address	000000000006C204 (SCOM)
Description	OCB_OCI OCB Stream Push Control/Status 0 Register

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRPART	OCB_OCI_OCBSHCS0_PUSH_FULL: Reads indicate the push queue is full condition. Any write to this register clears this indicator and clears PUSH_WRITE_PTR and PUSH_READ_PTR to 0s. This is a means for resetting the queue hardware.
1	RWX_WSETPART	OCB_OCI_OCBSHCS0_PUSH_EMPTY: Read indicate the push queue empty condition. Any write to this register sets this indicator and clears PUSH_WRITE_PTR and PUSH_READ_PTR to 0s. This is a means for resetting the queue hardware.
2:3	RW	OCB_OCI_OCBSHCS0_SPARE: Implemented by not used. Writes store the value. Reads return the last value written.
4:5	RW	OCB_OCI_OCBSHCS0_PUSH_INTR_ACTION_0_1: Push Interrupt Action. This field controls the condition that will assert the push interrupt signal for this channel to the OCB interrupt controller. b00 = Full (default upon hardware init) b01 = Not full b10 = Empty b11 = Not empty.

Bits	SCOM	Field Mnemonic: Description
6:10	RW	OCB_OCI_OCBSHCS0_PUSH_LENGTH: Push queue length in (PUSH_LENGTH + 1) * 8 B Value mapping: 0b00000 = 8 B 0b00001 = 16 B 0b00010 = 24 B 0b00011 = 32 B 0b00100 = 40 B 0b00101 = 48 B 0b00110 = 56 B 0b00111 = 64 B 0b01000 = 72 B 0b01001 = 80 B 0b01010 = 88 B 0b01011 = 96 B 0b01100 = 104 B 0b01101 = 112 B 0b01110 = 120 B 0b01111 = 128 B 0b10000 = 136 B 0b10001 = 144 B 0b10010 = 152 B 0b10011 = 160 B 0b10100 = 168 B 0b10101 = 176 B 0b10110 = 184 B 0b10111 = 192 B 0b11000 = 200 B 0b11001 = 208 B 0b11010 = 216 B 0b11011 = 224 B 0b11100 = 232 B 0b11101 = 240 B 0b11110 = 248 B 0b11111 = 256 B
11:12	RO	constant = 0b00
13:17	RWX_WCLRPART	OCB_OCI_OCBSHCS0_PUSH_WRITE_PTR: Push write pointer. Reads indicate the current push queue write pointer in increments of 8 B. The actual address used is PUSH_OCI_REGION || PUSH_START + PUSH_WRITE_PTR || 00000. Writes to this field are ignored. Hardware performs all modifications. This field is cleared upon a write to this register.
18:20	RO	constant = 0b000
21:25	RWX_WCLRPART	OCB_OCI_OCBSHCS0_PUSH_READ_PTR: Push read pointer reads indicate the current push queue read pointer in increments of 8 B. The actual address used is PUSH_OCI_REGION || PUSH_START + PUSH_READ_PTR || 00000. This field is cleared upon a write to this register.
26:30	RO	constant = 0b00000
31	RW	OCB_OCI_OCBSHCS0_PUSH_ENABLE: Enables the push queue function if disabled, PIB writes to OCB Data [n] Register to perform a push will result in an offline PIB error back to the PIB master. **Note:** OCI Writes to OCB Stream Push Increment [n] Register to cause incrementation are unaffected by the setting of this bit. Full or empty conditions might still arise to the OCC even if this bit indicates disabled.
32:63	RO	constant = 0b00000000000000000000000000000000

Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCBSLCS2
Address	000000000006C221 (SCOM)
Description	OCB_OCI OCB Stream Pull Control/Status 2 Register

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRPART	OCB_OCI_OCBSLCS2_PULL_FULL: Reads indicate the pull queue is full condition Any write to this register clears this indicator and clears PULL_WRITE_PTR and PULL_READ_PTR to 0s. (this is a means for resetting the queue hardware) RWX_WCLRPART.
1	RWX_WSETPART	OCB_OCI_OCBSLCS2_PULL_EMPTY: Reads indicate the pull queue empty condition Any write to this register sets this indicator and clears PULL_WRITE_PTR and PULL_READ_PTR to 0s. (this is a means for resetting the queue hardware) RWX_WSETPART.
2:3	RW	OCB_OCI_OCBSLCS2_SPARE: Implemented but not used. Writes store the value. Reads return the last value written.
4:5	RW	OCB_OCI_OCBSLCS2_PULL_INTR_ACTION_0_1: Pull Interrupt Action This field controls the condition which will assert the pull interrupt signal for this channel to the OCB interrupt controller. b00 = Full (default upon hardware init) b01 = Non Full b10 = Empty (the more useful firmware default) b11 = Not Empty.
6:10	RW	OCB_OCI_OCBSLCS2_PULL_LENGTH: Pull queue length in (pull_length + 1) * 8 B Value mapping: 0b00000 = 8 B 0b00001 = 16 B 0b00010 = 24 B 0b00011 = 32 B 0b00100 = 40 B 0b00101 = 48 B 0b00110 = 56 B 0b00111 = 64 B 0b01000 = 72 B 0b01001 = 80 B 0b01010 = 88 B 0b01011 = 96 B 0b01100 = 104 B 0b01101 = 112 B 0b01110 = 120 B 0b01111 = 128 B 0b10000 = 136 B 0b10001 = 144 B 0b10010 = 152 B 0b10011 = 160 B 0b10100 = 168 B 0b10101 = 176 B 0b10110 = 184 B 0b10111 = 192 B 0b11000 = 200 B 0b11001 = 208 B 0b11010 = 216 B 0b11011 = 224 B 0b11100 = 232 B 0b11101 = 240 B 0b11110 = 248 B 0b11111 = 256 B
11:12	RO	constant = 0b00
13:17	RWX_WCLRPART	OCB_OCI_OCBSLCS2_PULL_WRITE_PTR: Pull write pointer Reads indicate the current pull queue write pointer in increments of 8 B. The actual address used is PULL_OCI_REGION || PULL_START + PULL_WRITE_PTR || 00000. Writes to this field are ignored. Hardware performs all modifications. This field is cleared upon a write to this register. ROX_WCLRPART.
18:20	RO	constant = 0b000
21:25	RWX_WCLRPART	OCB_OCI_OCBSLCS2_PULL_READ_PTR: Pull read pointer Reads indicate the current pull queue read pointer in increments of 8 B. The actual address used is PULL_OCI_REGION || PULL_START + PULL_WRITE_PTR || 00000. This field is cleared upon a write to this register. ROX_WCLRPART.
26:30	RO	constant = 0b00000

Bits	SCOM	Field Mnemonic: Description
31	RW	OCB_OCI_OCBSLCS2_PULL_ENABLE: Enables the Pull Queue Function. If disabled, PIB reads to the OCB Data [n] Register to perform a pull will result in an offline PIB error back to the PIB Master. **Note:** OCI reads to OCB Stream Pull Increment [n] Register to cause incrementation are unaffected by the setting of this bit. Full or empty conditions might still arise to the OCC even if this bit indicates disabled.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	**OCB_OCI OCB Stream Pull Increment 2 Register**
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCBSLI2
Address	000000000006C222 (SCOM)
Description	OCB_OCI OCB Stream Pull Increment 2 Register

Register Name	**OCB_OCI OCB Stream Push Base 2 Register**
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCBSHBR2
Address	000000000006C223 (SCOM)
Description	OCB_OCI OCB Stream Push Base 2 Register

Bits	SCOM	Field Mnemonic: Description
0:2	RW	OCB_OCI_OCBSHBR2_PUSH_OCI_REGION: Push OCI Region Allowed values: 10X - processor bus memory 111 - SRAM Others are reserved.
3:28	RW	OCB_OCI_OCBSHBR2_PUSH_START: Starting address of Push Queue (8 B alignment).
29:63	RO	constant = 0b00000000000000000000000000000000000

Register Name	**OCB_OCI OCB Stream Push Control/Status 2 Register**
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCBSHCS2
Address	000000000006C224 (SCOM)
Description	OCB_OCI OCB Stream Push Control/Status 2 Register

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRPART	OCB_OCI_OCBSHCS2_PUSH_FULL: Reads indicate the push queue is full condition. Any write to this register clears this indicator and clears PUSH_WRITE_PTR and PUSH_READ_PTR to 0s. This is a means for resetting the queue hardware.
1	RWX_WSETPART	OCB_OCI_OCBSHCS2_PUSH_EMPTY: Read indicate the push queue empty condition. Any write to this register sets this indicator and clears PUSH_WRITE_PTR and PUSH_READ_PTR to 0s. This is a means for resetting the queue hardware.
2:3	RW	OCB_OCI_OCBSHCS2_SPARE: Implemented by not used. Writes store the value. Reads return the last value written.
4:5	RW	OCB_OCI_OCBSHCS2_PUSH_INTR_ACTION_0_1: Push Interrupt Action This field controls the condition which will assert the push interrupt signal for this channel to the OCB interrupt controller. b00 = Full (default upon hardware init) b01 = Non Full b10 = Empty b11 = Not Empty.

Bits	SCOM	Field Mnemonic: Description
6:10	RW	OCB_OCI_OCBSHCS2_PUSH_LENGTH: Push queue length in (PUSH_LENGTH + 1) * 8 B Value mapping: 0b00000 = 8 B 0b00001 = 16 B 0b00010 = 24 B 0b00011 = 32 B 0b00100 = 40 B 0b00101 = 48 B 0b00110 = 56 B 0b00111 = 64 B 0b01000 = 72 B 0b01001 = 80 B 0b01010 = 88 B 0b01011 = 96 B 0b01100 = 104 B 0b01101 = 112 B 0b01110 = 120 B 0b01111 = 128 B 0b10000 = 136 B 0b10001 = 144 B 0b10010 = 152 B 0b10011 = 160 B 0b10100 = 168 B 0b10101 = 176 B 0b10110 = 184 B 0b10111 = 192 B 0b11000 = 200 B 0b11001 = 208 B 0b11010 = 216 B 0b11011 = 224 B 0b11100 = 232 B 0b11101 = 240 B 0b11110 = 248 B 0b11111 = 256 B
11:12	RO	constant = 0b00
13:17	RWX_WCLRPART	OCB_OCI_OCBSHCS2_PUSH_WRITE_PTR: Push write pointer Reads indicate the current Push Queue write pointer in increments of 8 B. The actual address used is push_oci_region || push_start + push_write_ptr || 00000. Writes to this field are ignored. Hardware performs all modifications. This field is cleared upon a write to this register. ROX_WCLRPART.
18:20	RO	constant = 0b000
21:25	RWX_WCLRPART	OCB_OCI_OCBSHCS2_PUSH_READ_PTR: Push read pointer Reads indicate the current Push Queue read pointer in increments of 8 B. The actual address used is push_oci_region || push_start + push_read_ptr || 00000. This field is cleared upon a write to this register. ROX_WCLRPART.
26:30	RO	constant = 0b00000
31	RW	OCB_OCI_OCBSHCS2_PUSH_ENABLE: Enables the Push Queue function If Disabled, PIB Writes to OCB Data [n] Register to perform a push will result in an offline PIB error back to the PIB Master. **Note:** OCI Writes to OCB Stream Push Increment [n] Register to cause incrementation are unaffected by the setting of this bit. Full or empty conditions might still arise to the OCC even if this bit indicates disabled.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	OCB_OCI OCB Stream Push Increment 2 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCBSHI2
Address	000000000006C225 (SCOM)
Description	OCB_OCI OCB Stream Push Increment 2 Register

Bits	SCOM	Field Mnemonic: Description
0:63	RO	constant = 0b0000000000000000000000000000000000000000000000000000000000000000

Register Name	OCB_OCI OCB Stream Error Status 2 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCBSES2
Address	000000000006C226 (SCOM)
Description	OCB_OCI OCB Stream Error Status 2 Register

Bits	SCOM	Field Mnemonic: Description
0	RWX	OCB_OCI_OCBSES2_PUSH_READ_UNDERFLOW: Push Queue Read Underflow. Underflow is defined as a store to the push_read_incr facility is done and the PUSH_EMPTY facility is already set. This bit is cleared only by a firmware write of this bit to 0.
1	RWX	OCB_OCI_OCBSES2_PULL_WRITE_OVERFLOW: Pull Queue Write Overflow. Overflow is defined as a load to the PULL_WRITE_INCR facility is done and the PULL_FULL facility is already set. This bit is cleared only by a firmware write of this bit to 0.
2:63	RO	constant = 0b0000000000000000000000000000000000000000000000000000000000000000

Register Name	OCB_OCI OCB Linear Write Window Control 2 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCBLWCR2
Address	000000000006C228 (SCOM)
Description	OCB_OCI OCB Linear Write Window Control 2 Register

Bits	SCOM	Field Mnemonic: Description
0	RW	OCB_OCI_OCBLWCR2_LINEAR_WINDOW_ENABLE: Linear Window Enable 0: Window facility disabled. See Power Management Specification, section Indirect Bridge Operation for the effects of this bit for a write operation as it is dependent on the setting of trusted mode. 1: Window facility enabled. If OCBCSR[n]. OCB_STREAM_TYPE = linear, Linear Window BAR and Mask are valid and operations are to be honored. SC_RESP codes are the same as for the OCB indirect facility to reflect the status of the OCI operation.
1:2	RW	OCB_OCI_OCBLWCR2_SPARE_0: Implemented by not used. Writes store the value. Reads return the last value written.
3:19	RW	OCB_OCI_OCBLWCR2_LINEAR_WINDOW_BAR: Linear Window Base Address Register Defines OCI address(12:28) - 17 bits to define the starting offset within the region addressed.
20:31	RW	OCB_OCI_OCBLWCR2_LINEAR_WINDOW_MASK: Linear Window Address Mask Register Masks OCI address (17:28) - 12 bits to define the window size.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	OCB_OCI OCB Linear Write Window Status 2 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCBLWSR2
Address	000000000006C22A (SCOM)
Description	OCB_OCI OCB Linear Write Window Status 2 Register

Bits	SCOM	Field Mnemonic: Description
0:2	ROX	OCB_OCI_OCBLWSR2_LINEAR_WINDOW_SCRESP: Linear Window PIB SC Response If OCBLWCR.linear_window_enable=1, this field contains the last PIB response code sent (potentially allowing OCC FW to tell if attempts were made to use the window.
3:7	RO	OCB_OCI_OCBLWSR2_SPARE0: Implemented but not used.
8:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	OCB_OCI OCB Linear Window Write Base 2 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCBLWSBR2
Address	000000000006C22C (SCOM)
Description	OCB_OCI OCB Linear Window Write Base 2 Register

Bits	SCOM	Field Mnemonic: Description
0:2	RW	OCB_OCI_OCBLWSBR2_LINEAR_WINDOW_REGION: Linear Window Region If linear_window_enable=1, this field defines the OCI region (OCI Address(0:2) that is enabled for accessing the Linear Window. If the value written into OCBAR[n] does not match this value and the OCBDR[n] is accessed, a PIB scresp error is produced. Only the SRAM region (0b111) is supported.
3:9	RW	OCB_OCI_OCBLWSBR2_LINEAR_WINDOW_BASE: Linear Window Base If linear_window_enable = 1, establishes OCI Address(5:11); 128 B aliases still apply (for example, OCI Address[3:4]).
10:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	OCB_OCI OCB Stream Pull Base 3 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCBSLBR3
Address	000000000006C230 (SCOM)
Description	OCB_OCI OCB Stream Pull Base 3 Register

Bits	SCOM	Field Mnemonic: Description
0:2	RW	OCB_OCI_OCBSLBR3_PULL_OCI_REGION: Pull OCI Region Allowed values: 10X = Processor bus memory 111=- SRAM Others are reserved
3:28	RW	OCB_OCI_OCBSLBR3_PULL_START: Starting address of pull queue. (8 B alignment).
29:63	RO	constant = 0b00000000000000000000000000000000000000000

Register Name	OCB_OCI OCB Stream Pull Control/Status 3 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCBSLCS3
Address	000000000006C231 (SCOM)
Description	OCB_OCI OCB Stream Pull Control/Status 3 Register

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRPART	OCB_OCI_OCBSLCS3_PULL_FULL: Reads indicate the pull queue is full condition. Any write to this register clears this indicator and clears PULL_WRITE_PTR and PULL_READ_PTR to 0s. (This is a means for resetting the queue hardware) RWX_WCLRPART.
1	RWX_WSETPART	OCB_OCI_OCBSLCS3_PULL_EMPTY: Reads indicate the pull queue empty condition Any write to this register sets this indicator and clears PULL_WRITE_PTR and PULL_READ_PTR to 0s. (This is a means for resetting the queue hardware) RWX_WSETPART.
2:3	RW	OCB_OCI_OCBSLCS3_SPARE: Implemented but not used writes store the value. Reads return the last value written.
4:5	RW	OCB_OCI_OCBSLCS3_PULL_INTR_ACTION_0_1: Pull Interrupt Action. This field controls the condition that will assert the pull interrupt signal for this channel to the OCB interrupt controller. b00 = Full (default upon hardware init) b01 = Nonfull b10 = Empty (the more useful firmware default) b11 = Not empty.
6:10	RW	OCB_OCI_OC BSLCS3_PULL_LENGTH: Pull queue length in (pull_length + 1) * 8 B value mapping: 0b00000: 8 B 0b00001: 16 B 0b00010: 24 B 0b00011: 32 B 0b00100: 40 B 0b00101: 48 B 0b00110: 56 B 0b00111: 64 B 0b01000: 72 B 0b01001: 80 B 0b01010: 88 B 0b01011: 96 B 0b01100: 104 B 0b01101: 112 B 0b01110: 120 B 0b01111: 128 B 0b10000: 136 B 0b10001: 144 B 0b10010: 152 B 0b10011: 160 B 0b10100: 168 B 0b10101: 176 B 0b10110: 184 B 0b10111: 192 B 0b11000: 200 B 0b11001: 208 B 0b11010: 216 B 0b11011: 224 B 0b11100: 232 B 0b11101: 240 B 0b11110: 248 B 0b11111: 256 B.
11:12	RO	constant = 0b00

Bits	SCOM	Field Mnemonic: Description
13:17	RWX_WCLRPART	OCB_OCI_OCBSLCS3_PULL_WRITE_PTR: Pull Write Pointer. Reads indicate the current pull queue write pointer in increments of 8 B. The actual address used is PULL_OCI_REGION || PULL_START + PULL_WRITE_PTR || 00000. Writes to this field are ignored. Hardware performs all modifications. This field is cleared upon a write to this register. ROX_WCLRPART.
18:20	RO	constant = 0b000
21:25	RWX_WCLRPART	OCB_OCI_OCBSLCS3_PULL_READ_PTR: Pull read pointer reads indicate the current pull queue read pointer in increments of 8 B. The actual address used is PULL_OCI_REGION || PULL_START + PULL_WRITE_PTR || 00000. This field is cleared upon a write to this register. ROX_WCLRPART.
26:30	RO	constant = 0b00000
31	RW	OCB_OCI_OCBSLCS3_PULL_ENABLE: Enables the Pull Queue Function. If disabled, PIB reads to the OCB Data [n] Register to perform a pull will result in an offline PIB error back to the PIB Master. **Note:** OCI reads to OCB Stream Pull Increment [n] Register to cause incrementation are unaffected by the setting of this bit. Full or empty conditions might still arise to the OCC even if this bit indicates disabled.

Address	000000000006C236 (SCOM)
Description	OCB_OCI OCB Stream Error Status 3 Register

Bits	SCOM	Field Mnemonic: Description
0	RWX	OCB_OCI_OCBSES3_PUSH_READ_UNDERFLOW: Push Queue Read Underflow. Underflow is defined as a store to the PUSH_READ_INCR facility is done and the PUSH_EMPTY facility is already set. This bit is cleared only by a firmware write of this bit to 0.
1	RWX	OCB_OCI_OCBSES3_PULL_WRITE_OVERFLOW: Pull Queue Write Overflow. Overflow is defined as a load to the PULL_WRITE_INCR facility is done and the PULL_FULL facility is already set. This bit is cleared only by a firmware write of this bit to 0.
2:63	RO	constant = 0b0000000000000000000000000000000000000000000000000000000000000000

Register Name	**OCB_OCI OCB Linear Write Window Control 3 Register**
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCBLWCR3
Address	000000000006C238 (SCOM)
Description	OCB_OCI OCB Linear Write Window Control 3 Register

Bits	SCOM	Field Mnemonic: Description
0	RW	OCB_OCI_OCBLWCR3_LINEAR_WINDOW_ENABLE: Linear Window Enable 0 = Window facility disabled. See the Power Management Specification, section Indirect Bridge Operation for the effects of this bit for a write operation as it is dependent on the setting of trusted mode. 1 = Window facility enabled. If OCBCSR[n], OCB_STREAM_TYPE = linear. Linear window bar and mask are valid and operations are to be honored. SC_RESP codes are the same as for the OCB indirect facility to reflect the status of the OCI operation.
1:2	RW	OCB_OCI_OCBLWCR3_SPARE_0: Implemented by not used writes store the value. Reads return the last value written.
3:19	RW	OCB_OCI_OCBLWCR3_LINEAR_WINDOW_BAR: Linear Window Base Address Register. Defines OCI address(12:28) 17 bits to define the starting offset within the region addressed.

Bits	SCOM	Field Mnemonic: Description
20:31	RW	OCB_OCI_OCBLWCR3_LINEAR_WINDOW_MASK: Linear Window Address Mask Register. Masks OCI address (17:28), 12 bits to define the window size.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	OCB_OCI OCB Linear Write Window Status 3 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCBLWSR3
Address	000000000006C23A (SCOM)
Description	OCB_OCI OCB Linear Write Window Status 3 Register

Bits	SCOM	Field Mnemonic: Description
0:2	ROX	OCB_OCI_OCBLWSR3_LINEAR_WINDOW_SCRESP: Linear Window PIB SC Response. If OCBLWCR.linear_window_enable = 1, this field contains the last PIB response code sent (potentially allowing OCC FW to tell if attempts were made to use the window).
3:7	RO	OCB_OCI_OCBLWSR3_SPARE0: Implemented but not used.
8:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	OCB_OCI OCB Linear Window Write Base 3 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OCBLWSBR3
Address	000000000006C23C (SCOM)
Description	OCB_OCI OCB Linear Window Write Base 3 Register

Bits	SCOM	Field Mnemonic: Description
0:2	RW	OCB_OCI_OCBLWSBR3_LINEAR_WINDOW_REGION: Linear Window Region. If linear_window_enable = 1, this field defines the OCI region (OCI Address(0:2) that is enabled for accessing the linear window. If the value written into OCBAR[n] does not match this value and the OCBDR[n] is accessed, a PIB scresp error is produced. Only the SRAM region (0b111) is supported.
3:9	RW	OCB_OCI_OCBLWSBR3_LINEAR_WINDOW_BASE: Linear Window Base. If linear_window_enable = 1, establishes OCI Address(5:11). 128 B aliases still apply (for example, OCI Address[3:4]).
10:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	OCC PCB Interrupt Type 2 Core 10 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OPIT2C10
Address	000000000006C44A (SCOM) 000000000006C54A (SCOM1)
Description	OCC PCB Interrupt Type 2 Core 10 Register

Bits	SCOM	SCOM1	Field Mnemonic: Description
0:19	RO	RO	constant = 0b00000000000000000000
20:31	ROX	ROX	OCB_OCI_OPIT2C10_PCB_INTR_TYPE_A_CORE_N: Type [a] PCB interrupt packet content from core [n].
32:63	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCC PCB Interrupt Type 2 Core 11 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OPIT2C11
Address	000000000006C44B (SCOM) 000000000006C54B (SCOM1)
Description	OCC PCB Interrupt Type 2 Core 11 Register

Bits	SCOM	SCOM1	Field Mnemonic: Description
0:19	RO	RO	constant = 0b00000000000000000000
20:31	ROX	ROX	OCB_OCI_OPIT2C11_PCB_INTR_TYPE_A_CORE_N: Type [a] PCB interrupt packet content from core [n].
32:63	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCC PCB Interrupt Type 2 Core 12 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OPIT2C12
Address	000000000006C44C (SCOM) 000000000006C54C (SCOM1)
Description	OCC PCB Interrupt Type 2 Core 12 Register

Bits	SCOM	SCOM1	Field Mnemonic: Description
0:19	RO	RO	constant = 0b00000000000000000000
20:31	ROX	ROX	OCB_OCI_OPIT2C12_PCB_INTR_TYPE_A_CORE_N: Type [a] PCB interrupt packet content from core [n].
32:63	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCC PCB Interrupt Type 2 Core 13 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OPIT2C13
Address	000000000006C44D (SCOM) 000000000006C54D (SCOM1)
Description	OCC PCB Interrupt Type 2 Core 13 Register

Bits	SCOM	SCOM1	Field Mnemonic: Description
0:19	RO	RO	constant = 0b00000000000000000000
20:31	ROX	ROX	OCB_OCI_OPIT2C13_PCB_INTR_TYPE_A_CORE_N: Type [a] PCB interrupt packet content from core [n].
32:63	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCC PCB Interrupt Type 2 Core 14 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OPIT2C14
Address	000000000006C44E (SCOM) 000000000006C54E (SCOM1)
Description	OCC PCB Interrupt Type 2 Core 14 Register

Bits	SCOM	SCOM1	Field Mnemonic: Description
0:19	RO	RO	constant = 0b00000000000000000000
20:31	ROX	ROX	OCB_OCI_OPIT2C14_PCB_INTR_TYPE_A_CORE_N: Type [a] PCB interrupt packet content from core [n].
32:63	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCC PCB Interrupt Type 2 Core 15 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OPIT2C15
Address	000000000006C44F (SCOM) 000000000006C54F (SCOM1)
Description	OCC PCB Interrupt Type 2 Core 15 Register

Bits	SCOM	SCOM1	Field Mnemonic: Description
0:19	RO	RO	constant = 0b00000000000000000000
20:31	ROX	ROX	OCB_OCI_OPIT2C15_PCB_INTR_TYPE_A_CORE_N: Type [a] PCB interrupt packet content from core [n].
32:63	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCC PCB Interrupt Type 2 Core 16 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OPIT2C16
Address	000000000006C450 (SCOM) 000000000006C550 (SCOM1)
Description	OCC PCB Interrupt Type 2 Core 16 Register

Bits	SCOM	SCOM1	Field Mnemonic: Description
0:19	RO	RO	constant = 0b00000000000000000000
20:31	ROX	ROX	OCB_OCI_OPIT2C16_PCB_INTR_TYPE_A_CORE_N: Type [a] PCB interrupt packet content from core [n].
32:63	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCC PCB Interrupt Type 2 Core 17 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OPIT2C17
Address	000000000006C451 (SCOM) 000000000006C551 (SCOM1)
Description	OCC PCB Interrupt Type 2 Core 17 Register

Bits	SCOM	SCOM1	Field Mnemonic: Description
0:19	RO	RO	constant = 0b00000000000000000000
20:31	ROX	ROX	OCB_OCI_OPIT2C17_PCB_INTR_TYPE_A_CORE_N: Type [a] PCB interrupt packet content from core [n].
32:63	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCC PCB Interrupt Type 2 Core 18 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OPIT2C18
Address	000000000006C452 (SCOM) 000000000006C552 (SCOM1)
Description	OCC PCB Interrupt Type 2 Core 18 Register

Bits	SCOM	SCOM1	Field Mnemonic: Description
0:19	RO	RO	constant = 0b00000000000000000000
20:31	ROX	ROX	OCB_OCI_OPIT2C18_PCB_INTR_TYPE_A_CORE_N: Type [a] PCB interrupt packet content from core [n].
32:63	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCC PCB Interrupt Type 2 Core 19 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OPIT2C19
Address	000000000006C453 (SCOM) 000000000006C553 (SCOM1)
Description	OCC PCB Interrupt Type 2 Core 19 Register

Bits	SCOM	SCOM1	Field Mnemonic: Description
0:19	RO	RO	constant = 0b00000000000000000000
20:31	ROX	ROX	OCB_OCI_OPIT2C19_PCB_INTR_TYPE_A_CORE_N: Type [a] PCB interrupt packet content from core [n].
32:63	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCC PCB Interrupt Type 2 Core 20 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OPIT2C20
Address	000000000006C454 (SCOM) 000000000006C554 (SCOM1)
Description	OCC PCB Interrupt Type 2 Core 20 Register

Bits	SCOM	SCOM1	Field Mnemonic: Description
0:19	RO	RO	constant = 0b00000000000000000000
20:31	ROX	ROX	OCB_OCI_OPIT2C20_PCB_INTR_TYPE_A_CORE_N: Type [a] PCB interrupt packet content from core [n].
32:63	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCC PCB Interrupt Type 2 Core 21 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OPIT2C21
Address	000000000006C455 (SCOM) 000000000006C555 (SCOM1)
Description	OCC PCB Interrupt Type 2 Core 21 Register

Bits	SCOM	SCOM1	Field Mnemonic: Description
0:19	RO	RO	constant = 0b00000000000000000000
20:31	ROX	ROX	OCB_OCI_OPIT2C21_PCB_INTR_TYPE_A_CORE_N: Type [a] PCB interrupt packet content from core [n].
32:63	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCC PCB Interrupt Type 2 Core 22 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OPIT2C22
Address	000000000006C456 (SCOM) 000000000006C556 (SCOM1)
Description	OCC PCB Interrupt Type 2 Core 22 Register

Bits	SCOM	SCOM1	Field Mnemonic: Description
0:19	RO	RO	constant = 0b00000000000000000000
20:31	ROX	ROX	OCB_OCI_OPIT2C22_PCB_INTR_TYPE_A_CORE_N: Type [a] PCB interrupt packet content from core [n].
32:63	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCC PCB Interrupt Type 2 Core 23 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OPIT2C23
Address	000000000006C457 (SCOM) 000000000006C557 (SCOM1)
Description	OCC PCB Interrupt Type 2 Core 23 Register

Bits	SCOM	SCOM1	Field Mnemonic: Description
0:19	RO	RO	constant = 0b00000000000000000000
20:31	ROX	ROX	OCB_OCI_OPIT2C23_PCB_INTR_TYPE_A_CORE_N: Type [a] PCB interrupt packet content from core [n].
32:63	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	OCC PCB Interrupt Type 3 Core 0 Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_OCI_OPIT3C0
Address	000000000006C460 (SCOM) 000000000006C560 (SCOM1)
Description	OCC PCB Interrupt Type 3 Core 0 Register

Bits	SCOM	SCOM1	Field Mnemonic: Description
0:19	RO	RO	constant = 0b00000000000000000000

7	RO	WO_CLEAR	WO_OR	OCB_PIB_OCR_EXT_INTERRUPT: Asserts an external interrupt to the PowerPC 405 core.
8	RO	WO_CLEAR	WO_OR	OCB_PIB_OCR_CRITICAL_INTERRUPT: Asserts a critical interrupt to the PowerPC 405 core.
9	RO	WO_CLEAR	WO_OR	OCB_PIB_OCR_PIB_SLAVE_RESET_TO_405_ENABLE: Controls whether a PIB slave reset puts the PowerPC 405 core into reset. 0 = PIB slave reset does not cause PowerPC 405 core reset(default) 1 = PIB slave reset causes PowerPC 405 core reset (sets bit 0)
10	RO	WO_CLEAR	WO_OR	OCB_PIB_OCR_OCC_DBG_HALT: Halts the PowerPC 405 core execution. This bit is ORed with OCC JTAG Configuration Register(dbg_HALT), which is used by RISCWatch code for debug operations. This bit is intended to be used by OCC reset code to gracefully halt the PowerPC 405 core without colliding with RISCWatch firmware.
11:15	RO	WO_CLEAR	WO_OR	OCB_PIB_OCR_SPARE: Implemented but unused.
16:63	RO	RO	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	OCB_PIB OCC Debug Mode Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_PIB_OCDBG
Address	000000000006D003 (SCOM)
Description	OCB_PIB OCC Debug Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	OCB_PIB_OCDBG_MST_DIS_ABUSPAREN: Disable ADBUS_PAREN. Disables address parity generation for all GPE OCI Masters.
1	RW	OCB_PIB_OCDBG_MST_DIS_BEPAREN: Disable BE_PAREN. Disables byte enable parity generation for all GPE OCI Masters.
2	RW	OCB_PIB_OCDBG_MST_DIS_WRDBUSPAREN: Disable WRDATA_PAREN. Disables write data parity generation for all GPE OCI Masters.
3	RW	OCB_PIB_OCDBG_MST_DIS_RDDBUSPAR: Disable read data parity checking. Parity checking on read data will be disabled and data will be forwarded to unit for all GPE OCI masters.
4	RW	OCB_PIB_OCDBG_MST_SPARE: Spare debug signal for OCI Master for all GPE OCI masters.
5	RW	OCB_PIB_OCDBG_SLV_DIS_SACK: Disable acknowledge of secondary requests. Savalid will be ignored and interface component will respond only to pavalid.
6	RW	OCB_PIB_OCDBG_SLV_DIS_ABUSPAR: Disable address parity checking. Address parity error will be ignored by all GPE OCI Slaves.
7	RW	OCB_PIB_OCDBG_SLV_DIS_BEPAR: Disable byte enable parity checking. Byte enable parity error will be ignored by all GPE OCI Slaves.
8	RW	OCB_PIB_OCDBG_SLV_DIS_BE: Disable byte enable correctness checking. Invalid combinations of byte enable will be ignored by all GPE OCI slaves. Transfers will be allowed to progress to unit with all ‘1’ byte_enable.
9	RW	OCB_PIB_OCDBG_SLV_DIS_WRDBUSPAR: Disable write data parity checking. Parity checking on write data will be disabled and data will be forwarded to unit.
10	RW	OCB_PIB_OCDBG_SLV_DIS_RDDBUSPAREN: Disable RDDBUS_PAREN. Disable read data parity generation by all GPE OCI slaves.
11	RW	OCB_PIB_OCDBG_SLV_SPARE: Spare debug signal for all GPE OCI slaves.
12:15	RW	OCB_PIB_OCDBG_SPARE: Implemented but unused.

Bits	SCOM	Field Mnemonic: Description
16:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	JTG_PIB OCC JTAG Configuration Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.JTG_PIB_OJCFG
Address	000000000006D004 (SCOM) 000000000006D005 (SCOM1) 000000000006D006 (SCOM2)
Description	JTG_PIB OCC JTAG Configuration Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_AND	WO_OR	JTG_PIB_OJCFG_JTAG_SRC_SEL: Select source to drive the 405 JTAG pins. 0 = OCC FSM 1 = FSI (toad mode)
1	RW	WO_AND	WO_OR	JTG_PIB_OJCFG_RUN_TCK: Control TCK clock (also used as act to enable all associated JTAG driver latches) 0 = Off 1 = On
2:4	RW	WO_AND	WO_OR	JTG_PIB_OJCFG_TCK_WIDTH: This field is used to compute the number of clock cycles before transitioning TCK. The actual TCK width is (TCK_WIDTH + 1) * 2. For example : if TCK_WIDTH is 000, the actual width will be two clock cycles. TCK will be ‘1’ for two cycles and ‘0’ for two cycles and repeat. The possible values of the actual TCK width are even numbers from 2 to 16.
5	RW	WO_AND	WO_OR	JTG_PIB_OJCFG_JTAG_TRST_B: **Note:** This is a low active signal and the reset value puts the PowerPC 405 core JTAG logic into reset.
6	RW	WO_AND	WO_OR	JTG_PIB_OJCFG_DBG_HALT: Halts the PowerPC 405 core execution. This bit is ORed with OCC Control Register(OCC_DBG_HALT), which is used by OCC reset code. This bit is intended to be used by RISCWatch firmware without colliding with reset firmware.

Register Name	**OCB_PIB OCI Arbiter Control Register**
Mnemonic	TP.TPCHIP.OCC.OCI.OCB_PIB_OACR
Address	000000000006D207 (SCOM)
Description	OCB_PIB OCI Arbiter Control Register

Bits	SCOM	Field Mnemonic: Description
0	RWX	OCB_PIB_OACR_OCI_PRIORITY_MODE: OCI priority mode.
1:3	RWX	OCB_PIB_OACR_OCI_PRIORITY_ORDER: OCI priority order 000 = Masters 0, 1, 2, 3, 4, 5, 6, 7 001 = Masters 1, 2, 3, 4, 5, 6, 7, 0 010 = Masters 2, 3, 4, 5, 6, 7, 0, 1 011 = Masters 3, 4, 5, 6, 7, 0, 1, 2 100 = Masters 4, 5, 6, 7, 0, 1, 2, 3 101 = Masters 5, 6, 7, 0, 1, 2, 3, 4 110 = Masters 6, 7, 0, 1, 2, 3, 4, 5 111 = Masters 7, 0, 1, 2, 3, 4, 5, 6
4	RW	OCB_PIB_OACR_OCI_HI_BUS_MODE: High bus utilization (see the OCI arbiter documentation for description).
5:6	RW	OCB_PIB_OACR_OCI_READ_PIPELINE_CONTROL: Read pipeline control 00 = Read pipe lining disabled 01 = 2-deep read pipe 10 = 3-deep read pipe 11 = 4-deep read pipe

Bits	SCOM	Field Mnemonic: Description
7	RW	OCB_PIB_OACR_OCI_WRITE_PIPELINE_CONTROL: Write pipeline control 0 = Write pipe lining disabled 1 = 2-deep write pipe
8:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	OCB_PIB OCB Error Address Register
Mnemonic	TP.TPCHIP.OCC.OCI.OCB.OCB_PIB_OCBEAR
Address	000000000006D210 (SCOM)
Description	OCB_PIB OCB Error Address Register

Bits	SCOM	Field Mnemonic: Description
0:31	RWX_WCLRPART	OCB_PIB_OCBEAR_OCB_ERROR_ADDRESS: Captured address upon OCI errors.
32:34	RWX_WCLRPART	OCB_PIB_OCBEAR_RESERVED_32_34: Reserved bits.
35	RWX_WCLRPART	OCB_PIB_OCBEAR_DIRECT_BRIDGE_SOURCE: Address was source from the direct bridge.
36	RWX_WCLRPART	OCB_PIB_OCBEAR_INDIRECT_BRIDGE_0_SOURCE: Address was source from the indirect bridge 0.
37	RWX_WCLRPART	OCB_PIB_OCBEAR_INDIRECT_BRIDGE_1_SOURCE: Address was source from the indirect bridge 1.
38	RWX_WCLRPART	OCB_PIB_OCBEAR_INDIRECT_BRIDGE_2_SOURCE: Address was source from the indirect bridge 2.
39	RWX_WCLRPART	OCB_PIB_OCBEAR_INDIRECT_BRIDGE_3_SOURCE: Address was source from the indirect bridge 3.
40:63	RO	constant = 0b000000000000000000000000

Register Name	The SSCR0 Provides the Length Control Information for the P2S Frames
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIMPSS_ADC_CTRL_REG0
Address	0000000000070000 (SCOM)
Description	The SSCR0 provides the length control information for the P2S frames.

Bits	SCOM	Field Mnemonic: Description
0:5	RWX	HWCTRL_FRAME_SIZE: Number of data bits per individual SPI transaction (also referred to as frame) during chip select assertion. Supported values: 0x10 (16d) Chip select assertion duration is SPI_FRAME_SIZE + 2.
6:11	RWX	HWCTRL_OUT_COUNT: Number of bits sent out MOSI of the frame. Supported values: 0x000 to SPI_FRAME_SIZE. Values beyond SPI_FRAME_SIZE are ignored.
12:17	RWX	HWCTRL_IN_DELAY: Number of SPI clocks after chip select to wait before capturing MISO input. Supported values: 0x000 to SPI_FRAME_SIZE. Values beyond SPI_FRAME_SIZE result in the input never being captured.
18:23	RWX	HWCTRL_IN_COUNT: Number of bits captured on MISO input. Supported values: 0x000 to SPI_FRAME_SIZE. The actual number of bits captured is SPI_FRAME_SIZE - SPI_IN_DELAY.

Register Name	The SSCR1 Provides All Control Bits for the SPI ADC Interface
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_ADC_CTRL_REG1
Address	0000000000070001 (SCOM)
Description	The SSCR1 provides all control bits for the SPI ADC interface. This interface does not support CRC.

Bits	SCOM	Field Mnemonic: Description
0	RWX	HWCTRL_FSM_ENABLE: If set to 1 the ADC FSM can be used to control the SPI interface.
1	RWX	HWCTRL_DEVICE: Select the device on the ADC bus to target: 0 = Chip select 0. 1 = Chip select 1.
2	RWX	HWCTRL_CPOL: SPI clock polarity. If CPOL = 0, CLK IDLE is deasserted. If CPOL = 1, CLK IDLE is asserted.
3	RWX	HWCTRL_CPHA: SPI clock phase. If CPHA = 0, first edge sample , second_edge change If CPHA = 1, first edge change, second_edge sample
4:13	RWX	HWCTRL_CLOCK_DIVIDER: SPI clock speed divider to divide the NEST_NCLK/4 mesh clock, which results in a SPI frequency SPI_freq = NEST_FREQ/(8 * [clock_divider + 1]). Therefore, for a 2.4 GHz nest clock, the interchip clock can be theoretically adjusted between 300 MHz and 0.29MHz (cycle time 1.66ns…3.41 us, in 1.66 ns steps). However, because of some constraints, a practical range is 0.5…75 MHz. Allowed values: 0x003…0x3FF. Because of metastability constraints, only use values > 2 for INTERCHIP_CLOCK_DIVIDER. Otherwise, data will not be sampled correctly.
14:17	RWX	HWCTRL_NR_OF_FRAMES: Specifies the number of frames for each iteration of ADC sampling (legal values are 0,1, 2, …, 15).
18	RWX	HWCTRL_WRITE_WHILE_BRIDGE_BUSY_SCRESP_EN: If this bit is ‘1’ (enabled), if a write into the registers of HWCTRL in the middle of operation is attempted, it sends the BUSY_RESPONSE code, which is given in bits [19:21].
19:21	RWX	BUSY_RESPONSE_CODE: Busy response code for the bit 18.

Register Name	The SSCR2 Provides all Control Bits for the SPI ADC Interface
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_ADC_CTRL_REG2
Address	0000000000070002 (SCOM)
Description	The SSCR2 provides all control bits for the SPI ADC interface. This interface does not support ECC.

Bits	SCOM	Field Mnemonic: Description
0:16	RWX	HWCTRL_INTER_FRAME_DELAY: A delay between two frames of a two-command set as measured from the end of the last bit of the first frame until the chip select of the second frame, which contains the status, is asserted. This delay allows for the ADC chip to acquire the next value… Delay is computed as: (value * ~100 ns_hang_pulse) +0/-~100 ns_hang_pulse time. 0x00000: Wait 1 SPI clock. 0x00001 = 0x1FFFF: value = number of ~100ns_hang_pulses. The maximum delay at 0x1FFFF: 131071* 100 ns = 13.1 ms. Firmware must ensure that the delay is at least one SPI clock. In the case of of APSS with analog-to-digital converter (ADC), this delay allows for acquisition of the next reading when using a continuous acquisition mode. (TI specs indicate 325ns).

Register Name	The SSSR Displays the Current Status about SPI
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_ADC_STATUS_REG
Address	0000000000070003 (SCOM)
Description	Related activities.

Bits	SCOM	Field Mnemonic: Description
0	ROX	HWCTRL_ONGOING: The SPI interface is in progress of shifting data. This bit is provided, as a wire, to the OCC interrupt controller. The FW can poll on this bit to wait for valid data.
1	ROX	ADC_RESERVED_1: Implemented but not used.
2	ROX	ADC_RESERVED_2: Implemented but not used.
3	ROX	ADC_RESERVED_3: Implemented but not used.
4	ROX	HWCTRL_INVALID_NUMBER_OF_FRAMES: if this bit is asserted, a nonsupported number of frames was set in SPIPSS_ADC_CTRL_REG1. This bit is cleared upon the next enabled command that has a legal number of frames.
5	NCX	HWCTRL_WRITE_WHILE_FSM_BUSY_ERR: Indicates that firmware attempted to perform an PIB write to the any writable register while the ADC FSM is busy (ADC_ONGOING = 1), which causes undefined bridge behavior. This bit can only be reset by doing proper reset operation using reset register.
6	ROX	ADC_RESERVED_6: Implemented but not used.
7	ROX	HWCTRL_FSM_ERR: Indicates a catastrophic FSM error in the PIB2SPI control FSM.

Register Name	The SSCR Provided a way to Start the ADC Sampling
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_ADC_CMD_REG
Address	0000000000070004 (SCOM)
Description	The SSCR provided a way to start the ADC sampling.

Bits	SCOM	Field Mnemonic: Description
0	RWX	HWCTRL_START_SAMPLING: If bit set to 1 this register immediately resets itself and starts the ADC sampling only if ADC_FSM_ENABLE is enabled otherwise it will not trigger the sampling.

Register Name	Reset Complete HWCTRL SPIPSS
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_ADC_RESET_REGISTER
Address	0000000000070005 (SCOM)
Description	Writes into this register with a proper value resets complete HWCTRL SPIPSS.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	HWCTRL_RESET: Writing value 01 on this will reset.

Register Name	Configure SPI Data
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_ADC_WDATA_REG
Address	0000000000070010 (SCOM)
Description	The SSWDR register is used to configure the SPI data that is shifted out for each frame to the SPIADC.

Bits	SCOM	Field Mnemonic: Description
0:15	RWX	HWCTRL_WDATA: These 16bits are shifted out of the SPI interface to the ADC every time a frame is read.

Register Name	**The SRDR0 Displays the Read Data for Frames 0 - 3**
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_ADC_RDATA_REG0
Address	0000000000070020 (SCOM)
Description	The SRDR0 displays the read data for frames 0 to 3. Note to FW: This register should be read last, if the dial ENABLE_RESTART_ADC_SAMPLING_AFTER_LAST_READ is enabled.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	HWCTRL_RDATA0: Bits 0:15 = Frame 0 read data Bits 16:31 = Frame 1 read data Bits 32:47 = Frame 2 read data Bits 48:63 = Frame 3 read data

Register Name	**The SRDR1 Displays the Read Data for Frames 4 - 7**
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_ADC_RDATA_REG1
Address	0000000000070021 (SCOM)
Description	The SRDR1 displays the read data for frames 4 to 7.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	HWCTRL_RDATA1: Bits 0:15 = Frame 4 read data Bits 16:31 = Frame 5 read data Bits 32:47 = Frame 6 read data Bits 48:63 = Frame 7 read data

Register Name	**The SRDR2 Displays the Read Data for Frames 8 - 11**
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_ADC_RDATA_REG2
Address	0000000000070022 (SCOM)
Description	The SRDR2 displays the read data for frames 8 to 11.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	HWCTRL_RDATA2: Bits 0:15 = Frame 8 read data Bits 16:31 = Frame 9 read data Bits 32:47 = Frame 10 read data Bits 48:63 = Frame 11 read data

Register Name	**The SRDR2 Displays the Read Data for Frames 8 - 11**
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_ADC_RDATA_REG3
Address	0000000000070023 (SCOM)
Description	The SRDR2 displays the read data for frames 8 to 11.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	HWCTRL_RDATA3: Bits 0:15 = Frame 12 read data Bits 16:31 = Frame 13 read data Bits 32:47 = Frame 14 read data Bits 48:63 = Frame 15 read data

Register Name	**The S100R Register Defines the Number of Nest/4 Cycles**
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_100NS_REG
Address	0000000000070028 (SCOM)
Description	The S100R register defines the number of nest/4 cycles approximately every 100 ns as the decrementer is reloaded with this value until reaching 0. At the 0 value, a pulse is generated to represent an approximate 100 ns interval.

Bits	SCOM	Field Mnemonic: Description
0:31	RW	REG_100NS_OUT: The value should correspond to 100 ns.

Register Name	**The PPCR0A Provides the Length Control Information for the P2S Frames**
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_P2S_CTRL_REG0
Address	0000000000070040 (SCOM)
Description	The PPCR0A provides the length control information for the P2S frames

Bits	SCOM	Field Mnemonic: Description
0:5	RWX	P2S_FRAME_SIZE: Number of data bits per individual SPI transaction (also referred to as frame) during chip select assertion. Supported values: 0x10 (16d), Chip Select assertion duration is SPI_FRAME_SIZE + 2.
6:11	RWX	P2S_OUT_COUNT1: Number of bits sent out MOSI in frame 1 of a 2 frame set (the arbitration unit). Supported values: 0x000 to SPI_FRAME_SIZE. Values beyond SPI_FRAME_SIZE are ignored.
12:17	RWX	P2S_IN_DELAY1: Number of SPI clocks after chip select to wait before capturing MISO input in frame 1. Supported values: 0x000 to SPI_FRAME_SIZE. Values beyond SPI_FRAME_SIZE result in the input never being captured.
18:23	RWX	P2S_IN_COUNT1: Number of bits captured on MISO input in frame 1. Supported values: 0x000 to SPI_FRAME_SIZE. The actual number of bits captured is SPI_FRAME_SIZE - SPI_IN_DELAY.
24:29	RWX	P2S_OUT_COUNT2: Number of bits sent out MOSI in frame 2 of a 2 frame set (the arbitration unit). Supported values: 0x000 to SPI_FRAME_SIZE. Values beyond SPI_FRAME_SIZE are ignored.
30:35	RWX	P2S_IN_DELAY2: Number of SPI clocks after chip select to wait before capturing MISO input in frame 2. Supported values: 0x000 to SPI_FRAME_SIZE. Values beyond SPI_FRAME_SIZE result in the input never being captured.
36:41	RWX	P2S_IN_COUNT2: Number of bits captured on MISO input in frame 2. Supported values: 0x000 to SPI_FRAME_SIZE. The actual number of bits captured is SPI_FRAME_SIZE - SPI_IN_DELAY.

Register Name	The SSCR1 provides control bits for the P2S Bridge interface
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_P2S_CTRL_REG1
Address	0000000000070041 (SCOM)
Description	The SSCR1 provides control bits for the P2S bridge interface. This interface does not support CRC.

Bits	SCOM	Field Mnemonic: Description
0	RWX	P2S_BRIDGE_ENABLE: If set to 1 the PIB2SPI bridge can be used to control the SPI interface. If set to 0, the PIB2SPI bridge is disabled.
1	RWX	P2S_DEVICE: Select the device on the ADC bus to target: 0 = Chip select 0 1 = Chip select 1
2	RWX	P2S_CPOL: SPI clock polarity. If CPOL = 0, CLK IDLE is deasserted. If CPOL = 1, CLK IDLE is asserted.
3	RWX	P2S_CPHA: SPI clock phase. If CPHA = 0, change or sample values of data signals on the first edge. Otherwise, change or sample values of data signals on the second edge.
4:13	RWX	P2S_CLOCK_DIVIDER: SPI clock speed divider to divide the NEST_NCLK/4 mesh clock, which results in a SPI frequency SPI_freq = NEST_FREQ/(8 * [clock_divider + 1]). For a 2.4 GHz nest clock, the interchip clock can be theoretically adjusted between 300 MHz and 0.29 MHz (cycle time 1.66 ns…3.41 us, in 1.66 ns steps). However, because of some constraints, a practical range is 0.5…75MHz. Allowed values: 0x003…0x3FF. Because of metastability constraints, only use values > 2 for INTERCHIP_CLOCK_DIVIDER. Otherwise data will not be sampled correctly.
14:16	RWX	RESERVED: Implemented but not used.
17	RWX	P2S_NR_OF_FRAMES: Specifies the number of frames sent in the frame set (number of frames before the arbitration unit rearbitrates). 0 = 1 frame 1 = 2 frames
18	RWX	P2S_WRITE_WHILE_BRIDGE_BUSY_SCRESP_EN: If this bit is ‘1’ (enabled), if somebody tries to write into the registers of P2S bridge in the middle of operation, it sends out the BUSY_RESPONSE code, which is given in the bit [19:21].
19:21	RWX	BUSY_RESPONSE_CODE_NO_1: Busy response code for the bit 18.

Register Name	The SSCR2 Provides all Control Bits for the SPI ADC Interface
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_P2S_CTRL_REG2
Address	0000000000070042 (SCOM)
Description	The SSCR2 provides all control bits for the SPI ADC interface. This interface does not support ECC.

Bits	SCOM	Field Mnemonic: Description
0:16	RWX	P2S_INTER_FRAME_DELAY: Delay between two frames of a two command set as measured from the end of the last bit of the first frame until the chip select of the second frame, which contains the status, is asserted. This delay allows for the checking and status data the production in the addressed chip. Delay is computed as: (value * ~100 ns_hang_pulse) +0/-~100 ns_hang_pulse time. 0x00000: Wait 1 SPI Clock. 0x00001 - 0x1FFFF: value = number of ~100ns_hang_pulses. Maximum delay at 0x1FFFF: 131071* 100 ns = 13.1 ms. Firmware has to make sure that the delay is at least one SPI clock.

Register Name	The SSSR Displays the Current Status about SPI
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_P2S_STATUS_REG
Address	0000000000070043 (SCOM)
Description	Related activities.

Bits	SCOM	Field Mnemonic: Description
0	ROX	P2S_ONGOING: Indicates that a bridge transaction is queued or in progress of being executed. This bit is set by hardware while an operation is queued or in progress and will be be reset by hardware when the operation is complete.
1	ROX	P2S_RESERVED_1: Implemented but not used.
2	ROX	P2S_RESERVED_2: Implemented but not used.
3	ROX	P2S_RESERVED_3: Implemented but not used.
4	ROX	P2S_RESERVED_4: Implemented but not used.
5	NCX	P2S_WRITE_WHILE_BRIDGE_BUSY_ERR: Indicates that firmware attempted to perform a PIB write to the any register while the P2S bridge is busy, which causes undefined bridge behavior. This bit can only be reset by doing proper reset operation using reset register.
6	ROX	RESERVED6: Implemented but not used.
7	ROX	P2S_FSM_ERR: Indicates a catastrophic FSM error in the PIB2SPI control FSM.

Register Name	The SSCR Provides the Means to Start the P2S Bridge
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_P2S_COMMAND_REG
Address	0000000000070044 (SCOM)
Description	The SSCR provides the means to start the P2S bridge

Bits	SCOM	Field Mnemonic: Description
0	RWX	P2S_START_COMMAND: If set to ‘1’ and ENABLE_PIB2SPI_BRIDGE = ‘1’, this register immediately resets itself and starts the P2S operation. If ENABLE_PIB2SPI_BRIDGE = ‘0’. This register immediately resets itself but no operation is started.

Register Name	Write into this Register with the Proper Value Resets P2S_ SPIPSS
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_P2S_RESET_REGISTER
Address	0000000000070045 (SCOM)
Description	Write into this register with proper value will reset P2S_ SPIPSS

Bits	SCOM	Field Mnemonic: Description
0:1	RW	P2S_RESET: Writing value 01 on this will reset.

Register Name	The SPW Register is used for the Most Significant 4 B of Write Data through the P2S Bridge
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_P2S_WDATA_REG
Address	0000000000070050 (SCOM)
Description	The SPW register is used for the most significant 4 B of write data through the p2s bridge. A write to this register starts the SPI transaction (read or write), if the switch ENABLE_PIB2P2S_BRIDGE is set.

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	P2S_WDATA: Bits 0 to 31 of SPI data packet.

Register Name	The SPR Register Is used for the Most-Significant 4 B Of Read Data of the P2S Bridge
Mnemonic	TP.TPCHIP.PIB.SPIADC.SPIPSS_P2S_RDATA_REG
Address	0000000000070060 (SCOM)
Description	The SPR register is used for the most significant 4 B of read data of the P2S bridge. After the P2S_ONGOING bit has dropped, the read values are available in SPR.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	P2S_RDATA: Bits 0:31 of SPI data packet.

Register Name	Provides the controllability in Handling the Auto Increment/Decrement Address Pointer In Indirect Mode from both Access
Mnemonic	TP.TPCHIP.PIB.POREMEM.PIBMEM.CTRL_MAC.PIBMEM_CONTROL_REGISTER
Address	0000000000088000 (SCOM)
Description	Provides the controllablity in handling the auto increment/decrement address pointer in indirect mode from both access.

Bits	SCOM	Field Mnemonic: Description
0	RWX	AUTO_PRE_INCREMENT_PIB: 1 = When AUTO_INCREMENT_REGISTER is read/written from the PIB side, data is read/written into the array after the address pointer is incremented. 0 = When AUTO_INCREMENT_REGISTER is read/written, data is read/written into array before address pointer is incremented. Default_value = 0.
1	RWX	AUTO_POST_DECREMENT_PIB: 1 = When AUTO_DECREMENT_REGISTER is read or written from the PIB side, data will be read or written into the array before the address pointer is decremented. 0 = When AUTO_DECREMENT_REGISTER is read/written, data will be read or written into the array after address pointer is decremented. Default_value = 0.
2	RWX	DISABLE_ECC: 1 = Disables the ECC checking and calculating. 0 = Sends ECC and checks the ECC for the array data.
3	RWX	AUTO_PRE_INCREMENT_FACES: 1 = When the AUTO_INCREMENT_REGISTER is read or written from fast access side, data will be read/written into the array after the address pointer is incremented. 0 = When the AUTO_INCREMENT_REGISTER is read or written, data will be read or written into the array before address pointer is incremented. Default_value = 0.
4	RWX	AUTO_POST_DECREMENT_FACES: 1 = When AUTO_DECREMENT_REGISTER is read/written from fast access side, data will be read/written into array before the address pointer is decremented. 0 = When AUTO_DECREMENT_REGISTER is read/written, data will be read/written into array after address pointer is decremented. Default_value:0.
5	RWX	CHKSW_AR012: Debug switch to disable the enhanced PIB error handling.

Register Name	Indirect Address Pointer
Mnemonic	TP.TPCHIP.PIB.POREMEM.PIBMEM.CTRL_MAC.PIBMEM_ADDRESS_REGISTER
Address	0000000000088001 (SCOM)
Description	Indirect address pointer

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b00000000000000000000000000000000000000000000000000000000
48:63	RWX	ADDRESS_POINTER: 0x0000 = Accesses location 0 of the array. 0x0001 = Accesses the first location of the array.

Register Name	Status of PIBMEM Controller
Mnemonic	TP.TPCHIP.PIB.POREMEM.PIBMEM.CTRL_MAC.PIBMEM_STATUS_REG
Address	0000000000088005 (SCOM)
Description	Status of PIBMEM controller

Bits	SCOM	Field Mnemonic: Description
0	ROX	ADDR_INVALID_PIB: The address that the PIB is trying to access in the PIBMEM is not the valid.
1	ROX	WRITE_INVALID_PIB: The address for which the PIB is trying to write is not writable.
2	ROX	READ_INVALID_PIB: The address for which the PIB is trying to read is not readable.
3	ROX	ECC_UNCORRECTED_ERROR_PIB: Uncorrectable error occurred while PIB memory read. This also go out as FIR error.
4	ROX	ECC_CORRECTED_ERROR_PIB: Corrected error in PIB MEM read. Data can still be considered as good. This is an error O/P of the ECC_CHECK_CORRECTION block.
5	ROX	Reserved field.
6	ROX	WRITE_RST_INTERRUPT_PIB: This bit gets set, when a reset occurred during write operation to PIBMEM from PIB side. It is sticky status bit.
7	ROX	READ_RST_INTERRUPT_PIB: This bit gets set, when a reset occurred during read operation to PIBMEM from PIB side. It is sticky status bit.
8:11	RO	constant = 0b0000
12:18	ROX	FSM_PRESENT_STATE: State machines present state. 0000001 = ECC_CHK. Performs ECC checking in this state. 0000010 = READ_ARRAY. Performs read operation to array in this state. 0000100 = READ_SETUP. Checks for errors in this state. 0001000 = ACK. Gives out the acknowledgment to the PIB. 0010000 = WRITE_ARRAY. Writes data into the array. 0100000 = ECC_GEN. ECC generation happens for the write operation. 1000000 = IDLE. Default state.
19	ROX	ADDR_INVALID_FACES: The address that is given by the fast access interface. To access in PIBMEM is not valid.
20	ROX	WRITE_INVALID_FACES: The address that is given by the fast access interface. To access in PIBMEM is not valid one in PIBMEM or not writable.
21	ROX	READ_INVALID_FACES: The address that is given by the fast access interface. To access is not readable.
22	ROX	ECC_UNCORRECTED_ERROR_FACES: Uncorrectable error occurred while fast access interface was read.

Bits	SCOM	Field Mnemonic: Description
23	ROX	ECC_CORRECTED_ERROR_FACES: Corrected error in fast access read operation. Data can still be considered as good. This is an error O/P of the ECC_CHECK_CORRECTION block.
24	ROX	BAD_ARRAY_ADDRESS_FACES: Wrong address accessed in indirect mode of operation from fast access interface. It is a sticky status bit.
25	ROX	WRITE_RST_INTERRUPT_FACES: This bit is set when a reset occurred during a write operation to PIBMEM from fast access side. It is a sticky status bit.
26	ROX	READ_RST_INTERRUPT_FACES: This bit is set when a reset occurred during a read operation to PIBMEM from fast access side. It is sticky status bit.
27:31	RO	constant = 0b00000
32:47	ROX	ADDR_RESET_INTR_PIB: Address information of reset interrupted transaction from the PIB side.
48:63	ROX	ADDR_RESET_INTR_FACES: Address information of reset interrupted transaction from the FAST ACESS side.

Register Name	Write into this Register with Proper the Value will Reset Complete PIBMEM Controller Except Array
Mnemonic	TP.TPCHIP.PIB.POREMEM.PIBMEM.CTRL_MAC.PIBMEM_RESET_REGISTER
Address	0000000000088006 (SCOM)
Description	A write into this register with the proper value will reset complete PIBMEM controller except array.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	RESET: Writing value 10 on this will reset PIBMEM.

Register Name	Indirect Address Pointer
Mnemonic	TP.TPCHIP.PIB.POREMEM.PIBMEM.CTRL_MAC.PIBMEM_ADDRESS_REGISTER_FA
Address	0000000000088007 (SCOM)
Description	Indirect Address Pointer

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b00000000000000000000000000000000000000000000000000000000
48:63	RWX	ADDRESS_POINTER_FA: If the value on this is. 0x0000 = Accesses location 0 of the array. 0x0001 = Accesses the first location of the array.

Register Name	FIR Error Mask Register
Mnemonic	TP.TPCHIP.PIB.POREMEM.PIBMEM.CTRL_MAC.FIR_MASK_REGISTER
Address	0000000000088008 (SCOM)
Description	FIR Error Mask Register

Bits	SCOM	Field Mnemonic: Description
0:2	RO	constant = 0b000
3	RWX	MASK_ECC_UNCORRECTED_ERR_PIB: Bit allows to mask ECC uncorrected error for PIB transaction in generation of the FIR error.
4	RO	constant = 0b0

Bits	SCOM	Field Mnemonic: Description
5	RWX	MASK_BAD_ARRAY_ADDR_PIB: Bit allows masking of a bad array address error for PIB transactions in the generation of a FIR error.
6	RWX	MASK_WRT_RST_INTRPT_PIB: Bit allows masking of write reset interrupts for PIB transactions in the generation of a FIR error.
7	RWX	MASK_RD_RST_INTRPT_PIB: Bit allows masking of read reset interrupts for PIB transactions in the generation of a FIR error.
8:21	RO	constant = 0b00000000000000
22	RWX	MASK_ECC_UNCORRECTED_ERR_FACES: Bit allows masking of ECC uncorrected errors for fast access transaction in the generation of the FIR error.
23	RO	constant = 0b0
24	RWX	MASK_BAD_ARRAY_ADDR_FACES: Bit allows masking of bad array address errors for fast access transactions in the generation of the FIR error.
25	RWX	MASK_WRT_RST_INTRPT_FACES: Bit allows masking of a write reset interrupt errors for fast access transaction in the generation of the FIR error.
26	RWX	MASK_RD_RST_INTRPT_FACES: Bit allows masking read reset interrupt errors for fast access transactions in the generation of the FIR error.
27	RO	constant = 0b0

Register Name	Holds Repair Data for the Array
Mnemonic	TP.TPCHIP.PIB.POREMEM.PIBMEM.CTRL_MAC.PIBMEM_REPAIR_REGISTER_0
Address	000000000008800B (SCOM)
Description	Holds repair data for the array

Bits	SCOM	Field Mnemonic: Description
0:1	RW	REPAIR_DATA_0: Repair Data Load Control Register. 0 = Enables the MUX selecting repair data from this register. 1 = Fence ABIST_START_TEST to PIBMEM ABIST engine. 2:63 = Reserved.
2:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	Holds Repair Data for the Array
Mnemonic	TP.TPCHIP.PIB.POREMEM.PIBMEM.CTRL_MAC.PIBMEM_REPAIR_REGISTER_1
Address	000000000008800C (SCOM)
Description	Holds repair data for the array.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	REPAIR_DATA_1: Parallel register through which repair data can be loaded directly on to the repair chain of the array. 0:7 = Repair data for array-1. 8:15 = Repair data for array-2. 16:23 = Repair data for array-3. 24:31 = Repair data for array-4. 32:39 = Repair data for array-5. 40:47 = Repair data for array-6. 48:55 = Repair data for array-7. 56:63 = Repair data for array-8.

Register Name	Holds repair data for the array
Mnemonic	TP.TPCHIP.PIB.POREMEM.PIBMEM.CTRL_MAC.PIBMEM_REPAIR_REGISTER_2
Address	000000000008800D (SCOM)
Description	Holds repair data for the array

Bits	SCOM	Field Mnemonic: Description
0:63	RW	REPAIR_DATA_2: Parallel register through which repair data can be loaded directly on to the repair chain of the array. 0:7 = Repair data for array-9. 8:15 = Repair data for array-10. 16:23 = Repair data for array-11. 24:31 = Repair data for array-12. 32:39 = Repair data for array-13. 40:47 = Repair data for array-14. 48:55 = Repair data for array-15. 56:63 = Repair data for array-16.

Register Name	Holds Repair Data for the Array
Mnemonic	TP.TPCHIP.PIB.POREMEM.PIBMEM.CTRL_MAC.PIBMEM_REPAIR_REGISTER_3
Address	000000000008800E (SCOM)
Description	Holds repair data for the array

Bits	SCOM	Field Mnemonic: Description
0:63	RW	REPAIR_DATA_3: Parallel register through which repair data can be loaded directly on to the repair chain of the array. 0:7 = Repair data for array-17. 8:15 = Repair data for array-18. 16:23 = Repair data for array-19. 24:31 = Repair data for array-20. 32:39 = Repair data for array-21. 40:47 = Repair data for array-22. 48:55 = Repair data for array-23. 56:63 = Repair data for array-24.

Register Name	Alter/Display Control Register
Mnemonic	BRIDGE.AD.ALTD_ADDR_REG
Address	0000000000090000 (SCOM)
Description	Alter/Display Control Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:63	RWX	FBC_ALTD_ADDRESS: The address bits [8:63] to use with the Alter/Display command.

Register Name	Alter/Display Command Register
Mnemonic	BRIDGE.AD.ALTD_CMD_REG
Address	0000000000090001 (SCOM)
Description	Alter/Display Command Register

Bits	SCOM	Field Mnemonic: Description
0:1	RO	constant = 0b00
2	NCX	FBC_ALTD_START_OP: Start the fabric alter/display operation (latch resets after arbitration passed).
3	NCX	FBC_ALTD_CLEAR_STATUS: Clear the Fabric Alter/Display Status Register.
4	NCX	FBC_ALTD_RESET_FSM: Reset the Fabric Alter/Display State Machine and Status Registers. For exceptional use only.
5	RW	FBC_ALTD_RNW: The read or write control for the fabric alter/display command. Read = 1 Write = 0 Setting must match FBC_ALTD_TTYPE.
6	RWX	FBC_ALTD_AXTYPE: Address only type command. No data transfer will be done.
7	RW	FBC_ALTD_DATA_ONLY: Skip the CMD-CRESP part and only send a data packet with FBC_ALTD_ADDRESS(0:13) as TTAG. The address bits [57:59] are sent to the HT-Data ramp too.
8:9	RO	constant = 0b00
10	NCX	Reserved field.
11	RWX	FBC_LOCKED: Set when the locked the ALTD_CMD_REG, ALTD_ADDRESS_REG, and ALTD_DATA_REG.
12:15	ROX	FBC_LOCK_ID: Reading current lock owner (only valid when locked). Writing current owner when overwrite the lock.
16:18	RWX	FBC_ALTD_SCOPE: The broadcast scope of the command.
19	RW	FBC_ALTD_AUTO_INC: The Fabric Alter/Display will autoincrement the address and issue the next command. Auto Increment = 1. Address will increment by 8, and the next command will be issued after current command is completed. Regular = 0. Alter/Display will issue one command and stop.
20	RWX	FBC_ALTD_DROP_PRIORITY: Initial command drop priority. Specifying which commands are dropped because of Processor bus congestion first.
21	RW	FBC_ALTD_DROP_PRIORITY_MAX: Maximal value the command drop priority can increase to (if not already bigger).
22	RW	FBC_ALTD_OVERWRITE_PBINIT: Start this command even when PBINIT is low.
23	RW	FBC_ALTD_PIB_DIRECT:Copy ALTD_ADRESS_REG to PIB_DIRECT_CMD and ALTD_DATA_REG to the PIB_DIRECT_DATA register instruction. Must not use the XSCOM of this ADU until done.
24	RW	FBC_ALTD_WITH_TM_QUIESCE: Set and wait for the local token manager quiesce before the processor bus QUIESCE or ALTD command.
25:31	RW	FBC_ALTD_TTYPE: The TTYPE used in the Alter/Display command. Supported values are: CI partial write DMA partial write CI partial read DMA read PB operation (AXTYPE)

Bits	SCOM	Field Mnemonic: Description
32:39	RW	FBC_ALTD_TSIZE: The TSIZE used in the Alter/Display command. Supported values: 1, 2, 4 and 8 bytes. Important: The encoding of this is the processor bus secondary encode. Thus, it is defined differently for each TTYPE.

Register Name	Alter/Display Special Option Register
Mnemonic	BRIDGE.AD.ALTD_OPTION_REG
Address	0000000000090002 (SCOM)
Description	All bits are reset when used.

Bits	SCOM	Field Mnemonic: Description
0:21	RO	constant = 0b00000000000000000000
22	RWX	FBC_ALTD_WITH_PBINIT_LOW_WAIT: Wait for the PBINIT signal to be dropped before continuing.
23	RWX	FBC_ALTD_WITH_PRE_QUIESCE: Sent out a processor bus quiesce command before executing the ALTD command.
24:27	RO	constant = 0b0000
28:47	RWX	FBC_ALTD_AFTER_QUIESCE_WAIT_COUNT: Time to wait between QUIESCE and ALTD command.
48:50	RO	constant = 0b000
51	RWX	FBC_ALTD_WITH_POST_INIT: Sent out a processor bus INIT command after executing the command.
52:53	RO	constant = 0b00
54:63	RWX	FBC_ALTD_BEFORE_INIT_WAIT_COUNT: Time to wait between ALTD command and INIT.

Register Name	Alter/Display Status Register
Mnemonic	BRIDGE.AD.ALTD_STATUS_REG
Address	0000000000090003 (SCOM)
Description	Alter/Display Status Register

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field.
1	ROX	FBC_ALTD_WAIT_CMD_ARBIT: Waiting for arbiter to send the command out.
2	ROX	FBC_ALTD_ADDR_DONE: The address portion of the fabric alter/display operation is complete.
3	ROX	FBC_ALTD_DATA_DONE: The data portion of the fabric alter/display operation is complete.
4	ROX	FBC_ALTD_WAIT_RESP: Waiting on a clean combined response.
5	RWX_WCLRREG	FBC_ALTD_OVERRUN_ERROR: Overrun error indicates new data was written before the previous data was used or a read was performed without new data arrived.
6	RWX_WCLRREG	FBC_ALTD_AUTOINC_ERROR: Autoincrement Error indicates internal address counter rolled over the 0.5 M boundary.
7	RWX_WCLRREG	FBC_ALTD_COMMAND_ERROR: Command Error indicates a new command was issued before the previous one finished.
8	RWX_WCLRREG	FBC_ALTD_ADDRESS_ERROR: Invalid Address Error: Processor bus response with address error combined response.

Bits	SCOM	Field Mnemonic: Description
9	RWX_WCLRREG	FBC_ALTD_PB_OP_HANG_ERR: Processor bus Timeout while waiting for combined response.
10	RWX_WCLRREG	FBC_ALTD_PB_DATA_HANG_ERR: Processor bus Timeout while waiting for data.
11	RWX_WCLRREG	FBC_ALTD_PB_UNEXPECT_CRESP_ERR: Combined response from Processor bus received at a time it is not expected by FSM.
12	RWX_WCLRREG	FBC_ALTD_PB_UNEXPECT_DATA_ERR: Data from Processor bus received at a time it is not expected by FSM.
13:15	RO	constant = 0b000
16	ROX	FBC_ALTD_WAIT_PIB_DIRECT: Waiting on XSCOM state machine to complete a direct PIB (write) command.
17	ROX	FBC_ALTD_PIB_DIRECT_DONE: Completed a direct to PIB (write) command.
18	ROX	FBC_ALTD_PBINIT_MISSING: Attempt to start a command without PB_INIT active. It stays blocked until PB_INIT is set or overridden. A reset or clear both aborts the pending operation.
19:32	RO	constant = 0b00000000000000
33:37	ROX	FBC_ALTD_PIB_ERROR: PIB slave error indicates what kind of PIB slave error occurred.
38:47	RO	constant = 0b0000000000
48	RWX_WCLRREG	FBC_ALTD_ECC_CE: Correctable ECC error detected and corrected during an FBC_ALTD transaction (read).
49	RWX_WCLRREG	FBC_ALTD_ECC_UE: Uncorrectable ECC error detected during an FBC_ALTD transaction (read).
50	RWX_WCLRREG	FBC_ALTD_ECC_SUE: Special uncorrectable ECC error detected during FBC_ALTD transaction (read).
51:58	RO	constant = 0b00000000
59:63	ROX	FBC_ALTD_CRESP_VALUE: The combined response value. Not cleared. It might contain old or invalid value until combined response arrived.

Register Name	Alter/Display Data Register
Mnemonic	BRIDGE.AD.ALTD_DATA_REG
Address	0000000000090004 (SCOM)
Description	Alter/Display Data Register

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	FBC_ALTD_DATA: The data to use with the alter/display command.

Register Name	Force ECC Register
Mnemonic	BRIDGE.AD.FORCE_ECC_REG
Address	000000000009000D (SCOM)
Description	Force ECC Register

Bits	SCOM	Field Mnemonic: Description
0	RWX	ALTD_DATA_ITAG: the sixty-fourth bit of the ITAG of a fabric alter/display operation.
1:16	RWX	ALTD_DATA_TX_ECC: The two ECC values of a PCB/XSCOM/LPC Processor bus data transfer.

Bits	SCOM	Field Mnemonic: Description
17	RWX	ALTD_DATA_TX_ECC_OVERWRITE: Override (equals suppress update of) ECC value of a PCB Processor bus operation data transfer. Be careful. There must be no XSCOM or LPC data read data transfer. For example, an XSCOM read will modify the ECC value.

Register Name	**Alter/Display XSCOM Base Address Register**
Mnemonic	BRIDGE.AD.XSCOM_BASE_REG
Address	0000000000090010 (SCOM)
Description	Alter/Display XSCOM Base Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:29	RW	FBC_XSCOM_BASE: Base Address for XSCOM logic in Alter/Display.
30:60	RO	constant = 0b00000000000000000000000000000000
61	WOX	FBC_XSCOM_RESET: Used to reset the XSCOM State Machine logic in Alter/Display.
62	RW	FBC_XSCOM_DISABLE: Used to disable the XSCOM State Machine logic in Alter/Display.
63	RW	FBC_XSCOM_DISABLE_LOCAL_SHORTCUT: Used to disable the shortcut for local ADU internal registers.

Register Name	**XSCOM Mode Register**
Mnemonic	BRIDGE.AD.XSCOM_MODE_REG
Address	0000000000090011 (SCOM)
Description	XSCOM Mode Register

Bits	SCOM	Field Mnemonic: Description
0:3	RW	XSCOM_MODE_SPARE: Spare.
4	RW	XSCOM_MODE_BAR_PIB_ON_ERROR1: Prohibit XSCOM through the PIB after an error 001. Accessing ADU registers and the PIB register is still allowed.
5	RW	XSCOM_MODE_BAR_PIB_ON_ERROR2: Prohibit XSCOM through the PIB after an error 010. Accessing ADU registers and the PIB register is still allowed.
6	RW	XSCOM_MODE_BAR_PIB_ON_ERROR3: Prohibit XSCOM through the PIB after an error 011. Accessing ADU registers and the PIB register is still allowed.
7	RW	XSCOM_MODE_BAR_PIB_ON_ERROR4: Prohibit XSCOM through the PIB after an error 100. Accessing ADU registers and the PIB register is still allowed.
8	RW	XSCOM_MODE_BAR_PIB_ON_ERROR5: Prohibit XSCOM through the PIB after an error 101. Accessing ADU registers and the PIB register is still allowed.
9	RW	XSCOM_MODE_BAR_PIB_ON_ERROR6: Prohibit XSCOM through the PIB after an error 110. Accessing ADU registers and the PIB register is still allowed.
10	RW	XSCOM_MODE_BAR_PIB_ON_ERROR7: Prohibit XSCOM through the PIB after an error 111. Accessing ADU registers and the PIB register is still allowed.
11	RW	XSCOM_MODE_HANG_PIB_RESET: Reset the XSCOM state machine when a PIB hang was detected.
12	RW	XSCOM_MODE_HANG_RESET: Reset the XSCOM state machine when another a hang was detected.
13	RW	XSCOM_MODE_RESET_ON_PARITY: Reset the XSCOM state machine when a parity error was detected.
14	RW	XSCOM_MODE_FREEZE_LOG_ON_ERROR1: Freeze XSCOM log register after an error 001.

Bits	SCOM	Field Mnemonic: Description
15	RW	XSCOM_MODE_FREEZE_LOG_ON_ERROR2: Freeze XSCOM log register after an error 010.
16	RW	XSCOM_MODE_FREEZE_LOG_ON_ERROR3: Freeze XSCOM log register after an error 011.
17	RW	XSCOM_MODE_FREEZE_LOG_ON_ERROR4: Freeze XSCOM log register after an error 100.
18	RW	XSCOM_MODE_FREEZE_LOG_ON_ERROR5: Freeze XSCOM log register after an error 101.
19	RW	XSCOM_MODE_FREEZE_LOG_ON_ERROR6: Freeze XSCOM log register after an error 110.
20	RW	XSCOM_MODE_FREEZE_LOG_ON_ERROR7: Freeze XSCOM log register after an error 111.

Register Name	**XSCOM Status Log Register**
Mnemonic	BRIDGE.AD.XSCOM_LOG_REG
Address	0000000000090012 (SCOM)
Description	XSCOM Status Log Register

Bits	SCOM	Field Mnemonic: Description
0	ROX	XSCOM_CMD_IN_PROG: XSCOM command in progress. Read-only status bit does not freeze on an error.
1:3	RWX_WCLRREG	XSCOM_CMD_STATUS: XSCOM command returned status.
4	RWX_WCLRREG	XSCOM_WRITE_CMD: XSCOM was a write command.
5:26	RWX_WCLRREG	XSCOM_ADDR_TAG: XSCOM command fabric address tag. Indicates master of command.
27:29	RWX_WCLRREG	XSCOM_THR_ID: XSCOM Command fabric thread ID, indicates master thread of command.
30	RO	constant = 0b0
31	ROX	XSCOM_PIB_COMPONENT_BUSY: PIB transaction ongoing, if set.
32	RO	constant = 0b0
33:63	RWX_WCLRREG	XSCOM_PIB_ADDR: XSCOM PIB address of failing command.

Register Name	**XSCOM Error Register**
Mnemonic	BRIDGE.AD.XSCOM_ERR_REG
Address	0000000000090013 (SCOM)
Description	XSCOM error register

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	XSCOM_ADDRESS_ERR: XSCOM command error: invalid address.
1	RWX_WCLRREG	XSCOM_TSIZE_ERR: XSCOM command error: invalid TSIZE.
2	RWX_WCLRREG	XSCOM_RC_TTAG_PAR_ERR: Processor bus reflected command TTAG parity error.
3	RWX_WCLRREG	XSCOM_CR_TTAG_PAR_ERR: Processor bus combined response TTAG parity error.
4	RWX_WCLRREG	XSCOM_CR_ATAG_PAR_ERR: Processor bus combined response ATAG parity error.
5	RWX_WCLRREG	XSCOM_RC_ADDR_PAR_ERR: Processor bus reflected command ADDR parity error.

Bits	SCOM	Field Mnemonic: Description
6:7	RO	constant = 0b00
8	RWX_WCLRREG	PB_ECC_CE_ERR: Processor bus received correctable ECC error.
9	RWX_WCLRREG	PB_ECC_UE_ERR: Processor bus received uncorrectable ECC error.
10	RWX_WCLRREG	PB_ECC_SUE_ERR: Processor bus received special uncorrectable ECC error.
11	RWX_WCLRREG	RTAG_PARITY_ERR: Error: the data received came with an RTAG that has a parity error, thus it might also be not XSCOM related.
12	RWX_WCLRREG	CRESP_HANG_ERR: Hang detected waiting for combined response.
13	RWX_WCLRREG	PIB_HANG_ERR: Hang detected waiting for PIB.
14	RWX_WCLRREG	PBDATA_HANG_ERR: Hang detected waiting for data from PB.
15	RWX_WCLRREG	ADS_HANG_ERR: Hang detected waiting for internal ADU bus to complete.
16	RWX_WCLRREG	XSCOM_FSM_PERR: XSCOM command state machine parity error.
17	RWX_WCLRREG	SPARE0_ERR: This spare is a placeholder.
18	RWX_WCLRREG	SPARE1_ERR: This spare is a placeholder.
19	RWX_WCLRREG	UNEXPECT_DATA_ERR: Unexpected processor bus data error: state machine was idle while data arrived.
20	RWX_WCLRREG	ILL_CRESP_ERR: Error illegal combined response received.
21:63	RO	constant = 0b00000000000000000000000000000000000000000000000

Register Name	XSCOM Received Remote Status pMisc and Source Register
Mnemonic	BRIDGE.AD.XSCOM_RCVED_STAT_REG
Address	0000000000090018 (SCOM)
Description	XSCOM Received Remote Status pMisc and Source Register

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	XSCOM_DONE: XSCOM command done. An XSCOM command sourced from this chip has completed. This bit needs to be cleared before an XSCOM operation to be accurate.
1:3	RWX_WCLRREG	XSCOM_RESULT: XSCOM Result code 000 = Okay 001 = Retry required, other error.
4:9	RWX_WCLRREG	XSCOM_COREID: UNITID of the command source (which NCU started this operation).
10:12	RWX_WCLRREG	XSCOM_STAT_THRID: THREADID of the command source (which thread started this operation).
13:16	RWX_WCLRREG	DEST_GROUPID: GROUPID of XSCOM command destination (pointing to the ADU that executed the command).

Bits	SCOM	Field Mnemonic: Description
17:19	RWX_WCLRREG	DEST_CHIPID: CHIPID of XSCOM command destination (pointing to the ADU that executed the command).

Register Name	XSCOM Access Address Register
Mnemonic	BRIDGE.AD.ADS_XSCOM_CMD_REG
Address	000000000009001C (SCOM)
Description	XSCOM Access Address Register (ADU internal command transfer use only)

Bits	SCOM	Field Mnemonic: Description
0	ROX	ADS_XSCOM_CMD_REG_RNW: Internal register. Indicate read operation of current XSCOM/LPC access (otherwise, it is a write).
1:4	RO	constant = 0b0000
5:11	ROX	ADS_XSCOM_CMD_REG_SIZE: Internal register. The size of the current XSCOM/LPC access.
12:29	RO	constant = 0b000000000000000000
30:63	ROX	ADS_XSCOM_CMD_REG_ADR: Internal register. byte address of current XSCOM/LPC access.

Register Name	XSCOM Data Ramp Register (Internal use only)
Mnemonic	BRIDGE.AD.XSCOM_DAT0_REG
Address	000000000009001E (SCOM)
Description	XSCOM Data Ramp Register (internal use only)

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	XSCOM_DAT0: Internal register. Left data in the data ramp (to be transferred to and from the PIB and LPC).

Register Name	XSCOM Data Ramp Register (Internal use only)
Mnemonic	BRIDGE.AD.XSCOM_DAT1_REG
Address	000000000009001F (SCOM)
Description	XSCOM Data Ramp Register (internal use only)

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	XSCOM_DAT1: Internal register. Right data in the data ramp (to be transferred to and from PIB and LPC).

Register Name	pMisc Status Register
Mnemonic	BRIDGE.AD.SND_STAT_REG
Address	0000000000090020 (SCOM)
Description	pMisc Status Register

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	ERR_CMD_OVERRUN: Error command dropped from a queue overrun.

Bits	SCOM	Field Mnemonic: Description
1	RWX_WCLRREG	TRC_CMD_OVERRUN: Trace command dropped from a queue overrun.
2	RWX_WCLRREG	XSC_CMD_OVERRUN: XSCOM status command dropped from a queue overrun.
3	RWX_WCLRREG	HTM_CMD_OVERRUN: HTM command dropped from a queue overrun.
4	RWX_WCLRREG	TOD_CMD_OVERRUN: TOD Command dropped due to queue overrun.
5	RWX_WCLRREG	CMD_COUNT_ERR: Attempt to send but too much commands at a time (causes short stall to prevent tag reuse).
6	RWX_WCLRREG	SND_PB_OP_HANG_ERR: pMisc SND waiting for outstanding combined response much too long.
7:15	RO	constant = 0b000000000
16	RWX_WCLRREG	SND_INVALID_CRESP_ERR: pMisc send received an invalid combined response.
17:31	RO	constant = 0b0000000000000000
32	RWX_WCLRREG	RCV_TTAG_PARITY_ERR: Parity error of TTAG in RCV macro.
33	RWX_WCLRREG	RCV_PB_OP_HANG_ERR: pMisc RCV waiting for outstanding combined response much too long.
34	RWX_WCLRREG	TOD_HANG_ERR: pMisc RCV waiting for second TOD packet much too long.
35:47	RO	constant = 0b0000000000000
48:51	ROX	RCV_TOD_STATE: Reflects what parts of a pMisc TOD package has been received. CRESPAB means all but waiting for XCSM doing the PIB operation.
52:60	RO	constant = 0b000000000

Register Name	pMisc Mode Register
Mnemonic	BRIDGE.AD.SND_MODE_REG
Address	0000000000090021 (SCOM)
Description	pMisc Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	ENABLE_TRC_GLB_TRIG0: Enable broadcast of trace global trigger 0.
1	RW	ENABLE_TRC_GLB_TRIG1: Enable broadcast of trace global trigger 1.
2	RW	ENABLE_GLB_PULSE_MODE: On rising edge, send a trace global trigger toggle command.
3	RW	SINGLE_OUTSTANDING_CMD: Wait for the clean combined response on every command before the next can be posted. This can cause big delays if a command gets retried for a long time. Do not use with ENABLE_RECEIVE_OWN_TOD to prevent deadlock. This is because the receive part depends on XSCOM-RESULT-pMisc going out before XCSM accepts the next TOD command. The deadlock will be TOD-retrying forever, and XSCOM FSM will not finish sending the resulting pMisc.
4:7	RW	PROG_REQ_DELAY: Program amount of delay between fabric address requests. Matches 4 MSB of 12-bit counter. Allows delay from 0 cycles to 3840 cycles in steps of 256 cycles. Defaulted to no delay (0000) in the design.
8	RW	DISABLE_ERR_CMD: Block error commands from being broadcast (malfunction alert, rising edge only).

Bits	SCOM	Field Mnemonic: Description
9	RW	DISABLE_HTM_CMD: Block HTM commands from being broadcast.
10	RW	DISABLE_TRACE_CMD: Block trace commands from being broadcast.
11	RW	DISABLE_TOD_CMD: Block frequency changing commands from being broadcast.
12	RW	DISABLE_XSCOM_CMD: Block XSCOM commands from being broadcast.
13	RW	ENABLE_CLR_ERR_CMD: Enable sending of error reset when a malfunction alert goes away. Do Not Use: Sequence ordering cannot be guaranteed.
14	RW	OVERRIDE_PBINIT_ERR_CMD: Allow error commands to being broadcast on quiesced the processor bus.
15	RW	OVERRIDE_PBINIT_HTM_CMD: Allow HTM commands to being broadcast on quiesced the processor bus.
16	RW	OVERRIDE_PBINIT_TRACE_CMD: Allow trace commands to being broadcast on quiesced the processor bus.
17	RW	OVERRIDE_PBINIT_TOD_CMD: Allow FREQCHNG commands to being broadcast on quiesced the processor bus.
18	RW	OVERRIDE_PBINIT_XSCOM_CMD: Allow XSCOM commands to being broadcast on quiesced the processor bus.
19	RW	DISABLE_CHECKSTOP: Disable forwarding checkstop to stop the processor bus.
20	WOX	MANUAL_SET_PB_STOP: Manual set and overwrite state of Stop the Power Bus Signal (requires disabling forwarding first).
21	WOX	MANUAL_CLR_PB_STOP: Manual clear and overwrite state of Stop the Power Bus Signal (requires disabling forwarding first).
22	ROX	PB_STOP: State of the power bus PB_stop signal.
23:24	RO	constant = 0b00
25	WOX	MANUAL_PB_SWITCH_ABCD: Force a local (not broadcasted) processor bus AB or CD register switch.
26:27	RW	ENABLE_RECEIVE_OWN_TRIGGER: Enables receiving debug trigger pMisc from the same ADU (with the same NODEID, CHIPID).
28	RW	ENABLE_RECEIVE_OWN_TOD: Enables receiving TOD pMisc from the same ADU (with same NODEID, CHIPID). Do not use with SINGLE_OUTSTANDING_CMD to prevent deadlock (see there for reason why).
29	WOX	RESET_TOD_STATE: Reset state machine of incomplete TOD pMisc receive.
30	RW	ENABLE_PB_SWITCH_AB: Enable generation of a processor bus AB Register Switch event pulse.
31	RW	ENABLE_PB_SWITCH_CD: Enable generation of a processor bus CD Register Switch event pulse.

Register Name	pMisc Receive Malfunction Alert Register (First)
Mnemonic	BRIDGE.AD.RCV_ERRLOG0_REG
Address	0000000000090022 (SCOM)
Description	pMisc Receive Malfunction Alert Register (first)

Bits	SCOM	Field Mnemonic: Description
0:7	RW_WAND	MALF_ERR_FROM_GROUP0: There was a malfunction alert error from group 0 (one bit for each chip).
8:15	RW_WAND	MALF_ERR_FROM_GROUP1: There was a malfunction alert error from group 1 (one bit for each chip).
16:23	RW_WAND	MALF_ERR_FROM_GROUP2: There was a malfunction alert error from group 2 (one bit for each chip).
24:31	RW_WAND	MALF_ERR_FROM_GROUP3: There was a malfunction alert error from group 3 (one bit for each chip).
32:39	RW_WAND	MALF_ERR_FROM_GROUP4: There was a malfunction alert error from group 4 (one bit for each chip).

Bits	SCOM	Field Mnemonic: Description
40:47	RW_WAND	MALF_ERR_FROM_GROUP5: There was a malfunction alert error from group 5 (one bit for each chip).
48:55	RW_WAND	MALF_ERR_FROM_GROUP6: There was a malfunction alert error from group 6 (one bit for each chip).
56:63	RW_WAND	MALF_ERR_FROM_GROUP7: There was a malfunction alert error from group 7 (one bit for each chip).

Register Name	pMisc Receive Malfunction Alert Register (last)
Mnemonic	BRIDGE.AD.RCV_ERRLOG1_REG
Address	0000000000090023 (SCOM)
Description	pMisc Receive Malfunction Alert Register (last)

Bits	SCOM	Field Mnemonic: Description
0:7	RW_WAND	MALF_ERR_FROM_GROUP8: There was a malfunction alert error from group 8 (one bit for each chip).
8:15	RW_WAND	MALF_ERR_FROM_GROUP9: There was a malfunction alert error from group 9 (one bit for each chip).
16:23	RW_WAND	MALF_ERR_FROM_GROUP10: There was a malfunction alert error from group 10 (one bit for each chip).
24:31	RW_WAND	MALF_ERR_FROM_GROUP11: There was a malfunction alert error from group 11 (one bit for each chip).
32:39	RW_WAND	MALF_ERR_FROM_GROUP12: There was a malfunction alert error from group 12 (one bit for each chip).
40:47	RW_WAND	MALF_ERR_FROM_GROUP13: There was a malfunction alert error from group 13 (one bit for each chip).
48:55	RW_WAND	MALF_ERR_FROM_GROUP14: There was a malfunction alert error from group 14 (one bit for each chip).
56:63	RW_WAND	MALF_ERR_FROM_GROUP15: There was a malfunction alert error from group 15 (one bit for each chip).

Register Name	TOD: pMisc Data Send Register
Mnemonic	BRIDGE.AD.TOD_DATA_SND_REG
Address	0000000000090028 (SCOM)
Description	TOD: pMisc Data Send Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	PCB_TOD_DATA_SND: TOD command value to be sent.

Register Name	TOD: pMisc Data Receive Register
Mnemonic	BRIDGE.AD.TOD_DATA_RCV_REG
Address	0000000000090029 (SCOM)
Description	TOD: pMisc Data Receive Register

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	PCB_TOD_DATA_RCV: TOD command value received before forwarded to PIB.

Register Name	TOD: Command Receive PIB Address Register
Mnemonic	BRIDGE.AD.TOD_CMD_REG
Address	000000000009002A (SCOM)
Description	TOD: Command Receive PIB Address Register

Bits	SCOM	Field Mnemonic: Description
0:29	RO	constant = 0b00000000100000000000000000000000
30:60	RW	TOD_CMD_REG_ADR: The constant PIB address of a TOD register to store received TOD command in: 0x00040029
61:63	RO	constant = 0b000

Register Name	PIB Slave Data Register (internal use only)
Mnemonic	BRIDGE.AD.IO_DATA_REG
Address	0000000000090030 (SCOM)
Description	PIB Slave Data Register (internal use only)

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	PCB_IO_TMP_DATA: Internal only data to be transferred between ADS and PIB.

Register Name	Data for access to PIB from XSCOM
Mnemonic	BRIDGE.AD.PIB_CMD_REG
Address	0000000000090031 (SCOM)
Description	Data for access to PIB from XSCOM

Bits	SCOM	Field Mnemonic: Description
0	ROX	PIB_CMD_REG_RNW: Internal register. Setting this bit causes a PIB read and resulting data stored in the PIB_DATA_REG.
1:29	RO	constant = 0b00000000000000000000000000000
30:60	ROX	PIB_CMD_REG_ADR: Internal register. PIB address.
61:63	RO	constant = 0b000

Register Name	Data for access to PIB from Alt
Mnemonic	BRIDGE.AD.PIB_DATA_REG
Address	0000000000090032 (SCOM)
Description	Display. Writing this register with PIB_READ_NOT_WRITE = 0 causes a PIB write.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	PIB_DATA: Data from and to PIB.

Register Name	Reset pulse for PIB
Mnemonic	BRIDGE.AD.PIB_RESET_REG
Address	0000000000090033 (SCOM)
Description	Reset pulse for PIB

Bits	SCOM	Field Mnemonic: Description
0	WOX	PIB_RESET: Writing this to 1 causes a PIB reset. Do not use this unless there was an error.
1	ROX	PIB_RESET_STATE: PIB reset state.
2	RWX_WAND	PIB_RESET_ABORTED_CMD: A former PIB reset aborted a command of this master.

Register Name	LPC Base Address Register
Mnemonic	BRIDGE.AD.LPC_BASE_REG
Address	0000000000090040 (SCOM)
Description	LPC Base Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:31	RW	LPC_BASE: Base address for LPC unit.
32:62	RO	constant = 0b00000000000000000000000000000000
63	RW	LPC_DISABLE: Used to disable the LPC.

Register Name	Data for Access to LPC from XSCOM
Mnemonic	BRIDGE.AD.LPC_CMD_REG
Address	0000000000090041 (SCOM)
Description	Data for access to LPC from XSCOM

Bits	SCOM	Field Mnemonic: Description
0	ROX	LPC_CMD_REG_RNW: Internal register. Setting this bit causes an LPC read. The resulting data is stored in LPC_DATA_REG.
1:4	RO	constant = 0b0000
5:11	ROX	LPC_CMD_REG_SIZE: Internal register. Size of current XSCOM/LPC access.
12:31	RO	constant = 0b00000000000000000000
32:63	ROX	LPC_CMD_REG_ADR: Internal register. LPC address. **Note:** This field is updated after execution.

Register Name	Data for Access to LPC from Alt
Mnemonic	BRIDGE.AD.LPC_DATA_REG
Address	0000000000090042 (SCOM)
Description	Display. Writing this register with LPC_READ_NOT_WRITE = 0 causes an LPC write

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	LPC_DATA: Data from and to LPC.

Register Name	Status/Debug Register for LPC Operation
Mnemonic	BRIDGE.AD.LPC_STATUS_REG
Address	0000000000090043 (SCOM)
Description	Status/Debug Register for LPC Operation

Bits	SCOM	Field Mnemonic: Description
0	ROX	LPC_DONE_STATUS: Status of LPC transaction.
1:9	RO	constant = 0b000000000
10	ROX	LPC_VALID_STATUS: Status of LPC handshake. Status of LP_OPB_VALID.
11	ROX	LPC_ACK_STATUS: Status of LPC handshake. State of LP_OPB_ACK.
12:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	Divider Values for ADU PowerBus Hang
Mnemonic	BRIDGE.AD.ADU_HANG_DIV_REG
Address	0000000000090050 (SCOM)
Description	Divider values for ADU processor bus hang

Bits	SCOM	Field Mnemonic: Description
0:4	RW	ADU_DATA_HANG_DIV: Divider value for ADU processor bus data hang.
5:9	RW	ADU_OPER_HANG_DIV: Divider value for ADU processor bus operational hang.
10:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	Control Register Fast Mode B
Mnemonic	TP.TPCHIP.PIB.I2CM.CONTROL_REGISTER_B
Address	00000000000A0000 (SCOM)
Description	Control Register Fast Mode B

Bits	SCOM	Field Mnemonic: Description
0	RWX	PIB_CNTR_REG_BIT_WITHSTART_0: For command register of i2c engine.
1	RWX	PIB_CNTR_REG_BIT_WITHADDR_0: For command register of i2c engine.
2	RWX	PIB_CNTR_REG_BIT_READCONT_0: For command register of i2c engine.
3	RWX	PIB_CNTR_REG_BIT_WITHSTOP_0: For command register of i2c engine.
4:7	RWX	PIB_CNTR_REG_LENGTH_0: Maximum_write = 4 , Maximum_read = 8.
8:14	RWX	PIB_CNTR_REG_ADDR_0: For command register of i2c engine.
15	RWX	PIB_CNTR_REG_BIT_RNW_0: For command register of i2c engine.
16:17	RWX	PIB_CNTR_REG_SPEED_0: 00 = 100 K 01 = 400 K 10 = 3400 K 11 = 50 K
18:22	RWX	PIB_CNTR_REG_PORT_NUMBER_0: For the mode register of the I2C engine.

Bits	SCOM	Field Mnemonic: Description
23:25	RWX	REG_ADDR_LEN_0: 00 = No register address in FIFO 01= 1 byte of the FIFO data is the register address 10 = 2 byte of FIFO data are the register address 11 = 3 byte of FIFO data are are the register address
26	RWX	ENH_MODE_0: Enable enhanced mode in the mode register of the I2C engine.
27	RWX	ECC_ENABLE_0: Enables ECC for the current operation.
28	RWX	ECCCHK_DISABLE_0: Disables ECC checking for read operation when ECC is enabled.
29	RWX	UNUSED_0: Reserved. Not used.
30:31	RWX	FAST_MODE_INTERRUPT_STERRING_BITS_0: Decides which master should see the done interrupt of FAST_MODE.
32:39	RWX	PIB_CNTR_REG_DATA_1_0: Data for I2C FIFO.
40:47	RWX	PIB_CNTR_REG_DATA_2_0: Data for I2C FIFO.
48:55	RWX	PIB_CNTR_REG_DATA_3_0: Data for I2C FIFO.
56:63	RWX	PIB_CNTR_REG_DATA_4_0: Data for I2C FIFO.

Register Name	**DATA8to15 Register Read Only Fast Mode**
Mnemonic	TP.TPCHIP.PIB.I2CM.DATA8TO15_REGISTER_B
Address	00000000000A0001 (SCOM)
Description	DATA8to15 Register Read Only Fast Mode

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	PIB_DATA8TO15_0: The last 8 bytes of data for read. It is not available for write operation.

Register Name	**Reset Register Fast Mode**
Mnemonic	TP.TPCHIP.PIB.I2CM.RESET_REGISTER_B
Address	00000000000A0001 (SCOM)
Description	Reset Register Fast Mode

Bits	SCOM	Field Mnemonic: Description
0	WOX	OVERALL_RESET_0. One bit register resets all registers and the I2C engine.
1	WOX	CHKSW_AR012_0: Debug switch to disable the enhanced PIB error handling.

Register Name	**Status Register Fast Mode**
Mnemonic	TP.TPCHIP.PIB.I2CM.STATUS_REGISTER_B
Address	00000000000A0002 (SCOM)
Description	STATUS REGISTER_FAST_MODE

Bits	SCOM	Field Mnemonic: Description
0	ROX	BUS_STATUS_ADDR_NVLD_0: Address invalid.
1	ROX	BUS_STATUS_WRITE_NVLD_0: Write invalid.

Bits	SCOM	Field Mnemonic: Description
2	ROX	BUS_STATUS_READ_NVLD_0: Read invalid.
3	ROX	BUS_STATUS_ADDR_P_ERR_0: Address parity error.
4	ROX	BUS_STATUS_PAR_ERR_0: data parity error.
5	ROX	BUS_STATUS_LB_PARITY_ERROR_0: local bus parity error.
6:37	ROX	PIB_DATA0TO7_0: First eight bytes of data for read and for write, the 5th byte to 12th byte.
38:40	RO	constant = 0b000
41	ROX	ECC_CORRECTED_ERROR_0: This warning indicates that one bit flip was in data and has been corrected.
42	ROX	ECC_UNCORRECTED_ERROR_0: This error indicates that there are two bit flips in read data that cannot be corrected.
43	ROX	ECC_CONFIG_ERROR_0: This the error indicates that the control register is ECC_ENABLED for DATA_LENGTH not equal to eight. OR ECC is enabled for the engine where the ECC block is not at all instantiated.
44	ROX	BUS_STATUS_BUSY_0: Local bus busy.
45	ROX	BUS_STATUS_INVALID_COMMAND_0: invalid command.
46	ROX	BUS_STATUS_PARITY_ERROR_0: parity error.
47	ROX	BUS_STATUS_BACK_END_OVERRUN_ERROR_0: Back end overrun error.
48	ROX	BUS_STATUS_BACK_END_ACCESS_ERROR_0: Back end access error.
49	ROX	BUS_STATUS_ARBITRATION_LOST_ERROR_0: Arbitration lost error.
50	ROX	BUS_STATUS_NACK_RECEIVED_ERROR_0: NACK received error.
51	ROX	BUS_STATUS_DATA_REQUEST_0: Data request.
52	ROX	BUS_STATUS_COMMAND_COMPLETE_0: Command complete.
53	ROX	BUS_STATUS_STOP_ERROR_0: Stop error.
54	ROX	BUS_STATUS_I2C_PORT_BUSY_0: I2C port busy.
55	ROX	BUS_STATUS_I2C_INTERFACE_BUSY_0: I2C interface busy.
56:63	ROX	BUS_STATUS_FIFO_ENTRY_COUNT_0: FIFO entry count.

Register Name	**DATA0to7 Register Fast Mode**
Mnemonic	TP.TPCHIP.PIB.I2CM.DATA0TO7_REGISTER_B
Address	00000000000A0003 (SCOM)
Description	DATA0to7 Register FAST_MODE

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	PIB_DATA0TO7_0: First 8 bytes of data for read and for write the fifth byte to twelfth byte.

Register Name	**FIFO1 Register Read B**
Mnemonic	TP.TPCHIP.PIB.I2CM.FIFO1_REGISTER_READ_B
Address	00000000000A0004 (SCOM)
Description	FIFO1 Register Read B

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	FIFO_BITS_READ0_0: Because FIFO is not a normal register, it cannot be completely verified in REGCHK. Thus, this register is a dummy register that is used to maintain the address in HTML FIFO data byte 0. It should be able to read or write 1 byte.
8:31	RO	constant = 0b00000000000000000000000000
32:39	ROX	PEEK_DATA1_0: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_0: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	COMMAND Register B
Mnemonic	TP.TPCHIP.PIB.I2CM.COMMAND_REGISTER_B
Address	00000000000A0005 (SCOM)
Description	COMMAND Register B

Bits	SCOM	Field Mnemonic: Description
0	RWX	WITH_START_0: Decides if the start command is issued during the beginning of the operation.
1	RWX	WITH_ADDRESS_0: Decides if the device address is sent during the beginning of the operation.
2	RWX	READ_CONTINUE_0: Decides if the next read operation is continuation of present operation.
3	RWX	WITH_STOP_0: Decides if the stop command is issued during the end of the operation.
4:7	RWX	NOT_USED_0: Not used.
8:14	RWX	DEVICE_ADDRESS_0: The device address of the slave on the I2C bus.
15	RWX	READ_NOT_WRITE_0: I2C read or write.
16:31	RWX	LENGTH_IN_BYTES_0: The length of bytes to be accessed through the I2C bus.
32:39	ROX	PEEK_DATA1_0: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_0: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Mode Register B
Mnemonic	TP.TPCHIP.PIB.I2CM.MODE_REGISTER_B
Address	00000000000A0006 (SCOM)
Description	Mode Register B

Bits	SCOM	Field Mnemonic: Description
0:7	RWX	BIT_RATE_DIVISOR_0: Decides the speed on the I2C bus.
8:9	RWX	BIT_RATE_DIVISOR_0: Decides the speed on the I2C bus.
10:15	RWX	BIT_RATE_DIVISOR_0: Decides the speed on the I2C bus.
16:21	RWX	PORT_NUMBER_0: Port number.
22:25	RO	constant = 0b0000
26	RWX	CHKSW_CMDQUEUEING_0: Debug switch to switch the command queuing option off.
27	RWX	CHKSW_I2C_BUSY_0: A debug switch to switch between the Port Busy Register and I2C busy muxing logic. **Note:** If you do not enable the chicken switch, the older logic behavior occurs.
28	RWX	FGAT_MODE_0: FGAT mode.
29	RWX	DIAG_MODE_0: Diagnostic mode.
30	RWX	PACING_ALLOW_MODE_0: Pacing allow mode.
31	RWX	WRAP_MODE_0: WRAP_MODE.
32:39	ROX	PEEK_DATA1_0: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_0: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Water Mark Register B
Mnemonic	TP.TPCHIP.PIB.I2CM.WATER_MARK_REGISTER_B
Address	00000000000A0007 (SCOM)
Description	Water Mark Register B

Bits	SCOM	Field Mnemonic: Description
0:15	RO	constant = 0b0000000000000000
16:31	RWX	WATERMARK_REG_0: Water mark register.

Bits	SCOM	Field Mnemonic: Description
32:39	ROX	PEEK_DATA1_0: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_0: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Interrupt Mask Register B
Mnemonic	TP.TPCHIP.PIB.I2CM.INTERRUPT_MASK_REGISTER_B
Address	00000000000A0008 (SCOM) 00000000000A0009 (SCOM1) 00000000000A000A (SCOM2)
Description	Interrupt Mask Register B

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:15	RO	RO	RO	constant = 0b0000000000000000
16:31	WOX	WOX_OR	WOX_AND	INT_MASK_0: Interrupt mask register.
32:63	RO	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	Interrupt Mask Register Read B
Mnemonic	TP.TPCHIP.PIB.I2CM.INTERRUPT_MASK_REGISTER_READ_B
Address	00000000000A0008 (SCOM)
Description	Interrupt Mask Register Read B

Bits	SCOM	Field Mnemonic: Description
0:15	RO	constant = 0b0000000000000000
16:31	ROX	INT_MASK_0: Interrupt mask register.
32:39	ROX	PEEK_DATA1_0: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_0: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Interrupt Condition B
Mnemonic	TP.TPCHIP.PIB.I2CM.INTERRUPT_COND_B
Address	00000000000A0009 (SCOM)
Description	Interrupt Condition B

Bits	SCOM	Field Mnemonic: Description
0:15	RO	constant = 0b0000000000000000
16	ROX	INVALID_CMD_0: Invalid command. A new command was given when the old command was not yet completed.
17	ROX	LBUS_PARITY_ERROR_0: Local bus parity error.
18	ROX	BE_OV_ERROR_0: Back end overrun error. Writing or reading into full or empty FIFO reply.
19	ROX	BE_ACC_ERROR_0: Back end access error. Writing/Reading more data than requested.
20	ROX	ARBITRATION_LOST_ERROR_0: Arbitration lost error. I2C bus is held by some other master when trying to access.
21	ROX	NACK_RECEIVED_ERROR_0: NACK received error. The slave does not respond with the acknowledgment.
22	ROX	DATA_REQUEST_0: Data request: The FIFO must be accessed more to fulfill the expectation.
23	ROX	INT_CONDS_CMD_COMPLETE_0.
24	ROX	STOP_ERROR_0: Stop error: Cannot send the stop condition to the bus.
25	ROX	INT_CONDS_I2C_BUSY_0
26	ROX	INT_CONDS_NOT_I2C_BUSY_0
27	RO	constant = 0b0
28	ROX	INT_CONDS_SCL_EQ_1_0
29	ROX	INT_CONDS_SCL_EQ_0_0
30	ROX	INT_CONDS_SDA_EQ_1_0
31	ROX	INT_CONDS_SDA_EQ_0_0
32:39	ROX	PEEK_DATA1_0: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_0: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Interrupts Register B
Mnemonic	TP.TPCHIP.PIB.I2CM.INTERRUPTS_B
Address	00000000000A000A (SCOM)
Description	Interrupts Register B

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	INTS_0
32:39	ROX	PEEK_DATA1_0: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_0: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	**IMM Reset I2C B**
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_RESET_I2C_B
Address	00000000000A000B (SCOM)
Description	IIMM Reset I2C B

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_I2C_0. Resets command, mode, watermark, interrupt mask, and status registers.

Register Name	**Status Register Engine B**
Mnemonic	TP.TPCHIP.PIB.I2CM.STATUS_REGISTER_ENGINE_B
Address	00000000000A000B (SCOM)
Description	STATUS Register ENGINE_B

Bits	SCOM	Field Mnemonic: Description
0	ROX	INVALID_CMD_0: Invalid command. A new command was given when the old command was not yet completed.
1	ROX	LBUS_PARITY_ERROR_0: Local bus parity error.
2	ROX	BE_OV_ERROR_0: Back end overrun error: Writing or reading into full or empty FIFO reply.
3	ROX	BE_ACC_ERROR_0: Back end access error: Writing/Reading more data than requested.
4	ROX	ARBITRATION_LOST_ERROR_0: Arbitration lost error: I2C bus is held by some other master when trying to access.
5	ROX	NACK_RECEIVED_ERROR_0: NACK received error: The slave does not respond with the acknowledgment.
6	ROX	DATA_REQUEST_0: Data request: The FIFO must be accessed more to fulfill the expectation.
7	ROX	CMD_COMPLETE_0. Command complete: Indicates the completion of command.
8	ROX	STOP_ERROR_0: Stop error: Cannot send the stop condition to the bus.
9:15	ROX	MAX_NUM_OF_PORTS_0. Maximum number of ports defined for this engine.
16	ROX	ANY_I2C_INT_0
17:18	RO	constant = 0b00
19	ROX	I2C_PORT_HISTORY_BUSY_0

Bits	SCOM	Field Mnemonic: Description
20	ROX	SCL_SYN_0
21	ROX	SDA_SYN_0
22	ROX	I2C_BUSY_0. I2C bus is occupied.
23	ROX	SELF_BUSY_0: Self busy: I2C bus is occupied by itself.
24:27	RO	constant = 0b0000
28:31	ROX	FIFO_ENTRY_COUNT_0: The number of bytes that are present in the FIFO.
32:39	ROX	PEEK_DATA1_0: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_0: Local bus parity error from the local bus to glue logic.
41:43	RO	constant = 0b000
44:47	ROX	I2CM_STEERED_INTERRUPTS_0: Steered I2CM_INTERRUPT either for fast mode or legacy mode.
48:63	RO	constant = 0b0000000000000000

Register Name	Extended Status B
Mnemonic	TP.TPCHIP.PIB.I2CM.EXTENDED_STATUS_B
Address	00000000000A000C (SCOM)
Description	Extended Status B

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	FIFO_SIZE_0. Total FIFO size.
8:10	RO	constant = 0b000
11:15	ROX	MSM_CURR_STATE_0: Current state.
16	ROX	SCL_SYN_EXT_0
17	ROX	SDA_SYN_EXT_0
18	ROX	S_SCL_0. Clock input for wrap mode.
19	ROX	S_SDA_0. Data input for wrap mode.
20	ROX	M_SCL_0. Clock output for wrap mode.
21	ROX	M_SDA_0. Data output for wrap mode.
22	ROX	HIGH_WATER_0. High water mark: FIFO reached highest water level.
23	ROX	LOW_WATER_0. Low water mark: FIFO reached lowest water level.
24	ROX	I2C_BUSY_EXT_0. I2C bus is busy.
25	ROX	SELF_BUSY_0: I2C bus is occupied by itself.
26:31	RO	constant = 0b010111

Bits	SCOM	Field Mnemonic: Description
32:39	ROX	PEEK_DATA1_0: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_0: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	IMM Reset Error B
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_RESET_ERR_B
Address	00000000000A000C (SCOM)
Description	IMM Reset Error B

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_ERRORS_0. Resets FIFO, some status bits, and state machine.

Register Name	IMM Sets SCL_B
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_SET_S_SCL_B
Address	00000000000A000D (SCOM)
Description	IMM Sets SCL_B

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_SET_S_SCL_0. Sets output S_SCL.

Register Name	Residual Front End Back End Length B
Mnemonic	TP.TPCHIP.PIB.I2CM.RESIDUAL_FRONT_END_BACK_END_LENGTH_B
Address	00000000000A000D (SCOM)
Description	Residual Front End Back End Length B

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	RESID_FE_LEN_0. Residual front end length register.
16:31	ROX	RESID_BE_LEN_0. Residual back end length register.
32:39	ROX	PEEK_DATA1_0: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.

Bits	SCOM	Field Mnemonic: Description
40	ROX	LBUS_PARITY_ERR1_0: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	I2C Busy Register B
Mnemonic	TP.TPCHIP.PIB.I2CM.I2C_BUSY_REGISTER_B
Address	00000000000A000E (SCOM)
Description	I2C Busy Register B

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	PORT_BUSY_0. Corresponding port is busy. If it is ‘1’, no one should access. If ‘0’ can be accessed.
32:39	ROX	PEEK_DATA1_0: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_0: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	IMM Resets SCL_B
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_RESET_S_SCL_B
Address	00000000000A000F (SCOM)
Description	IMM Resets SCL_B

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_S_SCL_0. Resets output S_SCL.

Register Name	IMM Sets SDA_B
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_SET_S_SDA_B
Address	00000000000A0010 (SCOM)
Description	IMM Sets SDA_B

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_SET_S_SDA_0. Sets output S_SDA.

Register Name	IMM Resets SDA_B
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_RESET_S_SDA_B
Address	00000000000A0011 (SCOM)
Description	IMM Resets SDA_B

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_S_SDA_0. Resets output S_SDA.

Register Name	FIFO4 Register READ_0
Mnemonic	TP.TPCHIP.PIB.I2CM.FIFO4_REGISTER_READ_B
Address	00000000000A0012 (SCOM)
Description	FIFO4 Register READ_0

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	FIFO_BITS_READ0_0: Because FIFO is not a normal register, it cannot be completely verified in REGCHK. Thus, this register is a dummy register that is used to maintain the address in HTML FIFO data byte 0. It should be able to read or write 1 byte.
8:15	ROX	Reserved field.
16:23	ROX	Reserved field.
24:31	ROX	Reserved field.
32:39	ROX	PEEK_DATA1_0: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_0: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	CC Protect Mode Register
Mnemonic	TP.TPCHIP.PIB.I2CM.PIBI2CM_PROTECT_MODE_REG_B
Address	00000000000A03FE (SCOM)
Description	CC Protect Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_READ_PROTECT_ENABLE_0: Enable read protection.
1	RW	CC_WRITE_PROTECT_ENABLE_0: Enable write protection.

Register Name	Atomic Lock Register
Mnemonic	TP.TPCHIP.PIB.I2CM.PIBI2CM_ATOMIC_LOCK_REG_B
Address	00000000000A03FF (SCOM)
Description	Atomic Lock Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_ATOMIC_LOCK_ENABLE_0: Enable atomic lock.
1:4	ROX	CC_ATOMIC_ID_0: Atomic ID.
5:7	RO	constant = 0b000
8:15	ROX	CC_ATOMIC_ACTIVITY_0: Atomic lock counter.

Register Name	Control Register Fast Mode 1
Mnemonic	TP.TPCHIP.PIB.I2CM.CONTROL_REGISTER_C
Address	00000000000A1000 (SCOM)
Description	Control Register Fast Mode 1

Bits	SCOM	Field Mnemonic: Description
0	RWX	PIB_CNTR_REG_BIT_WITHSTART_1: For command register of the I2C engine.
1	RWX	PIB_CNTR_REG_BIT_WITHADDR_1: For command register of the I2C engine.
2	RWX	PIB_CNTR_REG_BIT_READCONT_1: For command register the I2C engine.
3	RWX	PIB_CNTR_REG_BIT_WITHSTOP_1: For command register the I2C engine.
4:7	RWX	PIB_CNTR_REG_LENGTH_1: MAXIMUM_WRITE = 4 , MAXIMUM_READ = 8.
8:14	RWX	PIB_CNTR_REG_ADDR_1: For command register of I2C engine.
15	RWX	PIB_CNTR_REG_BIT_RNW_1: For command register of I2C engine.
16:17	RWX	PIB_CNTR_REG_SPEED_1: 00 = 100 K 01 = 400 K 10 = 3400 K 11 = 50 K
18:22	RWX	PIB_CNTR_REG_PORT_NUMBER_1: For mode register of I2C engine.
23:25	RWX	REG_ADDR_LEN_1: 00 = No register address in FIFO 01 = 1 byte of FIFOs data is in the register address 10 = 2 bytes of FIFOs data are in the register address 11 = 3 bytes of FIFOs data are in the register address.
26	RWX	ENH_MODE_1: Enable enhanced mode in mode register of I2C engine.
27	RWX	ECC_ENABLE_1: Enables ECC for the current operation.
28	RWX	ECCCHK_DISABLE_1: Disables ECC checking for read operation when ECC is enabled.
29	RWX	UNUSED_1:
30:31	RWX	FAST_MODE_INTERRUPT_STERRING_BITS_1: Decides which master should see the done interrupt of fast_mode.
32:39	RWX	PIB_CNTR_REG_DATA_1_1: Data for I2C FIFO.
40:47	RWX	PIB_CNTR_REG_DATA_2_1: Data for I2C FIFO.
48:55	RWX	PIB_CNTR_REG_DATA_3_1: Data for I2C FIFO.

Bits	SCOM	Field Mnemonic: Description
56:63	RWX	PIB_CNTR_REG_DATA_4_1: Data for I2C FIFO.

Register Name	DATA8to15 Register Read Only Fast Mode
Mnemonic	TP.TPCHIP.PIB.I2CM.DATA8TO15_REGISTER_C
Address	00000000000A1001 (SCOM)
Description	DATA8to15 Register READ_ONLY_FAST_MODE

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	PIB_DATA8TO15_1: Last 8 bytes of data for read. It is not available for write operation.

Register Name	Reset Register Fast Mode
Mnemonic	TP.TPCHIP.PIB.I2CM.RESET_REGISTER_C
Address	00000000000A1001 (SCOM)
Description	Reset Register Fast Mode

Bits	SCOM	Field Mnemonic: Description
0	WOX	OVERALL_RESET_1. One bit register resets all registers and the I2C engine.
1	WOX	CHKSW_AR012_1: Debug switch to disable the enhanced PIB error handling.

Register Name	Status Register Fast Mode
Mnemonic	TP.TPCHIP.PIB.I2CM.STATUS_REGISTER_C
Address	00000000000A1002 (SCOM)
Description	Status Register Fast Mode

Bits	SCOM	Field Mnemonic: Description
0	ROX	BUS_STATUS_ADDR_NVLD_1: Address invalid.
1	ROX	BUS_STATUS_WRITE_NVLD_1: Write invalid.
2	ROX	BUS_STATUS_READ_NVLD_1: Read invalid.
3	ROX	BUS_STATUS_ADDR_P_ERR_1: Address parity error.
4	ROX	BUS_STATUS_PAR_ERR_1: Data parity error.
5	ROX	BUS_STATUS_LB_PARITY_ERROR_1: Local bus parity error.
6:37	ROX	PIB_DATA0TO7_1: First 8 bytes of data for read and for write the fifth byte to 12th byte.
38:40	RO	constant = 0b000
41	ROX	ECC_CORRECTED_ERROR_1: This warning indicates that 1 bit flip was there in data and been corrected.
42	ROX	ECC_UNCORRECTED_ERROR_1: This error indicates that there are 2 bit flips in read data that cannot be corrected.
43	ROX	ECC_CONFIG_ERROR_1: This error indicates that the control register is ECC_ENABLED for DATA_LENGTH and not equal to 8. OR ECC is enabled for the engine where ECC block is not at all instantiated.
44	ROX	BUS_STATUS_BUSY_1: Local bus busy.

Bits	SCOM	Field Mnemonic: Description
45	ROX	BUS_STATUS_INVALID_COMMAND_1: Invalid command.
46	ROX	BUS_STATUS_PARITY_ERROR_1: Parity error.
47	ROX	BUS_STATUS_BACK_END_OVERRUN_ERROR_1: Back end overrun error.
48	ROX	BUS_STATUS_BACK_END_ACCESS_ERROR_1: Back end access error.
49	ROX	BUS_STATUS_ARBITRATION_LOST_ERROR_1: Arbitration lost error.
50	ROX	BUS_STATUS_NACK_RECEIVED_ERROR_1: NACK received error.
51	ROX	BUS_STATUS_DATA_REQUEST_1: Data request.
52	ROX	BUS_STATUS_COMMAND_COMPLETE_1: Command complete.
53	ROX	BUS_STATUS_STOP_ERROR_1: Stop error.
54	ROX	BUS_STATUS_I2C_PORT_BUSY_1: I2C port busy.
55	ROX	BUS_STATUS_I2C_INTERFACE_BUSY_1: I2C interface busy.
56:63	ROX	BUS_STATUS_FIFO_ENTRY_COUNT_1: FIFO entry count.

Register Name	**DATA0to7 Register Fast Mode**
Mnemonic	TP.TPCHIP.PIB.I2CM.DATA0TO7_REGISTER_C
Address	00000000000A1003 (SCOM)
Description	DATA0to7 Register Fast Mode

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	PIB_DATA0TO7_1: First eight bytes of data for read and for write, the 5th byte to 12th byte.

Register Name	**FIFO1 Register Read C**
Mnemonic	TP.TPCHIP.PIB.I2CM.FIFO1_REGISTER_READ_C
Address	00000000000A1004 (SCOM)
Description	FIFO1 Register Read C

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	FIFO_BITS_READ0_1: Because FIFO is not a normal register, it cannot be completely verified in REGCHK. Thus, this register is a dummy register that is used to maintain the address in HTML FIFO data byte 0. It should be able to read or write 1 byte.
8:31	RO	constant = 0b00000000000000000000000000
32:39	ROX	PEEK_DATA1_1: 0 = Invalid command : Written with a new command when the old command is still in progress. 1 = Parity error: 2 = Back end overrun error: Writing or reading into full or empty FIFO reply. 3 = Back end access error: Writing/reading more data than requested. 4 = Arbitration lost error: I2C bus is held by some other master when trying to access. 5 = NACK received error: The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_1: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Command Register C
Mnemonic	TP.TPCHIP.PIB.I2CM.COMMAND_REGISTER_C
Address	00000000000A1005 (SCOM)
Description	COMMAND Register C

Bits	SCOM	Field Mnemonic: Description
0	RWX	WITH_START_1: Decides if the start command is to be issued during the beginning of the operation.
1	RWX	WITH_ADDRESS_1: Decides if the device address is to be sent during the beginning of the operation.
2	RWX	READ_CONTINUE_1: Decides if the next read operation is a continuation of the present operation.
3	RWX	WITH_STOP_1: Decides if the stop command is to be issued during the end of the operation.
4:7	RWX	NOT_USED_1: Not used.
8:14	RWX	DEVICE_ADDRESS_1: Device address of the slave on the I2C bus.
15	RWX	READ_NOT_WRITE_1: I2C read or write.
16:31	RWX	LENGTH_IN_BYTES_1: The length of bytes to be accessed through the I2C bus.
32:39	ROX	PEEK_DATA1_1: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_1: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Mode Register C
Mnemonic	TP.TPCHIP.PIB.I2CM.MODE_REGISTER_C
Address	00000000000A1006 (SCOM)
Description	Mode Register C

Bits	SCOM	Field Mnemonic: Description
0:7	RWX	BIT_RATE_DIVISOR_1: Decides the speed on the I2C bus.
8:9	RWX	BIT_RATE_DIVISOR_1: Decides the speed on the I2C bus.
10:15	RWX	BIT_RATE_DIVISOR_1: Decides the speed on the I2C bus.
16:21	RWX	PORT_NUMBER_1: Port number.
22:25	RO	constant = 0b0000
26	RWX	CHKSW_CMDQUEUEING_1: Debug switch to switch the command queuing option off.
27	RWX	CHKSW_I2C_BUSY_1: A debug switch to switch between the Port Busy Register and I2C busy muxing logic. **Note:** If you do not enable the chicken switch, the older logic behavior occurs.
28	RWX	FGAT_MODE_1: FGAT mode.
29	RWX	DIAG_MODE_1: Diagnostic mode.
30	RWX	PACING_ALLOW_MODE_1: Pacing allow mode.
31	RWX	WRAP_MODE_1: WRAP_MODE.

Bits	SCOM	Field Mnemonic: Description
32:39	ROX	PEEK_DATA1_1: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_1: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Water Mark Register C
Mnemonic	TP.TPCHIP.PIB.I2CM.WATER_MARK_REGISTER_C
Address	00000000000A1007 (SCOM)
Description	WATER_MARK Register C

Bits	SCOM	Field Mnemonic: Description
0:15	RO	constant = 0b0000000000000000
16:31	RWX	WATERMARK_REG_1: Water mark register.
32:39	ROX	PEEK_DATA1_1: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_1: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Interrupt Mask Register C
Mnemonic	TP.TPCHIP.PIB.I2CM.INTERRUPT_MASK_REGISTER_C
Address	00000000000A1008 (SCOM) 00000000000A1009 (SCOM1) 00000000000A100A (SCOM2)
Description	INTERRUPT_MASK Register C

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:15	RO	RO	RO	constant = 0b0000000000000000
16:31	WOX	WOX_OR	WOX_AND	INT_MASK_1: Interrupt mask register.
32:63	RO	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	Interrupt Mask Register Read_C
Mnemonic	TP.TPCHIP.PIB.I2CM.INTERRUPT_MASK_REGISTER_READ_C
Address	00000000000A1008 (SCOM)
Description	INTERRUPT_MASK Register read_C

Bits	SCOM	Field Mnemonic: Description
0:15	RO	constant = 0b0000000000000000
16:31	ROX	INT_MASK_1: Interrupt mask register.
32:39	ROX	PEEK_DATA1_1: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_1: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Interrupt Condition C
Mnemonic	TP.TPCHIP.PIB.I2CM.INTERRUPT_COND_C
Address	00000000000A1009 (SCOM)
Description	Interrupt Condition C

Bits	SCOM	Field Mnemonic: Description
0:15	RO	constant = 0b0000000000000000
16	ROX	INVALID_CMD_1: Invalid command. A new command was given when the old command was not yet completed.
17	ROX	LBUS_PARITY_ERROR_1: Local bus parity error.
18	ROX	BE_OV_ERROR_1: Back end overrun error. Writing or reading into full or empty FIFO reply.
19	ROX	BE_ACC_ERROR_1: Back end access error. Writing/Reading more data than requested.
20	ROX	ARBITRATION_LOST_ERROR_1: Arbitration lost error. I2C bus is held by some other master when trying to access.
21	ROX	NACK_RECEIVED_ERROR_1: NACK received error. The slave does not respond with the acknowledgment.
22	ROX	DATA_REQUEST_1: Data request. The FIFO must be accessed more to fulfill the expectation.
23	ROX	INT_CONDS_CMD_COMPLETE_1
24	ROX	STOP_ERROR_1: Stop error. Cannot send the stop condition to the bus.
25	ROX	INT_CONDS_I2C_BUSY_1
26	ROX	INT_CONDS_NOT_I2C_BUSY_1
27	RO	constant = 0b0
28	ROX	INT_CONDS_SCL_EQ_1_1. Interrupt conditions.
29	ROX	INT_CONDS_SCL_EQ_0_1

Bits	SCOM	Field Mnemonic: Description
30	ROX	INT_CONDS_SDA_EQ_1_1
31	ROX	INT_CONDS_SDA_EQ_0_1
32:39	ROX	PEEK_DATA1_1: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_1: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Interrupts Register C
Mnemonic	TP.TPCHIP.PIB.I2CM.INTERRUPTS_C
Address	00000000000A100A (SCOM)
Description	Interrupts Register C

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	Ints_1. Interrupts.
32:39	ROX	PEEK_DATA1_1: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_1: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	IMM Reset I2C C
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_RESET_I2C_C
Address	00000000000A100B (SCOM)
Description	IMM_RESET_I2C_C

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_I2C_1. Resets command, mode, watermark, interrupt mask, and status registers.

Register Name	Status Register Engine C
Mnemonic	TP.TPCHIP.PIB.I2CM.STATUS_REGISTER_ENGINE_C
Address	00000000000A100B (SCOM)
Description	STATUS Register ENGINE_C

Bits	SCOM	Field Mnemonic: Description
0	ROX	INVALID_CMD_1: Invalid command. A new command was given when the old command was not yet completed.
1	ROX	LBUS_PARITY_ERROR_1: Local bus parity error.
2	ROX	BE_OV_ERROR_1: Back end overrun error. Writing or reading into full or empty FIFO reply.
3	ROX	BE_ACC_ERROR_1: Back end access error. Writing or reading more data than requested.
4	ROX	ARBITRATION_LOST_ERROR_1: Arbitration lost error. I2C bus is held by some other master when trying to access.
5	ROX	NACK_RECEIVED_ERROR_1: NACK received error. The slave does not respond with the acknowledgment.
6	ROX	DATA_REQUEST_1: Data request. The FIFO must be accessed more to fulfill the expectation.
7	ROX	CMD_COMPLETE_1. Command complete. Indicates the completion of command.
8	ROX	STOP_ERROR_1: Stop error: Cannot send the stop condition to the bus.
9:15	ROX	MAX_NUM_OF_PORTS_1. Maximum number of ports defined for this engine.
16	ROX	ANY_I2C_INT_1
17:18	RO	constant = 0b00
19	ROX	I2C_PORT_HISTORY_BUSY_1
20	ROX	SCL_SYN_1
21	ROX	SDA_SYN_1
22	ROX	I2C_BUSY_1. I2C bus is occupied.
23	ROX	SELF_BUSY_1: Self busy. I2C bus is occupied by itself.
24:27	RO	constant = 0b0000
28:31	ROX	FIFO_ENTRY_COUNT_1. The number of bytes that are present in the FIFO.
32:39	ROX	PEEK_DATA1_1: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_1: Local bus parity error from the local bus to glue logic.
41:43	RO	constant = 0b000
44:47	ROX	I2CM_STEERED_INTERRUPTS_1: Steered I2CM_INTERRUPT either for fast mode or legacy mode.
48:63	RO	constant = 0b0000000000000000

Register Name	Extended Status C
Mnemonic	TP.TPCHIP.PIB.I2CM.EXTENDED_STATUS_C
Address	00000000000A100C (SCOM)
Description	Extended Status C

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	FIFO_SIZE_1. Total FIFO size.
8:10	RO	constant = 0b000
11:15	ROX	MSM_CURR_STATE_1: Current state.
16	ROX	SCL_SYN_ext_1
17	ROX	SDA_SYN_EXT_1
18	ROX	S_SCL_1. Clock input for wrap mode.
19	ROX	S_SDA_1. Data input for wrap mode.
20	ROX	M_SCL_1.Clock output for wrap mode.
21	ROX	M_SDA_1.Data output for wrap mode.
22	ROX	HIGH_WATER_1. FIFO reached highest water level.
23	ROX	LOW_WATER_1. FIFO reached lowest water level.
24	ROX	I2C_BUSY_EXT_1. I2C bus is busy.
25	ROX	SELF_BUSY_1: self busy: I2C bus is held busy by itself.
26:31	RO	constant = 0b010111
32:39	ROX	PEEK_DATA1_1: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_1: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	IMM Reset Error C
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_RESET_ERR_C
Address	00000000000A100C (SCOM)
Description	IMM Reset Error C

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_ERRORS_1. Resets FIFO. Some status bits and state machine.

Register Name	IMM Sets SCL_C
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_SET_S_SCL_C
Address	00000000000A100D (SCOM)
Description	IMM Sets SCL_C

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_SET_S_SCL_1.Sets output S_SCL.

Register Name	Residual Front End Back End Length C
Mnemonic	TP.TPCHIP.PIB.I2CM.RESIDUAL_FRONT_END_BACK_END_LENGTH_C
Address	00000000000A100D (SCOM)
Description	Residual Front End Back End Length C

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	RESID_FE_LEN_1: Residual front end length register.
16:31	ROX	RESID_BE_LEN_1. Residual back end length register.
32:39	ROX	PEEK_DATA1_1: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_1: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	I2C Busy Register C
Mnemonic	TP.TPCHIP.PIB.I2CM.I2C_BUSY_REGISTER_C
Address	00000000000A100E (SCOM)
Description	I2c Busy Register C

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	PORT_BUSY_1. Corresponding port is busy. If it is ‘1’, no one can access. If ‘0’ , it can be accessed.
32:39	ROX	PEEK_DATA1_1: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_1: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	IMM Resets SCL_C
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_RESET_S_SCL_C
Address	00000000000A100F (SCOM)
Description	IMM_RESET_S_SCL_C

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_S_SCL_1. Resets output S_SCL.

Register Name	IMM Sets SDA_C
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_SET_S_SDA_C
Address	00000000000A1010 (SCOM)
Description	IMM_SET_S_SDA_C

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_SET_S_SDA_1. Sets output S_SDA.

Register Name	IMM Resets SDA_C
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_RESET_S_SDA_C
Address	00000000000A1011 (SCOM)
Description	IMM_RESET_S_SDA_C

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_S_SDA_1. Resets output S_SDA.

Register Name	FIFO4 Register READ_C
Mnemonic	TP.TPCHIP.PIB.I2CM.FIFO4_REGISTER_READ_C
Address	00000000000A1012 (SCOM)
Description	FIFO4 Register READ_C

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	FIFO_BITS_READ0_1: Because FIFO is not a normal register, it cannot be completely verified in REGCHK. Thus, this register is a dummy register that is used to maintain the address in HTML FIFO data byte 0. It should be able to read or write 1 byte.
8:15	ROX	Reserved field.
16:23	ROX	Reserved field.
24:31	ROX	Reserved field.

Bits	SCOM	Field Mnemonic: Description
32:39	ROX	PEEK_DATA1_1: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_1: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	CC Protect Mode Register
Mnemonic	TP.TPCHIP.PIB.I2CM.PIBI2CM_PROTECT_MODE_REG_C
Address	00000000000A13FE (SCOM)
Description	CC Protect Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_READ_PROTECT_ENABLE_1: Enable read protection.
1	RW	CC_WRITE_PROTECT_ENABLE_1: Enable write protection.

Register Name	Atomic Lock Register
Mnemonic	TP.TPCHIP.PIB.I2CM.PIBI2CM_ATOMIC_LOCK_REG_C
Address	00000000000A13FF (SCOM)
Description	Atomic Lock Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_ATOMIC_LOCK_ENABLE_1: Enable atomic lock.
1:4	ROX	CC_ATOMIC_ID_1: Atomic ID.
5:7	RO	constant = 0b000
8:15	ROX	CC_ATOMIC_ACTIVITY_1: Atomic lock counter.

Register Name	Control Register Fast Mode 2
Mnemonic	TP.TPCHIP.PIB.I2CM.CONTROL_REGISTER_D
Address	00000000000A2000 (SCOM)
Description	Control Register Fast Mode 2

Bits	SCOM	Field Mnemonic: Description
0	RWX	PIB_CNTR_REG_BIT_WITHSTART_2: For the command register of the I2C engine.
1	RWX	PIB_CNTR_REG_BIT_WITHADDR_2: For command register of I2C engine.
2	RWX	PIB_CNTR_REG_BIT_READCONT_2: For command register of I2C engine.
3	RWX	PIB_CNTR_REG_BIT_WITHSTOP_2: For command register of I2C engine.

Bits	SCOM	Field Mnemonic: Description
4:7	RWX	PIB_CNTR_REG_LENGTH_2: Maximum_write = 4 , Maximum_read = 8.
8:14	RWX	PIB_CNTR_REG_ADDR_2: For command register of I2C engine.
15	RWX	PIB_CNTR_REG_BIT_RNW_2: For command register of I2C engine.
16:17	RWX	PIB_CNTR_REG_SPEED_2: 00 = 100 K 01 = 400 K 10 = 3400 K 11 = 50 K
18:22	RWX	PIB_CNTR_REG_PORT_NUMBER_2: For mode register of I2C engine.
23:25	RWX	REG_ADDR_LEN_2: 00 = No register address in FIFO 01= 1 byte of the FIFO data is the register address 10 = 2 byte of FIFO data are the register address 11 = 3 byte of FIFO data are are the register address
26	RWX	ENH_MODE_2: Enable enhanced mode in mode register of I2C engine.
27	RWX	ECC_ENABLE_2: Enables ECC for the current operation.
28	RWX	ECCCHK_DISABLE_2: Disables ECC checking for Read operation when ECC is enabled.
29	RWX	UNUSED_2: Reserved. Not used.
30:31	RWX	FAST_MODE_INTERRUPT_STERRING_BITS_2: Decides which master should see the done interrupt of fast_mode.
32:39	RWX	PIB_CNTR_REG_DATA_1_2: Data for I2C FIFO.
40:47	RWX	PIB_CNTR_REG_DATA_2_2: Data for I2C FIFO.
48:55	RWX	PIB_CNTR_REG_DATA_3_2: Data for I2C FIFO.
56:63	RWX	PIB_CNTR_REG_DATA_4_2: Data for I2C FIFO.

Register Name	DATA8to15 Register Read Only Fast Mode
Mnemonic	TP.TPCHIP.PIB.I2CM.DATA8TO15_REGISTER_D
Address	00000000000A2001 (SCOM)
Description	DATA8to15 Register Read Only Fast Mode

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	PIB_DATA8TO15_2: The last 8 bytes of data for read. It is not available for write operation.

Register Name	Reset Register Fast Mode
Mnemonic	TP.TPCHIP.PIB.I2CM.RESET_REGISTER_D
Address	00000000000A2001 (SCOM)
Description	Reset Register Fast Mode

Bits	SCOM	Field Mnemonic: Description
0	WOX	OVERALL_RESET_2. One bit register resets all registers and the I2C engine.
1	WOX	CHKSW_AR012_2: Debug switch to disable the enhanced PIB error handling.

Register Name	Status Register Fast Mode
Mnemonic	TP.TPCHIP.PIB.I2CM.STATUS_REGISTER_D
Address	00000000000A2002 (SCOM)
Description	Status Register Fast Mode

Bits	SCOM	Field Mnemonic: Description
0	ROX	BUS_STATUS_ADDR_NVLD_2: Address invalid.
1	ROX	BUS_STATUS_WRITE_NVLD_2: Write invalid.
2	ROX	BUS_STATUS_READ_NVLD_2: Read invalid.
3	ROX	BUS_STATUS_ADDR_P_ERR_2: Address parity error.
4	ROX	BUS_STATUS_PAR_ERR_2: Data parity error.
5	ROX	BUS_STATUS_LB_PARITY_ERROR_2: Local bus parity error.
6:37	ROX	PIB_DATA0TO7_2: First eight bytes of data for read and for write, the 5th byte to 12th byte.
38:40	RO	constant = 0b000
41	ROX	ECC_CORRECTED_ERROR_2: This warning indicates that one bit flip was in data and has been corrected.
42	ROX	ECC_UNCORRECTED_ERROR_2: This error indicates that there are two bit flips in read data that cannot be corrected.
43	ROX	ECC_CONFIG_ERROR_2: This the error indicates that the control register is ECC_ENABLED for DATA_LENGTH not equal to eight. OR ECC is enabled for the engine where the ECC block is not at all instantiated.
44	ROX	BUS_STATUS_BUSY_2: Local bus busy.
45	ROX	BUS_STATUS_INVALID_COMMAND_2: Invalid command.
46	ROX	BUS_STATUS_PARITY_ERROR_2: Parity error.
47	ROX	BUS_STATUS_BACK_END_OVERRUN_ERROR_2: Back end overrun error.
48	ROX	BUS_STATUS_BACK_END_ACCESS_ERROR_2: Back end access error.
49	ROX	BUS_STATUS_ARBITRATION_LOST_ERROR_2: Arbitration lost error.
50	ROX	BUS_STATUS_NACK_RECEIVED_ERROR_2: NACK received error.
51	ROX	BUS_STATUS_DATA_REQUEST_2: Data request.
52	ROX	BUS_STATUS_COMMAND_COMPLETE_2: Command complete.
53	ROX	BUS_STATUS_STOP_ERROR_2: Stop error.
54	ROX	BUS_STATUS_I2C_PORT_BUSY_2: I2C port busy.
55	ROX	BUS_STATUS_I2C_INTERFACE_BUSY_2: I2C interface busy.
56:63	ROX	BUS_STATUS_FIFO_ENTRY_COUNT_2: FIFO entry count.

Register Name	DATA0to7 Register Fast Mode
Mnemonic	TP.TPCHIP.PIB.I2CM.DATA0TO7_REGISTER_D
Address	00000000000A2003 (SCOM)
Description	DATA0to7 Register Fast Mode

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	PIB_DATA0TO7_2: First eight bytes of data for read and for write, the 5th byte to 12th byte.

Register Name	FIFO1 Register Read D
Mnemonic	TP.TPCHIP.PIB.I2CM.FIFO1_REGISTER_READ_D
Address	00000000000A2004 (SCOM)
Description	FIFO1 Register Read D

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	FIFO_BITS_READ0_2: Because FIFO is not a normal register, it cannot be completely verified in REGCHK. Thus, this register is a dummy register that is used to maintain the address in HTML FIFO data byte 0. It should be able to read or write 1 byte.
8:31	RO	constant = 0b00000000000000000000000000
32:39	ROX	PEEK_DATA1_2: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_2: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Command Register D
Mnemonic	TP.TPCHIP.PIB.I2CM.COMMAND_REGISTER_D
Address	00000000000A2005 (SCOM)
Description	Command Register D

Bits	SCOM	Field Mnemonic: Description
0	RWX	WITH_START_2: Decides if the start command is to be issued during the beginning of the operation.
1	RWX	WITH_ADDRESS_2: Decides the device address to be sent during the beginning of the operation.
2	RWX	READ_CONTINUE_2: Decides if the next read operation is a continuation of the present operation.
3	RWX	WITH_STOP_2: Decides if the stop command is to be issued during the end of the operation.
4:7	RWX	NOT_USED_2: Not used.
8:14	RWX	DEVICE_ADDRESS_2: Device address of Slave on the I2C bus. Device address of Slave on the I2C Bus.
15	RWX	READ_NOT_WRITE_2: I2C read or write.
16:31	RWX	LENGTH_IN_BYTES_2: The length of bytes to be accessed through the I2C bus.
32:39	ROX	PEEK_DATA1_2: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.

Bits	SCOM	Field Mnemonic: Description
40	ROX	LBUS_PARITY_ERR1_2: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Mode Register D
Mnemonic	TP.TPCHIP.PIB.I2CM.MODE_REGISTER_D
Address	00000000000A2006 (SCOM)
Description	Mode Register D

Bits	SCOM	Field Mnemonic: Description
0:7	RWX	BIT_RATE_DIVISOR_2: Decides the speed on the I2C bus. Decides the speed on the I2C bus.
8:9	RWX	BIT_RATE_DIVISOR_2: Decides the speed on the I2C bus.
10:15	RWX	BIT_RATE_DIVISOR_2: Decides the speed on the I2C bus.
16:21	RWX	PORT_NUMBER_2: Port number.
22:25	RO	constant = 0b0000
26	RWX	CHKSW_CMDQUEUEING_2: Debug switch to switch the command queuing option off.
27	RWX	CHKSW_I2C_BUSY_2: Debug switch to switch between the PORT_BUSY register and I2C_BUSY muxing logic. Without this muxed version, this version is older.
28	RWX	FGAT_MODE_2: FGAT mode.
29	RWX	DIAG_MODE_2: Diagnostic mode.
30	RWX	PACING_ALLOW_MODE_2: Pacing allow mode.
31	RWX	WRAP_MODE_2: WRAP_MODE.
32:39	ROX	PEEK_DATA1_2: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_2: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Water Mark Register D
Mnemonic	TP.TPCHIP.PIB.I2CM.WATER_MARK_REGISTER_D
Address	00000000000A2007 (SCOM)
Description	Water Mark Register D

Bits	SCOM	Field Mnemonic: Description
0:15	RO	constant = 0b0000000000000000
16:31	RWX	WATERMARK_REG_2: Water mark register.

Bits	SCOM	Field Mnemonic: Description
32:39	ROX	PEEK_DATA1_2: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_2: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Interrupt Mask Register D
Mnemonic	TP.TPCHIP.PIB.I2CM.INTERRUPT_MASK_REGISTER_D
Address	00000000000A2008 (SCOM) 00000000000A2009 (SCOM1) 00000000000A200A (SCOM2)
Description	Interrupt Mask Register D

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:15	RO	RO	RO	constant = 0b0000000000000000
16:31	WOX	WOX_OR	WOX_AND	INT_MASK_2: Interrupt mask register.
32:63	RO	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	Interrupt Mask Register Read D
Mnemonic	TP.TPCHIP.PIB.I2CM.INTERRUPT_MASK_REGISTER_READ_D
Address	00000000000A2008 (SCOM)
Description	Interrupt Mask Register Read D

Bits	SCOM	Field Mnemonic: Description
0:15	RO	constant = 0b0000000000000000
16:31	ROX	INT_MASK_2: Interrupt mask register.
32:39	ROX	PEEK_DATA1_2: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_2: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Interrupt Condition D
Mnemonic	TP.TPCHIP.PIB.I2CM.INTERRUPT_COND_D
Address	00000000000A2009 (SCOM)
Description	Interrupt Condition D

Bits	SCOM	Field Mnemonic: Description
0:15	RO	constant = 0b0000000000000000
16	ROX	INVALID_CMD_2: Invalid command. A new command was given when the old command was not yet completed.
17	ROX	LBUS_PARITY_ERROR_2: Local bus parity error.
18	ROX	BE_OV_ERROR_2: Back end overrun error. Writing or reading into full or empty FIFO reply.
19	ROX	BE_ACC_ERROR_2: Back end access error. Writing or reading more data than requested.
20	ROX	ARBITRATION_LOST_ERROR_2: Arbitration lost error: I2C bus is held by some other master when trying to access.
21	ROX	NACK_RECEIVED_ERROR_2: NACK received error: The slave does not respond with the acknowledgment. Interrupt conditions.
22	ROX	DATA_REQUEST_2: Data request: The FIFO must be accessed more to fulfill the expectation.
23	ROX	INT_CONDS_CMD_COMPLETE_2.
24	ROX	STOP_ERROR_2: Stop error: Cannot send the stop condition to the bus.
25	ROX	INT_CONDS_I2C_BUSY_2.
26	ROX	INT_CONDS_NOT_I2C_BUSY_2.
27	RO	constant = 0b0
28	ROX	INT_CONDS_SCL_EQ_1_2.
29	ROX	INT_CONDS_SCL_EQ_0_2.
30	ROX	INT_CONDS_SDA_EQ_1_2.
31	ROX	INT_CONDS_SDA_EQ_0_2.
32:39	ROX	PEEK_DATA1_2: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_2: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Interrupts Register D
Mnemonic	TP.TPCHIP.PIB.I2CM.INTERRUPTS_D
Address	00000000000A200A (SCOM)
Description	Interrupts Register D

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	Ints_2: Interrupts.
32:39	ROX	PEEK_DATA1_2: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_2: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	**IMM Reset I2C D**
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_RESET_I2C_D
Address	00000000000A200B (SCOM)
Description	IIMM Reset I2C D

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_I2C_2. Resets command, mode, watermark, interrupt mask, and status registers.

Register Name	**Status Register Engine D**
Mnemonic	TP.TPCHIP.PIB.I2CM.STATUS_REGISTER_ENGINE_D
Address	00000000000A200B (SCOM)
Description	Status Register Engine D

Bits	SCOM	Field Mnemonic: Description
0	ROX	INVALID_CMD_2: Invalid command. A new command was given when the old command was not yet completed.
1	ROX	LBUS_PARITY_ERROR_2: Local bus parity error.
2	ROX	BE_OV_ERROR_2: Back end overrun error: Writing or reading into full or empty FIFO reply. back end overrun error.
3	ROX	BE_ACC_ERROR_2: Back end access error. Writing or reading more data than requested. back end access error.
4	ROX	ARBITRATION_LOST_ERROR_2: Arbitration lost error: I2C bus is held by some other master when trying to access.
5	ROX	NACK_RECEIVED_ERROR_2: NACK received error. The slave does not respond with the acknowledgment.
6	ROX	DATA_REQUEST_2: Data request: The FIFO must be accessed more to fulfill the expectation.
7	ROX	CMD_COMPLETE_2. Command complete: Indicates the completion of command.
8	ROX	STOP_ERROR_2: stop error: Cannot send the stop condition to the bus.
9:15	ROX	MAX_NUM_OF_PORTS_2. Maximum number of ports defined for this engine.
16	ROX	ANY_I2C_INT_2.
17:18	RO	constant = 0b00

Bits	SCOM	Field Mnemonic: Description
19	ROX	I2C_PORT_HISTORY_BUSY_2.
20	ROX	SCL_SYN_2.
21	ROX	SDA_SYN_2.
22	ROX	i2c_busy_2. I2C bus is occupied.
23	ROX	SELF_BUSY_2: I2C bus is occupied by itself.
24:27	RO	constant = 0b0000
28:31	ROX	FIFO_ENTRY_COUNT_2: The number of bytes that are present in the FIFO.
32:39	ROX	PEEK_DATA1_2: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_2: Local bus parity error from the local bus to glue logic.
41:43	RO	constant = 0b000
44:47	ROX	I2CM_STEERED_INTERRUPTS_2: Steered I2CM_INTERRUPT either for fast mode or legacy mode.
48:63	RO	constant = 0b0000000000000000

Register Name	Extended Status D
Mnemonic	TP.TPCHIP.PIB.I2CM.EXTENDED_STATUS_D
Address	00000000000A200C (SCOM)
Description	Extended Status D

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	FIFO_SIZE_2. Total FIFO size.
8:10	RO	constant = 0b000
11:15	ROX	MSM_CURR_STATE_2: Current state.
16	ROX	SCL_SYN_ext_2.
17	ROX	SDA_SYN_EXT_2.
18	ROX	S_SCL_2. Clock input for wrap mode.
19	ROX	S_SDA_2. Data input for wrap mode.
20	ROX	M_SCL_2. Clock output for wrap mode.
21	ROX	M_SDA_2. Data output for wrap mode.
22	ROX	HIGH_WATER_2. High water mark. FIFO reached highest water level.
23	ROX	LOW_WATER_2.Low water mark. FIFO reached lowest water level.
24	ROX	I2C_BUSY_EXT_2. I2C bus is busy.
25	ROX	SELF_BUSY_2: Self busy: I2C bus is occupied by itself.
26:31	RO	constant = 0b010111

Bits	SCOM	Field Mnemonic: Description
32:39	ROX	PEEK_DATA1_2: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_2: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	IMM Reset Error D
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_RESET_ERR_D
Address	00000000000A200C (SCOM)
Description	IMM Reset Error D

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_ERRORS_2. Resets FIFO. Some status bits and state machine.

Register Name	IMM Sets SCL_D
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_SET_S_SCL_D
Address	00000000000A200D (SCOM)
Description	IMM Sets SCL_D

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_SET_S_SCL_2. Sets output S_SCL.

Register Name	Residual Front End Back End Length D
Mnemonic	TP.TPCHIP.PIB.I2CM.RESIDUAL_FRONT_END_BACK_END_LENGTH_D
Address	00000000000A200D (SCOM)
Description	Residual Front End Back End Length D

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	RESID_FE_LEN_2: Residual front end length register.
16:31	ROX	RESID_BE_LEN_2. Residual back end length register.
32:39	ROX	PEEK_DATA1_2: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.

Bits	SCOM	Field Mnemonic: Description
40	ROX	LBUS_PARITY_ERR1_2: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	I2C Busy Register D
Mnemonic	TP.TPCHIP.PIB.I2CM.I2C_BUSY_REGISTER_D
Address	00000000000A200E (SCOM)
Description	I2C Busy Register D

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	PORT_BUSY_2. The corresponding port is busy. If it is ‘1’ no one can access it. If it is ‘0’, it can be accessed.
32:39	ROX	PEEK_DATA1_2: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_2: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	IMM Resets SCL_D
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_RESET_S_SCL_D
Address	00000000000A200F (SCOM)
Description	IMM Resets SCL_D

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_S_SCL_2. Resets output S_SCL.

Register Name	IMM Sets SDA_D
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_SET_S_SDA_D
Address	00000000000A2010 (SCOM)
Description	IMM Sets SDA_D

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_SET_S_SDA_2. Sets output S_SDA.

Register Name	IMM Resets SDA_D
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_RESET_S_SDA_D
Address	00000000000A2011 (SCOM)
Description	IMM Resets SDA_D

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_S_SDA_2. Resets output S_SDA.

Register Name	FIFO4 Register Read D
Mnemonic	TP.TPCHIP.PIB.I2CM.FIFO4_REGISTER_READ_D
Address	00000000000A2012 (SCOM)
Description	FIFO4 Register Read D

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	FIFO_BITS_READ0_2: Because FIFO is not a normal register, it cannot be completely verified in REGCHK. Thus, this register is a dummy register that is used to maintain the address in HTML FIFO data byte 0. It should be able to read or write 1 byte.
8:15	ROX	Reserved field.
16:23	ROX	Reserved field.
24:31	ROX	Reserved field.
32:39	ROX	PEEK_DATA1_2: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_2: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	CC Protect Mode Register
Mnemonic	TP.TPCHIP.PIB.I2CM.PIBI2CM_PROTECT_MODE_REG_D
Address	00000000000A23FE (SCOM)
Description	CC Protect Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_READ_PROTECT_ENABLE_2: Enable read protection.
1	RW	CC_WRITE_PROTECT_ENABLE_2: Enable write protection.

Register Name	Atomic Lock Register
Mnemonic	TP.TPCHIP.PIB.I2CM.PIBI2CM_ATOMIC_LOCK_REG_D
Address	00000000000A23FF (SCOM)
Description	Atomic Lock Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_ATOMIC_LOCK_ENABLE_2: Enable atomic lock.
1:4	ROX	CC_ATOMIC_ID_2: Atomic ID.
5:7	RO	constant = 0b000
8:15	ROX	CC_ATOMIC_ACTIVITY_2: Atomic lock counter.

Register Name	CONTROL REGISTER_FAST_MODE_3
Mnemonic	TP.TPCHIP.PIB.I2CM.CONTROL_REGISTER_E
Address	00000000000A3000 (SCOM)
Description	CONTROL REGISTER_FAST_MODE_3

Bits	SCOM	Field Mnemonic: Description
0	RWX	PIB_CNTR_REG_BIT_WITHSTART_3: For command register of I2C engine.
1	RWX	PIB_CNTR_REG_BIT_WITHADDR_3: For command register of I2C engine.
2	RWX	PIB_CNTR_REG_BIT_READCONT_3: For command register of I2C engine.
3	RWX	PIB_CNTR_REG_BIT_WITHSTOP_3: For command register of I2C engine.
4:7	RWX	PIB_CNTR_REG_LENGTH_3: Maximum_write = 4 , Maximum_read = 8.
8:14	RWX	PIB_CNTR_REG_ADDR_3: For command register of I2C engine.
15	RWX	PIB_CNTR_REG_BIT_RNW_3: For command register of I2C engine.
16:17	RWX	PIB_CNTR_REG_SPEED_3: 00 = 100 K 01 = 400 K 10 = 3400 K 11 = 50 K
18:22	RWX	PIB_CNTR_REG_PORT_NUMBER_3: For mode register of I2C engine.
23:25	RWX	REG_ADDR_LEN_3: 00 = No register address in FIFO 01= 1 byte of the FIFO data is the register address 10 = 2 byte of FIFO data are the register address 11 = 3 byte of FIFO data are are the register address
26	RWX	ENH_MODE_3: Enable enhanced mode in mode register of I2C engine.
27	RWX	ECC_ENABLE_3: Enables ECC for the current operation.
28	RWX	ECCCHK_DISABLE_3: Disables ECC checking for Read operation when ECC is enabled.
29	RWX	UNUSED_3: Reserved. Not used.
30:31	RWX	FAST_MODE_INTERRUPT_STERRING_BITS_3: Decides which master should see the done interrupt of FAST_MODE.
32:39	RWX	PIB_CNTR_REG_DATA_1_3: Data for I2C FIFO.
40:47	RWX	PIB_CNTR_REG_DATA_2_3: Data for I2C FIFO.
48:55	RWX	PIB_CNTR_REG_DATA_3_3: Data for I2C FIFO.

Bits	SCOM	Field Mnemonic: Description
56:63	RWX	PIB_CNTR_REG_DATA_4_3: Data for I2C FIFO.

Register Name	DATA8to15 Register Read Only Fast Mode
Mnemonic	TP.TPCHIP.PIB.I2CM.DATA8TO15_REGISTER_E
Address	00000000000A3001 (SCOM)
Description	DATA8to15 Register Register Read Only Fast Mode

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	PIB_DATA8TO15_3: The last 8 bytes of data for read. It is not available for write operation.

Register Name	Reset Register Fast Mode
Mnemonic	TP.TPCHIP.PIB.I2CM.RESET_REGISTER_E
Address	00000000000A3001 (SCOM)
Description	Reset Register Fast Mode

Bits	SCOM	Field Mnemonic: Description
0	WOX	OVERALL_RESET_3. One bit register resets all registers and the I2C engine.
1	WOX	CHKSW_AR012_3: Debug switch to disable the enhanced PIB error handling.

Register Name	Status Register Fast Mode
Mnemonic	TP.TPCHIP.PIB.I2CM.STATUS_REGISTER_E
Address	00000000000A3002 (SCOM)
Description	Status Register Fast Mode

Bits	SCOM	Field Mnemonic: Description
0	ROX	BUS_STATUS_ADDR_NVLD_3: Address invalid.
1	ROX	BUS_STATUS_WRITE_NVLD_3: Write invalid.
2	ROX	BUS_STATUS_READ_NVLD_3: Read invalid.
3	ROX	BUS_STATUS_ADDR_P_ERR_3: Address parity error.
4	ROX	BUS_STATUS_PAR_ERR_3: Data parity error.
5	ROX	BUS_STATUS_LB_PARITY_ERROR_3: Local bus parity error.
6:37	ROX	PIB_DATA0TO7_3: First eight bytes of data for read and for write, the 5th byte to 12th byte.
38:40	RO	constant = 0b000
41	ROX	ECC_CORRECTED_ERROR_3: This warning indicates that one bit flip was in data and has been corrected.
42	ROX	ECC_UNCORRECTED_ERROR_3: This error indicates that there are two bit flips in read data that cannot be corrected.
43	ROX	ECC_CONFIG_ERROR_3: This the error indicates that the control register is ECC_ENABLED for DATA_LENGTH not equal to eight. OR ECC is enabled for the engine where the ECC block is not at all instantiated.
44	ROX	BUS_STATUS_BUSY_3: Local bus busy.

Bits	SCOM	Field Mnemonic: Description
45	ROX	BUS_STATUS_INVALID_COMMAND_3: Invalid command.
46	ROX	BUS_STATUS_PARITY_ERROR_3: Parity error.
47	ROX	BUS_STATUS_BACK_END_OVERRUN_ERROR_3 = Back end overrun error.
48	ROX	BUS_STATUS_BACK_END_ACCESS_ERROR_3 = Back end access error.
49	ROX	BUS_STATUS_ARBITRATION_LOST_ERROR_3: Arbitration lost error.
50	ROX	BUS_STATUS_NACK_RECEIVED_ERROR_3: NACK received error.
51	ROX	BUS_STATUS_DATA_REQUEST_3: Data request.
52	ROX	BUS_STATUS_COMMAND_COMPLETE_3: command complete.
53	ROX	BUS_STATUS_STOP_ERROR_3: Stop error.
54	ROX	BUS_STATUS_I2C_PORT_BUSY_3: I2C port busy.
55	ROX	BUS_STATUS_I2C_INTERFACE_BUSY_3: I2C interface busy.
56:63	ROX	BUS_STATUS_FIFO_ENTRY_COUNT_3: FIFO entry count.

Register Name	DATA0to7 Register Fast Mode
Mnemonic	TP.TPCHIP.PIB.I2CM.DATA0TO7_REGISTER_E
Address	00000000000A3003 (SCOM)
Description	DATA0to7 Register Fast Mode

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	PIB_DATA0TO7_3: First eight bytes of data for read and for write, the 5th byte to 12th byte.

Register Name	FIFO1 Register Read_E
Mnemonic	TP.TPCHIP.PIB.I2CM.FIFO1_REGISTER_READ_E
Address	00000000000A3004 (SCOM)
Description	FIFO1 Register Read_E

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	FIFO_BITS_READ0_3: Because FIFO is not a normal register, it cannot be completely verified in REGCHK. Thus, this register is a dummy register that is used to maintain the address in HTML FIFO data byte 0. It should be able to read or write 1 byte.
8:31	RO	constant = 0b00000000000000000000000000
32:39	ROX	PEEK_DATA1_3: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_3:
41:63	RO	constant = 0b00000000000000000000000

Register Name	Command Register E
Mnemonic	TP.TPCHIP.PIB.I2CM.COMMAND_REGISTER_E
Address	00000000000A3005 (SCOM)
Description	Command Register E

Bits	SCOM	Field Mnemonic: Description
0	RWX	WITH_START_3: Decides if the start command is to be issued during the beginning of the operation.
1	RWX	WITH_ADDRESS_3: Decides the device address to be sent during the beginning of the operation.
2	RWX	READ_CONTINUE_3: Decides if the next read operation is a continuation of the present operation.
3	RWX	WITH_STOP_3: Decides if the stop command is to be issued during the end of the operation.
4:7	RWX	NOT_USED_3: Not used.
8:14	RWX	DEVICE_ADDRESS_3: The device address of slave on the I2C bus.
15	RWX	READ_NOT_WRITE_3: I2C read or write.
16:31	RWX	LENGTH_IN_BYTES_3: The length of bytes to be accessed through the I2C bus.
32:39	ROX	PEEK_DATA1_3: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_3: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Mode Register E
Mnemonic	TP.TPCHIP.PIB.I2CM.MODE_REGISTER_E
Address	00000000000A3006 (SCOM)
Description	Mode Register E

Bits	SCOM	Field Mnemonic: Description
0:7	RWX	BIT_RATE_DIVISOR_3: Decides the speed on the I2C bus.
8:9	RWX	BIT_RATE_DIVISOR_3: Decides the speed on the I2C bus.
10:15	RWX	BIT_RATE_DIVISOR_3: Decides the speed on the I2C bus. port number.
16:21	RWX	PORT_NUMBER_3: Port number.
22:25	RO	constant = 0b0000
26	RWX	CHKSW_CMDQUEUEING_3: Debug switch to switch the command queuing option off.
27	RWX	CHKSW_I2C_BUSY_3: Debug switch to switch between the PORT_BUSY register and I2C_BUSY muxing logic. Without this muxed version, this version is older.
28	RWX	FGAT_MODE_3: FGAT mode.
29	RWX	DIAG_MODE_3: Diagnostic mode.
30	RWX	PACING_ALLOW_MODE_3: Pacing allow mode.

Bits	SCOM	Field Mnemonic: Description
31	RWX	WRAP_MODE_3: WRAP_MODE.
32:39	ROX	PEEK_DATA1_3: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.

Register Name	IMM Reset I2C E
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_RESET_I2C_E
Address	00000000000A300B (SCOM)
Description	IMM Reset I2C E

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_I2C_3. Resets command, mode, watermark, interrupt mask, and status registers.

Register Name	Status Register Engine E
Mnemonic	TP.TPCHIP.PIB.I2CM.STATUS_REGISTER_ENGINE_E
Address	00000000000A300B (SCOM)
Description	Status Register Engine E

Bits	SCOM	Field Mnemonic: Description
0	ROX	INVALID_CMD_3: Invalid command. A new command was given when the old command was not yet completed.
1	ROX	LBUS_PARITY_ERROR_3: Local bus parity error.
2	ROX	BE_OV_ERROR_3 = Back end overrun error : Writing or reading into full or empty FIFO reply.
3	ROX	BE_ACC_ERROR_3 = Back end access error : Writing/Reading more data than requested.
4	ROX	ARBITRATION_LOST_ERROR_3: Arbitration lost error: I2C bus is held by some other master when trying to access.
5	ROX	NACK_RECEIVED_ERROR_3: NACK received error. The slave does not respond with the acknowledgment.
6	ROX	DATA_REQUEST_3: The FIFO must be accessed more to fulfill the expectation.
7	ROX	CMD_COMPLETE_3. Indicates the completion of command.
8	ROX	STOP_ERROR_3: stop error: Cannot send the stop condition to the bus.
9:15	ROX	MAX_NUM_OF_PORTS_3. The maximum number of ports defined for this engine.
16	ROX	ANY_I2C_INT_3
17:18	RO	constant = 0b00
19	ROX	I2C_PORT_HISTORY_BUSY_3
20	ROX	SCL_SYN_3.
21	ROX	SDA_SYN_3.
22	ROX	I2C_BUSY_3. I2C bus is occupied.
23	ROX	SELF_BUSY_3: Self busy: I2C bus is occupied by itself.
24:27	RO	constant = 0b0000
28:31	ROX	FIFO_ENTRY_COUNT_3: The number of bytes that are present in the FIFO.
32:39	ROX	PEEK_DATA1_3: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_3: Local bus parity error from the local bus to glue logic.
41:43	RO	constant = 0b000
44:47	ROX	I2CM_STEERED_INTERRUPTS_3: Steered I2CM_INTERRUPT either for fast mode or legacy mode.
48:63	RO	constant = 0b0000000000000000

Register Name	Extended Status E
Mnemonic	TP.TPCHIP.PIB.I2CM.EXTENDED_STATUS_E
Address	00000000000A300C (SCOM)
Description	Extended Status E

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	FIFO_size_3. Total FIFO size.
8:10	RO	constant = 0b000
11:15	ROX	MSM_CURR_STATE_3: Current state.
16	ROX	SCL_SYN_ext_3.
17	ROX	SDA_SYN_EXT_3.
18	ROX	S_SCL_3. Clock input for wrap mode.
19	ROX	S_SDA_3. Data input for wrap mode.
20	ROX	M_SCL_3. Clock output for wrap mode.
21	ROX	M_SDA_3. Data output for wrap mode.
22	ROX	HIGH_WATER_3. FIFO reached highest water level.
23	ROX	LOW_WATER_3. FIFO reached lowest water level.
24	ROX	I2C_BUSY_EXT_3. I2C bus is busy.
25	ROX	SELF_BUSY_3: Self busy. I2C bus is occupied by itself.
26:31	RO	constant = 0b010111
32:39	ROX	PEEK_DATA1_3: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_3: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	IMM Reset Error E
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_RESET_ERR_E
Address	00000000000A300C (SCOM)
Description	IMM Reset Error E

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_ERRORS_3. Resets FIFO. Some status bits and state machine.

Register Name	IMM Sets SCL_E
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_SET_S_SCL_E
Address	00000000000A300D (SCOM)
Description	IMM Sets SCL_E

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_SET_S_SCL_3. Sets output S_SCL.

Register Name	Residual Front End/Back End Length_E
Mnemonic	TP.TPCHIP.PIB.I2CM.RESIDUAL_FRONT_END_BACK_END_LENGTH_E
Address	00000000000A300D (SCOM)
Description	Residual Front End/Back End Length_E

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	RESID_FE_LEN_3. Residual front end length register.
16:31	ROX	RESID_BE_LEN_3. Residual back end length register.
32:39	ROX	PEEK_DATA1_3: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_3: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	I2C Busy Register E
Mnemonic	TP.TPCHIP.PIB.I2CM.I2C_BUSY_REGISTER_E
Address	00000000000A300E (SCOM)
Description	I2C Busy Register E

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	PORT_BUSY_3. The corresponding port is busy. If it is ‘1’, no one can access it. If it is ‘0’, it can be accessed.
32:39	ROX	PEEK_DATA1_3: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_3: Local bus parity error from the local bus to glue logic.

Bits	SCOM	Field Mnemonic: Description
41:63	RO	constant = 0b00000000000000000000000

Register Name	IMM Resets SCL_E
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_RESET_S_SCL_E
Address	00000000000A300F (SCOM)
Description	IMM_RESET_S_SCL_E

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_S_SCL_3. Resets output S_SCL.

Register Name	IMM Sets SDA_E
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_SET_S_SDA_E
Address	00000000000A3010 (SCOM)
Description	IMM Sets SDA_E

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_SET_S_SDA_3. Sets output S_SDA.

Register Name	IMM Resets SDA_E
Mnemonic	TP.TPCHIP.PIB.I2CM.IMM_RESET_S_SDA_E
Address	00000000000A3011 (SCOM)
Description	IMM Resets SDA_E

Bits	SCOM	Field Mnemonic: Description
0	WOX	IMM_RESET_S_SDA_3. Resets output S_SDA.

Register Name	FIFO4 Register Read E
Mnemonic	TP.TPCHIP.PIB.I2CM.FIFO4_REGISTER_READ_E
Address	00000000000A3012 (SCOM)
Description	FIFO4 Register Read E

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	FIFO_BITS_READ0_3: Because FIFO is not a normal register, it cannot be completely verified in REGCHK. Thus, this register is a dummy register that is used to maintain the address in HTML FIFO data byte 0. It should be able to read or write 1 byte.
8:15	ROX	Reserved field.
16:23	ROX	Reserved field.
24:31	ROX	Reserved field.

Bits	SCOM	Field Mnemonic: Description
32:39	ROX	PEEK_DATA1_3: 0 = Invalid command. Written with the new command when the old command is still in progress. 1 = Parity error. 2 = Back end overrun error. Writing or reading into full or empty FIFO reply. 3 = Back end access error. Writing/reading more data than requested. 4 = Arbitration lost error. The I2C bus is held by another master when trying to access. 5 = NACK received error. The slave does not respond with the acknowledgment. 6 = Data request: FIFO must be accessed more to fulfill the expectation. 7 = State M/C idle: I2C state machine is now in idle state.
40	ROX	LBUS_PARITY_ERR1_3: Local bus parity error from the local bus to glue logic.
41:63	RO	constant = 0b00000000000000000000000

Register Name	CC Protect Mode Register
Mnemonic	TP.TPCHIP.PIB.I2CM.PIBI2CM_PROTECT_MODE_REG_E
Address	00000000000A33FE (SCOM)
Description	CC Protect Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_READ_PROTECT_ENABLE_3: Enable read protection.
1	RW	CC_WRITE_PROTECT_ENABLE_3: Enable write protection.

Register Name	Atomic Lock Register
Mnemonic	TP.TPCHIP.PIB.I2CM.PIBI2CM_ATOMIC_LOCK_REG_E
Address	00000000000A33FF (SCOM)
Description	Atomic Lock Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_ATOMIC_LOCK_ENABLE_3: Enable atomic lock.
1:4	ROX	CC_ATOMIC_ID_3: Atomic ID.
5:7	RO	constant = 0b000
8:15	ROX	CC_ATOMIC_ACTIVITY_3: Atomic lock counter.

Register Name	Dequeuing Location of Upstream FIFO
Mnemonic	TP.TPVSB.FSI.W.FSI_SBE_FIFO.FSB_UPFIFO_DATA_OUT
Address	00000000000B0000 (SCOM)
Description	Dequeuing location of upstream FIFO

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	Reserved field.

Register Name	Status Register of Upstream FIFO
Mnemonic	TP.TPVSB.FSI.W.FSI_SBE_FIFO.FSB_UPFIFO_STATUS
Address	00000000000B0001 (SCOM)
Description	Status register of upstream FIFO

Bits	SCOM	Field Mnemonic: Description
0:5	RW	Reserved.
6	ROX	UPFIFO_STATUS_REQ_RESET_FR_SP: External service processor (SP) is requesting a FIFO reset.
7	ROX	UPFIFO_STATUS_REQ_RESET_FR_SBE: SBE is requesting a FIFO reset through downstream path.
8	ROX	UPFIFO_STATUS_DEQUEUED_EOT_FLAG: A FIFO entry has been dequeued with set EOT flag.
9	RW	Reserved.
10	ROX	UPFIFO_STATUS_FIFO_FULL: Upstream FIFO is full.
11	ROX	UPFIFO_STATUS_FIFO_EMPTY: Upstream FIFO is empty.
12:15	ROX	UPFIFO_STATUS_FIFO_ENTRY_COUNT: Number of currently hold entries.
16:23	ROX	UPFIFO_STATUS_FIFO_VALID_FLAGS: Valid flags of all currently hold entries.
24:31	ROX	UPFIFO_STATUS_FIFO_EOT_FLAGS: EOT flags of all currently hold entries.

Register Name	Applying Reset Function to Upstream and Downstream FIFO
Mnemonic	TP.TPVSB.FSI.W.FSI_SBE_FIFO.FSB_UPFIFO_RESET
Address	00000000000B0004 (SCOM)
Description	Applying reset function to upstream and downstream FIFO.

Bits	SCOM	Field Mnemonic: Description
0	WOX	Reserved field.

Register Name	Acknowledging End-of-Transfer (EOT)
Mnemonic	TP.TPVSB.FSI.W.FSI_SBE_FIFO.FSB_UPFIFO_ACK_EOT
Address	00000000000B0005 (SCOM)
Description	Acknowledging end-of-transfer (EOT).

Bits	SCOM	Field Mnemonic: Description
0	WOX	Reserved field.

Register Name	Enqueuing Location of Downstream FIFO
Mnemonic	TP.TPVSB.FSI.W.FSI_SBE_FIFO.FSB_DOWNFIFO_DATA_IN
Address	00000000000B0010 (SCOM)
Description	Enqueuing location of downstream FIFO

Bits	SCOM	Field Mnemonic: Description
0:31	WOX	Reserved field.

Register Name	Status Register of Downstream FIFO
Mnemonic	TP.TPVSB.FSI.W.FSI_SBE_FIFO.FSB_DOWNFIFO_STATUS
Address	00000000000B0011 (SCOM)
Description	Status Register of Downstream FIFO

Bits	SCOM	Field Mnemonic: Description
0:5	RW	Reserved.
6	ROX	DNFIFO_STATUS_REQ_RESET_FR_SBE: SBE is requesting a FIFO reset.
7	ROX	DNFIFO_STATUS_REQ_RESET_FR_SP: External Service Processor (SP) is requesting a FIFO reset through upstream path.
8	ROX	DNFIFO_STATUS_DEQUEUED_EOT_FLAG: A FIFO entry has been dequeued with set EOT flag.
9	RW	Reserved.
10	ROX	DNFIFO_STATUS_FIFO_FULL: Downstream FIFO is full.
11	ROX	DNFIFO_STATUS_FIFO_EMPTY: Downstream FIFO is empty.
12:15	ROX	DNFIFO_STATUS_FIFO_ENTRY_COUNT: Number of currently hold entries.
16:23	ROX	DNFIFO_STATUS_FIFO_VALID_FLAGS: Valid flags of ALL currently hold entries.
24:31	ROX	DNFIFO_STATUS_FIFO_EOT_FLAGS: EOT flags of ALL currently hold entries.

Register Name	Signaling Location for End-of-Transfer (EOT)
Mnemonic	TP.TPVSB.FSI.W.FSI_SBE_FIFO.FSB_DOWNFIFO_SIG_EOT
Address	00000000000B0012 (SCOM)
Description	Signaling location for End-of-transfer (EOT)

Bits	SCOM	Field Mnemonic: Description
0	WOX	Reserved field.

Register Name	Signaling Location for Requesting FIFO Reset
Mnemonic	TP.TPVSB.FSI.W.FSI_SBE_FIFO.FSB_DOWNFIFO_REQ_RESET
Address	00000000000B0013 (SCOM)
Description	Signaling location for requesting FIFO reset.

Bits	SCOM	Field Mnemonic: Description
0	WOX	Reserved field.

Register Name	PIB History Control and Status Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_PIBHIST_CTRL_STATUS_REG
Address	00000000000D0000 (SCOM)
Description	PIB History Control and Status Register

Bits	SCOM	Field Mnemonic: Description
0	RW	HIST_MANUAL_MODE_EN: 0: history trace always running (default). 1 = Enable manual start/stop of history trace.
1	RW	HIST_START_NOT_STOP: Only valid if HIST_MANUAL_MODE_EN = 1. 0 = Stop history trace (default). 1 = Start history trace.
2	RWX	HIST_FREEZE_HISTORY: 1 = Disables history trace and freezes history registers. This bit is also set when the unit stops on error.
3	RWX	HIST_RESET_HISTORY: 1 = Clear history registers and reset control FSM. This bit is self-resetting.
4	RW	HIST_TRACE_PSU_TRAFFIC: Controls if the PIB traffic from/to the PIB slave address of the PSU is included in history trace. 0 = Do not trace PSU traffic (default). 1 = include PSU traffic.
5:7	RW	HIST_STOP_ON_ERROR_GT: Greater than value for RSP_INFO to stop history sampling. For example: 000 = Default. Stop sampling with RSP_INFO > 0. 001 = Stop sampling with RSP_INFO > 1, and so forth. 111 = Stop on error disabled.
8:15	RW	HIST_CTRL_STATUS_REG_RESERVED: Reserved.

Register Name	PIB History Filter Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_PIBHIST_FILTER_REG
Address	00000000000D0001 (SCOM)
Description	PIB History Filter Register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	HIST_FILTER_ADDRESS: Compare address for history trace.
32:63	RW	HIST_FILTER_MASK: Compare mask for history trace.

Register Name	PIB History Last Address Trace Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_PIBHIST_LAST_ADDR_TRACE_REG
Address	00000000000D0002 (SCOM)
Description	PIB History Last Address Trace Register

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	HIST_LAST_ADDR_TRACE: History trace: last address.

Register Name	PIB History Last Request Data Trace Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_PIBHIST_LAST_REQDATA_TRACE_REG
Address	00000000000D0003 (SCOM)
Description	PIB History Last Request Data Trace Register

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	HIST_LAST_REQDATA_TRACE: History trace: last request data.

Register Name	PIB History Last Response Data Trace Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_PIBHIST_LAST_RSPDATA_TRACE_REG
Address	00000000000D0004 (SCOM)
Description	PIB History Last Response Data Trace Register

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	HIST_LAST_RSPDATA_TRACE: History trace: last response data.

Register Name	PIB History Second Last Address Trace Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_PIBHIST_2NDLAST_ADDR_TRACE_REG
Address	00000000000D0005 (SCOM)
Description	PIB History Second Last Address Trace Register

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	HIST_2NDLAST_ADDR_TRACE: History trace: second last address.

Register Name	PIB History Second Last Request Data Trace Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_PIBHIST_2NDLAST_REQDATA_TRACE_REG
Address	00000000000D0006 (SCOM)
Description	PIB History Second Last Request Data Trace Register

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	HIST_2NDLAST_REQDATA_TRACE: History trace: second last request data.

Register Name	PIB History Second Last Response Data Trace Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_PIBHIST_2NDLAST_RSPDATA_TRACE_REG
Address	00000000000D0007 (SCOM)
Description	PIB History Second Last Response Data Trace Register

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	HIST_2NDLAST_RSPDATA_TRACE: History trace: second last response data.

Register Name	Instrumentation Control and Status Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR_CTRL_STATUS_REG
Address	00000000000D0010 (SCOM)
Description	Instrumentation Control and Status Register

Bits	SCOM	Field Mnemonic: Description
0:1	RW	INSTR0_MODE: Mode control for instrumentation unit 0: 00 = Disabled. 01 = PIB mode (default). 10 = PCB interrupt mode. 11 = Reserved.
2	RW	INSTR0_STOP_TIMER_EN: 0: Stop measurement manually (default). 1 = Stop measurement based on STOP_TIMER.
3:5	RW	INSTR0_STOP_ON_ERROR_GT: Greater than value for RSP_INFO to stop instrumentation. 000 (default) = Stop sampling with RSP_INFO > 0. 001 = Stop sampling with RSP_INFO > 1, and so forth.
6	RWX	INSTR0_START. 1 = Start measurement (self-resetting with INSTR0_CYCLECNT_RUNNING = 1).
7	RWX	INSTR0_STOP. 1 = Stop measurement (self-resetting with INSTR0_CYCLECNT_RUNNING = 0).
8:9	RW	INSTR1_MODE: Mode control for instrumentation unit 1: 00: Disabled. 01: PIB mode (default). 10: PCB interrupt mode. 11: Reserved.
10	RW	INSTR1_STOP_TIMER_EN: 0 = Stop measurement manually (default). 1 = Stop measurement based on STOP_TIMER.
11:13	RW	INSTR1_STOP_ON_ERROR_GT: Greater than value for RSP_INFO to stop instrumentation. For example: 000 (default) = Stop sampling with RSP_INFO > 0. 001 = Stop sampling with RSP_INFO > 1, and so forth.
14	RWX	INSTR1_START: 1: Start measurement (self-resetting with INSTR1_CYCLECNT_RUNNING = 1).
15	RWX	INSTR1_STOP: 1: Stop measurement (self-resetting with INSTR1_CYCLECNT_RUNNING = 0).
16:17	RW	INSTR2_MODE: Mode control for instrumentation unit 2: 00: Disabled. 01: PIB mode (default). 10: PCB interrupt mode. 11: Reserved.
18	RW	INSTR2_STOP_TIMER_EN: 0: Stop measurement manually (default). 1: Stop measurement based on STOP_TIMER.
19:21	RW	INSTR2_STOP_ON_ERROR_GT: Greater than value for RSP_INFO to stop instrumentation. For example: 000 (default) = Stop sampling with RSP_INFO > 0. 001 = Stop sampling with RSP_INFO > 1, and so forth.
22	RWX	INSTR2_START: 1: Start measurement (self-resetting with INSTR2_CYCLECNT_RUNNING = 1).
23	RWX	INSTR2_STOP: 1: Stop measurement (self-resetting with INSTR2_CYCLECNT_RUNNING = 0).
24	ROX	INSTR0_CYCLECNT_RUNNING: Instrumentation unit 0: flag for cycle counter running.
25	ROX	INSTR0_BUSYCNT_RUNNING: Instrumentation unit 0: flag for busy counter running.
26	ROX	INSTR1_CYCLECNT_RUNNING: Instrumentation unit 1: flag for cycle counter running.
27	ROX	INSTR1_BUSYCNT_RUNNING: Instrumentation unit 1: flag for busy counter running.
28	ROX	INSTR2_CYCLECNT_RUNNING: Instrumentation unit 2: flag for cycle counter running.
29	ROX	INSTR2_BUSYCNT_RUNNING: Instrumentation unit 2: flag for busy counter running.
30	RWX	INSTR0_STOPPED_ON_ERROR: Indicates that instrumentation unit 0 has stopped because of a RSP_INFO > INSTR0_STOP_ON_ERROR_GT. Resetting this bit after the error condition is gone resumes the measurement.

Bits	SCOM	Field Mnemonic: Description
31	RWX	INSTR1_STOPPED_ON_ERROR: Indicates that instrumentation unit 1 has stopped because of a RSP_INFO > INSTR1_STOP_ON_ERROR_GT. Resetting this bit after the error condition is gone resumes the measurement.
32	RWX	INSTR2_STOPPED_ON_ERROR: Indicates that instrumentation unit 1 has stopped because of a RSP_INFO > INSTR1_STOP_ON_ERROR_GT. Resetting this bit after the error condition is gone resumes the measurement.
33	RWX	INSTR0_RESET: 1 = Clear all measurement registers and resets measurement control of instrumentation unit 0. This bit is self-resetting.
34	RWX	INSTR1_RESET: 1 = Clear all measurement registers and resets measurement control of instrumentation unit 1. This bit is self-resetting.
35	RWX	INSTR2_RESET: 1 = Clear all measurement registers and resets measurement control of instrumentation unit 2. This bit is self-resetting.
36	RW	INSTR_INCLUDE_PSU_TRAFFIC: Controls if the PIB traffic from/to the PIB slave address of the PSU is included in measurement. 0 = Do not measure PSU traffic (default). 1 = Include PSU traffic.
37:39	RW	INSTR_CTRL_STATUS_REG_RESERVED: reserved.

Register Name	Instrumentation Stop Timer Register 0
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR0_STOP_TIMER_REG
Address	00000000000D0020 (SCOM)
Description	Instrumentation Stop Timer Register 0

Bits	SCOM	Field Mnemonic: Description
0:39	RW	INSTR0_STOP_TIMER: 40 bit threshold value for instrumentation unit 0 (in # of PIB cycles).

Register Name	Instrumentation Filter Register 0
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR0_FILTER_REG
Address	00000000000D0021 (SCOM)
Description	Instrumentation Filter Register 0

Bits	SCOM	Field Mnemonic: Description
0:31	RW	INSTR0_FILTER_CONTENT: Compare data for instrumentation unit 0.
32:63	RW	INSTR0_FILTER_MASK: Compare mask for instrumentation unit 0.

Register Name	Instrumentation Cycle Count Register 0
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR0_CYCLECNT_REG
Address	00000000000D0022 (SCOM)
Description	Instrumentation Cycle Count Register 0

Bits	SCOM	Field Mnemonic: Description
0:39	ROX	INSTR0_CYCLECNT: Measured cycle count of instrumentation unit 0.

Register Name	Instrumentation Active Cycle Count Register 0
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR0_ACTCYCLECNT_REG
Address	00000000000D0023 (SCOM)
Description	Instrumentation Active Cycle Count Register 0

Bits	SCOM	Field Mnemonic: Description
0:39	ROX	INSTR0_ACTCYCLECNT: Measured active cycle count of instrumentation unit 0.

Register Name	Instrumentation Event Count Register 0
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR0_EVENTCNT_REG
Address	00000000000D0024 (SCOM)
Description	Instrumentation Event Count Register 0

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	INSTR0_EVENTCNT: Measured event count of instrumentation unit 0. (Number of PIB accesses or number of PCB interrupts).

Register Name	Max Cycle Count Register 0
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR0_MAXCYCLECNT_REG
Address	00000000000D0025 (SCOM)
Description	Max Cycle Count Register 0

Bits	SCOM	Field Mnemonic: Description
0:39	ROX	INSTR0_MAXCYCLECNT: Maximum active cycle count of instrumentation unit 0.

Register Name	Min Cycle Count Register 0
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR0_MINCYCLECNT_REG
Address	00000000000D0026 (SCOM)
Description	Min Cycle Count Register 0

Bits	SCOM	Field Mnemonic: Description
0:39	ROX	INSTR0_MINCYCLECNT: Minimum active cycle count of instrumentation unit 0. Initial value is xFFFFFFFFFF.

Register Name	Instrumentation Stop Timer Register 1
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR1_STOP_TIMER_REG
Address	00000000000D0030 (SCOM)
Description	Instrumentation Stop Timer Register 1

Bits	SCOM	Field Mnemonic: Description
0:39	RW	INSTR1_STOP_TIMER: 40 bit threshold value for instrumentation unit 0 (in the number of PIB cycles).

Register Name	Instrumentation Filter Register 1
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR1_FILTER_REG
Address	00000000000D0031 (SCOM)
Description	Instrumentation Filter Register 1

Bits	SCOM	Field Mnemonic: Description
0:31	RW	INSTR1_FILTER_CONTENT: Compare data for instrumentation unit 1.
32:63	RW	INSTR1_FILTER_MASK: Compare mask for instrumentation unit 1.

Register Name	Instrumentation Cycle Count Register 1
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR1_CYCLECNT_REG
Address	00000000000D0032 (SCOM)
Description	Instrumentation Cycle Count Register 1

Bits	SCOM	Field Mnemonic: Description
0:39	ROX	INSTR1_CYCLECNT: Measured cycle count of instrumentation unit 1.

Register Name	Instrumentation Active Cycle Count Register 1
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR1_ACTCYCLECNT_REG
Address	00000000000D0033 (SCOM)
Description	Instrumentation Active Cycle Count Register 1

Bits	SCOM	Field Mnemonic: Description
0:39	ROX	INSTR1_ACTCYCLECNT: Measured active cycle count of instrumentation unit 1.

Register Name	Instrumentation Event Count Register 1
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR1_EVENTCNT_REG
Address	00000000000D0034 (SCOM)
Description	Instrumentation Event Count Register 1

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	INSTR1_EVENTCNT: Measured event count of instrumentation unit 1. (Number of PIB accesses or number of PCB interrupts).

Register Name	Max Cycle Count Register 1
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR1_MAXCYCLECNT_REG
Address	00000000000D0035 (SCOM)
Description	Max Cycle Count Register 1

Bits	SCOM	Field Mnemonic: Description
0:39	ROX	INSTR1_MAXCYCLECNT: Maximum active cycle count of instrumentation unit 1.

Register Name	Min Cycle Count Register 1
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR1_MINCYCLECNT_REG
Address	00000000000D0036 (SCOM)
Description	Min Cycle Count Register 1

Bits	SCOM	Field Mnemonic: Description
0:39	ROX	INSTR1_MINCYCLECNT: Minimum active cycle count of instrumentation unit 1. Initial value: xFFFFFFFFFF.

Register Name	Instrumentation Stop Timer Register 2
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR2_STOP_TIMER_REG
Address	00000000000D0040 (SCOM)
Description	Instrumentation Stop Timer Register 2

Bits	SCOM	Field Mnemonic: Description
0:39	RW	INSTR2_STOP_TIMER: 40-bit threshold value for instrumentation unit 0 (in number of PIB cycles).

Register Name	Instrumentation Filter Register 2
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR2_FILTER_REG
Address	00000000000D0041 (SCOM)
Description	Instrumentation Filter Register 2

Bits	SCOM	Field Mnemonic: Description
0:31	RW	INSTR2_FILTER_CONTENT: Compare data for instrumentation unit 2.
32:63	RW	INSTR2_FILTER_MASK: Compare mask for instrumentation unit 2.

Register Name	Instrumentation Cycle Count Register 2
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR2_CYCLECNT_REG
Address	00000000000D0042 (SCOM)
Description	Instrumentation Cycle Count Register 2

Bits	SCOM	Field Mnemonic: Description
0:39	ROX	INSTR2_CYCLECNT: Measured cycle count of instrumentation unit 2.

Register Name	Instrumentation Active Cycle Count Register 2
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR2_ACTCYCLECNT_REG
Address	00000000000D0043 (SCOM)
Description	Instrumentation Active Cycle Count Register 2

Bits	SCOM	Field Mnemonic: Description
0:39	ROX	INSTR2_ACTCYCLECNT: Measured active cycle count of instrumentation unit 2.

Register Name	Instrumentation Event Count Register 2
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR2_EVENTCNT_REG
Address	00000000000D0044 (SCOM)
Description	Instrumentation Event Count Register 2

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	INSTR2_EVENTCNT: Measured event count of instrumentation unit 2. (# of PIB accesses or # of PCB interrupts).

Register Name	Max Cycle Count Register 2
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR2_MAXCYCLECNT_REG
Address	00000000000D0045 (SCOM)
Description	Max Cycle Count Register 2

Bits	SCOM	Field Mnemonic: Description
0:39	ROX	INSTR2_MAXCYCLECNT: Maximum active cycle count of instrumentation unit 2.

Register Name	Min Cycle Count Register 2
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_INSTR2_MINCYCLECNT_REG
Address	00000000000D0046 (SCOM)
Description	Min Cycle Count Register 2

Bits	SCOM	Field Mnemonic: Description
0:39	ROX	INSTR2_MINCYCLECNT: Minimum active cycle count of instrumentation unit 2. Initial value: xFFFFFFFFFF.

Register Name	Host/SBE Mailbox 0 Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_HOST_SBE_MBOX0_REG
Address	00000000000D0050 (SCOM)
Description	Host/SBE Mailbox 0 Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	HOST_SBE_MBOX0: Mailbox Register for Host-SBE communication.

Register Name	Host/SBE Mailbox 1 Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_HOST_SBE_MBOX1_REG
Address	00000000000D0051 (SCOM)
Description	Host/SBE Mailbox 1 Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	HOST_SBE_MBOX1: Mailbox Register for Host-SBE communication.

Register Name	Host/SBE Mailbox 2 Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_HOST_SBE_MBOX2_REG
Address	00000000000D0052 (SCOM)
Description	Host/SBE Mailbox 2 Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	HOST_SBE_MBOX2: Mailbox Register for Host-SBE communication.

Register Name	Host/SBE Mailbox 3 Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_HOST_SBE_MBOX3_REG
Address	00000000000D0053 (SCOM)
Description	Host/SBE Mailbox 3 Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	HOST_SBE_MBOX3: Mailbox Register for Host-SBE communication.

Register Name	Host/SBE Mailbox 4 Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_HOST_SBE_MBOX4_REG
Address	00000000000D0054 (SCOM)
Description	Host/SBE Mailbox 4 Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	HOST_SBE_MBOX4: Mailbox Register for Host-SBE communication.

Register Name	Host/SBE Mailbox 5 Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_HOST_SBE_MBOX5_REG
Address	00000000000D0055 (SCOM)
Description	Host/SBE Mailbox 5 Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	HOST_SBE_MBOX5: Mailbox Register for Host-SBE communication.

Register Name	Host/SBE Mailbox 6 Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_HOST_SBE_MBOX6_REG
Address	00000000000D0056 (SCOM)
Description	Host/SBE Mailbox 6 Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	HOST_SBE_MBOX6: Mailbox Register for Host-SBE communication.

Register Name	Host/SBE Mailbox 7 Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_HOST_SBE_MBOX7_REG
Address	00000000000D0057 (SCOM)
Description	Host/SBE Mailbox 7 Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	HOST_SBE_MBOX7: Mailbox Register for Host-SBE communication.

Register Name	SBE Doorbell Register
Mnemonic	TP.TPCHIP.PIB.PSU.PSU_SBE_DOORBELL_REG
Address	00000000000D0060 (SCOM) 00000000000D0061 (SCOM1) 00000000000D0062 (SCOM2)
Description	SBE Doorbell Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_AND	WO_OR	SBE_DOORBELL_0: Doorbell Register bit to trigger SBE interrupt psu_sbe_interrupt_msg_available. Set by host firmware to inform the SBE about a waiting message in the Host/SBE Mailbox Registers. PSU_SBE_INTERRUPT_MSG_AVAILABLE is set if one of the 16 doorbell bits is set.

Register Name	MIB External Interface SIB Information
Mnemonic	TP.TPCHIP.PIB.SBE.SBEPM.MIB_XISIB
Address	00000000000E0006 (SCOM)
Description	MIB External Interface SIB Information

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	MIB_XISIB_PIB_ADDR: PIB transaction buffer current or previous transaction byte address.
32	ROX	MIB_XISIB_PIB_R_NW: PIB transaction buffer current or previous transaction type, read if ‘1’ and write if ‘0’.
33	ROX	MIB_XISIB_PIB_BUSY: Indicates if the transaction buffer is occupied with an ongoing transaction. Busy is cleared when the transaction is completed.

Bits	SCOM	Field Mnemonic: Description
34	ROX	MIB_XISIB_PIB_IMPRECISE_ERROR_PENDING: Indicates that the current or previous transaction had an imprecise error. Cleared when it is reported back to PPE. **Note:** The address of the erroneous transaction is copied into the SGB address latches such that the PIB interface can continue to service I-fetches (only in case of SBE instance).
35:48	RO	constant = 0b00000000000000
49:51	ROX	MIB_XISIB_PIB_RSP_INFO: PIB transaction buffer response information. Current or previous transaction got an error on the PIB interface when nonzero.
52:61	RO	constant = 0b0000000000
62	ROX	MIB_XISIB_PIB_IFETCH_PENDING: When set to '1', indicates that an instruction fetch is pending on the PIB interface.
63	ROX	MIB_XISIB_PIB_DATAOP_PENDING: Indicates a data transaction is pending on the PIB interface when set to '1'.

Register Name	MIB External Interface MEM Information
Mnemonic	TP.TPCHIP.PIB.SBE.SBEPM.SBEPPE.MIB.MIB_XIMEM
Address	00000000000E0007 (SCOM)
Description	MIB External Interface MEM Information

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	MIB_XIMEM_MEM_ADDR: MEM transaction buffer: current or previous transaction byte address.
32	ROX	MIB_XIMEM_MEM_R_NW: MEM transaction buffer: current or previous transaction type. 0 = Write 1 = Read
33	ROX	MIB_XIMEM_MEM_BUSY: Indicates if the transaction buffer is occupied with an ongoing transaction. Busy is cleared when the transaction is completed.
34	ROX	MIB_XIMEM_MEM_IMPRECISE_ERROR_PENDING: Indicates that the current or previous transaction had an imprecise error. Cleared when it is reported back to PPE. **Note:** The address of the erroneous transaction is copied into the SGB address latches such that the memory interface can continue to service I-fetches.
35:42	ROX	MIB_XIMEM_MEM_BYTE_ENABLE: MEM transaction buffer: current or previous transaction byte enables.
43	ROX	MIB_XIMEM_MEM_LINE_MODE: MEM transaction buffer: current or previous transaction line mode. Indicates a 32 B read request when set to '1'.
44:48	RO	constant = 0b00000
49:51	ROX	MIB_XIMEM_MEM_ERROR: MEM transaction buffer error code. A current or previous transaction received an error on the memory interface when nonzero.
52:61	RO	constant = 0b0000000000
62	ROX	MIB_XIMEM_MEM_IFETCH_PENDING: When set to '1', indicates that an instruction fetch is pending on the MEM interface.
63	ROX	MIB_XIMEM_MEM_DATAOP_PENDING: When set to '1', indicates that a data transaction is pending on the MEM interface.

Register Name	MIB External Interface Store Gather Buffer Information
Mnemonic	TP.TPCHIP.PIB.SBE.SBEPM.SBEPPE.MIB.MIB_XISGB
Address	00000000000E0008 (SCOM)
Description	MIB External Interface Store Gather Buffer Information

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	MIB_XISGB_STORE_ADDRESS: Contains either the SGB address 4-byte tag or the address of an imprecise store error that occurred when a previous data transaction was done.
32:34	RO	constant = 0b000
35	ROX	MIB_XIMEM_MEM_IMPRECISE_ERROR_PENDING: Indicates that the current or previous transaction had an imprecise error. Cleared when it is reported back to PPE. **Note:** The address of the erroneous transaction is copied into the SGB address latches such that the memory interface can continue to service I-fetches.
36:39	ROX	MIB_XISGB_SGB_BYTE_VALID: Byte valid bits within the 4 B tag. Cleared when the SGB contents are committed, that is, when the SGB contents are either flushed to memory or copied into the transaction buffer. **Note:** These bits can never be set if a MEM IMPRECISE ERROR is pending.
40:62	RO	constant = 0b00000000000000000000000
63	ROX	MIB_XISGB_SGB_FLUSH_PENDING: When set to ‘1’, indicates that a store gather buffer flush to memory is pending on the MEM interface. This can happen only if MEM_BUSY in the MEM transaction buffer is ‘0’.

Register Name	MIB External Interface I-cache Information
Mnemonic	TP.TPCHIP.PIB.SBE.SBEPM.SBEPPE.MIB.MIB_XIICAC
Address	00000000000E0009 (SCOM)
Description	MIB External Interface I-cache Information

Bits	SCOM	Field Mnemonic: Description
0:26	ROX	Reserved field.
27:31	RO	constant = 0b00000
32	ROX	Reserved field.
33	RO	constant = 0b0
34	ROX	MIB_XISIB_PIB_IFETCH_PENDING: When set to ‘1’, indicates that an instruction fetch is pending on the PIB interface.
35	ROX	MIB_XIMEM_MEM_IFETCH_PENDING: When set to ‘1’, indicates that an instruction fetch is pending on the MEM interface.
36:39	ROX	Reserved field.
40:43	ROX	Reserved field.
44	RO	constant = 0b0
45	ROX	Reserved field.
46	ROX	Reserved field.
47	ROX	Reserved field.
48:63	RO	constant = 0b0000000000000000

Register Name	Chiplet Control Register 0
Mnemonic	TP.TPCHIP.TPC.CPLT_CTRL0
Address	0000000001000000 (SCOM) 0000000001000010 (SCOM1) 0000000001000020 (SCOM2)
Description	VITL CCFG

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_OR	WO_CLEAR	CTRL_CC_ABSTCLK_MUXSEL_DC: Select ABIST clock source for Arrays on Chiplet Boundary. When set to 1, clocks where used from the chiplet with the ABIST.
1	RW	WO_OR	WO_CLEAR	TC_UNIT_SYNCCLK_MUXSEL_DC: Select the sync clock for asynchronous asynclatches (initial value 1).
2	RW	WO_OR	WO_CLEAR	CTRL_CC_FLUSHMODE_INH_DC: Prevent plats from going into flush mode (initial value 1).
3	RW	WO_OR	WO_CLEAR	CTRL_CC_FORCE_ALIGN_DC: Force align signal to be sent (initial value 1, drop before dropping FLUSHMODE_INH).
4	RW	WO_OR	WO_CLEAR	TC_UNIT_ARY_WRT_THRU_DC: Set array into write-through mode. Used for LBIST.
5	RW	WO_OR	WO_CLEAR	TC_UNIT_AVP_MODE: AVP Mode. Switches refresh pulse to phase counter.
6	RW	WO_OR	WO_CLEAR	FREE_USAGE_6A: Free usage.
7	RW	WO_OR	WO_CLEAR	FREE_USAGE_7A: Free usage.
8	RW	WO_OR	WO_CLEAR	CTRL_CC_ABIST_RECOV_DISABLE_DC: New signal to disable recovery.
9	RW	WO_OR	WO_CLEAR	FREE_USAGE_9A: Free usage.
10	RW	WO_OR	WO_CLEAR	TC_UNIT_IOBIST_TX_WRAP_ENABLE_DC:
11	RW	WO_OR	WO_CLEAR	RESERVED_11A: Reserved.
12	RW	WO_OR	WO_CLEAR	TC_SKIT_MODE_BIST_DC:
13	RW	WO_OR	WO_CLEAR	TC_UNIT_DETERMINISTIC_TEST_ENABLE_DC: Forces login into deterministic test mode for example, for LBIST.
14	RW	WO_OR	WO_CLEAR	TC_UNIT_CONSTRAIN_SAFESCAN_DC: Safe scan of N1L latches. Prevent LCK when switching SE.
15	RW	WO_OR	WO_CLEAR	TC_UNIT_RRFA_TEST_ENABLE_DC:
16	RW	WO_OR	WO_CLEAR	TC_NBTI_HDR_ENABLE_OVR_DC: NBTI.
17	RW	WO_OR	WO_CLEAR	TC_NBTI_PROBE_GATE_DC: NBTI.
18	RW	WO_OR	WO_CLEAR	RESERVED_18A: Reserved.
19	RW	WO_OR	WO_CLEAR	RESERVED_19A: Reserved.
20:27	RW	WO_OR	WO_CLEAR	TC_PSRO_SEL_DC: PSRO Select.
28	RW	WO_OR	WO_CLEAR	TC_BSC_WRAPSEL_DC: Wrap select for BSC.
29	RW	WO_OR	WO_CLEAR	TC_BSC_INTMODE_DC: Initial mode for BSC.
30	RW	WO_OR	WO_CLEAR	TC_BSC_INV_DC: INV for BSC mode.
31	RW	WO_OR	WO_CLEAR	TC_BSC_EXTMODE_DC: EXT mode for BSC.
32	RW	WO_OR	WO_CLEAR	TC_REFCLK_DRVR_EN_DC: REFCLOCK driver enable.
33	RW	WO_OR	WO_CLEAR	RESERVED_33A: Reserved.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
34	RW	WO_OR	WO_CLEAR	RESERVED_34A: Reserved.
35	RW	WO_OR	WO_CLEAR	RESERVED_35A: Reserved.
36	RW	WO_OR	WO_CLEAR	TC_OELCC_EDGE_DELAYED_DC: Allows to delay the align by one fast cycle. Only used in dual mesh chiplets.
37	RW	WO_OR	WO_CLEAR	TC_OELCC_ALIGN_FLUSH_DC: Forces the align and odd/even toggling latch into flush state. Used for DFT only.
38	RW	WO_OR	WO_CLEAR	RESERVED_38A: Reserved.
39	RW	WO_OR	WO_CLEAR	RESERVED_39A: Reserved.
40:41	RW	WO_OR	WO_CLEAR	CTRL_MISC_CLKDIV_SEL_DC: Clock Divider Select 00 = 1024:1 01 = 64:1 10 = 16:1 11 = 4:1.
42	RW	WO_OR	WO_CLEAR	RESERVED_42A: Reserved.
43	RW	WO_OR	WO_CLEAR	RESERVED_43A: Reserved.
44	RW	WO_OR	WO_CLEAR	CTRL_CC_DCTEST_DC: TE = 1 only. Enable DCTEST.
45	RW	WO_OR	WO_CLEAR	CTRL_CC_OTP_PRGMODE_DC: TE = 1 only. OTP ROM Program Mode.
46	RW	WO_OR	WO_CLEAR	CTRL_CC_SSS_CALIBRATE_DC: TE= 1 only. Sensors Calibration.
47	RW	WO_OR	WO_CLEAR	CTRL_CC_PIN_LBIST_DC: TE = 1 only. PIN LBIST mode. LBIST is controlled by pin, not by OPCG.
48	RW	WO_OR	WO_CLEAR	FREE_USAGE_48A: Free usage.
49	RW	WO_OR	WO_CLEAR	FREE_USAGE_49A: Free usage.

Register Name	Chiplet Status Register
Mnemonic	TP.TPCHIP.TPC.CPLT_STAT0
Address	0000000001000100 (SCOM)
Description	Interrupt send out on bit change if not masked by the Chiplet Mask Register. Only masks the interrupt, not the status register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SRAM_ABIST_DONE_DC: SRAM,EDRAM, ABIST done.
1	ROX	DRAM_ABIST_DONE_DC: Unused in POWER9 DD1.
2	ROX	RESERVED_2E: Reserved.
3	ROX	RESERVED_3E: Reserved.
4	ROX	TC_DIAG_PORT0_OUT: Diagnostic out port.
5	ROX	TC_DIAG_PORT1_OUT: Diagnostic out port.
6	ROX	RESERVED_6E: Reserved.
7	ROX	PLL_DESTOUT: PLL destout.
8	ROX	CC_CTRL_OPCG_DONE_DC: OPCG done. For LBIST, ABIST, or other OPCG runs.
9	ROX	CC_CTRL_CHIPLET_IS_ALIGNED_DC: Indicates that the chiplet is aligned.
10	ROX	FREE_USAGE_10E: Free usage.
11	ROX	FREE_USAGE_11E: Free usage.

21	ROX	FREE_USAGE_21E: Free usage.
22	ROX	FREE_USAGE_22E: Free usage.
23	ROX	FREE_USAGE_23E: Free usage.

Register Name	Chiplet Mask Register
Mnemonic	TP.TPCHIP.TPC.CPLT_MASK0
Address	0000000001000101 (SCOM)
Description	Masking the interrupt on a bitchange of the Chiplet Status Register. Does not mask the status itself.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CPLTMASK0: Masking bit-wise of the Chiplet Status Register.

Register Name	CTRL Protect Mode Register
Mnemonic	TP.TPCHIP.TPC.CTRL_PROTECT_MODE_REG
Address	00000000010003FE (SCOM)
Description	CTRL Protect Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CTRL_READ_PROTECT_ENABLE: Enable read protection.
1	RW	CTRL_WRITE_PROTECT_ENABLE: Enable write protection.

Register Name	Atomic Lock Register
Mnemonic	TP.TPCHIP.TPC.CTRL_ATOMIC_LOCK_REG
Address	00000000010003FF (SCOM)
Description	Atomic Lock Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CTRL_ATOMIC_LOCK_ENABLE: Enable atomic lock.
1:4	ROX	CTRL_ATOMIC_ID: Atomic ID.
5:7	RO	constant = 0b000
8:15	ROX	CTRL_ATOMIC_ACTIVITY: Atomic lock counter.

Register Name	PSCOMLE mode register
Mnemonic	TP.TPCHIP.TPC.EPS.PSC.PSCOM_MODE_REG
Address	0000000001010000 (SCOM)
Description	PSCOMLE mode register

Bits	SCOM	Field Mnemonic: Description
0	RW	ABORT_ON_PCB_ADDR_PARITY_ERROR: Abort on PCB address parity error.
1	RW	ABORT_ON_PCB_WDATA_PARITY_ERROR: Abort on PCB WDATA parity error.
2	RW	ABORT_ON_DL_RETURN_P0_ERROR: Abort on DL return P0 error.
3	RW	ABORT_ON_DL_RETURN_WDATA_PARITY_ERROR: Abort on DL return WDATA parity error.
4	RW	WATCHDOG_ENABLE: WATCHDOG_ENABLE.
5:6	RW	SCOM_HANG_LIMIT: 0b11 = 256 0b10 = 512 0b01 = 768 0b00 = 1023
7	RW	FORCE_ALL_RINGS: Set to logic 1 if all rings should be enabled independent of ring address.
8	RW	FSM_SELFRESET_ON_STATEVEC_PARITYERROR_ENABLE:
9:11	RW	RESERVED_PSCOM_MODE_LT: Reserved.

Register Name	PSCOMLE error register
Mnemonic	TP.TPCHIP.TPC.EPS.PSC.PSC.PSCOM_STATUS_ERROR_REG
Address	0000000001010001 (SCOM)
Description	PSCOMLE Error Register.

Bits	SCOM	Field Mnemonic: Description
0	RWX	ACCUMULATED_PCB_WDATA_PARITY_ERROR: Accumulated PCB WDATA parity error.
1	RWX	ACCUMULATED_PCB_ADDRESS_PARITY_ERROR: Accumulated PCB address parity error.
2	RWX	ACCUMULATED_DL_RETURN_WDATA_PARITY_ERROR: Accumulated DL return WDATA parity error.
3	RWX	ACCUMULATED_DL_RETURN_P0_ERROR: Accumulated DL return P0 error.
4	RWX	ACCUMULATED_UL_RDATA_PARITY_ERROR: Accumulated UL RDATA parity error.
5	RWX	ACCUMULATED_UL_P0_ERROR: Accumulated UL P0 error.
6	RWX	ACCUMULATED_PARITY_ERROR_ON_INTERFACE_MACHINE: Accumulated parity error on the interface machine.
7	RWX	ACCUMULATED_PARITY_ERROR_ON_P2S_MACHINE: Accumulated parity error on P2S machine.
8	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Accumulated timeout while waiting for ULCCH.
9	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Accumulated timeout while waiting for DLDCH return.
10	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Accumulated timeout while waiting for ULDCH.
11	RWX	ACCUMULATED_PSCOM_PARALLEL_WRITE_NVLD: Accumulated PSCOM parallel write NVLD.
12	RWX	ACCUMULATED_PSCOM_PARALLEL_READ_NVLD: Accumulated PSCOM parallel read NVLD.
13	RWX	ACCUMULATED_PSCOM_PARALLEL_ADDR_INVALID: Accumulated PSCOM parallel ADDR_INVALID.
14	RWX	ACCUMULATED_PCB_COMMAND_PARITY_ERROR: Accumulated PCB command parity error.
15	RWX	ACCUMULATED_GENERAL_TIMEOUT: Accumulated general timeout.
16	RWX	ACCUMULATED_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Accumulated satellite acknowledge access violation.
17	RWX	ACCUMULATED_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Accumulated satellite acknowledge invalid register.
18	RWX	TRAPPED_PCB_WDATA_PARITY_ERROR: Trapped PCB WDATA parity error.
19	RWX	TRAPPED_PCB_ADDRESS_PARITY_ERROR: Trapped PCB address parity error.
20	RWX	TRAPPED_DL_RETURN_WDATA_PARITY_ERROR: Trapped DL return WDATA parity error.
21	RWX	TRAPPED_DL_RETURN_P0_ERROR: Trapped DL return P0 error.
22	RWX	TRAPPED_UL_RDATA_PARITY_ERROR: Trapped UL RDATA parity error.
23	RWX	TRAPPED_UL_P0_ERROR: Trapped UL P0 error.
24	RWX	TRAPPED_PARITY_ERROR_ON_INTERFACE_MACHINE: Trapped parity error on interface machine.
25	RWX	TRAPPED_PARITY_ERROR_ON_P2S_MACHINE: Trapped parity error on the P2S machine.
26	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Trapped timeout while waiting for ULCCH.
27	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Trapped timeout while waiting for DLDCH return.
28	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Trapped timeout while waiting for ULDCH.

Bits	SCOM	Field Mnemonic: Description
29	RWX	TRAPPED_PSCOM_PARALLEL_WRITE_NVLD: Trapped PSCOM parallel write NVLD.
30	RWX	TRAPPED_PSCOM_PARALLEL_READ_NVLD: Trapped PSCOM parallel read NVLD.
31	RWX	TRAPPED_PSCOM_PARALLEL_ADDR_INVALID: Trapped PSCOM parallel ADDR invalid.
32	RWX	TRAPPED_PCB_COMMAND_PARITY_ERROR: Trapped PCB command parity error.
33	RWX	TRAPPED_GENERAL_TIMEOUT: Trapped general timeout.
34	RWX	TRAPPED_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Trapped satellite acknowledge access violation.
35	RWX	TRAPPED_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Trapped satellite acknowledge invalid register.

Register Name	**PSCOMLE error mask register**
Mnemonic	TP.TPCHIP.TPC.EPS.PSC.PSC.PSCOM_ERROR_MASK
Address	0000000001010002 (SCOM)
Description	PSCOMLE Error Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RW	MASK_PCB_WDATA_PARITY_ERROR: Mask PCB WDATA parity error.
1	RW	MASK_PCB_ADDRESS_PARITY_ERROR: Mask PCB address parity error.
2	RW	MASK_DL_RETURN_WDATA_PARITY_ERROR: Mask DL return WDATA parity error.
3	RW	MASK_DL_RETURN_P0_ERROR: Mask DL return P0 error.
4	RW	MASK_UL_RDATA_PARITY_ERROR: Mask UL RDATA parity error.
5	RW	MASK_UL_P0_ERROR: Mask UL P0 error.
6	RW	MASK_PARITY_ERROR_ON_INTERFACE_MACHINE: Mask parity error on interface machine.
7	RW	MASK_PARITY_ERROR_ON_P2S_MACHINE: Mask parity error on P2S machine.
8	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Mask timeout while waiting for ULCCH.
9	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Mask timeout while waiting for DLDCH return.
10	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Mask timeout while waiting for ULDCH.
11	RW	MASK_PSCOM_PARALLEL_WRITE_NVLD: Mask PSCOM parallel write NVLD.
12	RW	MASK_PSCOM_PARALLEL_READ_NVLD: Mask PSCOM parallel read NVLD.
13	RW	MASK_PSCOM_PARALLEL_ADDR_INVALID: Mask PSCOM parallel ADDR invalid.
14	RW	MASK_PCB_COMMAND_PARITY_ERROR: Mask PCB command parity error.
15	RW	MASK_GENERAL_TIMEOUT: Mask general timeout.
16	RW	MASK_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Mask satellite acknowledge access violation.
17	RW	MASK_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Mask satellite acknowledge invalid register.

Register Name	**PSCOMLE Address Trap Register**
Mnemonic	TP.TPCHIP.TPC.EPS.PSC.PSC.ADDR_TRAP_REG
Address	0000000001010003 (SCOM)
Description	PSCOMLE Address Trap Register

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	PCB_ADDRESS_OF_LAST_TRANSACTION_WITH_ERROR: PCB address of last transaction with error.
16	ROX	PCB_READ_NOTWRITE_OF_LAST_TRANSACTION_WITH_ERROR: PCB read-not-write of the last transaction with error.
17	ROX	RESERVED_ADDR_LAST_TRAP_LT: Reserved 0.
18:30	ROX	SERIAL2PARALLEL_STATE_MACHINE_AT_TIME_OF_ERROR: Serial2Parallel state machine at time of error.
31	ROX	SATELLITE_ACKNOWLEDGE_BIT_RETURN_PARITY: Satellite acknowledge bit: Set to 1 if no parity error detected of satellite number and acknowledge bits.
32	ROX	SATELLITE_ACKNOWLEDGE_BIT_WRITE_PARITY_ERROR: Set if write parity error detected by satellite.
33	ROX	SATELLITE_ACKNOWLEDGE_BIT_ACCESS_VIOLATION: Set if invalid read or write access detected by satellite.
34	ROX	SATELLITE_ACKNOWLEDGE_BIT_INVALID_REGISTER: Set if invalid register address detected by satellite.

Register Name	Ring Lock Enable Register
Mnemonic	TP.TPCHIP.TPC.EPS.PSC.PSC.WRITE_PROTECT_ENABLE_REG
Address	0000000001010005 (SCOM)
Description	Ring Lock Enable Register

Bits	SCOM	Field Mnemonic: Description
0	RW	ENABLE_RING_LOCKING: General enable of ring locking upon write to specific ring.
1	RW	RESERVED_RING_LOCKING: Reserved.

Register Name	Write Protect Rings Register
Mnemonic	TP.TPCHIP.TPC.EPS.PSC.PSC.WRITE_PROTECT_RINGS_REG
Address	0000000001010006 (SCOM)
Description	WRITE PROTECT RINGS Register

Bits	SCOM	Field Mnemonic: Description
0:15	RW	WRITE_PROTECT_RINGS: Write protect bit map for each ring.

Register Name	Atomic Lock Mask Register
Mnemonic	TP.TPCHIP.TPC.EPS.PSC.PSC.ATOMIC_LOCK_MASK_LATCH_REG
Address	0000000001010007 (SCOM)
Description	Atomic Lock Mask Register

Bits	SCOM	Field Mnemonic: Description
0:15	RW	ATOMIC_LOCK_MASK: Bit mask for atomic locking on a ring-by-ring basis.

Register Name	Ring Fence Enable Mask Register
Mnemonic	TP.TPCHIP.TPC.EPS.PSC.PSC.RING_FENCE_MASK_LATCH_REG
Address	0000000001010008 (SCOM)
Description	Ring Fence Enable Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1:15	RW	RING_FENCE_ENABLE_MASK: bit mask for ring fencing on a ring-by-ring basis.

Register Name	Trace Array High Data Register
Mnemonic	TP.TPCHIP.TPC.TRA0.TR0.TRACE_HI_DATA_REG
Address	0000000001010400 (SCOM)
Description	Trace Array High Data Register

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: Trace Array Data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TPCHIP.TPC.TRA0.TR0.TRACE_LO_DATA_REG
Address	0000000001010401 (SCOM)
Description	Trace Array Low Data Register

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace Array Data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace Address.
42:50	ROX	TRACE_LAST_BANK: Trace Last Bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace Last Bank Valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace Write-On-Run indicator.
53	ROX	TRACE_RUNNING: Trace Run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace Hold Address (pointing to last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TPCHIP.TPC.TRA0.TR0.TRACE_TRCTRL_CONFIG
Address	0000000001010402 (SCOM)
Description	Trace Control Configuration Register

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: Enable store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: Enable unconditional forced write when TRACE_RUN.
2:9	RW	EXTEND_TRIG_MODE: Counter value for extended trigger mode.

Bits	SCOM	Field Mnemonic: Description
10	RW	BANK_MODE: Enable bank mode.
11	RW	ENH_TRACE_MODE: Enable enhanced trace mode.
12:13	RW	LOCAL_CLOCK_GATE_CONTROL: Local clock gate control selection and overwrite.
14:17	RW	TRACE_SELCT_CONTROL: Selector for two sets of external trace bus multiplexers: TRA_MUX0_SEL[0:1] and TRA_MUX1_SEL[0:1].
18:21	RW	SPARE_CONTROL: Spare control bits.

Register Name	TRDATA Configuration Register 0
Mnemonic	TP.TPCHIP.TPC.TRA0.TR0.TRACE_TRDATA_CONFIG_0
Address	0000000001010403 (SCOM)
Description	TRDATA Configuration Register 0

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: Trace data compare mask for bits 0:63.

Register Name	TRDATA Configuration Register 1
Mnemonic	TP.TPCHIP.TPC.TRA0.TR0.TRACE_TRDATA_CONFIG_1
Address	0000000001010404 (SCOM)
Description	TRDATA Configuration Register 1

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: Trace data compare mask for bits 64:87.

Register Name	TRDATA Configuration Register 2
Mnemonic	TP.TPCHIP.TPC.TRA0.TR0.TRACE_TRDATA_CONFIG_2
Address	0000000001010405 (SCOM)
Description	TRDATA Configuration Register 2

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: pattern_match_pata_0_to_23.
24:47	RW	PATTERNB: pattern_match_patb_0_to_23.

Register Name	TRDATA Configuration Register 3
Mnemonic	TP.TPCHIP.TPC.TRA0.TR0.TRACE_TRDATA_CONFIG_3
Address	0000000001010406 (SCOM)
Description	TRDATA Configuration Register 3

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: pattern_match_patc_0_to_23.

Bits	SCOM	Field Mnemonic: Description
24:47	RW	PATTERND: pattern_match_patd_0_to_23.

Register Name	TRDATA Configuration Register 4
Mnemonic	TP.TPCHIP.TPC.TRA0.TR0.TRACE_TRDATA_CONFIG_4
Address	0000000001010407 (SCOM)
Description	TRDATA Configuration Register 4

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: mska.
24:47	RW	MASKB: mskb.

Register Name	TRDATA Configuration Register 5
Mnemonic	TP.TPCHIP.TPC.TRA0.TR0.TRACE_TRDATA_CONFIG_5
Address	0000000001010408 (SCOM)
Description	TRDATA Configuration Register 5

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: mskc.
24:47	RW	MASKD: mskd.

Register Name	TRDATA Configuration Register 9
Mnemonic	TP.TPCHIP.TPC.TRA0.TR0.TRACE_TRDATA_CONFIG_9
Address	0000000001010409 (SCOM)
Description	TRDATA Configuration Register 9

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable Trace Data Compression (store data every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account (care about) changes in the Error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits(00:23) 0b01 = Debug bus bits(24:47) 0b10 = Debug bus bits(48:71) 0b11 = Debug bus bits(72:87) | 8 zeros
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits(00:23) 0b01 = Debug bus bits(24:47) 0b10 = Debug bus bits(48:71) 0b11 = Debug bus bits(72:87) | 8 zeros
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits(00:23) 0b01 = Debug bus bits(24:47) 0b10 = Debug bus bits(48:71) 0b11 = Debug bus bits(72:87) | 8 zeros

Bits	SCOM	Field Mnemonic: Description
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits(00:23) 0b01 = Debug bus bits(24:47) 0b10 = Debug bus bits(48:71) 0b11 = Debug bus bits(72:87) | 8 zeros.
10:13	RW	TRIG0_OR_MASK: **Note:** The OR of all selected matches is ORed with result of TRIG0_AND. 0B1XXX = Selects MATCHA OR 0bX1XX = Selects MATCHB OR 0bXX1X = Selects MATCHC OR 0bXXX1 = Selects MATCHD OR 0b0000 = Selects to not OR any matches
14:17	RW	TRIG0_AND_MASK: **Note:** The AND of following selected matches is ORed with result of TRIG0_OR. 0b1XXX = Selects MATCHA AND 0bX1XX = Selects MATCHB AND 0bXX1X = Selects MATCHC AND 0bXXX1 = Selects MATCHD AND 0b0000 = Selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: **Note:** The OR of all selected MATCHes is ORed with result of TRIG1_AND. 0b1XXX = Selects MATCHA OR 0bX1XX = Selects MATCHB OR 0bXX1X = Selects MATCHC OR 0bXXX1 = Selects MATCHD OR 0b0000 = Selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: **Note:** The AND of following selected MATCHes is ORed with result of TRIG1_OR. 0b1XXX = Selects MATCHA AND 0bX1XX = Selects MATCHB AND 0bXX1X = Selects MATCHC AND 0bXXX1 = Selects MATCHD AND 0b0000 = Selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a trigger. 0b1000 inverts MATCHA 0b0100 inverts MATCHB 0b0010 inverts MATCHC 0b0001 inverts MATCHD
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved field.

Register Name	Trace Array High Data Register
Mnemonic	TP.TPCHIP.TPC.TRA0.TR1.TRACE_HI_DATA_REG
Address	0000000001010440 (SCOM)
Description	Trace Array High Data Register

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: Trace Array Data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TPCHIP.TPC.TRA0.TR1.TRACE_LO_DATA_REG
Address	0000000001010441 (SCOM)
Description	Trace Array Low Data Register

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace Array Data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace Address.
42:50	ROX	TRACE_LAST_BANK: Trace Last Bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace Last Bank Valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace Write-On-Run indicator.
53	ROX	TRACE_RUNNING: Trace Run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace Hold Address (pointing to last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TPCHIP.TPC.TRA0.TR1.TRACE_TRCTRL_CONFIG
Address	0000000001010442 (SCOM)
Description	Trace control configuration register

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: Enable store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: Enable unconditional forced write when trace_run.
2:9	RW	EXTEND_TRIG_MODE: Counter value for extended trigger mode.
10	RW	BANK_MODE: Enable bank mode.
11	RW	ENH_TRACE_MODE: Enable enhanced trace mode.
12:13	RW	LOCAL_CLOCK_GATE_CONTROL: Local clock gate control selection and overwrite.
14:17	RW	TRACE_SELCT_CONTROL: Selector for two sets of external trace bus multiplexers. tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: Spare control bits.

Register Name	TRDATA Configuration Register 0
Mnemonic	TP.TPCHIP.TPC.TRA0.TR1.TRACE_TRDATA_CONFIG_0
Address	0000000001010443 (SCOM)
Description	TRDATA Configuration Register 0

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: Trace data compare mask for bits 0:63.

Register Name	TRDATA Configuration Register 1
Mnemonic	TP.TPCHIP.TPC.TRA0.TR1.TRACE_TRDATA_CONFIG_1
Address	0000000001010444 (SCOM)
Description	TRDATA Configuration Register 1

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: Trace data compare mask for bits 64:87.

Register Name	TRDATA Configuration Register 2
Mnemonic	TP.TPCHIP.TPC.TRA0.TR1.TRACE_TRDATA_CONFIG_2
Address	0000000001010445 (SCOM)
Description	TRDATA Configuration Register 2

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: pattern_match_pata_0_to_23.
24:47	RW	PATTERNB: pattern_match_patb_0_to_23.

Register Name	TRDATA Configuration Register 3
Mnemonic	TP.TPCHIP.TPC.TRA0.TR1.TRACE_TRDATA_CONFIG_3
Address	0000000001010446 (SCOM)
Description	TRDATA Configuration Register 3

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: pattern_match_patc_0_to_23.
24:47	RW	PATTERND: pattern_match_patd_0_to_23.

Register Name	TRDATA Configuration Register 4
Mnemonic	TP.TPCHIP.TPC.TRA0.TR1.TRACE_TRDATA_CONFIG_4
Address	0000000001010447 (SCOM)
Description	TRDATA Configuration Register 4

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: mska.
24:47	RW	MASKB: mskb.

Register Name	TRDATA Configuration Register 5
Mnemonic	TP.TPCHIP.TPC.TRA0.TR1.TRACE_TRDATA_CONFIG_5
Address	0000000001010448 (SCOM)
Description	TRDATA Configuration Register 5

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: mskc.
24:47	RW	MASKD: mskd.

Register Name	TRDATA Configuration Register 9
Mnemonic	TP.TPCHIP.TPC.TRA0.TR1.TRACE_TRDATA_CONFIG_9
Address	0000000001010449 (SCOM)
Description	TRDATA Configuration Register 9

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable Trace Data Compression (store data every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account (care about) changes in the Error bit for trace data compression (Default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits(00:23) 0b01 = Debug bus bits(24:47) 0b10 = Debug bus bits(48:71) 0b11 = Debug bus bits(72:87) | 8 zeroes
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits(00:23) 0b01 = Debug bus bits(24:47) 0b10 = Debug bus bits(48:71) 0b11 = Debug bus bits(72:87) | 8 zeroes
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits(00:23). 0b01 = Debug bus bits(24:47). 0b10 = Debug bus bits(48:71). 0b11 = Debug bus bits(72:87) | 8 zeros.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits(00:23). 0b01 = Debug bus bits(24:47). 0b10 = Debug bus bits(48:71). 0b11 = Debug bus bits(72:87) | 8 zeros.
10:13	RW	TRIG0_OR_MASK: **Note:** The OR of all selected MATCHes is ORed with result of TRIG0_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: **Note:** The AND of following selected MATCHes is ORed with result of TRIG0_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: **Note:** The OR of all selected MATCHes is ORed with result of TRIG1_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1.

Bits	SCOM	Field Mnemonic: Description
22:25	RW	TRIG1_AND_MASK: **Note:** The AND of following selected MATCHes is ORed with result of TRIG1_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a trigger. 0b1000 inverts MATCHA. 0b0100 inverts MATCHB. 0b0010 inverts MATCHC. 0b0001 inverts MATCHD.
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved field.

Register Name	Debug Macro Configuration Register 0 for Configuration Component
Mnemonic	TP.TPCHIP.TPC.EPS.DBG.DBG_MODE_REG
Address	00000000010107C0 (SCOM)
Description	Debug macro configuration register 0 for configuration component

Bits	SCOM	Field Mnemonic: Description
0:2	RW	GLB_BRCST_MODE: global_broadcast_mode (0:2): 100 = dbg_trace_run and dbg_trace_freeze. 101 = pc_tcdbg_trace_run_fncd and dbg_trace_freeze. 110 = dbg_triggers_out(0:1). 111 = pc_tcdbg_triggers(0:1) (from core).
3:5	RW	TRACE_SEL_MODE: Select source for trace_run and bank. 001 = Core trace run and bank. 010 = TP broadcast run & 0. 011 = tc_dbg_inter_brcst latched. 100 = tc_dbg_dbg_sync_brcst_rcv. else: dbg_trace_run & dbg_trace_bank.
6:7	RW	TRIG_SEL_MODE: Select source for tcdbg_trigger(0). 10 = global broadcast. 11 = pc_tcdbg_trigger (from core). else: dbg_triggers_out(0:1).
8	RW	STOP_ON_XSTOP_SELECTION: Enable trace stop on checkstop.
9	RW	STOP_ON_RECOV_ERR_SELECTION: Enable trace stop on recoverable error.
10	RW	STOP_ON_SPATTN_SELECTION: Enable trace stop on special attention.
11	RW	FREEZE_SEL_MODE: Select freeze source: 0 = Local debug freeze. 1 = By broadcast: tp_tcdbg_glb_brcst(1).
12:13	RW	SYNC_BRCST_MODE: Unused, obsolete. See trace_sel_mode.
14	RO	constant = 0b0 sync_brcst_mode.
15	RO	constant = 0b0
16:31	ROX	dbg_status

Bits	SCOM	Field Mnemonic: Description
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	XTRA/Dedicated Trace Mode Register for Core Triggers
Mnemonic	TP.TPCHIP.TPC.EPS.DBG.XTRA_TRACE_MODE
Address	00000000010107D1 (SCOM)
Description	extra / dedicated trace mode register for core triggers

Bits	SCOM	Field Mnemonic: Description
0:37	RW	XTRA_TRACE_MODE_DATA: extra/dedicated trace mode register for core triggers.

Register Name	OCC_SCOM OCC LFIR
Mnemonic	TP.TPCHIP.OCC.OCI.SCOM.OCC_SCOM_OCCLFIR
Address	0000000001010800 (SCOM) 0000000001010801 (SCOM1) 0000000001010802 (SCOM2)
Description	OCC_SCOM OCC LFIR

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIR_OCC_FW0: Input tied to 0. Used by OCC Firmware to produce an attention to the FSP.
1	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIR_OCC_FW1: Input tied to 0. Used by OCC Firmware to produce an attention to the FSP.
2	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIR_CME_ERROR_NOTIFY: Input tied to 0. Used by STOP GPE code to indicated to HYP that a CME has indicated a fault.
3	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIR_STOP_RECOVERY_NOTIFY_PRD: Input tied to 0. Written by stop recovery firmware to indicate that the host side actions are complete and that FFDC information is available for analysis toward subsequent guarding and/or deconfiguration. Intended to produce a recoverable attention (by using Action register settings) to the PRD component for such analysis.
4	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_OCC_HB_ERROR: OCC Heartbeat Error.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
5	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_GPE0_WATCHDOG_TIMEOUT: GPE0 asserted a watchdog timeout condition.
6	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_GPE1_WATCHDOG_TIMEOUT: GPE1 asserted a watchdog timeout condition.
7	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_GPE2_WATCHDOG_TIMEOUT: GPE2 asserted a watchdog timeout condition.
8	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_GPE3_WATCHDOG_TIMEOUT: GPE3 asserted a watchdog timeout condition.
9	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_GPE0_ERROR: GPE0 asserted an error condition that caused it to halt. Implemented as an OR of the four error outputs from the PPE.
10	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_GPE1_ERROR: GPE1 asserted an error condition that caused it to halt. Implemented as an OR of the four error outputs from the PPE.
11	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_GPE2_ERROR: GPE2 asserted an error condition that caused it to halt. Implemented as an OR of the four error outputs from the PPE.
12	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_GPE3_ERROR: GPE3 asserted an error condition that caused it to halt. Implemented as an OR of the four error outputs from the PPE.
13	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_OCB_ERROR: OCB Error (recoverable error).
14	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_SRT_UE: SRAM Uncorrectable Error (recoverable error) **Note:** This being on will also have either a srt_read_error or srt_write_error on as well as these each have the UE error included. UE is broken out specifically to allow for array faster characterization.
15	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_SRT_CE: SRAM Correctable Error (masked (product); recoverable error (mfg).
16	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_SRT_READ_ERROR: SRAM Read Error - asserts if a read operation and any of the following: SRAM Tank Address Parity error; SRAM Uncorrectable error.
17	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_SRT_WRITE_ERROR: SRAM Read Error - asserts if a read operation and any of the following: SRAM Tank Address Parity error; if <8 B write (requiring a read, modify, write operation), (SRAM Tank Byte Enable Parity error; SRAM Write Data Parity error; SRAM Uncorrectable error).
18	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_SRT_DATAOUT_PERR: SRAM controller detected parity error on tank read data.
19	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_SRT_OCI_WRITE_DATA_PARITY: SRAM controller detected OCI write data parity error.
20	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_SRT_OCI_BE_PARITY_ERR: SRAM controller detected an OCI byte enable parity error.
21	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_SRT_OCI_ADDR_PARITY_ERR: SRAM controller detected an OCI address parity error.
22	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_GPE0_HALTED: GPE0 asserted a halt condition.
23	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_GPE1_HALTED: GPE1 asserted a halt condition.
24	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_GPE2_HALTED: GPE2 asserted a halt condition.
25	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_GPE3_HALTED: GPE3 asserted a halt condition.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
26	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_EXTERNAL_TRAP: External Trigger pin active (recoverable (product).
27	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_PPC405_CORE_RESET: PowerPC 405 Core Reset Output asserted.
28	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_PPC405_CHIP_RESET: PowerPC 405 Chip Reset Output asserted.
29	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_PPC405_SYSTEM_RESET: PowerPC 405 System Reset Output asserted.
30	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_PPC405_DBGMSRWE: PowerPC 405 Wait State asserted.
31	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_PPC405_DBGSTOPACK: PowerPC 405 Stop Ack output asserted (recoverable -> logging) Process stopped execution.
32	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_OCB_DB_OCI_TIMEOUT: OCB Direct Bridge OCI Timeout. Asserted to flag that no OCI slave acknowledged the direct bridge request. This bit is set by hardware under normal operations but can be forced using the OR mask register. This bit can be cleared using the AND mask register.
33	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_OCB_DB_OCI_READ_DATA_PARITY: OCB Direct Bridge OCI Read Data Parity Error. This bit is set by hardware under normal operations but can be forced using the OR mask register. This bit can be cleared using the AND mask register.
34	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_OCB_DB_OCI_SLAVE_ERROR: OCB Direct Bridge OCI SlvError received. This bit is set by hardware under normal operations but can be forced using the OR mask register. This bit can be cleared using the AND mask register.
35	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_OCB_PIB_ADDR_PARITY_ERR: OCB PIB Address Parity Error (PIB read or write operation). **Note:** Can be set for either direct bridge or indirect channel operations. This bit is set by hardware under normal operations but can be forced using the OR mask register. This bit can be cleared using the AND mask register.
36	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_OCB_DB_PIB_DATA_PARITY_ERR: OCB Direct Bridge PIB Data Error. Indicates the PIB data parity was in error for a PIB write operation to a direct bridge address. **Note:** Write data parity errors to an indirect bridge address are captured in the the OCB Control Status [n] Register for the addressed channel. This bit is set by hardware under normal operations but can be forced using the OR mask register. This bit can be cleared using the AND mask register.
37	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_OCB_IDC0_ERROR: Indirect Channel 0 Error. See OCB ControlStatus 0 Register for the reason.
38	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_OCB_IDC1_ERROR: Indirect Channel 1 Error. See OCB ControlStatus 1 Register for the reason.
39	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_OCB_IDC2_ERROR: Indirect Channel 2 Error. See OCB ControlStatus 2 Register for the reason.
40	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_OCB_IDC3_ERROR: Indirect Channel 3 Error. See OCB ControlStatus 3 Register for the reason.
41	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_SRT_FSM_ERR: Indicates an FSM error in the read or write machines of the SRAM controller.
42	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_JTAGACC_ERR: JTAG accelerator error. See OJSTAT register for reason.
43	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_SPARE_ERR_38: Input tied to 0.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
44	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_C405_ECC_UE: PowerPC 405 cache UE.
45	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_C405_ECC_CE: PowerPC 405 cache CE.
46	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_C405_OCI_MACHINECHECK: PowerPC 405 Machine Check.
47	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_SRAM_SPARE_DIRECT_ERROR0: SRAM spare direct error.
48	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_SRAM_SPARE_DIRECT_ERROR1: SRAM spare direct error.
49	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_SRAM_SPARE_DIRECT_ERROR2: SRAM spare direct error.
50	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_SRAM_SPARE_DIRECT_ERROR3: SRAM spare direct error.
51	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_GPE0_OCISLV_ERR: OCI slave error for GPE0 (see OCCERRPT for details).
52	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_GPE1_OCISLV_ERR: OCI slave error for GPE1 (see OCCERRPT for details).
53	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_GPE2_OCISLV_ERR: OCI slave error for GPE2 (see OCCERRPT for details).
54	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_GPE3_OCISLV_ERR: OCI slave error for GPE3 (see OCCERRPT for details).
55	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_C405ICU_M_TIMEOUT: PowerPC 405 ICU timeout on OCI request.
56	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_C405DCU_M_TIMEOUT: PowerPC 405 DCU timeout on OCI request.
57	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_OCC_COMPLEX_FAULT: Used by OCC to indicate that a fault occurred (to achieve safe mode). Connected to OCCMISC[firmware_fault].
58	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_OCC_COMPLEX_NOTIFY: Used by OCC to notify another firmware entity that an event occurred. Connected to OCCMISC[firmware_notify].
59:61	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIR_SPARE_59_61: Implemented but not used. Inputs tied to 0.
62	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_FIR_PARITY_ERR_DUP: Internal FIR parity error duplicate (same as bit 63).
63	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIR_FIR_PARITY_ERR: Internal FIR parity error.

Register Name	OCC_SCOM OCC LFIR MASK
Mnemonic	TP.TPCHIP.OCC.OCI.SCOM.OCC_SCOM_OCCLFIRMASK
Address	0000000001010803 (SCOM) 0000000001010804 (SCOM1) 0000000001010805 (SCOM2)
Description	OCC_SCOM OCC LFIR MASK

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_OCC_FW0_MASK:
1	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_OCC_FW1_MASK:

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
2	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_SPARE_2_MASK:
3	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_SPARE_3_MASK:
4	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_OCC_HB_MALF_MASK: OCC Heartbeat Error (malfunction alert).
5	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_GPE0_WATCHDOG_TIMEOUT_MASK: GPE0 asserted a watchdog timeout condition.
6	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_GPE1_WATCHDOG_TIMEOUT_MASK: GPE1 asserted a watchdog timeout condition.
7	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_GPE2_WATCHDOG_TIMEOUT_MASK: GPE2 asserted a watchdog timeout condition.
8	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_GPE3_WATCHDOG_TIMEOUT_MASK: GPE3 asserted a watchdog timeout condition.
9	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_GPE0_ERROR_MASK: GPE0 asserted a error condition.
10	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_GPE1_ERROR_MASK: GPE1 asserted a error condition.
11	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_GPE2_ERROR_MASK: GPE2 asserted a error condition.
12	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_GPE3_ERROR_MASK: GPE3 asserted a error condition.
13	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_OCB_ERROR_MASK: OCB Error (recoverable error).
14	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_SRT_UE_MASK: SRAM Uncorrectable Error (recoverable error).
15	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_SRT_CE_MASK: SRAM Correctable Error (masked (product); recoverable error (mfg).
16	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_SRT_READ_ERROR_MASK: SRAM Read Error.
17	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_SRT_WRITE_ERROR_MASK: SRAM Read Error.
18	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_SRT_DATAOUT_PERR_MASK: SRAM controller detected parity error on tank read data.
19	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_SRT_OCI_WRITE_DATA_PARITY_MASK: SRAM controller detected OCI write data parity error.
20	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_SRT_OCI_BE_PARITY_ERR_MASK: SRAM controller detected an OCI byte enable parity error.
21	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_SRT_OCI_ADDR_PARITY_ERR_MASK: SRAM controller detected an OCI address parity error.
22	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_GPE0_HALTED_MASK: GPE0 asserted a halt condition.
23	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_GPE1_HALTED_MASK: GPE1 asserted a halt condition.
24	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_GPE2_HALTED_MASK: GPE2 asserted a halt condition.
25	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_GPE3_HALTED_MASK: GPE3 asserted a halt condition.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
26	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_EXTERNAL_TRAP_MASK: External Trigger pin active (recoverable (product).
27	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_PPC405_CORE_RESET_MASK: PowerPC 405 Core Reset Output asserted.
28	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_PPC405_CHIP_RESET_MASK: PowerPC 405 Chip Reset Output asserted.
29	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_PPC405_SYSTEM_RESET_MASK: PowerPC 405 System Reset Output asserted.
30	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_PPC405_DBGMSRWE_MASK: PowerPC 405 Wait State asserted.
31	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_PPC405_DBGSTOPACK_MASK: PowerPC 405 Stop Ack output asserted (recoverable -> logging) Process stopped execution.
32	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_OCB_DB_OCI_TIMEOUT_MASK: OCB Direct Bridge OCI Timeout.
33	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_OCB_DB_OCI_READ_DATA_PARITY_MASK: OCB Direct Bridge OCI read data parity error.
34	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_OCB_DB_OCI_SLAVE_ERROR_MASK: OCB Direct Bridge OCI SlvError error.
35	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_OCB_PIB_ADDR_PARITY_ERR_MASK: OCB PIB address parity error.
36	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_OCB_DB_PIB_DATA_PARITY_ERR_MASK: OCB PIB data parity error.
37	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_OCB_IDC0_ERROR_MASK: Indirect Channel 0 Error.
38	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_OCB_IDC1_ERROR_MASK: Indirect Channel 1 Error.
39	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_OCB_IDC2_ERROR_MASK: Indirect Channel 2 Error.
40	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_OCB_IDC3_ERROR_MASK: Indirect Channel 3 Error.
41	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_SRT_FSM_ERR_MASK: SRAM Controller FSM error.
42	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_JTAGACC_ERR_MASK: JTAG accelerator error.
43	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_SPARE_ERR_38_MASK:
44	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_C405_ECC_UE_MASK: PowerPC 405 cache Uncorrectable Error (UE).
45	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_C405_ECC_CE_MASK: PowerPC 405 cache Correctable Error (CE).
46	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_C405_OCI_MACHINECHECK_MASK: PowerPC 405 Machine Check.
47	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_SRAM_SPARE_DIRECT_ERROR0_MASK: SRAM spare direct error.
48	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_SRAM_SPARE_DIRECT_ERROR1_MASK: SRAM spare direct error.
49	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_SRAM_SPARE_DIRECT_ERROR2_MASK: SRAM spare direct error.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
50	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_SRAM_SPARE_DIRECT_ERROR3_MASK: SRAM spare direct error.
51	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_GPE0_OCISLV_ERR_MASK: OCI slave error for GPE0 (see OCCERRPT for details).
52	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_GPE1_OCISLV_ERR_MASK: OCI slave error for GPE0 (see OCCERRPT for details).
53	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_GPE2_OCISLV_ERR_MASK: OCI slave error for GPE0 (see OCCERRPT for details).
54	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_GPE3_OCISLV_ERR_MASK: OCI slave error for GPE0 (see OCCERRPT for details).
55	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_C405ICU_M_TIMEOUT_MASK: PowerPC 405 ICU timeout on OCI request.
56	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_C405DCU_M_TIMEOUT_MASK: PowerPC 405 DCU timeout on OCI request.
57	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIRMASK_OCC_COMPLEX_FAULT_MASK: Used by OCC to indicate that a fault occurred (to achieve safe mode). Connected to OCCMISC[firmware_fault].
58	RWX	WOX_AND	WOX_OR	OCC_SCOM_OCCLFIRMASK_OCC_COMPLEX_NOTIFY_MASK: Used by OCC to notify another firmware entity that an event occurred. Connected to OCCMISC[firmware_notify].
59:61	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_SPARE_59_61: Implemented but not used. Inputs tied to 0.
62	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_FIR_PARITY_ERR_DUP_MASK: Internal FIR parity error duplicate (same as bit 63).
63	RW	WO_AND	WO_OR	OCC_SCOM_OCCLFIRMASK_FIR_PARITY_ERR_MASK: Internal FIR parity error.

Register Name	OCC_SCOM OCC LFIR Action0
Mnemonic	TP.TPCHIP.OCC.OCI.SCOM.OCC_SCOM_OCCLFIRACT0
Address	0000000001010806 (SCOM)
Description	OCC_SCOM OCC LFIR Action0

Bits	SCOM	Field Mnemonic: Description
0:63	RW	OCC_SCOM_OCCLFIRACT0_FIR_ACTION0: MSB of action select for corresponding bit in FIR.

Register Name	OCC_SCOM OCC LFIR Action1
Mnemonic	TP.TPCHIP.OCC.OCI.SCOM.OCC_SCOM_OCCLFIRACT1
Address	0000000001010807 (SCOM)
Description	OCC_SCOM OCC LFIR Action1

Bits	SCOM	Field Mnemonic: Description
0:63	RW	OCC_SCOM_OCCLFIRACT1_FIR_ACTION1: LSB of action select for corresponding bit in FIR.

Register Name	OCC_SCOM OCC Error Report Register
Mnemonic	TP.TPCHIP.OCC.OCI.SCOM.OCC_SCOM_OCCERRRPT
Address	000000000101080A (SCOM)
Description	OCC_SCOM OCC Error Report Register

Bits	SCOM	Field Mnemonic: Description
0:9	RWX_WCLRPART	OCC_SCOM_OCCERRRPT_SRAM_CERRRPT: sram_oci_error_bus(0:9) 0 = FSM error write machine0 1 = FSM error write machine1 2 = FSM error read machine0 3 = FSM error read machine1 4 = Write buffer underflow 5 = Write buffer overflow 6:9 are spares.

Register Name	Counter References
Mnemonic	TP.TPCHIP.TPC.ITR.FMU.FMU_MODE_REG
Address	0000000001020000 (SCOM)
Description	Counter References

Bits	SCOM	Field Mnemonic: Description
0:11	RW	TOD_CNTR_REF: To determine time frame the oscillator pulses are counted. This value is compared to a 16-bit wide TOD pulse counter.
12:15	RW	Reserved field.
16	RW	Reserved field.
17:19	RW	POWER_UP_CNTR_REF: To determine time frame the FMU starts counting the oscillator pulses. This value is compared to a 3-bit wide TOD pulse counter. Must be 0b010 in case time to wait must be >= 62.5 ns (16 MHZ).
20:23	RW	Reserved field.

Register Name	Osc Counter1
Mnemonic	TP.TPCHIP.TPC.ITR.FMU.FMU_OSC_CNTR1_REG
Address	0000000001020001 (SCOM)
Description	Stressed Osc Counter for NBTI

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1	ROX	Reserved field.
2	ROX	Reserved field.
3	ROX	RESULT_AVAILABLE: FMU result available.
4:27	ROX	OSC_PULSE1_CNTR: Osc Counter1. Stressed OSC Counter for NBTI.

Register Name	Counter References for Internal Pulse
Mnemonic	TP.TPCHIP.TPC.ITR.FMU.FMU_PULSE_GEN_REG
Address	0000000001020001 (SCOM)
Description	Counter References for Internal Pulse

Bits	SCOM	Field Mnemonic: Description
0	WO	FMU_INT_PULSE_ENA: FMU internal TOD pulse generation enable.
1	WO	Reserved field.
2:11	WO	FMU_INT_PULSE_CNTR_REF: Reference value to compare against 10-bit counter for FMU internal TOD pulse generation.

Register Name	OSC Counter 2
Mnemonic	TP.TPCHIP.TPC.ITR.FMU.FMU_OSC_CNTR2_REG
Address	0000000001020002 (SCOM)
Description	Reference OSC Counter for NBTI

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1	ROX	Reserved field.
2	ROX	Reserved field.
3	ROX	RESULT_AVAILABLE: FMU result available.
4:27	ROX	OSC_PULSE2_CNTR: OSC Counter2. Stressed OSC Counter for NBTI.

Register Name	Force Operations
Mnemonic	TP.TPCHIP.TPC.ITR.FMU.FMU_FORCE_OP_REG
Address	0000000001020003 (SCOM)
Description	Force Operations

Bits	SCOM	Field Mnemonic: Description
0	WOX	Reserved field.
1	WOX	Reserved field.

Register Name	KVREF Data Register
Mnemonic	TP.TPCHIP.TPC.ITR.FMU.FMU_KVREF_DATAREG
Address	0000000001020004 (SCOM)
Description	KVREF data register

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved field.

Register Name	KVREF Tune Data
Mnemonic	TP.TPCHIP.TPC.ITR.FMU.KVREF_TUNE_DATA
Address	0000000001020005 (SCOM)
Description	KVREF Tune Data

Bits	SCOM	Field Mnemonic: Description
0:11	ROX	Reserved field.

Register Name	VMEAS RESULT Register
Mnemonic	TP.TPCHIP.TPC.ITR.FMU.VMEAS_RESULT_REG
Address	0000000001020006 (SCOM)
Description	VMEAS Result Register

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	Reserved field.

Register Name	KVREF and VMEAS Mode Register
Mnemonic	TP.TPCHIP.TPC.ITR.FMU.KVREF_AND_VMEAS_MODE_STATUS_REG
Address	0000000001020007 (SCOM)
Description	KVREF and VMEAS Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RWX	Reserved field.
1	RW	Reserved field.
2	RW	Reserved field.
3:7	RO	constant = 0b00000
8	RWX	Reserved field.
9	RW	Reserved field.
10	RW	Reserved field.
11:15	RO	constant = 0b00000
16	ROX	Reserved field.
17	ROX	Reserved field.
18	ROX	Reserved field.
19	ROX	Reserved field.

Register Name	VMEAS Maximum Result
Mnemonic	TP.TPCHIP.TPC.ITR.FMU.FMU_VMEAS_MAX_RESULT
Address	0000000001020008 (SCOM)
Description	VMEAS Maximum Result

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	Reserved field.

Register Name	VMEAS Minimum Result
Mnemonic	TP.TPCHIP.TPC.ITR.FMU.FMU_VMEAS_MIN_RESULT
Address	0000000001020009 (SCOM)
Description	VMEAS Minimum Result

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	Reserved field.

Register Name	OSC Error Hold Latch
Mnemonic	TP.TPCHIP.TPC.ITR.OSCERR.OSCERR_HOLD
Address	0000000001020019 (SCOM)
Description	OSC Error hold latch

Bits	SCOM	Field Mnemonic: Description
0:3	RWX	OSCERR_CP: OSC Error hold values for cp.
4:7	RWX	OSCERR_MEM: OSC Error hold values for mem.
8:11	RWX	OSCERR_GX: OSC Error hold values for gx.
12:15	RWX	OSCERR_CPLITE: OSC Error hold values for cplite.

Register Name	OSC Error Mask Latch
Mnemonic	TP.TPCHIP.TPC.ITR.OSCERR.OSCERR_MASK
Address	000000000102001A (SCOM)
Description	OSC Error mask latch

Bits	SCOM	Field Mnemonic: Description
0:3	RW	OSCERR_CP_MASK: OSC error hold values for CP.
4:7	RW	OSCERR_MEM_MASK: OSC error hold values for MEM.
8:11	RW	OSCERR_GX_MASK: OSC error hold values for GX.
12:15	RW	OSCERR_CPLITE_MASK: OSC error hold values for CPLITE.

Register Name	OSC Error MCODE Latch
Mnemonic	TP.TPCHIP.TPC.ITR.OSCERR.OSCERR_MCODE
Address	000000000102001B (SCOM)
Description	OSC Error MCODE Latch

Bits	SCOM	Field Mnemonic: Description
0:3	ROX	OSCERR_MCODE_IN: OSC Error MCODE.

Register Name	Configuration of CC Counters
Mnemonic	TP.TPCHIP.TPC.SYNC_CONFIG
Address	0000000001030000 (SCOM)
Description	Configuration of CC counters

Bits	SCOM	Field Mnemonic: Description
0:3	RW	SYNC_PULSE_DELAY: Delay incoming sync pulse. Default are eight latches including. Async. 0000 = 8 0001 = 2 0010 = 3 0011 = 4 0100 = 5 0101 = 6 0110 = 7 0111 = 8 cycles 1000 = 9 1001 = 10 1010 = 11 1011 = 12 1100 = 13 1101 = 14 1110 = 15 1111 = 16 delay of the reset of the phase counter.
4	RW	LISTEN_TO_SYNC_PULSE_DIS: disable phase counter synchronization by SYNC_PULSE signal (default is enabled) Attention: When LISTEN_TO_SYNC is enabled, the chiplet is corrupted for 200 cycles.
5	RW	SYNC_PULSE_INPUT_SEL: Default is 0. When set to 1, the alternative input of the SYNC_PULSE will be used. Attention: When toggling the input select, the chiplet is corrupted for 200 cycles.
6	RW	USE_SYNC_FOR_SCAN: if set, use OPCG initial alignment for scan requests.
7	RW	CLEAR_CHIPLET_IS_ALIGNED: This bit clears the CHIPLET_IS_ALIGNED bit. See the CPLT_STAT register.
8	RW	UNIT_REGION_CLKCMD_ENABLE: Enable the unit interface to start/stop one dedicate region. Used for the POWER9 cache/core.
9	RW	DISABLE_PCB_ITR: Disable interrupt generation within CC. The interrupt is sent on each HLD event.
10	RW	ENABLE_VITL_ALIGN_CHECK: Enable the VITL align check to compare alignment of incoming sync pulse with 2:1 VITL LCB.
11	RW	SYNC_PULSE_OUT_DIS: Disable SYNC_PULSE output when set to 1, master chiplet will not send sync pulses to slave chiplets anymore.
12:19	RW	UNUSED1219: Unused.

Register Name	OPCG Align
Mnemonic	TP.TPCHIP.TPC.OPCG_ALIGN
Address	0000000001030001 (SCOM)
Description	OPCG Align

Bits	SCOM	Field Mnemonic: Description
0:3	RW	INOP_ALIGN: INOP phase alignment 0 = None 1 = 2:1 2 = 3:1 3 = 4:1 4 = 6:1 5 = 8:1 6 = 12:1 7 = 16:1 8 = 24:1 9 = 15:48

Bits	SCOM	Field Mnemonic: Description
4:7	RW	SNOP_ALIGN: SNOP phase alignment 0 = none 1 = 2:1 2 = 3:1 3 = 4:1 4 = 6:1 5 = 8:1 6 = 12:1 7 = 16:1 8 = 24:1 9 = 15:48
8:11	RW	ENOP_ALIGN: ENOP phase alignment 0 = none 1 = 2:1 2 = 3:1 3 = 4:1 4 = 6:1 5 = 8:1 6 = 12:1 7 = 16:1 8 = 24:1 9 = 15:48
12:19	RW	INOP_WAIT: INOP cycle delay (0 - 255).
20:31	RW	SNOP_WAIT: SNOP cycle delay (0 - 4095).
32:39	RW	ENOP_WAIT: ENOP cycle delay (0 - 255).
40	RW	INOP_FORCE_SG: INOP: Set SG high during INOP.
41	RW	SNOP_FORCE_SG: SNOP: Set SG high during SNOP.
42	RW	ENOP_FORCE_SG: ENOP: Set SG high during ENOP (including loop phase).
43	RW	NO_WAIT_ON_CLK_CMD: 0 = A clock change request will first wait the OPCG_WAIT cycles. 1 = A clock change request will not wait, when not in flush.
44:45	RW	ALIGN_SOURCE_SELECT: 0 = Use INOPA setting from OPCG_REG0 1 = Use rising edge of sync pulse 2 = Use UNIT0_SYNC_LVL to align (for AVP - REFRESH0) 3 = Use UNIT1_SYNC_LVL to align (for AVP - REFRESH1)
46	RW	UNUSED46: Unused.
47:51	RW	SCAN_RATIO: SCAN_RATIO (n=0-15: (n+1):1, 16: 24:1, 17: 32:1, 18: 48:1, 19: 64:1, 20: 128:1) - Default 4:1= 00011.
52:63	RW	OPCG_WAIT_CYCLES: Old PAD value. The delay at the beginning and at the end of the OPCG run. To allow DC signals to be there at the right time (0 4095), there must be a higher than plat depth. Default = 0x020.

Register Name	**OPCG Control Register 0**
Mnemonic	TP.TPCHIP.TPC.OPCG_REG0
Address	0000000001030002 (SCOM)
Description	OPCG Control Register 0

Bits	SCOM	Field Mnemonic: Description
0	RW	RUNN_MODE: 0 = BIST-mode. Used for LBIST. 1 = RUN-N mode. Used for ABIST/IOBIST.
1	RWX	OPCG_GO: OPCG GO (start OPCG). This bit is cleared when OPCG is done. Poll for OPCG_DONE in CPLT_START the register.
2	RWX	RUN_SCAN0: Run SCAN0. This overrides all BIST mode settings but the SCAN_RATIO), which starts a SCAN0 run. The bit is cleared when OPCG is done. Poll for OPCG_DONE in the CPLT_START register.
3	RW	SCAN0_MODE: Set PRPGs in SCAN0_MODE, but do not run automatic SCAN0 the sequence.
4	RWX	OPCG_IN_SLAVE_MODE: When selected, the OPCG waits for the master chiplet to get started. When KEEP_MS_MODE is 0, SLAVE_MODE is cleared after the incoming trigger.
5	RWX	OPCG_IN_MASTER_MODE: When selected, the OPCG sends a trigger to all slave chiplets. When KEEP_MS_MODE = 0, MASTER_MODE is cleared after sending out one master trigger.
6	RW	KEEP_MS_MODE: When set to 1, OPCG in M/S mode bits are not be cleared after one incoming OPCG trigger. The default is to clear M/S mode bits.

Bits	SCOM	Field Mnemonic: Description
7	RW	TRIGGER_OPCG_ON_UNIT0_SYNC_LVL: Unit pin used for AVP can trigger OPCG (UNIT0_SYNC_LVL).
8	RW	TRIGGER_OPCG_ON_UNIT1_SYNC_LVL: Unit pin used for AVP can trigger OPCG (UNIT1_SYNC_LVL).
9	RWX	RUN_CHIPLET_SCAN0: Run SCAN0 on all regions and types. (It clears the chiplet at all.)
10	RWX	RUN_CHIPLET_SCAN0_NO_PLL: Run SCAN0 on all regions and types. It clears the chiplet at all exclude PLL regions. PLL can keep running.
11	RW	RUN_OPCG_ON_UPDATE_DR: Start the OPCG engine when the scan update (update_dr) is received (set pulse). Cronus requires that this bit = 1 for a set-pulse write.
12	RW	RUN_OPCG_ON_CAPTURE_DR: start the OPCG engine when the scan update (capture_dr) is received (set pulse). Cronus requires that this bit = 1 for a set pulse read.
13	RW	STOP_RUNN_ON_XSTOP: RUN-N mode: stop RUN-N on XSTOP.
14	RW	OPCG_STARTS_BIST: RUN-N mode: OPCG engine controls start_bist for ABIST or IOBIST (see the BIST register).
15:20	RW	UNUSED1520: Unused.
10:03:00 PM	RWX	LOOP_COUNT: Loop counter for LBIST and RUN-N. Write = Target value Read = Current counter value. Counts from 0 to target value.

Register Name	OPCG Control Register 1
Mnemonic	TP.TPCHIP.TPC.OPCG_REG1
Address	0000000001030003 (SCOM)
Description	OPCG Control Register 1

Bits	SCOM	Field Mnemonic: Description
0:11	RW	SCAN_COUNT: BIST mode = Channel scan count (s = 0-4095) Run-n mode: START_BIST match value(0:11).
12:23	RW	MISR_A_VAL: BIST mode = A value for MISR aperture. Run-n mode = START_BIST match value(12:23).
24:35	RW	MISR_B_VAL: BIST mode = b value for MISR aperture Run-n mode = START_BIST match value(24:35).
36:47	RW	MISR_INIT_WAIT: BIST mode = delay MISR aperture. MISRs get active after this number of loops.
48	RW	OPCG_SUPPRESS_EVEN_CLK: OPCG creates even and not odd clocks. Used for RUN-N to create only one clock in fast domain. Default is 0.
49	RW	SCAN_CLK_USE_EVEN: Generate scan clock in even cycle instead of odd. Default is 0 = odd for scan.
50:51	RW	UNUSED2: Unused.
52	RW	RTIM_THOLD_FORCE: Force RTIM_THOLD low when not in TEST_DC mode (must be 0 at all time).
53	RW	DISABLE_ARY_CLK_DURING_FILL: LBIST and SCAN0: prevent fire of ARY HLD during NSL-fill.
54	RW	SG_HIGH_DURING_FILL: LBIST and SCAN0: Hold SG high during NSL-fill.
55:56	RW	LBIST_SKITTER_CTL: BIST mode: 00 = Enable skitter during LBIST_IP 01 = Enable skitter when MISR_ACTIVE. See MISR_INIT_WAIT 10 = Skitter OPCG_GO mode. Falling edge = start. Rising edge = stop 11 = Unused

Bits	SCOM	Field Mnemonic: Description
57	RW	MISR_MODE: BIST mode: MISR aperture mode (0 = a-1 to b-1, 1 = start to a and b to end).
58	RW	INFINITE_MODE: Infinite mode. Run-n and LBIST run forever and ignore the loop count.
59:63	RW	NSL_FILL_COUNT: BIST mode: NSL-fill count (0-31).

Register Name	OPCG Control Register 2
Mnemonic	TP.TPCHIP.TPC.OPCG_REG2
Address	0000000001030004 (SCOM)
Description	OPCG Control Register 2

Bits	SCOM	Field Mnemonic: Description
0	RWX	OPCG_GO2: OPCG go for broadcast sequences (start sequence).
01:03:00 AM	RW	PRPG_WEIGHTING: PRPG_ACTIVATE: 1/2, 1/4, 1/8, 1/16, 1/2, 3/4, 7/8, 15/16.
4:15	RWX	PRPG_VALUE: Set to 0 for prpg always on, else seed.
16:27	RW	PRPG_A_VAL: A value for PRPG aperture.
28:39	RW	PRPG_B_VAL: B value for PRPG aperture.
40	RW	PRPG_MODE: PRPG aperture mode (0 = a-1 to b-1, 1 = start to a and b to end).
41:63	RW	UNUSED41_63: Unused.

Register Name	Scan Region and Type
Mnemonic	TP.TPCHIP.TPC.SCAN_REGION_TYPE
Address	0000000001030005 (SCOM)
Description	Scan Region and Type

Bits	SCOM	Field Mnemonic: Description
0	RWX	SYSTEM_FAST_INIT: Default is 0, when its set to 1, the MASK bits in the CMSK chain decide, which part will be scanned or scan0. MASK = 1 = scan0, MASK = 0-part or scan chain.
1:2	RO	constant = 0b00
3	NCX	SCAN_REGION_VITL: Scan clock region VITL (Vital = Clock).
4	RWX	SCAN_REGION_PERV: Scan clock region perv (Pervasive).
5	RWX	SCAN_REGION_UNIT1: Scan clock region net.
6	RWX	SCAN_REGION_UNIT2: Scan clock region PIB.
7	RWX	SCAN_REGION_UNIT3: Scan clock region OCC.
8	RWX	SCAN_REGION_UNIT4: Scan clock region ANPERV - E9.
9	RWX	SCAN_REGION_UNIT5: Scan clock region unused.
10	RWX	SCAN_REGION_UNIT6: Scan clock region unused.
11	RWX	SCAN_REGION_UNIT7: Scan clock region unused.
12	RWX	SCAN_REGION_UNIT8: Scan clock region unused.
13	RWX	SCAN_REGION_UNIT9: Scan clock region unused.

Bits	SCOM	Field Mnemonic: Description
14	RWX	SCAN_REGION_UNIT10: Scan clock regions PLLPERV, PLLNEST, PLLNESTFLT, PLLEMFLT, PLLSSCG - TP.
15:47	RO	constant = 0b00000000000000000000000000000000
48	RW	SCAN_TYPE_FUNC: Scan chain func (functional).
49	RW	SCAN_TYPE_CFG: Scan chain mode (boot configure and debug configure).
50	RW	SCAN_TYPE_CCFG_GPTR: Scan chain CCFG/GPTR (Pervasive: CC configure, Others: GPTR).
51	RW	SCAN_TYPE_REGF: Scan chain regf (register files).
52	RW	SCAN_TYPE_LBIST: Scan chain (LBIST).
53	RW	SCAN_TYPE_ABIST: Scan chain (ABIST).
54	RW	SCAN_TYPE_REPR: Scan chain (Array Repair).
55	RW	SCAN_TYPE_TIME: Scan chain time (Array Timing).
56	RW	SCAN_TYPE_BNDY: Scan chain boundry (Boundary I/Os).
57	RW	SCAN_TYPE_FARR: Scan chain FARR (fast array unload).
58	RW	SCAN_TYPE_CMSK: Scan chain CMSK (LBIST channel mask).
59	RW	SCAN_TYPE_INEX: Scan chain idex (c14 ASIC).
60:63	RO	constant = 0b0000

Register Name	Start/Stop of Clocks
Mnemonic	TP.TPCHIP.TPC.CLK_REGION
Address	0000000001030006 (SCOM)
Description	start/stop of Clocks

Bits	SCOM	Field Mnemonic: Description
0:1	RWX	CLOCK_CMD: command for clock control: 00 = NOP 01 = START 10 = STOP 11 = PULSE (one pulse).
2	RWX	SLAVE_MODE: when selected, Clock Command will wait for Master chiplet to get started. Bit gets cleared after incoming Slave trigger and KEEP_MS_MODE_AFTER_TRIGGER is set to 0.
3	RWX	MASTER_MODE: when selected, Clock Command will send out trigger to all Slave chiplets. Bit gets cleared after sending out one Master trigger and KEEP_MS_MODE_AFTER_TRIGGER is set to 0.
4	RWX	CLOCK_REGION_PERV: For clock region perv (Pervasive).
5	RWX	CLOCK_REGION_UNIT1: For clock region net.
6	RWX	CLOCK_REGION_UNIT2: For clock region PIB.
7	RWX	CLOCK_REGION_UNIT3: For clock region OCC.
8	RWX	CLOCK_REGION_UNIT4: For clock region ANPERV - E9.
9	RWX	CLOCK_REGION_UNIT5: For clock region unused.
10	RWX	CLOCK_REGION_UNIT6: For clock region unused.
11	RWX	CLOCK_REGION_UNIT7: For clock region unused.
12	RWX	CLOCK_REGION_UNIT8: For clock region unused.
13	RWX	CLOCK_REGION_UNIT9: For clock region unused.

Bits	SCOM	Field Mnemonic: Description
14	RWX	CLOCK_REGION_UNIT10: For clock regions PLLPERV, PLLNEST, PLLNESTFLT, PLLEMFLT, PLLSSCG - TP.
15:47	RO	constant = 0b00000000000000000000000000000000
48	RWX	SEL_THOLD_SL: Select SL THOLDS.
49	RWX	SEL_THOLD_NSL: Select NSL THOLDS.
50	RWX	SEL_THOLD_ARY: Select array THOLD.
51	RO	constant = 0b0
52	RW	CLOCK_PULSE_USE_EVEN: For dual mesh support: default for pulse is ODD phase, when this bit is set, pulse will by applied on EVEN phase.
53:63	RO	constant = 0b00000000000

Register Name	Clocks Running SL
Mnemonic	TP.TPCHIP.TPC.CLOCK_STAT_SL
Address	0000000001030008 (SCOM)
Description	Clocks Running SL

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b1111

Register Name	ABIST and IOBIST per Region
Mnemonic	TP.TPCHIP.TPC.BIST
Address	0000000001030008 (SCOM)
Description	ABIST and IOBIST per region

Bits	SCOM	Field Mnemonic: Description
0	RW	TC_BIST_START_TEST_DC: Keep this 0 during ABIST/IOBIST. It can be used to bypass the RUN-N start. When this bit is set, the BIST_START_TEST goes high immediately without waiting for RUN-N. BIST starts with the first HLD clock cycle.
1	RW	TC_SRAM_ABIST_MODE_DC: Select the ABIST engines for SRAMs.
2	RW	TC_EDRAM_ABIST_MODE_DC: Select the ABIST engines for EDRAMs.
3	RW	TC_IOBIST_MODE_DC: Select the IOBIST engines.
4	RW	BIST_PERV: Region perv: 1 = BIST_START_TEST for this region will be triggered. 0 = Region will not take part of the ABIST/IOBIST run.
5	RW	BIST_UNIT1: Region net: 1 = BIST_START_TEST for this region will be triggered. 0 = Region will not take part of the ABIST/IOBIST run.
6	RW	BIST_UNIT2: Region PIB: 1= BIST_START_TEST for this region will be triggered. 0 = Region will not take part of the ABIST/IOBIST run.
7	RW	BIST_UNIT3: Region OCC: 1= BIST_START_TEST for this region will be triggered. 0 = Region will not take part of the ABIST/IOBIST run.
8	RW	BIST_UNIT4: Region ANPERV: E9: 1= BIST_START_TEST for this region will be triggered. 0 = Region will not take part of the ABIST/IOBIST run.
9	RW	BIST_UNIT5: Region unused: 1= BIST_START_TEST for this region will be triggered. 0 = Region will not take part of the ABIST/IOBIST run.
10	RW	BIST_UNIT6: Region unused: 1= BIST_START_TEST for this region will be triggered. 0 = Region will not take part of the ABIST/IOBIST run.
11	RW	BIST_UNIT7: Region unused: 1= BIST_START_TEST for this region will be triggered. 0 = Region will not take part of the ABIST/IOBIST run.
12	RW	BIST_UNIT8: Region unused: 1= BIST_START_TEST for this region will be triggered. 0 = Region will not take part of the ABIST/IOBIST run.
13	RW	BIST_UNIT9: Region unused: 1= BIST_START_TEST for this region will be triggered. 0 = Region will not take part of the ABIST/IOBIST run.
14	RW	BIST_UNIT10: Regions PLLPERV, PLLNEST, PLLNESTFLT, PLLEMFLT, PLLSSCG - TP: 1= BIST_START_TEST for this region will be triggered. 0 = Region will not take part of the ABIST/IOBIST run.
15:47	RO	constant = 0b00000000000000000000000000000000
48	RW	BIST_STROBE_WINDOW_EN: Enable Strobe window only in TE = 1. Mode OPCGGO tester pin is enabling ABIST compare when ABIST has been started. Special setup in ABIST engine is required. Default is 0. System mode can not enable this feature.
49:63	RO	constant = 0b000000000000000

Register Name	XSTOP per Region
Mnemonic	TP.TPCHIP.TPC.XSTOP1
Address	000000000103000C (SCOM)
Description	XSTOP per region

Bits	SCOM	Field Mnemonic: Description
0	RW	XSTOP1_MASK_B: mask for XSTOP to clockstop of select regions (see XSTOP_PERV,XSTOP_UNIT0…n): 0 = Ignore CHKSTOP 1 = Stop on CHKSTOP
1	RW	XSTOP1_UNUSED:
2	RW	TRIGGER_OPCG_ON_XSTOP1: Trigger OPCG on XSTOP instead of performing clockstop.
3	RW	XSTOP1_WAIT_ALLWAYS: When set to 1, XSTOP will wait independent from flush, default is no wait, when flush in not set.
4	RW	XSTOP1_PERV: Region perv: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
5	RW	XSTOP1_UNIT1: Region net: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
6	RW	XSTOP1_UNIT2: Region PIB: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
7	RW	XSTOP1_UNIT3: Region OCC: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
8	RW	XSTOP1_UNIT4: Region ANPERV - E9: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
9	RW	XSTOP1_UNIT5: Region unused: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
10	RW	XSTOP1_UNIT6: Region unused: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
11	RW	XSTOP1_UNIT7: Region unused: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
12	RW	XSTOP1_UNIT8: Region unused: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
13	RW	XSTOP1_UNIT9: Region unused: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
14	RW	XSTOP1_UNIT10: Regions PLLPERV, PLLNEST, PLLNESTFLT, PLLEMFLT, PLLSSCG - TP: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
15:47	RO	constant = 0b00000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:59	RW	XSTOP1_WAIT_CYCLES: Defines, how many cycle XSTOP will wait after dropping flush, before tholds get dropped. 0 - 4095 cycles are possible.
60:63	RO	constant = 0b0000

Register Name	XSTOP per Region
Mnemonic	TP.TPCHIP.TPC.XSTOP2
Address	000000000103000D (SCOM)
Description	XSTOP per region

Bits	SCOM	Field Mnemonic: Description
0	RW	XSTOP2_MASK_B: mask for XSTOP to clockstop of select regions(see XSTOP_PERV,XSTOP_UNIT0…n) 0 = Ignore CHKSTOP 1= Stop on CHKSTOP
1	RW	XSTOP2_UNUSED: Unused.
2	RW	TRIGGER_OPCG_ON_XSTOP2: Trigger OPCG on XSTOP instead of performing clockstop.
3	RW	XSTOP2_WAIT_ALLWAYS: when set to 1, XSTOP will wait independent from flush, default is no wait, when flush in not set.
4	RW	XSTOP2_PERV: Region perv: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
5	RW	XSTOP2_UNIT1: Region net: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
6	RW	XSTOP2_UNIT2: Region PIB: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
7	RW	XSTOP2_UNIT3: Region OCC: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
8	RW	XSTOP2_UNIT4: Region ANPERV - E9: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
9	RW	XSTOP2_UNIT5: Region unused: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
10	RW	XSTOP2_UNIT6: Region unused: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
11	RW	XSTOP2_UNIT7: Region unused: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
12	RW	XSTOP2_UNIT8: Region unused: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
13	RW	XSTOP2_UNIT9: Region unused: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.

Bits	SCOM	Field Mnemonic: Description
14	RW	XSTOP2_UNIT10: Regions PLLPERV, PLLNEST, PLLNESTFLT, PLLEMFLT, PLLSSCG - TP: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
15:47	RO	constant = 0b00000000000000000000000000000000
48:59	RW	XSTOP2_WAIT_CYCLES: Defines, how many cycle XSTOP will wait after dropping flush, before tholds get dropped. 0-4095 cycles possible.
60:63	RO	constant = 0b0000

Register Name	XSTOP per Region
Mnemonic	TP.TPCHIP.TPC.XSTOP3
Address	000000000103000E (SCOM)
Description	XSTOP per region

Bits	SCOM	Field Mnemonic: Description
0	RW	XSTOP3_MASK_B: mask for XSTOP to clockstop of select regions (see XSTOP_PERV,XSTOP_UNIT0…n): 0 = Ignore CHKSTOP 1= Stop on CHKSTOP
1	RW	XSTOP3_UNUSED: Unused.
2	RW	TRIGGER_OPCG_ON_XSTOP3: Trigger OPCG on XSTOP instead of performing clockstop.
3	RW	XSTOP3_WAIT_ALLWAYS: When set to 1, XSTOP will wait independent from flush, default is no wait, when flush in not set.
4	RW	XSTOP3_PERV: Region perv: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
5	RW	XSTOP3_UNIT1: Region net: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
6	RW	XSTOP3_UNIT2: Region PIB: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
7	RW	XSTOP3_UNIT3: Region OCC: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
8	RW	XSTOP3_UNIT4: Region ANPERV - E9: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
9	RW	XSTOP3_UNIT5: Region unused: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
10	RW	XSTOP3_UNIT6: Region unused: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
11	RW	XSTOP3_UNIT7: Region unused: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.

Bits	SCOM	Field Mnemonic: Description
12	RW	XSTOP3_UNIT8: Region unused: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
13	RW	XSTOP3_UNIT9: Region unused: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
14	RW	XSTOP3_UNIT10: Regions PLLPERV, PLLNEST, PLLNESTFLT, PLLEMFLT, PLLSSCG - TP: 1 = Region will be stopped. 0 = Region will keep running on XSTOP.
15:47	RO	constant = 0b00000000000000000000000000000000
48:59	RW	XSTOP3_WAIT_CYCLES: Defines how many cycle XSTOP will wait after dropping flush before THOLDS get dropped. 0-4095 cycles possible.
60:63	RO	constant = 0b0000

Register Name	Error Status of CC
Mnemonic	TP.TPCHIP.TPC.ERROR_STATUS
Address	000000000103000F (SCOM)
Description	Error Status of CC

Bits	SCOM	Field Mnemonic: Description
0	RWX	PCB_WRITE_NOT_ALLOWED_ERR: Write on read only register.
1	RWX	PCB_READ_NOT_ALLOWED_ERR: Read not allowed. Maybe write only register.
2	RWX	PCB_PARITY_ON_CMD_ERR: Parity error on CMD.
3	RWX	PCB_ADDRESS_NOT_VALID_ERR: Invalid address.
4	RWX	PCB_PARITY_ON_ADDR_ERR: Parity error on address.
5	RWX	PCB_PARITY_ON_DATA_ERR: Parity error on data.
6	RWX	PCB_PROTECTED_ACCESS_INVALID_ERR: Protection violation.
7	RWX	PCB_PARITY_ON_SPCIF_ERR: Parity error on specification.
8	RWX	PCB_WRITE_AND_OPCG_IP_ERR: PCB write while OPCG is running.
9	RWX	SCAN_READ_AND_OPCG_IP_ERR: Scan read when OPCG is running.
10	RWX	CLOCK_CMD_CONFLICT_ERR: Clock CMD in progress.
11	RWX	SCAN_COLLISION_ERR: Scan region selected of running region.
12	RWX	PREVENTED_SCAN_COLLISION_ERR: PCB request to set scan region which is running.
13	RWX	OPCG_TRIGGER_ERR: OPCG gets triggered while OPCG is running.
14	RWX	PHASE_CNT_CORRUPTION_ERR: Phase counters inside chiplet out of sync.
15	RWX	CLOCK_CMD_PREVENTED_ERR: Security or scan collision prevented a clock start.
16	RWX	PARITY_ON_OPCG_SM_ERR: Parity error on OPCG state machine.
17	RWX	PARITY_ON_CLOCK_MUX_REG_ERR: Parity error on scan/clock region/type or clock status register.
18	RWX	PARITY_ON_OPCG_REG_ERR: Parity error on OPCG registers.
19	RWX	PARITY_ON_SYNC_CONFIG_REG_ERR: Parity error on sync configuration register.
20	RWX	PARITY_ON_XSTOP_REG_ERR: Parity error on XSTOP register.
21	RWX	PARITY_ON_GPIO_REG_ERR: Parity error on GP0,4,5,6 registers.

Bits	SCOM	Field Mnemonic: Description
22	RWX	CLKCMD_REQUEST_ERR: Region CLKCMD has one request pending but received a second one.
23	RWX	CBS_PROTOCOL_ERR: CBS protocol error. Request/acknowledgment sequence wrong.
24	RWX	VITL_ALIGN_ERR: VITL alignment is out of sync to sync pulse.
25	RWX	UNIT_SYNC_LVL_ERR: Unit0 and Unit1 sync LVL pulse are not in sync. AVP broken.
26	RWX	PARITY_ON_SELFBOOT_CMD_STATE_ERR: Parity error on self-boot CMD state.
27	RWX	UNUSED_ERROR27: Unused.
28	RWX	UNUSED_ERROR28: Unused.
29	RWX	UNUSED_ERROR29: Unused.
30	RWX	UNUSED_ERROR30: Unused.
31	RWX	UNUSED_ERROR31: Unused.

Register Name	**OPCG Control Register Capture1**
Mnemonic	TP.TPCHIP.TPC.OPCG_CAPT1
Address	0000000001030010 (SCOM)
Description	OPCG Control Register Capture1

Bits	SCOM	Field Mnemonic: Description
0:3	RW	COUNT: 0000 = 12 cycle 0001 - 1100 = cycle 1-12 1101 - 1111 = 24 normal, no fast.
4:8	RW	SEQ_01: Sequence cycle 1 for normal/slow region (SL, NSL, ARY, SE, FCE).
9:13	RW	SEQ_02: Sequence cycle 2 for normal/slow region (SL, NSL, ARY, SE, FCE).
14:18	RW	SEQ_03: Sequence cycle 3 for normal/slow region (SL, NSL, ARY, SE, FCE).
19:23	RW	SEQ_04: Sequence cycle 4 for normal/slow region (SL, NSL, ARY, SE, FCE).
24:28	RW	SEQ_05: Sequence cycle 5 for normal/slow region (SL, NSL, ARY, SE, FCE).
29:33	RW	SEQ_06: Sequence cycle 6 for normal/slow region (SL, NSL, ARY, SE, FCE).
34:38	RW	SEQ_07: Sequence cycle 7 for normal/slow region (SL, NSL, ARY, SE, FCE).
39:43	RW	SEQ_08: Sequence cycle 8 for normal/slow region (SL, NSL, ARY, SE, FCE).
44:48	RW	SEQ_09: Sequence cycle 9 for normal/slow region (SL, NSL, ARY, SE, FCE).
49:53	RW	SEQ_10: Sequence cycle 10 for normal/slow region (SL, NSL, ARY, SE, FCE).
54:58	RW	SEQ_11: Sequence cycle 11 for normal/slow region (SL, NSL, ARY, SE, FCE).
59:63	RW	SEQ_12: Sequence cycle 12 for normal/slow region (SL, NSL, ARY, SE, FCE).

Register Name	**OPCG Control Register Capture 2**
Mnemonic	TP.TPCHIP.TPC.OPCG_CAPT2
Address	0000000001030011 (SCOM)
Description	OPCG Control Register Capture 2

Bits	SCOM	Field Mnemonic: Description
0:3	RW	UNUSED_CAPT2:
4:8	RW	SEQ_13_01EVEN: Sequence cycle 1. Even for fast region or cycle 13 for normal region (SL, NSL, ARY, SE, FCE).
9:13	RW	SEQ_14_01ODD: Sequence cycle 1. Odd for fast region or cycle 14 for normal region (SL, NSL, ARY, SE, FCE).
14:18	RW	SEQ_15_02EVEN: Sequence cycle 2. Even for fast region or cycle 15 for normal region (SL, NSL, ARY, SE, FCE).

Bits	SCOM	Field Mnemonic: Description
19:23	RW	SEQ_16_02ODD: Sequence cycle 2. Odd for fast region or cycle 16 for normal region (SL, NSL, ARY, SE, FCE).
24:28	RW	SEQ_17_03EVEN: Sequence cycle 3. Even for fast region or cycle 17 for normal region (SL, NSL, ARY, SE, FCE).
29:33	RW	SEQ_18_03ODD: Sequence cycle 3. Odd for fast region or cycle 18 for normal region (SL, NSL, ARY, SE, FCE).
34:38	RW	SEQ_19_04EVEN: Sequence cycle 4. Even for fast region or cycle 19 for normal region (SL, NSL, ARY, SE, FCE).
39:43	RW	SEQ_20_04ODD: Sequence cycle 4. Odd for fast region or cycle 20 for normal region (SL, NSL, ARY, SE, FCE).
44:48	RW	SEQ_21_05EVEN: Sequence cycle 5. Even for fast region or cycle 21 for normal region (SL, NSL, ARY, SE, FCE).
49:53	RW	SEQ_22_05ODD: Sequence cycle 5. Odd for fast region or cycle 22 for normal region (SL, NSL, ARY, SE, FCE).
54:58	RW	SEQ_23_06EVEN: Sequence cycle 6. Even for fast region or cycle 23 for normal region (SL, NSL, ARY, SE, FCE).
59:63	RW	SEQ_24_06ODD: Sequence cycle 6. Odd for fast region or cycle 24 for normal region (SL, NSL, ARY, SE, FCE).

Register Name	OPCG Control Register Capture 3
Mnemonic	TP.TPCHIP.TPC.OPCG_CAPT3
Address	0000000001030012 (SCOM)
Description	OPCG Control Register Capture 3

Bits	SCOM	Field Mnemonic: Description
0:3	RW	UNUSED_CAPT3:
4:8	RW	SEQ_07EVEN: Sequence cycle 7. Even for fast region (SL, NSL, ARY, SE, FCE).
9:13	RW	SEQ_07ODD: Sequence cycle 7. Odd for fast region (SL, NSL, ARY, SE, FCE).
14:18	RW	SEQ_08EVEN: Sequence cycle 8. Even for fast region (SL, NSL, ARY, SE, FCE).
19:23	RW	SEQ_08ODD: Sequence cycle 8. Odd for fast region (SL, NSL, ARY, SE, FCE).
24:28	RW	SEQ_09EVEN: Sequence cycle 9. Even for fast region (SL, NSL, ARY, SE, FCE).
29:33	RW	SEQ_09ODD: Sequence cycle 9. Odd for fast region (SL, NSL, ARY, SE, FCE).
34:38	RW	SEQ_10EVEN: Sequence cycle 10. Even for fast region (SL, NSL, ARY, SE, FCE).
39:43	RW	SEQ_10ODD: Sequence cycle 10. Odd for fast region (SL, NSL, ARY, SE, FCE).
44:48	RW	SEQ_11EVEN: Sequence cycle 11. Even for fast region (SL, NSL, ARY, SE, FCE).
49:53	RW	SEQ_11ODD: Sequence cycle 11. Odd for fast region (SL, NSL, ARY, SE, FCE).
54:58	RW	SEQ_12EVEN: Sequence cycle 12. Even for fast region (SL, NSL, ARY, SE, FCE).
59:63	RW	SEQ_12ODD: Sequence cycle 12. Odd for fast region (SL, NSL, ARY, SE, FCE).

Register Name	Debug CBS CC Register
Mnemonic	TP.TPCHIP.TPC.DBG_CBS_CC
Address	0000000001030013 (SCOM)
Description	Debug CBS CC Register

Bits	SCOM	Field Mnemonic: Description
0	ROX	DBG_RESET_EP: Reset Endpoint - Is the CC and CTRL in reset state.
1	ROX	DBG_OPCG_IP: OPCG in progress, not in idle.
2	ROX	DBG_VITL_CLKOFF: VITL HLD stopped, when enabled, need plat-depth cycles to switch this latch.
3	ROX	DBG_TEST_ENABLE: Test Enable.
4	ROX	DBG_CBS_REQ: CBS Interface. Request (Latched).
5:7	ROX	DBG_CBS_CMD: CBS Interface. Command (Latched).
8:12	ROX	DBG_CBS_STATE: CBS Command State Machine 00000 = Idle.
13	ROX	DBG_SECURITY_DEBUG_MODE: Status of the security mode bit.
14	ROX	DBG_CBS_PROTOCOL_ERROR: CBS Protocol Error. REQ raised, although state machine is not in IDLE. RESET_EP is required to clear this bit. No impact on IPL.
15	ROX	DBG_PCB_IDLE: PCB Interface in IDLE state.
16:19	ROX	DBG_CURRENT_OPCG_MODE: Current/latest OPCG MODE 0 = NOP 1 = LBIST 2 = ABIST 3 = RUN-N 4 = SCAN0 5 = SCAN 6 = SCAN rotate 7 = SCAN with UpdateDR 8 = SCAN with CaptureDR 9 = CLK Change Request 10 - 15 = Unused
20:23	ROX	DBG_LAST_OPCG_MODE: Previous OPCG MODE.
24	ROX	DBG_PCB_ERROR: PCB Interface Error, Read CC Error Register or set CBS_CMD = 001 to switch FSI CBS Debug Information to CC Error Register.
25	ROX	DBG_PARITY_ERROR: Any Parity Error, non PCB Parity. Read CC Error Register or set CBS_CMD = 001 to switch FSI CBS debug information to CC Error Register.
26	ROX	DBG_CC_ERROR: Any other CC Error. Read CC Error Register or set CBS_CMD = 001 to switch FSI CBS Debug Information to CC Error Register.
27	ROX	DBG_CHIPLET_IS_ALIGNED: Is 1 when the a valid align pulse WS is sent out.
28	ROX	DBG_PCB_REQUEST_SINCE_RESET: RESET will clear that bit. The first PCB request will set it.
29	ROX	DBG_PARANOIA_TEST_ENABLE_CHANGE: Rising or falling edge on test enable. After reset, RESET_EP must be cleared. There is no impact on IPL.
30	ROX	DBG_PARANOIA_VITL_CLKOFF_CHANGE: Rising or falling edge on VITL_CLKOFF. After reset, RESET_EP must be cleared. There is no impact on IPL.
31	ROX	TP_TPFSI_CBS_ACK: Only representation of CC acknowledge signal going to FSI.

Register Name	CC Protect Mode Register
Mnemonic	TP.TPCHIP.TPC.CC_PROTECT_MODE_REG
Address	00000000010303FE (SCOM)
Description	CC Protect Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_READ_PROTECT_ENABLE: Enable read protection.
1	RW	CC_WRITE_PROTECT_ENABLE: Enable write protection.

Register Name	Atomic Lock Register
Mnemonic	TP.TPCHIP.TPC.CC_ATOMIC_LOCK_REG
Address	00000000010303FF (SCOM)
Description	Atomic Lock Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_ATOMIC_LOCK_ENABLE: Enable atomic lock.
1:4	ROX	CC_ATOMIC_ID: Atomic ID.
5:7	RO	constant = 0b000
8:15	ROX	CC_ATOMIC_ACTIVITY: Atomic lock counter.

Register Name	Global Checkstop FIR
Mnemonic	TP.TPCHIP.TPC.XFIR
Address	0000000001040000 (SCOM)
Description	Global checkstop FIR

Bits	SCOM	Field Mnemonic: Description
0	RWX	XFIR_IN0: Summary bit (any XSTOP).
1	RWX	XFIR_IN1: XSTOP broadcast by using OOB.
2	RWX	XFIR_IN2: Unused.
3	RWX	XFIR_IN3: XSTOP from pervasive unit.
4	RWX	XFIR_IN4: Checkstop from OCC complex.
5	RWX	XFIR_IN5: Unused.
6	RWX	XFIR_IN6: Unused.
7	RWX	XFIR_IN7: Unused.
8	RWX	XFIR_IN8: Unused.
9	RWX	XFIR_IN9: Unused.
10	RWX	XFIR_IN10: Unused.
11	RWX	XFIR_IN11: Unused.
12	RWX	XFIR_IN12: Unused.
13	RWX	XFIR_IN13: Unused.

Bits	SCOM	Field Mnemonic: Description
14	RWX	XFIR_IN14: Unused.
15	RWX	XFIR_IN15: Unused.
16	RWX	XFIR_IN16: Unused.
17	RWX	XFIR_IN17: Unused.
18	RWX	XFIR_IN18: Unused.
19	RWX	XFIR_IN19: Unused.
20	RWX	XFIR_IN20: Unused.
21:25	RWX	XFIR_IN21: unused.
26	RWX	XFIR_IN26: XSTOP on debug trigger and LOCAL_XSTOP to recoverable.

Register Name	Global Recoverable FIR
Mnemonic	TP.TPCHIP.TPC.RFIR
Address	0000000001040001 (SCOM)
Description	Global recoverable FIR

Bits	SCOM	Field Mnemonic: Description
0	ROX	RFIR_IN0: Local checkstop unused.
1	ROX	LFIR_RECOV_ERR: Recoverable error from pervasive unit.
2	ROX	RFIR_IN4: recov from OCC(405 core).
3	ROX	RFIR_IN5: Unused.
4	ROX	RFIR_IN6: Unused.
5	ROX	RFIR_IN7: Unused.
6	ROX	RFIR_IN8: Unused.
7	ROX	RFIR_IN9: Unused.
8	ROX	RFIR_IN10: Unused.
9	ROX	RFIR_IN11: Unused.
10	ROX	RFIR_IN12: Unused.
11	ROX	RFIR_IN13: Unused.
12	ROX	RFIR_IN14: Unused.
13	ROX	RFIR_IN15: Unused.
14	ROX	RFIR_IN16: Unused.
15	ROX	RFIR_IN17: Unused.
16	ROX	RFIR_IN18: Unused.
17	ROX	RFIR_IN19: Unused.
18	ROX	RFIR_IN20: unused.
19:23	ROX	RFIR_IN21: Unused.

Register Name	FIR Mask
Mnemonic	TP.TPCHIP.TPC.FIR_MASK
Address	0000000001040002 (SCOM)
Description	FIR Mask

Bits	SCOM	Field Mnemonic: Description
0	RW	FIR_MASK_IN0: Mask for XFIR summary bit(any xstop).
1	RW	FIR_MASK_IN1: Mask for XFIR from other chiplets.
2	RW	FIR_MASK_IN2: Unused.
3	RW	FIR_MASK_IN3: Mask for XFIR from pervasive unit error.
4	RW	FIR_MASK_IN4: Mask for OCC(405 core) RFIR/XFIR.
5	RW	FIR_MASK_IN5: Unused.
6	RW	FIR_MASK_IN6: Unused.
7	RW	FIR_MASK_IN7: Unused.
8	RW	FIR_MASK_IN8: Unused.
9	RW	FIR_MASK_IN9: Unused.
10	RW	FIR_MASK_IN10: Unused.
11	RW	FIR_MASK_IN11: Unused.
12	RW	FIR_MASK_IN12: Unused.
13	RW	FIR_MASK_IN13: Unused.
14	RW	FIR_MASK_IN14: Unused.
15	RW	FIR_MASK_IN15: Unused.
16	RW	FIR_MASK_IN16: Unused.
17	RW	FIR_MASK_IN17: Unused.
18	RW	FIR_MASK_IN18: Unused.
19	RW	FIR_MASK_IN19: Unused.
20	RW	FIR_MASK_IN20: Unused.
21:25	RW	FIR_MASK_IN21: Unused.
26	RW	FIR_MASK_IN26: Mask for debug trigger and local XSTOP to recoverable error.

Register Name	Special Attention
Mnemonic	TP.TPCHIP.TPC.SPATTN
Address	0000000001040004 (SCOM) 0000000001040005 (SCOM1) 0000000001040006 (SCOM2)
Description	Special Attention

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	ROX	NCX	NCX	SPATTN_IN0: Special attention from OCC complex.
1	ROX	NCX	NCX	SPATTN_IN1: Unused special attentions.
2	ROX	NCX	NCX	SPATTN_IN2: Unused special attentions.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
3	ROX	NCX	NCX	SPATTN_IN3: Unused special attentions.
4	ROX	NCX	NCX	SPATTN_IN4: Unused special attentions.
5	ROX	NCX	NCX	SPATTN_IN5: Unused special attentions.
6	ROX	NCX	NCX	SPATTN_IN6: Unused special attentions.
7	ROX	NCX	NCX	SPATTN_IN7: Unused special attentions.
8	ROX	NCX	NCX	SPATTN_IN8: Unused special attentions.
9	ROX	NCX	NCX	SPATTN_IN9: Unused special attentions.

Register Name	Special Attention Mask
Mnemonic	TP.TPCHIP.TPC.SPA_MASK
Address	0000000001040007 (SCOM)
Description	Special Attention Mask

Bits	SCOM	Field Mnemonic: Description
0:9	RW	SPA_MASK_IN: Special attention mask.

Register Name	Mode Register
Mnemonic	TP.TPCHIP.TPC.EPS.FIR.MODE_REG
Address	0000000001040008 (SCOM)
Description	Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	MODE_IN0: Unused.
1	RW	MODE_IN1: Unused.
2	RW	MODE_IN2: Unused.
3	RW	MODE_IN3: Unused.
4	RW	MODE_IN4: Stop chip TOD on checkstop (unused in POWER9).
5	RW	MODE_IN5: Stop chip TOD on recoverable (unused in POWER9).
6	RW	MODE_IN6: Disable propagation of checkstop to other chips.
7	RW	MODE_IN7: Unused.
8	RW	MODE_IN8: Enable XSTOP on special attention.
9	RW	MODE_IN9: MASK_DIRECT/LOCAL_ERROR.
10	RW	MODE_IN10: Unused.
11	RW	MODE_IN11: Unused.
12:15	RW	MODE_IN: Unused.

Register Name	Host Attention
Mnemonic	TP.TPCHIP.TPC.HOSTATTN
Address	0000000001040009 (SCOM)
Description	Host Attention

Bits	SCOM	Field Mnemonic: Description
0	ROX	HOSTATTN_IN0: Host Attention Summary Bit.
1	ROX	HOSTATTN_IN1: Unused.
2	ROX	HOSTATTN_IN2: Unused.
3	ROX	HOSTATTN_IN3: Unused.
4	ROX	HOSTATTN_IN4: Unused.
5	ROX	HOSTATTN_IN5: Unused.
6	ROX	HOSTATTN_IN6: Unused.
7	ROX	HOSTATTN_IN7: Unused.
8	ROX	HOSTATTN_IN8: Unused.
9	ROX	HOSTATTN_IN9: Unused.
10	ROX	HOSTATTN_IN10: Unused.
11	ROX	HOSTATTN_IN11: Unused.
12	ROX	HOSTATTN_IN12: Unused.
13	ROX	HOSTATTN_IN13: Unused.
14	ROX	HOSTATTN_IN14: Unused.
15	ROX	HOSTATTN_IN15: Unused.
16	ROX	HOSTATTN_IN16: Unused.
17	ROX	HOSTATTN_IN17: Unused.
18	ROX	HOSTATTN_IN18: Unused.
19	ROX	HOSTATTN_IN19: Unused.
20	ROX	HOSTATTN_IN20: Unused.
21	ROX	HOSTATTN_IN21: Unused.
22	ROX	HOSTATTN_IN22: Unused.

Register Name	Local FIR
Mnemonic	TP.TPCHIP.TPC.LOCAL_FIR
Address	000000000104000A (SCOM) 000000000104000B (SCOM1) 000000000104000C (SCOM2)
Description	Local FIR

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	FIR_IN0: CFIR internal parity error.
1	RWX	WOX_AND	WOX_OR	FIR_IN1: Local errors from GPIO (PCB error).
2	RWX	WOX_AND	WOX_OR	FIR_IN2: Local errors from CC (PCB error).

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
3	RWX	WOX_AND	WOX_OR	FIR_IN3: Local errors from CC (OPCG, parity, scan collision, …).
4	RWX	WOX_AND	WOX_OR	FIR_IN4: Local errors from PSC (PCB error).
5	RWX	WOX_AND	WOX_OR	FIR_IN5: Local errors from PSC (parity error).
6	RWX	WOX_AND	WOX_OR	FIR_IN6: Local errors from thermal (parity error).
7	RWX	WOX_AND	WOX_OR	FIR_IN7: Local errors from thermal (PCB error).
8	RWX	WOX_AND	WOX_OR	FIR_IN8: Local errors from thermal (trip error) critical error.
9	RWX	WOX_AND	WOX_OR	FIR_IN9: Local errors from thermal (trip error) fatal error.
10	RWX	WOX_AND	WOX_OR	FIR_IN10: Therm VOLTTRIP error.
11	RWX	WOX_AND	WOX_OR	FIR_IN11: Local errors from debug (error).
12	RWX	WOX_AND	WOX_OR	FIR_IN12: Local errors from trace array (error).
13	RWX	WOX_AND	WOX_OR	FIR_IN13: Local errors from trace array (SCOM error).
14	RWX	WOX_AND	WOX_OR	FIR_IN14: Local errors from ITR (PCBIF ERR(13), FMU ERR(14)).
15	RWX	WOX_AND	WOX_OR	FIR_IN15: Local errors from ITR (PCBIF ERR(13), FMU ERR(14)).
16	RWX	WOX_AND	WOX_OR	FIR_IN16: Local errors from PCB (error).
17	RWX	WOX_AND	WOX_OR	FIR_IN17: Local errors from I2CM (error).
18	RWX	WOX_AND	WOX_OR	FIR_IN18: Local errors from TOD (error).
19	RWX	WOX_AND	WOX_OR	FIR_IN19: Local errors from TOD (error).
20	RWX	WOX_AND	WOX_OR	FIR_IN20: Local errors from TOD (error).
21	RWX	WOX_AND	WOX_OR	FIR_IN21: local errors from PORT2 (error).
22	RWX	WOX_AND	WOX_OR	FIR_IN22: FIR error from SBE.
23	RWX	WOX_AND	WOX_OR	FIR_IN23: FIR error from SBE.
24	RWX	WOX_AND	WOX_OR	FIR_IN24: FIR error from SBE.
25	RWX	WOX_AND	WOX_OR	FIR_IN25: FIR error from SBE.
26	RWX	WOX_AND	WOX_OR	FIR_IN26: FIR error from SBE.
27	RWX	WOX_AND	WOX_OR	FIR_IN27: FIR error from SBE.
28	RWX	WOX_AND	WOX_OR	FIR_IN28: FIR error from SBE.
29	RWX	WOX_AND	WOX_OR	FIR_IN29: FIR error from SBE.
30	RWX	WOX_AND	WOX_OR	FIR_IN30: FIR error from SBE.
31	RWX	WOX_AND	WOX_OR	FIR_IN31: local error from OTP.
32	RWX	WOX_AND	WOX_OR	FIR_IN32: local error from EXT trigger.
33	RWX	WOX_AND	WOX_OR	FIR_IN33: Fast XSTOP FIR error.
34	RWX	WOX_AND	WOX_OR	FIR_IN34: PCB MCAST GRP error.
35	RWX	WOX_AND	WOX_OR	FIR_IN35: PCB Parity error.
36	RWX	WOX_AND	WOX_OR	FIR_IN36: OSC SW FIR error.
37	RWX	WOX_AND	WOX_OR	FIR_IN37: OSC SW FIR error.
38	RWX	WOX_AND	WOX_OR	FIR_IN38: Local errors from PIBMEM (ECC error(37). Bad array address error(38)).
39	RWX	WOX_AND	WOX_OR	FIR_IN39: Local errors from PIBMEM (ECC error(37). Bad array address error(38)).
40	RWX	WOX_AND	WOX_OR	FIR_IN40: OTP correctable error.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
41	RWX	WOX_AND	WOX_OR	FIR_IN41: Malfunction alert (local XSTOP in another chiplet).

Register Name	Local FIR Mask
Mnemonic	TP.TPCHIP.TPC.EPS.FIR.LOCAL_FIR_MASK
Address	000000000104000D (SCOM) 000000000104000E (SCOM1) 000000000104000F (SCOM2)
Description	Local FIR Mask

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:41	RW	WO_AND	WO_OR	LFIR_MASK_IN: Mask for LEM error collection vector.

Register Name	Local FIR Action0
Mnemonic	TP.TPCHIP.TPC.EPS.FIR.LOCAL_FIR_ACTION0
Address	0000000001040010 (SCOM)
Description	Local FIR Action0

Bits	SCOM	Field Mnemonic: Description
0:41	RW	FIR_ACTION0_IN: ACTION0 mask.

Register Name	Local FIR Action1
Mnemonic	TP.TPCHIP.TPC.EPS.FIR.LOCAL_FIR_ACTION1
Address	0000000001040011 (SCOM)
Description	Local FIR Action1

Bits	SCOM	Field Mnemonic: Description
0:41	RW	FIR_ACTION1_IN: Action1 mask.

Register Name	Group XSTOP Mask Register
Mnemonic	TP.TPCHIP.TPC.EPS.FIR.GXSTOP_TRIG_REG
Address	0000000001040013 (SCOM)
Description	Group XSTOP Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP_TRIG_IN0: Mask bit for system checkstop.
1	RW	GXSTP_TRIG_IN1: Mask bit for recoverable error.
2	RW	GXSTP_TRIG_IN2: Mask bit for special attention.
3	RW	GXSTP_TRIG_IN3: Mask bit for local checkstop.
4	RW	GXSTP_TRIG_IN4: Mask bit for type 4 error (host attention).
5	RW	GXSTP_TRIG_IN5: Mask bit for OOB system checkstop Input (0).

Bits	SCOM	Field Mnemonic: Description
6	RW	GXSTP_TRIG_IN6: Mask bit for OOB system checkstop Input (1).
7	RW	GXSTP_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP_TRIG_IN9: Mask bit for debug checkstop on trigger.
10	RW	GXSTP_TRIG_IN10: Unused.
11	RW	GXSTP_TRIG_IN11: Unused.

Register Name	Group0 XSTOP Mask Register
Mnemonic	TP.TPCHIP.TPC.EPS.FIR.GXSTOP0_MASK_REG
Address	0000000001040014 (SCOM)
Description	Group0 XSTOP Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP0_TRIG_IN0: Mask bit for system checkstop.
1	RW	GXSTP0_TRIG_IN1: Mask bit for recoverable error.
2	RW	GXSTP0_TRIG_IN2: Mask bit for special attention.
3	RW	GXSTP0_TRIG_IN3: Mask bit for local checkstop.
4	RW	GXSTP0_TRIG_IN4: Mask bit for type 4 error (host attention).
5	RW	GXSTP0_TRIG_IN5: Mask bit for OOB system checkup input (0).
6	RW	GXSTP0_TRIG_IN6: Mask bit for OOB system checkup input (1).
7	RW	GXSTP0_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP0_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP0_TRIG_IN9: Mask bit for debug checkstop on trigger.
10	RW	GXSTP0_TRIG_IN10: Unused.
11	RW	GXSTP0_TRIG_IN11: Unused.

Register Name	Group1 XSTOP Mask Register
Mnemonic	TP.TPCHIP.TPC.EPS.FIR.GXSTOP1_MASK_REG
Address	0000000001040015 (SCOM)
Description	Group1 XSTOP Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP1_TRIG_IN0: Mask bit for system checkstop.
1	RW	GXSTP1_TRIG_IN1: Mask bit for recoverable error.
2	RW	GXSTP1_TRIG_IN2: Mask bit for special attention.
3	RW	GXSTP1_TRIG_IN3: Mask bit for local checkstop.
4	RW	GXSTP1_TRIG_IN4: Mask bit for type 4 error (host attention).
5	RW	GXSTP1_TRIG_IN5: Mask bit for OOB system checkstop input (0).
6	RW	GXSTP1_TRIG_IN6: Mask bit for OOB system checkstop input (1).

Bits	SCOM	Field Mnemonic: Description
7	RW	GXSTP1_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP1_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP1_TRIG_IN9: Mask bit for debug checkstop on trigger.
10	RW	GXSTP1_TRIG_IN10: Unused.
11	RW	GXSTP1_TRIG_IN11: Unused.

Register Name	Group2 XSTOP Mask Register
Mnemonic	TP.TPCHIP.TPC.EPS.FIR.GXSTOP2_MASK_REG
Address	0000000001040016 (SCOM)
Description	Group2 XSTOP Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP2_TRIG_IN0: Mask bit for system checkstop.
1	RW	GXSTP2_TRIG_IN1: Mask bit for recoverable error.
2	RW	GXSTP2_TRIG_IN2: Mask bit for special attention.
3	RW	GXSTP2_TRIG_IN3: Mask bit for local checkstop.
4	RW	GXSTP2_TRIG_IN4: Mask bit for type 4 error (host attention).
5	RW	GXSTP2_TRIG_IN5: Mask bit for OOB system checkstop input (0).
6	RW	GXSTP2_TRIG_IN6: Mask bit for OOB system checkstop input (1).
7	RW	GXSTP2_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP2_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP2_TRIG_IN9: Mask bit for debug checkstop on trigger.
10	RW	GXSTP2_TRIG_IN10: Unused.
11	RW	GXSTP2_TRIG_IN11: Unused.

Register Name	Summary Mask Register
Mnemonic	TP.TPCHIP.TPC.EPS.FIR.SUM_MASK_REG
Address	0000000001040017 (SCOM)
Description	Summary Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RW	SMASK_IN0: System checkstop summary bit.
1	RW	SMASK_IN1: Recoverable summary bit.
2	RW	SMASK_IN2: Special attention summary bit.
3	RW	SMASK_IN3: Local checkstop summary bit.
4	RW	SMASK_IN4: Type4 (host attention summary bit.

Register Name	Local Checkstop
Mnemonic	TP.TPCHIP.TPC.LOCAL_XSTOP_ERR
Address	0000000001040018 (SCOM)
Description	Local Checkstop

Bits	SCOM	Field Mnemonic: Description
0	ROX	LOCAL_XSTOP_IN0: Local checkstop summary bit.
1	ROX	LOCAL_XSTOP_IN1: Unused.
2	ROX	LOCAL_XSTOP_IN2: Unused.
3	ROX	LOCAL_XSTOP_IN3: Unused.
4	ROX	LOCAL_XSTOP_IN4: Unused.
5	ROX	LOCAL_XSTOP_IN5: Unused.
6	ROX	LOCAL_XSTOP_IN6: Unused.
7	ROX	LOCAL_XSTOP_IN7: Unused.
8	ROX	LOCAL_XSTOP_IN8: Unused.
9	ROX	LOCAL_XSTOP_IN9: Unused.
10	ROX	LOCAL_XSTOP_IN10: Unused.
11	ROX	LOCAL_XSTOP_IN11: Unused.
12	ROX	LOCAL_XSTOP_IN12: Unused.
13	ROX	LOCAL_XSTOP_IN13: Unused.
14	ROX	LOCAL_XSTOP_IN14: Unused.
15	ROX	LOCAL_XSTOP_IN15: Unused.
16	ROX	LOCAL_XSTOP_IN16: Unused.
17	ROX	LOCAL_XSTOP_IN17: Unused.
18	ROX	LOCAL_XSTOP_IN18: Unused.
19	ROX	LOCAL_XSTOP_IN19: Unused.
20	ROX	LOCAL_XSTOP_IN20: Unused.
21	ROX	LOCAL_XSTOP_IN21: Unused.
22	ROX	LOCAL_XSTOP_IN22: Unused.

Register Name	Local Checkstop Mask
Mnemonic	TP.TPCHIP.TPC.LOCAL_XSTOP_MASK
Address	0000000001040019 (SCOM)
Description	Local Checkstop Mask

Bits	SCOM	Field Mnemonic: Description
0:21	RW	LOCAL_XSTOP_MASK_IN: Local checkstop mask.

Register Name	Host Attention Mask
Mnemonic	TP.TPCHIP.TPC.HOSTATTN_MASK
Address	000000000104001A (SCOM)
Description	Host Attention Mask

Bits	SCOM	Field Mnemonic: Description
0:21	RW	HOSTATTN_MASK_IN: Host attention mask.

Register Name	DTS Thermal Sensor Loop1 Results
Mnemonic	TP.TPCHIP.TPC.EPS.THERM.DTS_RESULT0
Address	0000000001050000 (SCOM)
Description	DTS Thermal Sensor Loop1 Results

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	DTS_0_RESULT: Calibrated DTS result of sensor with ID 0.
16:31	ROX	DTS_1_RESULT: Calibrated DTS result of sensor with ID 1.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	DTS Trace Results
Mnemonic	TP.TPCHIP.TPC.EPS.THERM.DTS_TRC_RESULT
Address	0000000001050003 (SCOM)
Description	DTS Trace Results

Bits	SCOM	Field Mnemonic: Description
0:43	ROX	TIMESTAMP_COUNTER_VALUE: Time stamp counter value during DTS trace mode.
44	ROX	TIMESTAMP_COUNTER_OVERFLOW_ERR: Over flow error bit of the time stamp counter value during DTS trace mode.
45:47	RO	constant = 0b000
48:63	ROX	DTS_1_RESULT: Calibrated DTS result of sensor with ID 1.

Register Name	CPM and DTS Enables and Controls
Mnemonic	TP.TPCHIP.TPC.EPS.THERM.THERM_MODE_REG
Address	000000000105000F (SCOM)
Description	CPM and DTS Enables and Controls

Bits	SCOM	Field Mnemonic: Description
0	RW	THERM_DIS_CPM_BUBBLE_CORR: Critical path result bubble correction active.
1	RW	THERM_FORCE_THRES_ACT: Force TPC_THERM_THRES_MAC clock gating off and activates clocks.
2:4	RW	THERM_THRES_TRIP_ENA: THERM_THRES_TRIP compare enables. 1xx = trip0 - Warning x1x = trip1 - Critical xx1 = trip2 - Fatal

Bits	SCOM	Field Mnemonic: Description
5	RW	THERM_DTS_SAMPLE_ENA: 0 = No DTS sampling 1 = DTS sampling is enabled and below counter compare match can occur.
6:9	RW	THERM_SAMPLE_PULSE_CNT: A 16 MHz sample pulse is feed into an 18-bit counter, with the THERM_SAMPLE_PULSE_CNT it is possible to select a high-order bit of the counter. To enable a resolutions of sampling DTSS between 2.5 us and 80 ms. An edge detection circuit detects the rising edge of the selected counter bit and this triggers a DTS sample. 0000 = 16 ms. 0001: 8 ms. 0010 = 4 ms. 0011: 2 ms. 0100 = 1 ms. 0101: 0.5 ms. 0110 = 250 us. 0111: 125 us. 1000 = 62.5us. 1001: 31.3 us. 1010 = 15.6 us. 1011: 7.8 us. 1100 = 3.9 us. 1101: 2 us. 1110 = 1 us. 1111: 0.5 us.
10:11	RW	THERM_THRES_MODE_ENA: Forces max or min mode in threshold unit: 00 = Is off. 11 = Is illegal. 10 = Max mode. 01 = Min mode.
12	RW	DTS_TRIGGER_MODE: Unused.
13	RW	DTS_TRIGGER_SEL: Unused.
14	RW	THERM_THRES_OVERFLOW_MASK: 0 = THERM_OVERFLOW_ERR will be enabled. 1 = THERM_OVERFLOW_ERR will be disabled.
15	RW	THERM_MODE_UNUSED: Unused.
16:19	RW	THERM_DTS_READ_SEL: Selects which DTS result will be provided with PCB read ADDR_V(4): 0000 = DTS 0. 0001 = DTS 1. 0010 = DTS 2. 0100 = DTS 4. 1111 = Worst Case Sensor.
20:21	RW	THERM_DTS_ENABLE_L1: loop1 DTS enables: 1x: DTS 0 available. x1: DTS 1 available.
22:34	RO	constant = 0b0000000000000
35:36	RW	Reserved field.

Register Name	Skitter Control Register
Mnemonic	TP.TPCHIP.TPC.EPS.THERM.SKITTER_MODE_REG
Address	0000000001050010 (SCOM)
Description	Skitter Control Register

Bits	SCOM	Field Mnemonic: Description
0	RW	SKITTER_HOLD_SAMPLE: Forces skitter to hold current sample.
1	RW	DISABLE_SKITTER_STICKINESS: I 0 = Accumulation mode 1 = Samples new value each cycle and resets sticky value.
2:3	RW	SKITTER_MODE_UNUSED1: Unused.
4:5	RW	SKITTER_HOLD_DBGTRIG_SEL: bit0 = hold_on_trigger0. bit1: _on_trigger1.
6:7	RW	SKITTER_RESET_TRIG_SEL: bit0 = reset_sticky_on_trigger0. bit1: reset_sticky_on_trigger1.
8:9	RW	SKITTER_SAMPLE_GUTS: Selects guts to measure: 00 = GUTS1. 01 = GUTS2. 10 = GUTS3. 11 = GUTS4.
10:43	RO	constant = 0b00000000000000000000000000000000
44	ROX	SKITTER_HOLD_SAMPLE_WITH_TRIGGER: Forces skitter to hold current sample on the DBG trigger. This has highest priority.
45	ROX	SKITTER_DATA_V_LT: If '1', the data that is requested by a skitter force read register has finished, and data is present in skitter data register in the collector macro. The data can be read by any combination of V25/V26/V27 PCB reads.

Register Name	Error Injection Control Register
Mnemonic	TP.TPCHIP.TPC.EPS.THERM.INJECT_REG
Address	0000000001050011 (SCOM)
Description	Error Injection Control Register

Bits	SCOM	Field Mnemonic: Description
0:1	RW	THERM_INJECT_TRIP: 00 = no injection. 01: warning trip level injection. 10 = critical trip level injection. 11: fatal trip level injection.
2:3	RW	THERM_INJECT_MODE: 00 = No injection. 01 = Injection on the next DTS sample. 10 = Solid injection for the next DTS samples until bit setting changes. 11 = Not used.

Register Name	Control/Force Reset Register
Mnemonic	TP.TPCHIP.TPC.EPS.THERM.CONTROL_REG
Address	0000000001050012 (SCOM)
Description	Control/Force Reset Register

Bits	SCOM	Field Mnemonic: Description
0	WO_1P	Reserved field.
1	WO_1P	Reserved field.
2	WO_1P	Reserved field.

Bits	SCOM	Field Mnemonic: Description
3	WO_1P	Reserved field.
4	WO_1P	Reserved field.
5	WO_1P	Reserved field.
6	WO_1P	Reserved field.
7	WO_1P	Reserved field.
8	WO_1P	Reserved field.
9	WO_1P	Reserved field.
10	WO_1P	Reserved field.
11	WO_1P	Reserved field.
12	WO_1P	Reserved field.

Register Name	Thermal Error Status Register
Mnemonic	TP.TPCHIP.TPC.EPS.THERM.ERR_STATUS_REG
Address	0000000001050013 (SCOM)
Description	Thermal Error Status Register

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field.
1	ROX	Reserved field.
2	ROX	Reserved field.
3	ROX	Reserved field.
4	ROX	Reserved field.
5	ROX	Reserved field.
6	ROX	Reserved field.
7	ROX	Reserved field.
8	ROX	Reserved field.
9	ROX	Reserved field.
10	ROX	Reserved field.
11	ROX	Reserved field.
12	ROX	Reserved field.
13	ROX	Reserved field.
14	ROX	Reserved field.
15	ROX	Reserved field.
16	ROX	SERIAL_SHIFTCNT_MODEREG_PARITY_ERR_MASK: Serial shift count parity error mask.
17	ROX	THERM_MODEREG_PARITY_ERR_MASK: Therm mode register parity error mask.
18	ROX	SKITTER_MODEREG_PARITY_ERR_MASK: Skitter mode register parity error mask.
19	ROX	SKITTER_FORCEREG_PARITY_ERR_MASK: Skitter force register parity error mask.
20	ROX	SCAN_INIT_VERSION_REG_PARITY_ERR_MASK: Scan initialized version register parity error mask.
21	ROX	VOLT_MODEREG_PARITY_ERR_MASK: Volt mode register parity error mask.

Bits	SCOM	Field Mnemonic: Description
22	RO	constant = 0b0
23	ROX	COUNT_STATE_ERR_MASK: Count state machine error mask.
24	ROX	RUN_STATE_ERR_MASK: Run state machine error mask.
25	ROX	THRES_STATE_ERR_MASK: Thres state machine error mask.
26	ROX	OVERFLOW_ERR_MASK: DTS calibration calculation overflow error mask.
27	ROX	SHIFTER_PARITY_ERR_MASK: Shifter parity error mask.
28	ROX	SHIFTER_VALID_ERR_MASK: Shifter valid error mask.
29	ROX	TIMEOUT_ERR_MASK: Timeout error mask.
30	ROX	F_SKITTER_READ_ERR_MASK: Force skitter read one hot error mask.
31	ROX	PCB_ERR_MASK: Pervasive control bus error mask.
32:39	RO	constant = 0b00000000
40:43	ROX	Reserved field.
44:46	ROX	Reserved field.
47	ROX	Reserved field.
48	ROX	Reserved field.
49:50	ROX	Reserved field.
51:54	ROX	Reserved field.
55	ROX	Reserved field.
56	ROX	Reserved field.
57	ROX	Reserved field.
58	ROX	Reserved field.
59	ROX	Reserved field.
60:63	RO	constant = 0b0000

Register Name	**Skitter Force Read Register**
Mnemonic	TP.TPCHIP.TPC.EPS.THERM.SKITTER_FORCE_REG
Address	0000000001050014 (SCOM)
Description	Skitter Force Read Register

Bits	SCOM	Field Mnemonic: Description
0	RW	F_SKITTER_READ: Forces the read of that particular skitter.

Register Name	**Skitter Clock SRC Control Register**
Mnemonic	TP.TPCHIP.TPC.EPS.THERM.SKITTER_CLKSRC_REG
Address	0000000001050016 (SCOM)
Description	Skitter Clock SRC Control Register

Bits	SCOM	Field Mnemonic: Description
0:2	RW	SKITTER0_CLKSRC: Selects clock to measure: 000 = Local mesh clock. 001 = External pin SKITTER_C1_1_IN. 010 = Local D1CLK only if D_MODE = 1. 011 = External pin SKITTER_C1_2_IN. 100 = Local LCLK only if D_MODE = 1. 101 = External pin SKITTER_C1_3_IN. 110 = Unused. 111 = External pin SKITTER_C1_4_IN.
3:35	RO	constant = 0b00000000000000000000000000000000
36:37	RW	SKITTER0_DELAY_SELECT: To select delay to be added between clock source mux and inverter chain (base line delay is 12.2 psec) of SKITTER0. 00 = No delay. 01 = 0.6 psec. 10 = 1.8 psec. 11 = 5 psec.

Register Name	Skitter Data Register Read Bit [0:63]
Mnemonic	TP.TPCHIP.TPC.EPS.THERM.SKITTER_DATA0
Address	0000000001050019 (SCOM)
Description	Skitter Data Register Read Bit 0:63

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved.

Register Name	Skitter Data Register Read Bit [32:95]
Mnemonic	TP.TPCHIP.TPC.EPS.THERM.SKITTER_DATA1
Address	000000000105001A (SCOM)
Description	Skitter Data Register Read Bit [32:95]

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved.

Register Name	Skitter Data Register Read Bits [6:127]
Mnemonic	TP.TPCHIP.TPC.EPS.THERM.SKITTER_DATA2
Address	000000000105001B (SCOM)
Description	Skitter Data Register Read Bits [6:127]

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved.

Register Name	Time stamp Counter Read
Mnemonic	TP.TPCHIP.TPC.EPS.THERM.TIMESTAMP_COUNTER_READ
Address	000000000105001C (SCOM)
Description	Timestamp Counter Read

Bits	SCOM	Field Mnemonic: Description
0:43	ROX	TIMESTAMP_COUNTER_VALUE: Time stamp counter value during DTS trace mode.
44	ROX	TIMESTAMP_COUNTER_OVERFLOW_ERR: Overflow error bit of the time stamp counter value during DTS trace mode.

3. TB Chiplet PCB Slave

The POWER9 processor registers are listed alphabetically by mnemonic in the following address table.

Mnemonic	Address	Page
TP.TPCHIP.NET.PCBSLPERV.ASSIST_INTERRUPT_REG	0x00000000010F0011	553
TP.TPCHIP.NET.PCBSLPERV.ATOMIC_LOCK_REG	0x00000000010F03FF	561

The POWER9 processor registers are listed in the following tables.

Register Name	**Number of Slaves in Multicast Group 0**
Mnemonic	TP.TPCHIP.PIB.PCBMS.MCAST_GRP_0_SLAVES_REG
Address	00000000000F0000 (SCOM)
Description	This register specifies the number of slaves in multicast group 0.

Bits	**SCOM**	**Field Mnemonic: Description**
0:5	RWX	SLAVES_MCAST_GROUP_0: This field specifies the number of slaves in multicast group 0.

Register Name	**Number of Slaves in Multicast Group 1**
Mnemonic	TP.TPCHIP.PIB.PCBMS.MCAST_GRP_1_SLAVES_REG
Address	00000000000F0001 (SCOM)
Description	This register specifies the number of slaves in multicast group 1.

Bits	**SCOM**	**Field Mnemonic: Description**
0:5	RWX	SLAVES_MCAST_GROUP_1: This field specifies the number of slaves in multicast group 1.

Register Name	Number of Slaves in Multicast Group 2
Mnemonic	TP.TPCHIP.PIB.PCBMS.MCAST_GRP_2_SLAVES_REG
Address	00000000000F0002 (SCOM)
Description	This register specifies the number of slaves in multicast group 2.

Bits	SCOM	Field Mnemonic: Description
0:5	RWX	SLAVES_MCAST_GROUP_2: This field specifies the number of slaves in multicast group 2.

Register Name	Number of Slaves in Multicast Group 3
Mnemonic	TP.TPCHIP.PIB.PCBMS.MCAST_GRP_3_SLAVES_REG
Address	00000000000F0003 (SCOM)
Description	This register specifies the number of slaves in multicast group 3.

Bits	SCOM	Field Mnemonic: Description
0:5	RWX	SLAVES_MCAST_GROUP_3: This field specifies the number of slaves in multicast group 3.

Register Name	Number of Slaves in Multicast Group 4
Mnemonic	TP.TPCHIP.PIB.PCBMS.MCAST_GRP_4_SLAVES_REG
Address	00000000000F0004 (SCOM)
Description	This register specifies the number of slaves in multicast group 4.

Bits	SCOM	Field Mnemonic: Description
0:5	RWX	SLAVES_MCAST_GROUP_4: This field specifies the number of slaves in multicast group 4.

Register Name	Number of Slaves in Multicast Group 5
Mnemonic	TP.TPCHIP.PIB.PCBMS.MCAST_GRP_5_SLAVES_REG
Address	00000000000F0005 (SCOM)
Description	This register specifies the number of slaves in multicast group 5.

Bits	SCOM	Field Mnemonic: Description
0:5	RWX	SLAVES_MCAST_GROUP_5: This field specifies the number of slaves in multicast group 5.

Register Name	Number of Slaves in Multicast Group 6
Mnemonic	TP.TPCHIP.PIB.PCBMS.MCAST_GRP_6_SLAVES_REG
Address	00000000000F0006 (SCOM)
Description	This register specifies the number of slaves in multicast group 6.

Bits	SCOM	Field Mnemonic: Description
0:5	RWX	SLAVES_MCAST_GROUP_6: This field specifies the number of slaves in multicast group 6.

Register Name	Selects Bit to be Returned by Multicast Read
Mnemonic	TP.TPCHIP.PIB.PCBMS.BIT_SEL_REG_2
Address	00000000000F0008 (SCOM)
Description	This register selects the bit to be returned by a multicast read operation.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	BIT_SELECT_REGISTER_FSP2PIB: This field selects the bit to be returned by the Multicast Read Register. This bit is determined by the PIB master even though the PIB master and multicast Read Register have the same address.

Register Name	Chip
Mnemonic	TP.TPCHIP.PIB.PCBMS.DEVICE_ID_REG
Address	00000000000F000F (SCOM)
Description	ID readout.

Bits	SCOM	Field Mnemonic: Description
0:19	RO	CFAM_CHIPID: This field is also known as cfam_chipid.
20	RO	constant = 0b0
21:31	RO	VENDOR_ID: The IBM ID is 0x49
32:35	RO	constant = 0b0000
36:38	RW	SOCKET_ID: Socket position Socket 0x0 is connected to the primary service element. Socket 0x1 is connected to the secondary service element (high end only).
39	RW	CHIPPOS_ID: DCM position 0 = SCMs or the first chip on the DCM 1 = The second chip on the DCM (always a slave)
40	RO	IO_TP_VSB_CHIP_POS
41:47	RO	constant = 0b0000000
48	ROX	FUSE_NX_ALLOW_CRYPTO: 1 = NX crypto-functionality is enabled (export regulation).
49	ROX	FUSE_VMX_CRYPTO_DIS: 1 = VMX crypto-functionality is disabled (export regulation).
50	ROX	FUSE_FP_THROTTLE_EN: 1 = Floating point is throttled (export regulation).
51	RO	TP_NP_NVLINK_DISABLE: Indicates that NVLink is disabled.
52	RO	FUSE_TOPOLOGY_2CHIP
53:54	RO	FUSE_TOPOLOGY_GROUP
55:63	RO	constant = 0b000000000

Register Name	Slave Response during Multicast Access Register
Mnemonic	TP.TPCHIP.PIB.PCBMS.REC_ACK_REG
Address	00000000000F0010 (SCOM)
Description	This register contains information about the slaves that responded during a multicast access operation.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	RECEIVE_ACKNOWLEDGE_REGISTER: This field contains information about which slave responded during a multicast access operation.

Register Name	Slave Error Response during Multicast Access Register 0
Mnemonic	TP.TPCHIP.PIB.PCBMS.REC_ERR_REG0
Address	00000000000F0011 (SCOM)
Description	This register contains information about which slave responded with an error during a multicast access operation.

Bits	SCOM	Field Mnemonic: Description
0	ROX	MASTER_RESPONSE_BIT: This bit indicates that the PCBMS has responded.
1:3	RWX_WAND	MASTER_ERROR_CODE: This bit specifies the master error code.
4	ROX	SLAVE1_RESPONSE_BIT: This bit indicates that that Slave1 has responded.
5:7	RWX_WAND	SLAVE1_ERROR_CODE: This field indicates the Slave1 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
8	ROX	SLAVE2_RESPONSE_BIT: This bit indicates that Slave2 has responded.
9:11	RWX_WAND	SLAVE2_ERROR_CODE: This field indicates the Slave2 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
12	ROX	SLAVE3_RESPONSE_BIT: This bit indicates that Slave3 has responded.
13:15	RWX_WAND	SLAVE3_ERROR_CODE: This field indicates the Slave3 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
16	ROX	SLAVE4_RESPONSE_BIT: This bit indicates that Slave4 has responded.
17:19	RWX_WAND	SLAVE4_ERROR_CODE: This field indicates the Slave4 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
20	ROX	SLAVE5_RESPONSE_BIT: This bit indicates that Slave5 has responded.
21:23	RWX_WAND	SLAVE5_ERROR_CODE: This field indicates the Slave5 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
24	ROX	SLAVE6_RESPONSE_BIT: This bit indicates that Slave6 has responded.

Bits	SCOM	Field Mnemonic: Description
25:27	RWX_WAND	SLAVE6_ERROR_CODE: This field indicates the Slave6 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
28	ROX	SLAVE7_RESPONSE_BIT: This bit indicates that Slave7 has responded.
29:31	RWX_WAND	SLAVE7_ERROR_CODE: This field indicates the Slave7 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
32	ROX	SLAVE8_RESPONSE_BIT: This bit indicates that Slave8 has responded.
33:35	RWX_WAND	SLAVE8_ERROR_CODE: This field indicates the Slave8 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
36	ROX	SLAVE9_RESPONSE_BIT: This bit indicates that Slave9 has responded.
37:39	RWX_WAND	SLAVE9_ERROR_CODE: This field indicates the Slave9 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
40	ROX	SLAVE10_RESPONSE_BIT: This bit indicates that Slave10 has responded.
41:43	RWX_WAND	SLAVE10_ERROR_CODE: This field indicates the Slave10 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
44	ROX	SLAVE11_RESPONSE_BIT: This bit indicates that Slave11 has responded.
45:47	RWX_WAND	SLAVE11_ERROR_CODE: This field indicates the Slave11 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
48	ROX	SLAVE12_RESPONSE_BIT: This bit indicates that Slave12 has responded.
49:51	RWX_WAND	SLAVE12_ERROR_CODE: This field indicates the Slave12 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
52	ROX	SLAVE13_RESPONSE_BIT: This bit indicates that Slave13 has responded.

Bits	SCOM	Field Mnemonic: Description
53:55	RWX_WAND	SLAVE13_ERROR_CODE: This field indicates the Slave13 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
56	ROX	SLAVE14_RESPONSE_BIT: This bit indicates that Slave14 has responded.
57:59	RWX_WAND	SLAVE14_ERROR_CODE: This field indicates the Slave14 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
60	ROX	SLAVE15_RESPONSE_BIT: This bit indicates that Slave15 has responded.
61:63	RWX_WAND	SLAVE15_ERROR_CODE: This field indicates the Slave15 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout

Register Name	Slave Error Response during Multicast Access Register 1
Mnemonic	TP.TPCHIP.PIB.PCBMS.REC_ERR_REG1
Address	00000000000F0012 (SCOM)
Description	This register contains information about which slave responded with an error during a multicast access operation.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SLAVE16_RESPONSE_BIT: This bit indicates that Slave16 has responded.
1:3	RWX_WAND	SLAVE16_ERROR_CODE: This field indicates the Slave16 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
4	ROX	SLAVE17_RESPONSE_BIT: This bit indicates that Slave17 has responded.
5:7	RWX_WAND	SLAVE17_ERROR_CODE: This field indicates the Slave17 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
8	ROX	SLAVE18_RESPONSE_BIT: This bit indicates that Slave18 has responded.
9:11	RWX_WAND	SLAVE18_ERROR_CODE: This field indicates the Slave18 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
12	ROX	SLAVE19_RESPONSE_BIT: This bit indicates that Slave19 has responded.

Bits	SCOM	Field Mnemonic: Description
13:15	RWX_WAND	SLAVE19_ERROR_CODE: This field indicates the Slave19 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
16	ROX	SLAVE20_RESPONSE_BIT: This bit indicates that Slave20 has responded.
17:19	RWX_WAND	SLAVE20_ERROR_CODE: This field indicates the Slave20 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
20	ROX	SLAVE21_RESPONSE_BIT: This bit indicates that Slave21 has responded.
21:23	RWX_WAND	SLAVE21_ERROR_CODE: This field indicates the Slave21 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
24	ROX	SLAVE22_RESPONSE_BIT: This bit indicates that Slave22 has responded.
25:27	RWX_WAND	SLAVE22_ERROR_CODE: This field indicates the Slave22 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
28	ROX	SLAVE23_RESPONSE_BIT: This bit indicates that Slave23 has responded.
29:31	RWX_WAND	SLAVE23_ERROR_CODE: This field indicates the Slave23 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
32	ROX	SLAVE24_RESPONSE_BIT: This bit indicates that Slave24 has responded.
33:35	RWX_WAND	SLAVE24_ERROR_CODE: This field indicates the Slave24 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
36	ROX	SLAVE25_RESPONSE_BIT: This bit indicates that Slave25 has responded.
37:39	RWX_WAND	SLAVE25_ERROR_CODE: This field indicates the Slave25 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
40	ROX	SLAVE26_RESPONSE_BIT: This bit indicates that Slave26 has responded.

Bits	SCOM	Field Mnemonic: Description
41:43	RWX_WAND	SLAVE26_ERROR_CODE: This field indicates the Slave26 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
44	ROX	SLAVE27_RESPONSE_BIT: This bit indicates that Slave27 has responded.
45:47	RWX_WAND	SLAVE27_ERROR_CODE: This field indicates the Slave27 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
48	ROX	SLAVE28_RESPONSE_BIT: This bit indicates that Slave28 has responded.
49:51	RWX_WAND	SLAVE28_ERROR_CODE: This field indicates the Slave28 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
52	ROX	SLAVE29_RESPONSE_BIT: This bit indicates that Slave29 has responded.
53:55	RWX_WAND	SLAVE29_ERROR_CODE: This field indicates the Slave29 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
56	ROX	SLAVE30_RESPONSE_BIT: This bit indicates that Slave30 has responded.
57:59	RWX_WAND	SLAVE30_ERROR_CODE: This field indicates the Slave30 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
60	ROX	SLAVE31_RESPONSE_BIT: This bit indicates that Slave31 has responded.
61:63	RWX_WAND	SLAVE31_ERROR_CODE: This field indicates the Slave31 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout

Register Name	Slave Error Response during Multicast Access Register 2
Mnemonic	TP.TPCHIP.PIB.PCBMS.REC_ERR_REG2
Address	00000000000F0013 (SCOM)
Description	This register contains information about which slave responded with an error during a multicast access.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SLAVE32_RESPONSE_BIT: This bit indicates that Slave32 has responded.

Bits	SCOM	Field Mnemonic: Description
1:3	RWX_WAND	SLAVE32_ERROR_CODE: This field indicates the Slave32 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
4	ROX	SLAVE33_RESPONSE_BIT: This bit indicates that Slave33 has responded.
5:7	RWX_WAND	SLAVE33_ERROR_CODE: This field indicates the Slave33 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
8	ROX	SLAVE34_RESPONSE_BIT: This bit indicates that Slave34 has responded.
9:11	RWX_WAND	SLAVE34_ERROR_CODE: This field indicates the Slave34 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
12	ROX	SLAVE35_RESPONSE_BIT: This bit indicates that Slave35 has responded.
13:15	RWX_WAND	SLAVE35_ERROR_CODE: This field indicates the Slave35 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
16	ROX	SLAVE36_RESPONSE_BIT: This bit indicates that Slave36 has responded.
17:19	RWX_WAND	SLAVE36_ERROR_CODE: This field indicates the Slave36 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
20	ROX	SLAVE37_RESPONSE_BIT: This bit indicates that Slave37 has responded.
21:23	RWX_WAND	SLAVE37_ERROR_CODE: This field indicates the Slave37 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
24	ROX	SLAVE38_RESPONSE_BIT: This bit indicates that Slave38 has responded.
25:27	RWX_WAND	SLAVE38_ERROR_CODE: This field indicates the Slave38 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
28	ROX	SLAVE39_RESPONSE_BIT: This bit indicates that Slave39 has responded.

Bits	SCOM	Field Mnemonic: Description
29:31	RWX_WAND	SLAVE39_ERROR_CODE: This field indicates the Slave39 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
32	ROX	SLAVE40_RESPONSE_BIT: This bit indicates that Slave40 has responded.
33:35	RWX_WAND	SLAVE40_ERROR_CODE: This field indicates the Slave40 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
36	ROX	SLAVE41_RESPONSE_BIT: This bit indicates that Slave41 has responded.
37:39	RWX_WAND	SLAVE41_ERROR_CODE: This field indicates the Slave41 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
40	ROX	SLAVE42_RESPONSE_BIT: This bit indicates that Slave42 has responded.
41:43	RWX_WAND	SLAVE42_ERROR_CODE: This field indicates the Slave42 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
44	ROX	SLAVE43_RESPONSE_BIT: This bit indicates that Slave43 has responded.
45:47	RWX_WAND	SLAVE43_ERROR_CODE: This field indicates the Slave43 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
48	ROX	SLAVE44_RESPONSE_BIT: This bit indicates that Slave44 has responded.
49:51	RWX_WAND	SLAVE44_ERROR_CODE: This field indicates the Slave44 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
52	ROX	SLAVE45_RESPONSE_BIT: This bit indicates that Slave45 has responded.
53:55	RWX_WAND	SLAVE45_ERROR_CODE: This field indicates the Slave46 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
56	ROX	SLAVE46_RESPONSE_BIT: This bit indicates that Slave46 has responded.

Bits	SCOM	Field Mnemonic: Description
57:59	RWX_WAND	SLAVE46_ERROR_CODE: This field indicates the Slave46 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
60	ROX	SLAVE47_RESPONSE_BIT: This bit indicates that Slave47 has responded.
61:63	RWX_WAND	SLAVE47_ERROR_CODE: This field indicates the Slave47 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout

Register Name	Slave Error Response during Multicast Access Register 3
Mnemonic	TP.TPCHIP.PIB.PCBMS.REC_ERR_REG3
Address	00000000000F0014 (SCOM)
Description	This register contains information about which slave responded with an error during a multicast access operation.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SLAVE48_RESPONSE_BIT: This bit indicates that Slave48 has responded.
1:3	RWX_WAND	SLAVE48_ERROR_CODE: This field indicates the Slave48 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
4	ROX	SLAVE49_RESPONSE_BIT: This bit indicates that Slave49 has responded.
5:7	RWX_WAND	SLAVE49_ERROR_CODE: This field indicates the Slave49 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
8	ROX	SLAVE50_RESPONSE_BIT: This bit indicates that Slave50 has responded.
9:11	RWX_WAND	SLAVE50_ERROR_CODE: This field indicates the Slave50 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
12	ROX	SLAVE51_RESPONSE_BIT: This bit indicates that Slave51 has responded.
13:15	RWX_WAND	SLAVE51_ERROR_CODE: This field indicates the Slave51 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
16	ROX	SLAVE52_RESPONSE_BIT: This bit indicates that Slave52 has responded.

Bits	SCOM	Field Mnemonic: Description
17:19	RWX_WAND	SLAVE52_ERROR_CODE: This field indicates the Slave52 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
20	ROX	SLAVE53_RESPONSE_BIT: This bit indicates that Slave53 has responded.
21:23	RWX_WAND	SLAVE53_ERROR_CODE: This field indicates the Slave53 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
24	ROX	SLAVE54_RESPONSE_BIT: This bit indicates that Slave54 has responded.
25:27	RWX_WAND	SLAVE54_ERROR_CODE: This field indicates the Slave54 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
28	ROX	SLAVE55_RESPONSE_BIT: This bit indicates that Slave55 has responded.
29:31	RWX_WAND	SLAVE55_ERROR_CODE: This field indicates the Slave55 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
32	ROX	SLAVE56_RESPONSE_BIT: This bit indicates that Slave56 has responded.
33:35	RWX_WAND	SLAVE56_ERROR_CODE: This field indicates the Slave56 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
36	ROX	SLAVE57_RESPONSE_BIT: This bit indicates that Slave57 has responded.
37:39	RWX_WAND	SLAVE57_ERROR_CODE: This field indicates the Slave57 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
40	ROX	SLAVE58_RESPONSE_BIT: This bit indicates that Slave58 has responded.
41:43	RWX_WAND	SLAVE58_ERROR_CODE: This field indicates the Slave58 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
44	ROX	SLAVE59_RESPONSE_BIT: This bit indicates that Slave59 has responded.

Bits	SCOM	Field Mnemonic: Description
45:47	RWX_WAND	SLAVE59_ERROR_CODE: This field indicates the Slave59 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
48	ROX	SLAVE60_RESPONSE_BIT: This bit indicates that Slave60 has responded.
49:51	RWX_WAND	SLAVE60_ERROR_CODE: This field indicates the Slave60 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
52	ROX	SLAVE61_RESPONSE_BIT: This bit indicates that Slave61 has responded.
53:55	RWX_WAND	SLAVE61_ERROR_CODE: This field indicates the Slave61 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
56	ROX	SLAVE62_RESPONSE_BIT: This bit indicates that Slave62 has responded.
57:59	RWX_WAND	SLAVE62_ERROR_CODE: This field indicates the Slave62 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout
60	ROX	SLAVE63_RESPONSE_BIT: This bit indicates that Slave63 has responded.
61:63	RWX_WAND	SLAVE63_ERROR_CODE: This field indicates the Slave63 error code. 000 = OK 010 = Chiplet offline 100 = Invalid address 110 = Parity error/unexpected/wrong packet 111 = Timeout

Register Name	Mode Select for Multicast Compare
Mnemonic	TP.TPCHIP.PIB.PCBMS.MCAST_COMP_REG
Address	00000000000F0015 (SCOM)
Description	This register specifies the mode of the multicast compare operation.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	MULTICAST_COMPARE_REGISTER: Mode select for multicast compare. 00 = Equal (=) 01 = Less than (<) 10 = Not equal (!=) 11= Greater than or equal to (>=)

Register Name	Multicast Compare Operation Comparison Value
Mnemonic	TP.TPCHIP.PIB.PCBMS.MCAST_COMP_VAL_REG
Address	00000000000F0016 (SCOM)
Description	This register specifies the value to compare against during a multicast compare operation.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	MULTICAST_COMPARE_VALUE_REGISTER: This field specifies value to compare against during a multicast compare operation. This value is not replicated per master. There is only a single copy.

Register Name	Multicast Compare Operation Mask Value
Mnemonic	TP.TPCHIP.PIB.PCBMS.MCAST_COMP_MASK_REG
Address	00000000000F0017 (SCOM)
Description	This register specifies the mask value to be used during a multicast compare operation.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	MULTICAST_COMPARE_MASK_REGISTER: This field specifies the mask value to be used during a multicast compare operation.

Register Name	First Reply Packet Slave Address
Mnemonic	TP.TPCHIP.PIB.PCBMS.FIRST_REPLY_REG
Address	00000000000F0018 (SCOM)
Description	This register contains the slave address of the first reply packet.

Bits	SCOM	Field Mnemonic: Description
0:5	ROX	FIRST_REPLY_REGISTER: This field contains slave address of the first reply packet.

Register Name	PCB Master Timeout Value
Mnemonic	TP.TPCHIP.PIB.PCBMS.TIMEOUT_REG
Address	00000000000F0019 (SCOM)
Description	This register contains the timeout value for the PCB master.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	TIMEOUT_REGISTER: Contains the timeout value for the PCB master.

Register Name	Interrupt Register for Special Attention, Checkstop, Recoverable Error
Mnemonic	TP.TPCHIP.PIB.PCBMS.INTERRUPT_TYPE_REG
Address	00000000000F001A (SCOM)
Description	This interrupt register specifies if the error is a special attention, checkstop, or recoverable error.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WAND	ATTENTION: Attention.

Bits	SCOM	Field Mnemonic: Description
1	RWX_WAND	RECOVERABLE_ERROR: Recoverable error.
2	RWX_WAND	CHECKSTOP: Checkstop.

Register Name	Ignore Parity Register
Mnemonic	TP.TPCHIP.PIB.PCBMS.IGNORE_PAR_REG
Address	00000000000F001C (SCOM)
Description	If set to 1, accesses to the PCB master are forwarded to the PCB. Also, all interrupts are forwarded to the interrupt controller. If set to 0, accesses with parity errors to the PCB master are not forwarded to the PCB. Interrupt packets with parity errors are not forwarded to the interrupt controller.

Bits	SCOM	Field Mnemonic: Description
0	RW	IGNORE_PARITY_REG: Set to 0 to block accesses with parity errors from the PCB and to ignore interrupt packets with parity error.
1	RW	DISABLE_ECC_CORRECTION: If set, the ECC error correction feature is off.
2	RWX_WCLRPART	ECC_S_BIT_ERROR: Set by hardware on a single-bit ECC error. Cleared on writing.
3	RW	CHKSW_AR012: If set, the AR012 architecture is used.

Register Name	Reset Register
Mnemonic	TP.TPCHIP.PIB.PCBMS.RESET_REG
Address	00000000000F001D (SCOM)
Description	Bit 0 resets all PCB elements outside of the standby domain. Bit 1 resets all endpoints.

Bits	SCOM	Field Mnemonic: Description
0	RW	RESET_PCB: Resets all PCB elements outside of the standby domain.
1	RW	RESET_ENDPOINTS: Unused: Resets all endpoints that are attached to the PCB. The bit is now in the FSI Domain.
2	RW	TIMEOUT_RESET_EN: Enable for autoreset PCB on a PCB timeout.

Register Name	PCB Master Error Register, Contains First Error
Mnemonic	TP.TPCHIP.PIB.PCBMS.FIRST_ERR_REG
Address	00000000000F001E (SCOM)
Description	PCB master error register, contains first error.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	FIRST_TIMEOUT_ACTIVE: Active when the master ran into a timeout.
1	RWX_WCLRREG	FIRST_PARITY_ERR: A parity error on internal FSMs occurred.
2	RWX_WCLRREG	FIRST_BEAT_NUM_ERR: A beat with wrong beat number was received.
3	RWX_WCLRREG	FIRST_BEAT_REC_ERR: An unexpected beat was received.
4	RWX_WCLRREG	FIRST_RECEIVED_ERROR: An error packet was received.
5	RWX_WCLRREG	FIRST_RX_PCB_DATA_P_ERR: A data parity on incoming packet occurred.

Bits	SCOM	Field Mnemonic: Description
6	RWX_WCLRREG	FIRST_PIB_ADDR_P_ERR: A parity error on PIB address occurred.
7	RWX_WCLRREG	FIRST_PIB_DATA_P_ERR: A parity error on PIB data occurred.

Register Name	Internal PCB Master Error Register
Mnemonic	TP.TPCHIP.PIB.PCBMS.ERROR_REG
Address	00000000000F001F (SCOM)
Description	Internal PCB master error register.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRREG	TIMEOUT_ACTIVE: Active when the master ran into a timeout.
1	RWX_WCLRREG	PARITY_ERR: A parity error on internal FSMs occurred.
2	RWX_WCLRREG	BEAT_NUM_ERR: A beat with a wrong beat number was received.
3	RWX_WCLRREG	BEAT_REC_ERR: An unexpected beat was received.
4	RWX_WCLRREG	RECEIVED_ERROR: An error packet received.
5	RWX_WCLRREG	RX_PCB_DATA_P_ERR: A data parity on and incoming packet occurred.
6	RWX_WCLRREG	PIB_ADDR_P_ERR: A parity error on PIB address occurred.
7	RWX_WCLRREG	PIB_DATA_P_ERR: A parity error on PIB data occurred.

Register Name	Interrupt Presentation Register
Mnemonic	TP.TPCHIP.PIB.PCBMS.COMP.INTR_COMP.INTERRUPT1_REG
Address	00000000000F0020 (SCOM) 00000000000F0021 (SCOM1) 00000000000F0022 (SCOM2)
Description	Interrupt presentation register.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:55	RWX	WOX_OR	WOX_AND	INTERRUPT1: Interrupt type 1 (gp) for up to 56 chiplets.

Register Name	Interrupt Presentation Register
Mnemonic	TP.TPCHIP.PIB.PCBMS.COMP.INTR_COMP.INTERRUPT2_REG
Address	00000000000F0023 (SCOM) 00000000000F0024 (SCOM1) 00000000000F0025 (SCOM2)
Description	Interrupt presentation register.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:55	RWX	WOX_OR	WOX_AND	INTERRUPT2: Interrupt type 2 (cc) for up to 56 chiplets.

Register Name	Interrupt Presentation Register
Mnemonic	TP.TPCHIP.PIB.PCBMS.COMP.INTR_COMP.INTERRUPT3_REG
Address	00000000000F0026 (SCOM) 00000000000F0027 (SCOM1) 00000000000F0028 (SCOM2)
Description	Interrupt presentation register.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:55	RWX	WOX_OR	WOX_AND	INTERRUPT3: Interrupt type 3 (--) for up to 56 chiplets.

Register Name	Interrupt Presentation Register
Mnemonic	TP.TPCHIP.PIB.PCBMS.COMP.INTR_COMP.INTERRUPT4_REG
Address	00000000000F0029 (SCOM) 00000000000F002A (SCOM1) 00000000000F002B (SCOM2)
Description	Interrupt presentation register.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:55	RWX	WOX_OR	WOX_AND	INTERRUPT4: Interrupt type 4 (--) for up to 56 chiplets.

Register Name	Interrupt Type Mask Register
Mnemonic	TP.TPCHIP.PIB.PCBMS.COMP.INTR_COMP.INTERRUPT_TYPE_MASK_REG
Address	00000000000F002C (SCOM) 00000000000F002D (SCOM1) 00000000000F002E (SCOM2)
Description	Interrupt type mask register.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	RW_WOR	RW_WAND	INTERRUPT_TYPE_MASK_GP: Mask all BIST Done interrupts. 0 = Active 1 = Masked
1	RW	RW_WOR	RW_WAND	INTERRUPT_TYPE_MASK_CC: Mask all clock state change interrupts. 0 = Active 1 = Masked
2	RW	RW_WOR	RW_WAND	INTERRUPT_TYPE_MASK_UNUSED2: Mask all clock state change interrupts. 0 = Active 1 = Masked
3	RW	RW_WOR	RW_WAND	INTERRUPT_TYPE_MASK_UNUSED3: Mask all clock state change interrupts. 0 = Active 1 = Masked

Register Name	Interrupt Configuration Register
Mnemonic	TP.TPCHIP.PIB.PCBMS.COMP.INTR_COMP.INTERRUPT_CONF_REG
Address	00000000000F002F (SCOM) 00000000000F0030 (SCOM1) 00000000000F0031 (SCOM2)
Description	This register is used to configure interrupts.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	RW_WOR	RW_WAND	INTERRUPT_CONF_UNUSED0: Reserved
1:3	RW	RW_WOR	RW_WAND	INTERRUPT_CONF_SEL0: Select for OOB return #0
4	RW	RW_WOR	RW_WAND	INTERRUPT_CONF_UNUSED4: Reserved
5:7	RW	RW_WOR	RW_WAND	INTERRUPT_CONF_SEL1: Select for OOB return #1
8	RW	RW_WOR	RW_WAND	INTERRUPT_CONF_GP: Configuration for BIST Done interrupts 0 = Or 1 = And
9	RW	RW_WOR	RW_WAND	INTERRUPT_CONF_CC: Configuration for clock state change interrupts 0 = Or 1 = And
10	RW	RW_WOR	RW_WAND	INTERRUPT_CONF_UNUSED2: Configuration for clock state change interrupts 0 = Or 1 = And
11	RW	RW_WOR	RW_WAND	INTERRUPT_CONF_UNUSED3: Configuration for clock state change interrupts 0 = Or 1 = And

Register Name	Last interrupt packet received from PCB Master
Mnemonic	TP.TPCHIP.PIB.PCBMS.COMP.INTR_COMP.INTERRUPT_HOLD_REG
Address	00000000000F0032 (SCOM)
Description	The last interrupt packet was received from the PCB master.

Bits	SCOM	Field Mnemonic: Description
0:25	ROX	INTERRUPT_HOLD: The last interrupt packet received from the PCB master

Register Name	IPOLL Mask Register
Mnemonic	TP.TPCHIP.PIB.PCBMS.COMP.INTR_COMP.HOST_MASK_REG
Address	00000000000F0033 (SCOM)
Description	This register indicates the mask error type.

Bits	SCOM	Field Mnemonic: Description
0	RW	IPOLL_MASK_0: Mask error type0 for Host/Core/Millicode
1	RW	IPOLL_MASK_1: Mask error type1 for Host/Core/Millicode
2	RW	IPOLL_MASK_2: Mask error type2 for Host/Core/MillicodE
3	RW	IPOLL_MASK_3: Mask error type3 for Host/Core/Millicode

Bits	SCOM	Field Mnemonic: Description
4	RW	IPOLL_MASK_4: Mask error type4 for Host/Core/Millicode
5	RW	IPOLL_MASK_5: Mask interrupt for Host/Core/Millicode
6	RW	ERROR_MASK_0: Mask error type0 for FSP/BMC
7	RW	ERROR_MASK_1: Mask error type1 for FSP/BMC
8	RW	ERROR_MASK_2: Mask error type2 for FSP/BMC
9	RW	ERROR_MASK_3: Mask error type3 for FSP/BMC
10	RW	ERROR_MASK_4: Mask error type4 for FSP/BMC
11	RW	ERROR_MASK_5: Mask interrupt for FSP/BMC

Register Name	**Status of the Errors**
Mnemonic	TP.TPCHIP.PIB.PCBMS.COMP.INTR_COMP.ERROR_STATUS_REG
Address	00000000000F0034 (SCOM)
Description	This register contains the status of the errors.

Bits	SCOM	Field Mnemonic: Description
0:5	ROX	ipoll_err_masked: Status of IPOLL errors
6:11	ROX	fsi_err_masked: Status of FSI errors

Register Name	**Slave Primary Address**
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.PRIMARY_ADDRESS_REG
Address	00000000010F0000 (SCOM)
Description	This register contains the slave primary address.

Bits	SCOM	Field Mnemonic: Description
0:5	RO	Reserved field. (Access type is primary_address).

Register Name	**Multicast Group 1**
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.MULTICAST_GROUP_1
Address	00000000010F0001 (SCOM)
Description	Multicast group 1

Bits	SCOM	Field Mnemonic: Description
0:2	RO	constant = 0b111
3:5	RW	MULTICAST1_GROUP: Multicast group1 setting.

Register Name	Multicast Group 2
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.MULTICAST_GROUP_2
Address	00000000010F0002 (SCOM)
Description	Multicast group 2

Bits	SCOM	Field Mnemonic: Description
0:2	RO	constant = 0b111
3:5	RW	MULTICAST2_GROUP: Multicast group2 setting.

Register Name	Multicast Group 3
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.MULTICAST_GROUP_3
Address	00000000010F0003 (SCOM)
Description	Multicast group 3

Bits	SCOM	Field Mnemonic: Description
0:2	RO	constant = 0b111
3:5	RW	MULTICAST3_GROUP: Multicast group3 setting.

Register Name	Multicast Group 4
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.MULTICAST_GROUP_4
Address	00000000010F0004 (SCOM)
Description	Multicast group 4

Bits	SCOM	Field Mnemonic: Description
0:2	RO	constant = 0b111
3:5	RW	MULTICAST4_GROUP: Multicast group4 setting.

Register Name	Timeout Select Register
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.TIMEOUT_REG
Address	00000000010F0010 (SCOM)
Description	Timeout select register

Bits	SCOM	Field Mnemonic: Description
0:1	RW	Reserved field. (Access type is int_timeout).

Register Name	Assist Interrupt Register
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.ASSIST_INTERRUPT_REG
Address	00000000010F0011 (SCOM)
Description	Assist Interrupt Register

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field. Access type is attn.
1	ROX	Reserved field. Access type is recov.
2	ROX	Reserved field. Access type is xstop.

Register Name	Vital Scan Out
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.VITAL_SCAN_OUT
Address	00000000010F0017 (SCOM)
Description	Vital scan out

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved.

Register Name	Chiplet Heartbeat Register
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.HEARTBEAT_REG
Address	00000000010F0018 (SCOM)
Description	Chiplet heartbeat register

Bits	SCOM	Field Mnemonic: Description
0	ROX	HEARTBEAT_DEAD: The chiplet heartbeat is not detected.

Register Name	Lock Indications from PLLs
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.PLL_LOCK_REG
Address	00000000010F0019 (SCOM)
Description	Lock indications from PLLs

Bits	SCOM	Field Mnemonic: Description
0:3	ROX	Reserved field. (Access type is lock).

Register Name	Attn Interrupt
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.ATTN_INTERRUPT_REG
Address	00000000010F001A (SCOM)
Description	Attention interrupt

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field. (Access type is attention).

Register Name	Recov Interrupt
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.RECOV_INTERRUPT_REG
Address	00000000010F001B (SCOM)
Description	Recov interrupt

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field. (Access type is recov).

Register Name	Xstop Interrupt
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.XSTOP_INTERRUPT_REG
Address	00000000010F001C (SCOM)
Description	Xstop interrupt

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field. (Access type is xstop).

Register Name	Slave Configuration Register
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.SLAVE_CONFIG_REG
Address	00000000010F001E (SCOM)
Description	Slave configuration register

Bits	SCOM	Field Mnemonic: Description
0	RW	CFG_DISABLE_PERV_THOLD_CHECK: Disable pervasive thold check.
1	RW	CFG_DISABLE_MALF_PULSE_GEN: Disable pulse generation for malfunction alert. Switch back to level.
2	RW	CFG_STOP_HANG_CNT_SYS_XSTP: Disable hang counter stop for system xstop.
3	RW	CFG_DISABLE_CL_ATOMIC_LOCK: Disable atomic lock for chiplet accesses.
4	RW	CFG_DISABLE_HEARTBEAT: Disable check for voltage and gridclock in the chiplet.
5	RW	CFG_DISABLE_FORCE_TO_ZERO: Disable force to zero for error cases.
6	RW	CFG_PM_DISABLE: Disable power management set/reset interface for net_ctrl registers.
7	RW	CFG_PM_MUX_DISABLE: Disable pm MUX request signal.
8:13	RW	ERROR_MASK: Mask bits for slave error reporting.
14:15	RW	Reserved.

Register Name	Error Capture Register
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.ERROR_REG
Address	00000000010F001F (SCOM)
Description	Error capture register

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLEAR	CE_ERROR: Correctable error on PCB bus.

Bits	SCOM	Field Mnemonic: Description
1:3	RWX_WCLEAR	CHIPLET_ERRORS: Errors reported by chiplet. 000 = No error 001 = XSCOM command blocked from pending errors 010 = Chiplet offline 011 = Partial good 100 = Invalid address/address error/bad access type 101 = Clock error 110 = Parity error/received unexpected packet/wrong packet number 111 = Timeout This register is for debug purposes only. It only holds meaningful data if it is cleared after each error.
4	RWX_WCLEAR	PARITY_ERROR: Parity error on PCB Interface
5	RWX_WCLEAR	DATA_BUFFER_ERROR: Parity error in data buffer.
6	RWX_WCLEAR	ADDR_BUFFER_ERROR: Parity error in address buffer
7	RWX_WCLEAR	PCB_FSM_ERROR: Invalid state error in PCB FSM
8	RWX_WCLEAR	CL_FSM_ERROR: Invalid state error in chiplet FSM
9	RWX_WCLEAR	INT_RX_FSM_ERROR: Invalid state error in interrupt RX FSM
10	RWX_WCLEAR	INT_TX_FSM_ERROR: Invalid state error in interrupt TX FSM
11	RWX_WCLEAR	INT_TYPE_ERROR: Invalid interrupt type
12	RWX_WCLEAR	CL_DATA_ERROR: Parity error on chiplet interface occurred.
13	RWX_WCLEAR	INFO_ERROR: Parity error on chiplet information lines occurred.
14	RWX_WCLEAR	UNUSED_0:
15	RWX_WCLEAR	CHIPLET_ATOMIC_LOCK_ERROR: Chiplet atomic lock error occurred
16	RWX_WCLEAR	PCB_INTERFACE_ERROR: Error in the PCB interface component for the internal endpoint occurred
17	RWX_WCLEAR	CHIPLET_OFFLINE: Heartbeat check indicated that the chiplet is offline.
18	RWX_WCLEAR	EDRAM_SEQUENCE_ERR: An error in the EDRAM power up sequence occurred.
19	RWX_WCLEAR	CTRL_REG_PARITY_ERROR: Control register parity is bad.
20	RWX_WCLEAR	ADDRESS_REG_PARITY_ERROR: Address register parity is bad.
21	RWX_WCLEAR	TIMEOUT_REG_PARITY_ERROR: Timeout select register parity is bad.
22	RWX_WCLEAR	CONFIG_REG_PARITY_ERROR: Slave configuration register parity is bad.
23	RWX_WCLEAR	UNUSED_1:
24	RWX_WCLEAR	DIV_REG_PARITY_ERROR: Div register parity is bad.
25:28	RWX_WCLEAR	PLL_UNLOCK_ERROR: Unlock from chiplet PLL

Register Name	Hang Pulse Generation Register 0
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.HANG_PULSE_0_REG
Address	00000000010F0020 (SCOM)
Description	Hang pulse generation register 0

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_0: Value of hang pulse 0 Time period = 2value * (precounter_reg + 1) / pcb_freq, 34 >= value > 0
6	RW	SUPPRESS_HANG_0: If set to 1, hang pulses are suppressed in the case of an xstop.

Register Name	Hang Pulse Generation Register 1
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.HANG_PULSE_1_REG
Address	00000000010F0021 (SCOM)
Description	Hang pulse generation register 1

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_1: Value of hang pulse 1 Time period = 2value * (precounter_reg + 1) / pcb_freq, 34>=value>0
6	RW	SUPPRESS_HANG_1: If set to 1, hang pulses are suppressed in the case of an xstop.

Register Name	Hang Pulse Generation Register 2
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.HANG_PULSE_2_REG
Address	00000000010F0022 (SCOM)
Description	Hang pulse generation register 2

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_2: Value of hang pulse 2 Time period = 2value * (precounter_reg + 1) / pcb_freq, 34 > = value > 0
6	RW	SUPPRESS_HANG_2: If set to 1, hang pulses are suppressed in the case of an xstop.

Register Name	Hang Pulse Generation Register 3
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.HANG_PULSE_3_REG
Address	00000000010F0023 (SCOM)
Description	Hang pulse generation register 3

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_3: Value of hang pulse 3 Time period = 2value * (precounter_reg + 1) / pcb_freq, 34 >= value > 0
6	RW	SUPPRESS_HANG_3: If set to 1, hang pulses are suppressed in the case of an xstop.

Register Name	Hang Pulse Generation Register 4
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.HANG_PULSE_4_REG
Address	00000000010F0024 (SCOM)
Description	Hang pulse generation register 4

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_4: Value of hang pulse 4 Time period = 2value * (precounter_reg + 1) / pcb_freq, 34 >= value > 0
6	RW	SUPPRESS_HANG_4: If set to 1, hang pulses are suppressed in the case of an xstop.

Register Name	Hang Pulse Generation Register 5
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.HANG_PULSE_5_REG
Address	00000000010F0025 (SCOM)
Description	This hang counter is used exclusively to generate the malfunction alert pulse.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_5: Value of hang pulse 5 Time period = 2 value * (precounter_reg+1) / pcb_freq, 34>=value>0
6	RW	SUPPRESS_HANG_5: If set to 1, hang pulses are suppressed in the case of an xstop.

Register Name	Hang Pulse Generation Register 6
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.HANG_PULSE_6_REG
Address	00000000010F0026 (SCOM)
Description	Hang pulse generation register 6. This hang counter is used exclusively for the heartbeat generation.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_6: Value of hang pulse 6 Time period = 2 value * (precounter_reg+1) / pcb_freq, 34>=value>0
6	RW	SUPPRESS_HANG_6: If set to 1, hang pulses are suppressed in the case of an xstop.

Register Name	Divider for Hang Counter Clock
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.PRE_COUNTER_REG
Address	00000000010F0028 (SCOM)
Description	Divider for hang counter clock

Bits	SCOM	Field Mnemonic: Description
0:7	RW	PRE_COUNTER: Divider for hang counter clock. Divides clock by n+1 (default: n=0).

Register Name	EDRAM Control Status Register
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.EDRAM_STATUS
Address	00000000010F0029 (SCOM)
Description	EDRAM control status register

Bits	SCOM	Field Mnemonic: Description
0:3	ROX	EDRAM_STAT: EDRAM control status

Register Name	**NET CTRL0 Register**
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.NET_CTRL0
Address	00000000010F0040 (SCOM) 00000000010F0041 (SCOM1) 00000000010F0042 (SCOM2)
Description	NET CTRL0 Register (N/A in Pervasive Chiplet)

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	RWX_WAND	RWX_WOR	CHIPLET_ENABLE: Set if the chiplet is good.
1	RWX	RWX_WAND	RWX_WOR	PCB_EP_RESET: Output ORed to the global EP reset
2	RWX	RWX_WAND	RWX_WOR	CLK_ASYNC_RESET: POWER9 cache chiplet: EQ Skew adjust reset POWER9 core chiplet: Core duty cycle adjust reset POWER9 memory chiplet: Memory glitchless multiplexer async reset
3	RWX	RWX_WAND	RWX_WOR	PLL_TEST_EN: Test enable for chiplet PLL
4	RWX	RWX_WAND	RWX_WOR	PLL_RESET: Reset for chiplet PLL
5	RWX	RWX_WAND	RWX_WOR	PLL_BYPASS: Enable bypass for chiplet PLL
6	RWX	RWX_WAND	RWX_WOR	VITAL_SCAN: Scan control for chiplet vital domain
7	RWX	RWX_WAND	RWX_WOR	VITAL_SCAN_IN: Scan in for the chiplet vital domain
8	RWX	RWX_WAND	RWX_WOR	VITAL_PHASE: Phase for vital domain
9	RWX	RWX_WAND	RWX_WOR	FLUSH_ALIGN_OVR: Override flush, flush_nto1, align in chiplet to 1
10	RWX	RWX_WAND	RWX_WOR	VITAL_AL: Align for vital domain
11	RWX	RWX_WAND	RWX_WOR	ACT_DIS: LCB control signal for vital logic
12	RWX	RWX_WAND	RWX_WOR	MPW1: LCB control signal for vital logic
13	RWX	RWX_WAND	RWX_WOR	MPW2: LCB control signal for vital logic
14	RWX	RWX_WAND	RWX_WOR	MPW3: LCB control signal for vital logic
15	RWX	RWX_WAND	RWX_WOR	DELAY_LCLKR: LCB control signal for vital logic
16	RWX	RWX_WAND	RWX_WOR	VITAL_THOLD: Thold for the chiplet vital domain
17	RWX	RWX_WAND	RWX_WOR	FLUSH_SCAN_N: Flush scan control
18	RWX	RWX_WAND	RWX_WOR	FENCE_EN: Fencing signal for chiplet
19	RWX	RWX_WAND	RWX_WOR	CPLT_RCTRL: Chiplet receiver enable
20	RWX	RWX_WAND	RWX_WOR	CPLT_DCTRL: Chiplet driver enable
21	RWX	RWX_WAND	RWX_WOR	Reserved field. (Access type is pm_access).
22	RWX	RWX_WAND	RWX_WOR	ADJ_FUNC_CLKSEL: POWER9 cache chiplet: clock select for skew adjust/duty cycle adjust logic POWER9 core chiplet: skew sense to skew adjust fencing
23:24	RWX	RWX_WAND	RWX_WOR	Reserved field. (Access type is pm_access).
25	RWX	RWX_WAND	RWX_WOR	TP_FENCE_PCB: Fence the Chiplet from the PCB Bus. If set, the PCB slave reports ‘Chiplet Offline.’
26	RWX	RWX_WAND	RWX_WOR	LVLTRANS_FENCE: Fence control for level translators
27	RWX	RWX_WAND	RWX_WOR	ARRAY_WRITE_ASSIST_EN: Array write assist
28	RWX	RWX_WAND	RWX_WOR	HTB_INTEST: HTB in-test mode
29	RWX	RWX_WAND	RWX_WOR	HTB_EXTEST: HTB in-test mode

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
30	RWX	RWX_WAND	RWX_WOR	Reserved field. (Access type is pm_access).
31	RWX	RWX_WAND	RWX_WOR	PLLFORCE_OUT_EN: PLL force out enable

Register Name	NET CTRL1 Register
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.NET_CTRL1
Address	00000000010F0044 (SCOM) 00000000010F0045 (SCOM1) 00000000010F0046 (SCOM2)
Description	NET CTRL1 Register (N/A in Pervasive Chiplet).

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	RWX_WAND	RWX_WOR	PLL_CLKIN_SEL: PLL CLKIN select.
1	RWX	RWX_WAND	RWX_WOR	CLK_DCC_BYPASS_EN: POWER9 cache chiplet: L2-0, L2-1, L3 duty cycle control bypass POWER9 core chiplet: Core duty cycle control bypass POWER9 mem chiplet: Memory duty cycle control bypass
2	RWX	RWX_WAND	RWX_WOR	CLK_PDLY_BYPASS_EN: POWER9 cache chiplet: L2-0, L2-1, L3 progdly bypass POWER9 core chiplet: Core progdly bypass POWER9 mem chiplet: Memory progdly bypass.
3	RWX	RWX_WAND	RWX_WOR	CLK_DIV_BYPASS_EN: Enable clock div bypass.
4	RWX	RWX_WAND	RWX_WOR	REFCLK_CLKMUX0_SEL: Select for REFCLK mux0
5	RWX	RWX_WAND	RWX_WOR	REFCLK_CLKMUX1_SEL: Select for REFCLK mux1
6	RWX	RWX_WAND	RWX_WOR	PLL_BNDY_BYPASS_EN: Bypass for IOP PLL
7	RWX	RWX_WAND	RWX_WOR	Reserved field. (Access type is pcb_access).
8:15	RWX	RWX_WAND	RWX_WOR	DPLL_TEST_SEL: DPLL testout MUXing
16:19	RWX	RWX_WAND	RWX_WOR	SB_STRENGTH: Sector buffer driver strength
20	RWX	RWX_WAND	RWX_WOR	ASYNC_TYPE:
21	RWX	RWX_WAND	RWX_WOR	ASYNC_OBS:
22	RWX	RWX_WAND	RWX_WOR	CPM_CAL_SET: CPM calibrate
23	RWX	RWX_WAND	RWX_WOR	SENSEADJ_RESET0: POWER9 cache chiplet: L2-0 duty cycle adjust reset
24	RWX	RWX_WAND	RWX_WOR	SENSEADJ_RESET1: POWER9 cache chiplet: L2-1 duty cycle adjust reset
25	RWX	RWX_WAND	RWX_WOR	CLK_PULSE_EN: Clock pulse mode enable
26:27	RWX	RWX_WAND	RWX_WOR	CLK_PULSE_MODE: Clock pulse mode setting
28:31	RWX	RWX_WAND	RWX_WOR	Reserved field. (Access type is pcb_access).

Register Name	Protect Mode Register
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.PROTECT_MODE_REG
Address	00000000010F03FE (SCOM)
Description	Protect mode register.

Bits	SCOM	Field Mnemonic: Description
0	RW	READ_PROTECT_ENABLE: Enable read protection
1	RW	WRITE_PROTECT_ENABLE: Enable write protection

Register Name	Atomic Lock Register
Mnemonic	TP.TPCHIP.NET.PCBSLPERV.ATOMIC_LOCK_REG
Address	00000000010F03FF (SCOM)
Description	Atomic lock register

Bits	SCOM	Field Mnemonic: Description
0	RW	ATOMIC_LOCK_ENABLE: Enable atomic lock
1:4	ROX	ATOMIC_ID: Atomic ID
5:7	RO	constant = 0b000
8:15	ROX	ATOMIC_ACTIVITY: Atomic lock counter

4. PB Chiplet (Nest Chiplet 0)

The POWER9 processor registers are listed alphabetically by mnemonic in the following address table.

Mnemonic	Address	Page

The POWER9 processor registers are listed in the following tables.

`

Register Name	Chiplet Control Register 0
Mnemonic	TP.TCN0.N0.CPLT_CTRL0
Address	0000000002000000 (SCOM) 0000000002000010 (SCOM1) 0000000002000020 (SCOM2)
Description	This register contains the first set of vital chiplet controls.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_OR	WO_CLEAR	CTRL_CC_ABSTCLK_MUXSEL_DC: Select the ABIST clock source for arrays on a chiplet boundary. When set to 1, clocks are used from a chiplet with ABIST.
1	RW	WO_OR	WO_CLEAR	TC_UNIT_SYNCCLK_MUXSEL_DC: Select the synchronous clock for asynchronous latches. (The initial value is 1.)
2	RW	WO_OR	WO_CLEAR	CTRL_CC_FLUSHMODE_INH_DC: Prevent pipeline latches from going into flush mode. (The initial value is 1.)
3	RW	WO_OR	WO_CLEAR	CTRL_CC_FORCE_ALIGN_DC: Force an alignment signal to be sent. (The initial value is 1. Drop before dropping flushmode_inh.)
4	RW	WO_OR	WO_CLEAR	TC_UNIT_ARY_WRT_THRU_DC: Set the array into write through mode. Used for LBIST.
5	RW	WO_OR	WO_CLEAR	TC_UNIT_AVP_MODE: AVP mode. Switches from refresh pulse to phase counter.
6	RW	WO_OR	WO_CLEAR	FREE_USAGE_6A: Free usage.
7	RW	WO_OR	WO_CLEAR	FREE_USAGE_7A: Free usage.
8	RW	WO_OR	WO_CLEAR	CTRL_CC_ABIST_RECOV_DISABLE_DC: New signal to disable recovery.
9	RW	WO_OR	WO_CLEAR	FREE_USAGE_9A: Free usage.
10	RW	WO_OR	WO_CLEAR	TC_UNIT_IOBIST_TX_WRAP_ENABLE_DC:
11	RW	WO_OR	WO_CLEAR	RESERVED_11A: Reserved.
12	RW	WO_OR	WO_CLEAR	TC_SKIT_MODE_BIST_DC:
13	RW	WO_OR	WO_CLEAR	TC_UNIT_DETERMINISTIC_TEST_ENABLE_DC: Forces login into deterministic test mode. For example, for LBIST.
14	RW	WO_OR	WO_CLEAR	TC_UNIT_CONSTRAIN_SAFESCAN_DC: Safe scan of N1L latches. Prevent lock when switching SE.
15	RW	WO_OR	WO_CLEAR	TC_UNIT_RRFA_TEST_ENABLE_DC:
16	RW	WO_OR	WO_CLEAR	TC_NBTI_HDR_ENABLE_OVR_DC: NBTI.
17	RW	WO_OR	WO_CLEAR	TC_NBTI_PROBE_GATE_DC: NBTI.
18	RW	WO_OR	WO_CLEAR	RESERVED_18A: Reserved.
19	RW	WO_OR	WO_CLEAR	RESERVED_19A: Reserved.
20:27	RW	WO_OR	WO_CLEAR	TC_PSRO_SEL_DC: PSRO select.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
28	RW	WO_OR	WO_CLEAR	TC_BSC_WRAPSEL_DC: Wrap select for BSC.
29	RW	WO_OR	WO_CLEAR	TC_BSC_INTMODE_DC: INT mode for BSC.
30	RW	WO_OR	WO_CLEAR	TC_BSC_INV_DC: INV for BSC mode.
31	RW	WO_OR	WO_CLEAR	TC_BSC_EXTMODE_DC: EXT mode for BSC.
32	RW	WO_OR	WO_CLEAR	TC_REFCLK_DRVR_EN_DC: Reference clock driver enable.
33	RW	WO_OR	WO_CLEAR	RESERVED_33A: Reserved.
34	RW	WO_OR	WO_CLEAR	RESERVED_34A: Reserved.
35	RW	WO_OR	WO_CLEAR	RESERVED_35A: Reserved.
36	RW	WO_OR	WO_CLEAR	TC_OELCC_EDGE_DELAYED_DC: Enables delaying the alignment by one fast cycle. Only used in dual mesh chiplets.
37	RW	WO_OR	WO_CLEAR	TC_OELCC_ALIGN_FLUSH_DC: Forces the alignment and odd/even toggling latch into flush state. For DFT only.
38	RW	WO_OR	WO_CLEAR	RESERVED_38A: Reserved.
39	RW	WO_OR	WO_CLEAR	RESERVED_39A: Reserved.
40:41	RW	WO_OR	WO_CLEAR	CTRL_MISC_CLKDIV_SEL_DC: Clock divider select. 00 = 1024:1 01 = 64:1 10 = 16:1 11 = 4:1
42	RW	WO_OR	WO_CLEAR	RESERVED_42A: Reserved.
43	RW	WO_OR	WO_CLEAR	RESERVED_43A: Reserved.
44	RW	WO_OR	WO_CLEAR	CTRL_CC_DCTEST_DC: TE = 1 only. Enable DCTEST.
45	RW	WO_OR	WO_CLEAR	CTRL_CC_OTP_PRGMODE_DC: TE = 1 only. OTP ROM program mode.
46	RW	WO_OR	WO_CLEAR	CTRL_CC_SSS_CALIBRATE_DC: TE = 1 only. Sensors calibration.
47	RW	WO_OR	WO_CLEAR	CTRL_CC_PIN_LBIST_DC: TE = 1 only. PIN LBIST mode. LBIST is controlled by Pin, not by OPCG.
48	RW	WO_OR	WO_CLEAR	FREE_USAGE_48A: Free usage.
49	RW	WO_OR	WO_CLEAR	FREE_USAGE_49A: Free usage.
50	RW	WO_OR	WO_CLEAR	FREE_USAGE_50A: Free usage.
51	RW	WO_OR	WO_CLEAR	FREE_USAGE_51A: Free usage.
52	RW	WO_OR	WO_CLEAR	FREE_USAGE_52A: Free usage.
53	RW	WO_OR	WO_CLEAR	FREE_USAGE_53A: Free usage.
54	RW	WO_OR	WO_CLEAR	FREE_USAGE_54A: Free usage.
55	RW	WO_OR	WO_CLEAR	FREE_USAGE_55A: Free usage.
56	RW	WO_OR	WO_CLEAR	FREE_USAGE_56A: Free usage.
57	RW	WO_OR	WO_CLEAR	FREE_USAGE_57A: Free usage.
58	RW	WO_OR	WO_CLEAR	FREE_USAGE_58A: Free usage.
59	RW	WO_OR	WO_CLEAR	FREE_USAGE_59A: Free usage.
60	RW	WO_OR	WO_CLEAR	FREE_USAGE_60A: Free usage.
61	RW	WO_OR	WO_CLEAR	FREE_USAGE_61A: Free usage.
62	RW	WO_OR	WO_CLEAR	FREE_USAGE_62A: Free usage.
63	RW	WO_OR	WO_CLEAR	FREE_USAGE_63A: Free usage.

Register Name	Chiplet Control Register 1
Mnemonic	TP.TCN0.N0.CPLT_CTRL1
Address	0000000002000001 (SCOM) 0000000002000011 (SCOM1) 0000000002000021 (SCOM2)
Description	This register contains the second set of vital chiplet controls.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_OR	WO_CLEAR	UNUSED_0B: Unused.
1	RW	WO_OR	WO_CLEAR	UNUSED_1B: Unused.
2	RW	WO_OR	WO_CLEAR	UNUSED_2B: Unused.
3	RW	WO_OR	WO_CLEAR	TC_VITL_REGION_FENCE: VITL fence. Protect the VITL region logic from pollution by other regions during LBIST, or when the chiplet is not initialized and running yet.
4	RW	WO_OR	WO_CLEAR	TC_PERV_REGION_FENCE: Fence for the pervasive region.
5	RW	WO_OR	WO_CLEAR	TC_REGION1_FENCE: Fence for region NX.
6	RW	WO_OR	WO_CLEAR	TC_REGION2_FENCE: Fence for regions CXA0 - CAPP.
7	RW	WO_OR	WO_CLEAR	TC_REGION3_FENCE: Fence for regions PBIOE0 - PB.
8	RW	WO_OR	WO_CLEAR	TC_REGION4_FENCE: Fence for regions PBIOE1 - PB .
9	RW	WO_OR	WO_CLEAR	TC_REGION5_FENCE: Fence for regions PBIOE2 - PB.
10	RW	WO_OR	WO_CLEAR	UNUSED_10B: Unused.
11	RW	WO_OR	WO_CLEAR	UNUSED_11B: Unused.
12	RW	WO_OR	WO_CLEAR	UNUSED_12B: Unused.
13	RW	WO_OR	WO_CLEAR	UNUSED_13B: Unused.
14	RW	WO_OR	WO_CLEAR	UNUSED_14B: Unused.
15	RW	WO_OR	WO_CLEAR	RESERVED: Reserved.
16	RW	WO_OR	WO_CLEAR	TC_UNIT_MULTICYCLE_TEST_FENCE:
17	RW	WO_OR	WO_CLEAR	UNUSED_17B: Unused.
18	RW	WO_OR	WO_CLEAR	UNUSED_18B: Unused.
19	RW	WO_OR	WO_CLEAR	UNUSED_19B: Unused.
20	RW	WO_OR	WO_CLEAR	UNUSED_20B: Unused.
21	RW	WO_OR	WO_CLEAR	UNUSED_21B: Unused.
22	RW	WO_OR	WO_CLEAR	UNUSED_22B: Unused.
23	RW	WO_OR	WO_CLEAR	UNUSED_23B: Unused.
24	RW	WO_OR	WO_CLEAR	UNUSED_24B: Unused.
25	RW	WO_OR	WO_CLEAR	UNUSED_25B: Unused.
26	RW	WO_OR	WO_CLEAR	UNUSED_26B: Unused.
27	RW	WO_OR	WO_CLEAR	UNUSED_27B: Unused.
28	RW	WO_OR	WO_CLEAR	UNUSED_28B: Unused.
29	RW	WO_OR	WO_CLEAR	UNUSED_29B: Unused.
30	RW	WO_OR	WO_CLEAR	UNUSED_30B: Unused.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
31	RW	WO_OR	WO_CLEAR	UNUSED_31B: Unused.

Register Name	Chiplet Configuration Register 0
Mnemonic	TP.TCN0.N0.CPLT_CONF0
Address	0000000002000008 (SCOM) 0000000002000018 (SCOM1) 0000000002000028 (SCOM2)
Description	This register contains the first set of vital chiplet configuration functions.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:5	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE0_SEL_DC: Probe 0 select.
6	RW	WO_OR	WO_CLEAR	RESERVED_6C: Reserved.
7	RW	WO_OR	WO_CLEAR	RESERVED_7C: Reserved.
8:13	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE1_SEL_DC: Probe 1 select.
14	RW	WO_OR	WO_CLEAR	RESERVED_14C: Reserved.
15	RW	WO_OR	WO_CLEAR	RESERVED_15C: Reserved.
16:21	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE2_SEL_DC: Probe 2 select.
22	RW	WO_OR	WO_CLEAR	RESERVED_22C: Reserved.
23	RW	WO_OR	WO_CLEAR	RESERVED_23C: Reserved.
24:29	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE3_SEL_DC: Probe 3.
30	RW	WO_OR	WO_CLEAR	RESERVED_30C: Reserved.
31	RW	WO_OR	WO_CLEAR	RESERVED_31C: Reserved.
32	RW	WO_OR	WO_CLEAR	CTRL_CC_OFLOW_FEH_SEL_DC: ABIST overflow/failure indication select.
33	RW	WO_OR	WO_CLEAR	CTRL_CC_SCAN_PROTECT_DC: Enables scan protection. Enables the scan collision error mechanism.
34	RW	WO_OR	WO_CLEAR	CTRL_CC_SDIS_DC_N: Disables the scan diagnostic scan path.
35	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_35C: Reserved for test control.
36	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_36C: Reserved for test control.
37	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_37C: Reserved for test control.
38	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_38C: Reserved for test control.
39	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_39C: Reserved for test control.
40	RW	WO_OR	WO_CLEAR	CTRL_EPS_MASK_VITL_PCB_ERR_DC: Mask VITL PCB errors from CC or CPLT_CTRL.
41	RW	WO_OR	WO_CLEAR	CTRL_CC_MASK_VITL_SCAN_OPCG_ERR_DC: Mask VITL errors in CC, which are not PCB related.
42	RW	WO_OR	WO_CLEAR	RESERVED_42C: Reserved.
43	RW	WO_OR	WO_CLEAR	RESERVED_43C: Reserved.
44	RW	WO_OR	WO_CLEAR	FREE_USAGE_44C: Free usage.
45	RW	WO_OR	WO_CLEAR	FREE_USAGE_45C: Free usage.
46	RW	WO_OR	WO_CLEAR	FREE_USAGE_46C: Free usage.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
47	RW	WO_OR	WO_CLEAR	FREE_USAGE_47C: Free usage.
48:51	RW	WO_OR	WO_CLEAR	TC_UNIT_GROUP_ID_DC: Group ID.
52:54	RW	WO_OR	WO_CLEAR	TC_UNIT_CHIP_ID_DC: Chip ID.
55	RW	WO_OR	WO_CLEAR	RESERVED_ID_55C: Reserved ID.
56:60	RW	WO_OR	WO_CLEAR	TC_UNIT_SYS_ID_DC: System ID.
61	RW	WO_OR	WO_CLEAR	RESERVED_ID_61C: Reserved ID.
62	RW	WO_OR	WO_CLEAR	RESERVED_ID_62C: Reserved ID.
63	RW	WO_OR	WO_CLEAR	RESERVED_ID_63C: Reserved ID.

Register Name	**Chiplet Configuration Register 1**
Mnemonic	TP.TCN0.N0.CPLT_CONF1
Address	0000000002000009 (SCOM) 0000000002000019 (SCOM1) 0000000002000029 (SCOM2)
Description	This register contains the second set of vital chiplet configuration functions.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_OR	WO_CLEAR	UNUSED_0D: Unused.
1	RW	WO_OR	WO_CLEAR	UNUSED_1D: Unused.
2	RW	WO_OR	WO_CLEAR	UNUSED_2D: Unused.
3	RW	WO_OR	WO_CLEAR	UNUSED_3D: Unused.
4	RW	WO_OR	WO_CLEAR	IOVALID_4D:
5	RW	WO_OR	WO_CLEAR	IOVALID_5D:
6	RW	WO_OR	WO_CLEAR	IOVALID_6D:
7	RW	WO_OR	WO_CLEAR	IOVALID_7D:
8	RW	WO_OR	WO_CLEAR	IOVALID_8D:
9	RW	WO_OR	WO_CLEAR	IOVALID_9D:
10	RW	WO_OR	WO_CLEAR	IOVALID_10D:
11	RW	WO_OR	WO_CLEAR	IOVALID_11D:
12	RW	WO_OR	WO_CLEAR	FREE_USAGE_12D: Free usage.
13	RW	WO_OR	WO_CLEAR	FREE_USAGE_13D: Free usage.
14	RW	WO_OR	WO_CLEAR	FREE_USAGE_14D: Free usage.
15	RW	WO_OR	WO_CLEAR	FREE_USAGE_15D: Free usage.
16	RW	WO_OR	WO_CLEAR	FREE_USAGE_16D: Free usage.
17	RW	WO_OR	WO_CLEAR	FREE_USAGE_17D: Free usage.
18	RW	WO_OR	WO_CLEAR	FREE_USAGE_18D: Free usage.
19	RW	WO_OR	WO_CLEAR	FREE_USAGE_19D: Free usage.
20	RW	WO_OR	WO_CLEAR	FREE_USAGE_20D: Free usage.
21	RW	WO_OR	WO_CLEAR	FREE_USAGE_21D: Free usage.
22	RW	WO_OR	WO_CLEAR	FREE_USAGE_22D: Free usage.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
23	RW	WO_OR	WO_CLEAR	FREE_USAGE_23D: Free usage.
24	RW	WO_OR	WO_CLEAR	FREE_USAGE_24D: Free usage.
25	RW	WO_OR	WO_CLEAR	FREE_USAGE_25D: Free usage.
26	RW	WO_OR	WO_CLEAR	FREE_USAGE_26D: Free usage.
27	RW	WO_OR	WO_CLEAR	FREE_USAGE_27D: Free usage.
28	RW	WO_OR	WO_CLEAR	FREE_USAGE_28D: Free usage.
29	RW	WO_OR	WO_CLEAR	FREE_USAGE_29D: Free usage.
30	RW	WO_OR	WO_CLEAR	FREE_USAGE_30D: Free usage.
31	RW	WO_OR	WO_CLEAR	FREE_USAGE_31D: Free usage.

Register Name	**Chiplet Status Register**
Mnemonic	TP.TCN0.N0.CPLT_STAT0
Address	0000000002000100 (SCOM)
Description	An interrupt is sent out on a bit change if not masked by the Chiplet Mask Register. A mask only masks the interrupt, *not* the status register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SRAM_ABIST_DONE_DC: SRAM and EDRAM ABIST done.
1	ROX	DRAM_ABIST_DONE_DC: Unused in POWER9 DD1.
2	ROX	RESERVED_2E: Reserved.
3	ROX	RESERVED_3E: Reserved.
4	ROX	TC_DIAG_PORT0_OUT: Diagnostic output port.
5	ROX	TC_DIAG_PORT1_OUT: Diagnostic output port.
6	ROX	RESERVED_6E: Reserved.
7	ROX	PLL_DESTOUT: Reserved.
8	ROX	CC_CTRL_OPCG_DONE_DC: OPCG done for LBIST, ABIST, or other OPCG runs.
9	ROX	CC_CTRL_CHIPLET_IS_ALIGNED_DC: Indicates that the chiplet is aligned.
10	ROX	FREE_USAGE_10E: Free usage.
11	ROX	FREE_USAGE_11E: Free usage.
12	ROX	FREE_USAGE_12E: Free usage.
13	ROX	FREE_USAGE_13E: Free usage.
14	ROX	FREE_USAGE_14E: Free usage.
15	ROX	FREE_USAGE_15E: Free usage.
16	ROX	FREE_USAGE_16E: Free usage.
17	ROX	FREE_USAGE_17E: Free usage.
18	ROX	FREE_USAGE_18E: Free usage.
19	ROX	FREE_USAGE_19E: Free usage.
20	ROX	FREE_USAGE_20E: Free usage.
21	ROX	FREE_USAGE_21E: Free usage.
22	ROX	FREE_USAGE_22E: Free usage.

Bits	SCOM	Field Mnemonic: Description
23	ROX	FREE_USAGE_23E: Free usage.

Register Name	Chiplet Mask Register
Mnemonic	TP.TCN0.N0.CPLT_MASK0
Address	0000000002000101 (SCOM)
Description	This register masks the interrupt on a bit change of the Chiplet Status Register. It does *not* mask the status itself.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CPLTMASK0: This field provides bitwise masking of the Chiplet Status Register.

Register Name	Control Protect Mode Register
Mnemonic	TP.TCN0.N0.CTRL_PROTECT_MODE_REG
Address	00000000020003FE (SCOM)
Description	This register enables read and write protection.

Bits	SCOM	Field Mnemonic: Description
0	RW	CTRL_READ_PROTECT_ENABLE: This bit enables read protection.
1	RW	CTRL_WRITE_PROTECT_ENABLE: This bit enables write protection.

Register Name	Atomic Lock Register
Mnemonic	TP.TCN0.N0.CTRL_ATOMIC_LOCK_REG
Address	00000000020003FF (SCOM)
Description	This register enables an atomic lock and an atomic lock counter.

Bits	SCOM	Field Mnemonic: Description
0	RW	CTRL_ATOMIC_LOCK_ENABLE: This bit enables an atomic lock.
1:4	ROX	CTRL_ATOMIC_ID: This field contains the atomic ID.
5:7	RO	constant = 0b000
8:15	ROX	CTRL_ATOMIC_ACTIVITY: This field is an atomic lock counter.

Register Name	PSCOMLE Mode Register
Mnemonic	TP.TCN0.N0.EPS.PSC.PSC.PSCOM_MODE_REG
Address	0000000002010000 (SCOM)
Description	This is the parallel-to-serial communication light edition (PSCOMLE) mode register.

Bits	SCOM	Field Mnemonic: Description
0	RW	ABORT_ON_PCB_ADDR_PARITY_ERROR: Abort on a PCB address parity error.
1	RW	ABORT_ON_PCB_WDATA_PARITY_ERROR: Abort on a PCB write data parity error.
2	RW	UNUSED_2B. Unused.

Bits	SCOM	Field Mnemonic: Description
3	RW	ABORT_ON_DL_RETURN_WDATA_PARITY_ERROR: Abort on a DL return write data parity error.
4	RW	WATCHDOG_ENABLE: Watchdog enable.
5:6	RW	SCOM_HANG_LIMIT: 0b11 = 256 0b10 = 512 0b01 = 768 0b00 = 1023
7	RW	FORCE_ALL_RINGS: This bit is set to a logical 1 if all rings must be enabled independent of the ring address.
8	RW	FSM_SELFRESET_ON_STATEVEC_PARITYERROR_ENABLE: FSM self reset on statevec parity error enable.
9:11	RW	RESERVED_PSCOM_MODE_LT: Reserved.

Register Name	PSCOMLE Error Register
Mnemonic	TP.TCN0.N0.EPS.PSC.PSC.PSCOM_STATUS_ERROR_REG
Address	0000000002010001 (SCOM)
Description	This is the parallel-to-serial communication light edition (PSCOMLE) error register.

Bits	SCOM	Field Mnemonic: Description
0	RWX	ACCUMULATED_PCB_WDATA_PARITY_ERROR: Accumulated PCB write data parity error.
1	RWX	ACCUMULATED_PCB_ADDRESS_PARITY_ERROR: Accumulated PCB address parity error.
2	RWX	ACCUMULATED_DL_RETURN_WDATA_PARITY_ERROR: Accumulated DL return write data parity error.
3	RWX	ACCUMULATED_DL_RETURN_P0_ERROR: Accumulated DL return P0 error.
4	RWX	ACCUMULATED_UL_RDATA_PARITY_ERROR: Accumulated UL read data parity error.
5	RWX	ACCUMULATED_UL_P0_ERROR: Accumulated UL P0 error.
6	RWX	ACCUMULATED_PARITY_ERROR_ON_INTERFACE_MACHINE: Accumulated parity error on interface machine.
7	RWX	ACCUMULATED_PARITY_ERROR_ON_P2S_MACHINE: Accumulated parity error on p2s machine.
8	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Accumulated timeout while waiting for ULCCH.
9	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Accumulated timeout while waiting for DLDCH return.
10	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Accumulated timeout while waiting for ULDCH.
11	RWX	ACCUMULATED_PSCOM_PARALLEL_WRITE_NVLD: Accumulated PSCOM parallel write NVLD.
12	RWX	ACCUMULATED_PSCOM_PARALLEL_READ_NVLD: Accumulated PSCOM parallel read NVLD.
13	RWX	ACCUMULATED_PSCOM_PARALLEL_ADDR_INVALID: Accumulated PSCOM parallel address invalid.
14	RWX	ACCUMULATED_PCB_COMMAND_PARITY_ERROR: Accumulated PCB command parity error.
15	RWX	ACCUMULATED_GENERAL_TIMEOUT: Accumulated general timeout.
16	RWX	ACCUMULATED_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Accumulated satellite acknowledge access violation.
17	RWX	ACCUMULATED_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Accumulated satellite acknowledge invalid register.

Bits	SCOM	Field Mnemonic: Description
18	RWX	TRAPPED_PCB_WDATA_PARITY_ERROR: Trapped PCB write data parity error.
19	RWX	TRAPPED_PCB_ADDRESS_PARITY_ERROR: Trapped PCB address parity error.
20	RWX	TRAPPED_DL_RETURN_WDATA_PARITY_ERROR: Trapped DL return write data parity error.
21	RWX	TRAPPED_DL_RETURN_P0_ERROR: Trapped DL return P0 error.
22	RWX	TRAPPED_UL_RDATA_PARITY_ERROR: Trapped UL read data parity error.
23	RWX	TRAPPED_UL_P0_ERROR: Trapped UL P0 error.
24	RWX	TRAPPED_PARITY_ERROR_ON_INTERFACE_MACHINE: Trapped parity error on interface machine.
25	RWX	TRAPPED_PARITY_ERROR_ON_P2S_MACHINE: Trapped parity error on p2s machine.
26	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Trapped timeout while waiting for ULCCH.
27	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Trapped timeout while waiting for DLDCH return.
28	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Trapped timeout while waiting for ULDCH.
29	RWX	TRAPPED_PSCOM_PARALLEL_WRITE_NVLD: Trapped PSCOM parallel write NVLD.
30	RWX	TRAPPED_PSCOM_PARALLEL_READ_NVLD: Trapped PSCOM parallel read NVLD.
31	RWX	TRAPPED_PSCOM_PARALLEL_ADDR_INVALID: Trapped PSCOM parallel address invalid.
32	RWX	TRAPPED_PCB_COMMAND_PARITY_ERROR: Trapped PCB command parity error.
33	RWX	TRAPPED_GENERAL_TIMEOUT: Trapped general timeout.
34	RWX	TRAPPED_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Trapped satellite acknowledge access violation.
35	RWX	TRAPPED_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Trapped satellite acknowledge invalid register.

Register Name	PSCOMLE Error Mask Register
Mnemonic	TP.TCN0.N0.EPS.PSC.PSC.PSCOM_ERROR_MASK
Address	0000000002010002 (SCOM)
Description	This is the parallel-to-serial communication light edition (PSCOMLE) error mask register.

Bits	SCOM	Field Mnemonic: Description
0	RW	MASK_PCB_WDATA_PARITY_ERROR: Mask PCB write data parity error.
1	RW	MASK_PCB_ADDRESS_PARITY_ERROR: Mask PCB address parity error.
2	RW	MASK_DL_RETURN_WDATA_PARITY_ERROR: Mask DL return write data parity error.
3	RW	MASK_DL_RETURN_P0_ERROR: Mask DL return P0 error.
4	RW	MASK_UL_RDATA_PARITY_ERROR: Mask UL read data parity error.
5	RW	MASK_UL_P0_ERROR: Mask UL P0 error.
6	RW	MASK_PARITY_ERROR_ON_INTERFACE_MACHINE: Mask parity error on the interface machine.
7	RW	MASK_PARITY_ERROR_ON_P2S_MACHINE: Mask parity error on the p2s machine.
8	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Mask timeout while waiting for ULCCH.
9	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Mask timeout while waiting for DLDCH return.
10	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Mask timeout while waiting or ULDCH.
11	RW	MASK_PSCOM_PARALLEL_WRITE_NVLD: Mask PSCOM parallel write NVLD.

Bits	SCOM	Field Mnemonic: Description
12	RW	MASK_PSCOM_PARALLEL_READ_NVLD: Mask PSCOM parallel read NVLD.
13	RW	MASK_PSCOM_PARALLEL_ADDR_INVALID: Mask PSCOM parallel address invalid.
14	RW	MASK_PCB_COMMAND_PARITY_ERROR: Mask PCB command parity error.
15	RW	MASK_GENERAL_TIMEOUT: Mask general timeout.
16	RW	MASK_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Mask satellite acknowledge access violation.
17	RW	MASK_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Mask satellite acknowledge invalid register.

Register Name	PSCOMLE Address Trap Register
Mnemonic	TP.TCN0.N0.EPS.PSC.PSC.ADDR_TRAP_REG
Address	0000000002010003 (SCOM)
Description	This is the parallel-to-serial communication light edition (PSCOMLE) address trap register.

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	PCB_ADDRESS_OF_LAST_TRANSACTION_WITH_ERROR: This field contains the PCB address of the last transaction with an error.
16	ROX	PCB_READ_NOTWRITE_OF_LAST_TRANSACTION_WITH_ERROR: PCB read, not write, of the last transaction with an error.
17	ROX	RESERVED_ADDR_LAST_TRAP_LT: Reserved 0.
18:30	ROX	SERIAL2PARALLEL_STATE_MACHINE_AT_TIME_OF_ERROR: Serial2 parallel state machine at the time of the error.
31	ROX	SATELLITE_ACKNOWLEDGE_BIT_RETURN_PARITY: Satellite acknowledge bit. This bit is set to 1 if no parity error is detected in the satellite number or acknowledgment bits.
32	ROX	SATELLITE_ACKNOWLEDGE_BIT_WRITE_PARITY_ERROR: This bit is set if a write parity error is detected by the satellite.
33	ROX	SATELLITE_ACKNOWLEDGE_BIT_ACCESS_VIOLATION: This bit is set if an invalid read or write access is detected by the satellite.
34	ROX	SATELLITE_ACKNOWLEDGE_BIT_INVALID_REGISTER: This bit is set if an invalid register address is detected by the satellite.

Register Name	Ring Lock Enable Register
Mnemonic	TP.TCN0.N0.EPS.PSC.PSC.WRITE_PROTECT_ENABLE_REG
Address	0000000002010005 (SCOM)
Description	This register enables the ring lock.

Bits	SCOM	Field Mnemonic: Description
0	RW	ENABLE_RING_LOCKING: General enable of ring locking upon write to specific ring.
1	RW	RESERVED_RING_LOCKING: Reserved.

Register Name	Write Protect Rings Register
Mnemonic	TP.TCN0.N0.EPS.PSC.PSC.WRITE_PROTECT_RINGS_REG
Address	0000000002010006 (SCOM)
Description	This register writes ring protect bit maps.

Bits	SCOM	Field Mnemonic: Description
0:15	RW	WRITE_PROTECT_RINGS: Writes a protect bit map for each ring.

Register Name	Atomic Lock Mask Register
Mnemonic	TP.TCN0.N0.EPS.PSC.PSC.ATOMIC_LOCK_MASK_LATCH_REG
Address	0000000002010007 (SCOM)
Description	This register provides a bit mask for atomic locking.

Bits	SCOM	Field Mnemonic: Description
0:15	RW	ATOMIC_LOCK_MASK: This field provides a bit mask for atomic locking on a ring-by-ring basis.

Register Name	Ring Fence Enable Mask Register
Mnemonic	TP.TCN0.N0.EPS.PSC.PSC.RING_FENCE_MASK_LATCH_REG
Address	0000000002010008 (SCOM)
Description	This register provides a bit mask for ring fencing.

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1:15	RW	RING_FENCE_ENABLE_MASK: This field provides a bit mask for ring fencing on a ring-by-ring basis.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN0.N0.TRA0.TR0.TRACE_HI_DATA_REG
Address	0000000002010400 (SCOM)
Description	This register provides the high trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: This field contains trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN0.N0.TRA0.TR0.TRACE_LO_DATA_REG
Address	0000000002010401 (SCOM)
Description	This register provides the low trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.

Bits	SCOM	Field Mnemonic: Description
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address pointing to the last entry.

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN0.N0.TRA0.TR0.TRACE_TRCTRL_CONFIG
Address	0000000002010402 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: This bit enables an unconditional forced write when trace run.
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.
10	RW	BANK_MODE: Enables bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B. Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: This field contains spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN0.N0.TRA0.TR0.TRACE_TRDATA_CONFIG_0
Address	0000000002010403 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: This field contains a trace data compare mask for bits 0:63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN0.N0.TRA0.TR0.TRACE_TRDATA_CONFIG_1
Address	0000000002010404 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: This field contains a trace data compare mask for bits 64:87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN0.N0.TRA0.TR0.TRACE_TRDATA_CONFIG_2
Address	0000000002010405 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match pattern A 0 - 23.
24:47	RW	PATTERNB: Pattern match pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN0.N0.TRA0.TR0.TRACE_TRDATA_CONFIG_3
Address	0000000002010406 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match pattern C 0 - 23.
24:47	RW	PATTERND: Pattern match pattern D 0 - 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN0.N0.TRA0.TR0.TRACE_TRDATA_CONFIG_4
Address	0000000002010407 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN0.N0.TRA0.TR0.TRACE_TRDATA_CONFIG_5
Address	0000000002010408 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN0.N0.TRA0.TR0.TRACE_TRDATA_CONFIG_9
Address	0000000002010409 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disables trace data compression. Stores data every cycle.
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Takes into account (cares about) changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG0_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG1_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Inverts TRIG0 before using it.

Bits	SCOM	Field Mnemonic: Description
27	RW	TRIG1_NOT_MODE: Inverts TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Inverts the match polarity before using it to form a trigger. 0b1000 inverts MATCHA. 0b0100 inverts MATCHB. 0b0010 inverts MATCHC. 0b0001 inverts MATCHD.
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: DD1 workaround. Stretches the trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved field.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN0.N0.TRA0.TR1.TRACE_HI_DATA_REG
Address	0000000002010440 (SCOM)
Description	This register provides the high trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: This field contains trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN0.N0.TRA0.TR1.TRACE_LO_DATA_REG
Address	0000000002010441 (SCOM)
Description	This register provides the low trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address pointing to last entry.

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN0.N0.TRA0.TR1.TRACE_TRCTRL_CONFIG
Address	0000000002010442 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: This bit enables ab unconditional forced write when trace is run.

Bits	SCOM	Field Mnemonic: Description
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.
10	RW	BANK_MODE: Enables bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B. Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: This field contains spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN0.N0.TRA0.TR1.TRACE_TRDATA_CONFIG_0
Address	0000000002010443 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: This field contains a trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN0.N0.TRA0.TR1.TRACE_TRDATA_CONFIG_1
Address	0000000002010444 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: This field contains a trace data compare mask for bits 64 - 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN0.N0.TRA0.TR1.TRACE_TRDATA_CONFIG_2
Address	0000000002010445 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 – 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0-23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN0.N0.TRA0.TR1.TRACE_TRDATA_CONFIG_3
Address	0000000002010446 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 – 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 – 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN0.N0.TRA0.TR1.TRACE_TRDATA_CONFIG_4
Address	0000000002010447 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN0.N0.TRA0.TR1.TRACE_TRDATA_CONFIG_5
Address	0000000002010448 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN0.N0.TRA0.TR1.TRACE_TRDATA_CONFIG_9
Address	0000000002010449 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disables trace data compression (stores data every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Takes into account (cares about) changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.

Bits	SCOM	Field Mnemonic: Description
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG0_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG1_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Inverts TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Inverts TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Inverts the match polarity before using it to form a trigger. 0b1000 inverts MATCHA. 0b0100 inverts MATCHB. 0b0010 inverts MATCHC. 0b0001 inverts MATCHD.
32:35	RW	Reserved field
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved field

Register Name	**Trace Array High Data Register**
Mnemonic	TP.TCN0.N0.TRA1.TR0.TRACE_HI_DATA_REG
Address	0000000002010480 (SCOM)
Description	This register provides the high trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: This field contains trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN0.N0.TRA1.TR0.TRACE_LO_DATA_REG
Address	0000000002010481 (SCOM)
Description	This register provides the low trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN0.N0.TRA1.TR0.TRACE_TRCTRL_CONFIG
Address	0000000002010482 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: This bit enables an unconditional forced write when trace is run.
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.
10	RW	BANK_MODE: This bit enables bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B. Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: Spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN0.N0.TRA1.TR0.TRACE_TRDATA_CONFIG_0
Address	0000000002010483 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: This field contains a trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN0.N0.TRA1.TR0.TRACE_TRDATA_CONFIG_1
Address	0000000002010484 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: This field contains a trace data compare mask for bits 64 - 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN0.N0.TRA1.TR0.TRACE_TRDATA_CONFIG_2
Address	0000000002010485 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 – 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN0.N0.TRA1.TR0.TRACE_TRDATA_CONFIG_3
Address	0000000002010486 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 – 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 – 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN0.N0.TRA1.TR0.TRACE_TRDATA_CONFIG_4
Address	0000000002010487 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN0.N0.TRA1.TR0.TRACE_TRDATA_CONFIG_5
Address	0000000002010488 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN0.N0.TRA1.TR0.TRACE_TRDATA_CONFIG_9
Address	0000000002010489 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disables trace data compression (stores data every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Takes into account (cares about) changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG0_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0.

Bits	SCOM	Field Mnemonic: Description
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG1_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Inverts TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Inverts TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Inverts the match polarity before using it to form a trigger. 0b1000 inverts MATCHA. 0b0100 inverts MATCHB. 0b0010 inverts MATCHC. 0b0001 inverts MATCHD.
32:35	RW	Reserved field
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved field

Register Name	Debug Mode Register
Mnemonic	TP.TCN0.N0.EPS.DBG.DBG_MODE_REG
Address	00000000020107C0 (SCOM)
Description	This register is the debug macro configuration register 0 for the configuration component.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	GLB_BRCST_MODE: Global broadcast mode (0 - 2): 100 = dbg_trace_run and dbg_trace_freeze 101 = pc_tcdbg_trace_run_fncd and dbg_trace_freeze 110 = dbg_triggers_out(0 to 1) 111 = pc_tcdbg_triggers(0 to 1) (from core)
3:5	RW	TRACE_SEL_MODE: Select source for trace_run and bank: 001 = core trace run and bank 010 = tp broadcast run and 0 011 = tc_dbg_inter_brcst latched 100 = tc_dbg_dbg_sync_brcst_rcv else: dbg_trace_run and dbg_trace_bank
6:7	RW	TRIG_SEL_MODE: Select source for tcdbg_trigger(0): 10 = global broadcast 11 = pc_tcdbg_trigger (from core) else: dbg_triggers_out(0:1)
8	RW	STOP_ON_XSTOP_SELECTION: This bit enables a trace stop on a checkstop.
9	RW	STOP_ON_RECOV_ERR_SELECTION: This bit enables a trace stop on a recoverable error.
10	RW	STOP_ON_SPATTN_SELECTION: This bit enables a trace stop on special attention.

Bits	SCOM	Field Mnemonic: Description
11	RW	FREEZE_SEL_MODE: Select freeze source: 0 = local debug freeze 1 = via broadcast: tp_tcdbg_glb_brcst(1)
12:13	RW	SYNC_BRCST_MODE: Originally used for synchronous broadcast mode; currently unused because obsolete. See trace_sel_mode.
14	RO	constant = 0b0 sync_brcst_mode
15	RO	constant = 0b0
16:31	ROX	DBG_STATUS: Debug status.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	Debug Instance 1 Condition 1 Register
Mnemonic	TP.TCN0.N0.EPS.DBG.DBG_INST1_COND_REG_1
Address	00000000020107C1 (SCOM)
Description	This register is the debug macro configuration register 1 for the front-end 1 component.

Register Name	Debug Trace Mode 2 Register
Mnemonic	TP.TCN0.N0.EPS.DBG.DBG_TRACE_MODE_REG_2
Address	00000000020107CF (SCOM)
Description	This is debug macro configuration register 2 for the back-end component.

Bits	SCOM	Field Mnemonic: Description
0:15	RW	RUNN_COUNT_COMPARE_VALUE: Compare value for the run-N counter used in trace modes run-N and wait-N.
16	RW	IMM_FREEZE_MODE: Immediate freeze mode.
17	RW	STOP_ON_ERR: Stop and freeze on checkstop.
18	RW	BANK_ON_RUNN_MATCH: Bank switch on run-N match.
19	RW	FORCE_TEST_MODE: FORCE run-N condition to be true.

Bits	SCOM	Field Mnemonic: Description
20	RW	ACCUM_HIST_MODE: Accumulate history mode; do not clear history mode when trace_run is active.
21	RW	FRZ_COUNT_ON_FRZ: Freeze condition counters on trace freeze.

Register Name	Debug Trace Control Register
Mnemonic	TP.TCN0.N0.EPS.DBG.DEBUG_TRACE_CONTROL
Address	00000000020107D0 (SCOM)
Description	This is the trace start/stop/rest using SCOM command register. Use write data(0/1/2) = 1. This is a reserved register

Bits	SCOM	Field Mnemonic: Description
0	WOX	Reserved field
1	WOX	Reserved field
2	WOX	Reserved field

Register Name	Extra Trace Mode Register
Mnemonic	TP.TCN0.N0.EPS.DBG.XTRA_TRACE_MODE
Address	00000000020107D1 (SCOM)
Description	Extra or dedicated trace mode register for core triggers

Bits	SCOM	Field Mnemonic: Description
0:37	RW	This register provides an extra or dedicated trace mode register for core triggers.

Register Name	CXA FIR Register
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.FIR_REG
Address	0000000002010800 (SCOM) 0000000002010801 (SCOM1) 0000000002010802 (SCOM2)
Description	This register is the local FIR register for the CAPP.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	BAR_PE: Informational PE. Generic bucket for errors that are informational.
1	RWX	WOX_AND	WOX_OR	REGISTER_PE: System checkstop PE. Generic bucket for errors that are system checkstop.
2	RWX	WOX_AND	WOX_OR	MASTER_ARRAY_CE: Correctable error on master array. Included uOP and CRESP arrays.
3	RWX	WOX_AND	WOX_OR	MASTER_ARRAY_UE: Uncorrectable error on Master array. Includes uOP and CRESP arrays.
4	RWX	WOX_AND	WOX_OR	TIMER_EXPIRED_RECOV_ERROR: Precise directory epoch timeout. Coarse directory epoch timeout. rtagPool epoxh data hang timeout. Recovery sequencer hang detection.
5	RWX	WOX_AND	WOX_OR	TIMER_EXPIRED_XSTOP_ERROR: Recovery sequencer hang detection.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
6	RWX	WOX_AND	WOX_OR	PSL_CMD_UE: XPT detected uncorrectable error on processor bus data determined to be a PSL command. The PSL command does not propagate past XPT.
7	RWX	WOX_AND	WOX_OR	PSL_CMD_SUE: XPT detected special uncorrectable error on processor bus data determined to be a PSL command. The PSL command does not propagate past XPT.
8	RWX	WOX_AND	WOX_OR	SNOOP_ARRAY_CE: Correctable error on snooper array. Includes precise dir, coarse dir, and uOP.
9	RWX	WOX_AND	WOX_OR	SNOOP_ARRAY_UE: Uncorrectable error on snooper array. Includes precise DIR, coarse DIR, and uOP.
10	RWX	WOX_AND	WOX_OR	RECOVERY_FAILED: CAPP recovery failed.
11	RWX	WOX_AND	WOX_OR	ILLEGAL_LPC_BAR_ACCESS: Illegal LPC BAR Access. Error detected when a snooper or master write operation is attempted to the fine directories in LPC-only mode, or when the operation hits the LPC BAR region in LPC DISJOINT mode. Also, fires if a directory hit is found on a read operation within the LPC BAR range.
12	RWX	WOX_AND	WOX_OR	XPT_RECOVERABLE_ERROR: Recoverable errors detected in transport.
13	RWX	WOX_AND	WOX_OR	MASTER_RECOVERABLE_ERROR: Recoverable errors detected in Master.
14	RWX	WOX_AND	WOX_OR	SNOOPER_RECOVERABLE_ERROR: Spare FIR bits allocated for future use.
15	RWX	WOX_AND	WOX_OR	SECURE_SCOM_ERROR: Error detected in secure SCOM satellite.
16	RWX	WOX_AND	WOX_OR	MASTER_SYS_XSTOP_ERROR: System checkstop errors detected in the master (invalid state, control checker).
17	RWX	WOX_AND	WOX_OR	SNOOPER_SYS_XSTOP_ERROR: System checkstop errors detected in the snooper (invalid state, control checker).
18	RWX	WOX_AND	WOX_OR	XPT_SYS_XSTOP_ERROR: System checkstop errors detected in transport (invalid state, control checker).
19	RWX	WOX_AND	WOX_OR	MUOP_ERROR_1: Master uOP FIR 1.
20	RWX	WOX_AND	WOX_OR	MUOP_ERROR_2: Master uOP FIR 2.
21	RWX	WOX_AND	WOX_OR	MUOP_ERROR_3: Master uOP FIR 3.
22	RWX	WOX_AND	WOX_OR	SUOP_ERROR_1: Snooper uOP FIR 1.
23	RWX	WOX_AND	WOX_OR	SUOP_ERROR_2: Snooper uOP FIR 2.
24	RWX	WOX_AND	WOX_OR	SUOP_ERROR_3: Snooper uOP FIR 3.
25	RWX	WOX_AND	WOX_OR	POWERBUS_MISC_ERROR: Miscellaneous informational processor bus errors including unsolicited processor bus data. Unsolicited cResp.
26	RWX	WOX_AND	WOX_OR	POWERBUS_INTERFACE_PE: Parity error on processor bus interface (address/aTag/tTaag/rTag APC, SNP TLBI).
27	RWX	WOX_AND	WOX_OR	POWERBUS_DATA_HANG_ERROR: Any processor bus data hang poll error.
28	RWX	WOX_AND	WOX_OR	POWERBUS_HANG_ERROR: Any processor bus command hang error (domestic address range).
29	RWX	WOX_AND	WOX_OR	LD_CLASS_CMD_ADDR_ERR: Processor bus address error detected by APC on a load-class command.
30	RWX	WOX_AND	WOX_OR	ST_CLASS_CMD_ADDR_ERR: Processor bus address error detected by APC on a store-class command.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
31	RWX	WOX_AND	WOX_OR	PHB_LINK_DOWN: PPHB0 or PHB1 interface has asserted link down.
32	RWX	WOX_AND	WOX_OR	LD_CLASS_CMD_FOREIGN_LINK_FAIL: APC received ack_dead or ack_ed_dead from the foreign interface on a load-class command.
33	RWX	WOX_AND	WOX_OR	FOREIGN_LINK_HANG_ERROR: Any processor bus command hang error (foreign address range).
34	RWX	WOX_AND	WOX_OR	XPT_POWERBUS_CE: CE on data received from processor bus and destined for either XPT data array (and back to processor bus) or PSL command or link delay response packet.
35	RWX	WOX_AND	WOX_OR	XPT_POWERBUS_UE: UE on data received from processor bus and destined for XPT data array (and back to processor bus) or link delay response packet.
36	RWX	WOX_AND	WOX_OR	XPT_POWERBUS_SUE: SUE on data received from processor bus and destined for XPT data array (and back to processor bus) or link delay response packet.
37	RWX	WOX_AND	WOX_OR	TLBI_TIMEOUT: TLBI Timeout error. TLBI requires re-IPL to recover.
38	RWX	WOX_AND	WOX_OR	TLBI_SOT_ERR: Illegal SOT operation detected in P8BC mode.
39	RWX	WOX_AND	WOX_OR	TLBI_BAD_OP_ERR: TLBI bad operation error. TLBI requires re-IPL to recover.
40	RWX	WOX_AND	WOX_OR	TLBI_SEQ_NUM_PARITY_ERR: Parity error detected on TLBI sequence number.
41	RWX	WOX_AND	WOX_OR	ST_CLASS_CMD_FOREIGN_LINK_FAIL: APC received ack_dead or ack_ed_dead from the foreign interface on a store-class command.
42	RWX	WOX_AND	WOX_OR	TIME_BASE_ERR: An error has occurred with timebase. This is an indication that the timebase value can no longer be assumed to be correct.
43	RWX	WOX_AND	WOX_OR	TRANSPORT_INFORMATIONAL_ERR: Transport informational error.
44	RWX	WOX_AND	WOX_OR	APC_ARRAY_CMD_CE_ERPT: CE on PSL command queue array in APC.
45	RWX	WOX_AND	WOX_OR	APC_ARRAY_CMD_UE_ERPT: UE on PSL command queue array in APC.
46	RWX	WOX_AND	WOX_OR	PSL_CREDIT_TIMEOUT_ERR: PSL credit timeout error.
47	RWX	WOX_AND	WOX_OR	SPARE_2: Spare FIR bits allocated for future use.
48	RWX	WOX_AND	WOX_OR	HYPERVISOR: Hypervisor.
49	RWX	WOX_AND	WOX_OR	SPARE_3: Spare FIR bits allocated for future use.
50	RWX	WOX_AND	WOX_OR	SCOM_ERR2: Local FIR parity error RAS duplicate.
51	RWX	WOX_AND	WOX_OR	SCOM_ERR: Local FIR parity error of ACTION/MASK registers.
52:63	RO	RO	RO	constant = 0b000000000000

Register Name	CXA FIR Mask Register
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.FIR_MASK_REG
Address	0000000002010803 (SCOM) 0000000002010804 (SCOM1) 0000000002010805 (SCOM2)
Description	Error mask register. (Action0, mask) = Action select (0, 0) = Recoverable error (0, 1) = Masked (1, x) = Checkstop error

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_AND	WO_OR	BAR_PE_MASK: Informational PE Mask. Generic bucket for errors that are informational.
1	RW	WO_AND	WO_OR	REGISTER_PE_MASK: System checkstop PE mask. Generic bucket for errors that are system checkstop.
2	RW	WO_AND	WO_OR	MASTER_ARRAY_CE_MASK: Correctable error on master array. Includes uOP and CRESP arrays Mask.
3	RW	WO_AND	WO_OR	MASTER_ARRAY_UE_MASK: Uncorrectable error on master array. Includes uOP and CRESP arrays Mask.
4	RW	WO_AND	WO_OR	TIMER_EXPIRED_RECOV_ERROR_MASK: Precise directory epoch timeout Mask. Coarse directory epoch timeout mask. rtagPool epoxh data hang timeout mask. Recovery sequencer hang detection mask.
5	RW	WO_AND	WO_OR	TIMER_EXPIRED_XSTOP_ERROR_MASK: Recovery sequencer hang detection mask.
6	RW	WO_AND	WO_OR	PSL_CMD_UE_MASK: XPT detected uncorrectable error on processor bus data determined to be a PSL command Mask. The PSL command does not propagate past XPT.
7	RW	WO_AND	WO_OR	PSL_CMD_SUE_MASK: XPT detected Special uncorrectable error on processor bus data determined to be a PSL command mask. The PSL command does not propagate past XPT.
8	RW	WO_AND	WO_OR	SNOOP_ARRAY_CE_MASK: Correctable error on Snooper array. Includes precise directory, coarse directory, and uOP mask.
9	RW	WO_AND	WO_OR	SNOOP_ARRAY_UE_MASK: Uncorrectable error on Snooper array. Includes precise directory, coarse directory, and uOP Mask.
10	RW	WO_AND	WO_OR	RECOVERY_FAILED_MASK: CAPP recovery failed mask.
11	RW	WO_AND	WO_OR	ILLEGAL_LPC_BAR_ACCESS_MASK: Error detected when a snooper or master write operation is attempted to the fine directories in LPC-only mode, or when the operation hits the LPC BAR region in LPC disjoint mode. Also, activates if a directory hit is found on a read operation within the LPC BAR range.
12	RW	WO_AND	WO_OR	XPT_RECOVERABLE_ERROR_MASK: Recoverable errors detected in xpt mask.
13	RW	WO_AND	WO_OR	MASTER_RECOVERABLE_ERROR_MASK: Recoverable errors detected in Master mask.
14	RW	WO_AND	WO_OR	SNOOPER_RECOVERABLE_ERROR_MASK: Spare FIR bits allocated for future use mask.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
15	RW	WO_AND	WO_OR	SECURE_SCOM_ERROR_MASK: Error detected in secure SCOM satellite Mask.
16	RW	WO_AND	WO_OR	MASTER_SYS_XSTOP_ERROR_MASK: System checkstop errors detected in Master (invalid state, control checker) mask.
17	RW	WO_AND	WO_OR	SNOOPER_SYS_XSTOP_ERROR_MASK: System checkstop errors detected in Snooper (invalid state, control checker) mask.
18	RW	WO_AND	WO_OR	XPT_SYS_XSTOP_ERROR_MASK: System checkstop errors detected in Transport (invalid state, control checker) Mask.
19	RW	WO_AND	WO_OR	MUOP_ERROR_1_MASK: Master uOP FIR 1 mask.
20	RW	WO_AND	WO_OR	MUOP_ERROR_2_MASK: Master uOP FIR 2 mask.
21	RW	WO_AND	WO_OR	MUOP_ERROR_3_MASK: Master uOP FIR 3 mask.
22	RW	WO_AND	WO_OR	SUOP_ERROR_1_MASK: Snooper uOP FIR 1 mask.
23	RW	WO_AND	WO_OR	SUOP_ERROR_2_MASK: Snooper uOP FIR 2 mask.
24	RW	WO_AND	WO_OR	SUOP_ERROR_3_MASK: Snooper uOP FIR 3 mask.
25	RW	WO_AND	WO_OR	POWERBUS_MISC_ERROR_MASK: Miscellaneous informational processor bus errors mask including unsolicited processor bus data and unsolicited cResp.
26	RW	WO_AND	WO_OR	POWERBUS_INTERFACE_PE_MASK: Parity error on processor bus interface (address/aTag/tTag/rTag APC, SNP TLBI) mask.
27	RW	WO_AND	WO_OR	POWERBUS_DATA_HANG_ERROR_MASK: Any processor bus data hang poll error mask.
28	RW	WO_AND	WO_OR	POWERBUS_HANG_ERROR_MASK: Any processor bus command hang error (domestic address range) mask.
29	RW	WO_AND	WO_OR	LD_CLASS_CMD_ADDR_ERR_MASK: processor bus address error detected by APC on a load-class command mask.
30	RW	WO_AND	WO_OR	ST_CLASS_CMD_ADDR_ERR_MASK: Processor bus address error detected by APC on a store-class command mask.
31	RW	WO_AND	WO_OR	PHB_LINK_DOWN_MASK: PPHB0 or PHB1 interface has asserted linkdown Mask.
32	RW	WO_AND	WO_OR	LD_CLASS_CMD_FOREIGN_LINK_FAIL_MASK: APC received ack_dead or ack_ed_dead from the foreign interface on a load-class command mask.
33	RW	WO_AND	WO_OR	FOREIGN_LINK_HANG_ERROR_MASK: Any processor bus command hang error (foreign address range) mask.
34	RW	WO_AND	WO_OR	XPT_POWERBUS_CE_MASK: CE on data received from processor bus and destined for either XPT data array (and back to processor bus) or PSL command or link delay response packet mask.
35	RW	WO_AND	WO_OR	XPT_POWERBUS_UE_MASK: UE on data received from processor bus and destined for XPT data array (and back to processor bus) or link delay response packet mask.
36	RW	WO_AND	WO_OR	XPT_POWERBUS_SUE_MASK: SUE on data received from processor bus and destined for XPT data array (and back to processor bus) or link delay response packet mask.
37	RW	WO_AND	WO_OR	TLBI_TIMEOUT_MASK: TLBI Timeout error. TLBI requires re-IPL to recover mask.
38	RW	WO_AND	WO_OR	TLBI_SOT_ERR_MASK: Illegal SOT op detected in POWER8 BC mode. TLBI requires re-IPL to recover mask.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
39	RW	WO_AND	WO_OR	TLBI_BAD_OP_ERR_MASK: TLBI bad op error. TLBI requires re-IPL to recover mask.
40	RW	WO_AND	WO_OR	TLBI_SEQ_NUM_PARITY_ERR_MASK: Parity error detected on TLBI sequence number mask.
41	RW	WO_AND	WO_OR	ST_CLASS_CMD_FOREIGN_LINK_FAIL_MASK: APC received ack_dead or ack_ed_dead from the foreign interface on a store-class command mask.
42	RW	WO_AND	WO_OR	TIME_BASE_ERR_MASK: An error has occurred with timebase. This is an indication that the time-base value can no longer be assumed to be correct.
43	RW	WO_AND	WO_OR	TRANSPORT_INFORMATIONAL_ERR_MASK: Transport informational error mask.
44	RW	WO_AND	WO_OR	APC_ARRAY_CMD_CE_ERPT_MASK: CE on PSL command queue array in APC mask.
45	RW	WO_AND	WO_OR	APC_ARRAY_CMD_UE_ERPT_MASK: UE on PSL command queue array in APC mask.
46	RW	WO_AND	WO_OR	PSL_CREDIT_TIMEOUT_ERR_MASK: PSL credit timeout error mask.
47	RW	WO_AND	WO_OR	SPARE_2_MASK: Spare FIR bits allocated for future use mask.
48	RW	WO_AND	WO_OR	SPARE_3_MASK: Spare FIR bits allocated for future use mask.
49	RW	WO_AND	WO_OR	HYPERVISOR_MASK: Hypervisor mask.
50	RW	WO_AND	WO_OR	SCOM_ERR2_MASK: Local FIR parity error RAS duplicate mask.
51	RW	WO_AND	WO_OR	SCOM_ERR_MASK: Local FIR parity error of ACTION/MASK registers mask.
52:63	RO	RO	RO	constant = 0b000000000000

Register Name	Pervasive FIR Action 0 Register
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.FIR_ACTION0_REG
Address	0000000002010806 (SCOM)
Description	This register is the action select for the FIR bits.

Bits	SCOM	Field Mnemonic: Description
0:51	RO	FIR_ACTION0: MSB of action select for corresponding bit in FIR. (Action0,Action1) = Action Select. (0, 0) = Checkstop. (0, 1) = Recoverable. (1, 0) = Recoverable interrupt. (1, 1) = Machine check.

Register Name	Pervasive FIR Action 1 Register
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.FIR_ACTION1_REG
Address	0000000002010807 (SCOM)
Description	This register is the second bit of action select, if necessary.

Bits	SCOM	Field Mnemonic: Description
0:51	RO	FIR_ACTION1: LSB of action select for corresponding bit in FIR. (Action0, Action1, Mask) = Action select. (x, x, 1) = Masked. (0, 0, 0) = Checkstop. (0, 1, 0) = Recoverable Error. (1, 0, 0) = Recoverable Interrupt. (1, 1, 0) = Machine Check.

Register Name	Snoop Error Report Register
Mnemonic	CAPP0.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_ERROR_REPORT_REG
Address	000000000201080A (SCOM)
Description	This register is the SCOM access of snp c_err_rpt latches.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	CXA_SNP_C_ERR_RPT_HOLD_DATA: SNP c_err report hold value.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	APC Master Error Report Register
Mnemonic	CAPP0.CXA_TOP.CXA_APC1.ERRRPT
Address	000000000201080B (SCOM)
Description	This register is the output of the APC cerr_rpt hold latches.

Bits	SCOM	Field Mnemonic: Description

Register Name	Transport Error Hold Register
Mnemonic	CAPP0.CXA_TOP.XPT_ERROR_REPORT
Address	0000000002010800 (SCOM)
Description	This register contains hold latches for the conditions that result in FIR errors.

Bits	SCOM	Field Mnemonic: Description
0	ROX	XPT_PSL_CMD_UE_ERRHOLD: PSL command uncorrectable error.
1	ROX	XPT_PSL_CMD_SUE_ERRHOLD: PSL command special uncorrectable error.
2	ROX	XPT_SC_RDATA_PARITY_ERRHOLD: EPT register read data parity error.

Bits	SCOM	Field Mnemonic: Description
3	ROX	APC_SC_RDATA_PARITY_ERRHOLD: APC register read data parity error.
4	ROX	SN_SC_RDATA_PARITY_ERRHOLD: Snoop register read data parity error .
5	ROX	NX_DATA_RTAG_PARITY_ERRHOLD: Processor bus RTAG parity error.
6	ROX	NXPBXPT_PBRCV_ECC_CE_ERRHOLD: Processor bus data or PSL command correctable error.
7	ROX	NXPBXPT_PBRCV_ECC_UE_ERRHOLD: Processor bus data uncorrectable error.
8	ROX	NXPBXPT_PBRCV_ECC_SUE_ERRHOLD: Processor bus data Special uncorrectable error.
9	ROX	XPT_DBG_CTL_REG_PARITY_ERRHOLD: Debug Bus Mux Control Register write data parity error.
10	ROX	XPT_CFG_REG_PARITY_ERRHOLD: Transport Control Register write data parity error.
11	ROX	CAPP_ERR_STAT_CTL_REG_PARITY_ERRHOLD: CAPP Error Status and Control Register write data parity error.
12	ROX	PMU_CNTRA_CFG_REG_PARITY_ERRHOLD: PMU Counter Configuration Register0 write data parity error.
13	ROX	PMU_CNTRB_CFG_REG_PARITY_ERRHOLD: PMU Counter Configuration Register1 write data parity error.
14	ROX	XPT_PMU_EVENT_SEL_REG_PARITY_ERRHOLD: XPT PMU Event Select Register write data parity error.
15	ROX	PE0_CXA_LINKDOWN_ERRHOLD: PE0 link down.
16	ROX	PE1_CXA_LINKDOWN_ERRHOLD: PE1 link down.
17	ROX	SB_SCOM_ERRHOLD: Secure SCOM internal error.
18	ROX	PBXMIT_MSGQ_SEQ_ERRHOLD: Transport message queue sequencer not one hot error.
19	ROX	PBXMIT_DXMIT_SEQ_ERRHOLD: Transport transmit queue sequencer not one hot error.
20	ROX	EPH_REC_TMR_CNTL_REG_PARITY_ERRHOLD: Epoch and Recovery Timers Control Register write data parity error
21	ROX	RCS_RECOVERY_FAILED_ERRHOLD: CAPP recovery failed.
22	ROX	RCS_STATE_MACHINE_ERRHOLD: Recovery sequencer FSM invalid state.
23	ROX	NXPBXPT_PBRCV_LNK_RSP_ECC_UE_ERRHOLD: Secure link response packet UE.
24	ROX	NXPBXPT_PBRCV_LNK_RSP_ECC_SUE_ERRHOLD: Secure link response packet SUE.
25	ROX	LNK_RSP_PKT_DISCARDED_ERRHOLD: Secure link response packet discarded.
26	ROX	SECURE_LNK_RSP_PKT_NOT_VALID_ERRHOLD: Secure link response packet not valid.
27	ROX	SECURE_LNK_SCOM_CONFLICT_ERRHOLD: Secure link response packet conflict with SCOM access.
28	ROX	UNSOLICITED_DATA_RCV_ERROR_ERRHOLD: Unsolicited data received.
29	ROX	AS_RCMD0_PARITY_ERR_ERRHOLD: AS as endpoint rcmd0 parity error.
30	ROX	AS_REGS_PARITY_ERR_ERRHOLD: AS as Endpoint Register parity error.
31	ROX	AS_SM_ERROR_ERRHOLD: AS as endpoint state machine error.
32	ROX	AS_REG_RDATA_PERR_ERRHOLD: AS as Endpoint Register Read data parity error.
33	ROX	DFS_SM_ERROR_ERRHOLD: DFS state machine error.
34	ROX	TB_XPT_ERROR_FIR_ERR_ERRHOLD: Time base error.
35	ROX	TB_CMD_DISCARDED_ERRHOLD: Time base command discarded.
36	ROX	TB_REG_RDATA_PERR_ERRHOLD: Time base command discarded.
37	ROX	RNG_WR_ENBL_REG_PERR_ERRHOLD: RNG Write Enable Configuration Register parity error.
38	ROX	SSA_ECC_HI_UE_ERRHOLD: Message queue high UE.

Bits	SCOM	Field Mnemonic: Description
39	ROX	SSA_ECC_HI_CE_ERRHOLD: Message queue high CE.
40	ROX	SSA_ECC_HI_SUE_ERRHOLD: Message queue high SUE.
41	ROX	SSA_ECC_LO_SUE_ERRHOLD: Message queue low SUE.
42	ROX	SSA_ECC_LO_CE_ERRHOLD: Message queue low CE.
43	ROX	SSA_ECC_LO_UE_ERRHOLD: Message queue low UE.
44	ROX	CXACQPB_MUX_ECC_CE_ERRHOLD: CQ multiplexer CE.
45	ROX	CXACQPB_MUX_ECC_UE_ERRHOLD: CQ multiplexer UE.
46	ROX	APC0_SC_RDATA_PARITY_ERRHOLD: APC0 Register parity error.
47	ROX	CREDIT_TIMEOUT_ERRHOLD: CAPP Credit timeout.
48	ROX	TLBI_SC_RDATA_PARITY_ERRHOLD: TLBI SCOM parity error.
49	ROX	TLBI_REGS_PARITY_ERRHOLD: TLBI Register parity error.
50	ROX	RCS_RECOVERY_TIMEOUT_ERRHOLD: CAPP recovery timeout.
51	ROX	TBST0_BADIN_ERRHOLD: Timebase state machine in State 0 and SCOM TFMR write of bit (18) move_chip_tod_to_tb.
52	ROX	TBST6_BADIN_ERRHOLD: Timebase state machine in State 6 and SCOM TFMR write of 1 bit (18) move_chip_tod_to_tb.
53	ROX	TBST7_BADIN_ERRHOLD: Timebase state machine in State 7 and SCOM TFMR write of 1 bit (16) load_tod_mod or (18) move_chip_tod_to_tb.
54	ROX	TWO_TFMRCMDS_ERR_ERRHOLD: SCOM TFMR write of 1 to both bits (16) load_tod_mod and bit (18) move_chip_tod_to_tb.
55	ROX	TB_MISSING_SYNC_ERRHOLD: Indicates a SYNC pulse was not received in the time specified by the sync_bit_sel control bits.
56	ROX	TB_MISSING_STEP_ERRHOLD: Indicates that a step pulse was not received in the time specified by the max_cyc_bet_steps control bits.
57	ROX	TB_RESIDUE_ERR_ERRHOLD: Indicates a parity or residue error has compromised the integrity of the timebase.
58	ROX	TX_TFMR_CORRUPT_ERRHOLD: Indicates a parity error has been detected on the TFMR Register.
59	ROX	TBST_CORRUPT_ERRHOLD: Indicates a TFMR invalid TB state machine state.
60	ROX	TBST9_BADIN_ERRHOLD: Timebase state machine in state 9 and SCOM TFMR write of 1 bit (16) load_tod_mod or (18) move_chip_tod_to_tb.
61:63	RO	constant = 0b000

Register Name	TLBI Error Hold Register
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.TLBI_ERROR_REPORT
Address	000000000201080D (SCOM)
Description	This register contains hold latches for the conditions that result in FIR errors.

Bits	SCOM	Field Mnemonic: Description
0	ROX	TLBI_IN_TIMEOUT: Data hang timeout.
1	ROX	TLBI_IN_SEQ_ERR: Error in TLBI internal sequencers.
2	ROX	TLBI_IN_SEQ_PERR: TLBI sequence number parity error.
3	ROX	TLBI_IN_BAD_OP_ERR: TLBI bad op error.

Bits	SCOM	Field Mnemonic: Description
4	ROX	TLBI_IN_SNP_ADDR_PERR: TLBI snoop address parity error.
5	ROX	TLBI_IN_SNP_TTAG_PERR: TLBI snoop TTAG parity error.
6:63	RO	constant = 0b0000000000000000000000000000000000000000000000000000000000000000

Register Name	CAPP Error Status and Control Register
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_EPT.CAPP_ERR_STATUS_CONTROL
Address	000000000201080E (SCOM)
Description	This register contains status and controls for the error recovery process.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRPART	ERROR_RECOVERY_INITIATED: If this bit is set (= 1) a recoverable error has been detected and the CAPP recovery process has been initiated. Once set, this bit remains set until cleared by firmware or POR.
1	RWX_WCLRPART	ERROR_RECOVERY_COMPLETE: If Error Recovery Initiated is 1 and this bit is 0, the CAPP recovery process is in progress. If Error Recovery Initiated is 1 and this bit is 1, the CAPP recovery process has completed. If Error Recovery Initiated is 0, Error Recovery Complete = 1 is not meaningful. Once set, this bit remains set until cleared by firmware or POR.
2	RO	constant = 0b0
3	RWX	TLBI_PSL_DEAD: This bit is set by hardware when Error Recovery Initiated is set, asserting the core_is_dead signal to the TLBI macro informing it that PSL must be considered non-operational, possibly with outstanding TLBI requests. When core_is_dead = 1, the snoop machine in TLBI stops waiting for not_my_lpar_id or tlbi_response command from PSL. TLBI acts as if PSL has returned something and goes back to idle. When error recovery is complete and firmware wants to reinitialize the TLBI, it writes this bit and TLBI Fence to 0 in the same SCOM write operation.
4	RWX	TLBI_FENCE: This bit is set by hardware when Error Recovery Initiated is set. This bit drives the tlbie_fence_lvl signal to the TLBI macro, which normally informs the macro that the core is going to sleep but here is used as part of error initiation and recovery. The tlbie_fence_lvl tells the macro to start ignoring the new TLBIES, but still finishes up the TLBIES received before tlbie_fence_lvl went high. When recovery is complete and firmware wants to reinitialize the TLBI, it writes this bit and the TLBI PSL is dead to 0 in the same SCOM write operation.
5	RWX_WCLRPART	RECOVERY_FAILED: Recovery did not complete successfully. Bits 6 - 9 specify the reason for the failure.
6	RWX_WCLRPART	RTAGFLUSH_FAILED: During recovery an error was detected while trying to flush the rTagPool.
7	RWX_WCLRPART	PRECISE_DIR_FLUSH_FAILED: During recovery an error was detected while trying to flush the precise directory.
8	RWX_WCLRPART	COURSE_DIR_FLUSH_FAILED: During recovery an error was detected while trying to flush the course directory.
9	RWX_WCLRPART	RECOVERY_HANG_DETECTED: The recovery actions timed out and a hang was declared.
10:11	RWX_WCLRPART	EPOCH_VALUE: Epoch value captured when error recovery is initiated.
12:13	RO	constant = 0b00
14	WO_1P	FORCE_QUIESCE: Force CAPP to quiesce.
15	ROX	QUIESCE_DONE: When set to 1, the force quiesce is in progress. When set to 0, the quiesce has completed.
16:63	RO	constant = 0b0000000000000000000000000000000000000000000000000000000000000000

Register Name	Flush SUE State Map Register
Mnemonic	CAPP0.CXA_TOP.CXA_APC0.FLUSHSHUE
Address	000000000201080F (SCOM)
Description	This register is 1 bit per state decode. When set to 1, it requires a flush with SUE during directory flush.

Bits	SCOM	Field Mnemonic: Description
0:31	RW	FLUSH_SUE_STATE_MAP: DIR Flush SUE state map. 1 bit per state decode.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	Error Inject Register
Mnemonic	CAPP0.CXA_TOP.APC_ERRINJ
Address	0000000002010810 (SCOM)
Description	This register controls error injection.

Bits	SCOM	Field Mnemonic: Description
0	RW	APC_ERRINJ_ENABLE: APC master error inject enable.
1	RW	APC_ERRINJ_DBLERR: APC master 0 = inject 1-bit ECC error. When set to 1, inject 2-bit ECC error.
2	RW	APC_ERRINJ_CONTINUOUS: APC master 0 = inject error once. When set to 1, inject error continuously.
3:6	RO	constant = 0b0000
7:11	RW	APC_ERRINJ_TARGET: APC master error inject target selection.
12	RW	SNP_ERROR_INJECT_ENABLE: SNP master error inject enable.
13	RW	SNP_INJECT_DBL_ECC_ERROR: SNP Master 0 = inject 1-bit ECC error. When set to 1, inject 2-bit ECC error.
14	RW	SNP_INJECT_CONTINOUS_ERROR: SNP master 0 = inject error once. When set to 1, inject error continuously.
15:16	RO	constant = 0b00
17:23	RW	SNP_ERROR_INJECT_TARGET: SNP Master error inject target selection.
24:31	RO	constant = 0b00000000
32	RW	XPT_ERROR_INJECT_ENABLE: XPT master error inject enable.
33:34	RW	XPT_ERROR_TYPE: XPT error type: 00 = Inject CE 01 = Inject UE 10 = Inject SUE 11 = Reserved.
35	RW	XPT_INJECT_CONTINUOUS_ERROR: XPT continuous mode. When set to 1, continuously inject the error. When set to 0, inject on the next operation.
36:39	RW	XPT_ERROR_INJECT_TARGET: XPT Error inject target: 0000 = Write buffer array 0 0001 = Write buffer array 1 0010-1111 = Reserved
40:63	RO	Constant = 0b000000000000000000000000

Register Name	Debug Bus Multiplexer Control Register
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.DEBUG_CONTROL
Address	0000000002010811 (SCOM)
Description	This register selects which unit drives the bus, and which port of its 16 - 1 multiplexer drives the bus.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	BLOCK_MUX_PORT_SEL: Selects 1 of up to 16 block internal debug buses to source the block debug bus output.
4:11	RW	BLOCK_SEL: One-hot bit vector that selects the block to drive the debug bus. Bit blocks: 4 apc0 5 apc1 6 snpfe 7 snpfe_dir 8 snpbe 9 snpbe_uop 10 tlbi 11 xpt If all block select bits are 0, the debug bus is degated and no switching on the main trunk of the debug bus occurs.
12:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	Trigger Bus Multiplexer Control Register
Mnemonic	CAPP0.CXA_TOP.CXA_TRIGCTL
Address	0000000002010812 (SCOM)
Description	This register selects and enables trigger events.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CXA_TRIGCTL_PORTSEL: APC master trigger selection.
4	RW	CXA_TRIGCTL_APC0_ENABLE: APC master trigger enable for apc0.
5	RW	CXA_TRIGCTL_APC1_ENABLE: APC master trigger enable for apc1.
6	RW	SNPFE_TRIGGER_ENABLE: SNP FE trigger enable.
7	RW	SNPFE_DIR_TRIGGER_ENABLE: SNP FE DIR trigger enable.
8	RW	SNPBE_TRIGGER_ENABLE: SNP BE trigger enable.
9	RW	SNPBE_UOP_TRIGGER_ENABLE: SNP BE UOP trigger enable.
10	RW	Reserved field.
11	RW	Reserved field.
12:15	RW	SNP_MUX_PORT_SEL: Selects 1 of up to 16 block internal trigger conditions to source the SNP trigger bus bit 1.
16:19	RW	Reserved field.
20:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	Error Report Clear Register
Mnemonic	CAPP0.CXA_TOP.ERR_RPT_CLR
Address	0000000002010813 (SCOM)
Description	This register clears all the CAPP c_err_rpt error hold latches when written to.

Bits	SCOM	Field Mnemonic: Description
0	WOX	Reserved.
1:63	RO	Not implemented.

Register Name	PMU Counter A Configuration Register
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.PMU_CNTRA_CFG
Address	0000000002010814 (SCOM)
Description	The PMU Counter A Configuration Register controls the configuration of the PMU Counters.

Bits	SCOM	Field Mnemonic: Description
0	RW	PMUA_COUNTER0_ENABLE: When set to 1, this bit enables PMU Counter0.
1	RW	PMUA_COUNTER1_ENABLE: When set to 1, this bit enables PMU Counter1.
2	RW	PMUA_COUNTER2_ENABLE: When set to 1, this bit enables PMU Counter2.
3	RW	PMUA_COUNTER3_ENABLE: When set to 1, this bit enables PMU Counter3.
4:6	RW	PMUA_PRESCALER_SELECT: Determines which, if any, prescaler counter to apply to all 16-bit PMU counters.
7	RW	PMUA_COUNTER_FREEZE_MODE: Indicates a counter should freeze on overflow. When set to 0, free running. When set to 1, freeze on overflow.
8	RW	PMUA_COUNTER_RESET_MODE: Indicates how a counter should reset. When set to 0, free running. When set to 1, reset on SCOM read.
9:12	RW	PMUA_COUNTER0_EVENT_SELECT: Indication of which of the four event pairs (eight total events) to count in counter0.
13	RW	PMUA_COUNTER0_POSEDGE_SELECT: When set to 1, the PMU only counts the event rising edge. When set to 0, the PMU counts every cycle the event is asserted (high).
14:15	RW	PMUA_COUNTER0_BIT_PAIR_SELECT: Indicates how the event pairs must be combined to increment this PMU counter.
16:19	RW	PMUA_COUNTER1_EVENT_SELECT: Indication of which of the four event pairs (eight total events) to count in counter1.
20	RW	PMUA_COUNTER1_POSEDGE_SELECT: When set to 1, the PMU only counts the event rising edge. When set to 0, the PMU counts every cycle the event is asserted (high).
21:22	RW	PMUA_COUNTER1_BIT_PAIR_SELECT: Indicates how the event pairs should be combined to increment this PMU counter.
23:26	RW	PMUA_COUNTER2_EVENT_SELECT: Indication of which of the four event pairs (eight total events) to count in counter2.
27	RW	PMUA_COUNTER2_POSEDGE_SELECT: When set to 1, the PMU only counts the event rising edge. When set to 0, the PMU counts every cycle the event is asserted (high).
28:29	RW	PMUA_COUNTER2_BIT_PAIR_SELECT: Indicates how the event pairs should be combined to increment this PMU counter.
30:33	RW	PMUA_COUNTER3_EVENT_SELECT: Indication of which of the four event pairs (eight total events) to count in counter3.

Bits	SCOM	Field Mnemonic: Description
34	RW	PMUA_COUNTER3_POSEDGE_SELECT: When set to 1, the PMU only counts the event rising edge. When set to 0, the PMU counts every cycle the event is asserted (high).
35:36	RW	PMUA_COUNTER3_BIT_PAIR_SELECT: Indicates how the event pairs should be combined to increment this PMU counter.
37:38	RW	PMUA_PMU_PORT_SELECT: Chooses the final PMU events to feed to the counters.
39:63	RO	constant = 0b00000000000000000000000000

Register Name	PMU Counters A Register
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_PMULET.PMU_CNTRA_REG
Address	0000000002010815 (SCOM)
Description	The PMU Counters A Register.

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	PMU_COUNTERA_0: PMU Counter0.
16:31	ROX	PMU_COUNTERA_1: PMU Counter1.
32:47	ROX	PMU_COUNTERA_2: PMU Counter2.
48:63	ROX	PMU_COUNTERA_3: PMU Counter3.

Register Name	APC Master PMU Events Select Register
Mnemonic	CAPP0.CXA_TOP.CXA_APC1.APC_PMUSEL
Address	0000000002010816 (SCOM)
Description	This register controls APC performance monitor event selections.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	APC_PMUSEL_GRPSEL: APC master PMU events group selection. Valid values of 0 - 4.
4:5	RO	constant = 0b00
6:11	RW	APC_PMUSEL_FSMJ_EVENT_SEL: APC master PMU events FSMJ event selection. Valid values of 0 - 9.
12	RO	constant = 0b0
13:19	RW	APC_PMUSEL_FSMJ_FSM_SEL: APC master PMU FSMJ FSM selection. Valid values of 0, 1, 8, 9, 16, 17, 24, 25 for read FSMs. Valid values of 64, 65, 72, 73, 80, 81, 88, 89 for write FSMs.
20:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	Snoop PMU Events Select Register
Mnemonic	CAPP0.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_PMU_EVENTS_SELECT_REG
Address	0000000002010817 (SCOM)
Description	This register controls which group of events go on the CXA SNP PMON bus. This bus is sent to the PMU input bus multiplexer in XPT where further bit selection is performed on input to the PMU counters.

Bits	SCOM	Field Mnemonic: Description
0:3	WO	CXA_SNP_PMU_GROUP_SELECT: Selects which one of four snoop PMU event groups is sent. Use only values 0 to 3.
4:5	RO	constant = 0b00
6:11	WO	CXA_SNP_PMU_FSMJ_EVENT_SELECT: Selects which one of eight FSMJ events get routed to the FAMJ event. Use only values 0 to 7.
12:13	RO	constant = 0b00
14:19	WO	CXA_SNP_PMU_FSMJ_FSM_SELECT: Selects which one of four snoop state machines is used for FSMJ event counting. Use only values of 0, 1 , 2, and 3.
20:63	RO	constant = 0b0000000000000000000000000000000000000000000000000000

Register Name	APC Master Processor Bus Control Register
Mnemonic	CAPP0.CXA_TOP.CXA_APC0.APCTL
Address	0000000002010818 (SCOM)
Description	This register controls Processor Bus operations.

Bits	SCOM	Field Mnemonic: Description
0	RW	APCCTL_ENB_CRESP_EXAM: Enables APC master examining cResps. When disabled, prevents false assertion of unexpected CRESP FIR when cResps for PHB are seen. (APC RD FSM spoofs PHB unit ID).
1	RW	APCCTL_ADR_BAR_MODE: addr_bar_mode. Set to 1 when chip equals group. Small system address map. Reduces the number of group ID bits to two and eliminates the chip ID bits. All chips have an ID of 0. Nn scope is not available in this mode.
2	RW	APCCTL_DISABLE_NN_RN: Disables nn_rn scope.
3	RW	APCCTL_DISABLE_VG_NOT_SYS: disable_vg_not_sys scope.
4	RW	APCCTL_DISABLE_G: disable_group scope.
5	RW	APCCTL_DISABLE_LN: disable_ln scope.
6	RW	APCCTL_SKIP_G: Skip increment to group scope. Only used by read machines.
7	RW	APCCTL_HANG_ARE: Hangs on address error.
8	RW	APCCTL_HANG_DEAD: Hangs on Ack_*dead.
9	RW	APCCTL_CFG_BKILL_INC: cfg bkill inc.
10	RW	Reserved field.
11	RW	Reserved field.
12	RW	APCCTL_DISABLE_PSL_CMDQUEUE: disable_psl_cmdqueue. When set to 0, the PSL command queue is enabled. Order of commands is restored in queue using queue ID as a write pointer. When set to 1, the PSL command queue is disabled or bypassed. PSL can only have one command outstanding per APC machine.
13	RW	APCCTL_ENABLE_MASTER_RETRY_BACKOFF: enable_master_retry_backoff. When set to 0, master_retry_backoff due to excessive rty_lpc_only is disabled. When set to 1, master_retry_backoff due to excessive rty_lpc_only is enabled.

Bits	SCOM	Field Mnemonic: Description
14:16	RW	SCPTGT_LFSR_MODE: Mode for LFSRs used in scope_target counter logic selects count of average number of clocks before LFSR rolls over: 0 = On average every 64 K clocks 1 = On average every 32 K clocks 2 = On average every 16 K clocks 3 = On average every 8 K clocks 4 = On average every 4 K clocks 5 = On average every 2 K clocks 6 = On average every 1 K clocks 7 = On average every 512 clocks
17	RW	APCCTL_ENABLE_RD_VG_SCOPE_PREDICT: enable_rd_vg_scope_predict. 0 = rd_vg_scope_predictor is disabled. 1 = rd_vg_scope_predictor is enabled.
18	RW	Reserved field.
19:38	RO	constant = 0b00000000000000000000
39:45	RW	WR_EPSILON_VALUE: Write epsilon value.
46:55	RO	constant = 0b0000000000
56:63	RW	APCCTL_MAX_RETRY: Maximum retry count. When set to 0, retry forever.

Register Name	**APC Master Configuration Register**
Mnemonic	CAPP0.CXA_TOP.CXA_APC0.APCFG
Address	0000000002010819 (SCOM)
Description	This register controls the PHB selection, hang_poll_scale, speculative HPC state, POWER8/POWER9 mode, and addr(8:13).

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1	RW	Reserved field.
2:3	RW	APCCTL_PHB_SEL: PHB select: 01 selects PHB 10 selects Alink
4:7	RW	HANG_POLL_SCALE: Determines the number of hang polls that must be detected to indicate a hang poll to the logic.
8:12	RW	SPEC_HPC_DIR_STATE: Speculative HPC DIR state value.
13	RW	Reserved field.
14	RW	APCCTL_POWER9_MODE: When set to 0, in POWER8 backwards compatibility mode. When set to 1, in POWER9 mode.
15:20	RW	APCCTL_SYSADDR: Used for address bits 8:13 in PB commands and SNP DIR compares.
21	RW	APCCTL_MEM_SEL_MODE: Memory select mode as defined in PB Arch V4. 0 = Memory select mode 0 1 = Memory select mode 1
22	RW	APCCTL_ENB_FRC_ADDR13: Enables forcing of addr(13) = 1 when P8BC mode AND mem_sel_mode = 0 AND pslcmd.rfs_class ! = 0. 0 = Disabled 1 = enabled
23:63	RO	constant = 0b00000000000000000000000000000000000000000000000

Register Name	Snoop CAPI Configuration Register
Mnemonic	CAPP0.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_CAPI_CFG_REG
Address	000000000201081A (SCOM)
Description	This register controls the configuration of the precise and coarse directories and controls other snooper functions whose setup is dependent on the discovered CAPI device.

Bits	SCOM	Field Mnemonic: Description
0	RW	CXA_SNP_ENABLE_TTYPE_DECODE: When set to 1, this bit enables tType decode in the snoop pipeline. When set to 0, tTypes are not decoded and the snoop pipelines are disabled.
1	RO	constant = 0b0
2:3	RW	CXA_SNP_PRECISE_DIR_SIZE: These bits control the size of the ways of the precise directory. Directory size can be further reduced by not allocating entries to a particular way.
4	RW	CXA_SNP_COARSE_DIR_ENABLE: The coarse directory must be enabled to participate in the memory coherence protocol. If the coarse directory is disabled, the effect is as if the coarse directory always misses on a search access and the results of reads and writes to coarse directory entries are unpredictable.
5	RW	CXA_SNP_COARSE_DIR_SECTORS: Coarse directory sector configuration varies under control of this bit allowing the capacity of memory covered by the directory to be either 8 MB or 256 MB.
6	RW	CXA_SNP_MCD_CHICKEN_SWITCH: This switch is to be used only if the MCD cannot be configured to cover the address space specified by the BHR address range (Remote Address Base Address/Mask Register).
7:11	RW	CXA_SNP_BHR_DIR_STATE: This is the directory state value used to indicate that the remote address BAR has been hit (BHR BAR hit remote).
12:13	RW	CXA_SNP_LPC_MODE:
14:31	RO	constant = 0b0000000000000000000
32:37	RW	CXA_SNP_CT_COMPARE_VECTOR: Used to compare the CT field of COP request commands, bits 30:35 of address for match.
38:39	RW	CXA_SNP_PHB_FILTER_CNTL:
40:63	RW	CXA_SNP_EPOCH_TEST_VECTOR: Used to determine epoch timeouts when there are multiple hits on the directory.

Register Name	Snoop Control Register
Mnemonic	CAPP0.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_CNTL_REG
Address	000000000201081B (SCOM)
Description	This register contains CAPI-device-independent snooper controls and parameters.

Bits	SCOM	Field Mnemonic: Description
0	RW	CXA_SNP_READ_EPSILON_MODE: Controls which read epsilon tier* is loaded into the read epsilon counter for read commands of various scopes.
1:2	RO	constant = 0b00
3:11	RW	CXA_SNP_READ_EPSILON_TIER0: Read epsilon mode controls whether this value loads the read epsilon counter tier 0.
12:14	RO	constant = 0b000
15:23	RW	CXA_SNP_READ_EPSILON_TIER1: Read epsilon mode controls whether this value loads the read epsilon counter tier 1.
24	RO	constant = 0b0

Bits	SCOM	Field Mnemonic: Description
25:35	RW	CXA_SNP_READ_EPSILON_TIER2: Read epsilon mode controls whether this value loads the read epsilon counter tier 2.
36:44	RO	constant = 0b000000000
45:47	RW	CXA_SNP_ADDRESS_PIPELINE_MASTERWAIT_COUNT: Maximum number of cycles an APC master can wait before swapping the arbitration priority between APC and the snooper.
48:51	RW	CXA_SNP_DATA_HANG_POLL_SCALE: Number of dhang_polls it takes to increment the DHANG counter in snoop. Actual count is scale + 1. Value of 0000 = decimal 1 counts.
52:63	RO	constant = 0b000000000000

Register Name	Transport Control Register
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.XPT_CONTROL
Address	000000000201081C (SCOM)
Description	This register contains configuration and threshold values.

Bits	SCOM	Field Mnemonic: Description
0:9	RW	SEND_PACKET_TIMER_VALUE: The send packet timer, which is used to determine when the XPT has waited long enough for a next message to pack, is loaded from this field. The timer is used in conjunction with the CI Store Buffer Threshold field and expires when the number of cycles specified by that field has passed. When the CI Store Buffer Threshold is set to '11'x, the timer starts when a message is loaded into an empty buffer. When the CI Store Buffer Threshold timer is not set to '11'x, the timer is started when a new message is loaded into a buffer and the number of CI store buffers in use is greater than the value specified by the CI Store Buffer Threshold. When a message packet is sent, the timer is reset and is not running and the buffer is marked empty. A send packet timer value of x'000' specifies 1024 cycles.
10:13	RW	CI_STORE_BUFFER_THRESHOLD: The number of PHB0 CI Store buffers in use must exceed the CI Store Buffer Threshold before the Send Message Timer affects when XPT sends message packets (see Send Packet Timer Value). The values of this field apply as follows: 000 – 101 - Message packet is delayed until either the packet is full or the timer has expired when the number of CI store buffers in use exceeds this value. When the number of buffers in use does not exceed this value, the message packet is not delayed and can be sent when there is a break in the message send requests from the APC, snooper, or TLBI units. 11x - Message packet is delayed until either the packet is full or the timer has expired. To disable this function, set the threshold to a value of `101'. With this setting, the timer is active only when the number of in-use buffers is 6, which is all of them, stopping additional packets to be sent until the CI store buffers clear out.
14:17	RW	MAX_LPC_DATA_PBH0_CI_STORE_BUFFERS: This field is the maximum number of PHB port 0 CI Store Buffers that can be used for LPC data packets. Six CI Store Buffers are available and a minimum of two are reserved for message data packets. 00: Four buffers can be used. 01: One buffer can be used. 10: Two buffers can be used. 11: Three buffers can be used.
18:21	RW	TLBI_DATA_POLL_PULSE_DIV: Number of data polls received before signaling TLBI hang-detection timer has expired.
22:25	RW	SN_WRT_DBUF_MAX_CREDIT: Defines the maximum number of snooper write-data cache lines that can be sent to PSL without return of credit (LPC mode). This configuration is for the number of credits available per snooper data queue in the PSL. There is one snooper data queue per snooper in CAPP. For each snooper data queue, there is a counter tracking the number of credits available. For each full or partial cache line sent, a counter is incremented for the data queue specified by the snooper sending the data. When the counter reaches the value in this field, no more cache lines can be sent and are allowed to backup into the snoopers and eventually backup onto the processor bus (no snoopers to dispatch). A value of 0 in this field means 16 credits per snooper data queue.

Bits	SCOM	Field Mnemonic: Description
26:27	RW	RESERVED: Reserved.
28:36	RW	SN_MSG_MAX_CREDIT: Defines the maximum number of messages (SN_snoop, SN_write, tlbi_set, ASE, APC credit consumer) that can be sent to PSL without return of credit. For each message sent requiring a credit, a counter is incremented. When the counter reaches the value in this field, no more messages can be sent that require credits. A value of 0 in this field means 512 credits. Initialized to 32.
37	RW	BENIGN_PTR_DATA: Used to indicate the format of the line sent during rTagPool flush sequence when the rfs_class = '10' 0 = Sends a line of all zeros 1 = Sends a line of all ones
38	RW	TLBIE_STALL_EN: Enables CAPP stalling the PSL if CAPP is overflowing with TLBIES.
39:41	RW	TLBIE_STALL_THRESHOLD: The number of TLBIES pending required before the CAPP starts the stall count. Minimum is 1; maximum is 7.
42:45	RW	TLBIE_STALL_CMPLT_CNT: The number of TLBIES to be completed before CAPP stops stalling the PSL. Minimum that should be set is 1; maximum is 8.
46:53	RW	TLBIE_STALL_DELAY_CNT: The number of cycles CAPP waits while over the threshold before stalling the PSL. This count is in increments of 128 cycles, up to 32 K. A value of zero is invalid.
54:57	RO	constant = 0b0000
58:61	RW	XPT_CI_BUFF_MIN: Determines the lowest value CI store buffer used in the PHB.
62	RW	CI_BUFF_AVAIL: The number of CI store buffers available in the PHB, 0 = 6 buffers 1 = 14 buffers
63	WO	LOAD_CI_BUFF: Initial setup of the lowest CI Store Buffer Used counter and PHB RTAG generation.

Register Name	Canned pResp Map Register 0
Mnemonic	CAPP0.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_CAN_PRESP_REG0
Address	000000000201081D (SCOM)
Description	This register controls the canned pResp issued to the processor bus by the snooper in the event an rCmd hits the directory but the snoop uOP table access fails for any reason.

Bits	SCOM	Field Mnemonic: Description
0:31	RW	CXA_SNP_0_CANNED_PRESP_0: For composite directory states 0 – 31. If the corresponding bit = 1 and the snoop uOP table lookup for this rCmd failed regardless of cause, a pResp of lpc_ack is issued.
32:63	RW	CXA_SNP_0_CANNED_PRESP_1: For composite directory states 0 - 31 plus 32. If the corresponding bit = 1 and the snoop uOP table lookup for this rCmd failed regardless of cause, a pResp of rty_lpc is issued.

Register Name	Canned pResp Map Register 1
Mnemonic	CAPP0.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_CAN_PRESP_REG1
Address	000000000201081E (SCOM)
Description	This register controls the canned pResp issued to the processor bus by the snooper in the event an rCmd hits the directory, but the snoop uOP table access fails for any reason.

Bits	SCOM	Field Mnemonic: Description
0:31	RW	CXA_SNP_1_CANNED_PRESP_0: For composite directory states 0 - 31. If the corresponding bit = 1 and the snoop uOP table lookup for this rCmd fails regardless of cause, a pResp of lpc_ack is issued.

Bits	SCOM	Field Mnemonic: Description
32:63	RW	CXA_SNP_1_CANNED_PRESP_1: For composite directory states 0 - 31 plus 32. If the corresponding bit = 1 and the snoop uOP table lookup for this rCmd fails regardless of cause, a pResp of rty_lpc is issued.

Register Name	Canned pResp Map Register 2
Mnemonic	CAPP0.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_CAN_PRESP_REG2
Address	000000000201081F (SCOM)
Description	This register controls the canned pResp issued to the processor bus by the snooper in the event an rCmd hits the directory, but the snoop uOP table access fails for any reason.

Bits	SCOM	Field Mnemonic: Description
0:31	RW	CXA_SNP_2_CANNED_PRESP_0: For composite directory states 0 – 31. If the corresponding bit = 1 and the snoop uOP table look-up for this rCmd fails regardless of cause, a pResp of lpc_ack is issued.
32:63	RW	CXA_SNP_2_CANNED_PRESP_1: For composite directory states 0 - 31 plus 32. If the corresponding bit = 1 and the snoop uOP table look-up for this rCmd fails regardless of cause, a pResp of rty_lpc is issued.

Register Name	Flush cp_ig State Map Register
Mnemonic	CAPP0.CXA_TOP.CXA_APC0.FLUSHCPIG
Address	0000000002010820 (SCOM)
Description	This register has one bit per state decode. A 1 requires a flush with cp_ig during directory flush.

Bits	SCOM	Field Mnemonic: Description
0:31	RW	FLUSH_CP_IG_STATE_MAP: DIR Flush cp_ig state map. One bit per state decode.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	APC Master LCO Target Register
Mnemonic	CAPP0.CXA_TOP.CXA_APC0.APCLCO
Address	0000000002010821 (SCOM)
Description	This register controls LCO target selection.

Bits	SCOM	Field Mnemonic: Description
0:11	RW	APCLCO_TARGET_VALID: List of valid LCO targets.
12	RW	APCLCO_TARGET_ID0: Used for bit 0 of LCO target_id.
13:15	RW	APCLCO_TARGET_MIN: Minimum number of eligible LCO targets. Must be > = the sum of valid targets.
16:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	XPT PMU Events Select Register
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.XPT_PMU_EVENTS_SEL
Address	0000000002010822 (SCOM)
Description	This register selects which of the 64 events are on each bit of the PMU output bus.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	XPT_PMON_GROUP_SELECT: Selects which one of 64 XPT PMU events sources bit 0 of the 8-bit XPT PMU output bus.
4:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	APC FSM Read Machine Mask Register
Mnemonic	CAPP0.CXA_TOP.CXA_APC0.APCRDFSMMASK
Address	0000000002010823 (SCOM)
Description	This register controls RD FSM. It can then be used in CAPP. Must match values used in the PHB configuration register (TBD), CAPP Snoop PHB tTag Filter Mask Register, and PSL machine allocation register (TBD).

Bits	SCOM	Field Mnemonic: Description
0:47	RW	APC_RDFSM_MASK: List of RD FSMs used by APC.
48:63	RO	constant = 0b0000000000000000

Register Name	PMU Counter B Configuration Register
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.PMU_CNTRB_CFG
Address	0000000002010824 (SCOM)
Description	This register controls the configuration of the PMU counters.

Bits	SCOM	Field Mnemonic: Description
0	RW	PMUB_COUNTER0_ENABLE: When set to 1, this bit enables PMU Counter0.
1	RW	PMUB_COUNTER1_ENABLE: When set to 1, this bit enables PMU Counter1.
2	RW	PMUB_COUNTER2_ENABLE: When set to 1, this bit enables PMU Counter2.
3	RW	PMUB_COUNTER3_ENABLE: When set to 1, this bit enables PMU Counter3.
4:6	RW	PMUB_PRESCALER_SELECT: Determines which, if any, prescaler counter to apply to all 16-bit PMU counters.
7	RW	PMUB_COUNTER_FREEZE_MODE: Indicates a counter should freeze on overflow. 0 = Free running 1 = Freeze on overflow
8	RW	PMUB_COUNTER_RESET_MODE: Indicates how a counter should reset. 0 = Free running 1 = Reset on SCOM read
9:12	RW	PMUB_COUNTER0_EVENT_SELECT: Indication of which of the four event pairs (eight total events) to count in counter0.
13	RW	PMUB_COUNTER0_POSEDGE_SELECT: When set to 1, the PMU only counts the event rising edge. When set to 0, the PMU counts every cycle the event is asserted (high).
14:15	RW	PMUB_COUNTER0_BIT_PAIR_SELECT: Indicates how the event pairs should be combined to increment this PMU counter.
16:19	RW	PMUB_COUNTER1_EVENT_SELECT: Indication of which of the four event pairs (eight total events) to count in counter1.
20	RW	PMUB_COUNTER1_POSEDGE_SELECT: When set to 1, the PMU only counts the event rising edge. When set to 0, the PMU counts every cycle the event is asserted (high).

Bits	SCOM	Field Mnemonic: Description
21:22	RW	PMUB_COUNTER1_BIT_PAIR_SELECT: Indicates how the event pairs should be combined to increment this PMU counter.
23:26	RW	PMUB_COUNTER2_EVENT_SELECT: Indication of which of the four event pairs (eight total events) to count in counter2.
27	RW	PMUB_COUNTER2_POSEDGE_SELECT: When set to 1, the PMU only counts the event rising edge. When set to 0, the PMU will count every cycle the event is asserted (high).
28:29	RW	PMUB_COUNTER2_BIT_PAIR_SELECT: Indicates how the event pairs should be combined to increment this PMU counter.
30:33	RW	PMUB_COUNTER3_EVENT_SELECT: Indication of which of the four event pairs (eight total events) to count in counter3.
34	RW	PMUB_COUNTER3_POSEDGE_SELECT: When set to 1, the PMU only counts the event rising edge. When set to 0, the PMU counts every cycle the event is asserted (high).
35:36	RW	PMUB_COUNTER3_BIT_PAIR_SELECT: Indicates how the event pairs should be combined to increment this PMU counter.
37:38	RW	PMUB_PMU_PORT_SELECT: Chooses final PMU events to feed to the counters.
39:63	RO	constant = 0b00000000000000000000000000

Register Name	**PMU Counters B Register**
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_PMULET.PMU_CNTRB_REG
Address	0000000002010825 (SCOM)
Description	The PMU Counters B Register.

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	PMU_COUNTERB_0: PMU counter0.
16:31	ROX	PMU_COUNTERB_1: PMU counter1.
32:47	ROX	PMU_COUNTERB_2: PMU counter2.
48:63	ROX	PMU_COUNTERB_3: PMU counter3.

Register Name	**TOD SYNC000 Register**
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_TOD.TOD_SYNC000
Address	0000000002010826 (SCOM)
Description	tod sync000

Bits	SCOM	Field Mnemonic: Description
0:54	RWX	TIMEBASE: Timebase register.
55:59	ROX	TIMEBASE: Timebase register.
60:63	WO	CHIP_TOD_STATUS: Chip time of day status.

Register Name	CAPP Timebase Control Register
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_TOD.TFMR
Address	0000000002010827 (SCOM)
Description	This register is the time facility management register.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	Reserved field.
8:9	RW	Reserved field.
10	RW	Reserved field.
11:13	RW	Reserved field.
14	RW	Reserved field.
15	RW	Reserved field.
16	RWX	Reserved field.
17	RWX	Reserved field.
18	RWX	Reserved field.
19	RWX	Reserved field.
20	RWX	Reserved field.
21	RWX	Reserved field.
22	RWX	Reserved field.
23	RWX	Reserved field.
24	WOX	Reserved field.
25:26	RO	constant = 0b00
27	WOX_CLEAR	Reserved field.
28:31	ROX	Reserved field.
32:35	ROX	Reserved field.
36:39	RO	constant = 0b0000
40	ROX	Reserved field.
41	ROX	Reserved field.
42	ROX	Reserved field.
43	WOX_CLEAR	Reserved field.
44	WOX_CLEAR	Reserved field.
45	WOX_CLEAR	Reserved field.
46	WOX_CLEAR	Reserved field.
47:50	ROX	CHIP_TOD_STATUS: Chip time of day status.
51	ROX	Reserved field.
52:59	RO	constant = 0b00000000
60	WOX_CLEAR	Reserved field.

Register Name	Snoop Array Address Register
Mnemonic	CAPP0.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_ARRAY_ADDR_REG
Address	0000000002010828 (SCOM)
Description	This register is used to SCOM read and write of the SNP Arrays.

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1:15	RWX	CXA_SNP_ARRAY_ADDRESS: SNP SCOM array address.
16:63	RO	constant = 0b0000000000000000000000000000000000000000000000000

Register Name	Snoop Array Read Register
Mnemonic	CAPP0.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_ARRAY_READ_REG
Address	0000000002010829 (SCOM)
Description	This register holds data read via SCOM of the SNP arrays.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	CXA_SNP_ARRAY_READ_DATA: SNP SCOM array read data.

Register Name	APC Master Array Address Register
Mnemonic	CAPP0.CXA_TOP.CXA_APC1.APC_ARRY_ADDR
Address	000000000201082A (SCOM)
Description	This register holds the address for Array Access 2 instances of CRESP arrays to get four read ports. Writes to either instance writes to both. Read-only reads from one instance. encd_array_select: CRESP read copy0/write copies 0 - 1 for decodes = 0x0 through 0x5. uop read/write for decode = 0x6. CRESP read copy1/write copies 0 - 1 for decodes = 0x8 through 0xC. array_address: address for selected array. This register increments on each access initiated by R/W to the APC Array Data Register.

Bits	SCOM	Field Mnemonic: Description
0:1	RO	constant = 0b00
2	RWX	Reserved field.
3:11	RWX	APCARY_ADDRESS: Address for APC Master Array access.
12:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	APC Master Array Read Data Register
Mnemonic	CAPP0.CXA_TOP.CXA_APC1.APC_ARRY_RDDATA
Address	000000000201082B (SCOM)
Description	This register holds read data for array access read from array reads data. The address used is in the APC Array Data Register and is auto-incremented when the W/R operation completes.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	APCARY_RDDATA: Read data for APC master array access.

Register Name	CAPP Epoch and Recovery Timers Control Register
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_EPT.CAPP_EPOCH_AND_RECOVERY_TMR_CONTROL
Address	000000000201082C (SCOM)
Description	This register contains the enables and period controls for the epoch and recovery timers.

Bits	SCOM	Field Mnemonic: Description
0	RW	EPOCH_TIMER_ENABLE: When set to 1, the epoch timer is enabled. When set to 0, it is disabled.
1	RW	RECOVERY_TIMER_ENABLE: When set to 1, the recovery Timer is enabled. When set to 0, it is disabled.
2:31	RO	constant = 0b00000000000000000000000000000000
32:47	RW	EPOCH_TIMER_PERIOD_MASK: The mask determines the timer period. The mask and timer incrementers are bitwise ORed and AND reduced. When the output of the AND is 1, the timer has expired. By filling in the mask with ones from the most-significant bit to the least-significant bit, the timer pulse is divided by powers of 2. If zeros are placed between ones in the mask, the timer divider is be non-uniform.
48:63	RW	RECOVERY_TIMER_PERIOD_MASK: The mask determines the timer period. The mask and timer incrementers are bitwise ORed and AND reduced. When the output of the AND is 1, the timer has expired. By filling in the mask with ones from the most-significant bit to the least-significant bit, the timer pulse is divided by powers of 2. If zeros are placed between ones in the mask, the timer divider will be non-uniform.

Register Name	APC Master PSL TTYPE Remap Register 0
Mnemonic	CAPP0.CXA_TOP.CXA_APC0.PSLTTMAP0
Address	000000000201082D (SCOM)
Description	This register is used for POWER8 backward compatibility mode to map a PSL TTYPE/TSIZE to a new PSL ttype. When enabled, a match on ttype(0:4) and non-masked tsize(0:6) in a POWER8 PSL command causes the PSL ttype to be replaced with psl_ttype_replace(0:5). Only 1 of the 4 PSLTTMAP registers causes a replacement.

Bits	SCOM	Field Mnemonic: Description
0	RW	PSLTTMAP0_VALID: Enable.
1:5	RW	PSLTTMAP0_TTYPE_MATCH: psl_ttype(0:4) value to compare for in the PSL command.
6:12	RW	PSLTTMAP0_TSIZE_MATCH: psl_tsize(0:6) value to compare for in the PSL command.
13:19	RW	PSLTTMAP0_TSIZE_MASK: psl_tsize(0:6) mask for compare. When set to 1, forces a match for that bit.
20:25	RW	PSLTTMAP0_TTYPE_REPLACE: psl_ttype(0:5) to use for replacement on match.
26:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	APC Master PSL TTYPE Remap Register 1
Mnemonic	CAPP0.CXA_TOP.CXA_APC0.PSLTTMAP1
Address	000000000201082E (SCOM)
Description	This register is used for POWER8 backward compatibility mode to map a PSL TTYPE/TSIZE to a new PSL TTYPE. When enabled, a match on ttype(0:4) and non-masked tsize(0:6) in a POWER8 PSL command causes the PSL TTYPE to be replaced with psl_ttype_replace(0:5). Only one of the four PSLTTMAP registers causes a replacement.

Bits	SCOM	Field Mnemonic: Description
0	RW	PSLTTMAP1_VALID: Enable.

Bits	SCOM	Field Mnemonic: Description
1:5	RW	PSLTTMAP1_TTYPE_MATCH: psl_ttype(0:4) value to compare for in PSL command.
6:12	RW	PSLTTMAP1_TSIZE_MATCH: psl_tsize(0:6) value to compare for in PSL command.
13:19	RW	PSLTTMAP1_TSIZE_MASK: psl_tsize(0:6) mask for compare. When set to 1, forces a match for that bit.
20:25	RW	PSLTTMAP1_TTYPE_REPLACE: psl_ttype(0:5) to use for replacement on match.
26:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	**APC Master PSL TTYPE Remap Register 2**
Mnemonic	CAPP0.CXA_TOP.CXA_APC0.PSLTTMAP2
Address	0000000002010 82F (SCOM)
Description	This register is used for POWER8 backward compatibility mode to map a PSL TTYPE/TSIZE to a new PSL TTYPE. When enabled, a match on ttype(0:4) and non-masked tsize(0:6) in a POWER8 PSL command causes the PSL TTYPE to be replaced with psl_ttype_replace(0:5). Only one of the four PSLTTMAP registers causes a replacement.

Bits	SCOM	Field Mnemonic: Description
0	RW	PSLTTMAP2_VALID: Enable.
1:5	RW	PSLTTMAP2_TTYPE_MATCH: psl_ttype(0:4) value to compare for in PSL command.
6:12	RW	PSLTTMAP2_TSIZE_MATCH: psl_tsize(0:6) value to compare for in PSL command.
13:19	RW	PSLTTMAP2_TSIZE_MASK: psl_tsize(0:6) mask for compare. When set to 1, forces a match for that bit.
20:25	RW	PSLTTMAP2_TTYPE_REPLACE: psl_ttype(0:5) to use for replacement on match.
26:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	**APC Master PSL TTYPE Remap Register 3**
Mnemonic	CAPP0.CXA_TOP.CXA_APC0.PSLTTMAP3
Address	0000000002010830 (SCOM)
Description	This register is used for POWER8 backward compatibility mode to map a PSL TTYPE/TSIZE to a new PSL TTYPE. When enabled, a match on ttype(0:4) and non-masked tsize(0:6) in a POWER8 PSL command causes the PSL TTYPE to be replaced with psl_ttype_replace(0:5). Only one of the four PSLTTMAP registers causes a replacement.

Bits	SCOM	Field Mnemonic: Description
0	RW	PSLTTMAP3_VALID: Enable.
1:5	RW	PSLTTMAP3_TTYPE_MATCH: psl_ttype(0:4) value to compare for in PSL command.
6:12	RW	PSLTTMAP3_TSIZE_MATCH: psl_tsize(0:6) value to compare for in PSL command.
13:19	RW	PSLTTMAP3_TSIZE_MASK: psl_tsize(0:6) mask for compare. When set to 1, forces a match for that bit.
20:25	RW	PSLTTMAP3_TTYPE_REPLACE: psl_ttype(0:5) to use for replacement on match.
26:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	PHB TTAG Filter Register
Mnemonic	CAPP0.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_PHB_TTAG_FILTER_REG
Address	0000000002010831 (SCOM)
Description	This register is used to define which of the 48 APC FSMs Read Machines are available for use and, thus, which tTags to care about.

Bits	SCOM	Field Mnemonic: Description
0:47	RW	CXA_SNP_PHB_TTAG_FILTER: For APC FSMs 0 - 47, set each bit to 1 for each queue that is available to CAPP for use.
48:63	RO	constant = 0b0000000000000000

Register Name	Remote Address Base Address/Mask Register
Mnemonic	CAPP0.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_REMOTE_ADDR_BAR_BARM_REG
Address	0000000002010840 (SCOM)
Description	This register contains the base address/mask to determine whether a processor bus address hits the remote address space in the off-chip FPGA. When hit, it causes the assertion of the BHR DIR value in the address pipeline. The remote BAR represents the addresses owned by the PSL, which is a memory controller LPC.

Bits	SCOM	Field Mnemonic: Description
0	RW	CXA_SNP_BAR_EN: BAR enable.
1:18	RW	CXA_SNP_BAR_SIZE: BAR size.
19:45	RW	CXA_SNP_BAR_STARTING_ADDRESS: BAR starting address.
46:49	RO	constant = 0b0000
50:54	RW	CXA_SNP_BAR_SYSTEM: 5-bit system address.
55:63	RO	constant = 0b000000000

Register Name	Snoop Array Write Register
Mnemonic	CAPP0.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_ARRAY_WRITE_REG
Address	0000000002010841 (SCOM)
Description	This register is the SCOM write data for SNP arrays.

Bits	SCOM	Field Mnemonic: Description
0:63	WO	CXA_SNP_ARRAY_WRITE_DATA: SNP SCOM array write data.

Register Name	APC Master Array Write Data Register
Mnemonic	CAPP0.CXA_TOP.CXA_APC1.APC_ARRY_WRDATA
Address	0000000002010842 (SCOM)
Description	This register holds write data for array access write-to-array writes to this register. The address used is in the APC Array Address Register. The address is auto-incremented when W/R operation completes.

Bits	SCOM	Field Mnemonic: Description
0:63	WOX	APCARY_WRDATA: W/R data for APC master array access.

Register Name	Flush uOP Configuration Register
Mnemonic	CAPP0.CXA_TOP.CXA_APC1.DFSUOP1
Address	0000000002010843 (SCOM)
Description	This register is the uOP1 word used during directory flush.

Bits	SCOM	Field Mnemonic: Description
0:55	RW	DFSUOP1_WORD:
56:63	RO	constant = 0b00000000

Register Name	Remote Address Base Address/Mask Register
Mnemonic	CAPP0.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_REMOTE_ADDR_BAR_BARM_REG1
Address	0000000002010844 (SCOM)
Description	This register contains the base address/mask to determine whether a processor bus address hits the remote address space in the off-chip FPGA. When hit, it causes the assertion of the BHR DIR value in the address pipeline. The remote BAR represents the addresses owned by the PSL, which is a memory controller LPC.

Bits	SCOM	Field Mnemonic: Description
0	RW	CXA_SNP_BAR1_EN: BAR enable.
1:18	RW	CXA_SNP_BAR1_SIZE: BAR Size.
19:45	RW	CXA_SNP_BAR1_STARTING_ADDRESS: BAR starting address.
46:49	RO	constant = 0b0000
50:54	RW	CXA_SNP_BAR1_SYSTEM: 5-bit system address.
55:63	RO	constant = 0b000000000

Register Name	Link Delay Timer Register
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.LINK_DELAY_TIMER
Address	0000000002010845 (SCOM)
Description	This register contains the 29-bit counter and status bits.

Bits	SCOM	Field Mnemonic: Description
0:28	ROX	LINK_DELAY_TIMER_VALUE: 29-bit LFSR counter value.
29:31	RO	constant = 0b000
32	ROX	LINK_TIMER_VALID: When set to 0, timer value is not valid. When set to 1, timer value is valid.
33	ROX	LINK_RESP_PKT_RCV: When set to 0, response packet has not been received. When set to 1, response packet received.
34	ROX	LINK_SECURE_LINK_ERR: When set to 0, no error detected, When set to 1, error detected.
35:63	RO	constant = 0b00000000000000000000000000000

Register Name	AS Endpoint Tuple Register 0
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_AS.ASE_TUPLE0
Address	0000000002010846 (SCOM)
Description	AS endpoint tuple register 0 .

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b0000
4:15	RWX	ASE_TUPLE0_LPID: LPID (0:11).
06:19:00 AM	RO	constant = 0b0000
20:39	RWX	ASE_TUPLE0_PID: PID (0:15).
40:43	RO	constant = 0b0000
44:59	RWX	ASE_TUPLE0_TID: TID (0:15).
60:62	RO	constant = 0b000
63	RWX	ASE_TUPLE0_VALID: Valid.

Register Name	AS Endpoint Tuple Register 1
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_AS.ASE_TUPLE1
Address	0000000002010847 (SCOM)
Description	AS Endpoint tuple register 1 .

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b0000
4:15	RWX	ASE_TUPLE1_LPID: LPID (0:11).
16:19	RO	constant = 0b0000
20:39	RWX	ASE_TUPLE1_PID: PID (0:15).
40:43	RO	constant = 0b0000
44:59	RWX	ASE_TUPLE1_TID: TID (0:15).
60:62	RO	constant = 0b000
63	RWX	ASE_TUPLE1_VALID: Valid.

Register Name	AS Endpoint Tuple Register 2
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_AS.ASE_TUPLE2
Address	0000000002010848 (SCOM)
Description	AS endpoint tuple register 2.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b0000
4:15	RWX	ASE_TUPLE2_LPID: LPID (0:11).
16:19	RO	constant = 0b0000
20:39	RWX	ASE_TUPLE2_PID: PID (0:15).

Bits	SCOM	Field Mnemonic: Description
40:43	RO	constant = 0b0000
44:59	RWX	ASE_TUPLE2_TID: TID (0:15).
60:62	RO	constant = 0b000
63	RWX	ASE_TUPLE2_VALID: Valid.

Register Name	AS Endpoint Tuple Reg 3
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_AS.ASE_TUPLE3
Address	0000000002010849 (SCOM)
Description	AS endpoint tuple register 3.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b0000
4:15	RWX	ASE_TUPLE3_LPID: LPID (0:11).
16:19	RO	constant = 0b0000
20:39	RWX	ASE_TUPLE3_PID: PID (0:15).
40:43	RO	constant = 0b0000
44:59	RWX	ASE_TUPLE3_TID: TID (0:15).
60:62	RO	constant = 0b000
63	RWX	ASE_TUPLE3_VALID: Valid.

Register Name	Remote MMIO Base Address/Mask Register
Mnemonic	CAPP0.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_REMOTE_MMIO_BAR_BARM_REG
Address	000000000201084A (SCOM)
Description	This register contains the base address/mask to determine whether a processor bus address hits the remote MMIO space in the off-chip FPGA. When hit, it causes the assertion of the BHR DIR value in the address pipeline. The remote BAR represents the addresses owned by the PSL, which is a memory controller LPC.

Bits	SCOM	Field Mnemonic: Description
0	RW	CXA_SNP_MMIO_BAR_EN: BAR enable.
1:12	RO	constant = 0b000000000000
13:21	RW	CXA_SNP_MMIO_BAR_MS_GROUP_CHIP: Must match reflected address bits 13:21 for memory select, group, and chip ID.
22:52	RW	CXA_SNP_MMIO_BAR_STARTING_ADDRESS: BAR starting address.
53:63	RO	constant = 0b00000000000

Register Name	Remote MMIO Base Address/Mask Register 1
Mnemonic	CAPP0.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_REMOTE_MMIO_BAR_BARM_REG1
Address	000000000201084B (SCOM)
Description	This register contains the base address/mask to determine whether a processor bus address hits the remote MMIO space in the off-chip FPGA. When hit, it causes the assertion of the BHR DIR value in the address pipeline. The remote BAR represents the addresses owned by the PSL, which is a memory controller LPC.

Bits	SCOM	Field Mnemonic: Description
0	RW	CXA_SNP_MMIO_BAR1_EN: BAR enable.
1:12	RO	constant = 0b000000000000
13:21	RW	CXA_SNP_MMIO_BAR1_MS_GROUP_CHIP: Must match reflected address bits 13:21 for memory select, group and chip ID.
22:52	RW	CXA_SNP_MMIO_BAR1_STARTING_ADDRESS: BAR starting address.
53:63	RO	constant = 0b00000000000

Register Name	Link Delay Response Data Buffer Register 0
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.LINK_DELAY_RESP_DATA0
Address	0000000002010850 (SCOM)
Description	This register contains 8 bytes of a 128-byte line buffer used to hold the link-delay response packet.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved field.

Register Name	Link Delay Response Data Buffer Register 1
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.LINK_DELAY_RESP_DATA1
Address	0000000002010851 (SCOM)
Description	This register contains 8 bytes of a 128-byte line buffer used to hold the link-delay response packet.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved field.

Register Name	Link Delay Response Data Buffer Register 2
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.LINK_DELAY_RESP_DATA2
Address	0000000002010852 (SCOM)
Description	This register contains 8 bytes of a 128-byte line buffer used to hold the link-delay response packet.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved field.

Register Name	Link Delay Response Data Buffer Register 3
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.LINK_DELAY_RESP_DATA3
Address	0000000002010853 (SCOM)
Description	This register contains 8 bytes of a 128-byte line buffer used to hold the link-delay response packet.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved field.

Register Name	Link Delay Response Data Buffer Register 4
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.LINK_DELAY_RESP_DATA4
Address	0000000002010854 (SCOM)
Description	This register contains 8 bytes of a 128-byte line buffer used to hold the link-delay response packet.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved field.

Register Name	Link Delay Response Data Buffer Register 5
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.LINK_DELAY_RESP_DATA5
Address	0000000002010855 (SCOM)
Description	This register contains 8 bytes of a 128-byte line buffer used to hold the link-delay response packet.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved field.

Register Name	Link Delay Response Data Buffer Register 6
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.LINK_DELAY_RESP_DATA6
Address	0000000002010856 (SCOM)
Description	This register contains 8 bytes of a 128-byte line buffer used to hold the link-delay response packet.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved field.

Register Name	Link Delay Response Data Buffer Register 7
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.LINK_DELAY_RESP_DATA7
Address	0000000002010857 (SCOM)
Description	This register contains 8 bytes of a 128-byte line buffer used to hold the link-delay response packet.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved field.

Register Name	Link Delay Response Data Buffer Register 8
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.LINK_DELAY_RESP_DATA8
Address	0000000002010858 (SCOM)
Description	This register contains 8 bytes of a 128-byte line buffer used to hold the link-delay response packet.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved field.

Register Name	Link Delay Response Data Buffer Register 9
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.LINK_DELAY_RESP_DATA9
Address	0000000002010859 (SCOM)
Description	This register contains 8 bytes of a 128-byte line buffer used to hold the link-delay response packet.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved field.

Register Name	Link Delay Response Data Buffer Register 10
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.LINK_DELAY_RESP_DATA10
Address	000000000201085A (SCOM)
Description	This register contains 8 bytes of a 128-byte line buffer used to hold the link-delay response packet.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved field.

Register Name	Link Delay Response Data Buffer Register 11
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.LINK_DELAY_RESP_DATA11
Address	000000000201085B (SCOM)
Description	This register contains 8 bytes of a 128-byte line buffer used to hold the link-delay response packet.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved field.

Register Name	Link Delay Response Data Buffer Register 12
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.LINK_DELAY_RESP_DATA12
Address	000000000201085C (SCOM)
Description	This register contains 8 bytes of a 128-byte line buffer used to hold the link-delay response packet.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved field.

Register Name	Link Delay Response Data Buffer Register 13
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.LINK_DELAY_RESP_DATA13
Address	000000000201085D (SCOM)
Description	This register contains 8 bytes of a 128-byte line buffer used to hold the link-delay response packet.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved field.

Register Name	Link Delay Response Data Buffer Register 14
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.LINK_DELAY_RESP_DATA14
Address	000000000201085E (SCOM)
Description	This register contains 8 bytes of a 128-byte line buffer used to hold the link-delay response packet.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved field.

Register Name	Link Delay Response Data Buffer Register 15
Mnemonic	CAPP0.CXA_TOP.CXA_XPT.XPT_SCOMFIR.LINK_DELAY_RESP_DATA15
Address	000000000201085F (SCOM)
Description	This register contains 8 bytes of a 128-byte line buffer used to hold the link-delay response packet.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved field.

Register Name	CDM Status Register
Mnemonic	NX.DMA.SU_STATUS
Address	0000000002011040 (SCOM)
Description	CDM Status Register

Bits	SCOM	Field Mnemonic: Description
0:53	RO	constant = 0b00000000000000000000000000000000000000000000000000000
54	RWX	HMI_ACTIVE: NX has driven an HMI Interrupt (local checkstop) to the system.
55	ROX	PBI_IDLE: No requests being processed or queued from PBI.
56	ROX	DMA_CH0_IDLE: No current or pending requests are being processed by channel 0.
57	ROX	DMA_CH1_IDLE: No current or pending requests are being processed by channel 1.
58	ROX	DMA_CH2_IDLE: No current or pending requests are being processed by channel 2.
59	ROX	DMA_CH3_IDLE: No current or pending requests are being processed by channel 3.
60	ROX	DMA_CH4_IDLE: No current or pending requests are being processed by channel 4.
61:63	RO	constant = 0b000

Register Name	DMA Engine Enable Register
Mnemonic	NX.DMA.SU_ENGINE_ENABLE
Address	0000000002011041 (SCOM)
Description	DMA Engine Enable Register

Bits	SCOM	Field Mnemonic: Description
0	ROX	ALLOW_CRYPTO: Enables CRYPTO eFUSE value.
1:56	RO	constant = 0b00000000000000000000000000000000000000000000000000000000
57	RWX	CH3_SYM_ENABLE: Enables channel 3 SYM engine. Cannot be set when allow_crypto = 0.
58	RWX	CH2_SYM_ENABLE: Enables channel 2 SYM engine. Cannot be set when allow_crypto = 0.
59:60	RO	constant = 0b00
61	RW	CH4_GZIP_ENABLE: Enables channel 4 GZIP engine.
62	RW	CH1_EFT_ENABLE: Enables channel 1 842 engine.
63	RW	CH0_EFT_ENABLE: Enables channel 0 842 engine.

Register Name	DMA Configuration Register
Mnemonic	NX.DMA.SU_INBOUND_WRITE_CONTROL
Address	0000000002011042 (SCOM)
Description	DMA Configuration Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:11	RW	GZIPCOMP_MAX_INRD: Maximum number of outstanding inbound PBI read requests per channel for GZIP compression.
12:15	RW	GZIPDECOMP_MAX_INRD: Maximum number of outstanding inbound PBI read requests per channel for GZIP decompression.
16	RW	GZIP_COMP_PREFETCH_ENABLE: Enable for compression read prefetch hint for GZIP.
17	RW	GZIP_DECOMP_PREFETCH_ENABLE: Enable for decompression read prefetch hint for GZIP.
18:22	RO	constant = 0b00000
23	RW	EFT_COMP_PREFETCH_ENABLE: Enable for compression read prefetch hint for 842.
24	RW	EFT_DECOMP_PREFETCH_ENABLE: Enable for decompression read prefetch hint for 842.
25:28	RW	SYM_MAX_INRD: Maximum number of outstanding inbound PBI read requests per symmetric channel.
29:32	RO	constant = 0b0000
33:36	RW	EFTCOMP_MAX_INRD: Maximum number of outstanding inbound PBI read requests per channel for 842 compression/bypass.
37:40	RW	EFTDECOMP_MAX_INRD: Maximum number of outstanding inbound PBI read requests per channel for 842 decompression.
41:47	RO	constant = 0b0000000
48	RW	SYM_CPB_CHECK_DISABLE: Hardware checking of AES/SHA CPB parameters.
49:55	RO	constant = 0b0000000
56	RW	EFT_SPBC_WRITE_ENABLE: Enable SPBC write for 842.
57:63	RO	constant = 0b0000000

Register Name	Channel 0 Current CSB Address Register
Mnemonic	NX.DMA.SU_CH0_ABORT_CSB
Address	0000000002011043 (SCOM)
Description	Channel 0 Current CSB Address Register

Bits	SCOM	Field Mnemonic: Description
0:59	ROX	Reserved.
60:62	RO	constant = 0b000
63	ROX	Reserved.

Register Name	Channel 1 Current CSB Address Register
Mnemonic	NX.DMA.SU_CH1_ABORT_CSB
Address	0000000002011045 (SCOM)
Description	Channel 1 Current CSB Address Register

Bits	SCOM	Field Mnemonic: Description
0:59	ROX	Reserved.
60:62	RO	constant = 0b000
63	ROX	Reserved.

Register Name	Channel 2 Current CSB Address Register
Mnemonic	NX.DMA.SU_CH2_ABORT_CSB
Address	0000000002011047 (SCOM)
Description	Channel 2 Current CSB Address Register

Bits	SCOM	Field Mnemonic: Description
0:59	ROX	Reserved.
60:62	RO	constant = 0b000
63	ROX	Reserved.

Register Name	Channel 3 Current CSB Address Register
Mnemonic	NX.DMA.SU_CH3_ABORT_CSB
Address	0000000002011049 (SCOM)
Description	Channel 3 Current CSB Address Register

Bits	SCOM	Field Mnemonic: Description
0:59	ROX	Reserved.
60:62	RO	constant = 0b000
63	ROX	Reserved.

Register Name	Channel 4 Current CSB Address Register
Mnemonic	NX.DMA.SU_CH4_ABORT_CSB
Address	000000000201104B (SCOM)
Description	Channel 4 Current CSB Address Register

Bits	SCOM	Field Mnemonic: Description
0:59	ROX	Reserved.
60:62	RO	constant = 0b000
63	ROX	Reserved.

Register Name	CRB Kill Request Register
Mnemonic	NX.DMA.SU_CRB_KILL_REQ
Address	0000000002011053 (SCOM)
Description	CRB Kill Request Register

Bits	SCOM	Field Mnemonic: Description
0	RWX	CRB_KILL_ENABLE: Enable CRB kill action in NX.
1	RWX	CRB_KILL_DONE: CRB kill finished.
2	RWX	CRB_KILL_SUMMARY: Set by hardware if at least one CRB has been killed in the unit. Logically the or_reduce of bits 4:15 of this register.
3	RO	constant = 0b0
4:7	RWX	CRB_KILL_DISPATCH_SLOT_KILLED_CNT: Count of the CRBs matching the send window context ID match value that have been removed from the dispatch slots in UMAC.
8:11	RWX	CRB_KILL_PREFETCH_CHANNEL_CNT: Count of the CRBs matching the send window context ID match value that have been removed from the DMA Controller prefetch channel.
12:15	RWX	CRB_KILL_ACTIVE_CHANNEL_CNT: Count of the CRBs matching the send window context ID match value that have been removed from the DMA Controller current channel and algorithm engine.
16:31	RWX	CRB_KILL_SWC_VALUE: Send window context ID match value for CRB Kill.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	Performance Monitor Control 0 Register
Mnemonic	NX.DMA.SU_PERFMON_CONTROL_0
Address	0000000002011054 (SCOM)
Description	Performance Monitor Control 0 Register

Bits	SCOM	Field Mnemonic: Description
0:11	RW	PERFMON_LPID: LPID for PERFMON configuration matching.
12:23	RW	PERFMON_LPID_MASK: LPID match-enable mask for PERFMON configuration matching.
24:43	RW	PERFMON_PID: PID for PERFMON configuration matching.
44:63	RW	PERFMON_PID_MASK: PID match enable mask for PERFMON configuration matching.

Register Name	Performance Monitor Control 1 Register
Mnemonic	NX.DMA.SU_PERFMON_CONTROL_1
Address	0000000002011055 (SCOM)
Description	Performance Monitor Control 1 Register

Bits	SCOM	Field Mnemonic: Description
0:26	RO	constant = 0b00000000000000000000000000
27:28	RW	PERFMON_GZIP_FC_SELECT: FC select for GZIP performance monitoring events. 0x = All 10 = Compress 11 = Decompress
29:30	RW	PERFMON_842_FC_SELECT: FC select for 842 performance monitoring events. 0x = All 10 = Compress 11 = Decompress
31:34	RW	PERFMON_DMA_MUX_SELECT: Performance monitor DMA multiplexer selects.
35:37	RW	PERFMON_EFT_MUX_SELECT: Performance monitor EFT multiplexer selects.
38:40	RW	PERFMON_GZIP_MUX_SELECT: Performance monitor GZIP multiplexer selects.
41:44	RW	PERFMON_ERAT_MUX_SELECT: Performance monitor ERAT multiplexer selects.
45:47	RW	PERFMON_UMAC_MUX_SELECT: Performance monitor UMAC multiplexer selects.
48:51	RW	PERFMON_PBI_MUX_SELECT: Performance monitor PBI multiplexer selects.
52	RW	PERFMON_SHA_LATENCY_CFG: Marking configuration for sha. 0 : HW 1 : HW with match
53	RO	constant = 0b0
54	RW	PERFMON_MD5_LATENCY_CFG: Marking configuration for MD5. 0 : HW 1 : HW with match
55	RO	constant = 0b0
56	RW	PERFMON_AES_LATENCY_CFG: Marking configuration for AES. 0 : HW 1 : HW with match
57	RO	constant = 0b0
58	RW	PERFMON_AESSHA_LATENCY_CFG: Marking configuration for AESSHA. 0 : HW 1 : HW with match
59	RO	constant = 0b0
60	RW	PERFMON_GZIP_LATENCY_CFG: Marking configuration for GZIP. 0 : HW 1 : HW with match
61	RO	constant = 0b0
62	RW	PERFMON_842_LATENCY_CFG: Marking configuration for 842. 0 : HW 1 : HW with match
63	RO	constant = 0b0

Register Name	DMA CERR Report Register 0
Mnemonic	NX.DMA.SU_DMA_ERROR_REPORT_0
Address	0000000002011057 (SCOM)
Description	DMA CERR Report Register 0

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	DMA_ERROR_REPORT_0:

Register Name	DMA CERR Report Register 1
Mnemonic	NX.DMA.SU_DMA_ERROR_REPORT_1
Address	0000000002011058 (SCOM)
Description	DMA CERR Report Register 1

Bits	SCOM	Field Mnemonic: Description
0:16	ROX	DMA_ERROR_REPORT_1:
17:63	RO	constant = 0b00000000000000000000000000000000000000000000000

Register Name	EFT Maximum Byte Count Register
Mnemonic	NX.DMA.EFT_MAX_BYTE_CNT
Address	0000000002011059 (SCOM)
Description	EFT Maximum Byte Count Register

Bits	SCOM	Field Mnemonic: Description
0:4	RW	EFT_MAX_BYTE_CNT_LIMIT: Maximum byte count for 842 engine operations.
5:12	RW	EFT_MAX_SRC_DDE_CNT: EFT maximum source DDE count.
13:20	RW	EFT_MAX_TARGET_DDE_CNT: EFT maximum target DDE count.
21:63	RO	constant = 0b00000000000000000000000000000000000000000000000

Register Name	SYM Maximum Byte Count Register
Mnemonic	NX.DMA.SYM_MAX_BYTE_CNT
Address	000000002201105A (SCOM)
Description	SYM Maximum Byte Count Register

Bits	SCOM	Field Mnemonic: Description
0:4	RW	SYM_MAX_BYTE_CNT_LIMIT: Maximum byte count for SYM engine operations.
5:12	RW	SYM_MAX_SRC_DDE_CNT: SYM maximum source DDE count.
13:20	RW	SYM_MAX_TARGET_DDE_CNT: SYM maximum target DDE count.
21:63	RO	constant = 0b00000000000000000000000000000000000000000000000

Register Name	GZIP Maximum Byte Count Register
Mnemonic	NX.DMA.GZIP_MAX_BYTE_CNT
Address	000000000201105B (SCOM)
Description	GZIP Maximum Byte Count Register

Bits	SCOM	Field Mnemonic: Description
0:4	RW	GZIP_MAX_BYTE_CNT_LOW: Maximum byte count low threshold for GZIP engine operations.
5:9	RW	GZIP_MAX_BYTE_CNT_HIGH: Maximum byte count high threshold for GZIP engine operations.
10	RW	GZIP_MAX_BYTE_CNT_THRESHOLD: Maximum byte count high is applied when this bit is set. Otherwise, Maximum byte count low is applied.
11:18	RW	GZIP_MAX_SRC_DDE_CNT: GZIP maximum source DDE count.
19:26	RW	GZIP_MAX_TARGET_DDE_CNT: GZIP maximum target DDE count.
27:63	RO	constant = 0b00000000000000000000000000000000000000000

Register Name	Watchdog and Hang Timers Control Register
Mnemonic	NX.DMA.WATCHDOG_HANG_TIMERS_CNTL
Address	000000000201105C (SCOM)
Description	Watchdog and Hang Timers Control Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CH0_WATCHDOG_TIMER_ENBL: Channel 0 watchdog timer is enabled.
1:4	RW	CH0_WATCHDOG_REF_DIV: This field allows the watchdog timer reference oscillator to be divided by powers of two.
5	RW	CH1_WATCHDOG_TIMER_ENBL: Channel 1 watchdog timer is enabled.
6:9	RW	CH1_WATCHDOG_REF_DIV: This field allows the watchdog timer reference oscillator to be divided by powers of two.
10	RW	CH2_WATCHDOG_TIMER_ENBL: Channel 2 watchdog timer is enabled.
11:14	RW	CH2_WATCHDOG_REF_DIV: This field allows the watchdog timer reference oscillator to be divided by powers of two.
15	RW	CH3_WATCHDOG_TIMER_ENBL: Channel 3 Watchdog Timer is enabled.
16:19	RW	CH3_WATCHDOG_REF_DIV: This field allows the watchdog timer reference oscillator to be divided by powers of two.
20	RW	CH4_WATCHDOG_TIMER_ENBL: Channel 4 watchdog timer is enabled.
21:24	RW	CH4_WATCHDOG_REF_DIV: This field allows the watchdog timer reference oscillator to be divided by powers of two.
25	RW	DMA_HANG_TIMER_ENBL: DMA hang timer is enabled.
26:29	RW	DMA_HANG_TIMER_REF_DIV: This field allows the DMA hang timer reference oscillator to be divided by powers of two.
30:63	RO	constant = 0b00000000000000000000000000000000000000

Register Name	DMA VAS MMIO BAR Register
Mnemonic	NX.DMA.DMA_VAS_MMIO_BAR
Address	000000000201105E (SCOM)
Description	DMA VAS MMIO BAR Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:38	RW	VAS_MMIO_BAR: Base address of VAS MMIO region.
39:63	RO	constant = 0b00000000000000000000000000

Register Name	PBI CQ FIR Register
Mnemonic	NX.PBI.CQ_WRAP.NXCQ_SCOM.NX_CQ_FIR_REG
Address	0000000002011080 (SCOM) 0000000002011081 (SCOM1) 0000000002011082 (SCOM2)
Description	PBI CQ FIR Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	PBI_PE_FIR: PBI internal parity error.
1	RWX	WOX_AND	WOX_OR	PBUS_ECC_CE_FIR: Processor bus CE error.
2	RWX	WOX_AND	WOX_OR	PBUS_ECC_UE_FIR: Processor bus UE error.
3	RWX	WOX_AND	WOX_OR	PBUS_ECC_SUE_FIR: Processor bus SUE error.
4	RWX	WOX_AND	WOX_OR	INBD_ARRAY_ECC_CE_FIR: Inbound array CE error.
5	RWX	WOX_AND	WOX_OR	INBD_ARRAY_ECC_UE_FIR: Inbound array UE error.
6	RWX	WOX_AND	WOX_OR	PASTE_REJECT_FIR: Paste request rejected.
7	RWX	WOX_AND	WOX_OR	PBUS_CMD_HANG_FIR: Processor bus command hang error.
8	RWX	WOX_AND	WOX_OR	PBUS_READ_ARE_FIR: Processor bus read address error.
9	RWX	WOX_AND	WOX_OR	PBUS_WRITE_ARE_FIR: Processor bus write address error.
10	RWX	WOX_AND	WOX_OR	PBUS_MISC_HW_FIR: Processor bus miscellaneous error.
11	RWX	WOX_AND	WOX_OR	MMIO_BAR_PE_FIR: MMIO BAR parity error.
12	RWX	WOX_AND	WOX_OR	UMAC_WC_INT_ADDR_UE_FIR: UMAC detected SUE on WC Interrupt.
13	RWX	WOX_AND	WOX_OR	PBUS_LOAD_LINK_ERR_FIR: ACK_DEAD CRESP received by read command.
14	RWX	WOX_AND	WOX_OR	PBUS_STORE_LINK_ERR_FIR: ACK_DEAD CRESP received by write command.
15	RWX	WOX_AND	WOX_OR	PBUS_LINK_ABORT_FIR: Link check aborted while waiting on data.
16	RWX	WOX_AND	WOX_OR	PBI_INTERNAL_HANG_FIR: Hang poll time expired on internal transfer.
17	RWX	WOX_AND	WOX_OR	ERAT_ARRAY_PE_FIR: Parity error on ERAT arrays.
18	RWX	WOX_AND	WOX_OR	ERAT_ARRAY_CE_FIR: Correctable error on ERAT arrays.
19	RWX	WOX_AND	WOX_OR	ERAT_ARRAY_UE_FIR: Uncorrectable error on ERAT arrays.
20	RWX	WOX_AND	WOX_OR	ERAT_ARRAY_SUE_FIR: Special uncorrectable error on ERAT arrays.
21	RWX	WOX_AND	WOX_OR	ERAT_CICO_HANG_FIR: Hang on checkin/checkout request to NMMU.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
22	RWX	WOX_AND	WOX_OR	ERAT_CNTRL_ERR_FIR: ERAT control logic error.
23	RWX	WOX_AND	WOX_OR	PB_XLAT_DATA_UE_FIR: Uncorrectable error on the processor bus data for xlate.
24	RWX	WOX_AND	WOX_OR	PB_XLAT_DATA_SUE_FIR: Special uncorrectable error on the processor bus data for XLATE.
25	RWX	WOX_AND	WOX_OR	UMAC_LD_LINK_ERR_FIR: ACK_DEAD CRESP received by UMAC read command.
26	RWX	WOX_AND	WOX_OR	UMAC_LINK_ABORT_FIR: Link check aborted while waiting on UMAC data.
27	RWX	WOX_AND	WOX_OR	UMAC_CRB_UE_FIR: Uncorrectable error on CRB QW0/4.
28	RWX	WOX_AND	WOX_OR	UMAC_CRB_SUE_FIR: Special uncorrectable error on CRB QW0/4.
29	RWX	WOX_AND	WOX_OR	ERAT_LOCAL_CSTOP_FIR: UMAC has detected a control logic error.
30	RWX	WOX_AND	WOX_OR	Reserved field.
31	RWX	WOX_AND	WOX_OR	Reserved field.
32	RWX	WOX_AND	WOX_OR	RNG_FIRST_FAIL_FIR: A first noise source in the RNG has failed.
33	RWX	WOX_AND	WOX_OR	RNG_SECOND_FAIL_FIR: A second noise source in the RNG has failed.
34	RWX	WOX_AND	WOX_OR	RNG_CNTRL_LOGIC_ERR_FIR: RNG has detected a control logic error.
35	RWX	WOX_AND	WOX_OR	NMMU_LOCAL_XSTOP_FIR: NMMU has signaled local checkstop.
36	RWX	WOX_AND	WOX_OR	VAS_LOCAL_XSTOP_FIR: VAS has signaled local checkstop.
37	RWX	WOX_AND	WOX_OR	PBCQ_CNTRL_LOGIC_ERR_FIR: PBCQ has detected a control logic error.
38	RWX	WOX_AND	WOX_OR	FAILED_LINK_ON_INTERRUPT_FIR: PBCQ has detected a failed link on an interrupt.
39:41	RWX	WOX_AND	WOX_OR	Reserved field.
42	RWX	WOX_AND	WOX_OR	FIR_SCOM_PE_FIR: FIR/SCOM satellite parity error.
43	RWX	WOX_AND	WOX_OR	FIR_SCOM_PE_DUP_FIR: FIR/SCOM satellite parity error duplicate.
44:63	RO	RO	RO	constant = 0b0000000000000000000

Register Name	PBI CQ FIR Mask Register
Mnemonic	NX.PBI.CQ_WRAP.NXCQ_SCOM.NX_CQ_FIR_MASK_REG
Address	0000000002011083 (SCOM) 0000000002011084 (SCOM1) 0000000002011085 (SCOM2)
Description	PBI CQ FIR Mask Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:43	RW	WO_AND	WO_OR	NX_CQ_FIR_MASK:
44:63	RO	RO	RO	constant = 0b0000000000000000000

Register Name	PBI CQ FIR Action0 Register
Mnemonic	NX.PBI.CQ_WRAP.NXCQ_SCOM.NX_CQ_FIR_ACTION0_REG
Address	0000000002011086 (SCOM)
Description	This register is an action select for the corresponding bit in FIR. (Action0, Action1) = Action select (0, 0) = Checkstop (0, 1) = Recoverable (1, 0) = Unused (1, 1) = Local checkstop

Bits	SCOM	Field Mnemonic: Description

9	RW	UMAC_WR_DISABLE_GROUP: For UMAC write machine requests: 0 = Master can request G scope 1 = Master shall not request G scope
10	RW	UMAC_WR_DISABLE_VG_NOT_SYS: For UMAC write machine requests: 0 = Master can request Vg scope 1 = Master shall not request Vg scope, but can use Vg (SYS)
11	RW	UMAC_WR_DISABLE_NN_RN: For UMAC write machine requests: 0 = Master can request Nn or Rn scope 1 = Master shall not request Nn or Rn scope
12	RW	UMAC_RD_DISABLE_LN: For UMAC read machine requests: 0 = Master can request Ln scope 1 = Master shall not request Ln scope
13	RW	UMAC_RD_DISABLE_GROUP: For UMAC read machine requests: 0 = Master can request G scope 1 = Master shall not request G scope
14	RW	UMAC_RD_DISABLE_VG_NOT_SYS: For UMAC read machine requests: 0 = Master can request Vg scope 1 = Master shall not request Vg scope, but can use Vg (SYS)
15	RW	UMAC_RD_DISABLE_NN_RN: For UMAC read machine requests: 0 = Master can request Nn or Rn scope 1 = Master shall not request Nn or Rn scope
16:17	RW	NX_FREEZE_MODES: Data arbitration priority percentage: 00 = Behavior unchanged 01 = Pass data/ECC as is 10 = Freeze data pattern with good ECC 11 = Illegal
18:19	RW	RESERVED: Reserved.
20	RW	DMA_WR_NOT_INJECT: For DMA writes. When set to 1, a write machine shall not issue cl_dma_inj, but rather cl_dma_w. When set to 0, a write machine can issue cl_dma_inj.
21	RW	DMA_PARTIAL_WRT_NOT_INJECT: For DMA partial writes. When set to 1, a write machine shall not issue dma_pr_inj, but rather dma_pr_w. When set to 0, a write machine can issue dma_pr_inj.
22	RW	RD_GO_M_QOS: Controls the setting of the quality of service (q) bit in the secondary encode of the rd_go_m command. This command is only issued as the read (R) of the WRP protocol. If this bit = 1, the q bit = 1. This means high quality of service, that is, the memory controller must treat this as a high-priority request.
23	RW	ADDR_BAR_MODE: Specifies the address mapping mode in use for the system. 0 = Small system address map. Reduces the number of group ID bits to 2 and eliminates the chip ID bits. All chips have an ID of 0. Nn scope is not available in this mode. 1 = Large system address map. Uses 4 bits for the group ID and 3 bits for the chip ID.
24	RW	SKIP_G: Scope mode control set by firmware when the topology is chip = group. **Note**: This CS does not disable the use of group scope. It modifies the progression of scope when the command starts at nodal scope. 0 = The progression from nodal to group scope is followed when the combined response indicates rty_inc or sfStat (as applicable to the command) is set. 1 = When the scope of the command is nodal and the command is in the Read, RWITM, or is an atomic RMW and fetch command (found in the Ack_BK group), and the combined response is rty_inc or the sfStat is set in the data, the command scope progression skips group and goes to Vg scope.

Bits	SCOM	Field Mnemonic: Description
25:26	RW	DATA_ARB_LFSR_CONFIG: Data arbitration priority percentage: 00 = Choose XLATE 50% of the time 01 = Choose XLATE 75% of the time 10 = Choose XLATE 88% of the time 11 = Choose XLATE 100% of the time
27	RW	NXCQ_HANG_SM_ON_ARE: The control to enable or disable hanging the master FSM on a combined response of addr_error. When set to 1, a master getting an addr_error combined response hangs. This is used as a debug aid and must be disabled (set to 0).
28	RW	NXCQ_HANG_SM_ON_LINK_FAIL: The control to enable or disable hanging the master FSM on a combined response of ack_*dead. When set to 1, a master getting an ack_*dead combined response hangs. This is used as a debug aid and must be disabled (set to 0).
29	RW	CFG_PUMP_MODE: NX uses this control only for unit random backoff 0 = chip_is_node. Ln scope is constrained to the master's chip group. Scope is constrained to all chips specified by the topology as part of the group (coherent logical X link connections). 1 = chip_is_group. Both Ln and G scope are constrained to the master's chip. In this mode, it is recommended that skip_g be set for best performance.
30	RW	DISABLE_FLOW_SCOPE: Set to 1 to disable the use of flow based scope in the write queues.
31	RW	DISABLE_PMU_SNOOPING: Set to 1 to disable snooping of Global PMU command.
32	RW	ENDABLE_PMU_CNT_RESET: Set to 1 to enable resetting PMU counters by snooped PMISC global PMU command.
33	RW	DISABLE_WRP: Set to 1 to disable the WRP protocol.
34:39	RW	Unused: Unused.
40:47	RW	DMA_RD_VG_RESET_TIMER_MASK: Mask for timer to reset read Vg scope predictor: FF = 64 K cycles FE = 32 K cycles FC = 16 K cycles F8 = 8 K cycles 80 = 512 cycles.
48:55	RW	DMA_WR_VG_RESET_TIMER_MASK: Mask for timer to reset write Vg scope predictor: FF = 64 K cycles FE = 32 K cycles FC = 16 K cycles F8 = 8 K cycles 80 = 512 cycles
56:63	RO	constant = 0b00000000

Register Name	Processor Bus Error Report Register
Mnemonic	NX.PBI.CQ_WRAP.NXCQ_SCOM.NX_PB_ERR_RPT_1
Address	00000000020110A1 (SCOM)
Description	processor bus Error Report Register

Register Name	NX PMU0 Control Register
Mnemonic	NX.PBI.CQ_WRAP.NXCQ_SCOM.NX_PMU0_CONTROL_REG
Address	00000000020110A6 (SCOM)
Description	NX PMU0 Control Register

Bits	SCOM	Field Mnemonic: Description
0	RW	NX_PMU0_ENABLE: When set to 1, this bit enables PMUlet0.
1	RW	NX_PMU0_FREEZE: When set to 1, this bit freezes the counters.
2	RW	NX_PMU0_RESET: When set to 1, this bit generates a reset pulse.
3	RW	NX_PMU0_DIS_GLOB_SCOM: When set to 1, this bit disables the effect of the Global PMISC command on the PMULet.
4:5	RW	NX_PMU0_PRESCALAR_SEL0: Determines the prescalar counter to apply to counter 0.
6:7	RW	NX_PMU0_PRESCALAR_SEL1: Determines the prescalar counter to apply to counter 1.
8:9	RW	NX_PMU0_PRESCALAR_SEL2: Determines the prescalar counter to apply to counter 2.
10:11	RW	NX_PMU0_PRESCALAR_SEL3: Determines the prescalar counter to apply to counter 3.

Bits	SCOM	Field Mnemonic: Description
12:13	RW	NX_PMU0_CNT0_PAIR_OP: Indicates how the event pairs should be combined to increment counter 0.
14:15	RW	NX_PMU0_CNT1_PAIR_OP: Indicates how the event pairs should be combined to increment counter 1.
16:17	RW	NX_PMU0_CNT2_PAIR_OP: Indicates how the event pairs should be combined to increment counter 2.
18:19	RW	NX_PMU0_CNT3_PAIR_OP: Indicates how the event pairs should be combined to increment counter 3.
20:22	RW	NX_PMU0_CNT0_MUX_SEL: Select 8-bit bus to route to the PMUlet counter 0.
23:25	RW	NX_PMU0_CNT1_MUX_SEL: Select 8-bit bus to route to the PMUlet counter 1.
26:28	RW	NX_PMU0_CNT2_MUX_SEL: Select 8-bit bus to route to the PMUlet counter 2.
29:31	RW	NX_PMU0_CNT3_MUX_SEL: Select 8-bit bus to route to the PMUlet counter 3.
32	RW	NX_PMU0_FREEZE_ON_OVERFLOW: When set to 1, this bit freezes the counters when any of the counters overflows.
33:35	RW	NX_PMU0_CASCADE: PMU counter cascade SEL.
36:63	RO	constant = 0b00000000000000000000000000000

Register Name	**NX PMU0 Counter Register**
Mnemonic	NX.PBI.CQ_WRAP.NXCQ_SCOM.NX_PMU0_COUNTER_REG
Address	00000000020110A7 (SCOM)
Description	NX PMU0 Counter Register

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	NX_PMU0_COUNTER_0: NX PMU0 counter 0.
16:31	ROX	NX_PMU0_COUNTER_1: NX PMU0 counter 1.
32:47	ROX	NX_PMU0_COUNTER_2: NX PMU0 counter 2.
48:63	ROX	NX_PMU0_COUNTER_3: NX PMU0 counter 3.

Register Name	**NX Miscellaneous Control Register**
Mnemonic	NX.PBI.CQ_WRAP.NXCQ_SCOM.NX_MISC_CONTROL_REG
Address	00000000020110A8 (SCOM)
Description	NX Miscellaneous Control Register

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b0000
4:7	RW	HANG_POLL_SCALE: Determines how many hang polls must be detected to indicate a hang poll to the logic.
8:11	RW	HANG_DATA_SCALE: Determines how many data polls must be detected to indicate a data poll to the logic.
12:15	RW	HANG_SHM_SCALE: Determines how many data polls must be detected to indicate a shim poll to the logic. A shim poll is created by the CQ logic to detect hangs of SMs while waiting on exchanges with the shim logic.
16:19	RW	ERAT_DATA_POLL_SCALE: Determines how many data polls must be detected to indicate a data poll to the ERAT logic.
20:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	NX PMU1 Control Register
Mnemonic	NX.PBI.CQ_WRAP.NXCQ_SCOM.NX_PMU1_CONTROL_REG
Address	00000000020110A9 (SCOM)
Description	NX PMU1 Control Register

Bits	SCOM	Field Mnemonic: Description
0	RW	NX_PMU1_ENABLE: When set to 1, this bit enables PMUlet1.
1	RW	NX_PMU1_FREEZE: When set to 1, this bit freezes the counters.
2	RW	NX_PMU1_RESET: When set to 1, this bit generates a reset pulse.
3	RW	NX_PMU1_DIS_GLOB_SCOM: When set to 1, this bit disables the effect of the Global PMISC command on the PMULet.
4:5	RW	NX_PMU1_PRESCALAR_SEL0: Determines the prescalar counter to apply to counter 0.
6:7	RW	NX_PMU1_PRESCALAR_SEL1: Determines the prescalar counter to apply to counter 1.
8:9	RW	NX_PMU1_PRESCALAR_SEL2: Determines the prescalar counter to apply to counter 2.
10:11	RW	NX_PMU1_PRESCALAR_SEL3: Determines the prescalar counter to apply to counter 3.
12:13	RW	NX_PMU1_CNT0_PAIR_OP: Indicates how the event pairs must be combined to increment counter 0.
14:15	RW	NX_PMU1_CNT1_PAIR_OP: Indicates how the event pairs must be combined to increment counter 1.
16:17	RW	NX_PMU1_CNT2_PAIR_OP: Indicates how the event pairs must be combined to increment counter 2.

15:23	RWX	SYM_LO_PRIORITY_RCV_FIFO_QUEUED: SYM low-priority receive FIFO queued count.
24:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	UMAC GZIP Low-Priority Receive FIFO Control Register
Mnemonic	NX.PBI.PBI_UMAC.GZIP_LO_PRIOR_RCV_FIFO_CNTL
Address	00000000020110CE (SCOM)
Description	This register defines various access and arbitration controls with the associated receive FIFO.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b0000
4:11	RWX	GZIP_LO_PRIORITY_RCV_FIFO_READ_OFFSET: GZIP low-priority receive FIFO read offset.
12:14	RO	constant = 0b000
15:23	RWX	GZIP_LO_PRIORITY_RCV_FIFO_QUEUED: GZIP low-priority receive FIFO queued count.
24:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	UMAC EFT Normal-Priority Receive FIFO ASB Match Register
Mnemonic	NX.PBI.PBI_UMAC.EFT_LO_PRIOR_RCV_FIFO_ASB
Address	00000000020110CF (SCOM)
Description	This register contains the LPID, PID, and TID values that must match the LPID, PID, and TID values presented by a snooped asb_notify if the asb_notify is to be acknowledged.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b0000
4:15	RW	EFT_LO_PRIORITY_RCV_FIFO_ASB_LPID: LPID.
16:19	RO	constant = 0b0000
20:39	RW	EFT_LO_PRIORITY_RCV_FIFO_ASB_PID: PID.
40:43	RO	constant = 0b0000
44:59	RW	EFT_LO_PRIORITY_RCV_FIFO_ASB_TID: TID.
60:62	RO	constant = 0b000
63	RW	EFT_LO_PRIORITY_RCV_FIFO_ASB_ENABLE: Enable.

Register Name	UMAC SYM Normal-Priority Receive FIFO ASB Match Register
Mnemonic	NX.PBI.PBI_UMAC.SYM_LO_PRIOR_RCV_FIFO_ASB
Address	00000000020110D0 (SCOM)
Description	This register contains the LPID, PID, and TID values that must match the LPID, PID, and TID values presented by a snooped asb_notify if the asb_notify is to be acknowledged.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b0000
4:15	RW	SYM_LO_PRIORITY_RCV_FIFO_ASB_LPID: LPID.
16:19	RO	constant = 0b0000
20:39	RW	SYM_LO_PRIORITY_RCV_FIFO_ASB_PID: PID.
40:43	RO	constant = 0b0000
44:59	RW	SYM_LO_PRIORITY_RCV_FIFO_ASB_TID: TID.
60:62	RO	constant = 0b000
63	RW	SYM_LO_PRIORITY_RCV_FIFO_ASB_ENABLE: Enable.

Register Name	UMAC GZIP Normal-Priority Receive FIFO ASB Match Register
Mnemonic	NX.PBI.PBI_UMAC.GZIP_LO_PRIOR_RCV_FIFO_ASB
Address	00000000020110D1 (SCOM)
Description	This register contains the LPID, PID, and TID values that must match the LPID, PID, and TID values presented by a snooped asb_notify if the asb_notify is to be acknowledged.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b0000
4:15	RW	GZIP_LO_PRIORITY_RCV_FIFO_ASB_LPID: LPID.
16:19	RO	constant = 0b0000

Bits	SCOM	Field Mnemonic: Description
20:39	RW	GZIP_LO_PRIORITY_RCV_FIFO_ASB_PID: PID.
40:43	RO	constant = 0b0000
44:59	RW	GZIP_LO_PRIORITY_RCV_FIFO_ASB_TID: TID.
60:62	RO	constant = 0b000
63	RW	GZIP_LO_PRIORITY_RCV_FIFO_ASB_ENABLE: Enable.

Register Name	UMAC Send Window Context BAR Register
Mnemonic	NX.PBI.PBI_UMAC.SEND_WC_BASE_ADDR
Address	00000000020110D2 (SCOM)
Description	This register specifies the base address of the send window context (send WC) region of memory from where send WC information is fetched for a given CRB.

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:40	RW	SEND_WC_BAR: Send WC BAR.
41:63	RO	constant = 0b00000000000000000000000

Register Name	UMAC Error Report 0 Register
Mnemonic	NX.PBI.PBI_UMAC.SU_UMAC_ERROR_RPT
Address	00000000020110D3 (SCOM)
Description	UMAC Error Report 0 Register

Bits	SCOM	Field Mnemonic: Description
0:55	ROX	UMAC_ERROR_RPT:
56:63	RO	constant = 0b00000000

Register Name	UMAC VAS MMIO BAR Register
Mnemonic	NX.PBI.PBI_UMAC.VAS_MMIO_BASE_ADDR
Address	00000000020110D4 (SCOM)
Description	This register specifies the base address of the MMIO region of the on-chip VAS. NX uses this BAR to return send and receive window credits.

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:38	RW	VAS_MMIO_BAR: VAS MMIO BAR.
39:63	RO	constant = 0b00000000000000000000000000

Register Name	UMAC Status And Control Register
Mnemonic	NX.PBI.PBI_UMAC.UMAC_STATUS_CONTROL
Address	00000000020110D5 (SCOM)
Description	This register contains status and configuration values.

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1	RWX	CRB_READS_ENBL: Enables CRB reads.
2	RWX	CRB_READS_HALTED: CRB reads halted.
3	ROX	UMAC_IDLE: UMAC is in idle state.
4	RW	QUIESCE_REQUEST: Request to check for quiesce status.
5	RWX	QUIESCE_ACHEIVED: NX in quiesce state during quiesce request.
6	RWX	QUIESCE_FAILED: NX not in quiesce state during quiesce request.
7	ROX	UMAC_QUIESCED: UMAC is quiesced.
8	RW	PASTE_ADDR_ALIGN: When generating the address for a paste to the fault send window, this. bit controls the alignment of the sendWCID(0:15) in the generated address. 0 = Align sendWCID(0:15) with address(36:51) for 4 KB page. 1 = Align sendWCID(0:15) with address(32:47) for 64 KB page.
9:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	ERAT Status and Control Register
Mnemonic	NX.PBI.PBI_SHIM.ERAT_STATUS_CONTROL
Address	00000000020110D6 (SCOM)
Description	This register contains status and configuration values.

Bits	SCOM	Field Mnemonic: Description
0	RW	FORCE_ERAT_BYPASS: ERAT configuration: Forces bypass of ERAT, RA = EA (8:63).
1	RW	ERAT_IDLE:
2	RW	ERAT_VALID_ENTRY:
3	RW	DISABLE_ERAT_HIT_UNDER_BARRIER: Disables ERAT hits when an invalidate barrier is active.
4:5	RO	constant = 0b00
6	RW	DISABLE_PROMOTE: Chicken switch: Disables promote, force checkin.
7	RW	DISABLE_CHECKIN_HANG_TIMER: Disables checkin hang timer.
8	RW	DISABLE_CHECKOUT_HANG_TIMER: Disables checkout hang timer.
9:11	RW	SPECULATIVE_CHECKIN_COUNT: Speculative checkin count.
12:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	ERAT Error Report Register
Mnemonic	NX.PBI.PBI_UMAC.SU_ERAT_ERROR_RPT
Address	00000000020110D7 (SCOM)
Description	ERAT Error Report Register

Bits	SCOM	Field Mnemonic: Description
0:47	ROX	ERAT_ERROR_RPT:
48:63	RO	constant = 0b0000000000000000

Register Name	UMAC Error Report 1 Register
Mnemonic	NX.PBI.PBI_UMAC.SU_UMAC_ERROR_RPT1
Address	00000000020110D8 (SCOM)
Description	UMAC Error Report 1 Register

Bits	SCOM	Field Mnemonic: Description
0:5	ROX	UMAC_ERROR_RPT1:
6:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	RNG Status and Control Register
Mnemonic	NX.PBI.PBI_RNG.NX_RNG_CFG
Address	00000000020110E0 (SCOM)
Description	RNG Status and Control Register

Bits	SCOM	Field Mnemonic: Description
0:9	ROX	FAIL_REG: Self test hard fail status.
10	ROX	RNG0_FAIL: RNG0 fail status.
11	ROX	RNG1_FAIL: RNG1 fail status.
12	RW	INTERRUPT_SENT: Interrupt sent to processor bus.
13:15	RO	constant = 0b000
16	RW	BIST_ENABLE: RNG BIST enable.
17	ROX	BIST_COMPLETE: RNG BIST complete.
18	ROX	RNG0_BIST_FAIL: RNG0 BIST fail status.
19	ROX	RNG1_BIST_FAIL: RNG1 BIST fail status.
20:22	RW	BIST_BIT_FAIL_TH: RNG BIST bit fail threshold.
23	RW	RNG0_INJ_CONTINOUS_ERROR: RNG0 inject continuous error.
24	RW	RNG1_INJ_CONTINOUS_ERROR: RNG1 inject continuous error.
25:29	RO	constant = 0b00000
30:37	RW	ST2_RESET_PERIOD: RNG Self Test Register 2 reset period.
38	RW	RRN_BYPASS_ENABLE: RRN bypass enable.
39	RW	MASK_TOGGLE_ENABLE: Conditioner mask toggle enable.
40	RW	SAMPTEST_ENABLE: Samptest enable.
41	RW	REPTEST_ENABLE: Reptest enable.
42	RW	ADAPTEST_1BIT_ENABLE: Adaptest 1-bit enable.
43	RW	ADAPTEST_ENABLE: Adaptest enable.
44	ROX	COND_STARTUP_TEST_FAIL: Conditioner startup test fail.

Bits	SCOM	Field Mnemonic: Description
45	RO	constant = 0b0
46:61	RW	PACE_RATE: Pace rate.
62	RO	constant = 0b0
63	RW	RNG_ENABLE: RNG enable.

Register Name	RNG Self Test Register 0
Mnemonic	NX.PBI.PBI_RNG.NX_RNG_ST0
Address	00000000020110E1 (SCOM)
Description	RNG Self Test Register 0

Bits	SCOM	Field Mnemonic: Description
0:1	RW	REPTEST_MATCH_TH: Repetition count match count threshold.
2:6	RW	REPTEST_SOFT_FAIL_TH: Repetition count soft fail threshold.
7:8	RW	ADAPTEST_SAMPLE_SIZE: Adaptive proportion sample size.
9:11	RW	ADAPTEST_WINDOW_SIZE: Adaptive proportion window size.
12:23	RW	ADAPTEST_RRN_RNG0_MATCH_TH: Adaptive proportion RRN RNG0 match threshold.
24:35	RW	ADAPTEST_RRN_RNG1_MATCH_TH: Adaptive proportion RRN RNG1 match threshold.
36:47	RW	ADAPTEST_CRN_RNG0_MATCH_TH: Adaptive proportion CRN RNG0 match threshold.
48:59	RW	ADAPTEST_CRN_RNG1_MATCH_TH: Adaptive proportion CRN RNG1 match threshold.
60:63	RO	constant = 0b0000

Register Name	RNG Self Test Register 1
Mnemonic	NX.PBI.PBI_RNG.NX_RNG_ST1
Address	00000000020110E2 (SCOM)
Description	RNG Self Test Register 1

Bits	SCOM	Field Mnemonic: Description
0:6	RW	ADAPTEST_SOFT_FAIL_TH: Adaptive proportion soft fail threshold.
7:22	RW	ADAPTEST_1BIT_MATCH_TH_MIN: Adaptive proportion 1-bit match threshold minimum.
23:38	RW	ADAPTEST_1BIT_MATCH_TH_MAX: Adaptive proportion 1-bit match threshold maximum.
39:63	RO	constant = 0b00000000000000000000000000

Register Name	RNG Self Test Register 2
Mnemonic	NX.PBI.PBI_RNG.NX_RNG_ST2
Address	00000000020110E3 (SCOM)
Description	RNG Self Test Register 2

Bits	SCOM	Field Mnemonic: Description
0:7	RWX_WCLRREG	ADAPTEST_SOFT_FAIL_COUNT_RRN_RNG0: Adaptive proportion RRN RNG0 soft fail count.
8:15	RWX_WCLRREG	ADAPTEST_SOFT_FAIL_COUNT_RRN_RNG1: Adaptive proportion RRN RNG1 soft fail count.
16:23	RWX_WCLRREG	ADAPTEST_SOFT_FAIL_COUNT_CRN_RNG0: Adaptive proportion CRN RNG0 soft fail count.
24:31	RWX_WCLRREG	ADAPTEST_SOFT_FAIL_COUNT_CRN_RNG1: Adaptive proportion CRN RNG1 soft fail count.
32:37	RWX_WCLRREG	REPTEST_SOFT_FAIL_COUNT_RNG0: Repetition Test RNG0 soft fail count.
38:43	RWX_WCLRREG	REPTEST_SOFT_FAIL_COUNT_RNG1: Repetition Test RNG1 soft fail count.
44:63	RO	constant = 0b00000000000000000000

Register Name	RNG RRN Bypass Register
Mnemonic	NX.PBI.PBI_RNG.NX_RNG_BYPASS
Address	00000000020110E4 (SCOM)
Description	RNG RRN Bypass Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	RRN_BYPASS_DATA: RRN Bypass Data.

Register Name	RNG Read Delay Parameters Register
Mnemonic	NX.PBI.PBI_RNG.NX_RNG_RDELAY
Address	00000000020110E5 (SCOM)
Description	RNG Read Delay Parameters Register

Bits	SCOM	Field Mnemonic: Description
0:1	RW	RNG_CQ_RDELAY_FILL_THRESHOLD: Read delay fill threshold.
2:3	RW	RNG_CQ_RDELAY_DRAIN_THRESHOLD: Read delay drain threshold.
4:5	RO	constant = 0b00
6	RW	RNG_CQ_RDELAY_LFSR_RESEED_EN: Read delay LFSR reseed enable.
7:11	RW	RNG_CQ_RDELAY_READ_RTY_RATIO: Read delay Read retry ratio.
12:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	RNG Reset Register
Mnemonic	NX.PBI.PBI_RNG.NX_RNG_RESET
Address	00000000020110E6 (SCOM)
Description	This register resets the RNG.

Bits	SCOM	Field Mnemonic: Description
0	WO_SETPART_3P	RNG_RESET: RNG reset.

Register Name	RNG Failed Interrupt Address Register
Mnemonic	NX.PBI.PBI_UMAC.RNG_FAILED_INT
Address	00000000020110E7 (SCOM)
Description	This register specifies the address used to optionally post an interrupt when both RNG noise sources have failed.

Bits	SCOM	Field Mnemonic: Description
0	RW	RNG_FAILED_INT_ENABLE: RNG failed interrupt enable.
1:7	RO	constant = 0b0000000
8:51	RW	RNG_FAILED_INT_ADDRESS: RNG failed interrupt address.
52:63	RO	constant = 0b000000000000

Register Name	RNG Self Test Register 3
Mnemonic	NX.PBI.PBI_RNG.NX_RNG_ST3
Address	00000000020110E8 (SCOM)
Description	RNG Self Test Register 3

Bits	SCOM	Field Mnemonic: Description
0	RW	SAMPTEST_RRN_ENABLE: Sample rate RRN enable.
1:3	RW	SAMPTEST_WINDOW_SIZE: Sample rate window size.
4:19	RW	SAMPTEST_MATCH_TH_MIN: Sample rate match threshold minimum.
20:35	RW	SAMPTEST_MATCH_TH_MAX: Sample rate rate maximum.
36:63	RO	constant = 0b00000000000000000000000000000000

Register Name	DMA and Engine Fault Isolation Register
Mnemonic	NX.DBG.NX_DMA_ENG_FIR
Address	0000000002011100 (SCOM) 0000000002011101 (SCOM1) 0000000002011102 (SCOM2)
Description	DMA and Engine Fault Isolation Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	RESERVED_00_FIR: Reserved FIR bit 0.
1	RWX	WOX_AND	WOX_OR	ICS_INVALID_STATE_FIR: ICS invalid state error FIR bit.
2	RWX	WOX_AND	WOX_OR	RESERVED_02_FIR: Reserved FIR bit 2.
3	RWX	WOX_AND	WOX_OR	RESERVED_03_FIR: Reserved FIR bit 3.
4	RWX	WOX_AND	WOX_OR	CH0_842_ECC_CE_FIR: Channel 0 842 array corrected ECC error FIR bit.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
5	RWX	WOX_AND	WOX_OR	CH0_842_ECC_UE_FIR: Channel 0 842 array uncorrectable ECC error FIR bit.
6	RWX	WOX_AND	WOX_OR	CH1_842_ECC_CE_FIR: Channel 1 842 array corrected ECC error FIR bit.
7	RWX	WOX_AND	WOX_OR	CH1_842_ECC_UE_FIR: Channel 1 842 array uncorrectable ECC error FIR bit.
8	RWX	WOX_AND	WOX_OR	NONZERO_CSB_CC_FIR: DMA non-zero CSB CC detected FIR bit. Programming error.
9	RWX	WOX_AND	WOX_OR	DMA_ECC_CE_FIR: DMA array correctable ECC error FIR bit.
10	RWX	WOX_AND	WOX_OR	DMA_OUTWR_INRD_ECC_CE_FIR: DMA outbound write/inbound read correctable ECC error FIR bit.
11	RWX	WOX_AND	WOX_OR	CH5_AMF_ECC_CE_FIR: Channel 5 AMF array corrected ECC error FIR bit.
12	RWX	WOX_AND	WOX_OR	CH6_AMF_ECC_CE_FIR: Channel 6 AMF array corrected ECC error FIR bit.
13	RWX	WOX_AND	WOX_OR	CH7_AMF_ECC_CE_FIR: Channel 7 AMF array corrected ECC error FIR bit.
14	RWX	WOX_AND	WOX_OR	OTHER_SCOM_SAT_FIR: Error from other SCOM satellites FIR bit.
15	RWX	WOX_AND	WOX_OR	DMA_INVALID_STATE_RECOV_FIR: DMA invalid state error FIR bit. Unrecoverable despite name.
16	RWX	WOX_AND	WOX_OR	DMA_INVALID_STATE_UNRECOV_FIR: DMA invalid state error FIR bit.
17	RWX	WOX_AND	WOX_OR	DMA_ECC_UE_FIR: DMA array uncorrectable ECC error FIR bit.
18	RWX	WOX_AND	WOX_OR	DMA_OUTWR_INRD_ECC_UE_FIR: DMA outbound write/inbound read uncorrectable ECC error FIR bit.
19	RWX	WOX_AND	WOX_OR	DMA_INRD_DONE_ERR_FIR: DMA inbound read error FIR bit.
20	RWX	WOX_AND	WOX_OR	CH0_INVALID_STATE_FIR: Channel 0 invalid state error FIR bit.
21	RWX	WOX_AND	WOX_OR	CH1_INVALID_STATE_FIR: Channel 1 invalid state error FIR bit.
22	RWX	WOX_AND	WOX_OR	CH2_INVALID_STATE_FIR: Channel 2 invalid state error FIR bit.
23	RWX	WOX_AND	WOX_OR	CH3_INVALID_STATE_FIR: Channel 3 invalid state error FIR bit.
24	RWX	WOX_AND	WOX_OR	CH4_INVALID_STATE_FIR: Channel 4 invalid state error FIR bit.
25	RWX	WOX_AND	WOX_OR	CH5_INVALID_STATE_FIR: Channel 5 invalid state error FIR bit.
26	RWX	WOX_AND	WOX_OR	CH6_INVALID_STATE_FIR: Channel 6 invalid state error FIR bit.
27	RWX	WOX_AND	WOX_OR	CH7_INVALID_STATE_FIR: Channel 7 invalid state error FIR bit.
28	RWX	WOX_AND	WOX_OR	CH5_AMF_ECC_UE_FIR: Channel 5 AMF array uncorrectable ECC error FIR bit.
29	RWX	WOX_AND	WOX_OR	CH6_AMF_ECC_UE_FIR: Channel 6 AMF array uncorrectable ECC error FIR bit.
30	RWX	WOX_AND	WOX_OR	CH7_AMF_ECC_UE_FIR: Channel 7 AMF array uncorrectable ECC error FIR bit.
31	RWX	WOX_AND	WOX_OR	CRB_ECC_UE_FIR: UE error on CRB(CSB address, CCB) FIR bit.
32	RWX	WOX_AND	WOX_OR	CRB_ECC_SUE_FIR: SUE error on CRB(CSB address, CCB) FIR bit.
33	RWX	WOX_AND	WOX_OR	DMA_OUTWR_INRD_ECC_SUE_FIR: SUE error on something other than CRB (CSB address, CCB) FIR bit.
34	RWX	WOX_AND	WOX_OR	RESERVED_34_FIR: Reserved FIR bit 34.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
35	RWX	WOX_AND	WOX_OR	RESERVED_35_FIR: Reserved FIR bit 35.
36	RWX	WOX_AND	WOX_OR	CH4_AMF_ECC_CE_FIR: Channel 4 AMF array corrected ECC error FIR bit.
37	RWX	WOX_AND	WOX_OR	CH4_AMF_ECC_UE_FIR: Channel 4 AMF array uncorrectable ECC error FIR bit.
38	RWX	WOX_AND	WOX_OR	RESERVED_38_FIR: Reserved FIR bit 38.
39	RWX	WOX_AND	WOX_OR	RESERVED_39_FIR: Reserved FIR bit 39.
40	RWX	WOX_AND	WOX_OR	RESERVED_40_FIR: Reserved FIR bit 40.
41	RWX	WOX_AND	WOX_OR	RESERVED_41_FIR: Reserved FIR bit 41.
42	RWX	WOX_AND	WOX_OR	RESERVED_42_FIR: Reserved FIR bit 42.
43	RWX	WOX_AND	WOX_OR	RESERVED_43_FIR: Reserved FIR bit 43.
44	RWX	WOX_AND	WOX_OR	RESERVED_44_FIR: Reserved FIR bit 44.
45	RWX	WOX_AND	WOX_OR	RESERVED_45_FIR: Reserved FIR bit 45.
46	RWX	WOX_AND	WOX_OR	RESERVED_46_FIR: Reserved FIR bit 46.
47	RWX	WOX_AND	WOX_OR	RESERVED_47_FIR: Reserved FIR bit 47.
48	RWX	WOX_AND	WOX_OR	FIR_SCOM_PE_FIR: FIR/SCOM satellite parity error FIR bit.
49	RWX	WOX_AND	WOX_OR	FIR_SCOM_PE_DUP_FIR: FIR/SCOM satellite parity error FIR bit duplicate.
50:63	RO	RO	RO	constant = 0b00000000000000

Register Name	DMA and Engine FIR Mask Register
Mnemonic	NX.DBG.NX_DMA_ENG_FIR_MASK
Address	0000000002011103 (SCOM) 0000000002011104 (SCOM1) 0000000002011105 (SCOM2)
Description	DMA and Engine FIR Mask Register

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:49	RW	WO_AND	WO_OR	NX_DMA_ENG_FIR_MASK_BITS: DMA and Engine FIR Mask Register.
50:63	RO	RO	RO	constant = 0b00000000000000

Register Name	DMA and Engine FIR Action 0 Register
Mnemonic	NX.DBG.NX_DMA_ENG_FIR_ACTION0
Address	0000000002011106 (SCOM)
Description	DMA and Engine FIR Action 0 Register

Bits	SCOM	Field Mnemonic: Description
0:49	RW	NX_DMA_ENG_FIR_ACTION0_BITS: DMA and Engine FIR Action 0 Register.
50:63	RO	constant = 0b00000000000000

Register Name	DMA and Engine FIR Action 1 Register
Mnemonic	NX.DBG.NX_DMA_ENG_FIR_ACTION1
Address	0000000002011107 (SCOM)
Description	DMA and Engine FIR Action 1 Register

Bits	SCOM	Field Mnemonic: Description
0:49	RW	NX_DMA_ENG_FIR_ACTION1_BITS: DMA and Engine FIR Action 1 Register.
50:63	RO	constant = 0b00000000000000

Register Name	DMA and Engine FIR WOF Register
Mnemonic	NX.DBG.NX_DMA_ENG_FIR_WOF
Address	0000000002011108 (SCOM)
Description	DMA and Engine FIR WOF Register

Bits	SCOM	Field Mnemonic: Description
0:49	RWX_WCLRREG	NX_DMA_ENG_FIR_WOF_BITS: DMA and Engine FIR WOF Register.
50:63	RO	constant = 0b00000000000000

Register Name	Debug Multiplexer Control Register
Mnemonic	NX.DBG.NX_DEBUGMUX_CTRL
Address	000000000201110A (SCOM)
Description	Debug Mux Control Register

Bits	SCOM	Field Mnemonic: Description
0:46	RO	constant = 0b00000000000000000000000000000000000000000000000
47:60	RW	NX_DEBUGMUX_CTRL_BITS: NX debug bus selects.
61:63	RO	constant = 0b000

Register Name	Debug Trigger Control Register
Mnemonic	NX.DBG.NX_TRIGGER_CTRL
Address	000000000201110B (SCOM)
Description	Debug Trigger Control Register

Bits	SCOM	Field Mnemonic: Description
0:49	RO	constant = 0b0000000000000000000000000000000000000000000000000
50:61	RW	NX_TRIGGER_CTRL_BITS: NX trigger select.
62:63	RO	constant = 0b00

Register Name	DMA and Engine Error Injection Control Register
Mnemonic	NX.DBG.NX_ERRORINJ_CTRL
Address	000000000201110C (SCOM)
Description	DMA and Engine Error Injection Control Register

Bits	SCOM	Field Mnemonic: Description
0:1	RO	constant = 0b00
2	RW	CH0EFT_ERRORINJ_ENA: Channel 0 842 array error inject enable.
3	RW	CH0EFT_ERRORINJ_TYPE: Channel 0 842 array error inject type.
4	RW	CH0EFT_ERRORINJ_ACTION: Channel 0 842 array error inject action.
5:8	RW	CH0EFT_ERRORINJ_SELECT: Channel 0 842 array error inject select.
9	RW	CH1EFT_ERRORINJ_ENA: Channel 1 842 array error inject enable.
10	RW	CH1EFT_ERRORINJ_TYPE: Channel 1 842 array error inject type.
11	RW	CH1EFT_ERRORINJ_ACTION: Channel 1 842 array error inject action.
12:15	RW	CH1EFT_ERRORINJ_SELECT: Channel 1 842 array error inject select.
16:22	RO	constant = 0b0000000
23	RW	DMA_INWR_ERRORINJ_ENA: DMA inbound write error inject enable.
24	RW	DMA_INWR_ERRORINJ_TYPE: DMA inbound write error inject type.
25	RW	DMA_INWR_ERRORINJ_ACTION: DMA inbound write error inject action.
26	RW	DMA_OUTWR_ERRORINJ_ENA: DMA outbound write error inject enable.
27	RW	DMA_OUTWR_ERRORINJ_TYPE: DMA outbound write error inject type.
28	RW	DMA_OUTWR_ERRORINJ_ACTION: DMA outbound write error inject action.
29	RW	DMA_INGARRAY_ERRORINJ_ENA: DMA ingress array error inject enable.
30	RW	DMA_INGARRAY_ERRORINJ_TYPE: DMA ingress array error inject type.
31	RW	DMA_INGARRAY_ERRORINJ_ACTION: DMA ingress array error inject action.
32:35	RW	DMA_INGARRAY_ERRORINJ_SELECT: DMA ingress array error inject select.
36	RW	DMA_EGRARRAY_ERRORINJ_ENA: DMA egress array error inject enable.
37	RW	DMA_EGRARRAY_ERRORINJ_TYPE: DMA egress array error inject type.
38	RW	DMA_EGRARRAY_ERRORINJ_ACTION: DMA egress array error inject action.
39:42	RW	DMA_EGRARRAY_ERRORINJ_SELECT: DMA egress array error inject select.
43	RW	DMA_CRBARRAY_ERRORINJ_ENA: DMA CRB store array error inject enable.
44	RW	DMA_CRBARRAY_ERRORINJ_TYPE: DMA CRB store array error inject type.
45	RW	DMA_CRBARRAY_ERRORINJ_ACTION: DMA CRB store array error inject action.
46	RW	DMA_CRBARRAY_ERRORINJ_SELECT: DMA CRB store array error inject select.
47	RO	constant = 0b0
48	RW	CH4GZIP_ERRORINJ_ENA: CH4 GZIP array error inject enable.
49	RW	CH4GZIP_ERRORINJ_TYPE: CH4 GZIP array error inject type.
50	RW	CH4GZIP_ERRORINJ_ACTION: CH4 GZIP array error inject action.
51:58	RW	CH4GZIP_ERRORINJ_SELECT: CH4 GZIP array error inject select.
59	RW	DMA_OUTWR_QW0_UEINJ_ENA: DMA outbound write CRB QW0 UE inject enable.

Bits	SCOM	Field Mnemonic: Description
60	RW	DMA_OUTWR_QW4_UEINJ_ENA: DMA outbound write CRB QW4 UE inject enable.
61:63	RO	constant = 0b000

Register Name	GZIP Control Register
Mnemonic	NX.CH4.GZIP_CONTROL_REG
Address	0000000002011140 (SCOM)
Description	This register controls GZIP.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_NEAR_HISTORY: Disables near-history matches for GZIP compression.
1	RW	DISABLE_FAR_HISTORY: Disables far-history matches for GZIP compression.
2	RW	DISABLE_EXTRA_HASH_ACCESSES: Disables extra hash table accesses for GZIP compression.
3	RW	DISABLE_EXTRA_FIFO_ACCESSES: Disables extra FIFO accesses for GZIP compression.
4:7	RO	constant = 0b0000
8:15	RW	HASH_SIZE_MASK: Size of hash functions for hash table access in GZIP compression.
16:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	GZIP Address 0 Hash Function Register
Mnemonic	NX.CH4.ADDR_0_HASH_FUNCTION_REG
Address	0000000002011141 (SCOM)
Description	GZIP Address 0 Hash Function Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ADDRESS_0_HASH_FUNCTION: Compression hash function for hash table address bit 0.

Register Name	GZIP Address 1 Hash Function Register
Mnemonic	NX.CH4.ADDR_1_HASH_FUNCTION_REG
Address	0000000002011142 (SCOM)
Description	GZIP Address 1 Hash Function Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ADDRESS_1_HASH_FUNCTION: Compression hash function for hash table address bit 1.

Register Name	GZIP Address 2 Hash Function Register
Mnemonic	NX.CH4.ADDR_2_HASH_FUNCTION_REG
Address	0000000002011143 (SCOM)
Description	GZIP Address 2 Hash Function Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ADDRESS_2_HASH_FUNCTION: Compression hash function for hash table address bit 2.

Register Name	GZIP Address 3 Hash Function Register
Mnemonic	NX.CH4.ADDR_3_HASH_FUNCTION_REG
Address	0000000002011144 (SCOM)
Description	GZIP Address 3 Hash Function Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ADDRESS_3_HASH_FUNCTION: Compression hash function for hash table address bit 3.

Register Name	GZIP Address 4 Hash Function Register
Mnemonic	NX.CH4.ADDR_4_HASH_FUNCTION_REG
Address	0000000002011145 (SCOM)
Description	GZIP Address 4 Hash Function Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ADDRESS_4_HASH_FUNCTION: Compression hash function for hash table address bit 4.

Register Name	GZIP Address 5 Hash Function Register
Mnemonic	NX.CH4.ADDR_5_HASH_FUNCTION_REG
Address	0000000002011146 (SCOM)
Description	GZIP Address 5 Hash Function Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ADDRESS_5_HASH_FUNCTION: Compression hash function for hash table address bit 5.

Register Name	GZIP Address 6 Hash Function Register
Mnemonic	NX.CH4.ADDR_6_HASH_FUNCTION_REG
Address	0000000002011147 (SCOM)
Description	GZIP Address 6 Hash Function Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ADDRESS_6_HASH_FUNCTION: Compression hash function for hash table address bit 6.

Register Name	GZIP Address 7 Hash Function Register
Mnemonic	NX.CH4.ADDR_7_HASH_FUNCTION_REG
Address	0000000002011148 (SCOM)
Description	GZIP Address 7 Hash Function Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ADDRESS_7_HASH_FUNCTION: Compression hash function for hash table address bit 7.

Register Name	GZIP Address 8 Hash Function Register
Mnemonic	NX.CH4.ADDR_8_HASH_FUNCTION_REG
Address	0000000002011149 (SCOM)
Description	GZIP Address 8 Hash Function Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ADDRESS_8_HASH_FUNCTION: Compression hash function for hash table address bit 8.

Register Name	GZIP Address 9 Hash Function Register
Mnemonic	NX.CH4.ADDR_9_HASH_FUNCTION_REG
Address	000000000201114A (SCOM)
Description	GZIP Address 9 Hash Function Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ADDRESS_9_HASH_FUNCTION: Compression hash function for hash table address bit 9.

Register Name	GZIP Address 10 Hash Function Register
Mnemonic	NX.CH4.ADDR_10_HASH_FUNCTION_REG
Address	000000000201114B (SCOM)
Description	GZIP Address 10 Hash Function Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	ADDRESS_10_HASH_FUNCTION: Compression hash function for hash table address bit 10.

Register Name	GZIP Tag 0 Hash Function Register
Mnemonic	NX.CH4.DATATAG_0_HASH_FUNCTION_REG
Address	000000000201114C (SCOM)
Description	GZIP Tag 0 Hash Function Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	DATATAG_0_HASH_FUNCTION: Compression hash function for hash table tag 0.

Register Name	GZIP Tag 1 Hash Function Register
Mnemonic	NX.CH4.DATATAG_1_HASH_FUNCTION_REG
Address	000000000201114D (SCOM)
Description	GZIP Tag 1 Hash Function Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	DATATAG_1_HASH_FUNCTION: Compression hash function for hash table tag 1.

Register Name	GZIP Tag 2 Hash Function Register
Mnemonic	NX.CH4.DATATAG_2_HASH_FUNCTION_REG
Address	000000000201114E (SCOM)
Description	GZIP Tag 2 Hash Function Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	DATATAG_2_HASH_FUNCTION: Compression hash function for hash table tag 2.

Register Name	GZIP Tag 3 Hash Function Register
Mnemonic	NX.CH4.DATATAG_3_HASH_FUNCTION_REG
Address	000000000201114F (SCOM)
Description	GZIP Tag 3 Hash Function Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	DATATAG_3_HASH_FUNCTION: Compression hash function for hash table tag 3.

Register Name	GZIP Tag 4 Hash Function Register
Mnemonic	NX.CH4.DATATAG_4_HASH_FUNCTION_REG
Address	0000000002011150 (SCOM)
Description	GZIP Tag 4 Hash Function Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	DATATAG_4_HASH_FUNCTION: Compression hash function for hash table tag 4.

Register Name	GZIP Tag 5 Hash Function Register
Mnemonic	NX.CH4.DATATAG_5_HASH_FUNCTION_REG
Address	0000000002011151 (SCOM)
Description	GZIP Tag 5 Hash Function Register

Bits	SCOM	Field Mnemonic: Description
0:63	RW	DATATAG_5_HASH_FUNCTION: Compression hash function for hash table tag 5.

Register Name	GZIP Error Report Hold Register
Mnemonic	NX.CH4.GZIP_ERRRPT_HOLD_REG
Address	0000000002011152 (SCOM)
Description	GZIP Error Report Hold Register

Bits	SCOM	Field Mnemonic: Description
0:11	ROX	GZIP_ERRRPT_HOLD: GZIP engine c_err_rpt_holds.
12:63	RO	constant = 0b0000000000000000000000000000000000000000000000000000

Register Name	Configuration of CC Counters Register
Mnemonic	TP.TCN0.N0.SYNC_CONFIG
Address	0000000002030000 (SCOM)
Description	configuration of CC counters

Bits	SCOM	Field Mnemonic: Description
0:3	RW	SYNC_PULSE_DELAY: Delay incoming SYNC pulse. Default are eight latches: ASYNC 0000 = 8 0001 = 2 0010 = 3 0011 = 4 0100 = 5 0101 = 6 0110 = 7 0111 = 8 1000 = 9 1001 = 10 1010 = 11 1011 = 12 1100 = 13 1101 = 14 1110 = 15 1111 = 16 delay of the reset of the phase counter
4	RW	LISTEN_TO_SYNC_PULSE_DIS: Disables phase counter synchronization by the sync_pulse signal (default is enabled). **Note**: When you enable listen_to_sync, the chiplet is corrupted for 200 cycles.
5	RW	SYNC_PULSE_INPUT_SEL: Default is 0. When set to 1, the alternative input of the sync_pulse is used. **Note**: When you toggle the input select, the chiplet is corrupted for 200 cycles.
6	RW	USE_SYNC_FOR_SCAN: When set, use the OPCG initial alignment for scan requests.
7	RW	CLEAR_CHIPLET_IS_ALIGNED: This bit clears the chiplet_is_aligned bit.
8	RW	UNIT_REGION_CLKCMD_ENABLE: Enables the unit interface to start/stop one dedicated region. Used for POWER9 cache or core.
9	RW	DISABLE_PCB_ITR: Disables the interrupt generation within CC. The interrupt is sent on each HLD event.
10	RW	ENABLE_VITL_ALIGN_CHECK: Enables the VITL align check to compare alignment of the incoming SYNC pulse with 2:1 VITL LCB.
11	RW	SYNC_PULSE_OUT_DIS: Disables the sync_pulse output when set to 1. The master chiplet does not send SYNC pulses to slave chiplets.
12:19	RW	UNUSED1219: Unused.

Register Name	OPCG Align Register
Mnemonic	TP.TCN0.N0.OPCG_ALIGN
Address	0000000002030001 (SCOM)
Description	OPCG ALIGN

Bits	SCOM	Field Mnemonic: Description
0:3	RW	INOP_ALIGN: INOP phase alignment: 0: none 1: 2:1 2: 3:1 3: 4:1 4: 6:1 5: 8:1 6: 12:1 7: 16:1 8: 24:1 9-15: 48:1
4:7	RW	SNOP_ALIGN: SNOP phase alignment: 0: none 1: 2:1 2: 3:1 3: 4:1 4: 6:1 5: 8:1 6: 12:1 7: 16:1 8: 24:1 9-15: 48:1
8:11	RW	ENOP_ALIGN: ENOP phase alignment: 0: none 1: 2:1 2: 3:1 3: 4:1 4: 6:1 5: 8:1 6: 12:1 7: 16:1 8: 24:1 9-15: 48:1
12:19	RW	INOP_WAIT: INOP cycle delay (0 - 255).
20:31	RW	SNOP_WAIT: SNOP cycle delay (0 - 4095).
32:39	RW	ENOP_WAIT: ENOP cycle delay (0 - 255).
40	RW	INOP_FORCE_SG: INOP: Set SG high during INOP.
41	RW	SNOP_FORCE_SG: SNOP: Set SG high during SNOP.
42	RW	ENOP_FORCE_SG: ENOP: Set SG high during ENOP (including LOOP phase).
43	RW	NO_WAIT_ON_CLK_CMD: When set to 0, a clock change request first waits on the OPCG_WAIT cycles. When set to 1, a clock change request does not wait, when not in flush.
44:45	RW	ALIGN_SOURCE_SELECT: 0: Use the INOPA setting from opcg_reg0 1: Use the rising edge of SYNC pulse 2: Use unit0_sync_lvl to align (for AVP - refresh0) 3: Use unit1_sync_lvl to align (for AVP - refresh1)
46	RW	UNUSED46: Unused.

Bits	SCOM	Field Mnemonic: Description
47:51	RW	SCAN_RATIO: scan_ratio: n = 0 - 15: (n + 1):1 16: 24:1 17: 32:1 18: 48:1 19: 64:1 20: 128:1 Default 4:1 = 00011
52:63	RW	OPCG_WAIT_CYCLES: Old PAD value. Delay at the beginning and end of the OPCG run to allow DC signals to arrive at the correct time (0 4095). Required to be higher than plat depth. Default = 0x020.

Register Name	OPCG Control Register 0
Mnemonic	TP.TCN0.N0.OPCG_REG0
Address	0000000002030002 (SCOM)
Description	OPCG Control Register 0

Bits	SCOM	Field Mnemonic: Description
0	RW	RUNN_MODE: 0 = BIST mode used for LBIST 1 = RUNN mode used for ABIST/IOBIST
1	RWX	OPCG_GO: OPCG go (start OPCG). Bit is cleared when OPCG is done, Poll for opcg_done in cplt_start reg.
2	RWX	RUN_SCAN0: Run scan0. Overrides all BIST mode settings except the scan_ratio). Starts a scan0 run. The bit is cleared when OPCG is finished. Poll for opcg_done in the cplt_start register.
3	RW	SCAN0_MODE: Sets PRPGs in scan0_mode but does not run the automatic scan0 sequence.
4	RWX	OPCG_IN_SLAVE_MODE: When selected, OPCG waits for the master chiplet to start. When Keep_MS_Mode is 0, SLAVE_MODE is cleared after the incoming trigger.
5	RWX	OPCG_IN_MASTER_MODE: When selected, OPCG sends out a trigger to all slave chiplets. When Keep_MS_MODE = 0, the MASTER_MODE is cleared after sending out one master trigger.
6	RW	KEEP_MS_MODE: When set to 1, OPCG in M/S mode bits are not cleared after one incoming OPCG trigger. Default is clear M/S mode bits.
7	RW	TRIGGER_OPCG_ON_UNIT0_SYNC_LVL: Unit pin used for AVP that can trigger OPCG (unit0_sync_lvl).
8	RW	TRIGGER_OPCG_ON_UNIT1_SYNC_LVL: Unit pin used for AVP that can trigger OPCG (unit1_sync_lvl).
9	RWX	RUN_CHIPLET_SCAN0: Run scan0 on all regions and types. Clears the chiplet.
10	RWX	RUN_CHIPLET_SCAN0_NO_PLL: Run SCAN0 on all regions and types. Clears the chiplet at all exclude PLL regions where the PLL is running.
11	RW	RUN_OPCG_ON_UPDATE_DR: Starts the OPCG engine when scan updated (update_dr) is received (set pulse). Cronus requires that this bit be set to 1 for a SETPULSE write.
12	RW	RUN_OPCG_ON_CAPTURE_DR: Starts the OPCG engine when scan updated (update_dr) is received (set pulse). Cronus requires that this bit be set to 1 for a SETPULSE read.
13	RW	STOP_RUNN_ON_XSTOP: RUNN mode. Stops run-n on checkstop.
14	RW	OPCG_STARTS_BIST: rRUNN mode. OPCG engine controls start_bist for ABIST or IOBIST.
15:20	RW	UNUSED1520: Unused.
21:63	RWX	LOOP_COUNT: Loop counter for LBIST and RUNN. Write = target value. Read = current counter value. Counts from zero to the target value.

Register Name	OPCG Control Register 1
Mnemonic	TP.TCN0.N0.OPCG_REG1
Address	0000000002030003 (SCOM)
Description	OPCG Control Register 1

Bits	SCOM	Field Mnemonic: Description
0:11	RW	SCAN_COUNT: BIST mode: Channel scan count (s = 0 – 4095). runn-mode: start_bist match value (0:11).
12:23	RW	MISR_A_VAL: BIST mode: a value for MISR aperture. runn-mode: start_bist match value (12:23).
24:35	RW	MISR_B_VAL: BIST mode: b value for MISR aperture. runn-mode: start_bist match value (24:35).
36:47	RW	MISR_INIT_WAIT: BIST mode: Delay MISR aperture. MISRs get active after this number of loops.
48	RW	OPCG_SUPPRESS_EVEN_CLK: OPCG creates only even and not odd clocks. Used for runn to create only one clock in fast domain. Default is 0.
49	RW	SCAN_CLK_USE_EVEN: Generates scan clock in even cycles instead of odd. Default is 0 = odd for scan.
50:51	RW	UNUSED2: Unused.
52	RW	RTIM_THOLD_FORCE: Forces rtim_thold low when not in test_dc mode (must be 0 at all times).
53	RW	DISABLE_ARY_CLK_DURING_FILL: LBIST and SCAN0. Prevents activation of ARY HLD during NSL-fill.
54	RW	SG_HIGH_DURING_FILL: LBIST and SCAN0. Holds SG high during NSL-fill.
55:56	RW	LBIST_SKITTER_CTL: BIST mode. 00: Enables skitter during lbist_ip. 01: Enables skitter when misr_active. 10: skitter OPCG_GO mode. Falling edge = start; rising edge = stop. 11: Unused.
57	RW	MISR_MODE: BIST mode: MISR aperture mode. 0: a - 1 to b - 1 1: Start to a and b to end
58	RW	INFINITE_MODE: Infinite mode. RUNN and LBIST run forever and ignore the loop count.
59:63	RW	NSL_FILL_COUNT: BIST mode. NSL-fill count (0 - 31).

Register Name	OPCG Control Register 2
Mnemonic	TP.TCN0.N0.OPCG_REG2
Address	0000000002030004 (SCOM)
Description	OPCG Control Register 2

Bits	SCOM	Field Mnemonic: Description
0	RWX	OPCG_GO2: OPCG go for broadcast sequences (start sequence).
1:3	RW	PRPG_WEIGHTING: prpg_activate: 1/2 1/4 1/8 1/16 1/2 3/4 7/8 15/16
4:15	RWX	PRPG_VALUE: Set to 0 for PRPG always on, else seed.
16:27	RW	PRPG_A_VAL: a value for PRPG aperture.

Bits	SCOM	Field Mnemonic: Description
28:39	RW	PRPG_B_VAL: b value for PRPG aperture.
40	RW	PRPG_MODE: PRPG aperture mode: 0: a - 1 to b - 1 1: Start to a and b to end
41:63	RW	UNUSED41_63: Unused.

Register Name	Scan Region and Type Register
Mnemonic	TP.TCN0.N0.SCAN_REGION_TYPE
Address	0000000002030005 (SCOM)
Description	Scan Region and Type

Bits	SCOM	Field Mnemonic: Description
0	RWX	SYSTEM_FAST_INIT: Default is 0. When set to 1, the MASK bits in the CMSK chain decide which part is scanned or scan0. MASK = 1: scan0. MASK = 0: Part or scan chain
1:2	RO	constant = 0b00
3	NCX	SCAN_REGION_VITL: Scan clock region VITL (Vital = Clock).
4	RWX	SCAN_REGION_PERV: Scan clock region PERV (Pervasive).
5	RWX	SCAN_REGION_UNIT1: Scan clock region NX.
6	RWX	SCAN_REGION_UNIT2: Scan clock region cxa0 - CAPP.
7	RWX	SCAN_REGION_UNIT3: Scan clock region pbioe0 - PB.
8	RWX	SCAN_REGION_UNIT4: Scan clock region pbioe1 - PB.
9	RWX	SCAN_REGION_UNIT5: Scan clock region pbioe2 - PB.
10	RWX	SCAN_REGION_UNIT6: Scan clock region unused.
11	RWX	SCAN_REGION_UNIT7: Scan clock region unused.
12	RWX	SCAN_REGION_UNIT8: Scan clock region unused.
13	RWX	SCAN_REGION_UNIT9: Scan clock region unused.
14	RWX	SCAN_REGION_UNIT10: Scan clock region reserved.
15:47	RO	constant = 0b00000000000000000000000000000000
48	RW	SCAN_TYPE_FUNC: Scan chain FUNC (functional).
49	RW	SCAN_TYPE_CFG: Scan chain mode (boot configuration and debug configuration).
50	RW	SCAN_TYPE_CCFG_GPTR: Scan chain ccfg / gptr (Pervasive: CC configuration. Others: GPTR).
51	RW	SCAN_TYPE_REGF: Scan chain regf (register files).
52	RW	SCAN_TYPE_LBIST: Scan chain lbst (LBIST).
53	RW	SCAN_TYPE_ABIST: Scan chain abst (ABIST).
54	RW	SCAN_TYPE_REPR: Scan chain repr (array repair).
55	RW	SCAN_TYPE_TIME: Scan chain time (array timing).
56	RW	SCAN_TYPE_BNDY: Scan chain bndy (boundary I/Os).
57	RW	SCAN_TYPE_FARR: Scan chain farr (fast array unload).
58	RW	SCAN_TYPE_CMSK: Scan chain cmsk (LBIST channel mask).

Bits	SCOM	Field Mnemonic: Description
59	RW	SCAN_TYPE_INEX: Scan chain idex (c14 ASIC).
60:63	RO	constant = 0b0000

Register Name	Start/Stop of Clocks Register
Mnemonic	TP.TCN0.N0.CLK_REGION
Address	0000000002030006 (SCOM)
Description	This register starts and stops the clocks.

Bits	SCOM	Field Mnemonic: Description
0:1	RWX	CLOCK_CMD: Command for clock control: 00 = NOP 01 = Start 10 = Stop 11 = Pulse (one pulse)
2	RWX	SLAVE_MODE: When selected, the clock command waits for the master chiplet to start. The bit is cleared after the incoming slave trigger and Keep_MS_Mode_after_trigger is set to 0.
3	RWX	MASTER_MODE: When selected, the clock command sends out a trigger to all slave chiplets. The bit is cleared after sending out one master trigger and Keep_MS_Mode_after_trigger is set to 0.
4	RWX	CLOCK_REGION_PERV: For clock region perv (Pervasive).
5	RWX	CLOCK_REGION_UNIT1: For clock region NX.
6	RWX	CLOCK_REGION_UNIT2: For clock region cxa0 - CAPP.
7	RWX	CLOCK_REGION_UNIT3: For clock region pbioe0 - PB.
8	RWX	CLOCK_REGION_UNIT4: For clock region pbioe1 - PB.
9	RWX	CLOCK_REGION_UNIT5: For clock region pbioe2 - PB.
10	RWX	CLOCK_REGION_UNIT6: For clock region unused.
11	RWX	CLOCK_REGION_UNIT7: For clock region unused.
12	RWX	CLOCK_REGION_UNIT8: For clock region unused.
13	RWX	CLOCK_REGION_UNIT9: For clock region unused.
14	RWX	CLOCK_REGION_UNIT10: For clock region reserved.
15:47	RO	constant = 0b00000000000000000000000000000000
48	RWX	SEL_THOLD_SL: Selects SL holds.
49	RWX	SEL_THOLD_NSL: select NSL holds.
50	RWX	SEL_THOLD_ARY: select array holds.
51	RO	constant = 0b0
52	RW	CLOCK_PULSE_USE_EVEN: For dual mesh support. Default for pulse is ODD phase. When this bit is set, the pulse is applied on the even phase.
53:63	RO	constant = 0b00000000000

Register Name	Clocks Running SL Register
Mnemonic	TP.TCN0.N0.CLOCK_STAT_SL
Address	0000000002030008 (SCOM)
Description	This register runs the SL.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b1111
4	ROX	CLOCK_STATUS_PERV_SL: Status of PERV SL HLD. 0 = run 1 = stop
5	ROX	CLOCK_STATUS_UNIT1_SL: Status of NX SL HLD. 0 = run 1 = stop
6	ROX	CLOCK_STATUS_UNIT2_SL: Status of cxa0 - CAPP SL HLD. 0 = run 1 = stop
7	ROX	CLOCK_STATUS_UNIT3_SL: status of PBIOE0 - PB SL HLD 0 = run 1 = stop
8	ROX	CLOCK_STATUS_UNIT4_SL: Status of PBIOE1 - PB SL HLD 0 = run 1 = stop
9	ROX	CLOCK_STATUS_UNIT5_SL: Status of PBIOE2 - PB SL HLD 0 = run 1 = stop

Register Name	ABIST and IOBIST Per Region Register
Mnemonic	TP.TCN0.N0.BIST
Address	000000000203000B (SCOM)
Description	ABIST and IOBIST per region

Bits	SCOM	Field Mnemonic: Description
0	RW	TC_BIST_START_TEST_DC: Keep this bit 0 during ABIST/IOBIST. Can be used to bypass the RUNN start. When this bit is set, the BIST_START_TEST goes high immediately without waiting for RUNN. BIST starts with the first HLD clock cycle.
1	RW	TC_SRAM_ABIST_MODE_DC: Selects the ABIST engines for SRAMs.
2	RW	TC_EDRAM_ABIST_MODE_DC: Selects the ABIST engines for EDRAMs.
3	RW	TC_IOBIST_MODE_DC: Selects the IOBIST engines.
4	RW	BIST_PERV: Region PERV: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
5	RW	BIST_UNIT1: Region NX: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
6	RW	BIST_UNIT2: Region CXA0 - CAPP: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
7	RW	BIST_UNIT3: Region PBIOE0 - PB: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
8	RW	BIST_UNIT4: Region PBIOE1 - PB: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
9	RW	BIST_UNIT5: Region PBIOE2 - PB: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run

Bits	SCOM	Field Mnemonic: Description
10	RW	BIST_UNIT6: Region unused: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
11	RW	BIST_UNIT7: Region unused: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
12	RW	BIST_UNIT8: Region unused: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
13	RW	BIST_UNIT9: Region unused: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
14	RW	BIST_UNIT10: Region reserved: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
15:47	RO	constant = 0b00000000000000000000000000000000
48	RW	BIST_STROBE_WINDOW_EN: Enables strobe window only in TE = 1. mode OPCGGO tester pin enables ABIST compare when ABIST is started. Special setup in ABIST engine is required. Default = 0. System mode cannot enable this feature.
49:63	RO	constant = 0b000000000000000

Register Name	Checkstop Per Region 1 Register
Mnemonic	TP.TCN0.N0.XSTOP1
Address	000000000203000C (SCOM)
Description	Checkstop per region

Bits	SCOM	Field Mnemonic: Description
0	RW	XSTOP1_MASK_B: Mask for checkstop to clockstop of select regions (see XSTOP_perv, xstop_unit0..n). 0 = ignore chkstop 1 = stop on chkstop
1	RW	XSTOP1_UNUSED: Unused.
2	RW	TRIGGER_OPCG_ON_XSTOP1: Triggers OPCG on checkstop instead of performing clockstop.
3	RW	XSTOP1_WAIT_ALLWAYS: When set to 1, checkstop waits independent from flush. Default is no wait when flush in not set.
4	RW	XSTOP1_PERV: Region PERV: 1 = region is stopped 0 = region keeps running on checkstop
5	RW	XSTOP1_UNIT1: Region NX: 1 = region is stopped 0 = region keeps running on checkstop
6	RW	XSTOP1_UNIT2: Region CXA0 - CAPP: 1 = region is stopped 0 = region keeps running on checkstop
7	RW	XSTOP1_UNIT3: Region PBIOE0 - PB: 1 = region is stopped 0 = region keeps running on checkstop

Bits	SCOM	Field Mnemonic: Description
8	RW	XSTOP1_UNIT4: Region PBIOE1 - PB: 1 = region is stopped 0 = region keeps running on checkstop
9	RW	XSTOP1_UNIT5: Region PBIOE2 - PB: 1 = region is stopped 0 = region keeps running on checkstop
10	RW	XSTOP1_UNIT6: Region unused: 1 = region is stopped 0 = region keeps running on checkstop
11	RW	XSTOP1_UNIT7: Region unused: 1 = region is stopped 0 = region keeps running on checkstop
12	RW	XSTOP1_UNIT8: Region unused: 1 = region is stopped 0 = region keeps running on checkstop
13	RW	XSTOP1_UNIT9: Region unused: 1 = region is stopped 0 = region keeps running on checkstop
14	RW	XSTOP1_UNIT10: Region reserved: 1 = region is stopped 0 = region keeps running on checkstop
15:47	RO	constant = 0b00000000000000000000000000000000
48:59	RW	XSTOP1_WAIT_CYCLES: Defines how many cycles checkstop waits after dropping flush before Tholds is dropped. 0 - 4095 cycles possible.
60:63	RO	constant = 0b0000

Register Name	Checkstop Per Region 2 Register
Mnemonic	TP.TCN0.N0.XSTOP2
Address	000000000203000D (SCOM)
Description	Checkstop per region

Bits	SCOM	Field Mnemonic: Description
0	RW	XSTOP2_MASK_B: Mask for checkstop to clockstop of select regions (see XSTOP_perv, xstop_unit0..n). 0 = ignore chkstop 1 = stop on chkstop
1	RW	XSTOP2_UNUSED: Unused.
2	RW	TRIGGER_OPCG_ON_XSTOP2: Triggers OPCG on checkstop instead of performing clockstop.
3	RW	XSTOP2_WAIT_ALLWAYS: When set to 1, checkstop waits independent from flush. Default is no wait when flush in not set.
4	RW	XSTOP2_PERV: Region PERV: 1 = region is stopped 0 = region keeps running on checkstop
5	RW	XSTOP2_UNIT1: Region NX: 1 = region is stopped 0 = region keeps running on checkstop
6	RW	XSTOP2_UNIT2: Region CXA0 - CAPP: 1 = region is stopped 0 = region keeps running on checkstop

Bits	SCOM	Field Mnemonic: Description
7	RW	XSTOP2_UNIT3: Region PBIOE0 - PB: 1 = region is stopped 0 = region keeps running on checkstop

60:63	RO	constant = 0b0000

Register Name	Error Status of CC Register
Mnemonic	TP.TCN0.N0.ERROR_STATUS
Address	000000000203000F (SCOM)
Description	This register shows the error status of CC.

Bits	SCOM	Field Mnemonic: Description
0	RWX	PCB_WRITE_NOT_ALLOWED_ERR: Rrite on read only register.
1	RWX	PCB_READ_NOT_ALLOWED_ERR: Read not allowed. Can be write only register.
2	RWX	PCB_PARITY_ON_CMD_ERR: Parity error on CMD.
3	RWX	PCB_ADDRESS_NOT_VALID_ERR: Invalid address.
4	RWX	PCB_PARITY_ON_ADDR_ERR: Parity error on ADDR.
5	RWX	PCB_PARITY_ON_DATA_ERR: Parity error on data.
6	RWX	PCB_PROTECTED_ACCESS_INVALID_ERR: Protection violation.
7	RWX	PCB_PARITY_ON_SPCIF_ERR: Parity error on SPCIF.

Bits	SCOM	Field Mnemonic: Description
8	RWX	PCB_WRITE_AND_OPCG_IP_ERR: PCB write while OPCG is running.
9	RWX	SCAN_READ_AND_OPCG_IP_ERR: Scan read when OPCG is running.
10	RWX	CLOCK_CMD_CONFLICT_ERR: Clock CMD in progress.
11	RWX	SCAN_COLLISION_ERR: Scan region selected of running region.
12	RWX	PREVENTED_SCAN_COLLISION_ERR: PCB request to set scan region that is running.
13	RWX	OPCG_TRIGGER_ERR: OPCG gets triggered while OPCG is running.
14	RWX	PHASE_CNT_CORRUPTION_ERR: Phase counters inside chiplet out of SYNC.
15	RWX	CLOCK_CMD_PREVENTED_ERR: Security or scan collision prevented a clock start.
16	RWX	PARITY_ON_OPCG_SM_ERR: Parity error on OPCG state machine.
17	RWX	PARITY_ON_CLOCK_MUX_REG_ERR: Parity error on Scan/Clock Region/Type or Clock Status Register.
18	RWX	PARITY_ON_OPCG_REG_ERR: Parity error on OPCG registers.
19	RWX	PARITY_ON_SYNC_CONFIG_REG_ERR: Parity error on SYNC Configuration register.
20	RWX	PARITY_ON_XSTOP_REG_ERR: Parity error on checkstop register.
21	RWX	PARITY_ON_GPIO_REG_ERR: Parity error on GP0, 4, 5, and 6 registers.
22	RWX	CLKCMD_REQUEST_ERR: Region CLKCMD has one request pending, but receives a second CLKCMD.
23	RWX	CBS_PROTOCOL_ERR: CBS protocol error. REQ/ACK sequence wrong.
24	RWX	VITL_ALIGN_ERR: VITL Alignment is out of SYNC-to-SYNC pulse.
25	RWX	UNIT_SYNC_LVL_ERR: Unit0 and Unit1 SYNC LVL pulses are not in SYNC. AVP is broken.
26	RWX	PARITY_ON_SELFBOOT_CMD_STATE_ERR: Parity error on self-boot command state.
27	RWX	UNUSED_ERROR27: Unused.
28	RWX	UNUSED_ERROR28: Unused.
29	RWX	UNUSED_ERROR29: Unused.
30	RWX	UNUSED_ERROR30: Unused.
31	RWX	UNUSED_ERROR31: Unused.

Register Name	**OPCG Control Register Capture 1**
Mnemonic	TP.TCN0.N0.OPCG_CAPT1
Address	0000000002030010 (SCOM)
Description	OPCG Control Register Capture1

Bits	SCOM	Field Mnemonic: Description
0:3	RW	COUNT: 0000 = 12 cycle 0001 - 1100 = cycle 1-12 1101-1111 = 24 normal, not fast.
4:8	RW	SEQ_01: Sequence cycle 1 for normal/slow region (SL, NSL, ARY, SE, FCE).

Register Name	Debug CBS CC Register
Mnemonic	TP.TCN0.N0.DBG_CBS_CC
Address	0000000002030013 (SCOM)
Description	Debug CBS CC Register

Bits	SCOM	Field Mnemonic: Description
0	ROX	DBG_RESET_EP: Reset endpoint. CC and CTRL in reset state.
1	ROX	DBG_OPCG_IP: OPCG in progress, not in idle.
2	ROX	DBG_VITL_CLKOFF: VITL HLD stopped when enabled. Must have plat-depth cycles to switch this latch.
3	ROX	DBG_TEST_ENABLE: Test enable.
4	ROX	DBG_CBS_REQ: CBS Interface - Request (latched).
5:7	ROX	DBG_CBS_CMD: CBS Interface - Command (latched).
8:12	ROX	DBG_CBS_STATE: CBS command state machine 00000 = idle.
13	ROX	DBG_SECURITY_DEBUG_MODE: Status of the security mode bit.
14	ROX	DBG_CBS_PROTOCOL_ERROR: CBS protocol error. REQ is raised, but state machine is not in IDLE. Must reset_ep to clear this bit. No impact on IPL.
15	ROX	DBG_PCB_IDLE: PCB interface in IDLE state.
16:19	ROX	DBG_CURRENT_OPCG_MODE: Current/latest OPCG MODE: 0 = NOP 1 = LBIST 2 = ABIST 3 = RUNN 4 = SCAN0 5 = SCAN 6 = SCAN rotate 7 = SCAN with UpdateDR 8 = SCAN w CaptureDR 9 = CLK Change Request 10-15 = Unused

Bits	SCOM	Field Mnemonic: Description
20:23	ROX	DBG_LAST_OPCG_MODE: Previous OPCG mode.
24	ROX	DBG_PCB_ERROR: PCB interface error. Read CC Error Register or set CBS_CMD = 001 to switch FSI CBS. Debug Information to CC error Register.
25	ROX	DBG_PARITY_ERROR: Any parity error, non-PCB parity. Read CC Error Register or set CBS_CMD = 001 to switch FSI CBS. Debug Information to CC error Register.
26	ROX	DBG_CC_ERROR: Any other CC error. Read CC Error Register or set CBS_CMD = 001 to switch FSI CBS. Debug Information to CC error Register.
27	ROX	DBG_CHIPLET_IS_ALIGNED: Value is 1 when the a valid align pulse WS is sent out.
28	ROX	DBG_PCB_REQUEST_SINCE_RESET: Reset clears the bit. The first PCB request sets the bit.
29	ROX	DBG_PARANOIA_TEST_ENABLE_CHANGE: Rising or falling edge on test enable after reset. Must have reset_ep to clear, no impact on IPL.
30	ROX	DBG_PARANOIA_VITL_CLKOFF_CHANGE: Rising or falling edge on vitl_clkoff, after reset. Must have reset_ep to clear, no impact on IPL.
31	ROX	TP_TPFSI_CBS_ACK: Only representation of CC acknowled signal going to FSI.

Register Name	**CC Protect Mode Register**
Mnemonic	TP.TCN0.N0.CC_PROTECT_MODE_REG
Address	00000000020303FE (SCOM)
Description	CC Protect Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_READ_PROTECT_ENABLE: Enables read protection.
1	RW	CC_WRITE_PROTECT_ENABLE: Enables write protection.

Register Name	**Atomic Lock Register**
Mnemonic	TP.TCN0.N0.CC_ATOMIC_LOCK_REG
Address	00000000020303FF (SCOM)
Description	Atomic Lock Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_ATOMIC_LOCK_ENABLE: Enable atomic lock.
1:4	ROX	CC_ATOMIC_ID: Atomic ID.
5:7	RO	constant = 0b000
8:15	ROX	CC_ATOMIC_ACTIVITY: Atomic lock counter.

Register Name	**Global Checkstop FIR Register**
Mnemonic	TP.TCN0.N0.XFIR
Address	0000000002040000 (SCOM)
Description	Global checkstop FIR

Bits	SCOM	Field Mnemonic: Description
0	RWX	XFIR_IN0: Summary bit (any checkstop).
1	RWX	XFIR_IN1: Checkstop broadcast using OOB.
2	RWX	XFIR_IN2: Unused.
3	RWX	XFIR_IN3: Checkstop from pervasive unit.

Bits	SCOM	Field Mnemonic: Description
4	RWX	XFIR_IN4: Checkstop from NX0.
5	RWX	XFIR_IN5: Checkstop from NX1.
6	RWX	XFIR_IN6: Checkstop from CXA0 FIR.
7	RWX	XFIR_IN7: Unused.
8	RWX	XFIR_IN8: Checkstop from PBIOE0_0 FIR.
9	RWX	XFIR_IN9: Checkstop from PBIOE0_1 FIR.
10	RWX	XFIR_IN10: Checkstop from PBIOE1_0 FIR.
11	RWX	XFIR_IN11: Checkstop from PBIOE1_1 FIR.
12	RWX	XFIR_IN12: Checkstop from PBIOE2_0 FIR.
13	RWX	XFIR_IN13: Checkstop from PBIOE2_1 FIR.
14:25	RWX	XFIR_IN14: Unused.
26	RWX	XFIR_IN26: Checkstop on debug trigger.

Register Name	Global Recoverable FIR Register
Mnemonic	TP.TCN0.N0.RFIR
Address	0000000002040001 (SCOM)
Description	Global recoverable FIR

Bits	SCOM	Field Mnemonic: Description
0	ROX	RFIR_IN0: Local checkstop from NX and CXA0.
1	ROX	LFIR_RECOV_ERR: Recoverable error from pervasive unit.
2	ROX	RFIR_IN4: Recoverable from NX0.
3	ROX	RFIR_IN5: Recoverable from NX1.
4	ROX	RFIR_IN6: Recoverable from CXA0 FIR.
5	ROX	RFIR_IN7: Unused.
6	ROX	RFIR_IN8: Recoverable from PBIOE0_0 FIR.
7	ROX	RFIR_IN9: Recoverable from PBIOE0_1 FIR.
8	ROX	RFIR_IN10: Recoverable from PBIOE1_0 FIR.
9	ROX	RFIR_IN11: Recoverable from PBIOE1_1 FIR.
10	ROX	RFIR_IN12: Recoverable from PBIOE2_0 FIR.
11	ROX	RFIR_IN13: Recoverable from PBIOE2_1 FIR.
12:23	ROX	RFIR_IN14: Unused.

Register Name	FIR Mask Register
Mnemonic	TP.TCN0.N0.FIR_MASK
Address	0000000002040002 (SCOM)
Description	FIR Mask

Bits	SCOM	Field Mnemonic: Description
0	RW	FIR_MASK_IN0: Mask for XFIR/RFIR summary bit.
1	RW	FIR_MASK_IN1: Mask for XFIR bit received via OOB broadcast.
2	RW	FIR_MASK_IN2: Unused.
3	RW	FIR_MASK_IN3: Mask for XFIR from pervasive unit.
4	RW	FIR_MASK_IN4: Mask for nx0 XFIR and RFIR.
5	RW	FIR_MASK_IN5: Mask for nx1 XFIR and RFIR.
6	RW	FIR_MASK_IN6: Mask for CXA0 XFIR and RFIR.

Bits	SCOM	Field Mnemonic: Description
7	RW	FIR_MASK_IN7: Unused.
8	RW	FIR_MASK_IN8: Mask for PBIOE0_0 XFIR and RFIR.
9	RW	FIR_MASK_IN9: Mask for PBIOE0_1 XFIR and RFIR.
10	RW	FIR_MASK_IN10: Mask for PBIOE1_0 XFIR and RFIR.
11	RW	FIR_MASK_IN11: Mask for PBIOE1_1 XFIR and RFIR.
12	RW	FIR_MASK_IN12: mask for PBIOE2_0 XFIR and RFIR.
13	RW	FIR_MASK_IN13: Mask for PBIOE2_1 XFIR and RFIR.
14:25	RW	FIR_MASK_IN14: Unused.
26	RW	FIR_MASK_IN26: Mask for debug trigger and local checkstop to recoverable error.

Register Name	Special Attention Register
Mnemonic	TP.TCN0.N0.SPATTN
Address	0000000002040004 (SCOM) 0000000002040005 (SCOM1) 0000000002040006 (SCOM2)
Description	Special Attention

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:9	ROX	NCX	NCX	SPATTN_IN: Unused special attentions.

Register Name	Special Attention Mask Register
Mnemonic	TP.TCN0.N0.SPA_MASK
Address	0000000002040007 (SCOM)
Description	Special Attention Mask

Bits	SCOM	Field Mnemonic: Description
0:9	RW	SPA_MASK_IN: Special attention mask.

Register Name	Mode Register
Mnemonic	TP.TCN0.N0.EPS.FIR.MODE_REG
Address	0000000002040008 (SCOM)
Description	Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	MODE_IN0: Unused.
1	RW	MODE_IN1: Unused.
2	RW	MODE_IN2: Unused.
3	RW	MODE_IN3: Unused.
4	RW	MODE_IN4: Stop chip TOD on checkstop (unused in POWER9).
5	RW	MODE_IN5: Stop chip TOD on Recoverable (unused in POWER9).

Bits	SCOM	Field Mnemonic: Description
6	RW	MODE_IN6: Disable propagation of checkstop to other chips.
7	RW	MODE_IN7: Unused.
8	RW	MODE_IN8: Enables checkstop on special attention.
9	RW	MODE_IN9: mask_direct/local_error.
10	RW	MODE_IN10: Unused.
11	RW	MODE_IN11: Unused.
12:15	RW	MODE_IN: Unused.

Register Name	Host Attention Register
Mnemonic	TP.TCN0.N0.HOSTATTN
Address	0000000002040009 (SCOM)
Description	Host Attention

Bits	SCOM	Field Mnemonic: Description
0	ROX	HOSTATTN_IN0: Host Attention summary bit.
1	ROX	HOSTATTN_IN1: Unused.
2	ROX	HOSTATTN_IN2: Unused.
3	ROX	HOSTATTN_IN3: Unused.
4	ROX	HOSTATTN_IN4: Unused.
5	ROX	HOSTATTN_IN5: Unused.
6	ROX	HOSTATTN_IN6: Unused.
7	ROX	HOSTATTN_IN7: Unused.
8	ROX	HOSTATTN_IN8: Unused.
9	ROX	HOSTATTN_IN9: Unused.
10	ROX	HOSTATTN_IN10: Unused.
11	ROX	HOSTATTN_IN11: Unused.
12	ROX	HOSTATTN_IN12: Unused.
13	ROX	HOSTATTN_IN13: Unused.
14	ROX	HOSTATTN_IN14: Unused.
15	ROX	HOSTATTN_IN15: Unused.
16	ROX	HOSTATTN_IN16: Unused.
17	ROX	HOSTATTN_IN17: Unused.
18	ROX	HOSTATTN_IN18: Unused.
19	ROX	HOSTATTN_IN19: Unused.
20	ROX	HOSTATTN_IN20: Unused.
21	ROX	HOSTATTN_IN21: Unused.
22	ROX	HOSTATTN_IN22: Unused.

Register Name	Local FIR Register
Mnemonic	TP.TCN0.N0.LOCAL_FIR
Address	000000000204000A (SCOM) 000000000204000B (SCOM1) 000000000204000C (SCOM2)
Description	Local FIR

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	FIR_IN0: CFIR internal parity error.
1	RWX	WOX_AND	WOX_OR	FIR_IN1: Errors from control.
2	RWX	WOX_AND	WOX_OR	FIR_IN2: Local errors from CC (PCB error).
3	RWX	WOX_AND	WOX_OR	FIR_IN3: Local errors from CC (OPCG, parity, scan collision, and so on).
4	RWX	WOX_AND	WOX_OR	FIR_IN4: Local errors from PSC (PCB error).
5	RWX	WOX_AND	WOX_OR	FIR_IN5: Local errors from PSC (parity error).
6	RWX	WOX_AND	WOX_OR	FIR_IN6: Local errors from Thermal (parity error).
7	RWX	WOX_AND	WOX_OR	FIR_IN7: Local errors from Thermal (PCB error.
8	RWX	WOX_AND	WOX_OR	FIR_IN8: Local errors from Thermal (Trip error critical.
9	RWX	WOX_AND	WOX_OR	FIR_IN9: Local errors from Thermal (Trip error fatal).
10	RWX	WOX_AND	WOX_OR	FIR_IN10: Thermal volt trip error.
11	RWX	WOX_AND	WOX_OR	FIR_IN11: Local errors from debug (SCOM error).
12	RWX	WOX_AND	WOX_OR	FIR_IN12: Local errors from trace Array0 (SCOM error).
13	RWX	WOX_AND	WOX_OR	FIR_IN13: Local errors from trace Array0.
14	RWX	WOX_AND	WOX_OR	FIR_IN14: Local errors from trace Array1 (SCOM error).
15	RWX	WOX_AND	WOX_OR	FIR_IN15: Local errors from trace Array1.
16	RWX	WOX_AND	WOX_OR	FIR_IN16: Unused.
17	RWX	WOX_AND	WOX_OR	FIR_IN17: Unused.
18	RWX	WOX_AND	WOX_OR	FIR_IN18: Unused.
19	RWX	WOX_AND	WOX_OR	FIR_IN19: Unused.
20	RWX	WOX_AND	WOX_OR	FIR_IN20: Unused.
21	RWX	WOX_AND	WOX_OR	FIR_IN21: Unused.
22	RWX	WOX_AND	WOX_OR	FIR_IN22: Unused.
23	RWX	WOX_AND	WOX_OR	FIR_IN23: Unused.
24	RWX	WOX_AND	WOX_OR	FIR_IN24: Errors from Bsense I/O.
25	RWX	WOX_AND	WOX_OR	FIR_IN25: Unused.
26	RWX	WOX_AND	WOX_OR	FIR_IN26: Unused.
27	RWX	WOX_AND	WOX_OR	FIR_IN27: Unused.
28	RWX	WOX_AND	WOX_OR	FIR_IN28: Unused.
29	RWX	WOX_AND	WOX_OR	FIR_IN29: Unused.
30	RWX	WOX_AND	WOX_OR	FIR_IN30: Unused.
31	RWX	WOX_AND	WOX_OR	FIR_IN31: Unused.
32	RWX	WOX_AND	WOX_OR	FIR_IN32: Unused.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
33	RWX	WOX_AND	WOX_OR	FIR_IN33: Unused.
34	RWX	WOX_AND	WOX_OR	FIR_IN34: Unused.
35	RWX	WOX_AND	WOX_OR	FIR_IN35: Unused.
36	RWX	WOX_AND	WOX_OR	FIR_IN36: Unused.
37	RWX	WOX_AND	WOX_OR	FIR_IN37: Unused.
38	RWX	WOX_AND	WOX_OR	FIR_IN38: Unused.
39	RWX	WOX_AND	WOX_OR	FIR_IN39: Unused.
40	RWX	WOX_AND	WOX_OR	FIR_IN40: Unused.
41	RWX	WOX_AND	WOX_OR	FIR_IN41: Malfunction-alert broadcast using OOB.

Register Name	**Local FIR Mask Register**
Mnemonic	TP.TCN0.N0.EPS.FIR.LOCAL_FIR_MASK
Address	000000000204000D (SCOM) 000000000204000E (SCOM1) 000000000204000F (SCOM2)
Description	Local FIR Mask

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:41	RW	WO_AND	WO_OR	LFIR_MASK_IN: Mask for LEM error-collection vector.

Register Name	**Local FIR Action0 Register**
Mnemonic	TP.TCN0.N0.EPS.FIR.LOCAL_FIR_ACTION0
Address	0000000002040010 (SCOM)
Description	Local FIR Action0

Bits	SCOM	Field Mnemonic: Description
0:41	RW	FIR_ACTION0_IN: Action0 mask.

Register Name	**Local FIR Action1 Register**
Mnemonic	TP.TCN0.N0.EPS.FIR.LOCAL_FIR_ACTION1
Address	0000000002040011 (SCOM)
Description	Local FIR Action1

Bits	SCOM	Field Mnemonic: Description
0:41	RW	FIR_ACTION1_IN: Action1 mask.

Register Name	Group Checkstop Mask Register
Mnemonic	TP.TCN0.N0.EPS.FIR.GXSTOP_TRIG_REG
Address	0000000002040013 (SCOM)
Description	Group Checkstop Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP_TRIG_IN0: Mask bit for system checkstop.
1	RW	GXSTP_TRIG_IN1: Mask bit for recoverable error.
2	RW	GXSTP_TRIG_IN2: Mask bit for special attention.
3	RW	GXSTP_TRIG_IN3: Mask bit for local checkstop.
4	RW	GXSTP_TRIG_IN4: Mask bit for type-4 error (host attention).
5	RW	GXSTP_TRIG_IN5: Mask bit for OOB sys_checkstop Input (0).
6	RW	GXSTP_TRIG_IN6: Mask bit for OOB sys_checkstop Input (1).
7	RW	GXSTP_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP_TRIG_IN9: Mask bit for debug checkstop on trigger.
10	RW	GXSTP_TRIG_IN10: Unused.
11	RW	GXSTP_TRIG_IN11: Unused.

Register Name	Group0 Checkstop Mask Register
Mnemonic	TP.TCN0.N0.EPS.FIR.GXSTOP0_MASK_REG
Address	0000000002040014 (SCOM)
Description	Group0 Checkstop Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP0_TRIG_IN0: Mask bit for system checkstop.
1	RW	GXSTP0_TRIG_IN1: Mask bit for recoverable error
2	RW	GXSTP0_TRIG_IN2: Mask bit for special attention.
3	RW	GXSTP0_TRIG_IN3: Mask bit for local checkstop.
4	RW	GXSTP0_TRIG_IN4: Mask bit for YYPE 4 error (host attention).
5	RW	GXSTP0_TRIG_IN5: Mask bit for OOB sys_checkstop Input (0).
6	RW	GXSTP0_TRIG_IN6: Mask bit for OOB sys_checkstop Input (1).
7	RW	GXSTP0_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP0_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP0_TRIG_IN9: Mask bit for debug checkstop on trigger.
10	RW	GXSTP0_TRIG_IN10: Unused.
11	RW	GXSTP0_TRIG_IN11: Unused.

Register Name	Group1 Checkstop Mask Register
Mnemonic	TP.TCN0.N0.EPS.FIR.GXSTOP1_MASK_REG
Address	0000000002040015 (SCOM)
Description	Group1 Checkstop Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP1_TRIG_IN0: Mask bit for system checkstop.
1	RW	GXSTP1_TRIG_IN1: Mask bit for recoverable error.
2	RW	GXSTP1_TRIG_IN2: Mask bit for special attention.
3	RW	GXSTP1_TRIG_IN3: Mask bit for local checkstop.
4	RW	GXSTP1_TRIG_IN4: Mask bit for type-4 error (host attention).
5	RW	GXSTP1_TRIG_IN5: Mask bit for OOB sys_checkstop Input (0).
6	RW	GXSTP1_TRIG_IN6: Mask bit for OOB sys_checkstop Input (1).
7	RW	GXSTP1_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP1_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP1_TRIG_IN9: Mask bit for debug checkstop on trigger.
10	RW	GXSTP1_TRIG_IN10: Unused.
11	RW	GXSTP1_TRIG_IN11: Unused.

Register Name	Group2 Checkstop Mask Register
Mnemonic	TP.TCN0.N0.EPS.FIR.GXSTOP2_MASK_REG
Address	0000000002040016 (SCOM)
Description	Group2 Checkstop Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP2_TRIG_IN0: Mask bit for system checkstop.
1	RW	GXSTP2_TRIG_IN1: Mask bit for recoverable error.
2	RW	GXSTP2_TRIG_IN2: Mask bit for special attention.
3	RW	GXSTP2_TRIG_IN3: Mask bit for local checkstop.
4	RW	GXSTP2_TRIG_IN4: Mask bit for type 4 error (host attention).
5	RW	GXSTP2_TRIG_IN5: Mask bit for OOB sys_checkstop Input (0).
6	RW	GXSTP2_TRIG_IN6: Mask bit for OOB sys_checkstop Input (1).
7	RW	GXSTP2_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP2_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP2_TRIG_IN9: Mask bit for debug checkstop on Trigger.
10	RW	GXSTP2_TRIG_IN10: Unused.
11	RW	GXSTP2_TRIG_IN11: Unused.

Register Name	Summary Mask Register
Mnemonic	TP.TCN0.N0.EPS.FIR.SUM_MASK_REG
Address	0000000002040017 (SCOM)
Description	Summary Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RW	SMASK_IN0: System checkstop summary bit.
1	RW	SMASK_IN1: Recoverable summary bit.
2	RW	SMASK_IN2: Special attention summary bit.
3	RW	SMASK_IN3: Local checkstop summary bit.
4	RW	SMASK_IN4: Type4 host attention summary bit.

Register Name	Local Checkstop Register
Mnemonic	TP.TCN0.N0.LOCAL_XSTOP_ERR
Address	0000000002040018 (SCOM)
Description	Local Checkstop

Bits	SCOM	Field Mnemonic: Description
0	ROX	LOCAL_XSTOP_IN0: Local checkstop summary bit.
1	ROX	LOCAL_XSTOP_IN1: Local checkstop from NX, bit 0.
2	ROX	LOCAL_XSTOP_IN2: Local checkstop from NX, bit 1.
3	ROX	LOCAL_XSTOP_IN3: Local checkstop from CX.
4	ROX	LOCAL_XSTOP_IN4: Unused.
5	ROX	LOCAL_XSTOP_IN5: Unused.
6	ROX	LOCAL_XSTOP_IN6: Unused.
7	ROX	LOCAL_XSTOP_IN7: Unused.
8	ROX	LOCAL_XSTOP_IN8: Unused.
9	ROX	LOCAL_XSTOP_IN9: Unused.
10	ROX	LOCAL_XSTOP_IN10: Unused.
11	ROX	LOCAL_XSTOP_IN11: Unused.
12	ROX	LOCAL_XSTOP_IN12: Unused.
13	ROX	LOCAL_XSTOP_IN13: Unused.
14	ROX	LOCAL_XSTOP_IN14: Unused.
15	ROX	LOCAL_XSTOP_IN15: Unused.
16	ROX	LOCAL_XSTOP_IN16: Unused.
17	ROX	LOCAL_XSTOP_IN17: Unused.
18	ROX	LOCAL_XSTOP_IN18: Unused.
19	ROX	LOCAL_XSTOP_IN19: Unused.
20	ROX	LOCAL_XSTOP_IN20: Unused.
21	ROX	LOCAL_XSTOP_IN21: Unused.

Bits	SCOM	Field Mnemonic: Description
22	ROX	LOCAL_XSTOP_IN22: Unused.

Register Name	Local Checkstop Mask Register
Mnemonic	TP.TCN0.N0.LOCAL_XSTOP_MASK
Address	0000000002040019 (SCOM)
Description	Local Checkstop Mask

Bits	SCOM	Field Mnemonic: Description
0:21	RW	LOCAL_XSTOP_MASK_IN: Local checkstop mask.

Register Name	Host Attention Mask Register
Mnemonic	TP.TCN0.N0.HOSTATTN_MASK
Address	000000000204001A (SCOM)
Description	Host Attention Mask

Bits	SCOM	Field Mnemonic: Description
0:21	RW	HOSTATTN_MASK_IN: Host attention mask.

Register Name	DTS Thermal Sensor Loop1 Results Register
Mnemonic	TP.TCN0.N0.EPS.THERM.DTS_RESULT0
Address	0000000002050000 (SCOM)
Description	DTS Thermal Sensor loop1 Results

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	DTS_0_RESULT: Calibrated DTS result of sensor with ID 0.
16:31	ROX	DTS_1_RESULT: Calibrated DTS result of sensor with ID 1.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	DTS Trace Results Register
Mnemonic	TP.TCN0.N0.EPS.THERM.DTS_TRC_RESULT
Address	0000000002050003 (SCOM)
Description	DTS Trace Results

Bits	SCOM	Field Mnemonic: Description
0:43	ROX	TIMESTAMP_COUNTER_VALUE: Time stamp counter value during DTS trace mode.
44	ROX	TIMESTAMP_COUNTER_OVERFLOW_ERR: Overflow error bit of the time stamp counter value during DTS trace mode.
45:47	RO	constant = 0b000
48:63	ROX	DTS_1_RESULT: Calibrated DTS Result of sensor with ID 1.

Register Name	CPM & DTS Enables and Controls Register
Mnemonic	TP.TCN0.N0.EPS.THERM.THERM_MODE_REG
Address	000000000205000F (SCOM)
Description	CPM & DTS enables and Controls

Bits	SCOM	Field Mnemonic: Description
0	RW	THERM_DIS_CPM_BUBBLE_CORR: Critical path result bubble correction active.
1	RW	THERM_FORCE_THRES_ACT: force tpc_therm_thres_mac clock gating off and activates clocks.
2:4	RW	THERM_THRES_TRIP_ENA: therm_thres_trip compare enables. 1xx: trip0 - warning. x1x: trip1 - critical. xx1: trip2 - fatal.
5	RW	THERM_DTS_SAMPLE_ENA: When set to 0, there is no DTS sampling. When set to 1, DTS sampling is enabled and below-counter compare match can occur.
6:9	RW	THERM_SAMPLE_PULSE_CNT: A 16 MHz, sample pulse is fed into an 18-bit counter. With the therm_sample_pulse_cnt, it is possible to select a high-order bit of the counter to enable a resolutions of sampling DTSS between 2.5 us and 80 ms. An edge detection circuit detects the rising edge of the selected counter bit and this triggers a DTS sample. 0000: 16 ms. 0001: 8 ms. 0010: 4 ms. 0011: 2 ms. 0100: 1 ms. 0101: 0.5 ms. 0110: 250 µs. 0111: 125 µs. 1000: 62 .5 µs. 1001: 31.3 µs. 1010: 15.6 µs. 1011: 7.8 µs. 1100: 3.9 µs. 1101: 2 µs. 1110: 1 µs. 1111: 0.5 µs.
10:11	RW	THERM_THRES_MODE_ENA: Forces maximum or minimum mode in threshold unit: 00: Off. 11: Illegal. 10: Maximum mode. 01: Minimum mode.
12	RW	DTS_TRIGGER_MODE: Unused.
13	RW	DTS_TRIGGER_SEL: Unused.
14	RW	THERM_THRES_OVERFLOW_MASK: When set to 0, therm_overflow_err is enabled. When set to 1, therm_overflow_err will be disabled.
15	RW	THERM_MODE_UNUSED: Unused.
16:19	RW	THERM_DTS_READ_SEL: Selects which DTS result is provided with PCB read addr_v(4): 0000: DTS 0. 0001: DTS 1. 0010: DTS 2. 0100: DTS 4. 1111: Worst-case sensor.
20:21	RW	THERM_DTS_ENABLE_L1: Loop1 DTS enables: 1x: DTS 0 available. x1: DTS 1 available.

Bits	SCOM	Field Mnemonic: Description
22:34	RO	constant = 0b0000000000000
35:36	RW	Reserved field.

Register Name	Skitter Control Register
Mnemonic	TP.TCN0.N0.EPS.THERM.SKITTER_MODE_REG
Address	0000000002050010 (SCOM)
Description	Skitter Control Register

Bits	SCOM	Field Mnemonic: Description
0	RW	SKITTER_HOLD_SAMPLE: Forces skitter to hold current sample.
1	RW	DISABLE_SKITTER_STICKINESS: When set to 0, accumulation mode. When set to 1, samples new value each cycle and resets the sticky value.
2:3	RW	SKITTER_MODE_UNUSED1: Unused.
4:5	RW	SKITTER_HOLD_DBGTRIG_SEL: bit0: hold_on_trigger0. bit1: _on_trigger1.
6:7	RW	SKITTER_RESET_TRIG_SEL: bit0: reset_sticky_on_trigger0. bit1: reset_sticky_on_trigger1.
8:9	RW	SKITTER_SAMPLE_GUTS: Selects guts to measure: 00: Guts1. 01: Guts2. 10: Guts3. 11: Guts4.
10:43	RO	constant = 0b00000000000000000000000000000000000
44	ROX	SKITTER_HOLD_SAMPLE_WITH_TRIGGER: Forces skitter to hold current sample on the debug trigger. This bit has the highest priority.
45	ROX	SKITTER_DATA_V_LT: When set to 1, the data requested by a skitter force read register has finished and data is present in the skitter data register in the collector macro. The data can be read by any combination of V25/V26/V27 PCB reads.

Register Name	Error Injection Control Register
Mnemonic	TP.TCN0.N0.EPS.THERM.INJECT_REG
Address	0000000002050011 (SCOM)
Description	Error Injection Control Register

Bits	SCOM	Field Mnemonic: Description
0:1	RW	THERM_INJECT_TRIP: 00: no injection. 01: Warning trip level injection. 10: Critical trip level injection. 11: Fatal trip level injection.
2:3	RW	THERM_INJECT_MODE: 00: no injection. 01: Injection on the next DTS sample. 10: Solid injection for the next DTS samples till bit setting changes. 11: Not used.

Register Name	Control/Force Reset Register
Mnemonic	TP.TCN0.N0.EPS.THERM.CONTROL_REG
Address	0000000002050012 (SCOM)
Description	Control/Force Reset Register

Bits	SCOM	Field Mnemonic: Description
0	WO_1P	Reserved field.
1	WO_1P	Reserved field.
2	WO_1P	Reserved field.
3	WO_1P	Reserved field.
4	WO_1P	Reserved field.
5	WO_1P	Reserved field.
6	WO_1P	Reserved field.
7	WO_1P	Reserved field.
8	WO_1P	Reserved field.
9	WO_1P	Reserved field.
10	WO_1P	Reserved field.
11	WO_1P	Reserved field.
12	WO_1P	Reserved field.

Register Name	Thermal Error Status Register
Mnemonic	TP.TCN0.N0.EPS.THERM.ERR_STATUS_REG
Address	0000000002050013 (SCOM)
Description	Thermal Error Status Register

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field.
1	ROX	Reserved field.
2	ROX	Reserved field.
3	ROX	Reserved field.
4	ROX	Reserved field.
5	ROX	Reserved field.
6	ROX	Reserved field.
7	ROX	Reserved field.
8	ROX	Reserved field.
9	ROX	Reserved field.
10	ROX	Reserved field.
11	ROX	Reserved field.
12	ROX	Reserved field.
13	ROX	Reserved field.

Bits	SCOM	Field Mnemonic: Description
14	ROX	Reserved field.
15	ROX	Reserved field.
16	ROX	SERIAL_SHIFTCNT_MODEREG_PARITY_ERR_MASK: Serial shift count parity error mask.
17	ROX	THERM_MODEREG_PARITY_ERR_MASK: Thermal Mode Register parity error mask.
18	ROX	SKITTER_MODEREG_PARITY_ERR_MASK: Skitter Mode Register parity error mask.
19	ROX	SKITTER_FORCEREG_PARITY_ERR_MASK: Skitter Force Register parity error mask.
20	ROX	SCAN_INIT_VERSION_REG_PARITY_ERR_MASK: Scan INIT Version Register parity error mask.
21	ROX	VOLT_MODEREG_PARITY_ERR_MASK: Volt Mode Register parity error mask.
22	RO	constant = 0b0
23	ROX	COUNT_STATE_ERR_MASK: Count state machine error mask.
24	ROX	RUN_STATE_ERR_MASK: Run state machine error mask.
25	ROX	THRES_STATE_ERR_MASK: thres state machine error mask.
26	ROX	OVERFLOW_ERR_MASK: DTS calibration calculation overflow error mask.
27	ROX	SHIFTER_PARITY_ERR_MASK: Shifter parity error mask.
28	ROX	SHIFTER_VALID_ERR_MASK: Shifter valid error mask.
29	ROX	TIMEOUT_ERR_MASK: Timeout error mask.
30	ROX	F_SKITTER_READ_ERR_MASK: Forces skitter read on the hot error mask.
31	ROX	PCB_ERR_MASK: Pervasive control bus error mask.
32:39	RO	constant = 0b00000000
40:43	ROX	Reserved field.
44:46	ROX	Reserved field.
47	ROX	Reserved field.
48	ROX	Reserved field.
49:50	ROX	Reserved field.
51:54	ROX	Reserved field.
55	ROX	Reserved field.
56	ROX	Reserved field.
57	ROX	Reserved field.
58	ROX	Reserved field.
59	ROX	Reserved field.
60:63	RO	constant = 0b0000

Register Name	Skitter Force Read Register
Mnemonic	TP.TCN0.N0.EPS.THERM.SKITTER_FORCE_REG
Address	0000000002050014 (SCOM)
Description	Skitter Force Read Register

Bits	SCOM	Field Mnemonic: Description
0	RW	F_SKITTER_READ: Forces the read of that particular skitter.

Register Name	Skitter Clock SRC Control Register
Mnemonic	TP.TCN0.N0.EPS.THERM.SKITTER_CLKSRC_REG
Address	0000000002050016 (SCOM)
Description	Skitter Clock SRC Control Register

Bits	SCOM	Field Mnemonic: Description
0:2	RW	SKITTER0_CLKSRC: Selects clock to measure: 000: Local mesh clock. 001: External pin skitter_c1_1_in. 010: Local d1clk only if d_mode = 1. 011: External pin skitter_c1_2_in. 100: Local lclk only if d_mode = 1. 101: External pin skitter_c1_3_in. 110: Unused. 111: External pin skitter_c1_4_in.
3:35	RO	constant = 0b00000000000000000000000000000000
36:37	RW	SKITTER0_DELAY_SELECT: Selects delay to be added between clock source multiplexer and inverter chain (base line delay is 12.2 ps) of skitter0. 00 - No delay. 01 - 0.6 ps. 10 - 1.8 ps. 11 - 5 ps.

Register Name	Skitter Data Register Read Bit 0:63
Mnemonic	TP.TCN0.N0.EPS.THERM.SKITTER_DATA0
Address	0000000002050019 (SCOM)
Description	Skitter Data Register Read Bit0:63

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved.

Register Name	Skitter Data Register Read Bit 32:95
Mnemonic	TP.TCN0.N0.EPS.THERM.SKITTER_DATA1
Address	000000000205001A (SCOM)
Description	Skitter Data Register Read Bit32:95

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved.

Register Name	Skitter Data Register Read Bit 64:127
Mnemonic	TP.TCN0.N0.EPS.THERM.SKITTER_DATA2
Address	000000000205001B (SCOM)
Description	Skitter Data Register Read Bit 64:127

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved.

Register Name	Time-Stamp Counter Read Register
Mnemonic	TP.TCN0.N0.EPS.THERM.TIMESTAMP_COUNTER_READ
Address	000000000205001C (SCOM)
Description	Time-Stamp Counter Read

Bits	SCOM	Field Mnemonic: Description
0:43	ROX	TIMESTAMP_COUNTER_VALUE: Time stamp counter value during DTS trace mode.
44	ROX	TIMESTAMP_COUNTER_OVERFLOW_ERR: Overflow error bit of the time stamp counter value during DTS trace mode.

5. PB Chiplet (Nest Chiplet 0 PCB Slave)

The POWER9 processor registers are listed alphabetically by mnemonic in the following address table.

The POWER9 processor registers are listed in the following tables.

Register Name	**Primary PCB Slave Address Register**
Mnemonic	TP.TPCHIP.NET.PCBSLN0.PRIMARY_ADDRESS_REG
Address	00000000020F0000 (SCOM)
Description	This register contains the PCB slave's primary address.

Bits	SCOM	Field Mnemonic: Description
0:5	RO	Reserved field. This is the primary_address setting.

Register Name	Multicast Group 1 Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.MULTICAST_GROUP_1
Address	00000000020F0001 (SCOM)
Description	Multicast Group Registers 1 – 4 are used to are used to assign chiplets to a specific multicast group within the pervasive connect bus (PCB). Multicast groups make it possible to address more than a single chiplet at a time. They are used to read or write the same resource in multiple chiplets at the same time. **Note:** Multicast groups are initially set up at IPL, but they can be modified at any time by firmware or power management code.

Bits	SCOM	Field Mnemonic: Description
0:2	RO	constant = 0b111
3:5	RW	MULTICAST1_GROUP: Multicast group1 setting. Set this field to a multicast group that this chiplet should be a member of. The chiplet can be assigned to up to four multicast groups by setting this field in the four multicast group registers to the corresponding multicast group numbers. If the chiplet is member of less than four multicast groups, set this field to 0b111 in the multicast group register that is not required. The 0b111 setting indicates multicast group 7; all chiplets are members of multicast group 7 regardless of any multicast register being set to 0b111. 000: Multicast group 0. 001: Multicast group 1. 010: Multicast group 2. 011: Multicast group 3. 100: Multicast group 4 – unused. 101: Multicast group 5 – unused. 110: Multicast group 6 – unused. 111: Multicast group 7.

Register Name	Multicast Group 2 Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.MULTICAST_GROUP_2
Address	00000000020F0002 (SCOM)
Description	Multicast Group Registers 1 – 4 are used to are used to assign chiplets to a specific multicast group within the pervasive connect bus (PCB). Multicast groups make it possible to address more than a single chiplet at a time. They are used to read or write the same resource in multiple chiplets at the same time. **Note:** Multicast groups are initially set up at IPL, but they can be modified at any time by firmware or power management code.

Bits	SCOM	Field Mnemonic: Description
0:2	RO	constant = 0b111

Bits	SCOM	Field Mnemonic: Description
3:5	RW	MULTICAST2_GROUP: Multicast group2 setting. Set this field to a multicast group that this chiplet should be a member of. The chiplet can be assigned to up to four multicast groups by setting this field in the four multicast group registers to the corresponding multicast group numbers. If the chiplet is member of less than four multicast groups, set this field to 0b111 in the multicast group register that is not required. The 0b111 setting indicates multicast group 7; all chiplets are members of multicast group 7 regardless of any multicast register being set to 0b111. 000: Multicast group 0. 001: Multicast group 1. 010: Multicast group 2. 011: Multicast group 3. 100: Multicast group 4 – unused. 101: Multicast group 5 – unused. 110: Multicast group 6 – unused. 111: Multicast group 7.

Register Name	**Multicast Group 3 Register**
Mnemonic	TP.TPCHIP.NET.PCBSLN0.MULTICAST_GROUP_3
Address	00000000020F0003 (SCOM)
Description	Multicast Group Registers 1 – 4 are used to are used to assign chiplets to a specific multicast group within the pervasive connect bus (PCB). Multicast groups make it possible to address more than a single chiplet at a time. They are used to read or write the same resource in multiple chiplets at the same time. **Note:** Multicast groups are initially set up at IPL, but they can be modified at any time by firmware or power management code.

Bits	SCOM	Field Mnemonic: Description
0:2	RO	constant = 0b111
3:5	RW	MULTICAST3_GROUP: Multicast group3 setting. Set this field to a multicast group that this chiplet should be a member of. The chiplet can be assigned to up to four multicast groups by setting this field in the four multicast group registers to the corresponding multicast group numbers. If the chiplet is member of less than four multicast groups, set this field to 0b111 in the multicast group register that is not required. The 0b111 setting indicates multicast group 7; all chiplets are members of multicast group 7 regardless of any multicast register being set to 0b111. 000: Multicast group 0. 001: Multicast group 1. 010: Multicast group 2. 011: Multicast group 3. 100: Multicast group 4 – unused. 101: Multicast group 5 – unused. 110: Multicast group 6 – unused. 111: Multicast group 7.

Register Name	**Multicast Group 4 Register**
Mnemonic	TP.TPCHIP.NET.PCBSLN0.MULTICAST_GROUP_4
Address	00000000020F0004 (SCOM)
Description	Multicast Group Registers 1 – 4 are used to are used to assign chiplets to a specific multicast group within the pervasive connect bus (PCB). Multicast groups make it possible to address more than a single chiplet at a time. They are used to read or write the same resource in multiple chiplets at the same time. **Note:** Multicast groups are initially set up at IPL, but they can be modified at any time by firmware or power management code.

Bits	SCOM	Field Mnemonic: Description
0:2	RO	constant = 0b111
3:5	RW	MULTICAST4_GROUP: Multicast group4 setting. Set this field to a multicast group that this chiplet should be a member of. The chiplet can be assigned to up to four multicast groups by setting this field in the four multicast group registers to the corresponding multicast group numbers. If the chiplet is member of less than four multicast groups, set this field to 0b111 in the multicast group register that is not required. The 0b111 setting indicates multicast group 7; all chiplets are members of multicast group 7 regardless of any multicast register being set to 0b111. 000: Multicast group 0. 001: Multicast group 1. 010: Multicast group 2. 011: Multicast group 3. 100: Multicast group 4 – unused. 101: Multicast group 5 – unused. 110: Multicast group 6 – unused. 111: Multicast group 7.

Register Name	Timeout Select Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.TIMEOUT_REG
Address	00000000020F0010 (SCOM)
Description	This register contains the int_timeout setting.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	Reserved field. This is the int_timeout setting.

Register Name	Assist Interrupt Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.ASSIST_INTERRUPT_REG
Address	00000000020F0011 (SCOM)
Description	This register contains the attn, recov, and xstop (checkstop) settings.

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field. This is the attn setting.
1	ROX	Reserved field. This is the recov setting.
2	ROX	Reserved field. This is the xstop setting.

Register Name	Vital Scan Out Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.VITAL_SCAN_OUT
Address	00000000020F0017 (SCOM)
Description	This register contains the vital scan out settings.

Bits	SCOM	Field Mnemonic: Description
0	ROX	RESERVED.

Register Name	Chiplet Heartbeat Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.HEARTBEAT_REG
Address	00000000020F0018 (SCOM)
Description	This register indicates whether a chiplet heartbeat is detected.

Bits	SCOM	Field Mnemonic: Description
0	ROX	HEARTBEAT_DEAD: A chiplet heartbeat is not detected.

Register Name	PLL Lock indications Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.PLL_LOCK_REG
Address	00000000020F0019 (SCOM)
Description	This register contains lock indications from the PLLs,

Bits	SCOM	Field Mnemonic: Description
0:3	ROX	Reserved field. This is the lock setting.

Register Name	Attention Interrupt Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.ATTN_INTERRUPT_REG
Address	00000000020F001A (SCOM)
Description	This register contains the attn setting.

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field. This is the attn setting.

Register Name	Recovery Interrupt Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.RECOV_INTERRUPT_REG
Address	00000000020F001B (SCOM)
Description	This register contains the recoverable interrupt setting.

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field. This is the recov setting.

Register Name	Checkstop Interrupt Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.XSTOP_INTERRUPT_REG
Address	00000000020F001C (SCOM)
Description	This register contains the checkstop interrupt setting.

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field. This is the xstop setting.

Register Name	Slave Configuration Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.SLAVE_CONFIG_REG
Address	00000000020F001E (SCOM)
Description	This is the slave configuration register.

Bits	SCOM	Field Mnemonic: Description
0	RW	CFG_DISABLE_PERV_THOLD_CHECK: This bit disables the pervasive threshold check.
1	RW	CFG_DISABLE_MALF_PULSE_GEN: This bit disables pulse generation for a malfunction alert. Switch back to level.
2	RW	CFG_STOP_HANG_CNT_SYS_XSTP: This bit disables the hang counter stop for a system checkstop.
3	RW	CFG_DISABLE_CL_ATOMIC_LOCK: This bit disables the atomic lock for chiplet accesses.
4	RW	CFG_DISABLE_HEARTBEAT: This bit disables the check for voltage and gridclock in the chiplet.
5	RW	CFG_DISABLE_FORCE_TO_ZERO: This bit disables the force to zero for error cases.
6	RW	CFG_PM_DISABLE: This bit disables the power management set/reset interface for net_ctrl registers.
7	RW	CFG_PM_MUX_DISABLE: This bit disables the power-management multiplex request signal.
8:13	RW	ERROR_MASK: These are mask bits for slave error reporting.
14:15	RW	RESERVED.

Register Name	Error Capture Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.ERROR_REG
Address	00000000020F001F (SCOM)
Description	This register is used to capture errors.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLEAR	CE_ERROR: Correctable error on the PCB bus.
1:3	RWX_WCLEAR	CHIPLET_ERRORS: Errors reported by the chiplet. 000 = No error. 001 = XSCOM command blocked due to pending errors. 010 = Chiplet offline. 011 = Partial good. 100 = Invalid address, address error, or bad access type. 101 = Clock error. 110 = Parity error, received unexpected packet, or wrong packet number. 111 = Timeout. This register is for debug purposes only. It only holds meaningful data if it is cleared after each error.
4	RWX_WCLEAR	PARITY_ERROR: Parity error on the PCB interface.
5	RWX_WCLEAR	DATA_BUFFER_ERROR: Parity error in the data buffer.
6	RWX_WCLEAR	ADDR_BUFFER_ERROR: Parity error in the address buffer.
7	RWX_WCLEAR	PCB_FSM_ERROR: Invalid state error in the PCB FSM.
8	RWX_WCLEAR	CL_FSM_ERROR: Invalid state error in the chiplet FSM.
9	RWX_WCLEAR	INT_RX_FSM_ERROR: Invalid state error in the interrupt RX FSM.
10	RWX_WCLEAR	INT_TX_FSM_ERROR: Invalid state error in the interrupt TX FSM.
11	RWX_WCLEAR	INT_TYPE_ERROR: Invalid interrupt type.
12	RWX_WCLEAR	CL_DATA_ERROR: Parity error on the chiplet interface.

Bits	SCOM	Field Mnemonic: Description
13	RWX_WCLEAR	INFO_ERROR: Parity error on the chiplet information lines.
14	RWX_WCLEAR	UNUSED_0:
15	RWX_WCLEAR	CHIPLET_ATOMIC_LOCK_ERROR: Chiplet atomic lock error.
16	RWX_WCLEAR	PCB_INTERFACE_ERROR: Error on the PCB interface component for the internal endpoint.
17	RWX_WCLEAR	CHIPLET_OFFLINE: A heartbeat check indicated that the chiplet is offline.
18	RWX_WCLEAR	EDRAM_SEQUENCE_ERR: Error in the eDRAM power-up sequence.
19	RWX_WCLEAR	CTRL_REG_PARITY_ERROR: The control register parity is bad.
20	RWX_WCLEAR	ADDRESS_REG_PARITY_ERROR: The address register parity is bad.
21	RWX_WCLEAR	TIMEOUT_REG_PARITY_ERROR: The timeout select register parity is bad.
22	RWX_WCLEAR	CONFIG_REG_PARITY_ERROR: The slave configuration register parity is bad.
23	RWX_WCLEAR	UNUSED_1:
24	RWX_WCLEAR	DIV_REG_PARITY_ERROR: The divider register parity is bad.
25:28	RWX_WCLEAR	PLL_UNLOCK_ERROR: Unlock from the chiplet PLL.

Register Name	Hang Pulse Generation Register 0
Mnemonic	TP.TPCHIP.NET.PCBSLN0.HANG_PULSE_0_REG
Address	00000000020F0020 (SCOM)
Description	This register contains hang pulse 0 information.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_0: This field contains the value of hang pulse 0. The time period equals 2^{value} x (precounter_reg + 1) / pcb_freq. The range of valid values is 34 – 0.
6	RW	SUPPRESS_HANG_0: If set to '1', hang pulses are suppressed in case of a checkstop.

Register Name	Hang Pulse Generation Register 1
Mnemonic	TP.TPCHIP.NET.PCBSLN0.HANG_PULSE_1_REG
Address	00000000020F0021 (SCOM)
Description	This register contains hang pulse 1 information.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_1: This field contains the value of hang pulse 1. The time period equals 2^{value} x (precounter_reg + 1) / pcb_freq. The range of valid values is 34 – 0.
6	RW	SUPPRESS_HANG_1: If set to '1', hang pulses are suppressed in case of a checkstop.

Register Name	Hang Pulse Generation Register 2
Mnemonic	TP.TPCHIP.NET.PCBSLN0.HANG_PULSE_2_REG
Address	00000000020F0022 (SCOM)
Description	This register contains hang pulse 2 information.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_2: This field contains the value of hang pulse 2. The time period equals 2^{value} x (precounter_reg + 1) / pcb_freq. The range of valid values is 34 – 0.
6	RW	SUPPRESS_HANG_2: If set to '1', hang pulses are suppressed in case of a checkstop.

Register Name	Hang Pulse Generation Register 3
Mnemonic	TP.TPCHIP.NET.PCBSLN0.HANG_PULSE_3_REG
Address	00000000020F0023 (SCOM)
Description	This register contains hang pulse 3 information.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_3: This field contains the value of hang pulse 3. The time period equals 2^{value} x (precounter_reg + 1) / pcb_freq. The range of valid values is 34 – 0.
6	RW	SUPPRESS_HANG_3: If set to '1', hang pulses are suppressed in case of a checkstop.

Register Name	Hang Pulse Generation Register 4
Mnemonic	TP.TPCHIP.NET.PCBSLN0.HANG_PULSE_4_REG
Address	00000000020F0024 (SCOM)
Description	This register contains hang pulse 4 information.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_4: This field contains the value of hang pulse 4. The time period equals 2^{value} x (precounter_reg + 1) / pcb_freq. The range of valid values is 34 – 0.
6	RW	SUPPRESS_HANG_4: If set to '1', hang pulses are suppressed in case of a checkstop.

Register Name	Hang Pulse Generation Register 5
Mnemonic	TP.TPCHIP.NET.PCBSLN0.HANG_PULSE_5_REG
Address	00000000020F0025 (SCOM)
Description	This register contains hang pulse 5 information. This hang counter is exclusively used to generate the malfunction alert pulse.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_5: This field contains the value of hang pulse 5. The time period equals 2^{value} x (precounter_reg + 1) / pcb_freq. The range of valid values is 34 – 0.
6	RW	SUPPRESS_HANG_5: If set to '1', hang pulses are suppressed in case of a checkstop.

Register Name	Hang Pulse Generation Register 6
Mnemonic	TP.TPCHIP.NET.PCBSLN0.HANG_PULSE_6_REG
Address	00000000020F0026 (SCOM)
Description	This register contains hang pulse 6 information. This hang counter is exclusively used for heartbeat generation.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_6: This field contains the value of hang pulse 6. The time period equals 2^{value} x (precounter_reg + 1) / pcb_freq. The range of valid values is 34 – 0.
6	RW	SUPPRESS_HANG_6: If set to '1', hang pulses are suppressed in case of a checkstop.

Register Name	Hang Counter Clock Divider Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.PRE_COUNTER_REG
Address	00000000020F0028 (SCOM)
Description	This register is the divider for the hang counter clock.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	PRE_COUNTER: This field is the divider for the hang counter clock. It divides the clock by n + 1. (The default is n = 0).

Register Name	eDRAM Control Status Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.EDRAM_STATUS
Address	00000000020F0029 (SCOM)
Description	This register contains the eDRAM control status.

Bits	SCOM	Field Mnemonic: Description
0:3	ROX	EDRAM_STAT: This field contains the eDRAM control status.

Register Name	NET CTRL0 Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.NET_CTRL0
Address	00000000020F0040 (SCOM) 00000000020F0041 (SCOM1) 00000000020F0042 (SCOM2)
Description	This register contains NET controls. It is not applicable to the pervasive chiplet.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	RWX_WAND	RWX_WOR	CHIPLET_ENABLE: This bit is set if the chiplet is good.
1	RWX	RWX_WAND	RWX_WOR	PCB_EP_RESET: The output is ORed to the global EP reset.
2	RWX	RWX_WAND	RWX_WOR	CLK_ASYNC_RESET: POWER9 cache chiplet: EQ skew adjust reset. POWER9 core chiplet: Core duty cycle adjust reset. POWER9 memory chiplet: Memory glitchless multiplexer asynchronous reset.
3	RWX	RWX_WAND	RWX_WOR	PLL_TEST_EN: Test enable for the chiplet PLL.
4	RWX	RWX_WAND	RWX_WOR	PLL_RESET: Reset for the chiplet PLL.
5	RWX	RWX_WAND	RWX_WOR	PLL_BYPASS: Enable bypass for the chiplet PLL.
6	RWX	RWX_WAND	RWX_WOR	VITAL_SCAN: Scan control for the chiplet vital domain.
7	RWX	RWX_WAND	RWX_WOR	VITAL_SCAN_IN: Scan in for the chiplet vital domain.
8	RWX	RWX_WAND	RWX_WOR	VITAL_PHASE: Phase for the vital domain.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
9	RWX	RWX_WAND	RWX_WOR	FLUSH_ALIGN_OVR: When set to 1, this mechanism overrides automatic control by the clock controller of the flush, flush_nto1, and align signals in the chiplet.
10	RWX	RWX_WAND	RWX_WOR	VITAL_AL: Align for vital domain.
11	RWX	RWX_WAND	RWX_WOR	ACT_DIS: ACT disable control for LCBs in the vital logic.
12	RWX	RWX_WAND	RWX_WOR	MPW1: Modify pulse width 1 (MPW1) control for LCBs in the vital logic.
13	RWX	RWX_WAND	RWX_WOR	MPW2: Modify pulse width 2 (MPW2) control for LCBs in the vital logic.
14	RWX	RWX_WAND	RWX_WOR	MPW3: Modify pulse width 3 (MPW3) control for LCBs in the vital logic.
15	RWX	RWX_WAND	RWX_WOR	DELAY_LCLKR: LCB control signal for the vital logic.
16	RWX	RWX_WAND	RWX_WOR	VITAL_THOLD: Threshold for the chiplet vital domain.
17	RWX	RWX_WAND	RWX_WOR	FLUSH_SCAN_N: Flush scan control.
18	RWX	RWX_WAND	RWX_WOR	FENCE_EN: Fencing signal for the chiplet.
19	RWX	RWX_WAND	RWX_WOR	CPLT_RCTRL: Chiplet receiver enable.
20	RWX	RWX_WAND	RWX_WOR	CPLT_DCTRL: Chiplet driver enable.
21	RWX	RWX_WAND	RWX_WOR	Reserved field. This is the pm_access setting.
22	RWX	RWX_WAND	RWX_WOR	ADJ_FUNC_CLKSEL: POWER9 cache chiplet: Clock select for the skew adjust/duty cycle adjust logic. POWER9 core chiplet: Skew sense to skew adjust fencing.
23:24	RWX	RWX_WAND	RWX_WOR	Reserved field. This is the pm_access setting.
25	RWX	RWX_WAND	RWX_WOR	TP_FENCE_PCB: Fence the chiplet from the PCB bus. If set, the PCB slave reports “Chiplet Offline.”
26	RWX	RWX_WAND	RWX_WOR	LVLTRANS_FENCE: Fence control for the level translators.
27	RWX	RWX_WAND	RWX_WOR	ARRAY_WRITE_ASSIST_EN: Array write assist.
28	RWX	RWX_WAND	RWX_WOR	HTB_INTEST: HTB intest mode.
29	RWX	RWX_WAND	RWX_WOR	HTB_EXTEST: HTB intest mode.
30	RWX	RWX_WAND	RWX_WOR	Reserved field. This is the pm_access setting.
31	RWX	RWX_WAND	RWX_WOR	PLLFORCE_OUT_EN: PLL force out enable.

Register Name	NET CTRL1 Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.NET_CTRL1
Address	00000000020F0044 (SCOM) 00000000020F0045 (SCOM1) 00000000020F0046 (SCOM2)
Description	This register contains NET controls. It is not applicable to the pervasive chiplet.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	RWX_WAND	RWX_WOR	PLL_CLKIN_SEL: PLL clkin select.
1	RWX	RWX_WAND	RWX_WOR	CLK_DCC_BYPASS_EN: POWER9 cache chiplet: L2-0, L2-1, L3 duty cycle control bypass. POWER9 core chiplet: Core duty cycle control bypass. POWER9 memory chiplet: Memory duty cycle control bypass.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
2	RWX	RWX_WAND	RWX_WOR	CLK_PDLY_BYPASS_EN: POWER9 cache chiplet: L2-0, L2-1, L3 programmable delay bypass. POWER9 core chiplet: Core programmable delay bypass. POWER9 memory chiplet: Memory programmable delay bypass.
3	RWX	RWX_WAND	RWX_WOR	CLK_DIV_BYPASS_EN: Enable clock divider bypass.
4	RWX	RWX_WAND	RWX_WOR	REFCLK_CLKMUX0_SEL: Select for reference clock mux0.
5	RWX	RWX_WAND	RWX_WOR	REFCLK_CLKMUX1_SEL: Select for reference clock mux1.
6	RWX	RWX_WAND	RWX_WOR	PLL_BNDY_BYPASS_EN: Bypass for IOP PLL.
7	RWX	RWX_WAND	RWX_WOR	Reserved field. This is the pcb_access setting.
8:15	RWX	RWX_WAND	RWX_WOR	DPLL_TEST_SEL: DPLL testout multiplexing.
16:19	RWX	RWX_WAND	RWX_WOR	SB_STRENGTH: Sector buffer driver strength.
20	RWX	RWX_WAND	RWX_WOR	ASYNC_TYPE: This is a control signal for testing latches with asynchronous set and reset capabilities.
21	RWX	RWX_WAND	RWX_WOR	ASYNC_OBS: This is a control signal for testing latches with asynchronous set and reset capabilities.
22	RWX	RWX_WAND	RWX_WOR	CPM_CAL_SET: CPM calibrate.
23	RWX	RWX_WAND	RWX_WOR	SENSEADJ_RESET0: POWER9 cache chiplet: L2-0 duty cycle adjust reset.
24	RWX	RWX_WAND	RWX_WOR	SENSEADJ_RESET1: POWER9 cache chiplet: L2-1 duty cycle adjust reset.
25	RWX	RWX_WAND	RWX_WOR	CLK_PULSE_EN: Clock pulse mode enable.
26:27	RWX	RWX_WAND	RWX_WOR	CLK_PULSE_MODE: Clock pulse mode setting.
28:31	RWX	RWX_WAND	RWX_WOR	Reserved field. This is the pcb_access setting.

Register Name	Protect Mode Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.PROTECT_MODE_REG
Address	00000000020F03FE (SCOM)
Description	This register is used to enable read and write protection.

Bits	SCOM	Field Mnemonic: Description
0	RW	READ_PROTECT_ENABLE: Enable read protection.
1	RW	WRITE_PROTECT_ENABLE: Enable write protection.

Register Name	Atomic Lock Register
Mnemonic	TP.TPCHIP.NET.PCBSLN0.ATOMIC_LOCK_REG
Address	00000000020F03FF (SCOM)
Description	This register enables an atomic lock and an atomic lock counter.

Bits	SCOM	Field Mnemonic: Description
0	RW	ATOMIC_LOCK_ENABLE: Enable the atomic lock.
1:4	ROX	ATOMIC_ID: This field contains the atomic ID.
5:7	RO	constant = 0b000

Bits	SCOM	Field Mnemonic: Description
8:15	ROX	ATOMIC_ACTIVITY: This is the atomic lock counter.

6. PB Chiplet (Nest Chiplet 1)

The POWER9 processor registers are listed alphabetically by mnemonic in the following address table.

Mnemonic	Address	Page
TP.TCN1.N1.CTRL_PROTECT_MODE_REG	0x00000000030003FE	732

The POWER9 processor registers are listed in the following tables.

Register Name	Chiplet Control Register 0
Mnemonic	TP.TCN1.N1.CPLT_CTRL0
Address	0000000003000000 (SCOM) 0000000003000010 (SCOM1) 0000000003000020 (SCOM2)
Description	This register contains the first set of vital chiplet controls.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_OR	WO_CLEAR	CTRL_CC_ABSTCLK_MUXSEL_DC: Select the ABIST clock source for arrays on a chiplet boundary. When set to 1, clocks are used from a chiplet with ABIST.
1	RW	WO_OR	WO_CLEAR	TC_UNIT_SYNCCLK_MUXSEL_DC: Select the synchronous clock for asynchronous latches. (The initial value is 1.)
2	RW	WO_OR	WO_CLEAR	CTRL_CC_FLUSHMODE_INH_DC: Prevent pipeline latches from going into flush mode. (The initial value is 1.)
3	RW	WO_OR	WO_CLEAR	CTRL_CC_FORCE_ALIGN_DC: Force an alignment signal to be sent. (The initial value is 1. Drop before dropping flushmode_inh.)
4	RW	WO_OR	WO_CLEAR	TC_UNIT_ARY_WRT_THRU_DC: Set the array into write through mode. Used for LBIST.
5	RW	WO_OR	WO_CLEAR	TC_UNIT_AVP_MODE: AVP mode. Switches from refresh pulse to phase counter.
6	RW	WO_OR	WO_CLEAR	FREE_USAGE_6A: Free usage.
7	RW	WO_OR	WO_CLEAR	FREE_USAGE_7A: Free usage.
8	RW	WO_OR	WO_CLEAR	CTRL_CC_ABIST_RECOV_DISABLE_DC: New signal to disable recovery.
9	RW	WO_OR	WO_CLEAR	FREE_USAGE_9A: Free usage.
10	RW	WO_OR	WO_CLEAR	TC_UNIT_IOBIST_TX_WRAP_ENABLE_DC:
11	RW	WO_OR	WO_CLEAR	RESERVED_11A: Reserved.
12	RW	WO_OR	WO_CLEAR	TC_SKIT_MODE_BIST_DC:
13	RW	WO_OR	WO_CLEAR	TC_UNIT_DETERMINISTIC_TEST_ENABLE_DC: Forces login into deterministic test mode. For example, for LBIST.
14	RW	WO_OR	WO_CLEAR	TC_UNIT_CONSTRAIN_SAFESCAN_DC: Safe scan of N1L latches. Prevent lock when switching SE.
15	RW	WO_OR	WO_CLEAR	TC_UNIT_RRFA_TEST_ENABLE_DC:
16	RW	WO_OR	WO_CLEAR	TC_NBTI_HDR_ENABLE_OVR_DC: NBTI.
17	RW	WO_OR	WO_CLEAR	TC_NBTI_PROBE_GATE_DC: NBTI.
18	RW	WO_OR	WO_CLEAR	RESERVED_18A: Reserved.
19	RW	WO_OR	WO_CLEAR	RESERVED_19A: Reserved.
20:27	RW	WO_OR	WO_CLEAR	TC_PSRO_SEL_DC: PSRO select.
28	RW	WO_OR	WO_CLEAR	TC_BSC_WRAPSEL_DC: Wrap select for BSC.
29	RW	WO_OR	WO_CLEAR	TC_BSC_INTMODE_DC: INT mode for BSC.
30	RW	WO_OR	WO_CLEAR	TC_BSC_INV_DC: INV for BSC mode.
31	RW	WO_OR	WO_CLEAR	TC_BSC_EXTMODE_DC: EXT mode for BSC.
32	RW	WO_OR	WO_CLEAR	TC_REFCLK_DRVR_EN_DC: Reference clock driver enable.
33	RW	WO_OR	WO_CLEAR	RESERVED_33A: Reserved.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
34	RW	WO_OR	WO_CLEAR	RESERVED_34A: Reserved.
35	RW	WO_OR	WO_CLEAR	RESERVED_35A: Reserved.
36	RW	WO_OR	WO_CLEAR	TC_OELCC_EDGE_DELAYED_DC: Enables delaying the alignment by one fast cycle. Only used in dual mesh chiplets.
37	RW	WO_OR	WO_CLEAR	TC_OELCC_ALIGN_FLUSH_DC: Forces the alignment and odd/even toggling latch into flush state. For DFT only.
38	RW	WO_OR	WO_CLEAR	RESERVED_38A: Reserved.
39	RW	WO_OR	WO_CLEAR	RESERVED_39A: Reserved.
40:41	RW	WO_OR	WO_CLEAR	CTRL_MISC_CLKDIV_SEL_DC: Clock divider select. 00 = 1024:1 01 = 64:1 10 = 16:1 11 = 4:1
42	RW	WO_OR	WO_CLEAR	RESERVED_42A: Reserved.
43	RW	WO_OR	WO_CLEAR	RESERVED_43A: Reserved.
44	RW	WO_OR	WO_CLEAR	CTRL_CC_DCTEST_DC: TE = 1 only. Enable DCTEST.
45	RW	WO_OR	WO_CLEAR	CTRL_CC_OTP_PRGMODE_DC: TE = 1 only. OTP ROM program mode.
46	RW	WO_OR	WO_CLEAR	CTRL_CC_SSS_CALIBRATE_DC: TE = 1 only. Sensors calibration.
47	RW	WO_OR	WO_CLEAR	CTRL_CC_PIN_LBIST_DC: TE = 1 only. PIN LBIST mode. LBIST is controlled by Pin, not by OPCG.
48	RW	WO_OR	WO_CLEAR	FREE_USAGE_48A: Free usage.
49	RW	WO_OR	WO_CLEAR	FREE_USAGE_49A: Free usage.
50	RW	WO_OR	WO_CLEAR	FREE_USAGE_50A: Free usage.
51	RW	WO_OR	WO_CLEAR	FREE_USAGE_51A: Free usage.
52	RW	WO_OR	WO_CLEAR	FREE_USAGE_52A: Free usage.
53	RW	WO_OR	WO_CLEAR	FREE_USAGE_53A: Free usage.
54	RW	WO_OR	WO_CLEAR	FREE_USAGE_54A: Free usage.
55	RW	WO_OR	WO_CLEAR	FREE_USAGE_55A: Free usage.
56	RW	WO_OR	WO_CLEAR	FREE_USAGE_56A: Free usage.
57	RW	WO_OR	WO_CLEAR	FREE_USAGE_57A: Free usage.
58	RW	WO_OR	WO_CLEAR	FREE_USAGE_58A: Free usage.
59	RW	WO_OR	WO_CLEAR	FREE_USAGE_59A: Free usage.
60	RW	WO_OR	WO_CLEAR	FREE_USAGE_60A: Free usage.
61	RW	WO_OR	WO_CLEAR	FREE_USAGE_61A: Free usage.
62	RW	WO_OR	WO_CLEAR	FREE_USAGE_62A: Free usage.
63	RW	WO_OR	WO_CLEAR	FREE_USAGE_63A: Free usage.

Register Name	Chiplet Control Register 1
Mnemonic	TP.TCN1.N1.CPLT_CTRL1
Address	0000000003000001 (SCOM) 0000000003000011 (SCOM1) 0000000003000021 (SCOM2)
Description	This register contains the second set of vital chiplet controls.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_OR	WO_CLEAR	UNUSED_0B: Unused.
1	RW	WO_OR	WO_CLEAR	UNUSED_1B: Unused.
2	RW	WO_OR	WO_CLEAR	UNUSED_2B: Unused.
3	RW	WO_OR	WO_CLEAR	TC_VITL_REGION_FENCE: VITL fence. Protect the VITL region logic from pollution by other regions during LBIST, or when the chiplet is not initialized and running yet.
4	RW	WO_OR	WO_CLEAR	TC_PERV_REGION_FENCE: Fence for the pervasive region.
5	RW	WO_OR	WO_CLEAR	TC_REGION1_FENCE: Fence for region MCD.
6	RW	WO_OR	WO_CLEAR	TC_REGION2_FENCE: Fence for regions VA - VAS.
7	RW	WO_OR	WO_CLEAR	TC_REGION3_FENCE: Fence for regions PBIOO0 - PB.
8	RW	WO_OR	WO_CLEAR	TC_REGION4_FENCE: Fence for regions PBIOO1 - PB.
9	RW	WO_OR	WO_CLEAR	TC_REGION5_FENCE: Fence for regions MCS23 - MCU.
10	RW	WO_OR	WO_CLEAR	UNUSED_10B: Unused.
11	RW	WO_OR	WO_CLEAR	UNUSED_11B: Unused.
12	RW	WO_OR	WO_CLEAR	UNUSED_12B: Unused.
13	RW	WO_OR	WO_CLEAR	UNUSED_13B: Unused.
14	RW	WO_OR	WO_CLEAR	UNUSED_14B: Unused.
15	RW	WO_OR	WO_CLEAR	RESERVED: Reserved.
16	RW	WO_OR	WO_CLEAR	TC_UNIT_MULTICYCLE_TEST_FENCE:
17	RW	WO_OR	WO_CLEAR	UNUSED_17B: Unused.
18	RW	WO_OR	WO_CLEAR	UNUSED_18B: Unused.
19	RW	WO_OR	WO_CLEAR	UNUSED_19B: Unused.
20	RW	WO_OR	WO_CLEAR	UNUSED_20B: Unused.
21	RW	WO_OR	WO_CLEAR	UNUSED_21B: Unused.

23	RW	WO_OR	WO_CLEAR	UNUSED_23B: Unused.
24	RW	WO_OR	WO_CLEAR	UNUSED_24B: Unused.
25	RW	WO_OR	WO_CLEAR	UNUSED_25B: Unused.
26	RW	WO_OR	WO_CLEAR	UNUSED_26B: Unused.
27	RW	WO_OR	WO_CLEAR	UNUSED_27B: Unused.
28	RW	WO_OR	WO_CLEAR	UNUSED_28B: Unused.
29	RW	WO_OR	WO_CLEAR	UNUSED_29B: Unused.
30	RW	WO_OR	WO_CLEAR	UNUSED_30B: Unused.
31	RW	WO_OR	WO_CLEAR	UNUSED_31B: Unused.

Register Name	Chiplet Configuration Register 0
Mnemonic	TP.TCN1.N1.CPLT_CONF0
Address	0000000003000008 (SCOM) 0000000003000018 (SCOM1) 0000000003000028 (SCOM2)
Description	This register contains the first set of vital chiplet configuration functions.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:5	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE0_SEL_DC: Probe 0 select.
6	RW	WO_OR	WO_CLEAR	RESERVED_6C: Reserved.
7	RW	WO_OR	WO_CLEAR	RESERVED_7C: Reserved.
8:13	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE1_SEL_DC: Probe 1 select.
14	RW	WO_OR	WO_CLEAR	RESERVED_14C: Reserved.
15	RW	WO_OR	WO_CLEAR	RESERVED_15C: Reserved.
16:21	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE2_SEL_DC: Probe 2 select.
22	RW	WO_OR	WO_CLEAR	RESERVED_22C: Reserved.
23	RW	WO_OR	WO_CLEAR	RESERVED_23C: Reserved.
24:29	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE3_SEL_DC: Probe 3.
30	RW	WO_OR	WO_CLEAR	RESERVED_30C: Reserved.
31	RW	WO_OR	WO_CLEAR	RESERVED_31C: Reserved.
32	RW	WO_OR	WO_CLEAR	CTRL_CC_OFLOW_FEH_SEL_DC: ABIST overflow/failure indication select.
33	RW	WO_OR	WO_CLEAR	CTRL_CC_SCAN_PROTECT_DC: Enables scan protection. Enables the scan collision error mechanism.
34	RW	WO_OR	WO_CLEAR	CTRL_CC_SDIS_DC_N: Disables the scan diagnostic scan path.
35	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_35C: Reserved for test control.
36	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_36C: Reserved for test control.
37	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_37C: Reserved for test control.
38	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_38C: Reserved for test control.
39	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_39C: Reserved for test control.
40	RW	WO_OR	WO_CLEAR	CTRL_EPS_MASK_VITL_PCB_ERR_DC: Mask VITL PCB errors from CC or CPLT_CTRL.
41	RW	WO_OR	WO_CLEAR	CTRL_CC_MASK_VITL_SCAN_OPCG_ERR_DC: Mask VITL errors in CC, which are not PCB related.
42	RW	WO_OR	WO_CLEAR	RESERVED_42C: Reserved.
43	RW	WO_OR	WO_CLEAR	RESERVED_43C: Reserved.
44	RW	WO_OR	WO_CLEAR	FREE_USAGE_44C: Free usage.
45	RW	WO_OR	WO_CLEAR	FREE_USAGE_45C: Free usage.
46	RW	WO_OR	WO_CLEAR	FREE_USAGE_46C: Free usage.
47	RW	WO_OR	WO_CLEAR	FREE_USAGE_47C: Free usage.
48:51	RW	WO_OR	WO_CLEAR	TC_UNIT_GROUP_ID_DC: Group ID.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
52:54	RW	WO_OR	WO_CLEAR	TC_UNIT_CHIP_ID_DC: Chip ID.
55	RW	WO_OR	WO_CLEAR	RESERVED_ID_55C: Reserved ID.
56:60	RW	WO_OR	WO_CLEAR	TC_UNIT_SYS_ID_DC: System ID.
61	RW	WO_OR	WO_CLEAR	RESERVED_ID_61C: Reserved ID.
62	RW	WO_OR	WO_CLEAR	RESERVED_ID_62C: Reserved ID.
63	RW	WO_OR	WO_CLEAR	RESERVED_ID_63C: Reserved ID.

Register Name	**Chiplet Configuration Register 1**
Mnemonic	TP.TCN1.N1.CPLT_CONF1
Address	0000000003000009 (SCOM) 0000000003000019 (SCOM1) 0000000003000029 (SCOM2)
Description	This register contains the second set of vital chiplet configuration functions.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_OR	WO_CLEAR	UNUSED_0D: Unused.
1	RW	WO_OR	WO_CLEAR	UNUSED_1D: Unused.
2	RW	WO_OR	WO_CLEAR	UNUSED_2D: Unused.
3	RW	WO_OR	WO_CLEAR	UNUSED_3D: Unused.
4	RW	WO_OR	WO_CLEAR	IOVALID_4D:
5	RW	WO_OR	WO_CLEAR	IOVALID_5D:
6	RW	WO_OR	WO_CLEAR	IOVALID_6D:
7	RW	WO_OR	WO_CLEAR	IOVALID_7D:
8	RW	WO_OR	WO_CLEAR	IOVALID_8D:
9	RW	WO_OR	WO_CLEAR	IOVALID_9D:
10	RW	WO_OR	WO_CLEAR	IOVALID_10D:
11	RW	WO_OR	WO_CLEAR	IOVALID_11D:
12	RW	WO_OR	WO_CLEAR	FREE_USAGE_12D: Free usage.
13	RW	WO_OR	WO_CLEAR	FREE_USAGE_13D: Free usage.
14	RW	WO_OR	WO_CLEAR	FREE_USAGE_14D: Free usage.
15	RW	WO_OR	WO_CLEAR	FREE_USAGE_15D: Free usage.
16	RW	WO_OR	WO_CLEAR	FREE_USAGE_16D: Free usage.
17	RW	WO_OR	WO_CLEAR	FREE_USAGE_17D: Free usage.
18	RW	WO_OR	WO_CLEAR	FREE_USAGE_18D: Free usage.
19	RW	WO_OR	WO_CLEAR	FREE_USAGE_19D: Free usage.
20	RW	WO_OR	WO_CLEAR	FREE_USAGE_20D: Free usage.
21	RW	WO_OR	WO_CLEAR	FREE_USAGE_21D: Free usage.
22	RW	WO_OR	WO_CLEAR	FREE_USAGE_22D: Free usage.
23	RW	WO_OR	WO_CLEAR	FREE_USAGE_23D: Free usage.
24	RW	WO_OR	WO_CLEAR	FREE_USAGE_24D: Free usage.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
25	RW	WO_OR	WO_CLEAR	FREE_USAGE_25D: Free usage.
26	RW	WO_OR	WO_CLEAR	FREE_USAGE_26D: Free usage.
27	RW	WO_OR	WO_CLEAR	FREE_USAGE_27D: Free usage.
28	RW	WO_OR	WO_CLEAR	FREE_USAGE_28D: Free usage.
29	RW	WO_OR	WO_CLEAR	FREE_USAGE_29D: Free usage.
30	RW	WO_OR	WO_CLEAR	FREE_USAGE_30D: Free usage.
31	RW	WO_OR	WO_CLEAR	FREE_USAGE_31D: Free usage.

Register Name	Chiplet Status Register
Mnemonic	TP.TCN1.N1.CPLT_STAT0
Address	0000000003000100 (SCOM)
Description	An interrupt is sent out on a bit change if not masked by the Chiplet Mask Register. A mask only masks the interrupt, not the status register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SRAM_ABIST_DONE_DC: SRAM and EDRAM ABIST done.
1	ROX	DRAM_ABIST_DONE_DC: Unused in POWER9 DD1.
2	ROX	RESERVED_2E: Reserved.
3	ROX	RESERVED_3E: Reserved.
4	ROX	TC_DIAG_PORT0_OUT: Diagnostic out port.
5	ROX	TC_DIAG_PORT1_OUT: Diagnostic out port.
6	ROX	RESERVED_6E: Reserved.
7	ROX	PLL_DESTOUT: Reserved.
8	ROX	CC_CTRL_OPCG_DONE_DC: OPCG done for LBIST, ABIST, or other OPCG runs.
9	ROX	CC_CTRL_CHIPLET_IS_ALIGNED_DC: Indicates that the chiplet is aligned.
10	ROX	FREE_USAGE_10E: Free usage.
11	ROX	FREE_USAGE_11E: Free usage.
12	ROX	FREE_USAGE_12E: Chiplet specific.
13	ROX	FREE_USAGE_13E: Chiplet specific.
14	ROX	FREE_USAGE_14E: Free usage.
15	ROX	FREE_USAGE_15E: Free usage.
16	ROX	FREE_USAGE_16E: Free usage.
17	ROX	FREE_USAGE_17E: Free usage.
18	ROX	FREE_USAGE_18E: Free usage.
19	ROX	FREE_USAGE_19E: Free usage.
20	ROX	FREE_USAGE_20E: Free usage.
21	ROX	FREE_USAGE_21E: Free usage.
22	ROX	FREE_USAGE_22E: Free usage.
23	ROX	FREE_USAGE_23E: Free usage.

Register Name	Chiplet Mask Register
Mnemonic	TP.TCN1.N1.CPLT_MASK0
Address	0000000003000101 (SCOM)
Description	This register masks the interrupt on a bit change of the Chiplet Status Register. It does not mask the status itself.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CPLTMASK0: This field provides bitwise masking of the Chiplet Status Register.

Register Name	Control Protect Mode Register
Mnemonic	TP.TCN1.N1.CTRL_PROTECT_MODE_REG
Address	00000000030003FE (SCOM)
Description	This register enables read and write protection.

Bits	SCOM	Field Mnemonic: Description
0	RW	CTRL_READ_PROTECT_ENABLE: This bit enables read protection.
1	RW	CTRL_WRITE_PROTECT_ENABLE: This bit enables write protection.

Register Name	Atomic Lock Register
Mnemonic	TP.TCN1.N1.CTRL_ATOMIC_LOCK_REG
Address	00000000030003FF (SCOM)
Description	This register enables an atomic lock and an atomic lock counter.

Bits	SCOM	Field Mnemonic: Description
0	RW	CTRL_ATOMIC_LOCK_ENABLE: This bit enables an atomic lock.
1:4	ROX	CTRL_ATOMIC_ID: This field contains the atomic ID.
5:7	RO	constant = 0b000
8:15	ROX	CTRL_ATOMIC_ACTIVITY: This field is an atomic lock counter.

Register Name	PSCOMLE Mode Register
Mnemonic	TP.TCN1.N1.EPS.PSC.PSC.PSCOM_MODE_REG
Address	0000000003010000 (SCOM)
Description	This is the parallel-to-serial communication light edition (PSCOMLE) mode register.

Bits	SCOM	Field Mnemonic: Description
0	RW	ABORT_ON_PCB_ADDR_PARITY_ERROR: Abort on a PCB address parity error.
1	RW	ABORT_ON_PCB_WDATA_PARITY_ERROR: Abort on a PCB write data parity error.
2	RW	UNUSED_2B. Unused.
3	RW	ABORT_ON_DL_RETURN_WDATA_PARITY_ERROR: Abort on a DL return write data parity error.
4	RW	WATCHDOG_ENABLE: Watchdog enable.

Bits	SCOM	Field Mnemonic: Description
5:6	RW	SCOM_HANG_LIMIT: 0b11 = 256 0b10 = 512 0b01 = 768 0b00 = 1023
7	RW	FORCE_ALL_RINGS: This bit is set to a logical 1 if all rings should be enabled independent of the ring address.
8	RW	FSM_SELFRESET_ON_STATEVEC_PARITYERROR_ENABLE: FSM self reset on statevec parity error enable.
9:11	RW	RESERVED_PSCOM_MODE_LT: Reserved.

Register Name	PSCOMLE Error Register
Mnemonic	TP.TCN1.N1.EPS.PSC.PSC.PSCOM_STATUS_ERROR_REG
Address	0000000003010001 (SCOM)
Description	This is the parallel-to-serial communication light edition (PSCOMLE) error register.

Bits	SCOM	Field Mnemonic: Description
0	RWX	ACCUMULATED_PCB_WDATA_PARITY_ERROR: Accumulated PCB write data parity error.
1	RWX	ACCUMULATED_PCB_ADDRESS_PARITY_ERROR: Accumulated PCB address parity error.
2	RWX	ACCUMULATED_DL_RETURN_WDATA_PARITY_ERROR: Accumulated DL return write data parity error.
3	RWX	ACCUMULATED_DL_RETURN_P0_ERROR: Accumulated DL return P0 error.
4	RWX	ACCUMULATED_UL_RDATA_PARITY_ERROR: Accumulated UL read data parity error.
5	RWX	ACCUMULATED_UL_P0_ERROR: Accumulated UL P0 error.
6	RWX	ACCUMULATED_PARITY_ERROR_ON_INTERFACE_MACHINE: Accumulated parity error on interface machine.
7	RWX	ACCUMULATED_PARITY_ERROR_ON_P2S_MACHINE: Accumulated parity error on p2s machine.
8	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Accumulated timeout while waiting for ULCCH.
9	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Accumulated timeout while waiting for DLDCH return.
10	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Accumulated timeout while waiting for ULDCH.
11	RWX	ACCUMULATED_PSCOM_PARALLEL_WRITE_NVLD: Accumulated PSCOM parallel write NVLD.
12	RWX	ACCUMULATED_PSCOM_PARALLEL_READ_NVLD: Accumulated PSCOM parallel read NVLD.
13	RWX	ACCUMULATED_PSCOM_PARALLEL_ADDR_INVALID: Accumulated PSCOM parallel address invalid.
14	RWX	ACCUMULATED_PCB_COMMAND_PARITY_ERROR: Accumulated PCB command parity error.
15	RWX	ACCUMULATED_GENERAL_TIMEOUT: Accumulated general timeout.
16	RWX	ACCUMULATED_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Accumulated satellite acknowledge access violation.
17	RWX	ACCUMULATED_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Accumulated satellite acknowledge invalid register.
18	RWX	TRAPPED_PCB_WDATA_PARITY_ERROR: Trapped PCB write data parity error.
19	RWX	TRAPPED_PCB_ADDRESS_PARITY_ERROR: Trapped PCB address parity error.

Bits	SCOM	Field Mnemonic: Description
20	RWX	TRAPPED_DL_RETURN_WDATA_PARITY_ERROR: Trapped DL return write data parity error.
21	RWX	TRAPPED_DL_RETURN_P0_ERROR: Trapped DL return P0 error.
22	RWX	TRAPPED_UL_RDATA_PARITY_ERROR: Trapped UL read data parity error.
23	RWX	TRAPPED_UL_P0_ERROR: Trapped UL P0 error.
24	RWX	TRAPPED_PARITY_ERROR_ON_INTERFACE_MACHINE: Trapped parity error on interface machine.
25	RWX	TRAPPED_PARITY_ERROR_ON_P2S_MACHINE: Trapped parity error on p2s machine.
26	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Trapped timeout while waiting for ULCCH.
27	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Trapped timeout while waiting for DLDCH return.
28	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Trapped timeout while waiting for ULDCH.
29	RWX	TRAPPED_PSCOM_PARALLEL_WRITE_NVLD: Trapped PSCOM parallel write NVLD.
30	RWX	TRAPPED_PSCOM_PARALLEL_READ_NVLD: Trapped PSCOM parallel read NVLD.
31	RWX	TRAPPED_PSCOM_PARALLEL_ADDR_INVALID: Trapped PSCOM parallel address invalid.
32	RWX	TRAPPED_PCB_COMMAND_PARITY_ERROR: Trapped PCB command parity error.
33	RWX	TRAPPED_GENERAL_TIMEOUT: Trapped general timeout.
34	RWX	TRAPPED_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Trapped satellite acknowledge access violation.
35	RWX	TRAPPED_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Trapped satellite acknowledge invalid register.

Register Name	**PSCOMLE Error Mask Register**
Mnemonic	TP.TCN1.N1.EPS.PSC.PSC.PSCOM_ERROR_MASK
Address	0000000003010002 (SCOM)
Description	This is the parallel-to-serial communication light edition (PSCOMLE) error mask register.

Bits	SCOM	Field Mnemonic: Description
0	RW	MASK_PCB_WDATA_PARITY_ERROR: Mask PCB write data parity error.
1	RW	MASK_PCB_ADDRESS_PARITY_ERROR: Mask PCB address parity error.
2	RW	MASK_DL_RETURN_WDATA_PARITY_ERROR: Mask DL return write data parity error.
3	RW	MASK_DL_RETURN_P0_ERROR: Mask DL return P0 error.
4	RW	MASK_UL_RDATA_PARITY_ERROR: Mask UL read data parity error.
5	RW	MASK_UL_P0_ERROR: Mask UL P0 error.
6	RW	MASK_PARITY_ERROR_ON_INTERFACE_MACHINE: Mask parity error on the interface machine.
7	RW	MASK_PARITY_ERROR_ON_P2S_MACHINE: Mask parity error on the p2s machine.
8	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Mask timeout while waiting for ULCCH.
9	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Mask timeout while waiting for DLDCH return.
10	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Mask timeout while waiting or ULDCH.
11	RW	MASK_PSCOM_PARALLEL_WRITE_NVLD: Mask PSCOM parallel write NVLD.
12	RW	MASK_PSCOM_PARALLEL_READ_NVLD: Mask PSCOM parallel read NVLD.
13	RW	MASK_PSCOM_PARALLEL_ADDR_INVALID: Mask PSCOM parallel address invalid.

Bits	SCOM	Field Mnemonic: Description
14	RW	MASK_PCB_COMMAND_PARITY_ERROR: Mask PCB command parity error.
15	RW	MASK_GENERAL_TIMEOUT: Mask general timeout.
16	RW	MASK_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Mask satellite acknowledge access violation.
17	RW	MASK_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Mask satellite acknowledge invalid register.

Register Name	PSCOMLE Address Trap Register
Mnemonic	TP.TCN1.N1.EPS.PSC.PSC.ADDR_TRAP_REG
Address	0000000003010003 (SCOM)
Description	This is the parallel-to-serial communication light edition (PSCOMLE) address trap register.

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	PCB_ADDRESS_OF_LAST_TRANSACTION_WITH_ERROR: This field contains the PCB address of the last transaction with an error.
16	ROX	PCB_READ_NOTWRITE_OF_LAST_TRANSACTION_WITH_ERROR: PCB read, not write, of the last transaction with an error.
17	ROX	RESERVED_ADDR_LAST_TRAP_LT: Reserved 0.
18:30	ROX	SERIAL2PARALLEL_STATE_MACHINE_AT_TIME_OF_ERROR: Serial2 parallel state machine at the time of the error.
31	ROX	SATELLITE_ACKNOWLEDGE_BIT_RETURN_PARITY: Satellite acknowledge bit. This bit is set to 1 if no parity error is detected in the satellite number or acknowledgment bits.
32	ROX	SATELLITE_ACKNOWLEDGE_BIT_WRITE_PARITY_ERROR: This bit is set if a write parity error is detected by the satellite.
33	ROX	SATELLITE_ACKNOWLEDGE_BIT_ACCESS_VIOLATION: This bit is set if an invalid read or write access is detected by the satellite.
34	ROX	SATELLITE_ACKNOWLEDGE_BIT_INVALID_REGISTER: This bit is set if an invalid register address is detected by the satellite.

Register Name	Ring Lock Enable Register
Mnemonic	TP.TCN1.N1.EPS.PSC.PSC.WRITE_PROTECT_ENABLE_REG
Address	0000000003010005 (SCOM)
Description	This register enables the ring lock.

Bits	SCOM	Field Mnemonic: Description
0	RW	ENABLE_RING_LOCKING: General enable of ring locking upon write to specific ring.
1	RW	RESERVED_RING_LOCKING: Reserved.

Register Name	Write Protect Rings Register
Mnemonic	TP.TCN1.N1.EPS.PSC.PSC.WRITE_PROTECT_RINGS_REG
Address	0000000003010006 (SCOM)
Description	This register writes ring protect bit maps.

Bits	SCOM	Field Mnemonic: Description
0:15	RW	WRITE_PROTECT_RINGS: Writes a protect bit map for each ring.

Register Name	Atomic Lock Mask Register
Mnemonic	TP.TCN1.N1.EPS.PSC.PSC.ATOMIC_LOCK_MASK_LATCH_REG
Address	0000000003010007 (SCOM)
Description	This register provides a bit mask for atomic locking.

Bits	SCOM	Field Mnemonic: Description
0:15	RW	ATOMIC_LOCK_MASK: This field provides a bit mask for atomic locking on a ring-by-ring basis.

Register Name	Ring Fence Enable Mask Register
Mnemonic	TP.TCN1.N1.EPS.PSC.PSC.RING_FENCE_MASK_LATCH_REG
Address	0000000003010008 (SCOM)
Description	This register provides a bit mask for ring fencing.

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1:15	RW	RING_FENCE_ENABLE_MASK: This field provides a bit mask for ring fencing on a ring-by-ring basis.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN1.N1.TRA0.TR0.TRACE_HI_DATA_REG
Address	0000000003010400 (SCOM)
Description	This register provides the high trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: This field contains trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN1.N1.TRA0.TR0.TRACE_LO_DATA_REG
Address	0000000003010401 (SCOM)
Description	Trace array low data register

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.

Bits	SCOM	Field Mnemonic: Description
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address pointing to the last entry.

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN1.N1.TRA0.TR0.TRACE_TRCTRL_CONFIG
Address	0000000003010402 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: This bit enables an unconditional forced write when a trace runs.
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.
10	RW	BANK_MODE: This bit enables bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B. Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: This field contains spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN1.N1.TRA0.TR0.TRACE_TRDATA_CONFIG_0
Address	0000000003010403 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: This field contains a trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN1.N1.TRA0.TR0.TRACE_TRDATA_CONFIG_1
Address	0000000003010404 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: This field contains a trace data compare mask for bits 64 – 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN1.N1.TRA0.TR0.TRACE_TRDATA_CONFIG_2
Address	0000000003010405 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 – 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN1.N1.TRA0.TR0.TRACE_TRDATA_CONFIG_3
Address	0000000003010406 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 – 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 – 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN1.N1.TRA0.TR0.TRACE_TRDATA_CONFIG_4
Address	0000000003010407 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN1.N1.TRA0.TR0.TRACE_TRDATA_CONFIG_5
Address	0000000003010408 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN1.N1.TRA0.TR0.TRACE_TRDATA_CONFIG_9
Address	0000000003010409 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disables trace data compression. Stores data every cycle.
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Takes into account (cares about) changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG0_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG1_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Inverts TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Inverts TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Inverts the match polarity before using it to form a trigger. 0b1000 inverts MATCHA. 0b0100 inverts MATCHB. 0b0010 inverts MATCHC. 0b0001 inverts MATCHD.

Bits	SCOM	Field Mnemonic: Description
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: DD1 workaround. Stretches the trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved field.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN1.N1.TRA0.TR1.TRACE_HI_DATA_REG
Address	0000000003010440 (SCOM)
Description	This register provides the high trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: This field contains trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN1.N1.TRA0.TR1.TRACE_LO_DATA_REG
Address	0000000003010441 (SCOM)
Description	This register provides the low trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address pointing to last entry.

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN1.N1.TRA0.TR1.TRACE_TRCTRL_CONFIG
Address	0000000003010442 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: Enables unconditional forced write when trace is run.
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.
10	RW	BANK_MODE: This bit enables bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.

Bits	SCOM	Field Mnemonic: Description
13	RW	UNUSED_13B. Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: This field contains spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN1.N1.TRA0.TR1.TRACE_TRDATA_CONFIG_0
Address	0000000003010443 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: Trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN1.N1.TRA0.TR1.TRACE_TRDATA_CONFIG_1
Address	0000000003010444 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: Trace data compare mask for bits 64 - 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN1.N1.TRA0.TR1.TRACE_TRDATA_CONFIG_2
Address	0000000003010445 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 – 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN1.N1.TRA0.TR1.TRACE_TRDATA_CONFIG_3
Address	0000000003010446 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 – 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 – 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN1.N1.TRA0.TR1.TRACE_TRDATA_CONFIG_4
Address	0000000003010447 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN1.N1.TRA0.TR1.TRACE_TRDATA_CONFIG_5
Address	0000000003010448 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN1.N1.TRA0.TR1.TRACE_TRDATA_CONFIG_9
Address	0000000003010449 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disables trace data compression (stores data every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Takes into account (cares about) changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.

Bits	SCOM	Field Mnemonic: Description
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG0_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG1_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Inverts TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Inverts TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Inverts the match polarity before using it to form a trigger. 0b1000 inverts MATCHA. 0b0100 inverts MATCHB. 0b0010 inverts MATCHC. 0b0001 inverts MATCHD.
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved field.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN1.N1.TRA1.TR0.TRACE_HI_DATA_REG
Address	0000000003010480 (SCOM)
Description	This register provides the high trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: This field contains trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN1.N1.TRA1.TR0.TRACE_LO_DATA_REG
Address	0000000003010481 (SCOM)
Description	This register provides the low trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN1.N1.TRA1.TR0.TRACE_TRCTRL_CONFIG
Address	0000000003010482 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: Enables unconditional forced write when trace is run.
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.
10	RW	BANK_MODE: This bit enables bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B. Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: This field contains spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN1.N1.TRA1.TR0.TRACE_TRDATA_CONFIG_0
Address	0000000003010483 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: Trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN1.N1.TRA1.TR0.TRACE_TRDATA_CONFIG_1
Address	0000000003010484 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: Trace data compare mask for bits 64 - 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN1.N1.TRA1.TR0.TRACE_TRDATA_CONFIG_2
Address	0000000003010485 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 – 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN1.N1.TRA1.TR0.TRACE_TRDATA_CONFIG_3
Address	0000000003010486 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 – 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 – 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN1.N1.TRA1.TR0.TRACE_TRDATA_CONFIG_4
Address	0000000003010487 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN1.N1.TRA1.TR0.TRACE_TRDATA_CONFIG_5
Address	0000000003010488 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN1.N1.TRA1.TR0.TRACE_TRDATA_CONFIG_9
Address	0000000003010489 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disables trace data compression (stores data every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Takes into account (cares about) changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG0_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1.

Bits	SCOM	Field Mnemonic: Description
22:25	RW	TRIG1_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG1_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Inverts TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Inverts TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Inverts the match polarity before using it to form a trigger. 0b1000 inverts MATCHA. 0b0100 inverts MATCHB. 0b0010 inverts MATCHC. 0b0001 inverts MATCHD.
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved field.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN1.N1.TRA1.TR1.TRACE_HI_DATA_REG
Address	00000000030104C0 (SCOM)
Description	This register provides the high trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: This field contains trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN1.N1.TRA1.TR1.TRACE_LO_DATA_REG
Address	00000000030104C1 (SCOM)
Description	This register provides the low trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN1.N1.TRA1.TR1.TRACE_TRCTRL_CONFIG
Address	00000000030104C2 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: This bit enables an unconditional forced write when a trace runs.
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.
10	RW	BANK_MODE: This bit enables bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B. Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: This field contains spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN1.N1.TRA1.TR1.TRACE_TRDATA_CONFIG_0
Address	00000000030104C3 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: This field contains a trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN1.N1.TRA1.TR1.TRACE_TRDATA_CONFIG_1
Address	00000000030104C4 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: This field contains a trace data compare mask for bits 64 – 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN1.N1.TRA1.TR1.TRACE_TRDATA_CONFIG_2
Address	00000000030104C5 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 – 23.

Bits	SCOM	Field Mnemonic: Description
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN1.N1.TRA1.TR1.TRACE_TRDATA_CONFIG_3
Address	00000000030104C6 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 – 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 – 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN1.N1.TRA1.TR1.TRACE_TRDATA_CONFIG_4
Address	00000000030104C7 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN1.N1.TRA1.TR1.TRACE_TRDATA_CONFIG_5
Address	00000000030104C8 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN1.N1.TRA1.TR1.TRACE_TRDATA_CONFIG_9
Address	00000000030104C9 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disables trace data compression. Stores data every cycle.
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Takes into account (cares about) changes in the error bit for trace data compression (default = 0).

Bits	SCOM	Field Mnemonic: Description
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG0_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG1_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Inverts TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Inverts TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Inverts the match polarity before using it to form a trigger. 0b1000 inverts MATCHA. 0b0100 inverts MATCHB. 0b0010 inverts MATCHC. 0b0001 inverts MATCHD.
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: DD1 workaround. Stretches the trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.

Bits	SCOM	Field Mnemonic: Description
37	RW	Reserved field.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN1.N1.TRA2.TR0.TRACE_HI_DATA_REG
Address	0000000003010500 (SCOM)
Description	This register provides the high trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: This field contains trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN1.N1.TRA2.TR0.TRACE_LO_DATA_REG
Address	0000000003010501 (SCOM)
Description	This register provides the low trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN1.N1.TRA2.TR0.TRACE_TRCTRL_CONFIG
Address	0000000003010502 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: This bit enables an unconditional forced write when a trace runs.
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.
10	RW	BANK_MODE: This bit enables bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B. Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) and tra_mux1_sel(0:1).

Bits	SCOM	Field Mnemonic: Description
18:21	RW	SPARE_CONTROL: This field contains spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN1.N1.TRA2.TR0.TRACE_TRDATA_CONFIG_0
Address	0000000003010503 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: This field contains a trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN1.N1.TRA2.TR0.TRACE_TRDATA_CONFIG_1
Address	0000000003010504 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: This field contains a trace data compare mask for bits 64 – 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN1.N1.TRA2.TR0.TRACE_TRDATA_CONFIG_2
Address	0000000003010505 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 – 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN1.N1.TRA2.TR0.TRACE_TRDATA_CONFIG_3
Address	0000000003010506 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 – 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 – 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN1.N1.TRA2.TR0.TRACE_TRDATA_CONFIG_4
Address	0000000003010507 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN1.N1.TRA2.TR0.TRACE_TRDATA_CONFIG_5
Address	0000000003010508 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN1.N1.TRA2.TR0.TRACE_TRDATA_CONFIG_9
Address	0000000003010509 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disables trace data compression. Stores data every cycle.
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Takes into account (cares about) changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.

Bits	SCOM	Field Mnemonic: Description
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG0_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG1_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Inverts TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Inverts TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Inverts the match polarity before using it to form a trigger. 0b1000 inverts MATCHA. 0b0100 inverts MATCHB. 0b0010 inverts MATCHC. 0b0001 inverts MATCHD.
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: DD1 workaround. Stretches the trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved field.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN1.N1.TRA2.TR1.TRACE_HI_DATA_REG
Address	0000000003010540 (SCOM)
Description	This register provides the high trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: This field contains trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN1.N1.TRA2.TR1.TRACE_LO_DATA_REG
Address	0000000003010541 (SCOM)
Description	This register provides the low trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN1.N1.TRA2.TR1.TRACE_TRCTRL_CONFIG
Address	0000000003010542 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: This bit enables an unconditional forced write when a trace runs.
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.
10	RW	BANK_MODE: This bit enables bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B. Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: This field contains spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN1.N1.TRA2.TR1.TRACE_TRDATA_CONFIG_0
Address	0000000003010543 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: This field contains a trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN1.N1.TRA2.TR1.TRACE_TRDATA_CONFIG_1
Address	0000000003010544 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: This field contains a trace data compare mask for bits 64 – 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN1.N1.TRA2.TR1.TRACE_TRDATA_CONFIG_2
Address	0000000003010545 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 – 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN1.N1.TRA2.TR1.TRACE_TRDATA_CONFIG_3
Address	0000000003010546 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 – 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 – 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN1.N1.TRA2.TR1.TRACE_TRDATA_CONFIG_4
Address	0000000003010547 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN1.N1.TRA2.TR1.TRACE_TRDATA_CONFIG_5
Address	0000000003010548 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN1.N1.TRA2.TR1.TRACE_TRDATA_CONFIG_9
Address	0000000003010549 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disables trace data compression. Stores data every cycle.
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Takes into account (cares about) changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG0_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1.

Bits	SCOM	Field Mnemonic: Description
22:25	RW	TRIG1_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG1_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Inverts TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Inverts TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Inverts the match polarity before using it to form a trigger. 0b1000 inverts MATCHA. 0b0100 inverts MATCHB. 0b0010 inverts MATCHC. 0b0001 inverts MATCHD.
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: DD1 workaround. Stretches the trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved field.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN1.N1.TRA3.TR0.TRACE_HI_DATA_REG
Address	0000000003010580 (SCOM)
Description	This register provides the high trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: This field contains trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN1.N1.TRA3.TR0.TRACE_LO_DATA_REG
Address	0000000003010581 (SCOM)
Description	This register provides the low trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN1.N1.TRA3.TR0.TRACE_TRCTRL_CONFIG
Address	0000000003010582 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: This bit enables an unconditional forced write when a trace runs.
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.
10	RW	BANK_MODE: This bit enables bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B. Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: This field contains spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN1.N1.TRA3.TR0.TRACE_TRDATA_CONFIG_0
Address	0000000003010583 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: This field contains a trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN1.N1.TRA3.TR0.TRACE_TRDATA_CONFIG_1
Address	0000000003010584 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: This field contains a trace data compare mask for bits 64 – 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN1.N1.TRA3.TR0.TRACE_TRDATA_CONFIG_2
Address	0000000003010585 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 – 23.

Bits	SCOM	Field Mnemonic: Description
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN1.N1.TRA3.TR0.TRACE_TRDATA_CONFIG_3
Address	0000000003010586 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 – 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 – 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN1.N1.TRA3.TR0.TRACE_TRDATA_CONFIG_4
Address	0000000003010587 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN1.N1.TRA3.TR0.TRACE_TRDATA_CONFIG_5
Address	0000000003010588 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN1.N1.TRA3.TR0.TRACE_TRDATA_CONFIG_9
Address	0000000003010589 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disables trace data compression. Stores data every cycle.
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Takes into account (cares about) changes in the error bit for trace data compression (default = 0).

Bits	SCOM	Field Mnemonic: Description
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG0_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG1_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Inverts TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Inverts TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Inverts the match polarity before using it to form a trigger. 0b1000 inverts MATCHA. 0b0100 inverts MATCHB. 0b0010 inverts MATCHC. 0b0001 inverts MATCHD.
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: DD1 workaround. Stretches the trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.

Bits	SCOM	Field Mnemonic: Description
37	RW	Reserved field.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN1.N1.TRA3.TR1.TRACE_HI_DATA_REG
Address	00000000030105C0 (SCOM)
Description	This register provides the high trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: This field contains trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN1.N1.TRA3.TR1.TRACE_LO_DATA_REG
Address	00000000030105C1 (SCOM)
Description	This register provides the low trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN1.N1.TRA3.TR1.TRACE_TRCTRL_CONFIG
Address	00000000030105C2 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: This bit enables an unconditional forced write when a trace runs.
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.
10	RW	BANK_MODE: This bit enables bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B. Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) and tra_mux1_sel(0:1).

Bits	SCOM	Field Mnemonic: Description
18:21	RW	SPARE_CONTROL: This field contains spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN1.N1.TRA3.TR1.TRACE_TRDATA_CONFIG_0
Address	00000000030105C3 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: This field contains a trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN1.N1.TRA3.TR1.TRACE_TRDATA_CONFIG_1
Address	00000000030105C4 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: This field contains a trace data compare mask for bits 64 – 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN1.N1.TRA3.TR1.TRACE_TRDATA_CONFIG_2
Address	00000000030105C5 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 – 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN1.N1.TRA3.TR1.TRACE_TRDATA_CONFIG_3
Address	00000000030105C6 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 – 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 – 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN1.N1.TRA3.TR1.TRACE_TRDATA_CONFIG_4
Address	00000000030105C7 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN1.N1.TRA3.TR1.TRACE_TRDATA_CONFIG_5
Address	00000000030105C8 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN1.N1.TRA3.TR1.TRACE_TRDATA_CONFIG_9
Address	00000000030105C9 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disables trace data compression. Stores data every cycle.
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Takes into account (cares about) changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.

Bits	SCOM	Field Mnemonic: Description
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG0_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG1_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Inverts TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Inverts TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Inverts the match polarity before using it to form a trigger. 0b1000 inverts MATCHA. 0b0100 inverts MATCHB. 0b0010 inverts MATCHC. 0b0001 inverts MATCHD.
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: DD1 workaround. Stretches the trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved field.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN1.N1.TRA4.TR0.TRACE_HI_DATA_REG
Address	0000000003010600 (SCOM)
Description	This register provides the high trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: This field contains trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN1.N1.TRA4.TR0.TRACE_LO_DATA_REG
Address	0000000003010601 (SCOM)
Description	This register provides the low trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN1.N1.TRA4.TR0.TRACE_TRCTRL_CONFIG
Address	0000000003010602 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: This bit enables an unconditional forced write when a trace runs.
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.
10	RW	BANK_MODE: This bit enables bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B. Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: This field contains spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN1.N1.TRA4.TR0.TRACE_TRDATA_CONFIG_0
Address	0000000003010603 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: This field contains a trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN1.N1.TRA4.TR0.TRACE_TRDATA_CONFIG_1
Address	0000000003010604 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: This field contains a trace data compare mask for bits 64 – 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN1.N1.TRA4.TR0.TRACE_TRDATA_CONFIG_2
Address	0000000003010605 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 – 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN1.N1.TRA4.TR0.TRACE_TRDATA_CONFIG_3
Address	0000000003010606 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 – 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 – 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN1.N1.TRA4.TR0.TRACE_TRDATA_CONFIG_4
Address	0000000003010607 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN1.N1.TRA4.TR0.TRACE_TRDATA_CONFIG_5
Address	0000000003010608 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN1.N1.TRA4.TR0.TRACE_TRDATA_CONFIG_9
Address	0000000003010609 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disables trace data compression. Stores data every cycle.
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Takes into account (cares about) changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG0_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1.

Bits	SCOM	Field Mnemonic: Description
22:25	RW	TRIG1_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG1_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Inverts TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Inverts TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Inverts the match polarity before using it to form a trigger. 0b1000 inverts MATCHA. 0b0100 inverts MATCHB. 0b0010 inverts MATCHC. 0b0001 inverts MATCHD.
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: DD1 workaround. Stretches the trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved field.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN1.N1.TRA4.TR1.TRACE_HI_DATA_REG
Address	0000000003010640 (SCOM)
Description	This register provides the high trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: This field contains trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN1.N1.TRA4.TR1.TRACE_LO_DATA_REG
Address	0000000003010641 (SCOM)
Description	This register provides the low trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN1.N1.TRA4.TR1.TRACE_TRCTRL_CONFIG
Address	0000000003010642 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: This bit enables an unconditional forced write when a trace runs.
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.
10	RW	BANK_MODE: This bit enables bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B. Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: This field contains spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN1.N1.TRA4.TR1.TRACE_TRDATA_CONFIG_0
Address	0000000003010643 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: This field contains a trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN1.N1.TRA4.TR1.TRACE_TRDATA_CONFIG_1
Address	0000000003010644 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: This field contains a trace data compare mask for bits 64 – 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN1.N1.TRA4.TR1.TRACE_TRDATA_CONFIG_2
Address	0000000003010645 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 - 23.

Bits	SCOM	Field Mnemonic: Description
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN1.N1.TRA4.TR1.TRACE_TRDATA_CONFIG_3
Address	0000000003010646 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 – 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 – 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN1.N1.TRA4.TR1.TRACE_TRDATA_CONFIG_4
Address	0000000003010647 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN1.N1.TRA4.TR1.TRACE_TRDATA_CONFIG_5
Address	0000000003010648 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN1.N1.TRA4.TR1.TRACE_TRDATA_CONFIG_9
Address	0000000003010649 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disables trace data compression. Stores data every cycle.
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Takes into account (cares about) changes in the error bit for trace data compression (default = 0).

Bits	SCOM	Field Mnemonic: Description
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits (00:23). 0b01 = Debug bus bits (24:47). 0b10 = Debug bus bits (48:71). 0b11 = Debug bus bits (72:87) | 8 zeros.
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG0_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG0_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with the result of TRIG1_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: The AND of following selected MATCHes is ORed with the result of TRIG1_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Inverts TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Inverts TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Inverts the match polarity before using it to form a trigger. 0b1000 inverts MATCHA. 0b0100 inverts MATCHB. 0b0010 inverts MATCHC. 0b0001 inverts MATCHD.
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: DD1 workaround. Stretches the trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.

Bits	SCOM	Field Mnemonic: Description
37	RW	Reserved field.

Register Name	Debug Mode Register
Mnemonic	TP.TCN1.N1.EPS.DBG.DBG_MODE_REG
Address	00000000030107C0 (SCOM)
Description	This register is debug macro configuration register 0 for the configuration component.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	GLB_BRCST_MODE: Global broadcast mode (0 - 2): 100 = dbg_trace_run and dbg_trace_freeze 101 = pc_tcdbg_trace_run_fncd and dbg_trace_freeze 110 = dbg_triggers_out(0 to 1) 111 = pc_tcdbg_triggers(0 to 1) (from core)
3:5	RW	TRACE_SEL_MODE: Select source for trace_run and bank: 001 = core trace run and bank 010 = tp broadcast run and 0 011 = tc_dbg_inter_brcst latched 100 = tc_dbg_dbg_sync_brcst_rcv else: dbg_trace_run and dbg_trace_bank
6:7	RW	TRIG_SEL_MODE: Select source for tcdbg_trigger(0): 10 = global broadcast 11 = pc_tcdbg_trigger (from core) else: dbg_triggers_out(0:1)
8	RW	STOP_ON_XSTOP_SELECTION: This bit enables a trace stop on a checkstop.
9	RW	STOP_ON_RECOV_ERR_SELECTION: This bit enables a trace stop on a recoverable error.
10	RW	STOP_ON_SPATTN_SELECTION: This bit enables a trace stop on special attention.
11	RW	FREEZE_SEL_MODE: Select the freeze source: 0 = Local debug freeze. 1 = Via broadcast: tp_tcdbg_glb_brcst(1).
12:13	RW	SYNC_BRCST_MODE: Originally used for synchronous broadcast mode; currently unused because obsolete. See trace_sel_mode.
14	RO	constant = 0b0 sync_brcst_mode
15	RO	constant = 0b0
16:31	ROX	DBG_STATUS: Debug status.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	Debug Instance 1 Condition 1 Register
Mnemonic	TP.TCN1.N1.EPS.DBG.DBG_INST1_COND_REG_1
Address	00000000030107C1 (SCOM)
Description	This register is debug macro configuration register 1 for the front-end 1 component.

Register Name	Debug Trace Mode 2 Register
Mnemonic	TP.TCN1.N1.EPS.DBG.DBG_TRACE_MODE_REG_2
Address	00000000030107CF (SCOM)
Description	This is debug macro configuration register 2 for the back-end component.

Bits	SCOM	Field Mnemonic: Description
0:15	RW	RUNN_COUNT_COMPARE_VALUE: Compare value for the run-N counter used in trace modes run-N and wait-N.
16	RW	IMM_FREEZE_MODE: Immediate freeze mode.
17	RW	STOP_ON_ERR: Stop and freeze on checkstop.
18	RW	BANK_ON_RUNN_MATCH: Bank switch on run-N match.
19	RW	FORCE_TEST_MODE: Force the run-N condition to be true.
20	RW	ACCUM_HIST_MODE: Accumulate history mode; do not clear history mode when trace_run is active.
21	RW	FRZ_COUNT_ON_FRZ: Freeze condition counters on trace freeze.

Register Name	Pervasive FIR Register
Mnemonic	MCD0.MCC_FIR_REG
Address	0000000003011000 (SCOM) 0000000003011001 (SCOM1) 0000000003011002 (SCOM2)
Description	This is the local fault-isolation register for the memory coherency directory.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	MCD_ARRAY_ECC_UE_ERR: MCD array ECC uncorrectable error.
1	RWX	WOX_AND	WOX_OR	MCD_ARRAY_ECC_CE_ERR: MCD array ECC uncorrectable error.
2	RWX	WOX_AND	WOX_OR	MCD_PB_ADDR_PARITY_ERR: MCD processor bus address parity error.
3	RWX	WOX_AND	WOX_OR	MCD_SM_OR_CASE_ERR: MCD invalid state error.
4	RWX	WOX_AND	WOX_OR	MCD_CL_PROBE_PB_HANG_ERR: Hang poll timer expired on cl_probe.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
5	RWX	WOX_AND	WOX_OR	MCD_CRESP_ADDR_ERR: Processor bus address error CRESP received.
6	RWX	WOX_AND	WOX_OR	MCD_UNSOLICITED_CRESP_ERR: MCD received a unsolicited CRESP.
7	RWX	WOX_AND	WOX_OR	MCD_TTAG_PARITY_ERR: MCD processor bus TTAG parity error.
8	RWX	WOX_AND	WOX_OR	MCD_FIR_REG_UPDATE_ERR: MCD SCOM register update error.
9	RWX	WOX_AND	WOX_OR	MCD_ACK_DEAD_CRESP_ERR: MCD received an ack_dead_cresp.
10	RWX	WOX_AND	WOX_OR	MCD_SCOM_ERR: PBEH CENT FIR_SCOM error.
11	RWX	WOX_AND	WOX_OR	MCD_SCOM_ERR_DUP: PBEH CENT FIR_SCOM error duplicate.

Register Name	MCD Command Decode Configuration Register
Mnemonic	MCD0.BANK0_MCD_CMD
Address	000000000301100E (SCOM)
Description	MCD command decode configuration register

Bits	SCOM	Field Mnemonic: Description
0:18	RW	BANK0_MCD_CHECK_CMDS: Check commands.
19:30	RO	constant = 0b000000000000
31	RW	BANK0_MCD_CHECK_CMDS_EN: Enable override of check commands.
32:50	RW	BANK0_MCD_SET_CMDS: Set commands.
51:62	RO	constant = 0b000000000000
63	RW	BANK0_MCD_SET_CMDS_EN: Enable override of set commands.

Register Name	MCD Direct Read Write Register
Mnemonic	MCD0.BANK0_MCD_RW
Address	000000000301100F (SCOM)
Description	MCD direct read write register

Bits	SCOM	Field Mnemonic: Description
0	RWX	BANK0_MCD_RDWR_ACCESS_EN: MCD direct read/write access enable.
1	RW	BANK0_MCD_RDWR_WR_ENABLE: MCD direct write enable. Reads when off.
2	RO	constant = 0b0
3	ROX	BANK0_MCD_RDWR_REQ_PEND: MCD direct read/write access pending.
4	ROX	BANK0_MCD_RDWR_READ_STATUS: MCD direct read data is valid.
5	RW	BANK0_MCD_RDWR_WRITE_MODE: MCD write mode: 0 = OR 1 = and
6	ROX	BANK0_MCD_RDWR_WRITE_STATUS: MCD direct write has completed.
7:16	RO	constant = 0b0000000000
17:31	RW	BANK0_MCD_RDWR_ADDR: MCD direct access address.
32:63	RWX	BANK0_MCD_RDWR_RDWR_DATA: MCD read/write data based on wr_enable setting.

Register Name	MCD Recovery Control Register
Mnemonic	MCD0.BANK0_MCD_REC
Address	0000000003011010 (SCOM)
Description	MCD recovery control register

Bits	SCOM	Field Mnemonic: Description
0	RWX	BANK0_MCD_REC_ENABLE: MCD recovery access enable.
1	ROX	BANK0_MCD_REC_DONE: MCD recovery done.
2	RW	BANK0_MCD_REC_CONTINUOUS: MCD recovery continuous setting.
3:4	RO	constant = 0b00
5	ROX	BANK0_MCD_REC_STATUS: MCD recovery status: 0 = idle 1 = running
6:7	RO	constant = 0b00
8:19	RW	BANK0_MCD_REC_PACE: MCD recovery pace between new cache lines.
20	ROX	BANK0_MCD_REC_ADDR_ERROR: MCD recovery has received an address error CRESP.
21:35	RW	BANK0_MCD_REC_ADDR: MCD recovery start address.
36:39	RO	constant = 0b0000
40:43	RW	BANK0_MCD_REC_RTY_COUNT: MCD recovery retries before failure.
44:48	RO	constant = 0b00000
49:63	RW	BANK0_MCD_REC_VG_COUNT: MCD recovery vector groups to recovery.

Register Name	MCD Vector Group Configuration Register
Mnemonic	MCD0.BANK0_MCD_VGC
Address	0000000003011011 (SCOM)
Description	MCD vector group configuration register

Bits	SCOM	Field Mnemonic: Description
0:15	RW	BANK0_MCD_AVAIL_GROUPS: Available groups, for ECC.
16:31	RO	constant = 0b0000000000000000
32	RW	BANK0_MCD_4X4_MODE: Enable Brazos 4x4.
33	RW	BANK0_MCD_HANG_POLL_ENABLE: Enables hang_poll.
34	RW	BANK0_MCD_RND_BACKOFF_ENABLE: Enables rnd_backoff.
35	RW	BANK0_MCD_DROP_PRIORITY_MODE: Reduces drop_priority: 0 = high 1 = low
36	RW	BANK0_MCD_MASK_AGV_DISABLE_MODE: Reduce mask_agv_disable: 0 = mask 1 = not mask
37	RW	BANK0_MCD_XLATE_TO_ADDR_ID_ENABLE: Reduces mask_agv_disable: 0 = mask 1 = not mask

Bits	SCOM	Field Mnemonic: Description
38:63	RO	constant = 0b00000000000000000000000000

Register Name	MCD ECC Error Capture Register
Mnemonic	MCD0.MCD_ECAP
Address	0000000003011012 (SCOM)
Description	MCD ECC Error Capture Register

Bits	SCOM	Field Mnemonic: Description
0	WO_1P	MCD_ECAP_ECC_CLEAR: Write of 1 clears ECC capture data.
1	RO	constant = 0b0
2	ROX	MCD_ECAP_ECC_UE: ECC capture data is for an uncorrectable error.
3	ROX	MCD_ECAP_ECC_CE: ECC capture data is for a correctable error.
4:7	ROX	MCD_ECAP_ECC_ERROR_COUNT: Number of ECC errors detected. Clamps to 0xF.
8:9	RO	constant = 0b00
10:23	ROX	MCD_ECAP_ECC_ERROR_ADDR: Line (0 - 9) and array (10 - 13) of last captured ECC error.
24:31	ROX	MCD_ECAP_ECC_SYNDROME: Syndrome of last captured ECC error.
32	RO	constant = 0b0

Address	0000000003011400 (SCOM) 0000000003011401 (SCOM1) 0000000003011402 (SCOM2)
Description	Local FIR register for MCD

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	MCD_ARRAY_ECC_UE_ERR: MCD array ECC uncorrectable error.
1	RWX	WOX_AND	WOX_OR	MCD_ARRAY_ECC_CE_ERR: MCD array ECC uncorrectable error.
2	RWX	WOX_AND	WOX_OR	MCD_PB_ADDR_PARITY_ERR: MCD processor bus address Parity error.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
3	RWX	WOX_AND	WOX_OR	MCD_SM_OR_CASE_ERR: MCD invalid state error.
4	RWX	WOX_AND	WOX_OR	MCD_CL_PROBE_PB_HANG_ERR: Hang poll timer expired on cl_probe.
5	RWX	WOX_AND	WOX_OR	MCD_CRESP_ADDR_ERR: Processor bus address error cresp received.
6	RWX	WOX_AND	WOX_OR	MCD_UNSOLICITED_CRESP_ERR: MCD received an unsolicited CRESP.
7	RWX	WOX_AND	WOX_OR	MCD_TTAG_PARITY_ERR: MCD processor bus ttag parity error.
8	RWX	WOX_AND	WOX_OR	MCD_FIR_REG_UPDATE_ERR: MCD SCOM register update error.
9	RWX	WOX_AND	WOX_OR	MCD_ACK_DEAD_CRESP_ERR: MCD received an ack_dead_cresp.
10	RWX	WOX_AND	WOX_OR	MCD_SCOM_ERR: PBEH CENT FIR SCOM error.
11	RWX	WOX_AND	WOX_OR	MCD_SCOM_ERR_DUP: PBEH CENT FIR SCOM error duplicate.
12:63	RO	RO	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	Pervasive FIR Mask Register
Mnemonic	MCD1.MCD_FIR_MASK_REG
Address	0000000003011403 (SCOM) 0000000003011404 (SCOM1) 0000000003011405 (SCOM2)
Description	Error mask register (Action0, Action1, Mask) = Action Select (0, 1, 0) = Recoverable Error (0, 0, 0) = Checkstop Error (1, 0, 0) = Special_attention (x, x, 1) = MASKED

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_AND	WO_OR	MCD_ARRAY_ECC_UE_MASK: Mask MCD array ECC uncorrectable error.
1	RW	WO_AND	WO_OR	MCD_ARRAY_ECC_CE_MASK: Mask MCD array ECC uncorrectable error.
2	RW	WO_AND	WO_OR	MCD_PB_ADDR_PARITY_MASK: Mask MCD processor bus address parity error.
3	RW	WO_AND	WO_OR	MCD_SM_OR_CASE_MASK: Mask MCD invalid state error.
4	RW	WO_AND	WO_OR	MCD_CL_PROBE_PB_HANG_MASK: Mask Hang poll timer expired on cl_probe.
5	RW	WO_AND	WO_OR	MCD_CRESP_ADDR_MASK: Mask processor bus address error CRESP received.
6	RW	WO_AND	WO_OR	MCD_UNSOLICITED_CRESP_MASK: Mask MCD received an unsolicited CRESP.
7	RW	WO_AND	WO_OR	MCD_TTAG_PARITY_MASK: Mask MCD processor bus TTAG parity error.
8	RW	WO_AND	WO_OR	MCD_FIR_REG_UPDATE_ERR_MASK: Mask MCD SCOM register update error.
9	RW	WO_AND	WO_OR	MCD_ACK_DEAD_CRESP_MASK: Mask MCD SCOM register update error.
10	RW	WO_AND	WO_OR	MCD_SCOM_ERR_MASK: PBEH CENT FIR_SCOM error mask.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
11	RW	WO_AND	WO_OR	MCD_SCOM_ERR_MASK_DUP: PBEH CENT FIR_SCOM error mask duplicate.
12:63	RO	RO	RO	constant = 0b0000000000000000000000000000000000000000000000000000000000000000

Register Name	Pervasive FIR Action 0 Register
Mnemonic	MCD1.MCD_FIR_ACTION0_REG
Address	0000000003011406 (SCOM)
Description	Action Select for the FIR bits

Bits	SCOM	Field Mnemonic: Description
0:11	RW	FIR_ACTION0: MSB of action select for corresponding bit in FIR. (Action0, Action1, Mask) = Action select. (0, 1, 0) = Recoverable error. (0, 0, 0) = Checkstop error. (1, 0, 0) = Special attention. (x, x, 1) = Masked.
12:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	Pervasive FIR Action 1 Register
Mnemonic	MCD1.MCD_FIR_ACTION1_REG
Address	0000000003011407 (SCOM)
Description	Action Select for the FIR bits

Bits	SCOM	Field Mnemonic: Description
0:11	RW	FIR_ACTION1: MSB of action select for corresponding bit in FIR. (Action0, Action1, Mask) = Action select. (0, 1, 0) = Recoverable error. (0, 0, 0) = Checkstop error. (1, 0, 0) = Special attention. (x, x, 1) = Masked.
12:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	MCD TOP (mcd_cn0) Configuration Register
Mnemonic	MCD1.BANK0_MCD_TOP
Address	000000000301140A (SCOM)
Description	MCD TOP (mcd_cn0) Configuration Register

Bits	SCOM	Field Mnemonic: Description
0	RW	BANK0_MCD_TOP_VALID: MCD_TOP valid.
1	RW	BANK0_MCD_TOP_CPG: MCD_TOP group address with other bank.
2	RW	BANK0_MCD_TOP_GRP_MBR_ID: MCD_TOP group member identification.
3	RW	BANK0_MCD_TOP_ALWAYS_RTY: MCD_TOP disable array array access and force rty_dinc response.

Bits	SCOM	Field Mnemonic: Description
4:12	RO	constant = 0b000000000
13:29	RW	BANK0_MCD_TOP_GRP_SIZE: MCD_TOP group size.
30:32	RO	constant = 0b000
33:63	RW	BANK0_MCD_TOP_GRP_BASE: MCD_TOP base address.

Register Name	MCD STR (mcd_cn1) Configuration Register
Mnemonic	MCD1.BANK0_MCD_STR
Address	000000000301140B (SCOM)
Description	MCD STR (mcd_cn1) Configuration Register

Bits	SCOM	Field Mnemonic: Description
0	RW	BANK0_MCD_STR_VALID: MCD_str valid.
1	RW	BANK0_MCD_STR_CPG: MCD_str group address with other bank.
2	RW	BANK0_MCD_STR_GRP_MBR_ID: MCD_str group member identification.
3	RW	BANK0_MCD_STR_ALWAYS_RTY: MCD_str disable array array access and force rty_dinc response.
4:12	RO	constant = 0b000000000
13:29	RW	BANK0_MCD_STR_GRP_SIZE: MCD_str group size.
30:32	RO	constant = 0b000
33:63	RW	BANK0_MCD_STR_GRP_BASE: MCD_str base address.

Register Name	MCD bot (mcd_cn2) Configuration Register
Mnemonic	MCD1.BANK0_MCD_BOT
Address	000000000301140C (SCOM)
Description	MCD bot (mcd_cn2) Configuration Register

Bits	SCOM	Field Mnemonic: Description
0	RW	BANK0_MCD_BOT_VALID: MCD_bot valid.
1	RW	BANK0_MCD_BOT_CPG: MCD_bot group address with other bank.
2	RW	BANK0_MCD_BOT_GRP_MBR_ID: MCD_bot group member identification.
3	RW	BANK0_MCD_BOT_ALWAYS_RTY: MCD_bot disable array array access and force rty_dinc response.
4:12	RO	constant = 0b000000000
13:29	RW	BANK0_MCD_BOT_GRP_SIZE: MCD_bot group size.
30:32	RO	constant = 0b000
33:63	RW	BANK0_MCD_BOT_GRP_BASE: MCD_bot base address.

Register Name	MCD cha (mcd_cn3) Configuration Register
Mnemonic	MCD1.BANK0_MCD_CHA
Address	000000000301140D (SCOM)
Description	MCD cha (mcd_cn3) Configuration Register

Bits	SCOM	Field Mnemonic: Description
0	RW	BANK0_MCD_CHA_VALID: MCD_cha valid.
1	RW	BANK0_MCD_CHA_CPG: MCD_cha group address with other bank.
2	RW	BANK0_MCD_CHA_GRP_MBR_ID: MCD_cha group member identification.
3	RW	BANK0_MCD_CHA_ALWAYS_RTY: MCD_cha disable array array access and force rty_dinc response.
4:12	RO	constant = 0b000000000
13:29	RW	BANK0_MCD_CHA_GRP_SIZE: MCD_cha group size.
30:32	RO	constant = 0b000
33:63	RW	BANK0_MCD_CHA_GRP_BASE: MCD_cha base address.

Register Name	MCD Command Decode Configuration Register
Mnemonic	MCD1.BANK0_MCD_CMD
Address	000000000301140E (SCOM)
Description	MCD command decode Configuration Register

Bits	SCOM	Field Mnemonic: Description
0:18	RW	BANK0_MCD_CHECK_CMDS: Check commands.
19:30	RO	constant = 0b000000000000
31	RW	BANK0_MCD_CHECK_CMDS_EN: Enable override of check commands.
32:50	RW	BANK0_MCD_SET_CMDS: Set commands.
51:62	RO	constant = 0b000000000000
63	RW	BANK0_MCD_SET_CMDS_EN: Enable override of set commands.

Register Name	MCD Direct Read Write Register
Mnemonic	MCD1.BANK0_MCD_RW
Address	000000000301140F (SCOM)
Description	MCD direct read write Register

Bits	SCOM	Field Mnemonic: Description
0	RWX	BANK0_MCD_RDWR_ACCESS_EN: MCD direct read/write access enable.
1	RW	BANK0_MCD_RDWR_WR_ENABLE: MCD direct write enable. Reads when off.
2	RO	constant = 0b0
3	ROX	BANK0_MCD_RDWR_REQ_PEND: MCD direct read/write access pending.
4	ROX	BANK0_MCD_RDWR_READ_STATUS: MCD direct read data is valid.

Bits	SCOM	Field Mnemonic: Description
5	RW	BANK0_MCD_RDWR_WRITE_MODE: MCD write mode. 0 = OR 1 = and
6	ROX	BANK0_MCD_RDWR_WRITE_STATUS: MCD direct write has completed.
7:16	RO	constant = 0b0000000000
17:31	RW	BANK0_MCD_RDWR_ADDR: MCD direct access address.
32:63	RWX	BANK0_MCD_RDWR_RDWR_DATA: MCD read/write data based on the wr_enable setting.

Register Name	MCD Recovery Control Register
Mnemonic	MCD1.BANK0_MCD_REC
Address	0000000003011410 (SCOM)
Description	MCD recovery control Register

Bits	SCOM	Field Mnemonic: Description
0	RWX	BANK0_MCD_REC_ENABLE: MCD recovery access enable.
1	ROX	BANK0_MCD_REC_DONE: MCD recovery done.
2	RW	BANK0_MCD_REC_CONTINUOUS: MCD recovery continuous setting.
3:4	RO	constant = 0b00
5	ROX	BANK0_MCD_REC_STATUS: MCD recovery status. 0 = idle 1 = running
6:7	RO	constant = 0b00
8:19	RW	BANK0_MCD_REC_PACE: MCD recovery pace between new cache lines.
20	ROX	BANK0_MCD_REC_ADDR_ERROR: MCD recovery has received an address error CRESP.
21:35	RW	BANK0_MCD_REC_ADDR: MCD recovery start address.
36:39	RO	constant = 0b0000
40:43	RW	BANK0_MCD_REC_RTY_COUNT: MCD recovery retries before failure.
44:48	RO	constant = 0b00000
49:63	RW	BANK0_MCD_REC_VG_COUNT: MCD recovery vector groups to recovery.

Register Name	MCD Vector Group Configuration Register
Mnemonic	MCD1.BANK0_MCD_VGC
Address	0000000003011411 (SCOM)
Description	MCD vector group Configuration Register

Bits	SCOM	Field Mnemonic: Description
0:15	RW	BANK0_MCD_AVAIL_GROUPS: Available groups for ECC.
16:31	RO	constant = 0b0000000000000000
32	RW	BANK0_MCD_4X4_MODE: Enable Brazos 4x4.
33	RW	BANK0_MCD_HANG_POLL_ENABLE: Enable hang_poll.
34	RW	BANK0_MCD_RND_BACKOFF_ENABLE: Enable rnd_backoff.

Bits	SCOM	Field Mnemonic: Description
35	RW	BANK0_MCD_DROP_PRIORITY_MODE: Reduce drop_priority. 0 = high 1 = low
36	RW	BANK0_MCD_MASK_AGV_DISABLE_MODE: Reduce mask_agv_disable. 0 = mask 1 = not mask
37	RW	BANK0_MCD_XLATE_TO_ADDR_ID_ENABLE: Reduce mask_agv_disable. 0 = mask 1 = not mask
38:63	RO	constant = 0b00000000000000000000000000

Register Name	MCD ECC Error Capture Register
Mnemonic	MCD1.MCD_ECAP
Address	0000000003011412 (SCOM)
Description	MCD ECC Error Capture Register

Bits	SCOM	Field Mnemonic: Description
0	WO_1P	MCD_ECAP_ECC_CLEAR: Write of 1 clears ECC capture data.
1	RO	constant = 0b0
2	ROX	MCD_ECAP_ECC_UE: ECC capture data is for an uncorrectable error.
3	ROX	MCD_ECAP_ECC_CE: ECC capture data is for a correctable error.
4:7	ROX	MCD_ECAP_ECC_ERROR_COUNT: Number of ECC errors detected. Clamps to 0xF.
8:9	RO	constant = 0b00
10:23	ROX	MCD_ECAP_ECC_ERROR_ADDR: Line (0 - 9) and array(10 - 13) of last captured ECC error.
24:31	ROX	MCD_ECAP_ECC_SYNDROME: Syndrome of last captured ECC error.
32	RO	constant = 0b0
33	ROX	MCD_ECAP_SLICE0_CFG_ECC_UE_ERR:
34	ROX	MCD_ECAP_SLICE0_CFG_ECC_CE_ERR:
35	ROX	MCD_ECAP_SLICE1_CFG_ECC_UE_ERR:
36	ROX	MCD_ECAP_SLICE1_CFG_ECC_CE_ERR:
37	ROX	MCD_ECAP_SLICE2_CFG_ECC_UE_ERR:
38	ROX	MCD_ECAP_SLICE2_CFG_ECC_CE_ERR:
39	ROX	MCD_ECAP_SLICE3_CFG_ECC_UE_ERR:
40	ROX	MCD_ECAP_SLICE3_CFG_ECC_CE_ERR:
41	ROX	MCD_ECAP_PRESP_RTY_OTHER:
42	ROX	MCD_ECAP_REC_SM_ERROR_ERR:
43	ROX	MCD_ECAP_REC_PB_SM_ERROR_ERR:
44	ROX	MCD_ECAP_ADDR_ERROR_PULSE:
45	ROX	MCD_ECAP_RCMD0_ADDR_PARITY_ERROR:
46	ROX	MCD_ECAP_RCMD1_ADDR_PARITY_ERROR:
47	ROX	MCD_ECAP_RCMD2_ADDR_PARITY_ERROR:

Bits	SCOM	Field Mnemonic: Description
48	ROX	MCD_ECAP_RCMD3_ADDR_PARITY_ERROR:
49	ROX	MCD_ECAP_WARB_INVALID_CASE_ERROR:
50	ROX	MCD_ECAP_INVALID_CRESP_ERROR:
51	ROX	MCD_ECAP_TTAG_PARITY_ERROR:
52	ROX	MCD_ECAP_RDADDR_ARB_BAD_HAND:
53	ROX	MCD_RDWR_UPDATE_ERROR: MCD direct access register update error.
54	ROX	MCD_REC_UPDATE_ERROR: MCD direct access register update error.
55	ROX	MCD_REC_ACK_DEAD_ERROR: MCD received an ack_dead cResp.
56:63	RO	constant = 0b00000000

Register Name	MCD Debug Configuration Register
Mnemonic	MCD1.MCD_DBG
Address	0000000003011413 (SCOM)
Description	MCD Debug Configuration Register

Bits	SCOM	Field Mnemonic: Description
0:2	RO	constant = 0b000
3	RW	MCD_DBG_TRACE_ENABLE:
4:7	RW	MCD_DBG_TRACE_SELECT:
8	RW	MCD_DBG_ERR_INJ_ENABLE: MCD Array error inject enable.
9	RW	MCD_DBG_ERR_INJ_TYPE: MCD Array error inject type. 0 : CE 1 : UE
10	RW	MCD_DBG_ERR_INJ_ACTION: MCD Array error inject action. 0 : single 1 : continuous
11:14	RW	MCD_DBG_ERR_INJ_ARRAY_SEL: MCD Array error inject select. 0000 - 1111.
15	RWX_WCLRPART	MCD_DBG_ERR_INJ_STATUS: MCD Array error inject status. 1: success.
16:18	RO	constant = 0b000
19	RW	MCD_DBG_PMU_ENABLE:
20:22	RW	MCD_DBG_PMU_SELECT_LOW:
23:25	RW	MCD_DBG_PMU_SELECT_HIGH:
26:31	RO	constant = 0b000000
32:47	RW	MCD_DBG_PMU_BUS_ENABLE:
48:63	RO	constant = 0b0000000000000000

Register Name	VAS Unit FIR Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_FIR_REG
Address	0000000003011800 (SCOM) 0000000003011801 (SCOM1) 0000000003011802 (SCOM2)
Description	Local FIR register for the VAS unit logic

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	EG_LOGIC_HW_ERROR: Hardware error detected in egress logic.
1	RWX	WOX_AND	WOX_OR	IN_LOGIC_HW_ERROR: Hardware error detected in ingress logic.
2	RWX	WOX_AND	WOX_OR	CQ_LOGIC_HW_ERROR: Hardware error detected in CQ logic.
3	RWX	WOX_AND	WOX_OR	WC_LOGIC_HW_ERROR: Hardware error detected in WC logic.
4	RWX	WOX_AND	WOX_OR	RG_LOGIC_HW_ERROR: Hardware error detected in RG logic.
5	RWX	WOX_AND	WOX_OR	CQ_PB_PARITY_ERROR: processor bus parity error detected on CQ logic interface.
6	RWX	WOX_AND	WOX_OR	CQ_PB_RD_ADDR_ERROR: CQ logic detected processor bus address error on CRESP from a read operation.
7	RWX	WOX_AND	WOX_OR	CQ_PB_WR_ADDR_ERROR: CQ logic detected processor bus address error on CRESP from a write operation.
8	RWX	WOX_AND	WOX_OR	EG_ECC_CE_ERROR: Correctable ECC error detected in egress logic.
9	RWX	WOX_AND	WOX_OR	IN_ECC_CE_ERROR: Correctable ECC error detected in ingress logic.
10	RWX	WOX_AND	WOX_OR	CQ_ECC_CE_ERROR: Correctable ECC error detected in CQ logic.
11	RWX	WOX_AND	WOX_OR	WC_ECC_CE_ERROR: Correctable ECC error detected in WC logic.
12	RWX	WOX_AND	WOX_OR	RG_ECC_CE_ERROR: Correctable ECC error detected in RG logic.
13	RWX	WOX_AND	WOX_OR	CQ_PB_OB_CE_ERROR: ECC Correctable Error detected on CQ outbound processor bus interface.
14	RWX	WOX_AND	WOX_OR	CQ_PB_OB_UE_ERROR: ECC uncorrectable Error detected on CQ outbound processor bus interface.
15	RWX	WOX_AND	WOX_OR	CQ_PB_MASTER_FSM_HANG: processor bus state machine hang detected in CQ logic.
16	RWX	WOX_AND	WOX_OR	EG_ECC_UE_ERROR: Uncorrectable ECC error detected in egress logic.
17	RWX	WOX_AND	WOX_OR	IN_ECC_UE_ERROR: Uncorrectable ECC error detected in ingress logic.
18	RWX	WOX_AND	WOX_OR	CQ_ECC_UE_ERROR: Uncorrectable ECC error detected in CQ logic.
19	RWX	WOX_AND	WOX_OR	WC_ECC_UE_ERROR: Uncorrectable ECC error detected in WC logic.
20	RWX	WOX_AND	WOX_OR	RG_ECC_UE_ERROR: Uncorrectable ECC error detected in RG logic.
21	RWX	WOX_AND	WOX_OR	IN_PARITY_ERROR: Parity error detected in Ingress logic.
22	RWX	WOX_AND	WOX_OR	IN_SW_CAST_ERROR: Software cast error detected in Ingress logic.
23	RWX	WOX_AND	WOX_OR	Reserved field.
24	RWX	WOX_AND	WOX_OR	EG_ECC_SUE_ERROR: ECC sue error detected in egress logic.
25	RWX	WOX_AND	WOX_OR	IN_ECC_SUE_ERROR: ECC sue error detected in ingress logic.
26	RWX	WOX_AND	WOX_OR	CQ_ECC_SUE_ERROR: ECC sue error detected in CQ logic.
27	RWX	WOX_AND	WOX_OR	WC_ECC_SUE_ERROR: ECC sue error detected in WC logic.
28	RWX	WOX_AND	WOX_OR	RG_ECC_SUE_ERROR: ECC sue error detected in RG logic.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
29	RWX	WOX_AND	WOX_OR	CQ_PB_RD_LINK_ERROR: processor bus link error detected on read operation in CQ logic.
30	RWX	WOX_AND	WOX_OR	CQ_PB_WR_LINK_ERROR: processor bus link error detected on write operation in CQ logic.
31	RWX	WOX_AND	WOX_OR	CQ_PB_LINK_ABORT: processor bus link abort operation received in CQ logic.
32	RWX	WOX_AND	WOX_OR	MMIO_HYP_RD_ADDR_ERR: Address error detected on hypervisor MMIO read.
33	RWX	WOX_AND	WOX_OR	MMIO_OS_RD_ADDR_ERR: Address error detected on OS MMIO read.
34	RWX	WOX_AND	WOX_OR	MMIO_HYP_WR_ADDR_ERR: Address error detected on hypervisor MMIO write.
35	RWX	WOX_AND	WOX_OR	MMIO_OS_WR_ADDR_ERR: Address error detected on OS MMIO write.
36	RWX	WOX_AND	WOX_OR	MMIO_NON8B_HYP_ERR: non-8-Byte MMIO detected by hypervisor.
37	RWX	WOX_AND	WOX_OR	MMIO_NON8B_OS_ERR: non-8-Byte MMIO detected by user or OS.
38	RWX	WOX_AND	WOX_OR	WM_WIN_NOT_OPEN_ERR: Write monitor operation attempted on a window that is not open.
39	RWX	WOX_AND	WOX_OR	WM_MULTIHIT_ERR: Multiple write monitor registers match the same snooped PB operation.
40	RWX	WOX_AND	WOX_OR	PG_MIG_DISABLED_ERR: Page Migration Register is not valid.
41	RWX	WOX_AND	WOX_OR	PG_MIG_SIZE_MISMATCH_ERR: Page Migration Register size does not match corresponding FIFO.
42	RWX	WOX_AND	WOX_OR	NOTIFY_FAILED_ERR: ASB_Notify sent but not claimed and interrupts were disabled in window context.
43	RWX	WOX_AND	WOX_OR	WR_MON_NOT_DISABLED_ERR: Write monitor operation hit a window which has notification disabled.
44	RWX	WOX_AND	WOX_OR	VAS_REJECTED_PASTE_CMD: VAS rejected a PB paste command. See window status register for details.
45	RWX	WOX_AND	WOX_OR	DATA_HANG_DETECTED: VAS hung waiting for data from processor bus.
46	RWX	WOX_AND	WOX_OR	INCOMING_PB_PARITY_ERR: Incoming processor bus parity error.
47	RWX	WOX_AND	WOX_OR	SCOM1_SAT_ERR: HW error from SCOM Satellite 1.
48	RWX	WOX_AND	WOX_OR	NX_LOCAL_XSTOP: NX local checkstop.
49	RWX	WOX_AND	WOX_OR	SCOM_MMIO_ADDR_ERR: SCOM MMIO address offset error. SCOM-initiated MMIO address did not decode to valid address.
50	RWX	WOX_AND	WOX_OR	UNUSED50: Unused bit.
51	RWX	WOX_AND	WOX_OR	UNUSED51: Unused bit.
52	RWX	WOX_AND	WOX_OR	SCOMFIR_INT_ERR_0: FIR/SCOM satellite parity error.
53	RWX	WOX_AND	WOX_OR	SCOMFIR_INT_ERR_1: FIR/SCOM satellite parity error duplicate.
54:63	RO	RO	RO	constant = 0b0000000000

Register Name	**VAS FIR Mask Register**
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_FIR_MASK_REG
Address	0000000003011803 (SCOM) 0000000003011804 (SCOM1) 0000000003011805 (SCOM2)
Description	Error mask register (Action0, Action1, Mask) = Action select (0, 0, 0) = System checkstop error (0, 1, 0) = Recoverable error (1, 0, 0) = Not used (1, 1, 0) = Local checkstop error (x, x, 1) = Masked

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_AND	WO_OR	EG_LOGIC_HW_ERROR_MASK: Mask for hardware error detected in egress logic.
1	RW	WO_AND	WO_OR	IN_LOGIC_HW_ERROR_MASK: Mask for hardware error detected in ingress logic.
2	RW	WO_AND	WO_OR	CQ_LOGIC_HW_ERROR_MASK: Mask for hardware error detected in CQ logic.
3	RW	WO_AND	WO_OR	WC_LOGIC_HW_ERROR_MASK: Mask for hardware error detected in WC logic.
4	RW	WO_AND	WO_OR	RG_LOGIC_HW_ERROR_MASK: Mask for hardware error detected in RG logic.
5	RW	WO_AND	WO_OR	CQ_PB_PARITY_ERROR_MASK: Mask for processor bus parity error detected on CQ logic interface.
6	RW	WO_AND	WO_OR	CQ_PB_RD_ADDR_ERROR_MASK: Mask for processor bus address error detected by CQ logic on CRESP from a read operation.
7	RW	WO_AND	WO_OR	CQ_PB_WR_ADDR_ERROR_MASK: Mask for processor bus address error detected by CQ logic on CRESP from a write operation.
8	RW	WO_AND	WO_OR	EG_ECC_CE_ERROR_MASK: Mask for correctable ECC error detected in Egress logic.
9	RW	WO_AND	WO_OR	IN_ECC_CE_ERROR_MASK: Mask for correctable ECC error detected in Ingress logic.
10	RW	WO_AND	WO_OR	CQ_ECC_CE_ERROR_MASK: Mask for correctable ECC error detected in CQ logic.
11	RW	WO_AND	WO_OR	WC_ECC_CE_ERROR_MASK: Mask for correctable ECC error detected in WC logic.
12	RW	WO_AND	WO_OR	RG_ECC_CE_ERROR_MASK: Mask for correctable ECC error detected in RG logic.
13	RW	WO_AND	WO_OR	CQ_PB_OB_CE_ERROR_MASK: Mask for ECC correctable error detected on CQ outbound processor bus interface.
14	RW	WO_AND	WO_OR	CQ_PB_OB_UE_ERROR_MASK: Mask for ECC uncorrectable Error detected on CQ outbound processor bus interface.
15	RW	WO_AND	WO_OR	CQ_PB_MASTER_FSM_HANG_MASK: Mask for processor bus state machine hang detected in CQ logic.
16	RW	WO_AND	WO_OR	EG_ECC_UE_ERROR_MASK: Mask for uncorrectable ECC error detected in egress logic.
17	RW	WO_AND	WO_OR	IN_ECC_UE_ERROR_MASK: Mask for uncorrectable ECC error detected in ingress logic.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
18	RW	WO_AND	WO_OR	CQ_ECC_UE_ERROR_MASK: Mask for uncorrectable ECC error detected in CQ logic.
19	RW	WO_AND	WO_OR	WC_ECC_UE_ERROR_MASK: Mask for uncorrectable ECC error detected in WC logic.
20	RW	WO_AND	WO_OR	RG_ECC_UE_ERROR_MASK: Mask for uncorrectable ECC error detected in RG logic.
21	RW	WO_AND	WO_OR	IN_PARITY_ERROR_MASK: Mask for parity error detected in Ingress logic.
22	RW	WO_AND	WO_OR	IN_SW_CAST_ERROR_MASK: Mask for software cast error detected in Ingress logic.
23	RW	WO_AND	WO_OR	Reserved field.
24	RW	WO_AND	WO_OR	EG_ECC_SUE_ERROR_MASK: Mask for ECC sue error detected in Egress logic.
25	RW	WO_AND	WO_OR	IN_ECC_SUE_ERROR_MASK: Mask for ECC sue error detected in Ingress logic.
26	RW	WO_AND	WO_OR	CQ_ECC_SUE_ERROR_MASK: Mask for ECC sue error detected in CQ logic.
27	RW	WO_AND	WO_OR	WC_ECC_SUE_ERROR_MASK: Mask for ECC sue error detected in WC logic.
28	RW	WO_AND	WO_OR	RG_ECC_SUE_ERROR_MASK: Mask for ECC sue error detected in RG logic.
29	RW	WO_AND	WO_OR	CQ_PB_RD_LINK_ERROR_MASK: Mask for processor bus link error detected on read operation in CQ logic.
30	RW	WO_AND	WO_OR	CQ_PB_WR_LINK_ERROR_MASK: Mask for processor bus link error detected on write operation in CQ logic.
31	RW	WO_AND	WO_OR	CQ_PB_LINK_ABORT_MASK: Mask for processor bus link abort operation received in CQ logic.
32	RW	WO_AND	WO_OR	MMIO_HYP_RD_ADDR_ERR_MASK: Mask for address error detected on hypervisor MMIO read.
33	RW	WO_AND	WO_OR	MMIO_OS_RD_ADDR_ERR_MASK: Mask for address error detected on OS MMIO read.
34	RW	WO_AND	WO_OR	MMIO_HYP_WR_ADDR_ERR_MASK: Mask for address error detected on hypervisor MMIO write.
35	RW	WO_AND	WO_OR	MMIO_OS_WR_ADDR_ERR_MASK: Mask for address error detected on OS MMIO write.
36	RW	WO_AND	WO_OR	MMIO_NON8B_HYP_ERR_MASK: Mask for non-8-Byte MMIO detected by hypervisor.
37	RW	WO_AND	WO_OR	MMIO_NON8B_OS_ERR_MASK: Mask for non-8-Byte MMIO detected by user or OS.
38	RW	WO_AND	WO_OR	WM_WIN_NOT_OPEN_ERR_MASK: Mask for write monitor operation attempted on a window that is not open.
39	RW	WO_AND	WO_OR	WM_MULTIHIT_ERR_MASK: Mask for multiple write monitor registers which match the same snooped PB operation.
40	RW	WO_AND	WO_OR	PG_MIG_DISABLED_ERR_MASK: Mask for Page Migration Register which is not valid.
41	RW	WO_AND	WO_OR	PG_MIG_SIZE_MISMATCH_ERR_MASK: Mask for Page Migration Register whose size does not match corresponding FIFO.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
42	RW	WO_AND	WO_OR	NOTIFY_FAILED_ERR_MASK: Mask for ASB_Notify sent but not claimed and interrupts were disabled in window context.
43	RW	WO_AND	WO_OR	WR_MON_NOT_DISABLED_ERR_MASK: Mask for write monitor operation hit a window which has notification disabled.
44	RW	WO_AND	WO_OR	VAS_REJECTED_PASTE_CMD_MASK: Mask for VAS rejecting a PB paste command.
45	RW	WO_AND	WO_OR	DATA_HANG_DETECTED_MASK: Mask for VAS hang waiting for data from processor bus.
46	RW	WO_AND	WO_OR	INCOMING_PB_PARITY_ERR_MASK: Mask for incoming processor bus parity error.
47	RW	WO_AND	WO_OR	SCOM1_SAT_ERR_MASK: Mask for HW error from SCOM Satellite 1.
48	RW	WO_AND	WO_OR	NX_LOCAL_XSTOP_MASK: Mask for NX Local Checkstop.
49	RW	WO_AND	WO_OR	SCOM_MMIO_ADDR_ERR_MASK: Mask for SCOM MMIO address offset error.
50	RW	WO_AND	WO_OR	UNUSED50_MASK: Unused bit.
51	RW	WO_AND	WO_OR	UNUSED51_MASK: Unused bit.
52	RW	WO_AND	WO_OR	SCOMFIR_INT_ERR_0_MASK: Mask for FIR/SCOM satellite parity error.
53	RW	WO_AND	WO_OR	SCOMFIR_INT_ERR_1_MASK: Mask for FIR/SCOM satellite parity error duplicate.
54:63	RO	RO	RO	constant = 0b0000000000

Register Name	VAS FIR Action 0 Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_FIR_ACTION0_REG
Address	0000000003011806 (SCOM)
Description	Action Select 0 for the FIR bits

Bits	SCOM	Field Mnemonic: Description
0:53	RW	VAS_FIR_ACTION0: MSB of action select for corresponding bit in FIR. (Action0, Action1, Mask) = Action select (0, 0, 0) = System checkstop error (0, 1, 0) = Recoverable error (1, 0, 0) = Not used (1, 1, 0) = Local checkstop error (x, x, 1) = Masked
54:63	RO	constant = 0b0000000000

Register Name	VAS FIR Action 1 Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_FIR_ACTION1_REG
Address	0000000003011807 (SCOM)
Description	Action Select 1 for the FIR bits

Bits	SCOM	Field Mnemonic: Description
0:53	RW	VAS_FIR_ACTION1: MSB of action select for corresponding bit in FIR. (Action0, Action1, Mask) = Action select (0, 0, 0) = System checkstop error (0, 1, 0) = Recoverable error (1, 0, 0) = Not used (1, 1, 0) = Local checkstop error (x, x, 1) = Masked
54:63	RO	constant = 0b0000000000

Register Name	VAS FIR WOF Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_FIR_WOF_REG
Address	0000000003011808 (SCOM)
Description	The “Who's on first” (WOF) register indicates which error occurred first.

Bits	SCOM	Field Mnemonic: Description
0:53	RWX_WCLRREG	VAS_FIR_WOF: WOF Register locks on first error.
54:63	RO	constant = 0b0000000000

Register Name	Window Context MMIO Base Address Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_WCMBAR
Address	000000000301180A (SCOM)
Description	Window Context MMIO Base Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:38	RW	WCMBAR_BASE_ADDR: Base address for the start of the MMIOable registers.
39:63	RO	constant = 0b00000000000000000000000000

Register Name	OS/User Window Context MMIO Base Address Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_UWMBAR
Address	000000000301180B (SCOM)
Description	OS/User Window Context MMIO Base Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:35	RW	UWMBAR_BASE_ADDR: Base address for the start of the OS/user MMIOable registers.
36:63	RO	constant = 0b0000000000000000000000000000

Register Name	Buffer Control Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_BUFCTL
Address	000000000301180C (SCOM)
Description	Buffer Control Register

Bits	SCOM	Field Mnemonic: Description
0:48	RO	constant = 0b000000000000000000000000000000000000000000000000
49:55	RW	TOTAL_FREE_BUF_COUNT: Total number of buffers in the free pool.
56	RO	constant = 0b0
57:63	ROX	CONSUMED_BUF_COUNT: Number of free pool buffers that VAS is actively using.

Register Name	Miscellaneous Status and North Control Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_MISCCTL
Address	000000000301180D (SCOM)
Description	Miscellaneous Status and North Control Register

Bits	SCOM	Field Mnemonic: Description
0	RW	MISC_CTL_4VS64: 4 K vs 64 K striding of window ID bits in paste commands.
1	RW	MISC_CTL_ACCEPT_PASTE: When this bit is asserted, VAS snoops for and accepts paste commands.
2	RW	MISC_CTL_ENABLE_WRMON: Assert this bit to enable the write monitoring function in VAS.
3	RW	MISC_CTL_DISABLE_PUSH2MEM_LIMIT: Disable the push-to-memory credit limit (default limit is one push-to-mem operation at a time).
4	RW	MISC_CTL_QUIESCE_REQUEST: Quiesce requested. VAS logic stops accepting work and quiesces when in-progress work is done.
5	RW	MISC_CTL_PREFETCH_DISABLE: Prefetch disable switch. Tells ingress logic to turn off RCV window prefetching for SND window requests.
6:7	RW	MISC_CTL_UNUSED_BITS: Unused bits.
8:46	RO	constant = 0b00000000000000000000000000000000000000000000
47	WOX	MISC_CTL_INVALIDATE_CAM_LOC: Assert this bit to invalidate the CAM location specified in bits 49:55. Hardware clears this bit.
48	RW	MISC_CTL_INVALIDATE_CAM_ALL: Assert this bit to invalidate the entire CAM. All entries are forced back to memory and marked invalid.
49:55	RW	MISC_CTL_CAM_LOCATION: This location in the CAM is invalidated when bit 47 is asserted.
56	ROX	MISC_CTL_CAM_INVAL_DONE: CAM invalidate done Bit: This bit is asserted when a CAM invalidate operation is completed.
57	RW	MISC_CTL_UNUSED_BITS2: Unused bit.
58	ROX	MISC_CTL_HMI_ACTIVE: HMI Active Bit: This bit indicates that VAS experienced a local checkstop and set the HMI FIR.
59	ROX	MISC_CTL_RG_IS_IDLE: When this bit is asserted ,VAS RG logic is currently idle.
60:63	RO	constant = 0b0000

Register Name	Remote Memory Access Base Address Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_RMABAR
Address	000000000301180E (SCOM)
Description	Remote Memory Access Base Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:51	RW	RMA_BAR: Remote memory access base address register.
52:63	RO	constant = 0b000000000000

Register Name	Remote Memory Access Base Address Mask Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_RMABARM
Address	000000000301180F (SCOM)
Description	Remote Memory Access Base Address Mask Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:51	RW	RMA_BAR_MASK: Remote memory access base address mask register.
52:63	RO	constant = 0b000000000000

Register Name	Write Monitor 0 Base Address Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_WRMON0BAR
Address	0000000003011810 (SCOM)
Description	Write Monitor 0 Base Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:56	RW	WRMON_BAR0_BA: Write monitor 0 base address register.
57:59	RO	constant = 0b000
60:63	RW	WRMON_BAR0_SIZE: Write monitor 0 base address size compare.

Register Name	Write Monitor 1 Base Address Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_WRMON1BAR
Address	0000000003011811 (SCOM)
Description	Write Monitor 1 Base Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:56	RW	WRMON_BAR1_BA: Write monitor 1 base address register.
57:59	RO	constant = 0b000

Bits	SCOM	Field Mnemonic: Description
60:63	RW	WRMON_BAR1_SIZE: Write monitor 1 base address size compare.

Register Name	Write Monitor 2 Base Address Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_WRMON2BAR
Address	0000000003011812 (SCOM)
Description	Write Monitor 2 Base Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:56	RW	WRMON_BAR2_BA: Write monitor 2 base address register.
57:59	RO	constant = 0b000
60:63	RW	WRMON_BAR2_SIZE: Write monitor 2 base address size compare.

Register Name	Write Monitor 3 Base Address Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_WRMON3BAR
Address	0000000003011813 (SCOM)
Description	Write Monitor 3 Base Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:56	RW	WRMON_BAR3_BA: Write monitor 3 base address register.
57:59	RO	constant = 0b000
60:63	RW	WRMON_BAR3_SIZE: Write monitor 3 base address size compare.

Register Name	Write Monitor 4 Base Address Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_WRMON4BAR
Address	0000000003011814 (SCOM)
Description	Write Monitor 4 Base Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:56	RW	WRMON_BAR4_BA: Write monitor 4 base address register.
57:59	RO	constant = 0b000
60:63	RW	WRMON_BAR4_SIZE: Write monitor 4 base address size compare.

Register Name	Write Monitor 5 Base Address Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_WRMON5BAR
Address	0000000003011815 (SCOM)
Description	Write Monitor 5 Base Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:56	RW	WRMON_BAR5_BA: Write monitor 5 base address register.
57:59	RO	constant = 0b000
60:63	RW	WRMON_BAR5_SIZE: Write monitor 5 base address size compare.

Register Name	Write Monitor 6 Base Address Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_WRMON6BAR
Address	0000000003011816 (SCOM)
Description	Write Monitor 6 Base Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:56	RW	WRMON_BAR6_BA: Write monitor 6 base address register.
57:59	RO	constant = 0b000
60:63	RW	WRMON_BAR6_SIZE: Write monitor 6 base address size compare.

Register Name	Write Monitor 7 Base Address Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_WRMON7BAR
Address	0000000003011817 (SCOM)
Description	Write Monitor 7 Base Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:56	RW	WRMON_BAR7_BA: Write monitor 7 base address register.
57:59	RO	constant = 0b000
60:63	RW	WRMON_BAR7_SIZE: Write monitor 7 base address size compare.

Register Name	Write Monitor 0 Window ID Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_WRMON0WID
Address	0000000003011818 (SCOM)
Description	Write Monitor 0 Window ID Register

Bits	SCOM	Field Mnemonic: Description
0:15	RW	WRMON_WID0: Write monitor 0 receive window ID.

Bits	SCOM	Field Mnemonic: Description
16:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	**Window ID MMIO Control Register**
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_MMIOCTL
Address	0000000003011829 (SCOM)
Description	Window ID MMIO Control Register

Bits	SCOM	Field Mnemonic: Description
0	RWX	MMIO_CTL_INIT: Initiate MMIO Operation. SW asserts this bit to start MMIO. HW clears bit when MMIO is done.
1	RWX	MMIO_CTL_COMP: MMIO Complete. HW asserts this bit when MMIO operation is complete. SW must clear bit before reuse.
2	RW	MMIO_CTL_OPTYPE: Operation type load/store. 0 = MMIO Store 1 = MMIO Load
3	RW	MMIO_CTL_ACTYPE: Window Cache Access Type: 0 = Normal MMIO read/write 1 = Raw read of WC array contents
4	RWX	MMIO_CTL_OP_ERR: Error Indicator: 0 = No error 1 = Operation completed with error (typically bad address offset).
5:7	RW	MMIO_CTL_UNUSED: Window ID MMIO Control Register unused bits.
8:35	RO	constant = 0b00000000000000000000000000000000
36:47	RW	MMIO_CTL_OFFSET: Register offset. This field specifies the register to be read or written. Not used for raw array content display operation.

Bits	SCOM	Field Mnemonic: Description
48:63	RW	MMIO_CTL_WINID: Window ID. Specifies which of the 64 K window IDs should be read or written.

Register Name	Window ID MMIO Data Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_MMIODATA
Address	000000000301182A (SCOM)
Description	Window ID MMIO Data Register

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	MMIO_DATA: Data for MMIO write or read operation. ECC for read operation is in the Window ID MMIO ECC Register.

Register Name	IN Error Capture Contents Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_INERRRPT
Address	000000000301182B (SCOM)
Description	IN Error Capture Contents Register

Bits	SCOM	Field Mnemonic: Description
0	WOX	IN_CERR_RESET: c_err_rpt (Error capture) reset bit for IN logic. Asserting this bit resets the error capture keeper latches.
1:3	RO	constant = 0b000
4	ROX	IN_CERR_BIT4: ECC Correctable error (CE) in Window Cache Data0.
5	ROX	IN_CERR_BIT5: ECC Correctable error (CE) in Window Cache Data1.
6	ROX	IN_CERR_BIT6: ECC uncorrectable error (UE) in Window Cache Data0.
7	ROX	IN_CERR_BIT7: ECC uncorrectable error (UE) in Window Cache Data1.
8	ROX	IN_CERR_BIT8: ECC special uncorrectable Error (SUE) in Window Cache Data0.
9	ROX	IN_CERR_BIT9: ECC special uncorrectable Error (SUE) in Window Cache Data1.
10	ROX	IN_CERR_BIT10: Parity error on CAM data fields while doing a castout.
11	ROX	IN_CERR_BIT11: Parity error on CAM data fields while doing an MMIO operation.
12	ROX	IN_CERR_BIT12: Parity error on CAM lookup send data fields for a paste command.
13	ROX	IN_CERR_BIT13: Parity error on CAM lookup receive data fields for a paste command.
14	ROX	IN_CERR_BIT14: Parity error on CAM WINID field.
15	ROX	IN_CERR_BIT15: Software tried to castout an entry that was still in use.
16	ROX	IN_CERR_BIT16: VAS received a paste command for a WINID that is being castout by software.
17	ROX	IN_CERR_BIT17: Hardware rejected an RMA (read or write) command arriving on RCMD bus 1, 2, or 3.
18	ROX	IN_CERR_BIT18: Hardware rejected a paste command received on bus0 due to L=1 (length not zero) or command was an RMA read.
19	ROX	IN_CERR_BIT19: Hardware rejected a paste command due to send window being closed.
20	ROX	IN_CERR_BIT20: Hardware rejected a paste command due to receive window being closed.
21	ROX	IN_CERR_BIT21: Hardware rejected a paste command because (send) fault window had no credits.
22	ROX	IN_CERR_BIT22: Hardware rejected a paste command because send window had no credits (and HW is configured to do this).

Bits	SCOM	Field Mnemonic: Description
23	ROX	IN_CERR_BIT23: Hardware rejected a paste command because receive(fault) window had no credits.
24	ROX	IN_CERR_BIT24: Hardware rejected a paste command because receive window had no credits (and HW is configured to do this).
25	ROX	IN_CERR_BIT25: Multihit detected in CAM during a send window lookup.
26	ROX	IN_CERR_BIT26: Multihit detected in CAM during a receive window lookup.
27	ROX	IN_CERR_BIT27: Multihit detected in CAM during an MMIO lookup.
28	ROX	IN_CERR_BIT28: Combined response hit multiple entries in ingress cResp logic.
29	ROX	IN_CERR_BIT29: State machine entered an invalid state in the castout logic.
30	ROX	IN_CERR_BIT30: Data arrived for send window context, but no CAM slot was reserved for prefetching receive window context.
31	ROX	IN_CERR_BIT31: Unused bit.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	RG Error Capture Contents Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_RGERRRPT
Address	000000000301182C (SCOM)
Description	RG Error Capture Contents Register

Bits	SCOM	Field Mnemonic: Description
0	WOX	RG_CERR_RESET: c_err_rpt (Error capture) reset bit for RG logic. Asserting this bit resets the error capture keeper latches.
1:3	RO	constant = 0b000
4	ROX	RG_CERR_BIT4: RCMD Bus 0 Address parity error.
5	ROX	RG_CERR_BIT5: RCMD Bus 1 Address parity error.
6	ROX	RG_CERR_BIT6: RCMD Bus 2 Address parity error.
7	ROX	RG_CERR_BIT7: RCMD Bus 3 Address parity error.
8	ROX	RG_CERR_BIT8: RCMD Bus 0 TTAG parity error.
9	ROX	RG_CERR_BIT9: RCMD Bus 1 TTAG parity error.
10	ROX	RG_CERR_BIT10: RCMD Bus 2 TTAG parity error.
11	ROX	RG_CERR_BIT11: RCMD Bus 3 TTAG parity error.
12	ROX	RG_CERR_BIT12: Parity error detected on the current state of the MMIO state machine.
13	ROX	RG_CERR_BIT13: MMIO state machine has entered an invalid state.
14:23	ROX	RG_CERR_UNUSED_BITS: Unused bits.
24:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	Debug Bus IN/RG and Group Trace/PMU Selection Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_DBGNORTH
Address	000000000301182D (SCOM)
Description	Debug Bus IN/RG and Group Trace/PMU Selection Register

Bits	SCOM	Field Mnemonic: Description
0:1	RW	SEL_RG_TRACE_DATA_LO: Trace data selection for bits 00 - 43: 0b00 = pass ingress data 0b01 = pass CQ data 0b10 = pass RG internal data
2:3	RW	SEL_RG_TRACE_DATA_HI: Trace data selection for bits 44 - 87: 0b00 = pass ingress data 0b01 = pass CQ data 0b10 = pass RG internal data
4:5	RW	SEL_RG_TRIGGERS_01: Trigger selection for triggers 0, 1: 0b00 = pass Ingress triggers 0b01 = pass CQ triggers 0b10 = pass RG internal triggers
6:7	RW	SEL_RG_TRIGGERS_23: Trigger selection for triggers 2, 3: 0b00 = pass Ingress triggers 0b01 = pass CQ triggers 0b10 = pass RG internal triggers
8:10	RW	IN_TRACE_GROUP_SEL_LO: Select Ingress internal trace groups for bits 0:43, 0b000 = group0, 0b001 = group1, ... , 0b111 = group7.
11:13	RW	IN_TRACE_GROUP_SEL_HI: Select Ingress internal trace groups for bits 44:87, 0b000 = group0, 0b001 = group1, ... , 0b111 = group7.
14:16	RW	IN_TRACE_TRIGGER_SEL_01: Select Ingress internal trigger group for triggers 0, 1 0b000 = group0, 0b001 = group1, ... , 0b111 = group7.
17:19	RW	IN_TRACE_TRIGGER_SEL_23: Select Ingress internal trigger group for triggers 2, 3 0b000 = group0, 0b001 = group1, ... , 0b111 = group7.
20:22	RW	RG_TRACE_GROUP_SEL_LO: Select RG internal trace groups for bits 0:43 0b000 = group0, 0b001 = group1, ... , 0b111 = group7.
23:25	RW	RG_TRACE_GROUP_SEL_HI: Select RG internal trace groups for bits 44:87 0b000 = group0, 0b001 = group1, ... , 0b111 = group7.
26:28	RW	RG_TRACE_TRIGGER_SEL_01: Select RG internal trigger group for triggers 0, 1 0b000 = group0, 0b001 = group1, ... , 0b111 = group7.
29:31	RW	RG_TRACE_TRIGGER_SEL_23: Select RG internal trigger group for triggers 2, 3 0b000 = group0, 0b001 = group1, ... , 0b111 = group7.
32	RW	ENABLE_IN_TRACE: Enable Ingress trace logic. Must be asserted to trace ingress data.
33	RW	ENABLE_RG_TRACE: Enable RG trace logic. Must be asserted to trace RG data, or pass ingress, CQ, WC, or EG data.
34:35	RW	DBG_NORTH_UNUSED_BITS0: Unused bits.

Bits	SCOM	Field Mnemonic: Description
36	RW	SEL_RG_PMU_DATA: Select PMU data out, bits 0-31: 0b0 = pass Ingress/RG data, 0b1 = pass EG/CQ data.
37:39	RW	DBG_NORTH_UNUSED_BITS1: Unused bits.
40	RW	ENABLE_IN_PMU_COUNTING: Enable ingress PMU counting. Must be asserted to count ingress events.
41	RW	ENABLE_RG_PMU_COUNTING: Enable RG PMU counting. Must be asserted to count RG events, or pass Ingress, CQ, WC, or EG events.
42	RW	IN_TRACE_INT_DATA_LO: Select Lower(0:43) or Upper(44:87) Half of IN trace data for bits 0:43.
43	RW	IN_TRACE_INT_DATA_HI: Select Lower(0:43) or Upper(44:87) Half of IN trace data for bits 44:87.
44	RW	EG_TRACE_INT_DATA_LO: Select Lower(0:43) or Upper(44:87) Half of EG trace data for bits 0:43.
45	RW	EG_TRACE_INT_DATA_HI: Select Lower(0:43) or Upper(44:87) Half of EG trace data for bits 44:87.
46	RW	RG_TRACE_INT_DATA_LO: Select Lower(0:43) or Upper(44:87) Half of RG trace data for bits 0:43.
47	RW	RG_TRACE_INT_DATA_HI: Select Lower(0:43) or Upper(44:87) Half of RG trace data for bits 44:87.
48	RW	IN_TRACE_INT_TRIG_01: Select Lower(0:1) or Upper(2:3) Half of IN trace triggers for bits 0:1.
49	RW	IN_TRACE_INT_TRIG_23: Select Lower(0:1) or Upper(2:3) Half of IN trace triggers for bits 2:3.
50	RW	EG_TRACE_INT_TRIG_01: Select Lower(0:1) or Upper(2:3) Half of EG trace triggers for bits 0:1.
51	RW	EG_TRACE_INT_TRIG_23: Select Lower(0:1) or Upper(2:3) Half of EG trace triggers for bits 2:3.
52	RW	RG_TRACE_INT_TRIG_01: Select Lower(0:1) or Upper(2:3) Half of RG trace triggers for bits 0:1.
53	RW	RG_TRACE_INT_TRIG_23: Select Lower(0:1) or Upper(2:3) Half of RG trace triggers for bits 2:3.
54:63	RO	constant = 0b0000000000

Register Name	Debug Bus Data Contents Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_DBGCONT
Address	000000000301182E (SCOM)
Description	This register contains bits 0 – 63 of the trace/debug bus.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_BUS_BITS_0_63: This dial contains bits 0 - 63 of the trace/debug bus.

Register Name	Debug Bus Data and Trigger Contents Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_DBGTRIG
Address	000000000301182F (SCOM)
Description	This register contains bits 64 – 87 of the trace/debug bus and bits 0 – 3 of the trace/trigger bus.

Bits	SCOM	Field Mnemonic: Description
0:23	ROX	TRACE_BUS_BITS_64_87: This dial contains bits 64 - 87 of the trace/debug bus.
24:27	ROX	TRACE_BUS_TRIGGER_BITS: This dial contains trigger bits 0 - 3 of the trace/trigger bus.
28:63	RO	constant = 0b00000000000000000000000000000000000000

Register Name	Performance Monitor Control Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_PMCNTL
Address	0000000003011830 (SCOM)
Description	This register is used to enable performance counter bits.

Bits	SCOM	Field Mnemonic: Description
0:31	RW	PU_BIT_ENABLES: Each bit of this dial is used to enable the associated performance counter bit and send it to the PMU.
32:35	RW	PU_CNTL_UNUSED: Unused bits.
36:63	RO	constant = 0b00000000000000000000000000000

Register Name	Window ID MMIO ECC Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_MMIOECC
Address	0000000003011831 (SCOM)
Description	This register contains an error correction code (ECC) for MMIO data.

Bits	SCOM	Field Mnemonic: Description
0:7	ROX	MMIO_ECC: This field contains an ECC for MMIO data returned by an MMIO read operation. The data itself is in the Window ID MMIO Data Register.
8:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	North ECC Error Injection Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_ERRINJNO
Address	0000000003011832 (SCOM)
Description	This register is used to control ECC error injection.

Bits	SCOM	Field Mnemonic: Description
0	RW	ECC_ERR_INJ_NORTH_WC_ENA: This bit enables ECC error injection in the MMIO logic.
1	RW	ECC_ERR_INJ_NORTH_WC_TYP: This bit selects the ECC error-injection type for the MMIO logic: 0 = Single-bit errors. 1 = Double-bit errors.
2	RW	ECC_ERR_INJ_NORTH_WC_FRQ: This bit selects the ECC error-injection frequency for the MMIO logic: 0 = Single shot. 1 = Continuous errors.
3:7	RW	ECC_ERR_INJ_NORTH_WC_UNUSED: Unused bits.
8:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	CAM Display Control Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_CAMDISPCNTL
Address	0000000003011833 (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0	RO	Not implemented.
1	WOX	RESERVED.
2:15	RO	Not implemented.
16:31	WOX	RESERVED.
32:63	RO	Not implemented.

Register Name	CAM Display Data 0 Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_CAMDATA0
Address	0000000003011834 (SCOM)
Description	This register contains bit 0 – 63 of the content-addressable memory (CAM) Display 0 Register.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	CAM_DISPLAY_REG_0: This dial contains bits 0 - 63 of the CAM Display 0 Register.

Register Name	CAM Display Data 1 Register
Mnemonic	VA.VA_NORTH.VA_RG.SCF.VAS_CAMDATA1
Address	0000000003011835 (SCOM)
Description	This register contains bit 0 – 63 of the CAM Display 1 Register.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	CAM_DISPLAY_REG_1: This dial contains bits 0 - 63 of the CAM Display 1 Register.

Register Name	Window Context Backing Store Base Address Register
Mnemonic	VA.VA_SOUTH.VA_EG.EG_SCF.VAS_WCBSBAR
Address	0000000003011840 (SCOM)
Description	This is the Window Context Backing Store Base Address Register

Bits	SCOM	Field Mnemonic: Description
0:7	RO	constant = 0b00000000
8:40	RW	WC_BS_BAR: Window Context Backing Store Base Address Register.
41:63	RO	constant = 0b00000000000000000000000

Register Name	Page Migration Register 1
Mnemonic	VA.VA_SOUTH.VA_EG.EG_SCF.VAS_PGMIG1
Address	0000000003011841 (SCOM)
Description	This register is used to control page migration 1.

Bits	SCOM	Field Mnemonic: Description
0	RW	PGMIGR1_VAL: This bit indicates that page migration 1 is valid or enabled.

Bits	SCOM	Field Mnemonic: Description
1:7	RO	constant = 0b0000000
8:53	RW	PGMIGR1_BAR: This field contains the page migration 1 base real address.
54:59	RO	constant = 0b000000
60:63	RW	PGMIGR1_PGSZ: This field contains the page migration 1 page size.

Register Name	Page Migration Register 2
Mnemonic	VA.VA_SOUTH.VA_EG.EG_SCF.VAS_PGMIG2
Address	0000000003011842 (SCOM)
Description	This register is used to control page migration 2.

Bits	SCOM	Field Mnemonic: Description
0	RW	PGMIGR2_VAL: This bit indicates that page migration 2 is valid or enabled.
1:7	RO	constant = 0b0000000
8:53	RW	PGMIGR2_BAR: This field contains the page migration 2 base real address.
54:59	RO	constant = 0b000000
60:63	RW	PGMIGR2_PGSZ: This field contains the page migration 2 page size.

Register Name	Page Migration Register 3
Mnemonic	VA.VA_SOUTH.VA_EG.EG_SCF.VAS_PGMIG3
Address	0000000003011843 (SCOM)
Description	This register is used to control page migration 3.

Bits	SCOM	Field Mnemonic: Description
0	RW	PGMIGR3_VAL: This bit indicates that page migration 3 is valid or enabled.
1:7	RO	constant = 0b0000000
8:53	RW	PGMIGR3_BAR: This field contains the page migration 3 base real address.
54:59	RO	constant = 0b000000
60:63	RW	PGMIGR3_PGSZ: This field contains the page migration 3 page size.

Register Name	Page Migration Register 4
Mnemonic	VA.VA_SOUTH.VA_EG.EG_SCF.VAS_PGMIG4
Address	0000000003011844 (SCOM)
Description	This register is used to control page migration 4.

Bits	SCOM	Field Mnemonic: Description
0	RW	PGMIGR4_VAL: This bit indicates that page migration 4 is valid or enabled.
1:7	RO	constant = 0b0000000
8:53	RW	PGMIGR4_BAR: This field contains the page migration 4 base real address.
54:59	RO	constant = 0b000000

Bits	SCOM	Field Mnemonic: Description
60:63	RW	PGMIGR4_PGSZ: This field contains the page migration 4 page size.

Register Name	Page Migration Register 5
Mnemonic	VA.VA_SOUTH.VA_EG.EG_SCF.VAS_PGMIG5
Address	0000000003011845 (SCOM)
Description	This register is used to control page migration 5.

Bits	SCOM	Field Mnemonic: Description
0	RW	PGMIGR5_VAL: This bit indicates that page migration 5 is valid or enabled.
1:7	RO	constant = 0b0000000
8:53	RW	PGMIGR5_BAR: This field contains the page migration 5 base real address.
54:59	RO	constant = 0b000000
60:63	RW	PGMIGR5_PGSZ: This field contains the page migration 5 page size.

Register Name	Page Migration Register 6
Mnemonic	VA.VA_SOUTH.VA_EG.EG_SCF.VAS_PGMIG6
Address	0000000003011846 (SCOM)
Description	This register is used to control page migration 6.

Bits	SCOM	Field Mnemonic: Description
0	RW	PGMIGR6_VAL: This bit indicates that page migration 6 is valid or enabled.
1:7	RO	constant = 0b0000000
8:53	RW	PGMIGR6_BAR: This field contains the page migration 6 base real address.
54:59	RO	constant = 0b000000
60:63	RW	PGMIGR6_PGSZ: This field contains the page migration 6 page size.

Register Name	Page Migration Register 7
Mnemonic	VA.VA_SOUTH.VA_EG.EG_SCF.VAS_PGMIG7
Address	0000000003011847 (SCOM)
Description	This register is used to control page migration 7.

Bits	SCOM	Field Mnemonic: Description
0	RW	PGMIGR7_VAL: This bit indicates that page migration 7 is valid or enabled.
1:7	RO	constant = 0b0000000
8:53	RW	PGMIGR7_BAR: This field contains the page migration 7 base real address.
54:59	RO	constant = 0b000000
60:63	RW	PGMIGR7_PGSZ: This field contains the page migration 7 page size.

Register Name	CQ Error Capture Contents Register
Mnemonic	VA.VA_SOUTH.VA_EG.EG_SCF.VAS_CQERRRPT
Address	0000000003011848 (SCOM)
Description	This register contains common queue (CQ) error information.

Bits	SCOM	Field Mnemonic: Description
0	WOX	CQ_CERR_RESET: This is the error capture (c_err_rpt) reset bit for the CQ logic. Asserting this bit resets the error-capture keeper latches.
1:3	RO	constant = 0b000
4	ROX	CQ_CERR_BIT4: Parity error on MMIO data RTAG.
5	ROX	CQ_CERR_BIT5: Parity error on the RTAG for combined response bus 0.
6	ROX	CQ_CERR_BIT6: Parity error on the RTAG for combined response bus 1.
7	ROX	CQ_CERR_BIT7: Parity error on the RTAG for combined response bus 2.
8	ROX	CQ_CERR_BIT8: Parity error on the RTAG for combined response bus 3.
9	ROX	CQ_CERR_BIT9: Parity error on the address provided for a write operation.
10	ROX	CQ_CERR_BIT10: Parity error on the address provided for a read operation.
11	ROX	CQ_CERR_BIT11: Parity error on the RTAG for an incoming data payload into CQ.
12	ROX	CQ_CERR_BIT12: Parity error on the combined response TTAG for bus 0.
13	ROX	CQ_CERR_BIT13: Parity error on the combined response TTAG for bus 1.
14	ROX	CQ_CERR_BIT14: Parity error on the combined response TTAG for bus 2.
15	ROX	CQ_CERR_BIT15: Parity error on the combined response TTAG for bus 3.
16	ROX	CQ_CERR_BIT16: Parity error on the ATAG for combined response bus 0.
17	ROX	CQ_CERR_BIT17: Parity error on the ATAG for combined response bus 1.
18	ROX	CQ_CERR_BIT18: Parity error on the ATAG for combined response bus 2.
19	ROX	CQ_CERR_BIT19: Parity error on the ATAG for combined response bus 3.
20	ROX	CQ_CERR_BIT20: Hang detected on a write machine (write machine waiting for data for a write read push protocol, for example).
21	ROX	CQ_CERR_BIT21: Hang detected on a read machine (read machine waiting for data for a read operation).
22	ROX	CQ_CERR_BIT22: ACK dead combined response (cRESP) received for a read operation occurring on a write machine.
23	ROX	CQ_CERR_BIT23: ACK dead cRESP received for a read operation occurring on a read machine.
24	ROX	CQ_CERR_BIT24: Abort operation received for a write machine.
25	ROX	CQ_CERR_BIT25: Abort operation received for a read machine.
26	ROX	CQ_CERR_BIT26: Write machine entered an undefined state (hardware error).
27	ROX	CQ_CERR_BIT27: Read machine entered an undefined state (hardware error).
28	ROX	CQ_CERR_BIT28: Undefined cRESP received for a read machine.
29	ROX	CQ_CERR_BIT29: cRESP received for a read machine before transition to wait for cRESP state (for example, command not yet mastered).
30	ROX	CQ_CERR_BIT30: Data received before the read machine expects it.
31	ROX	CQ_CERR_BIT31: Attempt made to start an active read machine.
32	ROX	CQ_CERR_BIT32: Undefined cRESP received for a write machine.

Bits	SCOM	Field Mnemonic: Description
33	ROX	CQ_CERR_BIT33: cRESP received for a write machine before the transition to wait for cRESP state (for example, command not yet mastered).
34	ROX	CQ_CERR_BIT34: Data received before the write machine expects it.
35	ROX	CQ_CERR_BIT35: Attempt made to start an active write machine.
36	ROX	CQ_CERR_BIT36: Unused bit.
37	ROX	CQ_CERR_BIT37: Unused bit.
38	ROX	CQ_CERR_BIT38: Unused bit.
39	ROX	CQ_CERR_BIT39: Unused bit.
40:63	RO	constant = 0b00000000000000000000000

Register Name	WC Error Capture Contents Register
Mnemonic	VA.VA_SOUTH.VA_EG.EG_SCF.VAS_WCERRRPT
Address	0000000003011849 (SCOM)
Description	This register contains write control (WC) error information.

Bits	SCOM	Field Mnemonic: Description
0	WOX	WC_CERR_RESET: Error capture (c_err_rpt) reset bit for the WC logic. Asserting this bit resets the error capture keeper latches.
1:3	RO	constant = 0b000
4	ROX	WC_CERR_BIT4: Correctable ECC error (CE) from WC array bank 0 or 2.
5	ROX	WC_CERR_BIT5: Correctable ECC error (CE) from WC array bank 1 or 3.
6	ROX	WC_CERR_BIT6: Uncorrectable ECC error (UE) from WC array bank 0 or 2.
7	ROX	WC_CERR_BIT7: Uncorrectable ECC error (UE) from WC array bank 1 or 3.
8	ROX	WC_CERR_BIT8: Special uncorrectable ECC error (SUE) from WC array bank 0 or 2.
9	ROX	WC_CERR_BIT9: Special uncorrectable ECC error (SUE) from WC array bank 1 or 3.
10	ROX	WC_CERR_BIT10: WC logic received an unexpected castout request.
11	ROX	WC_CERR_BIT11: WC logic sent a new command to the CQ without waiting for a castout ACK from a previous command.
12	ROX	WC_CERR_BIT12: Overflow detected in the WC send FIFO.
13	ROX	WC_CERR_BIT13: Read error detected in the WC send FIFO (tried to read an empty FIFO).
14	ROX	WC_CERR_BIT14: Overflow detected in the WC fill FIFO.
15	ROX	WC_CERR_BIT15: Read error detected in the WC fill FIFO (tried to read an empty FIFO).
16	ROX	WC_CERR_BIT16: Overflow detected in the WC castout FIFO.
17	ROX	WC_CERR_BIT17: Read error detected in the WC castout FIFO (tried to read an empty FIFO).
18	ROX	WC_CERR_BIT18: Parity check detected an invalid (non-hot1) state in the send FIFO FSM.
19	ROX	WC_CERR_BIT19: Parity check detected an invalid (non-hot1) state in the fill FIFO FSM.
20	ROX	WC_CERR_BIT20: Parity check detected an invalid (non-hot1) state in the castout FIFO FSM.
21	ROX	WC_CERR_BIT21: Parity check detected an invalid (non-hot1) state in the WC scrubber FSM.
22	ROX	WC_CERR_BIT22: Parity check detected an invalid (non-hot1) state in the WC write FSM.
23	ROX	WC_CERR_BIT23: Parity check detected an invalid (non-hot1) state in the WC read FSM.

Bits	SCOM	Field Mnemonic: Description
24:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	EG Error Capture Contents Register
Mnemonic	VA.VA_SOUTH.VA_EG.EG_SCF.VAS_EGERRRPT
Address	0000000003011844A (SCOM)
Description	EG Error Capture Contents Register

Bits	SCOM	Field Mnemonic: Description
0	WOX	EG_CERR_RESET: c_err_rpt (Error capture) reset bit for EG logic. Asserting this bit resets the error capture keeper latches.
1:3	RO	constant = 0b000
4	ROX	EG_CERR_BIT4: EG unloader state machine parity error.
5	ROX	EG_CERR_BIT5: EG data buffer state machine parity error.
6	ROX	EG_CERR_BIT6: EG data flow ECC correctable error (CE) detected in array 0.
7	ROX	EG_CERR_BIT7: EG data flow ECC CE detected in array 1.
8	ROX	EG_CERR_BIT8: EG data flow ECC uncorrectable error (UE) detected in array 0.
9	ROX	EG_CERR_BIT9: EG data flow ECC UE detected in array 1.
10	ROX	EG_CERR_BIT10: EG data flow ECC special uncorrectable error (SUE) detected in array 0.
11	ROX	EG_CERR_BIT11: EG data flow ECC S SUE detected in array 1.
12:19	ROX	EG_CERR_UNUSEDBITS: Unused bits.
20:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	South ECC Error Injection Register
Mnemonic	VA.VA_SOUTH.VA_EG.EG_SCF.VAS_ERRINJSO
Address	0000000003011845B (SCOM)
Description	South ECC Error Injection Register

Bits	SCOM	Field Mnemonic: Description
0	RW	ECC_ERR_INJ_SOUTH_WC_ENA: Enable ECC error injection in Window Cache (WC) logic.
1	RW	ECC_ERR_INJ_SOUTH_WC_TYP: ECC error injection type for WC logic: 0 = Single-bit errors. 1 = Double-bit errors.
2	RW	ECC_ERR_INJ_SOUTH_WC_FRQ: ECC error injection frequency for WC logic: 0 = Single shot. 1 = Continuous errors.
3:4	RW	ECC_ERR_INJ_SOUTH_WC_SEL: Array selection for WC arrays: 0b00 = array0 0b01 = array1 0b10 = array2 0b11 = array3
5	RW	ECC_ERR_INJ_SOUTH_EG_ENA: Enable ECC error injection in egress (EG) logic.

Bits	SCOM	Field Mnemonic: Description
6	RW	ECC_ERR_INJ_SOUTH_EG_TYP: ECC error injection type for EG logic: 0 = single-bit errors 1 = double bit errors
7	RW	ECC_ERR_INJ_SOUTH_EG_FRQ: ECC error injection frequency for EG logic: 0 = single shot 1 = continuous errors
8	RW	ECC_ERR_INJ_SOUTH_EG_SEL: Array selection for EG arrays: 0b0 = array0 0b1 = array1
9:11	RW	ECC_ERR_INJ_SOUTH_UNUSED: Unused bits.
12:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	Debug Bus EG/WC/CQ and Group Trace/PMU Selection Register
Mnemonic	VA.VA_SOUTH.VA_EG.EG_SCF.VAS_DBGSOUTH
Address	000000000301184C (SCOM)
Description	Debug Bus EG/WC/CQ and Group Trace/PMU Selection Register

Bits	SCOM	Field Mnemonic: Description
0	RW	PASS_WC_INT_TRACE_DATA_LO: Select trace data bits 0:43. 0 = pass EG data to CQ, 1 = pass WC internal data to CQ.
1	RW	PASS_WC_INT_TRACE_DATA_HI: Select trace data bits 44:87. 0 = pass EG data to CQ, 1 = pass WC internal data to CQ.
2	RW	PASS_CQ_INT_TRACE_DATA_LO: Select trace data bits 0:43. 0 = pass WC data to RG, 1 = pass CQ internal data to RG.
3	RW	PASS_CQ_INT_TRACE_DATA_HI: Select trace data bits 44:87. 0 = pass WC data to RG, 1 = pass CQ internal data to RG.
4	RW	PASS_WC_INT_TRACE_TRIG_01: Select trace triggers 0,1. 0 = pass EG triggers to CQ, 1 = pass WC internal triggers to CQ.
5	RW	PASS_WC_INT_TRACE_TRIG_23: Select trace triggers 2,3. 0 = pass EG triggers to CQ, 1 = pass WC internal triggers to CQ.
6	RW	PASS_CQ_INT_TRACE_TRIG_01: Select trace triggers 0,1. 0 = pass WC triggers to RG, 1 = pass CQ internal triggers to RG.
7	RW	PASS_CQ_INT_TRACE_TRIG_23: Select trace triggers 2,3. 0 = pass WC triggers to RG, 1 = pass CQ internal triggers to RG.
8:11	RW	EG_TRACE_GROUP_SEL_LO: Select EG internal trace groups for bits 0:43. 0b0000=group0 0b0001=group1 ... 0b1111=group15

Bits	SCOM	Field Mnemonic: Description
12:15	RW	EG_TRACE_GROUP_SEL_HI: Select EG internal trace groups for bits 44:87. 0b0000 = group0 0b0001 = group1, ... 0b1111 = group15
16:17	RW	EG_TRACE_TRIGGER_SEL_01: Select EG internal trigger group for triggers 0,1. 0b00 = group0 0b01 = group1 ... 0b11 = group3
18:19	RW	EG_TRACE_TRIGGER_SEL_23: Select EG internal trigger group for triggers 2,3. 0b00 = group0 0b01 = group1 ... 0b11 = group3
20:22	RW	WC_TRACE_GROUP_SEL_LO: Select WC internal trace groups for bits 0:43. 0b000 = group0 0b001 = group1 ... 0b111 = group7
23:25	RW	WC_TRACE_GROUP_SEL_HI: Select WC internal trace groups for bits 44:87. 0b000 = group0 0b001 = group1 ... 0b111 = group7
26:28	RW	WC_TRACE_TRIGGER_SEL_01: Select WC internal trigger group for triggers 0,1. 0b000 = group0 0b001 = group1 ... 0b111 = group7
29:31	RW	WC_TRACE_TRIGGER_SEL_23: Select WC internal trigger group for triggers 2,3. 0b000 = group0 0b001 = group1 ... 0b111 = group7
32:34	RW	CQ_TRACE_GROUP_SEL_LO: Select CQ internal trace groups for bits 0:43. 0b000 = group0, 0b001 = group1 ... 0b111 = group7
35:37	RW	CQ_TRACE_GROUP_SEL_HI: Select CQ internal trace groups for bits 44:87. 0b000 = group0 0b001 = group1 ... 0b111 = group7
38:40	RW	CQ_TRACE_TRIGGER_SEL_01: Select CQ internal trigger group for triggers 0,1. 0b000 = group0 0b001 = group1 ... 0b111 = group7
41:43	RW	CQ_TRACE_TRIGGER_SEL_23: Select CQ internal trigger group for triggers 2,3. 0b000 = group0 0b001 = group1 ... 0b111 = group7
44	RW	ENABLE_EG_TRACE: Enable EG trace logic. Must be asserted to trace EG data.
45	RW	ENABLE_WC_TRACE: Enable WC trace logic. Must be asserted to trace WC data, or pass EG data.
46	RW	ENABLE_CQ_TRACE: Enable CQ trace logic. Must be asserted to trace CQ data, or pass EG or WC data.
47	RW	WC_TRACE_INT_DATA_LO: Select Lower(0:43) or Upper(44:87) Half of WC trace data for bits 0:43.
48	RW	WC_TRACE_INT_DATA_HI: Select Lower(0:43) or Upper(44:87) Half of WC trace data for bits 44:87.
49	RW	EG_TRACE_INT_DATA_LO: Select Lower(0:43) or Upper(44:87) Half of EG trace data for bits 0:43.

Bits	SCOM	Field Mnemonic: Description
50	RW	PASS_CQ_INT_PMU_DATA_LO: Select PMU data bits 0:7 at CQ: 0 = pass WC data to RG 1 = pass CQ internal data to RG
51	RW	PASS_CQ_INT_PMU_DATA_HI: Select PMU data bits 8:15 at CQ: 0 = pass WC data to RG 1 = pass CQ internal data to RG
52	RW	ENABLE_EG_PMU_COUNTING: Enable EG PMU counting. Must be asserted to count EG events.
53	RW	EG_TRACE_INT_DATA_HI: Select Lower(0:43) or Upper(44:87) Half of EG trace data for bits 44:87.
54	RW	ENABLE_CQ_PMU_COUNTING: Enable CQ PMU counting. Must be asserted to count CQ events, or pass EG or WC events.
55	RW	CQ_TRACE_INT_DATA_LO: Select Lower(0:43) or Upper(44:87) Half of CQ trace data for bits 0:43.
56	RW	CQ_TRACE_INT_DATA_HI: Select Lower(0:43) or Upper(44:87) Half of CQ trace data for bits 44:87.
57	RW	WC_TRACE_INT_TRIG_01: Select Lower(0:1) or Upper(2:3) Half of WC trace triggers for bits 0:1.
58	RW	WC_TRACE_INT_TRIG_23: Select Lower(0:1) or Upper(2:3) Half of WC trace triggers for bits 2:3.
59	RW	EG_TRACE_INT_TRIG_01: Select Lower(0:1) or Upper(2:3) Half of EG trace triggers for bits 0:1.
60	RW	EG_TRACE_INT_TRIG_23: Select Lower(0:1) or Upper(2:3) Half of EG trace triggers for bits 2:3.
61	RW	CQ_TRACE_INT_TRIG_01: Select Lower(0:1) or Upper(2:3) Half of CQ trace triggers for bits 0:1.
62	RW	CQ_TRACE_INT_TRIG_23: Select Lower(0:1) or Upper(2:3) Half of CQ trace triggers for bits 2:3.
63	RO	constant = 0b0

Register Name	Processor Bus Configuration 0 Register
Mnemonic	VA.VA_SOUTH.VA_EG.EG_SCF.VAS_PBCFG0
Address	000000000301184D (SCOM)
Description	Processor bus Configuration 0

Bits	SCOM	Field Mnemonic: Description
0:6	RW	PBCFG_0_EPSILON: Epsilon configuration value.
7:10	RW	PBCFG_0_HANG_POLL_MAX_CNT: CQ SCOM hang poll maximum count.
11:14	RW	PBCFG_0_UNUSED1: CQ Unused Controls.
15:18	RW	PBCFG_0_HANG_NX_MAX_CNT: CQ SCOM hang NX maximum count.
19	RW	PBCFG_0_DISABLE_WR_RD_PUSH: Disable write-read-push protocol.
20	RW	PBCFG_0_INJ_CE: Inject correctable error (CE) into PBCQ arrays.
21	RW	PBCFG_0_INJ_UE: Inject uncorrectable error (UE) into PBCQ arrays.
22	RW	PBCFG_0_INJ_SUE: Inject special uncorrectable error (SUE) into PBCQ arrays.
23	RW	PBCFG_0_INJ_ARRAY_SEL: Select array for error injection: 0 = CRA0 1 = CRA1
24	RW	PBCFG_0_INJ_FREQ: Error injection frequency: 0 = inject once 1 = inject continuously
25:31	RW	PBCFG_0_UNUSED2: CQ unused controls.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	Processor Bus Configuration 1 Register
Mnemonic	VA.VA_SOUTH.VA_EG.EG_SCF.VAS_PBCFG1
Address	000000000301184E (SCOM)
Description	processor bus Configuration 1

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_LN_WR: Disable Ln write.
1	RW	DISABLE_G_WR: Disable G write.
2	RW	DISABLE_VG_WR: Disable Vg write.
3	RW	DISABLE_NN_WR: Disable Nn Rn write.
4	RW	DISABLE_LN_RD: Disable Ln read.
5	RW	DISABLE_G_RD: Disable G read.
6	RW	DISABLE_VG_RD: Disable Vg read.
7	RW	DISABLE_NN_RD: Disable Nn Rn read.
8:11	RW	PBCFG_1_UNUSED1: CQ VACQ unused configuration bits.
12	RW	RD_GO_M_QOS: Quality of Service bit for rd_go_m commands.
13	RW	ADDR_BAR_MODE: Addr_bar_mode: 0 = for large system address map 1 = for small system address map
14	RW	SKIP_G: Scope mode control when chip equals group.
15	RW	HANG_SM_ON_ARE: Hang state machine when address error combined response received.
16	RW	HANG_SM_ON_LINK_FAIL: Hang state machine when link fail combined response received.
17	RW	CFG_PUMP_MODE: Random backoff control.
18	RW	DMA_WR_NOT_INJ: When set, do not issue cl_dma_inj. Issue cl_dma_w.
19	RW	DMA_PART_WR_NOT_INJ: When set do not issue dma_pr_injj. Issue dma_pr_w.
20:27	RW	DMA_RD_VG_RST_TMASK: Mask to control when to reset read Vg scope predictor.
28:35	RW	DMA_WR_VG_RST_TMASK: Mask to control when to reset write Vg scope predictor.
36:51	RW	PBCFG_1_UNUSED2: CQ VACQ unused configuration bits.
52:63	RO	constant = 0b000000000000

Register Name	Miscellaneous Status and South Control Register
Mnemonic	VA.VA_SOUTH.VA_EG.EG_SCF.VAS_SOUTHCTL
Address	000000000301184F (SCOM)
Description	Miscellaneous Status and South Control Register

Bits	SCOM	Field Mnemonic: Description
0	RW	SOUTH_CTL_DISABLE_WC_SCRUB: Disables the window cache scrubbing when this bit is asserted.
1	RW	SOUTH_CTL_DISABLE_WC_ECC: Disables the window cache ECC correction when this bit is asserted.
2	RW	SOUTH_CTL_EG_SINGLE_THREAD: Single thread all paste commands in EG when this bit is asserted.
3	RW	SOUTH_CTL_EG_WM_CTX_UPDATE_MODE: EG write monitor context update mode. Skips updating some fields when this bit is asserted.

Bits	SCOM	Field Mnemonic: Description
4	RW	SOUTH_CTL_EG_STAMP_DEBUG: EG stamp debug mode. Injects buffer number to stamp payload.
5	RW	SOUTH_CTL_EN_FAST_SCRUB: Enables fast scrub of window cache arrays: 0 = normal scrub 1 = continuous scrubbing.
6	RW	SOUTH_CTL_DIS_SIMULT_RD_WR: Disables simultaneous read and write in window cache arrays: 0 = normal operation 1 = non-overlapping read and writes
7	RW	SOUTH_CTL_ENA_NOTIFY_ORDER: Enables notification ordering within CQ.
8	ROX	SOUTH_CTL_WC_IDLE_BIT: Window cache (WC) logic is idle. This bit is read-only. It is set by the hardware.
9	ROX	SOUTH_CTL_CQ_IDLE_BIT: Common queue (CQ) logic is idle. This bit is read-only. It is set by the hardware.
10	ROX	SOUTH_CTL_EG_IDLE_BIT: Egress (EG) logic is idle. This bit is read-only. It is set by the hardware.
11:15	RW	SOUTH_CTL_UNUSED: Unused bits.
16:63	RO	constant = 0b0000000000000000000000000000000000000000000000000000

Register Name	Configuration of CC Counters Register
Mnemonic	TP.TCN1.N1.SYNC_CONFIG
Address	0000000003030000 (SCOM)
Description	configuration of CC counters

Bits	SCOM	Field Mnemonic: Description
0:3	RW	SYNC_PULSE_DELAY: Delay incoming SYNC pulse. Default are eight latches: ASYNC 0000 = 8 0001 = 2 0010 = 3 0011 = 4 0100 = 5 0101 = 6 0110 = 7 0111 = 8 1000 = 9 1001 = 10 1010 = 11 1011 = 12 1100 = 13 1101 = 14 1110 = 15 1111 = 16 delay of the reset of the phase counter
4	RW	LISTEN_TO_SYNC_PULSE_DIS: Disables phase counter synchronization by the sync_pulse signal (default is enabled). Note: When you enable listen_to_sync, the chiplet is corrupted for 200 cycles.
5	RW	SYNC_PULSE_INPUT_SEL: Default is 0. When set to 1, the alternative input of the sync_pulse is used. Note: When you toggle the input select, the chiplet is corrupted for 200 cycles.
6	RW	USE_SYNC_FOR_SCAN: When set, use the OPCG initial alignment for scan requests.
7	RW	CLEAR_CHIPLET_IS_ALIGNED: This bit clears the chiplet_is_aligned bit.
8	RW	UNIT_REGION_CLKCMD_ENABLE: Enables the unit interface to start/stop one dedicated region. Used for POWER9 cache or core.

Bits	SCOM	Field Mnemonic: Description
9	RW	DISABLE_PCB_ITR: Disables the interrupt generation within CC. The interrupt is sent on each HLD event.
10	RW	ENABLE_VITL_ALIGN_CHECK: Enables the VITL align check to compare alignment of the incoming SYNC pulse with 2:1 VITL LCB.
11	RW	SYNC_PULSE_OUT_DIS: Disables the sync_pulse output when set to 1. The master chiplet does not send SYNC pulses to slave chiplets.
12:19	RW	UNUSED1219: Unused.

Register Name	OPCG Align Register
Mnemonic	TP.TCN1.N1.OPCG_ALIGN
Address	0000000003030001 (SCOM)
Description	OPCG ALIGN

Bits	SCOM	Field Mnemonic: Description
0:3	RW	INOP_ALIGN: INOP phase alignment: 0: none 1: 2:1 2: 3:1 3: 4:1 4: 6:1 5: 8:1 6: 12:1 7: 16:1 8: 24:1 9 - 15: 48:1
4:7	RW	SNOP_ALIGN: SNOP phase alignment: 0: none 1: 2:1 2: 3:1 3: 4:1 4: 6:1 5: 8:1 6: 12:1 7: 16:1 8: 24:1 9 - 15: 48:1
8:11	RW	ENOP_ALIGN: ENOP phase alignment: 0: none 1: 2:1 2: 3:1 3: 4:1 4: 6:1 5: 8:1 6: 12:1 7: 16:1 8: 24:1 9 - 15: 48:1
12:19	RW	INOP_WAIT: INOP cycle delay (0 - 255).
20:31	RW	SNOP_WAIT: SNOP cycle delay (0 - 4095).
32:39	RW	ENOP_WAIT: ENOP cycle delay (0 - 255).
40	RW	INOP_FORCE_SG: INOP: Set SG high during INOP.
41	RW	SNOP_FORCE_SG: SNOP: Set SG high during SNOP.

Bits	SCOM	Field Mnemonic: Description
42	RW	ENOP_FORCE_SG: ENOP: Set SG high during ENOP (including LOOP phase).
43	RW	NO_WAIT_ON_CLK_CMD: When set to 0, a clock change request first waits on the OPCG_WAIT cycles. When set to 1, a clock change request does not wait, when not in flush.
44:45	RW	ALIGN_SOURCE_SELECT: 0: Use the INOPA setting from opcg_reg0 1: Use the rising edge of SYNC pulse 2: Use unit0_sync_lvl to align (for AVP - refresh0) 3: Use unit1_sync_lvl to align (for AVP - refresh1)
46	RW	UNUSED46: Unused.
47:51	RW	SCAN_RATIO: scan_ratio: n = 0 - 15: (n + 1):1 16: 24:1 17: 32:1 18: 48:1 19: 64:1 20: 128:1 Default 4:1 = 00011
52:63	RW	OPCG_WAIT_CYCLES: Old PAD value. Delay at the beginning and end of the OPCG run to allow DC signals to arrive at the correct time (0 4095). Required to be higher than plat depth. Default = 0x020.

Register Name	OPCG Control Register 0
Mnemonic	TP.TCN1.N1.OPCG_REG0
Address	0000000003030002 (SCOM)
Description	OPCG Control Register 0

Bits	SCOM	Field Mnemonic: Description
0	RW	RUNN_MODE: 0 = BIST mode used for LBIST 1 = RUNN mode used for ABIST/IOBIST
1	RWX	OPCG_GO: OPCG go (start OPCG). Bit is cleared when OPCG is done, Poll for opcg_done in cplt_start reg.
2	RWX	RUN_SCAN0: Run scan0. Overrides all BIST mode settings except the scan_ratio. Starts a scan0 run. The bit is cleared when OPCG is finished. Poll for opcg_done in the cplt_start register.
3	RW	SCAN0_MODE: Sets PRPGs in scan0_mode but does not run the automatic scan0 sequence.
4	RWX	OPCG_IN_SLAVE_MODE: When selected, OPCG waits for the master chiplet to start. When Keep_MS_Mode is 0, SLAVE_MODE is cleared after the incoming trigger.
5	RWX	OPCG_IN_MASTER_MODE: When selected, OPCG sends out a trigger to all slave chiplets. When Keep_MS_MODE = 0, the MASTER_MODE is cleared after sending out one master trigger.
6	RW	KEEP_MS_MODE: When set to 1, OPCG in M/S mode bits are not cleared after one incoming OPCG trigger. Default is clear M/S mode bits.
7	RW	TRIGGER_OPCG_ON_UNIT0_SYNC_LVL: Unit pin used for AVP that can trigger OPCG (unit0_sync_lvl).
8	RW	TRIGGER_OPCG_ON_UNIT1_SYNC_LVL: Unit pin used for AVP that can trigger OPCG (unit1_sync_lvl).
9	RWX	RUN_CHIPLET_SCAN0: Run scan0 on all regions and types. Clears the chiplet.
10	RWX	RUN_CHIPLET_SCAN0_NO_PLL: Run SCAN0 on all regions and types. Clears the chiplet at all exclude PLL regions where the PLL is running.
11	RW	RUN_OPCG_ON_UPDATE_DR: Starts the OPCG engine when scan updated (update_dr) is received (set pulse). Cronus requires that this bit be set to 1 for a SETPULSE write.

Bits	SCOM	Field Mnemonic: Description
12	RW	RUN_OPCG_ON_CAPTURE_DR: Starts the OPCG engine when scan updated (update_dr) is received (set pulse). Cronus requires that this bit be set to 1 for a SETPULSE read.
13	RW	STOP_RUNN_ON_XSTOP: RUNN mode. Stops run-n on checkstop.
14	RW	OPCG_STARTS_BIST: RUNN mode. OPCG engine controls start_bist for ABIST or IOBIST.
15:20	RW	UNUSED1520: Unused.
21:63	RWX	LOOP_COUNT: Loop counter for LBIST and RUNN. Write = target value. Read = current counter value. Counts from zero to the target value.

Register Name	**OPCG Control Register 1**
Mnemonic	TP.TCN1.N1.OPCG_REG1
Address	0000000003030003 (SCOM)
Description	OPCG Control Register 1

Bits	SCOM	Field Mnemonic: Description
0:11	RW	SCAN_COUNT: BIST mode: Channel scan count (s = 0 – 4095). runn-mode: start_bist match value (0:11).
12:23	RW	MISR_A_VAL: BIST mode: a value for MISR aperture. runn-mode: start_bist match value (12:23).
24:35	RW	MISR_B_VAL: BIST mode: b value for MISR aperture. runn-mode: start_bist match value (24:35).
36:47	RW	MISR_INIT_WAIT: BIST mode: Delay MISR aperture. MISRs get active after this number of loops.
48	RW	OPCG_SUPPRESS_EVEN_CLK: OPCG creates only even and not odd clocks. Used for runn to create only one clock in fast domain. Default is 0.
49	RW	SCAN_CLK_USE_EVEN: Generates scan clock in even cycles instead of odd. Default is 0 = odd for scan.
50:51	RW	UNUSED2: Unused.
52	RW	RTIM_THOLD_FORCE: Forces rtim_thold low when not in test_dc mode (must be 0 at all times).
53	RW	DISABLE_ARY_CLK_DURING_FILL: LBIST and SCAN0. Prevents activation of ARY HLD during NSL-fill.
54	RW	SG_HIGH_DURING_FILL: LBIST and SCAN0. Holds SG high during NSL-fill.
55:56	RW	LBIST_SKITTER_CTL: BIST mode. 00: Enables skitter during lbist_ip. 01: Enables skitter when misr_active. 10: skitter OPCG_GO mode. Falling edge = start; rising edge = stop. 11: Unused.
57	RW	MISR_MODE: BIST mode: MISR aperture mode. 0: a - 1 to b - 1 1: Start to a and b to end
58	RW	INFINITE_MODE: Infinite mode. RUNN and LBIST run forever and ignore the loop count.
59:63	RW	NSL_FILL_COUNT: BIST mode. NSL-fill count (0 - 31).

Register Name	**OPCG Control Register 2**
Mnemonic	TP.TCN1.N1.OPCG_REG2
Address	0000000003030004 (SCOM)
Description	OPCG Control Register 2

Bits	SCOM	Field Mnemonic: Description
0	RWX	OPCG_GO2: OPCG go for broadcast sequences (start sequence).
1:3	RW	PRPG_WEIGHTING: prpg_activate: 1/2 1/4 1/8 1/16 1/2 3/4 7/8 15/16
4:15	RWX	PRPG_VALUE: Set to 0 for PRPG always on, else seed.
16:27	RW	PRPG_A_VAL: a value for PRPG aperture.

Bits	SCOM	Field Mnemonic: Description
28:39	RW	PRPG_B_VAL: b value for PRPG aperture.
40	RW	PRPG_MODE: PRPG aperture mode: 0: a - 1 to b - 1 1: Start to a and b to end
41:63	RW	UNUSED41_63: Unused.

Register Name	Scan Region and Type Register
Mnemonic	TP.TCN1.N1.SCAN_REGION_TYPE
Address	0000000003030005 (SCOM)
Description	Scan Region and Type

Bits	SCOM	Field Mnemonic: Description
0	RWX	SYSTEM_FAST_INIT: Default is 0. When set to 1, the MASK bits in the CMSK chain decide which part is scanned or scan0. MASK = 1: scan0. MASK = 0: Part or scan chain
1:2	RO	constant = 0b00
3	NCX	SCAN_REGION_VITL: Scan clock region VITL (Vital = Clock).
4	RWX	SCAN_REGION_PERV: Scan clock region PERV (Pervasive).
5	RWX	SCAN_REGION_UNIT1: Scan clock region MCD.
6	RWX	SCAN_REGION_UNIT2: Scan clock region VA - VAS.
7	RWX	SCAN_REGION_UNIT3: Scan clock region PBIOO0 - PB.
8	RWX	SCAN_REGION_UNIT4: Scan clock region PBIOO1 - PB.
9	RWX	SCAN_REGION_UNIT5: Scan clock region MCS23 - MCU.
10	RWX	SCAN_REGION_UNIT6: Scan clock region unused.
11	RWX	SCAN_REGION_UNIT7: Scan clock region unused.
12	RWX	SCAN_REGION_UNIT8: Scan clock region unused.
13	RWX	SCAN_REGION_UNIT9: Scan clock region unused.
14	RWX	SCAN_REGION_UNIT10: Scan clock region reserved.
15:47	RO	constant = 0b00000000000000000000000000000000
48	RW	SCAN_TYPE_FUNC: Scan chain FUNC (functional).
49	RW	SCAN_TYPE_CFG: Scan chain mode (boot configuration and debug configuration).
50	RW	SCAN_TYPE_CCFG_GPTR: Scan chain CCFG/GPTR (Pervasive: CC configuration. Others: GPTR).
51	RW	SCAN_TYPE_REGF: Scan chain regf (register files).
52	RW	SCAN_TYPE_LBIST: Scan chain lbst (LBIST).
53	RW	SCAN_TYPE_ABIST: Scan chain abst (ABIST).
54	RW	SCAN_TYPE_REPR: Scan chain repr (array repair).
55	RW	SCAN_TYPE_TIME: Scan chain time (array timing).
56	RW	SCAN_TYPE_BNDY: Scan chain bndy (boundary I/Os).
57	RW	SCAN_TYPE_FARR: Scan chain farr (fast array unload).
58	RW	SCAN_TYPE_CMSK: Scan chain cmsk (LBIST channel mask).

Bits	SCOM	Field Mnemonic: Description
59	RW	SCAN_TYPE_INEX: Scan chain index (c14 ASIC).
60:63	RO	constant = 0b0000

Register Name	Start/Stop of Clocks Register
Mnemonic	TP.TCN1.N1.CLK_REGION
Address	0000000003030006 (SCOM)
Description	This register starts and stops the clocks.

Bits	SCOM	Field Mnemonic: Description
0:1	RWX	CLOCK_CMD: Command for clock control: 00 = NOP 01 = Start 10 = Stop 11 = Pulse (one pulse)
2	RWX	SLAVE_MODE: When selected, the clock command waits for the master chiplet to start. The bit is cleared after the incoming slave trigger and Keep_MS_Mode_after_trigger is set to 0.
3	RWX	MASTER_MODE: When selected, the clock command sends out a trigger to all slave chiplets. The bit is cleared after sending out one master trigger and Keep_MS_Mode_after_trigger is set to 0.
4	RWX	CLOCK_REGION_PERV: For clock region perv (Pervasive).
5	RWX	CLOCK_REGION_UNIT1: For clock region MCD.
6	RWX	CLOCK_REGION_UNIT2: For clock region VA - VAS.
7	RWX	CLOCK_REGION_UNIT3: For clock region PBIOO0 - PB.
8	RWX	CLOCK_REGION_UNIT4: For clock region PBIOO1 - PB.
9	RWX	CLOCK_REGION_UNIT5: For clock region MCS23 - MCU.
10	RWX	CLOCK_REGION_UNIT6: For clock region unused.
11	RWX	CLOCK_REGION_UNIT7: For clock region unused.
12	RWX	CLOCK_REGION_UNIT8: For clock region unused.
13	RWX	CLOCK_REGION_UNIT9: For clock region unused.
14	RWX	CLOCK_REGION_UNIT10: For clock region reserved.
15:47	RO	constant = 0b00000000000000000000000000000000
48	RWX	SEL_THOLD_SL: Selects SL holds.
49	RWX	SEL_THOLD_NSL: select NSL holds.
50	RWX	SEL_THOLD_ARY: select array holds.
51	RO	constant = 0b0
52	RW	CLOCK_PULSE_USE_EVEN: For dual mesh support. Default for pulse is ODD phase. When this bit is set, the pulse is applied on the even phase.
53:63	RO	constant = 0b00000000000

Register Name	Clocks Running SL Register
Mnemonic	TP.TCN1.N1.CLOCK_STAT_SL
Address	0000000003030008 (SCOM)
Description	This register runs the SL.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b1111
4	ROX	CLOCK_STATUS_PERV_SL: Status of PERV SL HLD. 0 = run 1 = stop
5	ROX	CLOCK_STATUS_UNIT1_SL: Status of MCD SL HLD. 0 = run 1 = stop
6	ROX	CLOCK_STATUS_UNIT2_SL: Status of VA - VAS SL HLD. 0 = run 1 = stop
7	ROX	CLOCK_STATUS_UNIT3_SL: status of PBIOO0 - PB SL HLD 0 = run 1 = stop
8	ROX	CLOCK_STATUS_UNIT4_SL: Status of PBIOO1 - PB SL HLD 0 = run 1 = stop
9	ROX	CLOCK_STATUS_UNIT5_SL: Status of MCS23 - MCU SL HLD 0 = run 1 = stop
10	ROX	CLOCK_STATUS_UNIT6_SL: Status of unused SL HLD. 0 = run 1 = stop
11	ROX	CLOCK_STATUS_UNIT7_SL: Status of unused SL HLD. 0 = run 1 = stop
12	ROX	CLOCK_STATUS_UNIT8_SL: Status of unused SL HLD. 0 = run 1 = stop
13	ROX	CLOCK_STATUS_UNIT9_SL: Status of unused SL HLD. 0 = run 1 = stop
14	ROX	CLOCK_STATUS_UNIT10_SL: Status of reserved SL HLD. 0 = run 1 = stop
15:63	RO	constant = 0b111111111111111111111111111111111111111111111111111111111

Register Name	Clocks Running NSL Register
Mnemonic	TP.TCN1.N1.CLOCK_STAT_NSL
Address	0000000003030009 (SCOM)
Description	This register runs the NSL.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b1111
4	ROX	CLOCK_STATUS_PERV_NSL: Status of PERV NSL HLD. 0 = run 1 = stop
5	ROX	CLOCK_STATUS_UNIT1_NSL: Status of MCD NSL HLD. 0 = run 1 = stop
6	ROX	CLOCK_STATUS_UNIT2_NSL: Status of VA - VAS NSL HLD. 0 = run 1 = stop
7	ROX	CLOCK_STATUS_UNIT3_NSL: status of PBIOO0 - PB NSL HLD 0 = run 1 = stop
8	ROX	CLOCK_STATUS_UNIT4_NSL: Status of PBIOO1 - PB NSL HLD 0 = run 1 = stop
9	ROX	CLOCK_STATUS_UNIT5_NSL: Status of MCS23 - MCU NSL HLD 0 = run 1 = stop
10	ROX	CLOCK_STATUS_UNIT6_NSL: Status of unused NSL HLD. 0 = run 1 = stop
11	ROX	CLOCK_STATUS_UNIT7_NSL: Status of unused NSL HLD. 0 = run 1 = stop
12	ROX	CLOCK_STATUS_UNIT8_NSL: Status of unused NSL HLD. 0 = run 1 = stop
13	ROX	CLOCK_STATUS_UNIT9_NSL: Status of unused NSL HLD. 0 = run 1 = stop
14	ROX	CLOCK_STATUS_UNIT10_NSL: Status of reserved NSL HLD. 0 = run 1 = stop
15:63	RO	constant = 0b11111111111111111111111111111111111111111111111111111111

Register Name	Clocks Running Array Register
Mnemonic	TP.TCN1.N1.CLOCK_STAT_ARY
Address	000000000303000A (SCOM)
Description	This register runs the array.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b1111
4	ROX	CLOCK_STATUS_PERV_ARY: Status of PERV ARY HLD. 0 = run 1 = stop

Bits	SCOM	Field Mnemonic: Description
5	ROX	CLOCK_STATUS_UNIT1_ARY: Status of MCD ARY HLD. 0 = run 1 = stop
6	ROX	CLOCK_STATUS_UNIT2_ARY: Status of VA - VAS ARY HLD. 0 = run 1 = stop
7	ROX	CLOCK_STATUS_UNIT3_ARY: status of PBIOO0 - PB ARY HLD 0 = run 1 = stop
8	ROX	CLOCK_STATUS_UNIT4_ARY: Status of PBIOO1 - PB ARY HLD 0 = run 1 = stop
9	ROX	CLOCK_STATUS_UNIT5_ARY: Status of MCS23 - MCU ARY HLD 0 = run 1 = stop
10	ROX	CLOCK_STATUS_UNIT6_ARY: Status of unused ARY HLD. 0 = run 1 = stop
11	ROX	CLOCK_STATUS_UNIT7_ARY: Status of unused ARY HLD. 0 = run 1 = stop
12	ROX	CLOCK_STATUS_UNIT8_ARY: Status of unused ARY HLD. 0 = run 1 = stop
13	ROX	CLOCK_STATUS_UNIT9_ARY: Status of unused ARY HLD. 0 = run 1 = stop
14	ROX	CLOCK_STATUS_UNIT10_ARY: Status of reserved ARY HLD. 0 = run 1 = stop
15:63	RO	constant = 0b11111111111111111111111111111111111111111111111111111

Register Name	**ABIST and IOBIST Per Region Register**
Mnemonic	TP.TCN1.N1.BIST
Address	0000000003030008 (SCOM)
Description	ABIST and IOBIST per region

Bits	SCOM	Field Mnemonic: Description
0	RW	TC_BIST_START_TEST_DC: Keep this bit 0 during ABIST/IOBIST. Can be used to bypass the RUNN start. When this bit is set, the BIST_START_TEST goes high immediately without waiting for RUNN. BIST starts with the first HLD clock cycle.
1	RW	TC_SRAM_ABIST_MODE_DC: Selects the ABIST engines for SRAMs.
2	RW	TC_EDRAM_ABIST_MODE_DC: Selects the ABIST engines for eDRAMs.
3	RW	TC_IOBIST_MODE_DC: Selects the IOBIST engines.
4	RW	BIST_PERV: Region PERV: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run

Bits	SCOM	Field Mnemonic: Description
5	RW	BIST_UNIT1: Region MCD: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
6	RW	BIST_UNIT2: Region VA - VAS: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
7	RW	BIST_UNIT3: Region PBIOO0 - PB: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
8	RW	BIST_UNIT4: Region PBIOO1 - PB: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
9	RW	BIST_UNIT5: Region MCS23 - MCU: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
10	RW	BIST_UNIT6: Region unused: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
11	RW	BIST_UNIT7: Region unused: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
12	RW	BIST_UNIT8: Region unused: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
13	RW	BIST_UNIT9: Region unused: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
14	RW	BIST_UNIT10: Region reserved: 1 = BIST_START_TEST for this region is triggered 0 = Region not part of the ABIST/IOBIST run
15:47	RO	constant = 0b00000000000000000000000000000000
48	RW	BIST_STROBE_WINDOW_EN: Enables strobe window only in TE = 1 mode OPCGGO tester pin enables ABIST compare when ABIST is started. Special setup in ABIST engine is required. Default = 0. System mode cannot enable this feature.
49:63	RO	constant = 0b000000000000000

Register Name	Checkstop Per Region 1 Register
Mnemonic	TP.TCN1.N1.XSTOP1
Address	000000000303000C (SCOM)
Description	Checkstop per region

Bits	SCOM	Field Mnemonic: Description
0	RW	XSTOP1_MASK_B: Mask for checkstop to clockstop of select regions (see XSTOP_perv, xstop_unit0..n). 0 = ignore checkstop 1 = stop on checkstop
1	RW	XSTOP1_UNUSED: Unused.
2	RW	TRIGGER_OPCG_ON_XSTOP1: Triggers OPCG on checkstop instead of performing clockstop.

Bits	SCOM	Field Mnemonic: Description
3	RW	XSTOP1_WAIT_ALLWAYS: When set to 1, checkstop waits independent from flush. Default is no wait when flush in not set.
4	RW	XSTOP1_PERV: Region PERV: 1 = region is stopped 0 = region keeps running on checkstop
5	RW	XSTOP1_UNIT1: Region MCD: 1 = region is stopped 0 = region keeps running on checkstop
6	RW	XSTOP1_UNIT2: Region VA - VAS: 1 = region is stopped 0 = region keeps running on checkstop
7	RW	XSTOP1_UNIT3: Region PBIOO0 - PB: 1 = region is stopped 0 = region keeps running on checkstop
8	RW	XSTOP1_UNIT4: Region PBIOO1 - PB: 1 = region is stopped 0 = region keeps running on checkstop
9	RW	XSTOP1_UNIT5: Region MCS23 - MCU: 1 = region is stopped 0 = region keeps running on checkstop
10	RW	XSTOP1_UNIT6: Region unused: 1 = region is stopped 0 = region keeps running on checkstop
11	RW	XSTOP1_UNIT7: Region unused: 1 = region is stopped 0 = region keeps running on checkstop
12	RW	XSTOP1_UNIT8: Region unused: 1 = region is stopped 0 = region keeps running on checkstop
13	RW	XSTOP1_UNIT9: Region unused: 1 = region is stopped 0 = region keeps running on checkstop
14	RW	XSTOP1_UNIT10: Region reserved: 1 = region is stopped 0 = region keeps running on checkstop
15:47	RO	constant = 0b00000000000000000000000000000000
48:59	RW	XSTOP1_WAIT_CYCLES: Defines how many cycles checkstop waits after dropping flush before Tholds is dropped. 0 - 4095 cycles possible.
60:63	RO	constant = 0b0000

Register Name	**Checkstop Per Region 2 Register**
Mnemonic	TP.TCN1.N1.XSTOP2
Address	000000000303000D (SCOM)
Description	Checkstop per region

Bits	SCOM	Field Mnemonic: Description
0	RW	XSTOP2_MASK_B: Mask for checkstop to clockstop of select regions (see XSTOP_perv, xstop_unit0..n). 0 = ignore checkstop 1 = stop on checkstop
1	RW	XSTOP2_UNUSED: Unused.
2	RW	TRIGGER_OPCG_ON_XSTOP2: Triggers OPCG on checkstop instead of performing clockstop.
3	RW	XSTOP2_WAIT_ALLWAYS: When set to 1, checkstop waits independent from flush. Default is no wait when flush in not set.
4	RW	XSTOP2_PERV: Region PERV: 1 = region is stopped 0 = region keeps running on checkstop
5	RW	XSTOP2_UNIT1: Region MCD: 1 = region is stopped 0 = region keeps running on checkstop
6	RW	XSTOP2_UNIT2: Region VA - VAS: 1 = region is stopped 0 = region keeps running on checkstop
7	RW	XSTOP2_UNIT3: Region PBIOO0 - PB: 1 = region is stopped 0 = region keeps running on checkstop
8	RW	XSTOP2_UNIT4: Region PBIOO1 - PB: 1 = region is stopped 0 = region keeps running on checkstop
9	RW	XSTOP2_UNIT5: Region MCS23 - MCU: 1 = region is stopped 0 = region keeps running on checkstop
10	RW	XSTOP2_UNIT6: Region unused: 1 = region is stopped 0 = region keeps running on checkstop

Bits	SCOM	Field Mnemonic: Description
11	RW	XSTOP2_UNIT7: Region unused: 1 = region is stopped 0 = region keeps running on checkstop
12	RW	XSTOP2_UNIT8: Region unused: 1 = region is stopped 0 = region keeps running on checkstop
13	RW	XSTOP2_UNIT9: Region unused: 1 = region is stopped 0 = region keeps running on checkstop

15:47	RO	constant = 0b00000000000000000000000000000000
48:59	RW	XSTOP2_WAIT_CYCLES: Defines how many cycles checkstop waits after dropping flush before Tholds is dropped. 0 - 4095 cycles possible.
60:63	RO	constant = 0b0000

Register Name	Checkstop Per Region Register 3
Mnemonic	TP.TCN1.N1.XSTOP3
Address	000000000303000E (SCOM)
Description	Checkstop per region

Bits	SCOM	Field Mnemonic: Description
0	RW	XSTOP3_MASK_B: Mask for Checkstop to clockstop of select regions (see XSTOP_perv, xstop_unit0..n). 0 = ignore checkstop 1 = stop on checkstop
1	RW	XSTOP3_UNUSED: Unused.
2	RW	TRIGGER_OPCG_ON_XSTOP3: Triggers OPCG on checkstop instead of performing clockstop.
3	RW	XSTOP3_WAIT_ALLWAYS: When set to 1, checkstop waits independent from flush. Default is no wait when flush in not set.
4	RW	XSTOP3_PERV: Region PERV: 1 = region is stopped 0 = region keeps running on checkstop
5	RW	XSTOP3_UNIT1: Region MCD: 1 = region is stopped 0 = region keeps running on checkstop
6	RW	XSTOP3_UNIT2: Region VA - VAS: 1 = region is stopped 0 = region keeps running on checkstop
7	RW	XSTOP3_UNIT3: Region PBIOO0 - PB: 1 = region is stopped 0 = region keeps running on checkstop
8	RW	XSTOP3_UNIT4: Region PBIOO1 - PB: 1 = region is stopped 0 = region keeps running on checkstop
9	RW	XSTOP3_UNIT5: Region MCS23 - MCU: 1 = region is stopped 0 = region keeps running on checkstop

Bits	SCOM	Field Mnemonic: Description
10	RW	XSTOP3_UNIT6: Region unused: 1 = region is stopped 0 = region keeps running on checkstop
11	RW	XSTOP3_UNIT7: Region unused: 1 = region is stopped 0 = region keeps running on checkstop
12	RW	XSTOP3_UNIT8: Region unused: 1 = region is stopped 0 = region keeps running on checkstop
13	RW	XSTOP3_UNIT9: Region unused: 1 = region is stopped 0 = region keeps running on checkstop
14	RW	XSTOP3_UNIT10: Region reserved: 1 = region is stopped 0 = region keeps running on checkstop
15:47	RO	constant = 0b00000000000000000000000000000000
48:59	RW	XSTOP3_WAIT_CYCLES: Defines how many cycles checkstop waits after dropping flush before Tholds is dropped. 0 - 4095 cycles possible.
60:63	RO	constant = 0b0000

Register Name	Error Status of CC Register
Mnemonic	TP.TCN1.N1.ERROR_STATUS
Address	000000000303000F (SCOM)
Description	This register shows the error status of CC.

Bits	SCOM	Field Mnemonic: Description
0	RWX	PCB_WRITE_NOT_ALLOWED_ERR: Write on read-only register.
1	RWX	PCB_READ_NOT_ALLOWED_ERR: Read not allowed. Can be write-only register.
2	RWX	PCB_PARITY_ON_CMD_ERR: Parity error on CMD.
3	RWX	PCB_ADDRESS_NOT_VALID_ERR: Invalid address.
4	RWX	PCB_PARITY_ON_ADDR_ERR: Parity error on ADDR.
5	RWX	PCB_PARITY_ON_DATA_ERR: Parity error on data.
6	RWX	PCB_PROTECTED_ACCESS_INVALID_ERR: Protection violation.
7	RWX	PCB_PARITY_ON_SPCIF_ERR: Parity error on SPCIF.
8	RWX	PCB_WRITE_AND_OPCG_IP_ERR: PCB write while OPCG is running.
9	RWX	SCAN_READ_AND_OPCG_IP_ERR: Scan read when OPCG is running.
10	RWX	CLOCK_CMD_CONFLICT_ERR: Clock CMD in progress.
11	RWX	SCAN_COLLISION_ERR: Scan region selected of running region.
12	RWX	PREVENTED_SCAN_COLLISION_ERR: PCB request to set scan region that is running.
13	RWX	OPCG_TRIGGER_ERR: OPCG gets triggered while OPCG is running.
14	RWX	PHASE_CNT_CORRUPTION_ERR: Phase counters inside chiplet out of SYNC.
15	RWX	CLOCK_CMD_PREVENTED_ERR: Security or scan collision prevented a clock start.
16	RWX	PARITY_ON_OPCG_SM_ERR: Parity error on OPCG state machine.

Bits	SCOM	Field Mnemonic: Description
17	RWX	PARITY_ON_CLOCK_MUX_REG_ERR: Parity error on Scan/Clock Region/Type or Clock Status Register.
18	RWX	PARITY_ON_OPCG_REG_ERR: Parity error on OPCG registers.
19	RWX	PARITY_ON_SYNC_CONFIG_REG_ERR: Parity error on SYNC Configuration register.
20	RWX	PARITY_ON_XSTOP_REG_ERR: Parity error on checkstop register.
21	RWX	PARITY_ON_GPIO_REG_ERR: Parity error on GP0, 4, 5, and 6 registers.
22	RWX	CLKCMD_REQUEST_ERR: Region CLKCMD has one request pending, but receives a second CLKCMD.
23	RWX	CBS_PROTOCOL_ERR: CBS protocol error. REQ/ACK sequence wrong.
24	RWX	VITL_ALIGN_ERR: VITL Alignment is out of SYNC-to-SYNC pulse.
25	RWX	UNIT_SYNC_LVL_ERR: Unit0 and Unit1 SYNC LVL pulses are not in SYNC. AVP is broken.
26	RWX	PARITY_ON_SELFBOOT_CMD_STATE_ERR: Parity error on self-boot command state.
27	RWX	UNUSED_ERROR27: Unused.
28	RWX	UNUSED_ERROR28: Unused.
29	RWX	UNUSED_ERROR29: Unused.
30	RWX	UNUSED_ERROR30: Unused.
31	RWX	UNUSED_ERROR31: Unused.

Register Name	**OPCG Control Register Capture 1**
Mnemonic	TP.TCN1.N1.OPCG_CAPT1
Address	0000000003030010 (SCOM)
Description	OPCG Control Register Capture1

Bits	SCOM	Field Mnemonic: Description
0:3	RW	COUNT: 0000 = 12 cycle 0001 - 1100 = cycle 1-12 1101-1111 = 24 normal, not fast.
4:8	RW	SEQ_01: Sequence cycle 1 for normal/slow region (SL, NSL, ARY, SE, FCE).
9:13	RW	SEQ_02: Sequence cycle 2 for normal/slow region (SL, NSL, ARY, SE, FCE).
14:18	RW	SEQ_03: Sequence cycle 3 for normal/slow region (SL, NSL, ARY, SE, FCE).
19:23	RW	SEQ_04: Sequence cycle 4 for normal/slow region (SL, NSL, ARY, SE, FCE).
24:28	RW	SEQ_05: Sequence cycle 5 for normal/slow region (SL, NSL, ARY, SE, FCE).
29:33	RW	SEQ_06: Sequence cycle 6 for normal/slow region (SL, NSL, ARY, SE, FCE).
34:38	RW	SEQ_07: Sequence cycle 7 for normal/slow region (SL, NSL, ARY, SE, FCE).
39:43	RW	SEQ_08: Sequence cycle 8 for normal/slow region (SL, NSL, ARY, SE, FCE).
44:48	RW	SEQ_09: Sequence cycle 9 for normal/slow region (SL, NSL, ARY, SE, FCE).
49:53	RW	SEQ_10: Sequence cycle 10 for normal/slow region (SL, NSL, ARY, SE, FCE).
54:58	RW	SEQ_11: Sequence cycle 11 for normal/slow region (SL, NSL, ARY, SE, FCE).
59:63	RW	SEQ_12: Sequence cycle 12 for normal/slow region (SL, NSL, ARY, SE, FCE).

Register Name	OPCG Control Register Capture 2
Mnemonic	TP.TCN1.N1.OPCG_CAPT2
Address	0000000003030011 (SCOM)
Description	OPCG Control Register Capture 2

Bits	SCOM	Field Mnemonic: Description
0:3	RW	UNUSED_CAPT2: Unused.
4:8	RW	SEQ_13_01EVEN: Sequence cycle 1 (even) for fast region or cycle 13 for normal region (SL, NSL, ARY, SE, FCE).
9:13	RW	SEQ_14_01ODD: Sequence cycle 1 (odd) for fast region or cycle 14 for normal region (SL, NSL, ARY, SE, FCE).
14:18	RW	SEQ_15_02EVEN: Sequence cycle 2 (even) for fast region or cycle 15 for normal region (SL, NSL, ARY, SE, FCE).
19:23	RW	SEQ_16_02ODD: Sequence cycle 2 (odd) for fast region or cycle 16 for normal region (SL, NSL, ARY, SE, FCE).
24:28	RW	SEQ_17_03EVEN: Sequence cycle 3 (even) for fast region or cycle 17 for normal region (SL, NSL, ARY, SE, FCE).
29:33	RW	SEQ_18_03ODD: Sequence cycle 3 (odd) for fast region or cycle 18 for normal region (SL, NSL, ARY, SE, FCE).
34:38	RW	SEQ_19_04EVEN: Sequence cycle 4 (even) for fast region or cycle 19 for normal region (SL, NSL, ARY, SE, FCE).
39:43	RW	SEQ_20_04ODD: Sequence cycle 4 (odd) for fast region or cycle 20 for normal region (SL, NSL, ARY, SE, FCE).
44:48	RW	SEQ_21_05EVEN: Sequence cycle 5 (even) for fast region or cycle 21 for normal region (SL, NSL, ARY, SE, FCE).
49:53	RW	SEQ_22_05ODD: Sequence cycle 5 (odd) for fast region or cycle 22 for normal region (SL, NSL, ARY, SE, FCE).
54:58	RW	SEQ_23_06EVEN: Sequence cycle 6 (even) for fast region or cycle 23 for normal region (SL, NSL, ARY, SE, FCE).
59:63	RW	SEQ_24_06ODD: Sequence cycle 6 (odd) for fast region or cycle 24 for normal region (SL, NSL, ARY, SE, FCE).

Register Name	OPCG Control Register Capture 3
Mnemonic	TP.TCN1.N1.OPCG_CAPT3
Address	0000000003030012 (SCOM)
Description	OPCG Control Register Capture 3

Bits	SCOM	Field Mnemonic: Description
0:3	RW	UNUSED_CAPT3:
4:8	RW	SEQ_07EVEN: Sequence cycle 7 (even) for fast region (SL, NSL, ARY, SE, FCE).
9:13	RW	SEQ_07ODD: Sequence cycle 7 (odd) for fast region (SL, NSL, ARY, SE, FCE).
14:18	RW	SEQ_08EVEN: Sequence cycle 8 (even) for fast region (SL, NSL, ARY, SE, FCE).
19:23	RW	SEQ_08ODD: Sequence cycle 8 (odd) for fast region (SL, NSL, ARY, SE, FCE).
24:28	RW	SEQ_09EVEN: Sequence cycle 9 (even) for fast region (SL, NSL, ARY, SE, FCE).
29:33	RW	SEQ_09ODD: Sequence cycle 9 (odd) for fast region (SL, NSL, ARY, SE, FCE).

Bits	SCOM	Field Mnemonic: Description
34:38	RW	SEQ_10EVEN: Sequence cycle 10 (even) for fast region (SL, NSL, ARY, SE, FCE).
39:43	RW	SEQ_10ODD: Sequence cycle 10 (odd) for fast region (SL, NSL, ARY, SE, FCE).
44:48	RW	SEQ_11EVEN: Sequence cycle 11 (even) for fast region (SL, NSL, ARY, SE, FCE).
49:53	RW	SEQ_11ODD: Sequence cycle 11 (odd) for fast region (SL, NSL, ARY, SE, FCE).
54:58	RW	SEQ_12EVEN: Sequence cycle 12 (even) for fast region (SL, NSL, ARY, SE, FCE).
59:63	RW	SEQ_12ODD: Sequence cycle 12 (odd) for fast region (SL, NSL, ARY, SE, FCE).

Register Name	Debug CBS CC Register
Mnemonic	TP.TCN1.N1.DBG_CBS_CC
Address	0000000003030013 (SCOM)
Description	Debug CBS CC Register

Bits	SCOM	Field Mnemonic: Description
0	ROX	DBG_RESET_EP: Reset endpoint. CC and CTRL in reset state.
1	ROX	DBG_OPCG_IP: OPCG in progress, not in idle.
2	ROX	DBG_VITL_CLKOFF: VITL HLD stopped when enabled. Must have plat-depth cycles to switch this latch.
3	ROX	DBG_TEST_ENABLE: Test enable.
4	ROX	DBG_CBS_REQ: CBS Interface - Request (latched).
5:7	ROX	DBG_CBS_CMD: CBS Interface - Command (latched).
8:12	ROX	DBG_CBS_STATE: CBS command state machine 00000 = idle.
13	ROX	DBG_SECURITY_DEBUG_MODE: Status of the security mode bit.
14	ROX	DBG_CBS_PROTOCOL_ERROR: CBS protocol error. REQ is raised, but state machine is not in IDLE. Must reset_ep to clear this bit. No impact on IPL.
15	ROX	DBG_PCB_IDLE: PCB interface in IDLE state.
16:19	ROX	DBG_CURRENT_OPCG_MODE: Current/latest OPCG MODE: 0 = NOP 1 = LBIST 2 = ABIST 3 = RUNN 4 = SCAN0 5 = SCAN 6 = SCAN rotate 7 = SCAN with UpdateDR 8 = SCAN w CaptureDR 9 = CLK Change Request 10-15 = Unused
20:23	ROX	DBG_LAST_OPCG_MODE: Previous OPCG mode.
24	ROX	DBG_PCB_ERROR: PCB interface error. Read CC Error Register or set CBS_CMD = 001 to switch FSI CBS. Debug Information to CC error Register.
25	ROX	DBG_PARITY_ERROR: Any parity error, non-PCB parity. Read CC Error Register or set CBS_CMD = 001 to switch FSI CBS. Debug Information to CC error Register.
26	ROX	DBG_CC_ERROR: Any other CC error. Read CC Error Register or set CBS_CMD = 001 to switch FSI CBS. Debug Information to CC error Register.
27	ROX	DBG_CHIPLET_IS_ALIGNED: Value is 1 when the a valid align pulse WS is sent out.

Bits	SCOM	Field Mnemonic: Description
28	ROX	DBG_PCB_REQUEST_SINCE_RESET: Reset clears the bit. The first PCB request sets the bit.
29	ROX	DBG_PARANOIA_TEST_ENABLE_CHANGE: Rising or falling edge on test enable after reset. Must have reset_ep to clear, no impact on IPL.
30	ROX	DBG_PARANOIA_VITL_CLKOFF_CHANGE: Rising or falling edge on vitl_clkoff, after reset. Must have reset_ep to clear, no impact on IPL.
31	ROX	TP_TPFSI_CBS_ACK: Only representation of CC acknowledged signal going to FSI.

Register Name	CC Protect Mode Register
Mnemonic	TP.TCN1.N1.CC_PROTECT_MODE_REG
Address	00000000030303FE (SCOM)
Description	CC Protect Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_READ_PROTECT_ENABLE: Enables read protection.
1	RW	CC_WRITE_PROTECT_ENABLE: Enables write protection.

Register Name	Atomic Lock Register
Mnemonic	TP.TCN1.N1.CC_ATOMIC_LOCK_REG
Address	00000000030303FF (SCOM)
Description	Atomic Lock Register

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_ATOMIC_LOCK_ENABLE: Enable atomic lock.
1:4	ROX	CC_ATOMIC_ID: Atomic ID.
5:7	RO	constant = 0b000
8:15	ROX	CC_ATOMIC_ACTIVITY: Atomic lock counter.

Register Name	Global Checkstop FIR Register
Mnemonic	TP.TCN1.N1.XFIR
Address	0000000003040000 (SCOM)
Description	Global checkstop FIR

Bits	SCOM	Field Mnemonic: Description
0	RWX	XFIR_IN0: Summary bit (any checkstop).
1	RWX	XFIR_IN1: Checkstop broadcast using OOB.
2	RWX	XFIR_IN2: Unused.
3	RWX	XFIR_IN3: Checkstop from pervasive unit.
4	RWX	XFIR_IN4: Checkstop from MCS23_0.
5	RWX	XFIR_IN5: Checkstop from MCS23_1.
6	RWX	XFIR_IN6: Checkstop from MCD0 FIR.

Bits	SCOM	Field Mnemonic: Description
7	RWX	XFIR_IN7: Checkstop from MCD1 FIR.
8	RWX	XFIR_IN8: Checkstop from VA FIR.
9	RWX	XFIR_IN9: Checkstop from PBIOO_0 FIRP.
10	RWX	XFIR_IN10: Checkstop from PBIOO_1 FIR.
11:25:00 AM	RWX	XFIR_IN11: Unused.
26	RWX	XFIR_IN26: Checkstop on debug trigger.

Register Name	Global Recoverable FIR Register
Mnemonic	TP.TCN1.N1.RFIR
Address	0000000003040001 (SCOM)
Description	Global recoverable FIR

Bits	SCOM	Field Mnemonic: Description
0	ROX	RFIR_IN0: Unused.
1	ROX	LFIR_RECOV_ERR: Recoverable error from pervasive unit.
2	ROX	RFIR_IN4: Recoverable from MCS23_0.
3	ROX	RFIR_IN5: Recoverable from MCS23_1.
4	ROX	RFIR_IN6: Recoverable from MCD0 FIR.
5	ROX	RFIR_IN7: Recoverable from MCD1 FIR.
6	ROX	RFIR_IN8: Recoverable from VA FIR.
7	ROX	RFIR_IN9: Recoverable from PBIOO_0 FIR.
8	ROX	RFIR_IN10: Recoverable from PBIOO_1 FIR.
09:23:00 AM	ROX	RFIR_IN11: Unused.

Register Name	FIR Mask Register
Mnemonic	TP.TCN1.N1.FIR_MASK
Address	0000000003040002 (SCOM)
Description	FIR Mask

Bits	SCOM	Field Mnemonic: Description
0	RW	FIR_MASK_IN0: Mask for XFIR summary bit (any checkstop).
1	RW	FIR_MASK_IN1: Mask for XFIR bit received from other chiplets.
2	RW	FIR_MASK_IN2: Unused.
3	RW	FIR_MASK_IN3: Mask for XFIR from pervasive unit.
4	RW	FIR_MASK_IN4: Mask for MCS23_0 XFIR and RFIR.
5	RW	FIR_MASK_IN5: Mask for MCS23_1 XFIR and RFIR.
6	RW	FIR_MASK_IN6: Mask for MCD0 XFIR and RFIR.
7	RW	FIR_MASK_IN7: Mask for MCD1 XFIR and RFIR.

Bits	SCOM	Field Mnemonic: Description
8	RW	FIR_MASK_IN8: Mask for VA XFIR and RFIR.
9	RW	FIR_MASK_IN9: Mask for PBIOO_0 XFIR and RFIR.
10	RW	FIR_MASK_IN10: Mask for PBIOO_1 XFIR and RFIR.
11:25	RW	FIR_MASK_IN11: Unused.
26	RW	FIR_MASK_IN26: Mask for debug trigger and local checkstop to recoverable error.

Register Name	Special Attention Register
Mnemonic	TP.TCN1.N1.SPATTN
Address	0000000003040004 (SCOM) 0000000003040005 (SCOM1) 0000000003040006 (SCOM2)
Description	Special Attention

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	ROX	NCX	NCX	SPATTN_IN0: Special attention from MCS23_0.
1	ROX	NCX	NCX	SPATTN_IN1: Special attention from MCS23_1.
2	ROX	NCX	NCX	SPATTN_IN2: Special attention from MCD0.
3	ROX	NCX	NCX	SPATTN_IN3: Special attention from MCD1.
4:9	ROX	NCX	NCX	SPATTN_IN4: Unused special attentions.

Register Name	Special Attention Mask Register
Mnemonic	TP.TCN1.N1.SPA_MASK
Address	0000000003040007 (SCOM)
Description	Special Attention Mask

Bits	SCOM	Field Mnemonic: Description
0:9	RW	SPA_MASK_IN: Special attention mask.

Register Name	Mode Register
Mnemonic	TP.TCN1.N1.EPS.FIR.MODE_REG
Address	0000000003040008 (SCOM)
Description	Mode Register

Bits	SCOM	Field Mnemonic: Description
0	RW	MODE_IN0: Unused.
1	RW	MODE_IN1: Unused.
2	RW	MODE_IN2: Unused.
3	RW	MODE_IN3: Unused.
4	RW	MODE_IN4: Stop chip TOD on checkstop (unused in POWER9).
5	RW	MODE_IN5: Stop chip TOD on Recoverable (unused in POWER9).

Bits	SCOM	Field Mnemonic: Description
6	RW	MODE_IN6: Disable propagation of checkstop to other chips.
7	RW	MODE_IN7: Unused.
8	RW	MODE_IN8: Enables checkstop on special attention.
9	RW	MODE_IN9: mask_direct/local_error.
10	RW	MODE_IN10: Unused.
11	RW	MODE_IN11: Unused.
12:15	RW	MODE_IN: Unused.

Register Name	**Host Attention Register**
Mnemonic	TP.TCN1.N1.HOSTATTN
Address	0000000003040009 (SCOM)
Description	Host Attention

Bits	SCOM	Field Mnemonic: Description
0	ROX	HOSTATTN_IN0: Host Attention summary bit.
1	ROX	HOSTATTN_IN1: Host attention error from MCS23, bit 0.
2	ROX	HOSTATTN_IN2: Host attention error from MCS23, bit 1.
3	ROX	HOSTATTN_IN3: Unused.
4	ROX	HOSTATTN_IN4: Unused.
5	ROX	HOSTATTN_IN5: Unused.
6	ROX	HOSTATTN_IN6: Unused.
7	ROX	HOSTATTN_IN7: Unused.
8	ROX	HOSTATTN_IN8: Unused.
9	ROX	HOSTATTN_IN9: Unused.
10	ROX	HOSTATTN_IN10: Unused.
11	ROX	HOSTATTN_IN11: Unused.
12	ROX	HOSTATTN_IN12: Unused.
13	ROX	HOSTATTN_IN13: Unused.
14	ROX	HOSTATTN_IN14: Unused.
15	ROX	HOSTATTN_IN15: Unused.
16	ROX	HOSTATTN_IN16: Unused.
17	ROX	HOSTATTN_IN17: Unused.
18	ROX	HOSTATTN_IN18: Unused.
19	ROX	HOSTATTN_IN19: Unused.
20	ROX	HOSTATTN_IN20: Unused.
21	ROX	HOSTATTN_IN21: Unused.
22	ROX	HOSTATTN_IN22: Unused.

Register Name	**Local FIR Register**
Mnemonic	TP.TCN1.N1.LOCAL_FIR
Address	000000000304000A (SCOM) 000000000304000B (SCOM1) 000000000304000C (SCOM2)
Description	Local FIR

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	FIR_IN0: CFIR internal parity error.
1	RWX	WOX_AND	WOX_OR	FIR_IN1: Errors from GPIO (PCB error).
2	RWX	WOX_AND	WOX_OR	FIR_IN2: Local errors from CC (PCB error).
3	RWX	WOX_AND	WOX_OR	FIR_IN3: Local errors from CC (OPCG, parity, scan collision, and so on).
4	RWX	WOX_AND	WOX_OR	FIR_IN4: Local errors from PSC (PCB error).
5	RWX	WOX_AND	WOX_OR	FIR_IN5: Local errors from PSC (parity error).
6	RWX	WOX_AND	WOX_OR	FIR_IN6: Local errors from thermal (parity error).
7	RWX	WOX_AND	WOX_OR	FIR_IN7: Local errors from thermal (PCB error).
8	RWX	WOX_AND	WOX_OR	FIR_IN8: Local errors from thermal (trip error critical).
9	RWX	WOX_AND	WOX_OR	FIR_IN9: Local errors from thermal (trip error fatal).
10	RWX	WOX_AND	WOX_OR	FIR_IN10: Thermal volt trip error.
11	RWX	WOX_AND	WOX_OR	FIR_IN11: Local errors from debug (SCOM error).
12	RWX	WOX_AND	WOX_OR	FIR_IN12: Local errors from trace Array0 (SCOM error).
13	RWX	WOX_AND	WOX_OR	FIR_IN13: Local errors from trace Array0.
14	RWX	WOX_AND	WOX_OR	FIR_IN14: Local errors from trace Array1 (SCOM error).
15	RWX	WOX_AND	WOX_OR	FIR_IN15: Local errors from trace Array1.
16	RWX	WOX_AND	WOX_OR	FIR_IN16: local errors from trace Array2 (SCOM error).
17	RWX	WOX_AND	WOX_OR	FIR_IN17: local errors from trace Array2.
18	RWX	WOX_AND	WOX_OR	FIR_IN18: local errors from trace Array3 (SCOM error).
19	RWX	WOX_AND	WOX_OR	FIR_IN19: local errors from trace Array3.
20	RWX	WOX_AND	WOX_OR	FIR_IN20: local errors from trace Array4 (SCOM error).
21	RWX	WOX_AND	WOX_OR	FIR_IN21: local errors from trace Array4.
22	RWX	WOX_AND	WOX_OR	FIR_IN22: Unused.
23	RWX	WOX_AND	WOX_OR	FIR_IN23: Unused.
24	RWX	WOX_AND	WOX_OR	FIR_IN24: Errors from Bsense I/O.
25	RWX	WOX_AND	WOX_OR	FIR_IN25: Unused.
26	RWX	WOX_AND	WOX_OR	FIR_IN26: Unused.
27	RWX	WOX_AND	WOX_OR	FIR_IN27: Unused.
28	RWX	WOX_AND	WOX_OR	FIR_IN28: Unused.
29	RWX	WOX_AND	WOX_OR	FIR_IN29: Unused.
30	RWX	WOX_AND	WOX_OR	FIR_IN30: Unused.
31	RWX	WOX_AND	WOX_OR	FIR_IN31: Unused.
32	RWX	WOX_AND	WOX_OR	FIR_IN32: Unused.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
33	RWX	WOX_AND	WOX_OR	FIR_IN33: Unused.
34	RWX	WOX_AND	WOX_OR	FIR_IN34: Unused.
35	RWX	WOX_AND	WOX_OR	FIR_IN35: Unused.
36	RWX	WOX_AND	WOX_OR	FIR_IN36: Unused.
37	RWX	WOX_AND	WOX_OR	FIR_IN37: Unused.
38	RWX	WOX_AND	WOX_OR	FIR_IN38: Unused.
39	RWX	WOX_AND	WOX_OR	FIR_IN39: Unused.
40	RWX	WOX_AND	WOX_OR	FIR_IN40: Unused.
41	RWX	WOX_AND	WOX_OR	FIR_IN41: Malfunction alert broadcast using OOB.

Register Name	**Local FIR Mask Register**
Mnemonic	TP.TCN1.N1.EPS.FIR.LOCAL_FIR_MASK
Address	000000000304000D (SCOM) 000000000304000E (SCOM1) 000000000304000F (SCOM2)
Description	Local FIR Mask

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:41	RW	WO_AND	WO_OR	LFIR_MASK_IN: Mask for LEM error-collection vector.

Register Name	**Local FIR Action0 Register**
Mnemonic	TP.TCN1.N1.EPS.FIR.LOCAL_FIR_ACTION0
Address	0000000003040010 (SCOM)
Description	Local FIR Action0

Bits	SCOM	Field Mnemonic: Description
0:41	RW	FIR_ACTION0_IN: Action0 mask.

Register Name	**Local FIR Action1 Register**
Mnemonic	TP.TCN1.N1.EPS.FIR.LOCAL_FIR_ACTION1
Address	0000000003040011 (SCOM)
Description	Local FIR Action1

Bits	SCOM	Field Mnemonic: Description
0:41	RW	FIR_ACTION1_IN: Action1 mask.

Register Name	Group Checkstop Mask Register
Mnemonic	TP.TCN1.N1.EPS.FIR.GXSTOP_TRIG_REG
Address	0000000003040013 (SCOM)
Description	Group Checkstop Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP_TRIG_IN0: Mask bit for system checkstop.
1	RW	GXSTP_TRIG_IN1: Mask bit for recoverable error.
2	RW	GXSTP_TRIG_IN2: Mask bit for special attention.
3	RW	GXSTP_TRIG_IN3: Mask bit for local checkstop.
4	RW	GXSTP_TRIG_IN4: Mask bit for type-4 error (host attention).
5	RW	GXSTP_TRIG_IN5: Mask bit for OOB sys_checkstop Input (0).
6	RW	GXSTP_TRIG_IN6: Mask bit for OOB sys_checkstop Input (1).
7	RW	GXSTP_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP_TRIG_IN9: Mask bit for debug checkstop on trigger.
10	RW	GXSTP_TRIG_IN10: Unused.
11	RW	GXSTP_TRIG_IN11: Unused.

Register Name	Group0 Checkstop Mask Register
Mnemonic	TP.TCN1.N1.EPS.FIR.GXSTOP0_MASK_REG
Address	0000000003040014 (SCOM)
Description	Group0 Checkstop Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP0_TRIG_IN0: Mask bit for system checkstop.
1	RW	GXSTP0_TRIG_IN1: Mask bit for recoverable error
2	RW	GXSTP0_TRIG_IN2: Mask bit for special attention.
3	RW	GXSTP0_TRIG_IN3: Mask bit for local checkstop.
4	RW	GXSTP0_TRIG_IN4: Mask bit for YYPE 4 error (host attention).
5	RW	GXSTP0_TRIG_IN5: Mask bit for OOB sys_checkstop Input (0).
6	RW	GXSTP0_TRIG_IN6: Mask bit for OOB sys_checkstop Input (1).
7	RW	GXSTP0_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP0_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP0_TRIG_IN9: Mask bit for debug checkstop on trigger.
10	RW	GXSTP0_TRIG_IN10: Unused.
11	RW	GXSTP0_TRIG_IN11: Unused.

Register Name	Group1 Checkstop Mask Register
Mnemonic	TP.TCN1.N1.EPS.FIR.GXSTOP1_MASK_REG
Address	0000000003040015 (SCOM)
Description	Group1 Checkstop Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP1_TRIG_IN0: Mask bit for system checkstop.
1	RW	GXSTP1_TRIG_IN1: Mask bit for recoverable error.
2	RW	GXSTP1_TRIG_IN2: Mask bit for special attention.
3	RW	GXSTP1_TRIG_IN3: Mask bit for local checkstop.
4	RW	GXSTP1_TRIG_IN4: Mask bit for type-4 error (host attention).
5	RW	GXSTP1_TRIG_IN5: Mask bit for OOB sys_checkstop Input (0).
6	RW	GXSTP1_TRIG_IN6: Mask bit for OOB sys_checkstop Input (1).
7	RW	GXSTP1_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP1_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP1_TRIG_IN9: Mask bit for debug checkstop on trigger.
10	RW	GXSTP1_TRIG_IN10: Unused.
11	RW	GXSTP1_TRIG_IN11: Unused.

Register Name	Group2 Checkstop Mask Register
Mnemonic	TP.TCN1.N1.EPS.FIR.GXSTOP2_MASK_REG
Address	0000000003040016 (SCOM)
Description	Group2 Checkstop Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP2_TRIG_IN0: Mask bit for system checkstop.
1	RW	GXSTP2_TRIG_IN1: Mask bit for recoverable error.
2	RW	GXSTP2_TRIG_IN2: Mask bit for special attention.
3	RW	GXSTP2_TRIG_IN3: Mask bit for local checkstop.
4	RW	GXSTP2_TRIG_IN4: Mask bit for type 4 error (host attention).
5	RW	GXSTP2_TRIG_IN5: Mask bit for OOB sys_checkstop input (0).
6	RW	GXSTP2_TRIG_IN6: Mask bit for OOB sys_checkstop input (1).
7	RW	GXSTP2_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP2_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP2_TRIG_IN9: Mask bit for debug checkstop on trigger.
10	RW	GXSTP2_TRIG_IN10: Unused.
11	RW	GXSTP2_TRIG_IN11: Unused.

Register Name	Summary Mask Register
Mnemonic	TP.TCN1.N1.EPS.FIR.SUM_MASK_REG
Address	0000000003040017 (SCOM)
Description	Summary Mask Register

Bits	SCOM	Field Mnemonic: Description
0	RW	SMASK_IN0: System checkstop summary bit.
1	RW	SMASK_IN1: Recoverable summary bit.
2	RW	SMASK_IN2: Special attention summary bit.
3	RW	SMASK_IN3: Local checkstop summary bit.
4	RW	SMASK_IN4: Type4 host attention summary bit.

Register Name	Local Checkstop Register
Mnemonic	TP.TCN1.N1.LOCAL_XSTOP_ERR
Address	0000000003040018 (SCOM)
Description	Local Checkstop

Bits	SCOM	Field Mnemonic: Description
0	ROX	LOCAL_XSTOP_IN0: Local checkstop summary bit.
1	ROX	LOCAL_XSTOP_IN1: Local checkstop from MCS23, bit 0.
2	ROX	LOCAL_XSTOP_IN2: Local checkstop from MCS23, bit 1.
3	ROX	LOCAL_XSTOP_IN3: Unused.
4	ROX	LOCAL_XSTOP_IN4: Local checkstop from VA.
5	ROX	LOCAL_XSTOP_IN5: Unused.
6	ROX	LOCAL_XSTOP_IN6: Unused.
7	ROX	LOCAL_XSTOP_IN7: Unused.
8	ROX	LOCAL_XSTOP_IN8: Unused.
9	ROX	LOCAL_XSTOP_IN9: Unused.
10	ROX	LOCAL_XSTOP_IN10: Unused.
11	ROX	LOCAL_XSTOP_IN11: Unused.
12	ROX	LOCAL_XSTOP_IN12: Unused.
13	ROX	LOCAL_XSTOP_IN13: Unused.
14	ROX	LOCAL_XSTOP_IN14: Unused.
15	ROX	LOCAL_XSTOP_IN15: Unused.
16	ROX	LOCAL_XSTOP_IN16: Unused.
17	ROX	LOCAL_XSTOP_IN17: Unused.
18	ROX	LOCAL_XSTOP_IN18: Unused.
19	ROX	LOCAL_XSTOP_IN19: Unused.
20	ROX	LOCAL_XSTOP_IN20: Unused.
21	ROX	LOCAL_XSTOP_IN21: Unused.

Bits	SCOM	Field Mnemonic: Description
22	ROX	LOCAL_XSTOP_IN22: Unused.

Register Name	Local Checkstop Mask Register
Mnemonic	TP.TCN1.N1.LOCAL_XSTOP_MASK
Address	0000000003040019 (SCOM)
Description	Local Checkstop Mask

Bits	SCOM	Field Mnemonic: Description
0:21	RW	LOCAL_XSTOP_MASK_IN: Local checkstop mask.

Register Name	Host Attention Mask Register
Mnemonic	TP.TCN1.N1.HOSTATTN_MASK
Address	000000000304001A (SCOM)
Description	Host Attention Mask

Bits	SCOM	Field Mnemonic: Description
0:21	RW	HOSTATTN_MASK_IN: Host attention mask.

Register Name	DTS Thermal Sensor Loop1 Results Register
Mnemonic	TP.TCN1.N1.EPS.THERM.DTS_RESULT0
Address	0000000003050000 (SCOM)
Description	DTS Thermal Sensor loop1 Results

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	DTS_0_RESULT: Calibrated DTS result of sensor with ID 0.
16:31	ROX	DTS_1_RESULT: Calibrated DTS result of sensor with ID 1.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	DTS Trace Results Register
Mnemonic	TP.TCN1.N1.EPS.THERM.DTS_TRC_RESULT
Address	0000000003050003 (SCOM)
Description	DTS Trace Results

Bits	SCOM	Field Mnemonic: Description
0:43	ROX	TIMESTAMP_COUNTER_VALUE: Time stamp counter value during DTS trace mode.
44	ROX	TIMESTAMP_COUNTER_OVERFLOW_ERR: Overflow error bit of the time stamp counter value during DTS trace mode.
45:47	RO	constant = 0b000
48:63	ROX	DTS_1_RESULT: Calibrated DTS Result of sensor with ID 1.

Register Name	CPM and DTS Enables and Controls Register
Mnemonic	TP.TCN1.N1.EPS.THERM.THERM_MODE_REG
Address	000000000305000F (SCOM)
Description	CPM and DTS enables and controls

Bits	SCOM	Field Mnemonic: Description
0	RW	THERM_DIS_CPM_BUBBLE_CORR: Critical path result bubble correction active.
1	RW	THERM_FORCE_THRES_ACT: force tpc_therm_thres_mac clock gating off and activates clocks.
2:4	RW	THERM_THRES_TRIP_ENA: therm_thres_trip compare enables. 1xx: trip0 - warning. x1x: trip1 - critical. xx1: trip2 - fatal.
5	RW	THERM_DTS_SAMPLE_ENA: When set to 0, there is no DTS sampling. When set to 1, DTS sampling is enabled and below-counter compare match can occur.
6:9	RW	THERM_SAMPLE_PULSE_CNT: A 16 MHz, sample pulse is fed into an 18-bit counter. With the therm_sample_pulse_cnt, it is possible to select a high-order bit of the counter to enable a resolutions of sampling DTSS between 2.5 us and 80 ms. An edge detection circuit detects the rising edge of the selected counter bit and this triggers a DTS sample. 0000: 16 ms. 0001: 8 ms. 0010: 4 ms. 0011: 2 ms. 0100: 1 ms. 0101: 0.5 ms. 0110: 250 ms. 0111: 125 ms. 1000: 62 .5 ms. 1001: 31.3 ms. 1010: 15.6 ms. 1011: 7.8 ms. 1100: 3.9 ms. 1101: 2 ms. 1110: 1 ms. 1111: 0.5 ms.
10:11	RW	THERM_THRES_MODE_ENA: Forces maximum or minimum mode in threshold unit: 00: Off. 11: Illegal. 10: Maximum mode. 01: Minimum mode.
12	RW	DTS_TRIGGER_MODE: Unused.
13	RW	DTS_TRIGGER_SEL: Unused.
14	RW	THERM_THRES_OVERFLOW_MASK: When set to 0, therm_overflow_err is enabled. When set to 1, therm_overflow_err will be disabled.
15	RW	THERM_MODE_UNUSED: Unused.
16:19	RW	THERM_DTS_READ_SEL: Selects which DTS result is provided with PCB read addr_v(4): 0000: DTS 0. 0001: DTS 1. 0010: DTS 2. 0100: DTS 4. 1111: Worst-case sensor.
20:21	RW	THERM_DTS_ENABLE_L1: Loop1 DTS enables: 1x: DTS 0 available. x1: DTS 1 available.

Bits	SCOM	Field Mnemonic: Description
22:34	RO	constant = 0b0000000000000
35:36	RW	Reserved field.

Register Name	Skitter Control Register
Mnemonic	TP.TCN1.N1.EPS.THERM.SKITTER_MODE_REG
Address	0000000003050010 (SCOM)
Description	Skitter Control Register

Bits	SCOM	Field Mnemonic: Description
0	RW	SKITTER_HOLD_SAMPLE: Forces skitter to hold current sample.
1	RW	DISABLE_SKITTER_STICKINESS: When set to 0, accumulation mode. When set to 1, samples new value each cycle and resets the sticky value.
2:3	RW	SKITTER_MODE_UNUSED1: Unused.
4:5	RW	SKITTER_HOLD_DBGTRIG_SEL: bit0: hold_on_trigger0. bit1: _on_trigger1.
6:7	RW	SKITTER_RESET_TRIG_SEL: bit0: reset_sticky_on_trigger0. bit1: reset_sticky_on_trigger1.
8:9	RW	SKITTER_SAMPLE_GUTS: Selects guts to measure: 00: Guts1. 01: Guts2. 10: Guts3. 11: Guts4.
10:43	RO	constant = 0b00000000000000000000000000000000000
44	ROX	SKITTER_HOLD_SAMPLE_WITH_TRIGGER: Forces skitter to hold current sample on the debug trigger. This bit has the highest priority.
45	ROX	SKITTER_DATA_V_LT: When set to 1, the data requested by a skitter force read register has finished and data is present in the skitter data register in the collector macro. The data can be read by any combination of V25/V26/V27 PCB reads.

Register Name	Error Injection Control Register
Mnemonic	TP.TCN1.N1.EPS.THERM.INJECT_REG
Address	0000000003050011 (SCOM)
Description	Error Injection Control Register

Bits	SCOM	Field Mnemonic: Description
0:1	RW	THERM_INJECT_TRIP: 00: no injection. 01: Warning trip level injection. 10: Critical trip level injection. 11: Fatal trip level injection.
2:3	RW	THERM_INJECT_MODE: 00: no injection. 01: Injection on the next DTS sample. 10: Solid injection for the next DTS samples till bit setting changes. 11: Not used.

Register Name	Control/Force Reset Register
Mnemonic	TP.TCN1.N1.EPS.THERM.CONTROL_REG
Address	0000000003050012 (SCOM)
Description	Control/Force Reset Register

Bits	SCOM	Field Mnemonic: Description
0	WO_1P	Reserved field.
1	WO_1P	Reserved field.
2	WO_1P	Reserved field.
3	WO_1P	Reserved field.
4	WO_1P	Reserved field.
5	WO_1P	Reserved field.
6	WO_1P	Reserved field.
7	WO_1P	Reserved field.
8	WO_1P	Reserved field.
9	WO_1P	Reserved field.
10	WO_1P	Reserved field.
11	WO_1P	Reserved field.
12	WO_1P	Reserved field.

Register Name	Thermal Error Status Register
Mnemonic	TP.TCN1.N1.EPS.THERM.ERR_STATUS_REG
Address	0000000003050013 (SCOM)
Description	Thermal Error Status Register

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field.
1	ROX	Reserved field.
2	ROX	Reserved field.
3	ROX	Reserved field.
4	ROX	Reserved field.
5	ROX	Reserved field.
6	ROX	Reserved field.
7	ROX	Reserved field.
8	ROX	Reserved field.
9	ROX	Reserved field.
10	ROX	Reserved field.
11	ROX	Reserved field.
12	ROX	Reserved field.
13	ROX	Reserved field.

Bits	SCOM	Field Mnemonic: Description
14	ROX	Reserved field.
15	ROX	Reserved field.
16	ROX	SERIAL_SHIFTCNT_MODEREG_PARITY_ERR_MASK: Serial shift count parity error mask.
17	ROX	THERM_MODEREG_PARITY_ERR_MASK: Thermal Mode Register parity error mask.
18	ROX	SKITTER_MODEREG_PARITY_ERR_MASK: Skitter Mode Register parity error mask.
19	ROX	SKITTER_FORCEREG_PARITY_ERR_MASK: Skitter Force Register parity error mask.
20	ROX	SCAN_INIT_VERSION_REG_PARITY_ERR_MASK: Scan INIT Version Register parity error mask.
21	ROX	VOLT_MODEREG_PARITY_ERR_MASK: Volt Mode Register parity error mask.
22	RO	constant = 0b0
23	ROX	COUNT_STATE_ERR_MASK: Count state machine error mask.
24	ROX	RUN_STATE_ERR_MASK: Run state machine error mask.
25	ROX	THRES_STATE_ERR_MASK: Threshold state machine error mask.
26	ROX	OVERFLOW_ERR_MASK: DTS calibration calculation overflow error mask.
27	ROX	SHIFTER_PARITY_ERR_MASK: Shifter parity error mask.
28	ROX	SHIFTER_VALID_ERR_MASK: Shifter valid error mask.
29	ROX	TIMEOUT_ERR_MASK: Timeout error mask.
30	ROX	F_SKITTER_READ_ERR_MASK: Forces skitter read on the hot error mask.
31	ROX	PCB_ERR_MASK: Pervasive control bus error mask.
32:39	RO	constant = 0b00000000
40:43	ROX	Reserved field.
44:46	ROX	Reserved field.
47	ROX	Reserved field.
48	ROX	Reserved field.
49:50	ROX	Reserved field.
51:54	ROX	Reserved field.
55	ROX	Reserved field.
56	ROX	Reserved field.
57	ROX	Reserved field.
58	ROX	Reserved field.
59	ROX	Reserved field.
60:63	RO	constant = 0b0000

Register Name	Skitter Force Read Register
Mnemonic	TP.TCN1.N1.EPS.THERM.SKITTER_FORCE_REG
Address	0000000003050014 (SCOM)
Description	Skitter Force Read Register

Bits	SCOM	Field Mnemonic: Description
0	RW	F_SKITTER_READ: Forces the read of that particular skitter.

Register Name	Skitter Clock SRC Control Register
Mnemonic	TP.TCN1.N1.EPS.THERM.SKITTER_CLKSRC_REG
Address	0000000003050016 (SCOM)
Description	Skitter Clock SRC Control Register

Bits	SCOM	Field Mnemonic: Description
0:2	RW	SKITTER0_CLKSRC: Selects clock to measure: 000: Local mesh clock. 001: External pin skitter_c1_1_in. 010: Local d1clk only if d_mode = 1. 011: External pin skitter_c1_2_in. 100: Local lclk only if d_mode = 1. 101: External pin skitter_c1_3_in. 110: Unused. 111: External pin skitter_c1_4_in.
3:35	RO	constant = 0b00000000000000000000000000000000
36:37	RW	SKITTER0_DELAY_SELECT: Selects delay to be added between clock source multiplexer and inverter chain (base line delay is 12.2 ps) of skitter0. 00 - No delay. 01 - 0.6 ps. 10 - 1.8 ps. 11 - 5 ps.

Register Name	Skitter Data Register Read Bits 0:63 Register
Mnemonic	TP.TCN1.N1.EPS.THERM.SKITTER_DATA0
Address	0000000003050019 (SCOM)
Description	Skitter Data Register Read Bit0:63

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved.

Register Name	Skitter Data Register Read Bits 32:95 Register
Mnemonic	TP.TCN1.N1.EPS.THERM.SKITTER_DATA1
Address	000000000305001A (SCOM)
Description	Skitter Data Register Read Bit32:95

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved.

Register Name	Skitter Data Register Read Bits 64:127 Register
Mnemonic	TP.TCN1.N1.EPS.THERM.SKITTER_DATA2
Address	000000000305001B (SCOM)
Description	Skitter Data Register Read Bit 64:127

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved.

Register Name	Time-Stamp Counter Read Register
Mnemonic	TP.TCN1.N1.EPS.THERM.TIMESTAMP_COUNTER_READ
Address	000000000305001C (SCOM)
Description	Time-Stamp Counter Read

Bits	SCOM	Field Mnemonic: Description
0:43	ROX	TIMESTAMP_COUNTER_VALUE: Time stamp counter value during DTS trace mode.
44	ROX	TIMESTAMP_COUNTER_OVERFLOW_ERR: Overflow error bit of the time stamp counter value during DTS trace mode.

7. PB Chiplet (Nest Chiplet 2)

The POWER9 processor registers are listed alphabetically by mnemonic in the following address table.

Mnemonic	Address	Page
CAPP1.CXA_TOP.APC_ERRINJ	0x0000000004010810	913

The POWER9 processor registers are listed in the following tables.

Register Name	Chiplet Control Register 0
Mnemonic	TP.TCN2.N2.CPLT_CTRL0
Address	0000000004000000 (SCOM) 0000000004000010 (SCOM1) 0000000004000020 (SCOM2)
Description	This register contains the first set of vital chiplet controls.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_OR	WO_CLEAR	CTRL_CC_ABSTCLK_MUXSEL_DC: Select the ABIST clock source for arrays on a chiplet boundary. When set to 1, clocks are used from a chiplet with ABIST.
1	RW	WO_OR	WO_CLEAR	TC_UNIT_SYNCCLK_MUXSEL_DC: Select the synchronous clock for asynchronous latches. (The initial value is 1.)
2	RW	WO_OR	WO_CLEAR	CTRL_CC_FLUSHMODE_INH_DC: Prevent pipeline latches from going into flush mode. (The initial value is 1.)
3	RW	WO_OR	WO_CLEAR	CTRL_CC_FORCE_ALIGN_DC: Force an alignment signal to be sent. (The initial value is 1. Drop before dropping flushmode_inh.)
4	RW	WO_OR	WO_CLEAR	TC_UNIT_ARY_WRT_THRU_DC: Set the array into write-through mode. Used for LBIST.
5	RW	WO_OR	WO_CLEAR	TC_UNIT_AVP_MODE: AVP mode. Switches from the refresh pulse to the phase counter.
6	RW	WO_OR	WO_CLEAR	FREE_USAGE_6A: Free usage.
7	RW	WO_OR	WO_CLEAR	FREE_USAGE_7A: Free usage.
8	RW	WO_OR	WO_CLEAR	CTRL_CC_ABIST_RECOV_DISABLE_DC: New signal to disable recovery.
9	RW	WO_OR	WO_CLEAR	FREE_USAGE_9A: Free usage.
10	RW	WO_OR	WO_CLEAR	TC_UNIT_IOBIST_TX_WRAP_ENABLE_DC: Unused.
11	RW	WO_OR	WO_CLEAR	Reserved_11A: Reserved.
12	RW	WO_OR	WO_CLEAR	TC_SKIT_MODE_BIST_DC: Enables skitter to be used functionally during the BIST. When set to 1, the scan chain is bypassed and scan enable (SE) is degated.
13	RW	WO_OR	WO_CLEAR	TC_UNIT_DETERMINISTIC_TEST_ENABLE_DC: Forces login into deterministic test mode. For example, for LBIST.
14	RW	WO_OR	WO_CLEAR	TC_UNIT_CONSTRAIN_SAFESCAN_DC: Safe scan of N1L latches. Prevents lock when switching SE.
15	RW	WO_OR	WO_CLEAR	TC_UNIT_RRFA_TEST_ENABLE_DC: Enables test-only logic and latches to increase the test coverage.
16	RW	WO_OR	WO_CLEAR	TC_NBTI_HDR_ENABLE_OVR_DC: NBTI.
17	RW	WO_OR	WO_CLEAR	TC_NBTI_PROBE_GATE_DC: NBTI.
18	RW	WO_OR	WO_CLEAR	Reserved_18A: Reserved.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
19	RW	WO_OR	WO_CLEAR	Reserved_19A: Reserved.
20:27	RW	WO_OR	WO_CLEAR	TC_PSRO_SEL_DC: PSRO selected.
28	RW	WO_OR	WO_CLEAR	TC_BSC_WRAPSEL_DC: Wrap select for BSC.
29	RW	WO_OR	WO_CLEAR	TC_BSC_INTMODE_DC: INTEST instruction support (INT) mode for BSC. The IEEE 1149.1 INTEST instruction can be triggered through JTAG or through this register.
30	RW	WO_OR	WO_CLEAR	TC_BSC_INV_DC: INV for BSC mode.
31	RW	WO_OR	WO_CLEAR	TC_BSC_EXTMODE_DC: EXT mode for BSC.
32	RW	WO_OR	WO_CLEAR	TC_REFCLK_DRVR_EN_DC: Reference clock driver enable.
33	RW	WO_OR	WO_CLEAR	Reserved_33A: Reserved.
34	RW	WO_OR	WO_CLEAR	Reserved_34A: Reserved.
35	RW	WO_OR	WO_CLEAR	Reserved_35A: Reserved.
36	RW	WO_OR	WO_CLEAR	TC_OELCC_EDGE_DELAYED_DC: Enables delaying the alignment by one fast cycle. Only used in dual mesh chiplets.
37	RW	WO_OR	WO_CLEAR	TC_OELCC_ALIGN_FLUSH_DC: Forces the alignment and odd/even toggling latch into flush state. Used for DFT only.
38	RW	WO_OR	WO_CLEAR	Reserved_38A: Reserved.
39	RW	WO_OR	WO_CLEAR	Reserved_39A: Reserved.
40:41	RW	WO_OR	WO_CLEAR	CTRL_MISC_CLKDIV_SEL_DC: Clock divider select. 00 = 1024:1 01 = 64:1 10 = 16:1 11 = 4:1
42	RW	WO_OR	WO_CLEAR	Reserved_42A: Reserved.
43	RW	WO_OR	WO_CLEAR	Reserved_43A: Reserved.
44	RW	WO_OR	WO_CLEAR	CTRL_CC_DCTEST_DC: Test enable (TE) = 1 only. Enable DCTEST.
45	RW	WO_OR	WO_CLEAR	CTRL_CC_OTP_PRGMODE_DC: TE = 1 only. OTP ROM program mode.
46	RW	WO_OR	WO_CLEAR	CTRL_CC_SSS_CALIBRATE_DC: TE = 1 only. Sensors calibration.
47	RW	WO_OR	WO_CLEAR	CTRL_CC_PIN_LBIST_DC: TE = 1 only. PIN LBIST mode. LBIST is controlled by PIN, and not by OPCG.
48	RW	WO_OR	WO_CLEAR	FREE_USAGE_48A: Free usage.
49	RW	WO_OR	WO_CLEAR	FREE_USAGE_49A: Free usage.
50	RW	WO_OR	WO_CLEAR	FREE_USAGE_50A: Free usage.
51	RW	WO_OR	WO_CLEAR	FREE_USAGE_51A: Free usage.
52	RW	WO_OR	WO_CLEAR	FREE_USAGE_52A: Free usage.
53	RW	WO_OR	WO_CLEAR	FREE_USAGE_53A: Free usage.
54	RW	WO_OR	WO_CLEAR	FREE_USAGE_54A: Free usage.
55	RW	WO_OR	WO_CLEAR	FREE_USAGE_55A: Free usage.
56	RW	WO_OR	WO_CLEAR	FREE_USAGE_56A: Free usage.
57	RW	WO_OR	WO_CLEAR	FREE_USAGE_57A: Free usage.
58	RW	WO_OR	WO_CLEAR	FREE_USAGE_58A: Free usage.
59	RW	WO_OR	WO_CLEAR	FREE_USAGE_59A: Free usage.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
60	RW	WO_OR	WO_CLEAR	FREE_USAGE_60A: Free usage.
61	RW	WO_OR	WO_CLEAR	FREE_USAGE_61A: Free usage.
62	RW	WO_OR	WO_CLEAR	FREE_USAGE_62A: Free usage.
63	RW	WO_OR	WO_CLEAR	FREE_USAGE_63A: Free usage.

Register Name	**Chiplet Control Register 1**
Mnemonic	TP.TCN2.N2.CPLT_CTRL1
Address	0000000004000001 (SCOM) 0000000004000011 (SCOM1) 0000000004000021 (SCOM2)
Description	This register contains the second set of vital chiplet controls.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_OR	WO_CLEAR	Unused_0B: Unused.
1	RW	WO_OR	WO_CLEAR	Unused_1B: Unused.
2	RW	WO_OR	WO_CLEAR	Unused_2B: Unused.
3	RW	WO_OR	WO_CLEAR	TC_VITL_REGION_FENCE: VITL fence. Protect the VITL region logic from pollution by other regions during LBIST, or when the chiplet is not initialized and running yet.
4	RW	WO_OR	WO_CLEAR	TC_PERV_REGION_FENCE: Fence for the pervasive region.
5	RW	WO_OR	WO_CLEAR	TC_REGION1_FENCE: Fence for region CXA1 to CAPP.
6	RW	WO_OR	WO_CLEAR	TC_REGION2_FENCE: Fence for region PCI Slave 0 (PCIS0) to PCI.
7	RW	WO_OR	WO_CLEAR	TC_REGION3_FENCE: Fence for region PCI Slave 1 (PCIS1) to PCI.
8	RW	WO_OR	WO_CLEAR	TC_REGION4_FENCE: Fence for region PCI Slave 2 (PCIS2) to PCI.
9	RW	WO_OR	WO_CLEAR	Unused_9B: Unused.
10	RW	WO_OR	WO_CLEAR	Unused_10B: Unused.
11	RW	WO_OR	WO_CLEAR	Unused_11B: Unused.
12	RW	WO_OR	WO_CLEAR	Unused_12B: Unused.
13	RW	WO_OR	WO_CLEAR	Unused_13B: Unused.
14	RW	WO_OR	WO_CLEAR	Unused_14B: Unused.
15	RW	WO_OR	WO_CLEAR	Reserved_15B: Reserved.
16	RW	WO_OR	WO_CLEAR	TC_UNIT_MULTICYCLE_TEST_FENCE: Fence logic that is indeterminate at any frequency.
17	RW	WO_OR	WO_CLEAR	Unused_17B: Unused.
18	RW	WO_OR	WO_CLEAR	Unused_18B: Unused.
19	RW	WO_OR	WO_CLEAR	Unused_19B: Unused.
20	RW	WO_OR	WO_CLEAR	Unused_20B: Unused.
21	RW	WO_OR	WO_CLEAR	Unused_21B: Unused.
22	RW	WO_OR	WO_CLEAR	Unused_22B: Unused.
23	RW	WO_OR	WO_CLEAR	Unused_23B: Unused.
24	RW	WO_OR	WO_CLEAR	Unused_24B: Unused.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
25	RW	WO_OR	WO_CLEAR	Unused_25B: Unused.
26	RW	WO_OR	WO_CLEAR	Unused_26B: Unused.
27	RW	WO_OR	WO_CLEAR	Unused_27B: Unused.
28	RW	WO_OR	WO_CLEAR	Unused_28B: Unused.
29	RW	WO_OR	WO_CLEAR	Unused_29B: Unused.
30	RW	WO_OR	WO_CLEAR	Unused_30B: Unused.
31	RW	WO_OR	WO_CLEAR	Unused_31B: Unused.

Register Name	Chiplet Configuration Register 0
Mnemonic	TP.TCN2.N2.CPLT_CONF0
Address	0000000004000008 (SCOM) 0000000004000018 (SCOM1) 0000000004000028 (SCOM2)
Description	This register contains the first set of vital chiplet configuration functions.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:5	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE0_SEL_DC: Probe 0 selected.
6	RW	WO_OR	WO_CLEAR	Reserved_6C: Reserved.
7	RW	WO_OR	WO_CLEAR	Reserved_7C: Reserved.
8:13	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE1_SEL_DC: Probe 1 selected.
14	RW	WO_OR	WO_CLEAR	Reserved_14C: Reserved.
15	RW	WO_OR	WO_CLEAR	Reserved_15C: Reserved.
16:21	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE2_SEL_DC: Probe 2 selected.
22	RW	WO_OR	WO_CLEAR	Reserved_22C: Reserved.
23	RW	WO_OR	WO_CLEAR	Reserved_23C: Reserved.
24:29	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE3_SEL_DC: Probe 3 selected.
30	RW	WO_OR	WO_CLEAR	Reserved_30C: Reserved.
31	RW	WO_OR	WO_CLEAR	Reserved_31C: Reserved.
32	RW	WO_OR	WO_CLEAR	CTRL_CC_OFLOW_FEH_SEL_DC: Selects an ABIST overflow or failure indication.
33	RW	WO_OR	WO_CLEAR	CTRL_CC_SCAN_PROTECT_DC: Enables scan protection and the scan collision error mechanism.
34	RW	WO_OR	WO_CLEAR	CTRL_CC_SDIS_DC_N: Disables the scan diagnostic scan path.
35	RW	WO_OR	WO_CLEAR	Reserved_TEST_CONTROL_35C: Reserved for test control.
36	RW	WO_OR	WO_CLEAR	Reserved_TEST_CONTROL_36C: Reserved for test control.
37	RW	WO_OR	WO_CLEAR	Reserved_TEST_CONTROL_37C: Reserved for test control.
38	RW	WO_OR	WO_CLEAR	Reserved_TEST_CONTROL_38C: Reserved for test control.
39	RW	WO_OR	WO_CLEAR	Reserved_TEST_CONTROL_39C: Reserved for test control.
40	RW	WO_OR	WO_CLEAR	CTRL_EPS_MASK_VITL_PCB_ERR_DC: Mask VITL PCB errors from the CC or chiplet control.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
41	RW	WO_OR	WO_CLEAR	CTRL_CC_MASK_VITL_SCAN_OPCG_ERR_DC: Mask VITL errors in the CC that are not PCB related.
42	RW	WO_OR	WO_CLEAR	Reserved_42C: Reserved.
43	RW	WO_OR	WO_CLEAR	Reserved_43C: Reserved.
44	RW	WO_OR	WO_CLEAR	FREE_USAGE_44C: Free usage.
45	RW	WO_OR	WO_CLEAR	FREE_USAGE_45C: Free usage.
46	RW	WO_OR	WO_CLEAR	FREE_USAGE_46C: Free usage.
47	RW	WO_OR	WO_CLEAR	FREE_USAGE_47C: Free usage.
48:51	RW	WO_OR	WO_CLEAR	TC_UNIT_GROUP_ID_DC: Group ID.
52:54	RW	WO_OR	WO_CLEAR	TC_UNIT_CHIP_ID_DC: Chip ID.
55	RW	WO_OR	WO_CLEAR	Reserved_ID_55C: Reserved ID.
56:60	RW	WO_OR	WO_CLEAR	TC_UNIT_SYS_ID_DC: System ID.
61	RW	WO_OR	WO_CLEAR	Reserved_ID_61C: Reserved ID.
62	RW	WO_OR	WO_CLEAR	Reserved_ID_62C: Reserved ID.
63	RW	WO_OR	WO_CLEAR	Reserved_ID_63C: Reserved ID.

Register Name	Chiplet Configuration Register 1
Mnemonic	TP.TCN2.N2.CPLT_CONF1
Address	0000000004000009 (SCOM) 0000000004000019 (SCOM1) 0000000004000029 (SCOM2)
Description	This register contains the second set of vital chiplet configuration functions.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_OR	WO_CLEAR	Unused_0D: Unused.
1	RW	WO_OR	WO_CLEAR	Unused_1D: Unused.
2	RW	WO_OR	WO_CLEAR	Unused_2D: Unused.
3	RW	WO_OR	WO_CLEAR	Unused_3D: Unused.
4	RW	WO_OR	WO_CLEAR	IOVALID_4D: Unused.
5	RW	WO_OR	WO_CLEAR	IOVALID_5D: Unused.
6	RW	WO_OR	WO_CLEAR	IOVALID_6D: Unused.
7	RW	WO_OR	WO_CLEAR	IOVALID_7D: Unused.
8	RW	WO_OR	WO_CLEAR	IOVALID_8D: Unused.
9	RW	WO_OR	WO_CLEAR	IOVALID_9D: Unused.
10	RW	WO_OR	WO_CLEAR	TC_PSI_IOVALID_DC: Enables the interface logic of this I/O.
11	RW	WO_OR	WO_CLEAR	IOVALID_11D: Unused.
12	RW	WO_OR	WO_CLEAR	FREE_USAGE_12D: Free usage.
13	RW	WO_OR	WO_CLEAR	FREE_USAGE_13D: Free usage.
14	RW	WO_OR	WO_CLEAR	FREE_USAGE_14D: Free usage.
15	RW	WO_OR	WO_CLEAR	FREE_USAGE_15D: Free usage.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
16	RW	WO_OR	WO_CLEAR	FREE_USAGE_16D: Free usage.
17	RW	WO_OR	WO_CLEAR	FREE_USAGE_17D: Free usage.
18	RW	WO_OR	WO_CLEAR	FREE_USAGE_18D: Free usage.
19	RW	WO_OR	WO_CLEAR	FREE_USAGE_19D: Free usage.
20	RW	WO_OR	WO_CLEAR	FREE_USAGE_20D: Free usage.
21	RW	WO_OR	WO_CLEAR	FREE_USAGE_21D: Free usage.
22	RW	WO_OR	WO_CLEAR	FREE_USAGE_22D: Free usage.
23	RW	WO_OR	WO_CLEAR	FREE_USAGE_23D: Free usage.
24	RW	WO_OR	WO_CLEAR	FREE_USAGE_24D: Free usage.
25	RW	WO_OR	WO_CLEAR	FREE_USAGE_25D: Free usage.
26	RW	WO_OR	WO_CLEAR	FREE_USAGE_26D: Free usage.
27	RW	WO_OR	WO_CLEAR	FREE_USAGE_27D: Free usage.
28	RW	WO_OR	WO_CLEAR	FREE_USAGE_28D: Free usage.
29	RW	WO_OR	WO_CLEAR	FREE_USAGE_29D: Free usage.
30	RW	WO_OR	WO_CLEAR	FREE_USAGE_30D: Free usage.
31	RW	WO_OR	WO_CLEAR	FREE_USAGE_31D: Free usage.

Register Name	Chiplet Status Register
Mnemonic	TP.TCN2.N2.CPLT_STAT0
Address	0000000004000100 (SCOM)
Description	An interrupt is sent out on a bit change if not masked by the Chiplet Mask Register. A mask only masks the interrupt, not the status register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SRAM_ABIST_DONE_DC: SRAM and eDRAM ABIST done.
1	ROX	DRAM_ABIST_DONE_DC: Unused in POWER9 DD1.
2	ROX	Reserved_2E: Reserved.
3	ROX	Reserved_3E: Reserved.
4	ROX	TC_DIAG_PORT0_OUT: Diagnostic output port.
5	ROX	TC_DIAG_PORT1_OUT: Diagnostic output port.
6	ROX	Reserved_6E: Reserved.
7	ROX	PLL_DESTOUT: Reserved.
8	ROX	CC_CTRL_OPCG_DONE_DC: OPCG done. Used for LBIST, ABIST, or other OPCG runs.
9	ROX	CC_CTRL_CHIPLET_IS_ALIGNED_DC: Indicates that the chiplet is aligned.
10	ROX	FREE_USAGE_10E: Free usage.
11	ROX	FREE_USAGE_11E: Free usage.
12	ROX	FREE_USAGE_12E: Free usage.
13	ROX	FREE_USAGE_13E: Free usage.
14	ROX	FREE_USAGE_14E: Free usage.
15	ROX	FREE_USAGE_15E: Free usage.

Bits	SCOM	Field Mnemonic: Description
16	ROX	FREE_USAGE_16E: Free usage.
17	ROX	FREE_USAGE_17E: Free usage.
18	ROX	FREE_USAGE_18E: Free usage.
19	ROX	FREE_USAGE_19E: Free usage.
20	ROX	FREE_USAGE_20E: Free usage.
21	ROX	FREE_USAGE_21E: Free usage.
22	ROX	FREE_USAGE_22E: Free usage.
23	ROX	FREE_USAGE_23E: Free usage.

Register Name	**Chiplet Mask Register**
Mnemonic	TP.TCN2.N2.CPLT_MASK0
Address	0000000004000101 (SCOM)
Description	This register masks an interrupt when a bit changes in the Chiplet Status Register. It does not mask the status itself.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CPLTMASK0: This field provides bitwise masking of the chiplet status register.

Register Name	**CTRL Protect Mode Register**
Mnemonic	TP.TCN2.N2.CTRL_PROTECT_MODE_REG
Address	00000000040003FE (SCOM)
Description	This register enables read and write protection.

Bits	SCOM	Field Mnemonic: Description
0	RW	CTRL_READ_PROTECT_ENABLE: This bit enables read protection.
1	RW	CTRL_WRITE_PROTECT_ENABLE: This bit enables write protection.

Register Name	**Atomic Lock Register**
Mnemonic	TP.TCN2.N2.CTRL_ATOMIC_LOCK_REG
Address	00000000040003FF (SCOM)
Description	This register enables an atomic lock and an atomic lock counter.

Bits	SCOM	Field Mnemonic: Description
0	RW	CTRL_ATOMIC_LOCK_ENABLE: This bit enables an atomic lock.
1:4	ROX	CTRL_ATOMIC_ID: This field contains the atomic ID.
5:7	RO	constant = 0b000
8:15	ROX	CTRL_ATOMIC_ACTIVITY: This field is an atomic lock counter.

Register Name	PSCOMLE Mode Register
Mnemonic	TP.TCN2.N2.EPS.PSC.PSC.PSCOM_MODE_REG
Address	0000000004010000 (SCOM)
Description	This is the parallel-to-serial communication light edition (PSCOMLE) mode register.

Bits	SCOM	Field Mnemonic: Description
0	RW	ABORT_ON_PCB_ADDR_PARITY_ERROR: Abort on a PCB address parity error.
1	RW	ABORT_ON_PCB_WDATA_PARITY_ERROR: Abort on a PCB write data parity error.
2	RW	UNUSED_2B: Unused.
3	RW	ABORT_ON_DL_RETURN_WDATA_PARITY_ERROR: Abort on a DL return write data parity error.
4	RW	WATCHDOG_ENABLE: Watchdog enable.
5:6	RW	SCOM_HANG_LIMIT: 0b11 = 256 0b10 = 512 0b01 = 768 0b00 = 1023
7	RW	FORCE_ALL_RINGS: This bit is set to a logical 1 if all rings should be enabled independent of the ring address.
8	RW	FSM_SELFRESET_ON_STATEVEC_PARITYERROR_ENABLE: FSM self reset on statevec parity error enable.
9:11	RW	Reserved_PSCOM_MODE_LT: Reserved.

Register Name	PSCOMLE Error Register
Mnemonic	TP.TCN2.N2.EPS.PSC.PSC.PSCOM_STATUS_ERROR_REG
Address	0000000004010001 (SCOM)
Description	This is the parallel-to-serial communication light edition (PSCOMLE) error register.

Bits	SCOM	Field Mnemonic: Description
0	RWX	ACCUMULATED_PCB_WDATA_PARITY_ERROR: Accumulated PCB write data parity error.
1	RWX	ACCUMULATED_PCB_ADDRESS_PARITY_ERROR: Accumulated PCB address parity error.
2	RWX	ACCUMULATED_DL_RETURN_WDATA_PARITY_ERROR: Accumulated DL return write data parity error.
3	RWX	ACCUMULATED_DL_RETURN_P0_ERROR: Accumulated DL return P0 error.
4	RWX	ACCUMULATED_UL_RDATA_PARITY_ERROR: Accumulated UL read data parity error.
5	RWX	ACCUMULATED_UL_P0_ERROR: Accumulated UL P0 error.
6	RWX	ACCUMULATED_PARITY_ERROR_ON_INTERFACE_MACHINE: Accumulated parity error on the interface machine.
7	RWX	ACCUMULATED_PARITY_ERROR_ON_P2S_MACHINE: Accumulated parity error on the parallel-to-serial (p2S) machine.
8	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Accumulated time out while waiting for ULCCH.
9	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Accumulated time out while waiting for DLDCH_return.
10	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Accumulated time out while waiting for ULDCH.

Bits	SCOM	Field Mnemonic: Description
11	RWX	ACCUMULATED_PSCOM_PARALLEL_WRITE_NVLD: Accumulated PSCOM parallel write NVLD.
12	RWX	ACCUMULATED_PSCOM_PARALLEL_READ_NVLD: Accumulated PSCOM parallel read NVLD.
13	RWX	ACCUMULATED_PSCOM_PARALLEL_ADDR_INVALID: Accumulated PSCOM parallel address is invalid.
14	RWX	ACCUMULATED_PCB_COMMAND_PARITY_ERROR: Accumulated PCB command parity error.
15	RWX	ACCUMULATED_GENERAL_TIMEOUT: Accumulated general timeout.
16	RWX	ACCUMULATED_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Accumulated satellite acknowledge access violation.
17	RWX	ACCUMULATED_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Accumulated satellite acknowledge invalid_register.
18	RWX	TRAPPED_PCB_WDATA_PARITY_ERROR: Trapped PCB write data parity error.
19	RWX	TRAPPED_PCB_ADDRESS_PARITY_ERROR: Trapped PCB address parity error.
20	RWX	TRAPPED_DL_RETURN_WDATA_PARITY_ERROR: Trapped DL return write data parity error.
21	RWX	TRAPPED_DL_RETURN_P0_ERROR: Trapped download return P0 error.
22	RWX	TRAPPED_UL_RDATA_PARITY_ERROR: Trapped UL read data parity error.
23	RWX	TRAPPED_UL_P0_ERROR: Trapped UL P0 error.
24	RWX	TRAPPED_PARITY_ERROR_ON_INTERFACE_MACHINE: Trapped parity error on interface machine.
25	RWX	TRAPPED_PARITY_ERROR_ON_P2S_MACHINE: Trapped parity error on p2s machine.
26	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Trapped timeout while waiting for ULCCH.
27	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Trapped timeout while waiting for DLDCH return.
28	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Trapped timeout while waiting for ULDCH.
29	RWX	TRAPPED_PSCOM_PARALLEL_WRITE_NVLD: Trapped PSCOM parallel write NVLD .
30	RWX	TRAPPED_PSCOM_PARALLEL_READ_NVLD: Trapped PSCOM parallel read NVLD .
31	RWX	TRAPPED_PSCOM_PARALLEL_ADDR_INVALID: Trapped PSCOM parallel address is invalid.
32	RWX	TRAPPED_PCB_COMMAND_PARITY_ERROR: Trapped PCB command parity error.
33	RWX	TRAPPED_GENERAL_TIMEOUT: Trapped general timeout.
34	RWX	TRAPPED_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Trapped satellite acknowledge access violation.
35	RWX	TRAPPED_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Trapped satellite acknowledge invalid register.

Register Name	PSCOMLE Error Mask Register
Mnemonic	TP.TCN2.N2.EPS.PSC.PSC.PSCOM_ERROR_MASK
Address	0000000004010002 (SCOM)
Description	This is the parallel-to-serial communication light edition (PSCOMLE) error mask register.

Bits	SCOM	Field Mnemonic: Description
0	RW	MASK_PCB_WDATA_PARITY_ERROR: Mask PCB write data parity error.
1	RW	MASK_PCB_ADDRESS_PARITY_ERROR: Mask PCB address parity error.
2	RW	MASK_DL_RETURN_WDATA_PARITY_ERROR: Mask DL return write data parity error.
3	RW	MASK_DL_RETURN_P0_ERROR: Mask DL return P0 error.

Bits	SCOM	Field Mnemonic: Description
4	RW	MASK_UL_RDATA_PARITY_ERROR: Mask UL read data parity error.
5	RW	MASK_UL_P0_ERROR: Mask UL P0 error.
6	RW	MASK_PARITY_ERROR_ON_INTERFACE_MACHINE: Mask parity error on the interface machine.
7	RW	MASK_PARITY_ERROR_ON_P2S_MACHINE: Mask parity error on the parallel-to-serial (p2s) machine.
8	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Mask timeout while waiting for ULCCH.
9	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Mask timeout while waiting for DLDCH return.
10	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Mask timeout while waiting for ULDCH.
11	RW	MASK_PSCOM_PARALLEL_WRITE_NVLD: Mask PSCOM parallel write NLVD.
12	RW	MASK_PSCOM_PARALLEL_READ_NVLD: Mask PSCOM parallel read NLVD.
13	RW	MASK_PSCOM_PARALLEL_ADDR_INVALID: Mask PSCOM parallel address invalid.
14	RW	MASK_PCB_COMMAND_PARITY_ERROR: Mask PCB command parity error.
15	RW	MASK_GENERAL_TIMEOUT: Mask general timeout.
16	RW	MASK_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Mask satellite acknowledge access violation.
17	RW	MASK_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Mask satellite acknowledge invalid register.

Register Name	PSCOMLE Address Trap Register
Mnemonic	TP.TCN2.N2.EPS.PSC.PSC.ADDR_TRAP_REG
Address	0000000004010003 (SCOM)
Description	This is the parallel-to-serial communication light edition (PSCOMLE) address trap register.

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	PCB_ADDRESS_OF_LAST_TRANSACTION_WITH_ERROR: This field contains the PCB address of the last transaction with an error.
16	ROX	PCB_READ_NOTWRITE_OF_LAST_TRANSACTION_WITH_ERROR: PCB read, not write of the last transaction with an error.
17	ROX	Reserved_ADDR_LAST_TRAP_LT: Reserved.
18:30	ROX	SERIAL2PARALLEL_STATE_MACHINE_AT_TIME_OF_ERROR: Serial-to-parallel state machine at the time of the error.
31	ROX	SATELLITE_ACKNOWLEDGE_BIT_RETURN_PARITY: Satellite acknowledge bit. This bit is set to 1 if no parity error is detected in the satellite number or acknowledgment bits. This applies to the parity of the satellite response excluding read data.
32	ROX	SATELLITE_ACKNOWLEDGE_BIT_WRITE_PARITY_ERROR: This bit is set if a write parity error is detected by the satellite.
33	ROX	SATELLITE_ACKNOWLEDGE_BIT_ACCESS_VIOLATION: This bit is set if an invalid read or write access is detected by the satellite.
34	ROX	SATELLITE_ACKNOWLEDGE_BIT_INVALID_REGISTER: This bit is set if an invalid register address is detected by the satellite.

Register Name	Ring Lock Enable Register
Mnemonic	TP.TCN2.N2.EPS.PSC.PSC.WRITE_PROTECT_ENABLE_REG
Address	0000000004010005 (SCOM)
Description	This register enables the ring lock.

Bits	SCOM	Field Mnemonic: Description
0	RW	ENABLE_RING_LOCKING: General enable of ring locking upon a write to a specific ring.
1	RW	Reserved_RING_LOCKING: Reserved.

Register Name	Write Protection Rings Register
Mnemonic	TP.TCN2.N2.EPS.PSC.PSC.WRITE_PROTECT_RINGS_REG
Address	0000000004010006 (SCOM)
Description	This register writes ring-protect bit maps.

Bits	SCOM	Field Mnemonic: Description
0:15	RW	WRITE_PROTECT_RINGS: Writes a protect bit map for each ring.

Register Name	Atomic Lock Mask Register
Mnemonic	TP.TCN2.N2.EPS.PSC.PSC.ATOMIC_LOCK_MASK_LATCH_REG
Address	0000000004010007 (SCOM)
Description	This register provides a bit mask for atomic locking.

Bits	SCOM	Field Mnemonic: Description
0:15	RW	ATOMIC_LOCK_MASK: This field provides a bit mask for atomic locking on a ring-by-ring basis.

Register Name	Ring Fence Enable Mask Register
Mnemonic	TP.TCN2.N2.EPS.PSC.PSC.RING_FENCE_MASK_LATCH_REG
Address	0000000004010008 (SCOM)
Description	This register provides a bit mask for ring fencing.

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1:15	RW	RING_FENCE_ENABLE_MASK: This field provides a bit mask for ring fencing on a ring-by-ring basis.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN2.N2.TRA0.TR0.TRACE_HI_DATA_REG
Address	0000000004010400 (SCOM)
Description	This register provides the high trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: This field contains trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN2.N2.TRA0.TR0.TRACE_LO_DATA_REG
Address	0000000004010401 (SCOM)
Description	This register provides the low trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-tun indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to the last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN2.N2.TRA0.TR0.TRACE_TRCTRL_CONFIG
Address	0000000004010402 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store-on-trigger mode.
1	RW	WRITE_ON_RUN_MODE: This bit enables an unconditional forced write when a trace is run.
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.
10	RW	BANK_MODE: This bit enables bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B: Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: This field contains spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN2.N2.TRA0.TR0.TRACE_TRDATA_CONFIG_0
Address	0000000004010403 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: This field contains a trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN2.N2.TRA0.TR0.TRACE_TRDATA_CONFIG_1
Address	0000000004010404 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: This field contains a trace data compare mask for bits 64 - 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN2.N2.TRA0.TR0.TRACE_TRDATA_CONFIG_2
Address	0000000004010405 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match pattern A 0 – 23. Pattern A is used to perform a data compare on the trace data. When the data compare matches, a trigger is generated that can be used for a "store on trigger" function or as a trace trigger to the debug macro.
24:47	RW	PATTERNB: Pattern match pattern B 0 – 23. Pattern B is used to perform a data compare on the trace data. When the data compare matches, a trigger is generated that can be used for a "store on trigger" function or as a trace trigger to the debug macro.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN2.N2.TRA0.TR0.TRACE_TRDATA_CONFIG_3
Address	0000000004010406 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match pattern C 0 – 23. Pattern C is used to perform a data compare on the trace data. When the data compare matches, a trigger is generated that can be used for a "store on trigger" function or as a trace trigger to the debug macro.
24:47	RW	PATTERND: Pattern match pattern D 0 – 23. Pattern D is used to perform a data compare on the trace data. When the data compare matches, a trigger is generated that can be used for a "store on trigger" function or as a trace trigger to the debug macro.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN2.N2.TRA0.TR0.TRACE_TRDATA_CONFIG_4
Address	0000000004010407 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A. When set to '1', masks off bits from Pattern A. This field is used to mask off individual bits of Pattern A so that they are "don't care" for the data compare match function.
24:47	RW	MASKB: Mask B. When set to '1', masks off bits from Pattern B. This field is used to mask off individual bits of Pattern B so that they are "don't care" for the data compare match function.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN2.N2.TRA0.TR0.TRACE_TRDATA_CONFIG_5
Address	0000000004010408 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C. When set to '1', masks off bits from Pattern C. This field is used to mask off individual bits of Pattern C so that they are "don't care" for the data compare match function.
24:47	RW	MASKD: Mask D. When set to '1', masks off bits from Pattern D. This field is used to mask off individual bits of Pattern D so that they are "don't care" for the data compare match function.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN2.N2.TRA0.TR0.TRACE_TRDATA_CONFIG_9
Address	0000000004010409 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable trace data compression (store data every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits(00:23) 0b01 = Debug bus bits(24:47) 0b10 = Debug bus bits(48:71) 0b11 = Debug bus bits(72:87) | 8 zeroes
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits(00:23) 0b01 = Debug bus bits(24:47) 0b10 = Debug bus bits(48:71) 0b11 = Debug bus bits(72:87) | 8 zeroes
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits(00:23) 0b01 = Debug bus bits(24:47) 0b10 = Debug bus bits(48:71) 0b11 = Debug bus bits(72:87) | 8 zeroes
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits(00:23) 0b01 = Debug bus bits(24:47) 0b10 = Debug bus bits(48:71) 0b11 = Debug bus bits(72:87) | 8 zeroes

Bits	SCOM	Field Mnemonic: Description
10:13	RW	TRIG0_OR_MASK: Note: The OR of all selected MATCHes is ORed with result of TRIG0_AND: 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes
14:17	RW	TRIG0_AND_MASK: Note: The AND of the following selected MATCHes is ORed with result of TRIG0_OR: 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0
18:21	RW	TRIG1_OR_MASK: Note: The OR of all selected MATCHes is ORed with result of TRIG1_AND: 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1
22:25	RW	TRIG1_AND_MASK: Note: The AND of following selected MATCHes is ORed with result of TRIG1_OR: 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a TRIGger: 0b1000 inverts MATCHA 0b0100 inverts MATCHB 0b0010 inverts MATCHC 0b0001 inverts MATCHD
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved field.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCN2.N2.TRA0.TR1.TRACE_HI_DATA_REG
Address	0000000004010440 (SCOM)
Description	This register provides the high trace array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: Trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCN2.N2.TRA0.TR1.TRACE_LO_DATA_REG
Address	0000000004010441 (SCOM)
Description	This register provides the low trace array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCN2.N2.TRA0.TR1.TRACE_TRCTRL_CONFIG
Address	0000000004010442 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store-on-trigger mode.
1	RW	WRITE_ON_RUN_MODE: This bit enables an unconditional forced write when a trace is run.
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.
10	RW	BANK_MODE: Enable bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace date pipeline are always clocked.
13	RW	UNUSED_13B: Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: This field contains spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCN2.N2.TRA0.TR1.TRACE_TRDATA_CONFIG_0
Address	0000000004010443 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: This field contains a trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCN2.N2.TRA0.TR1.TRACE_TRDATA_CONFIG_1
Address	0000000004010444 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: This field contains a trace data compare mask for bits 64 - 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCN2.N2.TRA0.TR1.TRACE_TRDATA_CONFIG_2
Address	0000000004010445 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match pattern A 0 – 23. Pattern A is used to perform a data compare on the trace data. When the data compare matches, a trigger is generated that can be used for a "store on trigger" function or as a trace trigger to the debug macro.
24:47	RW	PATTERNB: Pattern match pattern B 0 – 23. Pattern B is used to perform a data compare on the trace data. When the data compare matches, a trigger is generated that can be used for a "store on trigger" function or as a trace trigger to the debug macro.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCN2.N2.TRA0.TR1.TRACE_TRDATA_CONFIG_3
Address	0000000004010446 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match pattern C 0 – 23. Pattern C is used to perform a data compare on the trace data. When the data compare matches, a trigger is generated that can be used for a "store on trigger" function or as a trace trigger to the debug macro.
24:47	RW	PATTERND: Pattern match pattern D 0 – 23. Pattern D is used to perform a data compare on the trace data. When the data compare matches, a trigger is generated that can be used for a "store on trigger" function or as a trace trigger to the debug macro.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCN2.N2.TRA0.TR1.TRACE_TRDATA_CONFIG_4
Address	0000000004010447 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A. When set to '1', masks off bits from Pattern A. This field is used to mask off individual bits of Pattern A so that they are "don't care" for the data compare match function.
24:47	RW	MASKB: Mask B. When set to '1', masks off bits from Pattern B. This field is used to mask off individual bits of Pattern B so that they are "don't care" for the data compare match function.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCN2.N2.TRA0.TR1.TRACE_TRDATA_CONFIG_5
Address	0000000004010448 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C. When set to '1', masks off bits from Pattern C. This field is used to mask off individual bits of Pattern C so that they are "don't care" for the data compare match function.
24:47	RW	MASKD: Mask D. When set to '1', masks off bits from Pattern D. This field is used to mask off individual bits of Pattern D so that they are "don't care" for the data compare match function.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCN2.N2.TRA0.TR1.TRACE_TRDATA_CONFIG_9
Address	0000000004010449 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable trace data compression (store data every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits(00:23) 0b01 = Debug bus bits(24:47) 0b10 = Debug bus bits(48:71) 0b11 = Debug bus bits(72:87) | 8 zeroes
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits(00:23) 0b01 = Debug bus bits(24:47) 0b10 = Debug bus bits(48:71) 0b11 = Debug bus bits(72:87) | 8 zeroes
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits(00:23) 0b01 = Debug bus bits(24:47) 0b10 = Debug bus bits(48:71) 0b11 = Debug bus bits(72:87) | 8 zeroes
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits(00:23) 0b01 = Debug bus bits(24:47) 0b10 = Debug bus bits(48:71) 0b11 = Debug bus bits(72:87) | 8 zeroes
10:13	RW	TRIG0_OR_MASK: The OR of all selected MATCHes is ORed with result of TRIG0_AND: 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes

Bits	SCOM	Field Mnemonic: Description
14:17	RW	TRIG0_AND_MASK: The AND of following selected MATCHes is ORed with result of TRIG0_OR: 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0
18:21	RW	TRIG1_OR_MASK: The OR of all selected MATCHes is ORed with result of TRIG1_AND: 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1
22:25	RW	TRIG1_AND_MASK: The AND of following selected MATCHes is ORed with result of TRIG1_OR: 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a TRIGger: 0b1000 inverts MATCHA 0b0100 inverts MATCHB 0b0010 inverts MATCHC 0b0001 inverts MATCHD
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. Must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved field.

Register Name	**Debug Mode Register**
Mnemonic	TP.TCN2.N2.EPS.DBG.DBG_MODE_REG
Address	00000000040107C0 (SCOM)
Description	This is debug macro configuration register 0 for the configuration component.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	GLB_BRCST_MODE: Global broadcast mode (0 - 2): 100 = dbg_trace_run and dbg_trace_freeze 101 = pc_tcdbg_trace_run_fncd and dbg_trace_freeze 110 = dbg_triggers_out(0 to 1) 111 = pc_tcdbg_triggers(0 to 1) (from core)
3:5	RW	TRACE_SEL_MODE: Select source for trace_run and bank: 001 = core trace run and bank 010 = tp broadcast run and 0 011 = tc_dbg_inter_brcst latched 100 = tc_dbg_dbg_sync_brcst_rcv else: dbg_trace_run and dbg_trace_bank
6:7	RW	TRIG_SEL_MODE: Select source for tcdbg_trigger(0): 10 = global broadcast 11 = pc_tcdbg_trigger (from core) else: dbg_triggers_out(0:1)

Bits	SCOM	Field Mnemonic: Description
8	RW	STOP_ON_XSTOP_SELECTION: This bit enables a trace stop on a checkstop.
9	RW	STOP_ON_RECOV_ERR_SELECTION: This bit enables a trace stop on a recoverable error.
10	RW	STOP_ON_SPATTN_SELECTION: This bit enables a trace stop on special attention.
11	RW	FREEZE_SEL_MODE: Select freeze source: 0 = local debug freeze. 1 = via broadcast: tp_tcdbg_glb_brcst(1)
12:13	RW	SYNC_BRCST_MODE: Originally used for synchronous broadcast mode; currently unused because obsolete. See TRACE_SEL_MODE.
14	RO	constant = 0b0 See SYNC_BRCST_MODE.
15	RO	constant = 0b0
16:31	ROX	DBG_STATUS: Read-only debug status bits.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	Debug Instance 1 Condition 1 Register
Mnemonic	TP.TCN2.N2.EPS.DBG.DBG_INST1_COND_REG_1
Address	00000000040107C1 (SCOM)
Description	This is debug macro configuration register 1 for front-end component 1.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	INST1_COND1_SEL_A: Multiplexer for cond1_trig_in(0): 000 select constant 0 001 select constant 1 -- CONDITION FEEDBACK -- 002 select inst1_dbg_cond1 003 select inst1_dbg_cond2 004 select inst1_dbg_cond3 005 select inst1_dbg_cond2timeout 006 select inst2_dbg_cond1 007 select inst2_dbg_cond2 008 select inst2_dbg_cond3 009 select inst2_dbg_cond2timeout 010 select inst3_dbg_cond1 - Unused, tied down 011 select inst3_dbg_cond2 - Unused, tied down 012 select inst3_dbg_cond3 - Unused, tied down 013 select inst3_dbg_cond2timeout - Unused, tied down 014 select inst4_dbg_cond1 - Unused, tied down 015 select inst4_dbg_cond2 - Unused, tied down 016 select inst4_dbg_cond3 - Unused, tied down 017 select inst4_dbg_cond2timeout - Unused, tied down 018 select inst1_dbg_trig_sp 019 select inst2_dbg_trig_sp 020 select inst3_dbg_trig_sp - Unused, tied down 021 select inst4_dbg_trig_sp - Unused, tied down 022 select tctrc_tcdbg_trigger_a(0) 023 select tctrc_tcdbg_trigger_b(0) 024 select tctrc_tcdbg_trigger_a(0) and tctrc_tcdbg_trigger_b(0) 025 select tctrc_tcdbg_trigger_a(1) 026 select tctrc_tcdbg_trigger_b(1) 027 select tctrc_tcdbg_trigger_a(1) and tctrc_tcdbg_trigger_b(1) 028 select tctrc_tcdbg_trigger_a(2) 029 select tctrc_tcdbg_trigger_b(2) 030 select tctrc_tcdbg_trigger_a(2) and tctrc_tcdbg_trigger_b(2) 031 select tctrc_tcdbg_trigger_a(3) 032 select tctrc_tcdbg_trigger_b(3) 033 select tctrc_tcdbg_trigger_a(3) and tctrc_tcdbg_trigger_b(3) 034 select tctrc_tcdbg_trigger_a(4) 035 select tctrc_tcdbg_trigger_b(4) 036 select tctrc_tcdbg_trigger_a(4) and tctrc_tcdbg_trigger_b(4) 037 select tctrc_tcdbg_trigger_a(5) 038 select tctrc_tcdbg_trigger_b(5) 039 select tctrc_tcdbg_trigger_a(5) and tctrc_tcdbg_trigger_b(5) 040 select tctrc_tcdbg_trigger_a(6) 041 select tctrc_tcdbg_trigger_b(6) 042 select tctrc_tcdbg_trigger_a(6) and tctrc_tcdbg_trigger_b(6) 043 select tctrc_tcdbg_trigger_a(7) 044 select tctrc_tcdbg_trigger_b(7) 045 select tctrc_tcdbg_trigger_a(7) and tctrc_tcdbg_trigger_b(7) 046 select tctrc_tcdbg_trigger_a(8). 047 select tctrc_tcdbg_trigger_b(8). 048 select tctrc_tcdbg_trigger_a(8) and tctrc_tcdbg_trigger_b(8) 049 select tctrc_tcdbg_trigger_a(9) 050 select tctrc_tcdbg_trigger_b(9) 051 select tctrc_tcdbg_trigger_a(9) and tctrc_tcdbg_trigger_b(9) 052 select tctrc_tcdbg_trigger_a(10) 053 select tctrc_tcdbg_trigger_b(10) 054 select tctrc_tcdbg_trigger_a(10) and tctrc_tcdbg_trigger_b(10) 055 select tctrc_tcdbg_trigger_a(11) 056 select tctrc_tcdbg_trigger_b(11) 057 select tctrc_tcdbg_trigger_a(11) and tctrc_tcdbg_trigger_b(11) 058 select tctrc_tcdbg_trigger_a(12) 059 select tctrc_tcdbg_trigger_b(12)

Bits	SCOM	Field Mnemonic: Description
8:15	RW	INST1_COND1_SEL_B: Multiplexer for cond1_trig_in(1). Selection as cond1_trig_in(0).
16:23	RW	INST1_COND2_SEL_A: Multiplexer for cond2_trig_in(0). Selection as cond1_trig_in(0).
24:31	RW	INST1_COND2_SEL_B: Multiplexer for cond2_trig_in(1). Selection as cond1_trig_in(0).
32	RW	INST1_C1_INAROW_MODE: Counter 1 in-a-row mode for front-end instance (or component) 1.
33	RW	INST1_AND_TRIGGER_MODE1: Front-end instance 1 and trigger mode condition 1.
34	RW	INST1_NOT_TRIGGER_MODE1: Front-end instance 1 inverted trigger mode condition 1.
35	RW	INST1_EDGE_TRIGGER_MODE1: Front-end instance 1 edge trigger mode condition 1.
36:38	RWX	INST1_Unused_1: Unused.
39	RW	INST1_C2_INAROW_MODE: Counter 2 in-a-row mode for front-end instance (or component) 1.
40	RW	INST1_AND_TRIGGER_MODE2: Front-end instance 1 and trigger mode 2.
41	RW	INST1_NOT_TRIGGER_MODE2: Front-end instance 1 inverted (not) trigger.
42	RW	INST1_EDGE_TRIGGER_MODE2: Front-end instance 1 edge trigger.

18	RW	BANK_ON_RUNN_MATCH: Bank switch on run-N match.
19	RW	FORCE_TEST_MODE: Force the run-N condition to be true.
20	RW	ACCUM_HIST_MODE: Accumulate history mode; do not clear history mode when trace run is active.
21	RW	FRZ_COUNT_ON_FRZ: Freeze condition counters on trace freeze.

Register Name	**CXA FIR Register**
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_SCOMFIR.FIR_REG
Address	0000000004010800 (SCOM) 0000000004010801 (SCOM1) 0000000004010802 (SCOM2)
Description	This is the local FIR register for the CAPP.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	BAR_PE: Informational PE. Generic bucket for errors that are informational.
1	RWX	WOX_AND	WOX_OR	REGISTER_PE: System checkstop PE. Generic bucket for errors that are system checkstop.
2	RWX	WOX_AND	WOX_OR	MASTER_ARRAY_CE: Correctable error on the master array; includes micro-operation (uOP) and combined response (CRESP) arrays.
3	RWX	WOX_AND	WOX_OR	MASTER_ARRAY_UE: Uncorrectable error on the master array, includes uOP and CRESP arrays.
4	RWX	WOX_AND	WOX_OR	TIMER_EXPIRED_RECOV_ERROR: Precise directory epoch timeout. Coarse directory epoch timeout. rtagPool epoxh data hang timeout. Recovery sequencer hang detection.
5	RWX	WOX_AND	WOX_OR	TIMER_EXPIRED_XSTOP_ERROR: Recovery sequencer hang detection.
6	RWX	WOX_AND	WOX_OR	PSL_CMD_UE: The XPT detected an uncorrectable error on the processor bus data that is determined to be a PSL command. The PSL command does not propagate past XPT.
7	RWX	WOX_AND	WOX_OR	PSL_CMD_SUE: XPT detected special uncorrectable error on processor bus data determined to be a PSL command. The PSL command does not propagate past XPT.
8	RWX	WOX_AND	WOX_OR	SNOOP_ARRAY_CE: Correctable error on the snooper array. Includes the precise directory, coarse directory, and uOP.
9	RWX	WOX_AND	WOX_OR	SNOOP_ARRAY_UE: Uncorrectable error on the snooper array. Includes the precise directory, coarse directory, and uOP.
10	RWX	WOX_AND	WOX_OR	RECOVERY_FAILED: CAPP recovery failed.
11	RWX	WOX_AND	WOX_OR	ILLEGAL_LPC_BAR_ACCESS: Illegal LPC BAR access. An error was detected when a snooper or master write operation attempted to access directories in LPC-only mode or when the operation hits the LPC BAR region in LPC-disjoint mode. Also fires if a directory hit is found on a read operation within the LPC BAR range.
12	RWX	WOX_AND	WOX_OR	XPT_RECOVERABLE_ERROR: Recoverable errors detected in transport.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
13	RWX	WOX_AND	WOX_OR	MASTER_RECOVERABLE_ERROR: Recoverable errors detected in the master.
14	RWX	WOX_AND	WOX_OR	SNOOPER_RECOVERABLE_ERROR: Spare FIR bits allocated for future use.
15	RWX	WOX_AND	WOX_OR	SECURE_SCOM_ERROR: Error detected in the secure SCOM satellite.
16	RWX	WOX_AND	WOX_OR	MASTER_SYS_XSTOP_ERROR: System checkstop errors detected in the master (invalid state, control checker).
17	RWX	WOX_AND	WOX_OR	SNOOPER_SYS_XSTOP_ERROR: System checkstop errors detected in the snooper (invalid state, control checker).
18	RWX	WOX_AND	WOX_OR	XPT_SYS_XSTOP_ERROR: System checkstop errors detected in transport (invalid state, control checker).
19	RWX	WOX_AND	WOX_OR	MUOP_ERROR_1: Master uOP FIR 1.
20	RWX	WOX_AND	WOX_OR	MUOP_ERROR_2: Master uOP FIR 2.
21	RWX	WOX_AND	WOX_OR	MUOP_ERROR_3: Master uOP FIR 3.
22	RWX	WOX_AND	WOX_OR	SUOP_ERROR_1: Snooper uOP FIR 1.
23	RWX	WOX_AND	WOX_OR	SUOP_ERROR_2: Snooper uOP FIR 2.
24	RWX	WOX_AND	WOX_OR	SUOP_ERROR_3: Snooper uOP FIR 3.
25	RWX	WOX_AND	WOX_OR	POWERBUS_MISC_ERROR: Miscellaneous informational processor bus errors including unsolicited processor bus data and unsolicited CRESP.
26	RWX	WOX_AND	WOX_OR	POWERBUS_INTERFACE_PE: Parity error on power bus interface (address/aTag/tTaag/rTag APC, SNP TLBI).
27	RWX	WOX_AND	WOX_OR	POWERBUS_DATA_HANG_ERROR: Any processor bus data hang poll error.
28	RWX	WOX_AND	WOX_OR	POWERBUS_HANG_ERROR: Any processor bus command hang error (domestic address range).
29	RWX	WOX_AND	WOX_OR	LD_CLASS_CMD_ADDR_ERR: Processor bus address error detected by the APC on a load-class command.
30	RWX	WOX_AND	WOX_OR	ST_CLASS_CMD_ADDR_ERR: Processor bus address error detected by the APC on a store-class command.
31	RWX	WOX_AND	WOX_OR	PHB_LINK_DOWN: The PHB0 or PHB1 interface asserted link down.
32	RWX	WOX_AND	WOX_OR	LD_CLASS_CMD_FOREIGN_LINK_FAIL: The APC received ack_dead or ack_ed_dead from the foreign interface on a load-class command.
33	RWX	WOX_AND	WOX_OR	FOREIGN_LINK_HANG_ERROR: Any processor bus command hang error (foreign address range).
34	RWX	WOX_AND	WOX_OR	XPT_POWERBUS_CE: A CE on data received from the processor bus and destined for either the XPT data array (and back to the processor bus) or a PSL command or link delay response packet.
35	RWX	WOX_AND	WOX_OR	XPT_POWERBUS_UE: A UE on data received from the processor bus and destined for the XPT data array (and back to the processor bus) or a link delay response packet.
36	RWX	WOX_AND	WOX_OR	XPT_POWERBUS_SUE: An SUE on data received from the processor bus and destined for the XPT data array (and back to the processor bus) or a link delay response packet.
37	RWX	WOX_AND	WOX_OR	TLBI_TIMEOUT: TLBI timeout error. TLBI needs a re-IPL to recover.
38	RWX	WOX_AND	WOX_OR	TLBI_SOT_ERR: Illegal SOT operation detected in P8BC mode.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
39	RWX	WOX_AND	WOX_OR	TLBI_BAD_OP_ERR: TLBI bad operation error. TLBI needs a re-IPL to recover.
40	RWX	WOX_AND	WOX_OR	TLBI_SEQ_NUM_PARITY_ERR: Parity error detected on the TLBI sequence number.
41	RWX	WOX_AND	WOX_OR	ST_CLASS_CMD_FOREIGN_LINK_FAIL: The APC received ack_dead or ack_ed_dead from the foreign interface on a store-class command.
42	RWX	WOX_AND	WOX_OR	TIME_BASE_ERR: An error occurred with the timebase. This is an indication that the timebase value can no longer be assumed to be correct.
43	RWX	WOX_AND	WOX_OR	TRANSPORT_INFORMATIONAL_ERR: Transport informational error.
44	RWX	WOX_AND	WOX_OR	APC_ARRAY_CMD_CE_ERPT: A CE on the PSL command queue array in the APC.
45	RWX	WOX_AND	WOX_OR	APC_ARRAY_CMD_UE_ERPT: A UE on the PSL command queue array in the APC.
46	RWX	WOX_AND	WOX_OR	PSL_CREDIT_TIMEOUT_ERR: PSL credit timeout error.
47	RWX	WOX_AND	WOX_OR	SPARE_2: Spare FIR bits allocated for future use.
48	RWX	WOX_AND	WOX_OR	HYPERVISOR: Hypervisor.
49	RWX	WOX_AND	WOX_OR	SPARE_3: Spare FIR bits allocated for future use.
50	RWX	WOX_AND	WOX_OR	SCOM_ERR2: Local FIR parity error RAS duplicate.
51	RWX	WOX_AND	WOX_OR	SCOM_ERR: Local FIR parity error of ACTION/MASK registers.
52:63	RO	RO	RO	constant = 0b000000000000

Register Name	CXA FIR Mask Register
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_SCOMFIR.FIR_MASK_REG
Address	0000000004010803 (SCOM) 0000000004010804 (SCOM1) 0000000004010805 (SCOM2)
Description	Error mask register. (Action0, Mask) = Action Select (0,0) = Recoverable Error (0,1) = Masked (1,x) = Checkstop Error

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_AND	WO_OR	BAR_PE_MASK: Informational PE mask. This is a generic bucket for errors that are informational.
1	RW	WO_AND	WO_OR	REGISTER_PE_MASK: System checkstop PE mask. This is a generic bucket for errors that are a system checkstop.
2	RW	WO_AND	WO_OR	MASTER_ARRAY_CE_MASK: Correctable error on the master array. Includes uOP and CRESP arrays mask.
3	RW	WO_AND	WO_OR	MASTER_ARRAY_UE_MASK: Uncorrectable error on the master array. Includes uOP and CRESO arrays mask.
4	RW	WO_AND	WO_OR	TIMER_EXPIRED_RECOV_ERROR_MASK: Precise directory epoch timeout mask. Coarse directory epoch timeout mask. rtagPool epoxh data hang timeout mask. Recovery sequencer hang detection mask.
5	RW	WO_AND	WO_OR	TIMER_EXPIRED_XSTOP_ERROR_MASK: Recovery sequencer hang detection mask.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
6	RW	WO_AND	WO_OR	PSL_CMD_UE_MASK: XPT detected uncorrectable error on power-bus data determined to be a PSL command mask. The PSL command does not propagate past the XPT.
7	RW	WO_AND	WO_OR	PSL_CMD_SUE_MASK: XPT detected special uncorrectable error on processor bus data determined to be a PSL command mask. The PSL command does not propagate past the XPT.
8	RW	WO_AND	WO_OR	SNOOP_ARRAY_CE_MASK: Correctable error on the snooper array. Includes the precise directory, coarse directory, and uOP mask.
9	RW	WO_AND	WO_OR	SNOOP_ARRAY_UE_MASK: Uncorrectable error on the snooper array. Includes the precise directory, coarse directory, and uOP mask.
10	RW	WO_AND	WO_OR	RECOVERY_FAILED_MASK: CAPP recovery failed mask.
11	RW	WO_AND	WO_OR	ILLEGAL_LPC_BAR_ACCESS_MASK: Illegal LPC BAR access mask. Error detected when a snooper or master write operation is attempted to access directories in LPC-only mode or when the operation hits the LPC BAR region in LPC disjoint mode. Also fires if a directory hit is found on a read operation within the LPC BAR range.
12	RW	WO_AND	WO_OR	XPT_RECOVERABLE_ERROR_MASK: Recoverable errors detected in the XPT mask.
13	RW	WO_AND	WO_OR	MASTER_RECOVERABLE_ERROR_MASK: Recoverable errors detected in the master mask.
14	RW	WO_AND	WO_OR	SNOOPER_RECOVERABLE_ERROR_MASK: Spare FIR bits allocated for future use mask.
15	RW	WO_AND	WO_OR	SECURE_SCOM_ERROR_MASK: Error detected in the secure SCOM satellite mask.
16	RW	WO_AND	WO_OR	MASTER_SYS_XSTOP_ERROR_MASK: System checkstop errors detected in the master (invalid state, control checker) mask.
17	RW	WO_AND	WO_OR	SNOOPER_SYS_XSTOP_ERROR_MASK: System checkstop errors detected in snooper (invalid state, control checker) mask.
18	RW	WO_AND	WO_OR	XPT_SYS_XSTOP_ERROR_MASK: System checkstop errors detected in the transport (invalid state, control checker) mask.
19	RW	WO_AND	WO_OR	MUOP_ERROR_1_MASK: Master uOP FIR 1 mask.
20	RW	WO_AND	WO_OR	MUOP_ERROR_2_MASK: Master uOP FIR 2 mask.
21	RW	WO_AND	WO_OR	MUOP_ERROR_3_MASK: Master uOP FIR 3 mask.
22	RW	WO_AND	WO_OR	SUOP_ERROR_1_MASK: Snooper uOP FIR 1 mask.
23	RW	WO_AND	WO_OR	SUOP_ERROR_2_MASK: Snooper uOP FIR 2 mask.
24	RW	WO_AND	WO_OR	SUOP_ERROR_3_MASK: Snooper uOP FIR 3 mask.
25	RW	WO_AND	WO_OR	POWERBUS_MISC_ERROR_MASK: Miscellaneous informational processor bus errors mask including unsolicited processor bus data and unsolicited CRESP.
26	RW	WO_AND	WO_OR	POWERBUS_INTERFACE_PE_MASK: Parity error on the processor bus interface (address/aTag/tTag/rTag APC, SNP TLBI) mask.
27	RW	WO_AND	WO_OR	POWERBUS_DATA_HANG_ERROR_MASK: Any processor bus data hang poll error mask.
28	RW	WO_AND	WO_OR	POWERBUS_HANG_ERROR_MASK: Any processor bus command hang error (domestic address range) mask.
29	RW	WO_AND	WO_OR	LD_CLASS_CMD_ADDR_ERR_MASK: Processor bus address error detected by the APC on a load-class command mask.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
30	RW	WO_AND	WO_OR	ST_CLASS_CMD_ADDR_ERR_MASK: Processor bus address error detected by the APC on a store-class command mask.
31	RW	WO_AND	WO_OR	PHB_LINK_DOWN_MASK: The PHB0 or PHB1 interface asserted a link down mask.
32	RW	WO_AND	WO_OR	LD_CLASS_CMD_FOREIGN_LINK_FAIL_MASK: APC received ack_dead or ack_ed_dead from the foreign interface on a load-class command mask.
33	RW	WO_AND	WO_OR	FOREIGN_LINK_HANG_ERROR_MASK: Any processor bus command hang error (foreign address range) mask.
34	RW	WO_AND	WO_OR	XPT_POWERBUS_CE_MASK: CE on data received from the processor bus and destined for either the XPT data array (and back to the processor bus) or a PSL command or link-delay response packet mask.
35	RW	WO_AND	WO_OR	XPT_POWERBUS_UE_MASK: UE on data received from the processor bus and destined for the XPT data array (and back to the processor bus) or a link-delay response packet mask.
36	RW	WO_AND	WO_OR	XPT_POWERBUS_SUE_MASK: SUE on data received from the processor bus and destined for the XPT data array (and back to the processor bus) or a link-delay response packet mask.
37	RW	WO_AND	WO_OR	TLBI_TIMEOUT_MASK: TLBI timeout error. TLBI needs a re-IPL to recover mask.
38	RW	WO_AND	WO_OR	TLBI_SOT_ERR_MASK: Illegal SOT operation detected in P8BC mode. TLBI needs a re-IPL to recover mask.
39	RW	WO_AND	WO_OR	TLBI_BAD_OP_ERR_MASK: TLBI bad operation error. TLBI needs a re-IPL to recover mask.
40	RW	WO_AND	WO_OR	TLBI_SEQ_NUM_PARITY_ERR_MASK: Parity error detected on a TLBI sequence number mask.
41	RW	WO_AND	WO_OR	ST_CLASS_CMD_FOREIGN_LINK_FAIL_MASK: APC received ack_dead or ack_ed_dead from the foreign interface on a store-class command mask.
42	RW	WO_AND	WO_OR	TIME_BASE_ERR_MASK: Mask for an error that occurred with the timebase. This is an indication that the timebase value can no longer assumed to be correct.
43	RW	WO_AND	WO_OR	TRANSPORT_INFORMATIONAL_ERR_MASK: Transport informational error mask.
44	RW	WO_AND	WO_OR	APC_ARRAY_CMD_CE_ERPT_MASK: CE on the PSL command queue array in APC mask.
45	RW	WO_AND	WO_OR	APC_ARRAY_CMD_UE_ERPT_MASK: UE on the PSL command queue array in APC mask.
46	RW	WO_AND	WO_OR	PSL_CREDIT_TIMEOUT_ERR_MASK: PSL credit timeout error mask.
47	RW	WO_AND	WO_OR	SPARE_2_MASK: Spare FIR bits allocated for future use mask.
48	RW	WO_AND	WO_OR	SPARE_3_MASK: Spare FIR bits allocated for future use mask.
49	RW	WO_AND	WO_OR	HYPERVISOR_MASK: Hypervisor mask.
50	RW	WO_AND	WO_OR	SCOM_ERR2_MASK: Local FIR parity error RAS duplicate mask.
51	RW	WO_AND	WO_OR	SCOM_ERR_MASK: Local FIR parity error of ACTION/MASK registers mask.
52:63	RO	RO	RO	constant = 0b000000000000

Register Name	Pervasive FIR Action 0 Register
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_SCOMFIR.FIR_ACTION0_REG
Address	0000000004010806 (SCOM)
Description	This register contains the action select for the FIR bits.

Bits	SCOM	Field Mnemonic: Description
0:51	RO	FIR_ACTION0: MSB of action select for corresponding bit in FIR. (Action0,Action1) = Action Select (0,0) = Checkstop (0,1) = Recoverable (1,0) = Recoverable Interrupt (1,1) = Machine Check

Register Name	Pervasive FIR Action 1 Register
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_SCOMFIR.FIR_ACTION1_REG
Address	0000000004010807 (SCOM)
Description	This register contains the second bit of action select if necessary.

Bits	SCOM	Field Mnemonic: Description
0:51	RO	FIR_ACTION1: LSB of action select for corresponding bit in FIR. (Action0,Action1,Mask) = Action Select (x,x,1) = Masked (0,0,0) = Checkstop (0,1,0) = Recoverable Error (1,0,0) = Recoverable Interrupt (1,1,0) = Machine Check

Register Name	Snoop Error Report Register
Mnemonic	CAPP1.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_ERROR_REPORT_REG
Address	000000000401080A (SCOM)
Description	SCOM access of SNP c_err_rpt latches.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	CXA_SNP_C_ERR_RPT_HOLD_DATA: SNP c_err_report_hold value.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	APC Master Error Report Register
Mnemonic	CAPP1.CXA_TOP.CXA_APC1.ERRRPT
Address	000000000401080B (SCOM)
Description	Output of APC cerr_rpt hold latches.

Bits	SCOM	Field Mnemonic: Description

Register Name	Transport Error Hold Register
Mnemonic	CAPP1.CXA_TOP.XPT_ERROR_REPORT
Address	0000000004010800C (SCOM)
Description	The XPT error report register contains hold latches for the conditions that result in FIR errors.

Bits	SCOM	Field Mnemonic: Description
0	ROX	XPT_PSL_CMD_UE_ERRHOLD: PSL command uncorrectable error.
1	ROX	XPT_PSL_CMD_SUE_ERRHOLD: PSL command special uncorrectable error.
2	ROX	XPT_SC_RDATA_PARITY_ERRHOLD: EPT register read data parity error.
3	ROX	APC_SC_RDATA_PARITY_ERRHOLD: APC register read data parity error.
4	ROX	SN_SC_RDATA_PARITY_ERRHOLD: Snoop register read data parity error.
5	ROX	NX_DATA_RTAG_PARITY_ERRHOLD: Power bus RTAG parity error.
6	ROX	NXPBXPT_PBRCV_ECC_CE_ERRHOLD: Power bus data or PSL command correctable error.
7	ROX	NXPBXPT_PBRCV_ECC_UE_ERRHOLD: Power bus data uncorrectable error.
8	ROX	NXPBXPT_PBRCV_ECC_SUE_ERRHOLD: Power bus data special uncorrectable error.
9	ROX	XPT_DBG_CTL_REG_PARITY_ERRHOLD: Debug bus MUX control register write data parity error.
10	ROX	XPT_CFG_REG_PARITY_ERRHOLD: Transport control register write data parity error.
11	ROX	CAPP_ERR_STAT_CTL_REG_PARITY_ERRHOLD: CAPP error status and control register write data parity error.
12	ROX	PMU_CNTRA_CFG_REG_PARITY_ERRHOLD: PMU counter configuration register 0 write data parity error.
13	ROX	PMU_CNTRB_CFG_REG_PARITY_ERRHOLD: PMU counter configuration register 1 write data parity error.
14	ROX	XPT_PMU_EVENT_SEL_REG_PARITY_ERRHOLD: XPT PMU event select register write data parity error.
15	ROX	PE0_CXA_LINKDOWN_ERRHOLD: PE0 link down.
16	ROX	PE1_CXA_LINKDOWN_ERRHOLD: PE1 link down.
17	ROX	SB_SCOM_ERRHOLD: Secure SCOM internal error.
18	ROX	PBXMIT_MSGQ_SEQ_ERRHOLD: Transport message queue sequencer not one hot error.
19	ROX	PBXMIT_DXMIT_SEQ_ERRHOLD: Transport transmit queue sequencer not one hot error.
20	ROX	EPH_REC_TMR_CNTL_REG_PARITY_ERRHOLD: Epoch and recovery timers control register write data parity error.
21	ROX	RCS_RECOVERY_FAILED_ERRHOLD: CAPP recovery failed.
22	ROX	RCS_STATE_MACHINE_ERRHOLD: Recovery sequencer FSM invalid state.
23	ROX	NXPBXPT_PBRCV_LNK_RSP_ECC_UE_ERRHOLD: Secure link response packet UE.

Bits	SCOM	Field Mnemonic: Description
24	ROX	NXPBXPT_PBRCV_LNK_RSP_ECC_SUE_ERRHOLD: Secure link response packet SUE.
25	ROX	LNK_RSP_PKT_DISCARDED_ERRHOLD: Secure link response packet discarded.
26	ROX	SECURE_LNK_RSP_PKT_NOT_VALID_ERRHOLD: Secure link response packet not valid.
27	ROX	SECURE_LNK_SCOM_CONFLICT_ERRHOLD: Secure link response packet conflict with SCOM access.
28	ROX	UNSOLICITED_DATA_RCV_ERROR_ERRHOLD: Unsolicited data received.
29	ROX	AS_RCMD0_PARITY_ERR_ERRHOLD: AS as endpoint rcmd0 parity error.
30	ROX	AS_REGS_PARITY_ERR_ERRHOLD: AS as endpoint register parity error.
31	ROX	AS_SM_ERROR_ERRHOLD: AS as endpoint state machine error.
32	ROX	AS_REG_RDATA_PERR_ERRHOLD: AS as endpoint register read data parity error.
33	ROX	DFS_SM_ERROR_ERRHOLD: DFS State machine error.
34	ROX	TB_XPT_ERROR_FIR_ERR_ERRHOLD: Time base error.
35	ROX	TB_CMD_DISCARDED_ERRHOLD: Timebase command discarded.
36	ROX	TB_REG_RDATA_PERR_ERRHOLD: Timebase command discarded.
37	ROX	RNG_WR_ENBL_REG_PERR_ERRHOLD: RNG write enable configuration register parity error.
38	ROX	SSA_ECC_HI_UE_ERRHOLD: Message queue high UE.
39	ROX	SSA_ECC_HI_CE_ERRHOLD: Message queue high CE.
40	ROX	SSA_ECC_HI_SUE_ERRHOLD: Message queue high SUE.
41	ROX	SSA_ECC_LO_SUE_ERRHOLD: Message queue low SUE.
42	ROX	SSA_ECC_LO_CE_ERRHOLD: Message queue low CE.
43	ROX	SSA_ECC_LO_UE_ERRHOLD: Message queue low UE.
44	ROX	CXACQPB_MUX_ECC_CE_ERRHOLD: CQ MUX CE.
45	ROX	CXACQPB_MUX_ECC_UE_ERRHOLD: CQ MUX UE.
46	ROX	APC0_SC_RDATA_PARITY_ERRHOLD: APC0 register parity error.
47	ROX	CREDIT_TIMEOUT_ERRHOLD: CAPP credit timeout.
48	ROX	TLBI_SC_RDATA_PARITY_ERRHOLD: TLBI SCOM parity error.
49	ROX	TLBI_REGS_PARITY_ERRHOLD: TLBI register parity error.
50	ROX	RCS_RECOVERY_TIMEOUT_ERRHOLD: CAPP recovery timeout.
51	ROX	TBST0_BADIN_ERRHOLD: Timebase state machine in state 0 and SCOM TFMR write of bit (18) move_chip_tod_to_tb.
52	ROX	TBST6_BADIN_ERRHOLD: Timebase state machine in State 6 and SCOM TFMR write of 1 bit (18) move_chip_tod_to_tb.
53	ROX	TBST7_BADIN_ERRHOLD: Timebase state machine in State 7 and SCOM TFMR write of 1 bit (16) load_tod_mod or (18) move_chip_tod_to_tb.
54	ROX	TWO_TFMRCMDS_ERR_ERRHOLD: SCOM tfmr write of 1 to both bits (16) load_tod_mod and bit (18) move_chip_tod_to_tb.
55	ROX	TB_MISSING_SYNC_ERRHOLD: Indicates a synch pulse was not received in the time specified by the sync_bit_sel control bits.
56	ROX	TB_MISSING_STEP_ERRHOLD: Indicates that a step pulse was not received in the time specified by the max_cyc_bet_steps control bits.
57	ROX	TB_RESIDUE_ERR_ERRHOLD: Indicates a parity or residue error has compromised the integrity of the timebase.
58	ROX	TX_TFMR_CORRUPT_ERRHOLD: Indicates a parity error has been detected on the TFMR register.

Bits	SCOM	Field Mnemonic: Description
59	ROX	TBST_CORRUPT_ERRHOLD: Indicates a TFMR invalid TB state machine state.
60	ROX	TBST9_BADIN_ERRHOLD: Timebase state machine in state 9 and SCOM TFMR write of 1 bit (16) load_tod_mod or (18) move_chip_tod_to_tb.
61:63	RO	constant = 0b000

Register Name	TLBI Error Hold Register
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_SCOMFIR.TLBI_ERROR_REPORT
Address	000000000401080D (SCOM)
Description	The TLBI error report register contains hold latches for the conditions that result in FIR errors.

Bits	SCOM	Field Mnemonic: Description
0	ROX	TLBI_IN_TIMEOUT: Data hang timeout.
1	ROX	TLBI_IN_SEQ_ERR: Error in TLBI internal sequencers.
2	ROX	TLBI_IN_SEQ_PERR: TLBI sequence number parity error.
3	ROX	TLBI_IN_BAD_OP_ERR: TLBI bad operation error.
4	ROX	TLBI_IN_SNP_ADDR_PERR: TLBI snoop address parity error.
5	ROX	TLBI_IN_SNP_TTAG_PERR: TLBI snoop TTAG parity error.
6:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	CAPP Error Status and Control Register
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_EPT.CAPP_ERR_STATUS_CONTROL
Address	000000000401080E (SCOM)
Description	The CAPP error status and control register contains status and controls for the error recovery process.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLRPART	ERROR_RECOVERY_INITIATED: If this bit is set (=1) a recoverable error has been detected and the CAPP recovery process has been initiated. Once set, this bit remains set until cleared by the firmware or POR.
1	RWX_WCLRPART	ERROR_RECOVERY_COMPLETE: If error recovery initiated is 1 and this bit is 0, the CAPP recovery process is in progress. If error recovery initiated is 1 and this bit is 1, the CAPP recovery process has completed. If error recovery initiated is 0, error recovery complete = 1 is not meaningful. Once set, this bit remains set until cleared by the firmware or POR.
2	RO	constant = 0b0
3	RWX	TLBI_PSL_DEAD: This bit is set by hardware when error recovery initiated is set, asserting the core_is_dead signal to the TLBI macro informing it that PSL must be considered non-operational, possibly with outstanding TLBI requests. When core_is_dead = 1, the snoop machine in TLBI stops waiting for not_my_lpar_id or TLBI response command from PSL. TLBI acts as if PSL has returned something and goes back to idle. When error recovery is complete and the firmware wants to re-initialize the TLBI, it writes this bit and TLBI fence to 0 in the same SCOM write operation.
4	RWX	TLBI_FENCE: This bit is set by hardware when error recovery initiated is set. This bit drives the tlbie_fence_lvl signal to the TLBI macro, which normally informs the macro that the core is going to sleep but here is used as part of error initiation and recovery. The tlbie_fence_lvl tell the macro to start ignoring the new TLBIs, but still finish up the TLBIs received before tlbie_fence_lvl went high. When recovery is complete and the firmware wants to re-initialize the TLBI, it writes this bit and the TLBI PSL is dead to 0 in the same SCOM write operation.

Bits	SCOM	Field Mnemonic: Description
5	RWX_WCLRPART	RECOVERY_FAILED: Recovery did not complete successfully. Bits 6 through 9 specify the reason for the failure.
6	RWX_WCLRPART	RTAGFLUSH_FAILED: During recovery an error was detected while trying to flush the rTagPool.
7	RWX_WCLRPART	PRECISE_DIR_FLUSH_FAILED: During recovery an error was detected while trying to flush the precise directory.
8	RWX_WCLRPART	COURSE_DIR_FLUSH_FAILED: During recovery an error was detected while trying to flush the course directory.
9	RWX_WCLRPART	RECOVERY_HANG_DETECTED: The recovery actions timed out and a hang was declared.
10:11	RWX_WCLRPART	EPOCH_VALUE: Epoch value captured when error recovery is initiated.
12:13	RO	constant = 0b00
14	WO_1P	FORCE_QUIESCE: Force CAPP to quiesce.
15	ROX	QUIESCE_DONE: 1 = Force quiesce in progress, 0 = Quiesce has completed.
16:63	RO	constant = 0b0000000000000000000000000000000000000000000000000000

Register Name	Flush SUE State Map Register
Mnemonic	CAPP1.CXA_TOP.CXA_APC0.FLUSHSHUE
Address	000000000401080F (SCOM)
Description	1 bit per state decode. 1 = Requires flush with SUE during directory flush.

Bits	SCOM	Field Mnemonic: Description
0:31	RW	FLUSH_SUE_STATE_MAP: Directory flush SUE state map, 1 bit per state decode.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	Error Inject Register
Mnemonic	CAPP1.CXA_TOP.APC_ERRINJ
Address	0000000004010810 (SCOM)
Description	Error inject register controls error injection.

Bits	SCOM	Field Mnemonic: Description
0	RW	APC_ERRINJ_ENABLE: APC master error inject enable.
1	RW	APC_ERRINJ_DBLERR: APC master: 0 = Inject 1 bit ECC error 1 = Inject 2 bit ECC error
2	RW	APC_ERRINJ_CONTINUOUS: APC master: 0 = Inject error once 1 = Inject error continuously
3:6	RO	constant = 0b0000
7:11	RW	APC_ERRINJ_TARGET: APC master error inject target selection.
12	RW	SNP_ERROR_INJECT_ENABLE: SNP master error inject enable.

Bits	SCOM	Field Mnemonic: Description
13	RW	SNP_INJECT_DBL_ECC_ERROR: SNP master: 0 = Inject 1 bit ECC error 1 = Inject 2 bit ECC error
14	RW	SNP_INJECT_CONTINOUS_ERROR: SNP master: 0 = Inject error once 1 = Inject error continuously
15:16	RO	constant = 0b00
17:23	RW	SNP_ERROR_INJECT_TARGET: SNP master error inject target selection.
24:31	RO	constant = 0b00000000
32	RW	XPT_ERROR_INJECT_ENABLE: XPT master error inject enable.
33:34	RW	XPT_ERROR_TYPE: XPT Error type: 00 = Inject CE 01 = Inject UE 10 = Inject SUE 11 = Reserved
35	RW	XPT_INJECT_CONTINUOUS_ERROR: XPT continuous mode: 1 = Continuously inject the error 0 = Inject on the next operation
36:39	RW	XPT_ERROR_INJECT_TARGET: XPT Error inject target: 0000 = Write buffer array 0 0001 = Write buffer array 1 0010 – 1111 = Reserved
40:63	RO	constant = 0b000000000000000000000000

Register Name	Debug Bus MUX Control Register
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_SCOMFIR.DEBUG_CONTROL
Address	0000000004010811 (SCOM)
Description	The debug bus MUX control register selects which unit drives and which port of its 16-1 MUX drives the bus.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	BLOCK_MUX_PORT_SEL: Selects 1 of up to 16 block internal debug buses to source the block debug bus output.
4:11	RW	BLOCK_SEL: One-hot bit vector that selects the block to drive the debug bus. Bit block: 4 = APC0 5 = APC1 6 = SNPFE 7 = snpfe_dir 8 = SBPBE 9 = snpbe_uop 10 = TLBI 11 = XPT If all block select bits are 0, the debug bus is de-gated and no switching on the main trunk of the debug bus occurs.
12:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	Trigger Bus MUX Control Register
Mnemonic	CAPP1.CXA_TOP.CXA_TRIGCTL
Address	0000000004010812 (SCOM)
Description	Trigger bus MUX control register. selects and enables trigger events.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	CXA_TRIGCTL_PORTSEL: APC Master trigger selection.
4	RW	CXA_TRIGCTL_APC0_ENABLE: APC Master trigger enable for APC0.
5	RW	CXA_TRIGCTL_APC1_ENABLE: APC Master trigger enable for APC1.
6	RW	SNPFE_TRIGGER_ENABLE: SNP FE trigger enable.
7	RW	SNPFE_DIR_TRIGGER_ENABLE: SNP FE DIR trigger enable.
8	RW	SNPBE_TRIGGER_ENABLE: SNP BE trigger enable.
9	RW	SNPBE_UOP_TRIGGER_ENABLE: SNP BE uOP trigger enable.
10	RW	Reserved field.
11	RW	Reserved field.
12:15	RW	SNP_MUX_PORT_SEL: Selects 1 of up to 16 block internal trigger conditions to source the SNP trigger bus bit 1.
16:19	RW	Reserved field.
20:63	RO	constant = 0b00000000000000000000000000000000000000000000

Register Name	Error Report Clear Register
Mnemonic	CAPP1.CXA_TOP.ERR_RPT_CLR
Address	0000000004010813 (SCOM)
Description	A write to this register clears all the CAPP c_err_rpt error hold latches.

Bits	SCOM	Field Mnemonic: Description
0	WOX	Reserved.
1:63	RO	Not implemented.

Register Name	PMU Counter A Configuration Register
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_SCOMFIR.PMU_CNTRA_CFG
Address	0000000004010814 (SCOM)
Description	The PMU counter A configuration register controls the configuration of the PMU counters.

Bits	SCOM	Field Mnemonic: Description
0	RW	PMUA_COUNTER0_ENABLE: When = 1 this bit enables PMU counter 0.
1	RW	PMUA_COUNTER1_ENABLE: When = 1 this bit enables PMU counter 1.
2	RW	PMUA_COUNTER2_ENABLE: When = 1 this bit enables PMU counter 2.
3	RW	PMUA_COUNTER3_ENABLE: When = 1 this bit enables PMU counter 3.
4:6	RW	PMUA_PRESCALER_SELECT: Determines which, if any, prescaler counter to apply to all 16 bit PMU counters.

Bits	SCOM	Field Mnemonic: Description
7	RW	PMUA_COUNTER_FREEZE_MODE: Indicates a counter should freeze on overflow: 0 = Free running 1 = Freeze on overflow
8	RW	PMUA_COUNTER_RESET_MODE: Indicates how the counter should be reset: 0 = Free running 1 = Reset on SCOM read
9:12	RW	PMUA_COUNTER0_EVENT_SELECT: Indication of which of the four event pairs (eight total events) to count in counter 0.
13	RW	PMUA_COUNTER0_POSEDGE_SELECT: If this bit is 1, the PMU only counts the event rising edge. If this bit is 0, the PMU counts every cycle the event is asserted (high).
14:15	RW	PMUA_COUNTER0_BIT_PAIR_SELECT: Indicates how the event pairs should be combined to increment this PMU counter.
16:19	RW	PMUA_COUNTER1_EVENT_SELECT: Indication of which of the four event pairs (eight total events) to count in counter 1.
20	RW	PMUA_COUNTER1_POSEDGE_SELECT: If this bit is 1, the PMU only counts the event rising edge. If this bit is 0, the PMU counts every cycle the event is asserted (high).
21:22	RW	PMUA_COUNTER1_BIT_PAIR_SELECT: Indicates how the event pairs should be combined to increment this PMU counter.
23:26	RW	PMUA_COUNTER2_EVENT_SELECT: Indication of which of the four event pairs (eight total events) to count in counter 2.
27	RW	PMUA_COUNTER2_POSEDGE_SELECT: If this bit is 1, the PMU only counts the event rising edge. If this bit is 0, the PMU counts every cycle the event is asserted (high).
28:29	RW	PMUA_COUNTER2_BIT_PAIR_SELECT: Indicates how the event pairs should be combined to increment this PMU counter.
30:33	RW	PMUA_COUNTER3_EVENT_SELECT: Indication of which of the four event pairs (eight total events) to count in counter 3.
34	RW	PMUA_COUNTER3_POSEDGE_SELECT: If this bit is 1, the PMU only counts the event rising edge. If this bit is 0, the PMU counts every cycle the event is asserted (high).
35:36	RW	PMUA_COUNTER3_BIT_PAIR_SELECT: Indicates how the event pairs should be combined to increment this PMU counter.
37:38	RW	PMUA_PMU_PORT_SELECT: Chooses final PMU events to feed to the counters.
39:63	RO	constant = 0b00000000000000000000000000

Register Name	PMU Counters A Register
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_PMULET.PMU_CNTRA_REG
Address	0000000004010815 (SCOM)
Description	The PMU counters A register.

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	PMU_COUNTERA_0: PMU Counter 0.
16:31	ROX	PMU_COUNTERA_1: PMU Counter 1.
32:47	ROX	PMU_COUNTERA_2: PMU Counter 2.
48:63	ROX	PMU_COUNTERA_3: PMU Counter 3.

Register Name	APC Master PMU Events Select Register
Mnemonic	CAPP1.CXA_TOP.CXA_APC1.APC_PMUSEL
Address	0000000004010816 (SCOM)
Description	Controls APC performance monitor event selections.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	APC_PMUSEL_GRPSEL: APC master PMU events group selection, valid values of 0 - 4.
4:5	RO	constant = 0b00
6:11	RW	APC_PMUSEL_FSMJ_EVENT_SEL: APC master PMU events FSMJ event selection, valid values of 0 - 9.
12	RO	constant = 0b0
13:19	RW	APC_PMUSEL_FSMJ_FSM_SEL: APC master PMU FSMJ FSM selection: Valid values of 0, 1, 8, 9, 16, 17, 24, and 25 for read FSMs. Valid values of 64, 65, 72, 73, 80, 81, 88, and 89 for write FSMs.
20:63	RO	constant = 0b00000000000000000000000000000000000000000000000000

Register Name	Snoop PMU Events Select Register
Mnemonic	CAPP1.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_PMU_EVENTS_SELECT_REG
Address	0000000004010817 (SCOM)
Description	Used for which group of events that will go on the CXA SNP PMON bus . This bus is sent to the PMU input bus MUX in XPT where further bit selection is performed on input to the PMU counters.

Bits	SCOM	Field Mnemonic: Description
0:3	WO	CXA_SNP_PMU_GROUP_SELECT: Selects which one of four snoop PMU event groups is sent. Only values 0 to 3 are used .
4:5	RO	constant = 0b00
6:11	WO	CXA_SNP_PMU_FSMJ_EVENT_SELECT: Selects which one of eight FSMJ events gets routed to the FAMJ event. Only values 0 to 7 are used.
12:13	RO	constant = 0b00
14:19	WO	CXA_SNP_PMU_FSMJ_FSM_SELECT: Selects which one of four snoop state machines will be used for FSMJ event counting. Only values of 0, 1, 2, and 3 are used.
20:63	RO	constant = 0b00000000000000000000000000000000000000000000000000

Register Name	APC Master Power Bus Control Register
Mnemonic	CAPP1.CXA_TOP.CXA_APC0.APCTL
Address	0000000004010818 (SCOM)
Description	Controls Power bus operations.

Bits	SCOM	Field Mnemonic: Description
0	RW	APCCTL_ENB_CRESP_EXAM: Enables APC master examining CRESPs for it. When disabled, prevents false assertion of unexpected CRESP FIR when CRESPs for PHB are seen. (APC RD FSM spoofs PHB unit ID)
1	RW	APCCTL_ADR_BAR_MODE: addr_bar_mode is set to 1 when chip = group. Small system address map. Reduces the number of group ID bits to 2 and eliminates the chip ID bits. All chips have an ID of 0. Nn scope is not available in this mode.

Bits	SCOM	Field Mnemonic: Description
2	RW	APCCTL_DISABLE_NN_RN: Disable nn_rn scope.
3	RW	APCCTL_DISABLE_VG_NOT_SYS: Disable vg_not_sys scope.
4	RW	APCCTL_DISABLE_G: Disable group scope.
5	RW	APCCTL_DISABLE_LN: Disable LN scope.
6	RW	APCCTL_SKIP_G: Skip increment to group scope. Only used by read machines.
7	RW	APCCTL_HANG_ARE: Hang on address error.
8	RW	APCCTL_HANG_DEAD: Hang on Ack_*dead.
9	RW	APCCTL_CFG_BKILL_INC: This configuration bit controls the increase of scope when a combined response of *bk_inc is received. If this bit is 0, when the scope of the command is group or remote group scope (RGS), the scope of the background kill is unchanged and the command used is bkill_inc. When the scope of the command is nodal, the scope is increased to group and the command used is bkill_inc. Otherwise, the scope of the command is unlimited, the scope is unchanged, and the command used is bkill. Note: The combined response equations do not provide an *inc combined response directive when the command scope is unlimited. If this bit is 1, the command scope used for background kill is always increased. When the new scope is group, the command used is bkill_inc. Otherwise, the command used is bkill. Initialize to 0.
10	RW	Reserved field.
11	RW	Reserved field.
12	RW	APCCTL_DISABLE_PSL_CMDQUEUE: Disable PSL command queue: 0 = PSL command queue enabled. Order of commands is restored in queue using queue. ID as write pointer. 1 = PSL command queue is disabled/bypassed. PSL can only have one command outstanding per APC machine.
13	RW	APCCTL_ENABLE_MASTER_RETRY_BACKOFF: Enable master retry backoff: 0 = Master retry backoff due to excessive rty_lpc_only is disabled 1 = Master retry backoff due to excessive rty_lpc_only is enabled
14:16	RW	SCPTGT_LFSR_MODE: Mode for LFSRs used in scope target counter logic selects count of average number of clocks before LFSR will rollover: 0 = On average every 64K clocks 1 = On average every 32K clocks 2 = On average every 16K clocks 3 = On average every 8K clocks 4 = On average every 4K clocks 5 = On average every 2K clocks 6 = On average every 1K clocks 7 = On average every 512 clocks
17	RW	APCCTL_ENABLE_RD_VG_SCOPE_PREDICT: Enable rd_vg_scope_predict: 0 = rd_vg_scope_predictor is disabled 1 = rd_vg_scope_predictor is enabled.
18	RW	Reserved field.
19:38	RO	constant = 0b00000000000000000000
39:45	RW	WR_EPSILON_VALUE: Write epsilon value.
46:55	RO	constant = 0b0000000000
56:63	RW	APCCTL_MAX_RETRY: Max Retry count. 0 = Retry forever.

Register Name	**APC Master Configuration Register**
Mnemonic	CAPP1.CXA_TOP.CXA_APC0.APCFG
Address	0000000004010819 (SCOM)
Description	Controls PHB selection, hang_poll_scale, speculative HPC state, POWER8/POWER9 mode, and addr(8:13).

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1	RW	Reserved field.
2:3	RW	APCCTL_PHB_SEL: PHB Select: 01 = PHB 10 = Alink
4:7	RW	HANG_POLL_SCALE: How many hang polls that need to be detected to indicate a hang poll to the logic.
8:12	RW	SPEC_HPC_DIR_STATE: Speculative HPC DIR state value.
13	RW	Reserved field.
14	RW	APCCTL_P9_MODE: 0 = POWER8 backwards compatibility mode, 1 = POWER9 mode.
15:20	RW	APCCTL_SYSADDR: Used for address bits 8:13 in PB commands and SNP DIR compares.
21	RW	APCCTL_MEM_SEL_MODE: Memory select mode as defined in PB Arch V4: 0 = Memory select mode 0 1 = Memory select mode 1
22	RW	APCCTL_ENB_FRC_ADDR13: Enables forcing of addr(13)=1 when P8BC mode AND mem_sel_mode=0 AND pslcmd.rfs_class != 0: 0 = Disabled 1 = Enabled
23:63	RO	constant = 0b00000000000000000000000000000000000000000000000

Register Name	**Snoop CAPI Configuration Register**
Mnemonic	CAPP1.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_CAPI_CFG_REG
Address	000000000401081A (SCOM)
Description	This register controls the configuration of the precise and coarse directories and controls other snooper functions whose setup is dependent on the discovered CAPI device.

Bits	SCOM	Field Mnemonic: Description
0	RW	CXA_SNP_ENABLE_TTYPE_DECODE: When = 1 this bit enables tType decode in the snoop pipeline. When = 0, tTypes are not decoded and the snoop pipelines are disabled.
1	RO	constant = 0b0
2:3	RW	CXA_SNP_PRECISE_DIR_SIZE: These bits control the size of the precise directory. Directory size can be further reduced by not allocating entries to a particular way.
4	RW	CXA_SNP_COARSE_DIR_ENABLE: The coarse directory must be enabled to participate in the memory coherence protocol. If the coarse directory is disabled, the effect is as if the coarse directory always misses on a search access and the results of reads and writes to coarse directory entries is unpredictable.
5	RW	CXA_SNP_COARSE_DIR_SECTORS: Coarse directory sector configuration varies under control of this bit allowing the capacity of memory covered by the directory to be either 8MB or 256MB.
6	RW	CXA_SNP_MCD_CHICKEN_SWITCH: This chicken switch is to be used only if the MCD cannot be configured to cover the address space specified by the BHR address range.

Bits	SCOM	Field Mnemonic: Description
7:11	RW	CXA_SNP_BHR_DIR_STATE: This is the directory state value used to indicate that the remote address BAR has been hit (BHR BAR hit remote).
12:13	RW	CXA_SNP_LPC_MODE: Set this field to 00. Other functions are not supported.
14:31	RO	constant = 0b0000000000000000000
32:37	RW	CXA_SNP_CT_COMPARE_VECTOR: Used to compare the CT field of COP request commands, bits 30 to 35 of address for match.
38:39	RW	CXA_SNP_PHB_FILTER_CNTL: Reserved.
40:63	RW	CXA_SNP_EPOCH_TEST_VECTOR: Used to determine epoch time outs when there are multiple way hits on the directory.

Register Name	Snoop Control Register
Mnemonic	CAPP1.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_CNTL_REG
Address	000000000401081B (SCOM)
Description	This register contains CAPI device independent snooper controls and parameters.

Bits	SCOM	Field Mnemonic: Description
0	RW	CXA_SNP_READ_EPSILON_MODE: Controls which read epsilon tier is loaded into the read epsilon counter for read commands of various scopes.
1:2	RO	constant = 0b00
3:11	RW	CXA_SNP_READ_EPSILON_TIER0: Read epsilon mode controls whether this value loads the read epsilon counter tier 0.
12:14	RO	constant = 0b000
15:23	RW	CXA_SNP_READ_EPSILON_TIER1: Read epsilon mode controls whether this value loads the read epsilon counter tier 1.
24	RO	constant = 0b0
25:35	RW	CXA_SNP_READ_EPSILON_TIER2: Read epsilon mode controls whether this value loads the read epsilon counter tier 2.
36:44	RO	constant = 0b000000000
45:47	RW	CXA_SNP_ADDRESS_PIPELINE_MASTERWAIT_COUNT: Maximum number of cycles an APC master can wait before swapping the arbitration priority between APC and snooper.
48:51	RW	CXA_SNP_DATA_HANG_POLL_SCALE: Number of dhang_polls it takes to increment the dhang counter in snoop. Actual count is scale + 1. Value of 0000 = decimal 1 counts.
52:63	RO	constant = 0b000000000000

Register Name	Transport Control Register
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_SCOMFIR.XPT_CONTROL
Address	000000000401081C (SCOM)
Description	The transport control register contains configuration and threshold values.

Bits	SCOM	Field Mnemonic: Description
0:9	RW	SEND_PACKET_TIMER_VALUE: The send packet timer, which is used to determine when the XPT has waited long enough for a next message to pack, is loaded from this field. The timer is used in conjunction with the CI store buffer threshold field and expires when the number of cycles specified by that field has passed. When the CI store buffer threshold is set to '11'x, the timer starts when a message is loaded into an empty buffer. When the CI store buffer threshold timer is not set to '11'x, the timer is started when a new message is loaded into a buffer and the number of CI store buffers in use is greater than the value specified by the CI store buffer threshold. When a message packet is sent, the timer is reset and is not running and the buffer is marked empty. A send packet timer value of x'000' specifies 1024 cycles.
10:13	RW	CI_STORE_BUFFER_THRESHOLD: The number of PHB0 CI store buffers in use must exceed CI store buffer threshold before the send message timer affects when XPT sends message packets (see send packet timer value). The values of this field apply as follows: 000 - 101 = Message packet is delayed until either the packet is full or the timer has expired when the number of CI store buffers in use exceeds this value. When the number of buffers in use does not exceed this value, then the message packet is not delayed and can be sent as soon as there is a break in the message send requests from the APC, Snooper, or TLBI units. 11x = Message packet is delayed until either the packet is full or the timer has expired. To disable this function set the threshold to a value of `101'. With this setting, the timer is active only when the number of in use buffers is 6, which is all of them, stopping additional packets to be sent until the CI store buffers clear out.
14:17	RW	MAX_LPC_DATA_PBH0_CI_STORE_BUFFERS: This field is the maximum number of PHB port 0 CI store buffers that can be used for LPC data packets. Six CI store buffers are available and a minimum of two are reserved for message data packets. 00 4 buffers can be used, 01 1 buffer can be used, 10 2 buffers can be used, and 11 3 buffers can be used.
18:21	RW	TLBI_DATA_POLL_PULSE_DIV: Number of data polls received before signaling TLBI hang detection timer expired.
22:25	RW	SN_WRT_DBUF_MAX_CREDIT: Defines the maximum number of snooper write data cache lines that can be sent to PSL without return of credit (LPC mode). This configuration is for the number of credits available per snooper data queue in the PSL. There is one snooper data queue per snooper in CAPP. For each snooper data queue there is a counter tracking the number of credits available. For each full or partial cache line sent, a counter is incremented for the data queue specified by the snooper sending the data. When the counter reaches the value in this field, no more cache lines can be sent and are allowed to back up into the snoopers and eventually back up onto the processor bus (no snoopers to dispatch). A value of 0 in this field means 16 credits per snooper data queue.
26:27	RW	Reserved: Reserved.
28:36	RW	SN_MSG_MAX_CREDIT: Defines the maximum number of messages (SN_snoop, SN_write, tlbi_set, ASE, APC credit consumer) that can be sent to PSL without return of credit. For each message sent requiring a credit, a counter is incremented. When the counter reaches the value in this field, no more messages can be sent which require credits. A value of 0 in this field means 512 credits. Initialized to 32.
37	RW	BENIGN_PTR_DATA: Used to indicate the format of the line sent during rTagPool flush sequence when the rfs_class = '10': 0 = Send a line of all 0 1 = Send a line of all 1
38	RW	TLBIE_STALL_EN: Enables CAPP stalling the PSL if CAPP is overflowing with TLBIs.
39:41	RW	TLBIE_STALL_THRESHOLD: The number of TLBIS pending needed before the CAPP will start the stall count. Minimum is 1 and maximum is 7.

Bits	SCOM	Field Mnemonic: Description
42:45	RW	TLBIE_STALL_CMPLT_CNT: The number of TLBIs to be completed before CAPP stops stalling the PSL. Minimum that should be set is 1 and the maximum that should be set is 8.
46:53	RW	TLBIE_STALL_DELAY_CNT: The number of cycles CAPP will wait while over threshold before actually stalling the PSL. This count is in increments of 128 cycles, up to 32K. A value of zero is invalid.
54:57	RO	constant = 0b0000
58:61	RW	XPT_CI_BUFF_MIN: Determines the lowest value CI store buffer used in the PHB.
62	RW	CI_BUFF_AVAIL: The number of CI store buffers available in the PHB: 0 = 6 buffers 1 = 14 buffers
63	WO	LOAD_CI_BUFF: Initial setup of the lowest CI store buffer used counter and PHB rtag generation.

Register Name	APC Master LCO Target Register
Mnemonic	CAPP1.CXA_TOP.CXA_APC0.APCLCO
Address	0000000004010821 (SCOM)
Description	Controls LCO target selection.

Bits	SCOM	Field Mnemonic: Description
0:11	RW	APCLCO_TARGET_VALID: List of valid LCO targets.
12	RW	APCLCO_TARGET_ID0: Used for bit 0 of LCO target Id.
13:15	RW	APCLCO_TARGET_MIN: Minimum number of eligible LCO targets. Must be greater than or equal to the sum of valid targets.
16:63	RO	constant = 0b0000000000000000000000000000000000000000000000000000

Register Name	XPT PMU Events Select Register
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_SCOMFIR.XPT_PMU_EVENTS_SEL
Address	0000000004010822 (SCOM)
Description	The PMU counter configuration register selects which of the 64 events will be on each bit of the PMU output bus.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	XPT_PMON_GROUP_SELECT: Selects which one of 64 XPT PMU events sources bit 0 of the 8b XPT PMU output bus.
4:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	APC FSM Read Machine Mask Register
Mnemonic	CAPP1.CXA_TOP.CXA_APC0.APCRDFSMMASK
Address	0000000004010823 (SCOM)
Description	Controls RD FSM that can be used in CAPP. Must match values used in PHB configuration register (TBD), CAPP Snoop PHB tTag Filter Mask Register, and PSL machine allocation register (TBD).

Bits	SCOM	Field Mnemonic: Description
0:47	RW	APC_RDFSM_MASK: List of RD FSMs used by APC.

Bits	SCOM	Field Mnemonic: Description
48:63	RO	constant = 0b0000000000000000

Register Name	PMU Counter B Configuration Register
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_SCOMFIR.PMU_CNTRB_CFG
Address	0000000004010824 (SCOM)
Description	The PMU counter B configuration register controls the configuration of the PMU counters.

Bits	SCOM	Field Mnemonic: Description
0	RW	PMUB_COUNTER0_ENABLE: When = 1 this bit enables PMU counter 0.
1	RW	PMUB_COUNTER1_ENABLE: When = 1 this bit enables PMU counter 1.
2	RW	PMUB_COUNTER2_ENABLE: When = 1 this bit enables PMU counter 2.
3	RW	PMUB_COUNTER3_ENABLE: When = 1 this bit enables PMU counter 3.
4:6	RW	PMUB_PRESCALER_SELECT: Determines which, if any, prescaler counter to apply to all 16bit PMU counters.
7	RW	PMUB_COUNTER_FREEZE_MODE: Indicates a counter should freeze on overflow: 0 = Free running 1 = Freeze on overflow
8	RW	PMUB_COUNTER_RESET_MODE: Indicates how counter should reset: 0 = Free running 1 = Reset on SCOM read
9:12	RW	PMUB_COUNTER0_EVENT_SELECT: Indication of which of the four event pairs (eight total events) to count in counter 0.
13	RW	PMUB_COUNTER0_POSEDGE_SELECT: If this bit is 1, the PMU only counts the event rising edge. If this bit is 0, the PMU counts every cycle the event is asserted (high).
14:15	RW	PMUB_COUNTER0_BIT_PAIR_SELECT: Indicates how the event pairs should be combined to increment this PMU counter.
16:19	RW	PMUB_COUNTER1_EVENT_SELECT: Indication of which of the four event pairs (eight total events) to count in counter 1.
20	RW	PMUB_COUNTER1_POSEDGE_SELECT: If this bit is 1, the PMU only counts the event rising edge. If this bit is 0, the PMU counts every cycle the event is asserted (high).
21:22	RW	PMUB_COUNTER1_BIT_PAIR_SELECT: Indicates how the event pairs should be combined to increment this PMU counter.
23:26	RW	PMUB_COUNTER2_EVENT_SELECT: Indication of which of the four event pairs (eight total events) to count in counter 2.
27	RW	PMUB_COUNTER2_POSEDGE_SELECT: If this bit is 1, the PMU only counts the event rising edge. If this bit is 0, the PMU counts every cycle the event is asserted (high).
28:29	RW	PMUB_COUNTER2_BIT_PAIR_SELECT: Indicates how the event pairs should be combined to increment this PMU counter.
30:33	RW	PMUB_COUNTER3_EVENT_SELECT: Indication of which of the four event pairs (eight total events) to count in counter 3.
34	RW	PMUB_COUNTER3_POSEDGE_SELECT: If this bit is 1, the PMU only counts the event rising edge. If this bit is 0, the PMU counts every cycle the event is asserted (high).
35:36	RW	PMUB_COUNTER3_BIT_PAIR_SELECT: Indicates how the event pairs should be combined to increment this PMU counter.
37:38	RW	PMUB_PMU_PORT_SELECT: Chooses final PMU events to feed to the counters.

Bits	SCOM	Field Mnemonic: Description
39:63	RO	constant = 0b00000000000000000000000000

Register Name	PMU Counters B Register
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_PMULET.PMU_CNTRB_REG
Address	0000000004010825 (SCOM)
Description	The PMU counters B register.

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	PMU_COUNTERB_0: PMU counter 0.
16:31	ROX	PMU_COUNTERB_1: PMU counter 1.
32:47	ROX	PMU_COUNTERB_2: PMU counter 2.
48:63	ROX	PMU_COUNTERB_3: PMU counter 3.

Register Name	Time of Day Synchronization Register
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_TOD.TOD_SYNC000
Address	0000000004010826 (SCOM)
Description	Time of day synchronization register.

Bits	SCOM	Field Mnemonic: Description
0:54	RWX	TIMEBASE: Timebase register.
55:59	ROX	TIMEBASE: Timebase register.
60:63	WO	CHIP_TOD_STATUS: Chip time of day status.

Register Name	CAPP Timebase Control Register
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_TOD.TFMR
Address	0000000004010827 (SCOM)
Description	Time facility management register (TFMR)

Bits	SCOM	Field Mnemonic: Description
0:7	RW	Reserved field.
8:9	RW	Reserved field.
10	RW	Reserved field.
11:13	RW	Reserved field.
14	RW	Reserved field.
15	RW	Reserved field.
16	RWX	Reserved field.
17	RWX	Reserved field.
18	RWX	Reserved field.
19	RWX	Reserved field.

Bits	SCOM	Field Mnemonic: Description
20	RWX	Reserved field.
21	RWX	Reserved field.
22	RWX	Reserved field.
23	RWX	Reserved field.
24	WOX	Reserved field.
25:26	RO	constant = 0b00
27	WOX_CLEAR	Reserved field.
28:31	ROX	Reserved field.
32:35	ROX	Reserved field.
36:39	RO	constant = 0b0000
40	ROX	Reserved field.
41	ROX	Reserved field.
42	ROX	Reserved field.
43	WOX_CLEAR	Reserved field.
44	WOX_CLEAR	Reserved field.
45	WOX_CLEAR	Reserved field.
46	WOX_CLEAR	Reserved field.
47:50	ROX	CHIP_TOD_STATUS: Chip time of day status.
51	ROX	Reserved field.
52:59	RO	constant = 0b00000000
60	WOX_CLEAR	Reserved field.

Register Name	Snoop Array Address Register
Mnemonic	CAPP1.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_ARRAY_ADDR_REG
Address	0000000004010828 (SCOM)
Description	Used to SCOM read and write of the SNP arrays.

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1:15	RWX	CXA_SNP_ARRAY_ADDRESS: SNP SCOM array address.
16:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	Snoop Array Read Register
Mnemonic	CAPP1.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_ARRAY_READ_REG
Address	0000000004010829 (SCOM)
Description	Holds data read via SCOM of the SNP arrays.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	CXA_SNP_ARRAY_READ_DATA: SNP SCOM array read data.

Register Name	APC Master Array Address Register
Mnemonic	CAPP1.CXA_TOP.CXA_APC1.APC_ARRY_ADDR
Address	000000000401082A (SCOM)
Description	Holds the address for array access 2 instances of CRESP arrays to get the four read ports. A write to either instance writes to both. A read only reads from one instance. encd_array_select: CRESP read copy0/write copies 0-1 for decodes = 0x0 through 0x5. uOP read/write for decode = 0x6. CRESP read copy1/write copies 0-1 for decodes = 0x8 through 0xC. array_address: address for selected array. This register increments on each access initiated by read.write to apc_arry_data register.

Bits	SCOM	Field Mnemonic: Description
0:1	RO	constant = 0b00
2:11	RWX	APCARY_ADDRESS: Address for APC master array access. Note: Due to the number of ports required, there are two identical copies of the CRESP arrays. The bits are parsed according to the range as follows: 0x000 – 0x15F: CRESP arrays (writes both copies, reads copy 0). 2:5 Array select. 6:11 Row address. 0x160 – 0x17F: Reserved (instantiated but unused). 0x180 – 0x1BF: APC master uOP table array. 2:5 Array select (= 0110). 6:11 Row address; this is the psl_ttype(0:5). 0x1C0 – 0x1FF: Reserved. 0x200 – 0x35F: CRESP arrays (writes both copies, reads copy 1). 2:5 Array select. 6:11 Row address. 0x360 – 0x37F: Reserved (instantiated but unused). 0x380 – 0x3FF: Reserved.
12:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	APC Master Array Read Data Register
Mnemonic	CAPP1.CXA_TOP.CXA_APC1.APC_ARRY_RDDATA
Address	000000000401082B (SCOM)
Description	Holds read data for array access. Read from array reads data from this register. Address used is in register apc_arry_addr. Address is auto-incremented when write/read operation completes.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	APCARY_RDDATA: Read data for APC master array access.

Register Name	CAPP Epoch and Recovery Timers Control Register
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_EPT.CAPP_EPOCH_AND_RECOVERY_TMR_CONTROL
Address	000000000401082C (SCOM)
Description	The epoch and recovery timers control register contains the enables and period controls for the epoch and recovery timers.

Bits	SCOM	Field Mnemonic: Description
0	RW	EPOCH_TIMER_ENABLE: When = 1, the epoch timer is enabled, otherwise it is disabled.
1	RW	RECOVERY_TIMER_ENABLE: When = 1, the recovery timer is enabled, otherwise it is disabled.

Bits	SCOM	Field Mnemonic: Description
2:31	RO	constant = 0b00000000000000000000000000000000
32:47	RW	EPOCH_TIMER_PERIOD_MASK: The mask determines the timer period. The mask and timer incrementers are bitwise ORed and AND reduced. When the output of the AND is 1, the timer has expired. By filling in the mask with ones from the most-significant bit toward the least, the timer pulse is divided by powers of 2. If zeros are placed between ones in the mask, the timer divider will be non-uniform.
48:63	RW	RECOVERY_TIMER_PERIOD_MASK: The mask determines the timer period. The mask and timer incrementers are bitwise ORed and AND reduced. When the output of the AND is 1, the timer has expired. By filling in the mask with ones from the most-significant bit toward the least, the timer pulse is divided by powers of 2. If zeros are placed between ones in the mask, the timer divider will be non-uniform.

Register Name	PHB TTAG Filter Register
Mnemonic	CAPP1.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_PHB_TTAG_FILTER_REG
Address	0000000004010831 (SCOM)
Description	This register is used to define which of the 48 APC FSMs read machines are available for use and therefore which TTAGs to care about.

Bits	SCOM	Field Mnemonic: Description
0:47	RW	CXA_SNP_PHB_TTAG_FILTER: For APC FSMs 0 to 47, set each bit to 1 for each queue that is available to CAPP for use .
48:63	RO	constant = 0b0000000000000000

Register Name	Snoop Array Write Register
Mnemonic	CAPP1.CXA_TOP.CXA_SNPFE.SNP_REGS.CXA_SNP_ARRAY_WRITE_REG
Address	0000000004010841 (SCOM)
Description	SCOM write data for SNP arrays.

Bits	SCOM	Field Mnemonic: Description
0:63	WO	CXA_SNP_ARRAY_WRITE_DATA: SNP SCOM array write data.

Register Name	APC Master Array Write Data Register
Mnemonic	CAPP1.CXA_TOP.CXA_APC1.APC_ARRY_WRDATA
Address	0000000004010842 (SCOM)
Description	Holds write data for array access write to array writes data to this register. Address used is in register apc_arry_addr. Address is auto-incremented when write/read operation completes.

Bits	SCOM	Field Mnemonic: Description
0:63	WOX	APCARY_WRDATA: Write data for APC master array access.

Register Name	Flush uOP Configuration Register
Mnemonic	CAPP1.CXA_TOP.CXA_APC1.DFSUOP1
Address	0000000004010843 (SCOM)
Description	UOP1 word used during directory flush.

Bits	SCOM	Field Mnemonic: Description
0:55	RW	DFSUOP1_WORD: UOP1 word used during directory flush.
56:63	RO	constant = 0b00000000

Register Name	AS Endpoint Tuple Register 0
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_AS.ASE_TUPLE0
Address	0000000004010846 (SCOM)
Description	AS endpoint tuple register 0 .

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b0000
4:15	RWX	ASE_TUPLE0_LPID: lpid(0:11) for ASE tuple0 register.
16:19	RO	constant = 0b0000
20:39	RWX	ASE_TUPLE0_PID: pid(0:15) for ASE tuple0 register .
40:43	RO	constant = 0b0000
44:59	RWX	ASE_TUPLE0_TID: tid(0:15) for ASE tuple0 register .
60:62	RO	constant = 0b000
63	RWX	ASE_TUPLE0_VALID: Valid for ASE tuple0 register.

Register Name	AS Endpoint Tuple Register 1
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_AS.ASE_TUPLE1
Address	0000000004010847 (SCOM)
Description	AS endpoint tuple register 1.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b0000
4:15	RWX	ASE_TUPLE1_LPID: lpid(0:11) for ASE tuple1 register.
16:19	RO	constant = 0b0000
20:39	RWX	ASE_TUPLE1_PID: pid(0:15) for ASE tuple1 register.
40:43	RO	constant = 0b0000
44:59	RWX	ASE_TUPLE1_TID: tid(0:15) for ASE tuple1 register.
60:62	RO	constant = 0b000
63	RWX	ASE_TUPLE1_VALID: Valid for ASE tuple1 register.

Register Name	AS Endpoint Tuple Register 2
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_AS.ASE_TUPLE2
Address	0000000004010848 (SCOM)
Description	AS endpoint tuple register 2.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b0000
4:15	RWX	ASE_TUPLE2_LPID: lpid(0:11) for ASE tuple2 register.
16:19	RO	constant = 0b0000
20:39	RWX	ASE_TUPLE2_PID: pid(0:15) for ASE tuple2 register.
40:43	RO	constant = 0b0000
44:59	RWX	ASE_TUPLE2_TID: tid(0:15) for ASE tuple2 register.
60:62	RO	constant = 0b000
63	RWX	ASE_TUPLE2_VALID: valid for ASE tuple2 register.

Register Name	AS Endpoint Tuple Register 3
Mnemonic	CAPP1.CXA_TOP.CXA_XPT.XPT_AS.ASE_TUPLE3
Address	0000000004010849 (SCOM)
Description	AS endpoint tuple register 3.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b0000
4:15	RWX	ASE_TUPLE3_LPID: lpid(0:11) for ASE tuple3 register.
16:19	RO	constant = 0b0000
20:39	RWX	ASE_TUPLE3_PID: pid(0:15) for ASE tuple3 register.
40:43	RO	constant = 0b0000
44:59	RWX	ASE_TUPLE3_TID: tid(0:15) for ASE tuple3 register.
60:62	RO	constant = 0b000
63	RWX	ASE_TUPLE3_VALID: Valid for ASE tuple3 register.

Register Name	PCI PBCQ Hardware Configuration Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.PBCQHWCFG_REG
Address	0000000004010C00 (SCOM)
Description	PCI PBCQ hardware configuration register.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	HANG_POLL_SCALE: How many hang polls that need to be detected to indicate a hang poll to the logic.
4:7	RW	HANG_DATA_SCALE: How many data polls that need to be detected to indicate a data poll to the logic.
8:11	RW	HANG_PE_SCALE: How many data polls that need to be detected to indicate a PE poll to the logic. A PE poll is created by the PCIi unit to detect hangs of SMs while waiting on exchanges with the PCI logic.
12	RW	PE_BLOCK_CQPB_PB_INIT: When set, PCI to PB data movement ignores the PB initial signal. When not set, PCI to PB data movement will stop on cache line boundaries.
13	RW	DISABLE_RCMD_CLKGATE: Chicken switch to turn off the clock gating that occurs on a rcmd when the command is not for the PE.
14	RW	PE_HANG_SM_ON_ARE: Controls processor bus master state machines when an ARE is received.
15	RW	PE_DISABLE_PCI_CLK_CHECK: Disables the logic that checks valid PCI clocks (FIR bit 15).

Bits	SCOM	Field Mnemonic: Description
16	RW	LFSR_ARB_MODE: 1=use LFSR in outbound arbitration.
17	RW	PE_ENABLE_DMAR_IOPACING: Allow I/O pacing scheme for DMA read operations.
18	RW	PE_ENABLE_DMAW_IOPACING: Allow I/O pacing scheme for DMA write operations.
19	RW	PE_ADR_BAR_MODE: Address mode register for PE unit.
20	RW	PE_STQ_ALLOCATION: Queue allocation between stores and p2p: 0 = stq_1_reserved for each type, the rest floating 1 = stq_1_only Only one queue used for all traffic. The remaining seven are unused.
21	RW	DISABLE_LPC_CMDS: Disable LPC acknowledgment for commands that the PE does not service.
22	RW	PE_DISABLE_OOO_MODE: PE order OOO type CI stores like a normal CI store command.
23:26	RW	PE_OSMB_EARLY_START: Determines how much overlap of reading/writing the OSMB allows: 0b0000 = Most conservative, full packet written in before signaling PCI side 0b0001 = Most conservative, full packet written in before signaling PCI side 0b0010 = Start 2 writes from the end of the packet 0b0011 = Start 3 writes from the end of the packet 0b0100 = Start 4 writes from the end of the packet 0b0101 = Start 5 writes from the end of the packet 0b0110 = Start 6 writes from the end of the packet 0b0111 = Start 7 writes from the end of the packet 0b1000 = Most aggressive, start 8 writes from the end of the packet, before any data written 0b1111 = Extra aggressive, start before any data written (that is, when the command is written
27:28	RW	PE_QFIFO_HOLD_MODE: Determines how much overlap of reading/writing the OSMB allows: 0b00 = Stop sending outbound commands when QFIFO is full(default) 0b01 = Stop sending outbound commands when QFIFO has 1 entry empty 0b10 = Stop sending outbound commands when QFIFO has 3 entry empty 0b11 = Ignore QFIFO count when sending outbound packets
29:31	RW	Reserved field.
32	RW	PE_WR_STRICT_ORDER_MODE: Strictly order inbound write commands, independent of node ID.
33	RW	PE_CHANNEL_STREAMING_EN: Enable processor bus channel streaming operations.
34:35	RW	PE_WR_CACHE_INJECT_MODE: Mode bits for controlling processor bus cCache inject: DisableCacheInj(00) = Disable all cache injections(debug only) LegacyCacheInj(01) = Cache inject after a addr_hpc_ack combined response TLPHintCacheInj(10) = Start with cache inject if TLP hints indicate cache inject (TLP hints non-zero) P9ModetCacheInj(11) = Start with cache inject unconditionally
36	RW	PE_ENABLE_NEW_FLOW_CACHE_INJECT: Start new flows on PE to send cache inject commands.
37	RW	PE_DISABLE_INJ_ON_RESEND: Controls cache inject on resends when other cache inject modes are disabled.
38	RW	PE_FORCE_DISABLED_CTAG_TO_FOLLOW_FLOW: When CTAGs are disable, forces DMA writes to still use flows for non-ordering reasons.
39	RW	PE_ENABLE_ENH_FLOW: Controls cache inject on resends when other cache inject modes are disabled.
40	RW	Reserved field.
41	RW	PE_DISABLE_WR_VG: Force all DMA write requests to system scope when they progress to VG scope.
42	RW	PE_DISABLE_WR_SCOPE_GROUP: Disable group scope on DMA write requests.
43	RW	PE_DISABLE_INTWR_VG: Force all initial write requests to system scope when they progress to VG scope.
44	RW	PE_DISABLE_INTWR_SCOPE_GROUP: Disable group scope on initial write requests.
45	RW	PE_DISABLE_INTWR_SCOPE_NODE: Disable node scope on initial write requests.
46:47	RW	Reserved field.

Bits	SCOM	Field Mnemonic: Description
48:49	RW	PE_RD_WRITE_ORDERING: Ordering modes for reads verses writes: NodeMatch(110) = All non-write commands wait behind all writes that match its node AnyNode(111) = All non-write commands wait behind all writes All others are reserved.
50	RW	PE_DISABLE_RD_SCOPE_NODAL: Disable nodal scope on non-TCE DMA read requests.
51	RW	PE_DISABLE_RD_SCOPE_GROUP: Disable group scope on non-TCE DMA read requests.
52	RW	PE_DISABLE_RD_SCOPE_RNNN: Disable RN and Nn scopes on non-TCE DMA read requests.
53	RW	PE_ENABLE_RD_SKIP_GROUP: Skip group scope on non-TCE DMA read requests.
54	RW	PE_DISABLE_RD_VG: Use VG(sys) when at VG scope.
55	RW	PE_DISABLE_TCE_SCOPE_NODAL: Disable nodal scope on non-TCE DMA read requests.
56	RW	PE_DISABLE_TCE_SCOPE_GROUP: Disable group scope on non-TCE DMA read requests.
57	RW	PE_DISABLE_TCE_SCOPE_RNNN: Disable RnNn scopes on non-TCE DMA read requests.
58	RW	PE_ENABLE_TCE_SKIP_GROUP: Skip group scope on TCE DMA read requests.
59	RW	PE_DISABLE_TCE_VG: Use Vg(sys) when at VG scope.
60	RW	PE_DISABLE_TCE_ARBITRATION: Disable preferential TCE read request arbitration.
61	RW	PE_DISABLE_CQ_TCE_ARBITRATION: Disable preferential TCE read response arbitration.
62	RW	PE_DISABLE_MC_PREFETCH: Disable setting PADE bits in cl_rd_nc requests.
63	RW	PE_IGNORE_SFSTAT: Controls DMA read state machine behavior when receiving SFSTAT.

Register Name	Drop Priority Control Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.DRPPRICTL_REG
Address	0000000004010C01 (SCOM)
Description	Drop priority control register

Bits	SCOM	Field Mnemonic: Description
0:5	RW	PE_DROPPRIORITYMASK: Mask value to determine when a rty_drp will cause the priority to increment on the next request (enable_IO_cmd_pacing = 0) or the DropPaceCounter will be incremented based on dep(enable_IO_cmd_pacing = 1). When LSFR bits match mask drop priority, one of these two actions will be taken (DMA write commands only).
6	RW	PE_ENABLE_CTAG_DROP_PRIORITY: Allow commands in a CTAG stream to take the priority of previous rty_drp commands in the stream. If not set, each commands priority is sent independently.
7	RW	PE_ENABLE_IO_CMD_PACING: When a rty_drop CRESP is received, keep drop priority constant and lower command rate until the pacing count is reached. Pacing counter is incremented instead. When not set, drop priority is raised when DropPriorityMask = LSFR value.
8:16	RW	PE_DROPPACECOUNT: Value to use when determining if drop priority should be increased when I/O command pacing is enabled. When the drop priority counter reaches this value, the drop priority is increased (enable_IO_cmd_pacing = 1). Not used when enable_IO_cmd_pacing = 0.
17:22	RW	PE_DROPPACEINC: Value to use when determining how much drop pace count should increase when a retry drop CRESP occurs. Not used when enable_IO_cmd_pacing = 0.

Bits	SCOM	Field Mnemonic: Description
23:25	RW	PE_RTYDROPDIVIDER: Value used to divide down rty_drp combined responses before invoking drop priority: 000/001 = 1st retry drop combined response will invoke drop priority mechanism 010 = 2nd retry drop combined response will invoke drop priority mechanism 011 = 3rd retry drop combined response will invoke drop priority mechanism 100 = 4th retry drop combined response will invoke drop priority mechanism 101 = 5th retry drop combined response will invoke drop priority mechanism 110 = 6th retry drop combined response will invoke drop priority mechanism 111 = 7th retry drop combined response will invoke drop priority mechanism
26:63	RO	constant = 0b00000000000000000000000000000000000000000

Register Name	PBCQ Error Inject Control Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.PBCQEINJ_REG
Address	0000000004010C02 (SCOM)
Description	PBCQ error inject control register.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	PE_ECC_INJECT_TYPE: Determines the type of ECC error injected: 01 = Correctable error/Parity error 10 = Uncorrectable error 11 = Special uncorrectable error
2	RW	PE_CQ_ECC_INJECT_ENABLE: Enable ECC inject on CQ arrays.
3:6	RW	PE_CQ_SRAM_ARRAY: Determines which CQ SRAM array to force the ECC error into: 0000 = CI store 00:63 0001 = CI store 64:127 0010 = DMA read 00:63 0011 = DMA read 64:127 1000 = DMA write 00:63 1001 = DMA write 64:127 1010 = CI load 00:63 1011 = CI load 64:127
7	RW	PE_CQ_PAR_INJECT_ENABLE: Enable parity inject on CQ arrays.
8:10	RW	PE_CQ_REGISTER_ARRAY: Determines which CQ SRAM array to force the ECC error into: 000 = PBCQ array 001 = TTAG 010 = RTAG 011 = Outbound SMB 100 = CQPB DMAR 101 = CQPB DMAW 110 - 111 = Reserved
11	RW	PE_CONSTANT_EINJ: 1=constant error inject, 0=one hot error inject
12:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	PCI Nest Clock Trace Control Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.NESTTRC_REG
Address	0000000004010C03 (SCOM)
Description	PCI nest clock trace control register.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	Reserved field.
4:7	RW	Reserved field.
8:11	RW	Reserved field.
12:15	RW	Reserved field.
16	RW	Reserved field.
17:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000

Register Name	PBCQ Performance Monitor Control Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.PMONCTL_REG
Address	0000000004010C04 (SCOM)
Description	PBCQ performance monitor control register.

Bits	SCOM	Field Mnemonic: Description
0:31	RW	PE_PERFMON_EN: Enable performance monitor outputs per bit.
32:33	RW	PE_PERFMON_READ_TYPE: 00: DMA read events count TCE or DMA read requests: 01 = DMA read events count only TCE requests 10 = DMA read events count only DMA read requests 11 = Reserved, behavior unpredictable
34:35	RW	Reserved field.
36:39	RW	PE_PMON_MUX_BYTE0: 0000: Group 0: 0001 = Group 1 0010 = Group 2 0011 = Group 3 0100 = Group 4 0101 = Group 5 0110 = Group 6 0111-1111 = Reserved, behavior unpredictable
40:43	RW	PE_PMON_MUX_BYTE1: 0000: Group 0: 0001 = Group 1 0010 = Group 2 0011 = Group 3 0100 = Group 4 0101 = Group 5 0110 = Group 6 0111-1111 = Reserved, behavior unpredictable
44:47	RW	PE_PMON_MUX_BYTE2: 0000: Group 0: 0001 = Group 1 0010 = Group 2 0011 = Group 3 0100 = Group 4 0101 = Group 5 0110 = Group 6 0111-1111 = Reserved, behavior unpredictable

Bits	SCOM	Field Mnemonic: Description
48:51	RW	PE_PMON_MUX_BYTE3: 0000: Group 0; 0001 = Group 1 0010 = Group 2 0011 = Group 3 0100 = Group 4 0101 = Group 5 0110 = Group 6 0111-1111 = Reserved, behavior unpredictable
52:63	RO	constant = 0b000000000000

Register Name	PBCQ Tunnel BAR Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.TUNNEL_BAR_REG
Address	0000000004010C05 (SCOM)
Description	Tunnel bar for the return address of a tunneled packet.

Bits	SCOM	Field Mnemonic: Description
0:42	RW	PE_TUNNEL_BAR: Tunnel bar for the return address of a tunneled packet.
43:59	RO	constant = 0b00000000000000000

Register Name	PBCQ Predictive Vector Timeout Mask Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.PREDV_REG
Address	0000000004010C06 (SCOM)
Description	Predictive vector timeout mask register.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	PE_RD_PREDV_TIMEOUT_MASK: Predictive target timeout for reads.
8:15	RW	PE_WR_PREDV_TIMEOUT_MASK: Predictive target timeout for writes.
16:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	PE CAPP Control Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.PECAPP_CNTL_REG
Address	0000000004010C07 (SCOM)
Description	PE CAPP control register.

Bits	SCOM	Field Mnemonic: Description
0	RW	PE_CAPP_EN: Enable CAPP mode of operation.
1	RW	PE_CAPP_P8_MODE: Enable CAPP mode of operation.
2:11	RW	Reserved.
12:15	RW	PE_CAPP_NUM_MSG_ENG: Number of store queue assigned to CAPP for messages. Assigned 15->2 or 7->2 depending on configuration.
16:63	RW	PE_CAPP_APC_ENG: 48 bit vector to assign read queues to CAPP APC engines.

Register Name	PCI Nest FIR Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.STACK#0.REGS.NFIR_REG
Address	0000000004010C40 (SCOM) 0000000004010C41 (SCOM1) 0000000004010C42 (SCOM2)
Description	PCI nest FIR register.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:29	RWX	WOX_AND	WOX_OR	NFIRNFIR: PCI nest FIR NFIR.
30:63	RO	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	PCI Nest FIR Mask Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.STACK#0.REGS.NFIRMASK_REG
Address	0000000004010C43 (SCOM) 0000000004010C44 (SCOM1) 0000000004010C45 (SCOM2)
Description	PCI nest FIR mask register: 0 = No Mask 1 = Mask Error

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:29	RW	WO_AND	WO_OR	NFIRMASK: PCI nest FIR mask.
30:63	RO	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	PCI Nest FIR Action0 Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.STACK#0.REGS.NFIRACTION0_REG
Address	0000000004010C46 (SCOM)
Description	PCI nest FIR action0 register.

Bits	SCOM	Field Mnemonic: Description
0:29	RW	NFIRACTION0: Action0 select for corresponding bit in FIR. (Action0,Mask) = Action Select (0,0) = Checkstop error (0,1) = Recoverable error (1,0) = No Action (1,1) = Freeze
30:63	RO	constant = 0b00000000000000000000000000000000

Register Name	PCI Nest FIR Action1 Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.STACK#0.REGS.NFIRACTION1_REG
Address	0000000004010C47 (SCOM)
Description	PCI nest FIR action1 register.

Bits	SCOM	Field Mnemonic: Description
0:29	RW	NFIRACTION1: Action1 select for corresponding bit in FIR. (Action1,Mask) = Action Select (0,0) = Checkstop error (0,1) = Recoverable error (1,0) = No action (1,1) = Freeze
30:63	RO	constant = 0b00000000000000000000000000000000

Register Name	PCI Nest FIR WOF Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.STACK#0.REGS.NFIRWOF_REG
Address	0000000004010C48 (SCOM)
Description	PCI nest FIR WOF register.

Bits	SCOM	Field Mnemonic: Description
0:29	RWX_WCLRREG	Reserved.
30:63	RO	constant = 0b00000000000000000000000000000000

0:16	ROX	Reserved.
17:47	RO	constant = 0b00000000000000000000000000000000

Register Name	PBCQ General Status Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.STACK#0.REGS.CQSTAT_REG
Address	0000000004010C4C (SCOM)
Description	PBCQ general status register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	PE_INBOUND_ACTIVE: Inbound (PCIE->PB) state machines are active.
1	ROX	PE_OUTBOUND_ACTIVE: Outbound (PB->PCIE) state machines are active.
2:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	PBCQ General Status Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.STACK#0.REGS.PBCQMODE_REG
Address	0000000004010C4D (SCOM)
Description	PBCQ general status register

Bits	SCOM	Field Mnemonic: Description
0	RW	PE_PEER2PEER_MODDE: Enable peer to peer operations.
1	RW	PE_ENHANCED_PEER2PEER_MODDE: Enable enhanced peer to peer operations.
2:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	PE Bus MMIO Base Address Register 0
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.STACK#0.REGS.MMIOBAR0_REG
Address	0000000004010C4E (SCOM)
Description	PE bus MMIO base address register 0.

Bits	SCOM	Field Mnemonic: Description
0:39	RW	PE_MMIO_BAR0: PE bus I/O base address register 0. Bits 8 to 47 of the base address range are specified with this LDial. Bits 8 to 47 of a snoop address are compared with this base address after ANDing bits 8 to 47 of the corresponding mask register with each. If the compare is TRUE, the snoop address falls within the address range specified by the BAR/Mask pair.
40:63	RO	constant = 0b000000000000000000000000

Register Name	PE Bus MMIO Base Address Register 0
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.STACK#0.REGS.MMIOBAR0_MASK_REG
Address	0000000004010C4F (SCOM)
Description	PE bus MMIO base address register 0.

Bits	SCOM	Field Mnemonic: Description
0:39	RW	PE_MMIO_MASK0: PE bus I/O base address register mask 0. This LDial specifies the size of the address range which is specified by this BAR/Mask pair. The range size must be a power of two. Valid range sizes go from 64KB up to 32PB.
40:63	RO	constant = 0b000000000000000000000000

Register Name	PE Bus MMIO Base Address Register 1
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.STACK#0.REGS.MMIOBAR1_REG
Address	0000000004010C50 (SCOM)
Description	PE bus MMIO base address register 1.

Bits	SCOM	Field Mnemonic: Description
0:39	RW	PE_MMIO_BAR1: PE bus I/O Base Address Register 1. Bits 8 to 47 of the base address range are specified with this LDial. Bits 8 to 47 of a snoop address are compared with this base address after ANDing bits 8 to 47 of the corresponding mask register with each. If the compare is TRUE, the snoop address falls within the address range specified by the BAR/Mask pair.
40:63	RO	constant = 0b0000000000000000000000

Register Name	PE Bus MMIO Base Address Register 1
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.STACK#0.REGS.MMIOBAR1_MASK_REG
Address	0000000004010C51 (SCOM)
Description	PE bus MMIO base address register 1.

Bits	SCOM	Field Mnemonic: Description
0:39	RW	PE_MMIO_MASK1: PE bus I/O base address register mask 1. This LDial specifies the size of the address range which is specified by this BAR/Mask pair. The range size must be a power of two. Valid range sizes go from 64KB up to 32PB.
40:63	RO	constant = 0b0000000000000000000000

Register Name	PE Bus PHB Base Address Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.STACK#0.REGS.PHBBAR_REG
Address	0000000004010C52 (SCOM)
Description	PE bus PHB base address register.

Bits	SCOM	Field Mnemonic: Description
0:41	RW	PE_PHB_BAR: PE bus PHB base address register. Bits 8 to 49 of the base address range are specified with this LDial. Bits 8 to 49 of a snoop address are compared with this base address. If the compare is TRUE, the snoop address falls within the address range specified by the BAR. This BAR is intended for PHB MMIO space which is fixed at 4K, so there is not a mask.
42:63	RO	constant = 0b00000000000000000000

Register Name	PE Bus Initial Base Address Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.STACK#0.REGS.INTBAR_REG
Address	0000000004010C53 (SCOM)
Description	PE Bus initial base address register.

Bits	SCOM	Field Mnemonic: Description
0:27	RW	PE_INT_BAR: PE bus initial base address register. Bits 8 to 35 of the base address range are specified with this LDial. Bits 8 to 35 of a snoop address are compared with this base address. If the compare is TRUE, the snoop address falls within the address range specified by the BAR. This BAR is intended for int space which is fixed at 256M, so there is not a mask.
28:63	RO	constant = 0b00000000000000000000000000000000000000

Register Name	PE BAR Enables Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.STACK#0.REGS.BARE_REG
Address	0000000004010C54 (SCOM)
Description	PE BAR enables register.

Bits	SCOM	Field Mnemonic: Description
0	RW	PE_MMIO_BAR0_EN: PE MMIO base address register 0 enable. Each BAR/Mask set has one enable bit.
1	RW	PE_MMIO_BAR1_EN: PE MMIO base address register 1 enable. Each BAR/Mask set has one enable bit.
2	RW	PE_PHB_BAR_EN: PE PHB base address register enable. Each BAR/Mask set has one enable bit.
3	RW	PE_INT_BAR_EN: PE initial base address register enable. Each BAR/Mask set has one enable bit.
4:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	PCI Nest Data Freeze Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.STACK#0.REGS.PE_DFREEZE_REG
Address	0000000004010C55 (SCOM)
Description	PCI nest data freeze register.

Bits	SCOM	Field Mnemonic: Description
0:27	RW	PE_DFREEZE: Dfreeze select for corresponding bit in FIR: (dfreeze,Mask) = Action Select (1) = data freeze if action0:1=b11 (0) = data freeze if action0:1=b11 and freeze occurs before data is received

Register Name	PCI Nest Data Freeze Register
Mnemonic	PE0.PB0.PBCQ.PEPBREGS.STACK#2.REGS.PE_DFREEZE_REG
Address	0000000004010CD5 (SCOM)
Description	PCI nest data freeze register.

Bits	SCOM	Field Mnemonic: Description
0:27	RW	PE_DFREEZE: Dfreeze select for corresponding bit in FIR. (dfreeze,Mask) = Action Select (1) = Data freeze if action0:1=b11 (0) = Data freeze if action0:1=b11 and freeze occurs before data is received
28:63	RO	constant = 0b00000000000000000000000000000000000000

Register Name	PCI PBCQ Hardware Configuration Register
Mnemonic	PE1.PB1.PBCQ.PEPBREGS.PBCQHWCFG_REG
Address	0000000004011000 (SCOM)
Description	PCI PBCQ hardware configuration register.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	HANG_POLL_SCALE: How many hang polls that need to be detected to indicate a hang poll to the logic.
4:7	RW	HANG_DATA_SCALE: How many data polls that need to be detected to indicate a data poll to the logic.
8:11	RW	HANG_PE_SCALE: How many data polls that need to be detected to indicate a PE poll to the logic. A PE poll is created by the PCI unit to detect hangs of SMs while waiting on exchanges with the PCI logic.
12	RW	PE_BLOCK_CQPB_PB_INIT: When set, PCI to PB data movement ignores the PB initial signal. When not set, PCI to PB data movement will stop on cache line boundaries.
13	RW	DISABLE_RCMD_CLKGATE: Chicken switch to turn off the clock gating which occurs on rcmd when the command is not for PE.
14	RW	PE_HANG_SM_ON_ARE: Controls processor bus master state machines when an ARE is received.
15	RW	PE_DISABLE_PCI_CLK_CHECK: Disables the logic that checks valid PCI clocks (FIR bit 15).
16	RW	LFSR_ARB_MODE: 1 = Use LFSR in outbound arbitration.
17	RW	PE_ENABLE_DMAR_IOPACING: Allow I/O pacing scheme for DMA read operations.
18	RW	PE_ENABLE_DMAW_IOPACING: Allow I/O pacing scheme for DMA write operations.
19	RW	PE_ADR_BAR_MODE: Address mode register for PE unit.
20	RW	PE_STQ_ALLOCATION: Queue allocation between stores and p2p: 0 = stq_1_Reserved for each type, the rest floating 1 = stq_1_only. Only 1 queue is used for all traffic. The remaining 7 are unused.
21	RW	DISABLE_LPC_CMDS: Disable LPC acknowledgment for commands that the PE does not service.
22	RW	PE_DISABLE_OOO_MODE: PE order OOO type CI stores like a normal CI store command.
23:26	RW	PE_OSMB_EARLY_START: Determines how much overlap of reading/writing the OSMB allows: 0b0000 = Most conservative, full packet written in before signaling PCI side 0b0001 = Most conservative, full packet written in before signaling PCI side 0b0010 = Start 2 writes from the end of the packet 0b0011 = Start 3 writes from the end of the packet 0b0100 = Start 4 writes from the end of the packet 0b0101 = Start 5 writes from the end of the packet 0b0110 = Start 6 writes from the end of the packet 0b0111 = Start 7 writes from the end of the packet 0b1000 = Most aggressive, start 8 writes from the end of the packet, before any data written 0b1111 = Extra aggressive, start before any data written (that is, when command is written)
27:28	RW	PE_QFIFO_HOLD_MODE: Determines how much overlap of reading/writing the OSMB allows: 0b00 = Stop sending outbound commands when QFIFO is full(default) 0b01 = Stop sending outbound commands when QFIFO has 1 entry empty 0b10 = Stop sending outbound commands when QFIFO has 3 entry empty 0b11 = Ignore QFIFO count when sending outbound packets
29:31	RW	Reserved field.
32	RW	PE_WR_STRICT_ORDER_MODE: Strictly order inbound write commands, Independent of node ID.
33	RW	PE_CHANNEL_STREAMING_EN: Enable processor bus channel streaming operations.

Bits	SCOM	Field Mnemonic: Description
34:35	RW	PE_WR_CACHE_INJECT_MODE: Mode bits for controlling processor bus cache inject: DisableCacheInj(00) = Disable all cache injections (debug only) LegacyCacheInj(01) = Cache inject after a addr_hpc_ack combined response TLPHintCacheInj(10) = Start with cache inject if TLP hints indicate cache inject (TLP hints non-zero) P9ModetCacheInj(11) = Start with cache inject unconditionally
36	RW	PE_ENABLE_NEW_FLOW_CACHE_INJECT: Start new flows on PE to send cache inject commands.
37	RW	PE_DISABLE_INJ_ON_RESEND: Controls cache inject on resends when other cache inject modes are disabled.
38	RW	PE_FORCE_DISABLED_CTAG_TO_FOLLOW_FLOW: When CTAGs are disable, forces DMA writes to still use flows for non-ordering reasons.
39	RW	PE_ENABLE_ENH_FLOW: Controls cache inject on resends when other cache inject modes are disabled.
40	RW	Reserved field.
41	RW	PE_DISABLE_WR_VG: Force all DMA write requests to system scope when they progress to VG scope.
42	RW	PE_DISABLE_WR_SCOPE_GROUP: Disable group scope on DMA write requests.
43	RW	PE_DISABLE_INTWR_VG: Force all initial write requests to system scope when they progress to VG scope.
44	RW	PE_DISABLE_INTWR_SCOPE_GROUP: Disable group scope on initial write requests.
45	RW	PE_DISABLE_INTWR_SCOPE_NODE: Disable node scope on initial write requests.
46:47	RW	Reserved field.
48:49	RW	PE_RD_WRITE_ORDERING: Ordering modes for reads versus writes: NodeMatch(110) = All non-write commands wait behind all writes that match its node AnyNode(111) = All non-write commands wait behind all writes All others are reserved.
50	RW	PE_DISABLE_RD_SCOPE_NODAL: Disable nodal scope on non-TCE DMA read requests.
51	RW	PE_DISABLE_RD_SCOPE_GROUP: Disable group scope on non-TCE DMA read requests.
52	RW	PE_DISABLE_RD_SCOPE_RNNN: Disable RN and Nn scopes on non-TCE DMA read requests.
53	RW	PE_ENABLE_RD_SKIP_GROUP: Skip group scope on non-TCE DMA read requests.
54	RW	PE_DISABLE_RD_VG: Use VG(sys) when at VG scope.
55	RW	PE_DISABLE_TCE_SCOPE_NODAL: Disable nodal scope on non-TCE DMA read requests.
56	RW	PE_DISABLE_TCE_SCOPE_GROUP: Disable Group scope on non-TCE DMA read requests.
57	RW	PE_DISABLE_TCE_SCOPE_RNNN: Disable RnNn scopes on non-TCE DMA read requests.
58	RW	PE_ENABLE_TCE_SKIP_GROUP: Skip group scope on TCE DMA read requests.
59	RW	PE_DISABLE_TCE_VG: Use VG(sys) when at VG scope.
60	RW	PE_DISABLE_TCE_ARBITRATION: Disable preferential TCE read request arbitration.
61	RW	PE_DISABLE_CQ_TCE_ARBITRATION: Disable preferential TCE read response arbitration.
62	RW	PE_DISABLE_MC_PREFETCH: Disable setting PADE bits in cl_rd_nc requests.
63	RW	PE_IGNORE_SFSTAT: Controls DMA read state machine behavior when receiving SFSTAT.

Register Name	**Drop Priority Control Register**
Mnemonic	PE1.PB1.PBCQ.PEPBREGS.DRPPRICTL_REG
Address	0000000004011001 (SCOM)
Description	Drop priority control register.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	PE_DROPPRIORITYMASK: Mask value to determine when a rty_drp will cause the priority to increment on the next request (enable_IO_cmd_pacing = 0) or the DropPaceCounter will be incremented base on dep(enable_IO_cmd_pacing = 1). When LSFR bits match mask drop priority, one of these two actions is taken (DMA write commands only).
6	RW	PE_ENABLE_CTAG_DROP_PRIORITY: Allow commands in a CTAG stream to take the priority of previous rty_drp commands in the stream. If not set, each commands priority is sent independently.
7	RW	PE_ENABLE_IO_CMD_PACING: When a rty_drop CRESP is received, keep drop priority constant and lower command rate until the pacing count is reached. Pacing counter is incremented instead. When not set, drop priority is raised when DropPriorityMask = LSFR value.
8:16	RW	PE_DROPPACECOUNT: Value to use when determining if drop priority should be increase when I/O command pacing is enabled. When the drop priority counter reaches this value, the drop priority is increased (enable_IO_cmd_pacing = 1). Not used when enable_IO_cmd_pacing = 0.
17:22	RW	PE_DROPPACEINC: Value to use when determining how much drop pace count should increase when a retry drop CRESP occurs. Not used when enable_IO_cmd_pacing = 0.
23:25	RW	PE_RTYDROPDIVIDER: Value used to divide down rty_drp combined responses before invoking drop priority: 000/001 = 1st retry drop combined response will invoke drop priority mechanism 010 = 2nd retry drop combined response will invoke drop priority mechanism 011 = 3rd retry drop combined response will invoke drop priority mechanism 100 = 4th retry drop combined response will invoke drop priority mechanism 101 = 5th retry drop combined response will invoke drop priority mechanism 110 = 6th retry drop combined response will invoke drop priority mechanism 111 = 7th retry drop combined response will invoke drop priority mechanism

Address	000000000401108F (SCOM)
Description	PE bus MMIO base address register 0.

Bits	SCOM	Field Mnemonic: Description
0:39	RW	PE_MMIO_MASK0: PE bus I/O base address register mask 0. This LDial specifies the size of the address range which is specified by this BAR/Mask pair. The range size must be a power of two. Valid range sizes go from 64KB up to 32PB.
40:63	RO	constant = 0b000000000000000000000000

Register Name	PE Bus MMIO Base Address Register 1
Mnemonic	PE1.PB1.PBCQ.PEPBREGS.STACK#1.REGS.MMIOBAR1_REG
Address	0000000004011090 (SCOM)
Description	PE bus MMIO base address register 1.

Bits	SCOM	Field Mnemonic: Description
0:39	RW	PE_MMIO_BAR1: PE bus I/O base address register 1. Bits 8 to 47 of the base address range are specified with this Ldial. Bits 8 to 47 of a snoop address are compared with this base address after ANDing bits 8 to 47 of the corresponding mask register with each. If the compare is TRUE, the snoop address falls within the address range specified by the BAR/Mask pair.
40:63	RO	constant = 0b0000000000000000000000000

Register Name	PE Bus MMIO Base Address Register 1
Mnemonic	PE1.PB1.PBCQ.PEPBREGS.STACK#1.REGS.MMIOBAR1_MASK_REG
Address	0000000004011091 (SCOM)
Description	PE bus MMIO base address register 1.

Bits	SCOM	Field Mnemonic: Description
0:39	RW	PE_MMIO_MASK1: PE bus I/O base address register mask 1. This LDial specifies the size of the address range which is specified by this BAR/Mask pair. The range size must be a power of two. Valid range sizes go from 64KB up to 32PB.
40:63	RO	constant = 0b0000000000000000000000000

Register Name	PE Bus PHB Base Address Register
Mnemonic	PE1.PB1.PBCQ.PEPBREGS.STACK#1.REGS.PHBBAR_REG
Address	0000000004011092 (SCOM)
Description	PE bus PHB base address register.

Bits	SCOM	Field Mnemonic: Description
0:41	RW	PE_PHB_BAR: PE bus PHB base address register. Bits 8 to 49 of the base address range are specified with this LDial. Bits 8 to 49 of a snoop address are compared with this base address. If the compare is TRUE, the snoop address falls within the address range specified by the BAR. This BAR is intended for PHB MMIO space which is fixed at 4K, so there is not a mask.
42:63	RO	constant = 0b00000000000000000000

Register Name	PE Bus Initial Base Address Register
Mnemonic	PE1.PB1.PBCQ.PEPBREGS.STACK#1.REGS.INTBAR_REG
Address	0000000004011093 (SCOM)
Description	PE bus initial base address register.

Bits	SCOM	Field Mnemonic: Description
0:27	RW	PE_INT_BAR: PE bus initial base address register. Bits 8 to 35 of the base address range are specified with this LDial. Bits 8 to 35 of a snoop address are compared with this base address. If the compare is TRUE, the snoop address falls within the address range specified by the BAR. This BAR is intended for int space which is fixed at 256M, so there is not a mask.
28:63	RO	constant = 0b00000000000000000000000000000000000000

Register Name	PE BAR Enables Register
Mnemonic	PE1.PB1.PBCQ.PEPBREGS.STACK#1.REGS.BARE_REG
Address	0000000004011094 (SCOM)
Description	PE BAR enables register.

Bits	SCOM	Field Mnemonic: Description
0	RW	PE_MMIO_BAR0_EN: PE MMIO base address register 0 enable. Each BAR/Mask set has one enable bit.
1	RW	PE_MMIO_BAR1_EN: PE MMIO base address register 1 enable. Each BAR/Mask set has one enable bit.
2	RW	PE_PHB_BAR_EN: PE PHB base address register enable. Each BAR/Mask set has one enable bit.
3	RW	PE_INT_BAR_EN: PE initial base address register enable. Each BAR/Mask set has one enable bit.
4:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	PCI Nest Data Freeze Register
Mnemonic	PE1.PB1.PBCQ.PEPBREGS.STACK#1.REGS.PE_DFREEZE_REG
Address	0000000004011095 (SCOM)
Description	PCI nest data freeze register.

Bits	SCOM	Field Mnemonic: Description
0:27	RW	PE_DFREEZE: Dfreeze select for corresponding bit in FIR. (dfreeze,Mask) = Action Select (1) = Data freeze if action0:1=b11 (0) = data freeze if action0:1=b11 and freeze occurs before data is received
28:63	RO	constant = 0b00000000000000000000000000000000000000

Register Name	PCI Nest FIR Register

Register Name	PCI Nest Data Freeze Register
Mnemonic	PE1.PB1.PBCQ.PEPBREGS.STACK#2.REGS.PE_DFREEZE_REG
Address	00000000040110D5 (SCOM)
Description	PCI nest data freeze register.

Bits	SCOM	Field Mnemonic: Description
0:27	RW	PE_DFREEZE: Dfreeze select for corresponding bit in FIR. (dfreeze,Mask) = Action Select (1) = Data freeze if action0:1=b11 (0) = Data freeze if action0:1=b11 and freeze occurs before data is received
28:63	RO	constant = 0b00000000000000000000000000000000000000

Register Name	PCI PBCQ Hardware Configuration Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.PBCQHWCFG_REG
Address	0000000004011400 (SCOM)
Description	PCI PBCQ hardware configuration register.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	HANG_POLL_SCALE: How many hang polls that need to be detected to indicate a hang poll to the logic.
4:7	RW	HANG_DATA_SCALE: How many data polls that need to be detected to indicate a data poll to the logic.
8:11	RW	HANG_PE_SCALE: How many data polls that need to be detected to indicate a PE poll to the logic. A PE poll is created by the PCI unit to detect hangs of SMs while waiting on exchanges with the PCI logic.
12	RW	PE_BLOCK_CQPB_PB_INIT: When set, PCI to PB data movement ignores the PB initial signal. When not set, PCI to PB data movement will stop on cache line boundaries.
13	RW	DISABLE_RCMD_CLKGATE: Chicken switch to turn off the clock gating which occurs on rcmd when the command is not for PE.
14	RW	PE_HANG_SM_ON_ARE: Controls processor bus master state machines when an ARE is received.
15	RW	PE_DISABLE_PCI_CLK_CHECK: Disables the logic that checks valid PCI clocks (FIR bit 15).
16	RW	LFSR_ARB_MODE: 1 = Use LFSR in outbound arbitration.
17	RW	PE_ENABLE_DMAR_IOPACING: Allow I/O pacing scheme for DMA read operations.
18	RW	PE_ENABLE_DMAW_IOPACING: Allow I/O pacing scheme for DMA write operations.
19	RW	PE_ADR_BAR_MODE: Address mode register for PE unit.
20	RW	PE_STQ_ALLOCATION: Queue allocation between stores and p2p: 0 = stq_1_Reserved for each type, the rest floating 1 = stq_1_only Only queue used for all traffic, the remaining 7 are unused.
21	RW	DISABLE_LPC_CMDS: Disable LPC acknowledgment for commands that the PE does not service.
22	RW	PE_DISABLE_OOO_MODE: PE order OOO type CI stores like a normal CI store command.
23:26	RW	PE_OSMB_EARLY_START: Determines how much overlap of reading/writing the OSMB allows: 0b0000 = Most conservative, full packet written in before signaling PCI side 0b0001 = Most conservative, full packet written in before signaling PCI side 0b0010 = Start 2 writes from the end of the packet 0b0011 = Start 3 writes from the end of the packet 0b0100 = Start 4 writes from the end of the packet 0b0101 = Start 5 writes from the end of the packet 0b0110 = Start 6 writes from the end of the packet 0b0111 = Start 7 writes from the end of the packet 0b1000 = Most aggressive, start 8 writes from the end of the packet, before any data written 0b1111 = Extra aggressive, start before any data written (that is, when the command is written

Bits	SCOM	Field Mnemonic: Description
27:28	RW	PE_QFIFO_HOLD_MODE: Determines how much overlap of reading/writing the OSMB allows: 0b00 = Stop sending outbound commands when QFIFO is full (default). 0b01 = Stop sending outbound commands when QFIFO has 1 entry empty 0b10 = Stop sending outbound commands when QFIFO has 3 entry empty 0b11 = Ignore QFIFO count when sending outbound packets
29:31	RW	Reserved field.
32	RW	PE_WR_STRICT_ORDER_MODE: Strictly order inbound write commands, independent of node ID.
33	RW	PE_CHANNEL_STREAMING_EN: Enable processor bus channel streaming operations.
34:35	RW	PE_WR_CACHE_INJECT_MODE: Mode bits for controlling processor bus cache inject: DisableCacheInj(00) = Disable all cache Injections (debug only) LegacyCacheInj(01) = Cache inject after a addr_hpc_ack combined response TLPHintCacheInj(10) = Start with cache inject if TLP hints indicate cache inject (TLP hints non-zero) P9ModetCacheInj(11) = Start with cache inject unconditionally
36	RW	PE_ENABLE_NEW_FLOW_CACHE_INJECT: Start new flows on PE to send cache inject commands.
37	RW	PE_DISABLE_INJ_ON_RESEND: Controls cache inject on resends when other cache inject modes are disabled.
38	RW	PE_FORCE_DISABLED_CTAG_TO_FOLLOW_FLOW: When CTAGs are disable, forces DMA writes to still use flows for non-ordering reasons.
39	RW	PE_ENABLE_ENH_FLOW: Controls cache inject on resends when other cache inject modes are disabled.
40	RW	Reserved field.
41	RW	PE_DISABLE_WR_VG: Force all DMA write requests to system scope when they progress to VG scope.
42	RW	PE_DISABLE_WR_SCOPE_GROUP: Disable group scope on DMA write requests.
43	RW	PE_DISABLE_INTWR_VG: Force all initial write requests to system scope when they progress to VG scope.
44	RW	PE_DISABLE_INTWR_SCOPE_GROUP: Disable group scope on initial write requests.
45	RW	PE_DISABLE_INTWR_SCOPE_NODE: Disable node scope on initial write requests.
46:47	RW	Reserved field.
48:49	RW	PE_RD_WRITE_ORDERING: Ordering modes for reads verses writes: NodeMatch(110) = All non-write commands wait behind all writes that match its node AnyNode(111) = All non-write commands wait behind all writes All others are reserved.
50	RW	PE_DISABLE_RD_SCOPE_NODAL: Disable nodal scope on non-TCE DMA read requests.
51	RW	PE_DISABLE_RD_SCOPE_GROUP: Disable group scope on non-TCE DMA read requests.
52	RW	PE_DISABLE_RD_SCOPE_RNNN: Disable RN and Nn scopes on non-TCE DMA read requests.
53	RW	PE_ENABLE_RD_SKIP_GROUP: Skip group scope on non-TCE DMA read requests.
54	RW	PE_DISABLE_RD_VG: Use VG(sys) when at VG scope.
55	RW	PE_DISABLE_TCE_SCOPE_NODAL: Disable nodal scope on non-TCE DMA read requests.
56	RW	PE_DISABLE_TCE_SCOPE_GROUP: Disable Group scope on non-TCE DMA read requests.
57	RW	PE_DISABLE_TCE_SCOPE_RNNN: Disable RnNn scopes on non-TCE DMA read requests.
58	RW	PE_ENABLE_TCE_SKIP_GROUP: Skip group scope on TCE DMA read requests.
59	RW	PE_DISABLE_TCE_VG: Use VG(sys) when at VG scope.
60	RW	PE_DISABLE_TCE_ARBITRATION: Disable preferential TCE read request arbitration.
61	RW	PE_DISABLE_CQ_TCE_ARBITRATION: Disable preferential TCE read response arbitration.
62	RW	PE_DISABLE_MC_PREFETCH: Disable setting PADE bits in cl_rd_nc requests.

Bits	SCOM	Field Mnemonic: Description
63	RW	PE_IGNORE_SFSTAT: Controls DMA read state machine behavior when receiving SFSTAT.

Register Name	Drop Priority Control Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.DRPPRICTL_REG
Address	0000000004011401 (SCOM)
Description	Drop priority control register.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	PE_DROPPRIORITYMASK: Mask value to determine when a rty_drp will cause the priority to increment on the next request (enable_IO_cmd_pacing = 0) or the DropPaceCounter will be incremented based on dep(enable_IO_cmd_pacing = 1). When LSFR bits match mask drop priority, one of these two actions will be taken (DMA write commands only).
6	RW	PE_ENABLE_CTAG_DROP_PRIORITY: Allow commands in a CTAG stream to take the priority of previous rty_drp commands in the stream. If not set, each commands priority is sent independently.
7	RW	PE_ENABLE_IO_CMD_PACING: When a rty_drop CRESP is received, keep drop priority constant and lower command rate until the pacing count is reached. Pacing counter is incremented instead. When not set, drop priority is raised when DropPriorityMask = LSFR value.
8:16	RW	PE_DROPPACECOUNT: Value to use when determining if drop priority should be increase when I/O command pacing is enabled. When the drop priority counter reaches this value, the drop priority is increased (enable_IO_cmd_pacing = 1). It is not used when enable_IO_cmd_pacing = 0.
17:22	RW	PE_DROPPACEINC: Value to use when determining how much drop pace count should increase when a retry drop CRESP occurs. Not used when enable_IO_cmd_pacing = 0.
23:25	RW	PE_RTYDROPDIVIDER: Value used to divide down rty_drp combined responses before invoking drop priority: 000/001 = 1st retry drop combined response will invoke drop priority mechanism 010 = 2nd retry drop combined response will invoke drop priority mechanism 011 = 3rd retry drop combined response will invoke drop priority mechanism 100 = 4th retry drop combined response will invoke drop priority mechanism 101 = 5th retry drop combined response will invoke drop priority mechanism 110 = 6th retry drop combined response will invoke drop priority mechanism 111 = 7th retry drop combined response will invoke drop priority mechanism
26:63	RO	constant = 0b00000000000000000000000000000000000000

Register Name	PBCQ Error Inject Control Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.PBCQEINJ_REG
Address	0000000004011402 (SCOM)
Description	PBCQ error inject control register.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	PE_ECC_INJECT_TYPE: Determines the type of ECC error injected: 01 = Correctable error/Parity error 10 = Uncorrectable error 11 = Special uncorrectable error
2	RW	PE_CQ_ECC_INJECT_ENABLE: Enable ECC inject on CQ arrays.

Bits	SCOM	Field Mnemonic: Description
3:6	RW	PE_CQ_SRAM_ARRAY: Determines which CQ SRAM array to force the ECC error into: 0000 = CI store 00:63 0001 = CI store 64:127 0010 = DMA read 00:63 0011 = DMA read 64:127 1000 = DMA write 00:63 1001 = DMA write 64:127 1010 = CI load 00:63 1011 = CI load 64:127
7	RW	PE_CQ_PAR_INJECT_ENABLE: Enable parity inject on CQ arrays.
8:10	RW	PE_CQ_REGISTER_ARRAY: Determines which CQ SRAM array to force the ECC error into: 000 = PBCQ array 001 = CQ SRAM TTAG 010 = RTAG 011 = Outbound SMB 100 = CQPB DMAR 101 = CQPB DMAW 110 - 111 = Reserved
11	RW	PE_CONSTANT_EINJ: 1 = Constant error inject, 0 = One hot error inject
12:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	PCI Nest Clock Trace Control Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.NESTTRC_REG
Address	0000000004011403 (SCOM)
Description	PCI nest clock trace control register.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	Reserved field.
4:7	RW	Reserved field.
8:11	RW	Reserved field.
12:15	RW	Reserved field.
16	RW	Reserved field.
17:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000

Register Name	PBCQ Performance Monitor Control Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.PMONCTL_REG
Address	0000000004011404 (SCOM)
Description	PBCQ performance monitor control register

Bits	SCOM	Field Mnemonic: Description
0:31	RW	PE_PERFMON_EN: Enable performance monitor outputs per bit.
32:33	RW	PE_PERFMON_READ_TYPE: 00: DMA read events count TCE or DMA read requests: 01 = DMA Read events count only TCE requests 10 = DMA Read events count only DMA read requests 11 = Reserved, behavior unpredictable
34:35	RW	Reserved field.

Bits	SCOM	Field Mnemonic: Description
36:39	RW	PE_PMON_MUX_BYTE0: 0000: Group 0: 0001 = Group 1 0010 = Group 2 0011 = Group 3 0100 = Group 4 0101 = Group 5 0110 = Group 6 0111-1111 = Reserved, behavior unpredictable
40:43	RW	PE_PMON_MUX_BYTE1: 0000: Group 0: 0001 = Group 1 0010 = Group 2 0011 = Group 3 0100 = Group 4 0101 = Group 5 0110 = Group 6 0111-1111 = Reserved, behavior unpredictable
44:47	RW	PE_PMON_MUX_BYTE2: 0000: Group 0: 0001 = Group 1 0010 = Group 2 0011 = Group 3 0100 = Group 4 0101 = Group 5 0110 = Group 6 0111-1111 = Reserved, behavior unpredictable
48:51	RW	PE_PMON_MUX_BYTE3: 0000: Group 0: 0001 = Group 1 0010 = Group 2 0011 = Group 3 0100 = Group 4 0101 = Group 5 0110 = Group 6 0111-1111 = Reserved, behavior unpredictable
52:63	RO	constant = 0b000000000000

Register Name	**PBCQ Tunnel BAR Register**
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.TUNNEL_BAR_REG
Address	0000000004011405 (SCOM)
Description	Tunnel bar for the return address of a tunneled packet.

Bits	SCOM	Field Mnemonic: Description
0:42	RW	PE_TUNNEL_BAR: Tunnel bar for the return address of a tunneled packet.
43:59	RO	constant = 0b00000000000000000

Register Name	**PBCQ Predictive Vector Timeout Mask Register**
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.PREDV_REG
Address	0000000004011406 (SCOM)
Description	Predictive vector timeout mask register.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	PE_RD_PREDV_TIMEOUT_MASK: Predictive target timeout for reads.
8:15	RW	PE_WR_PREDV_TIMEOUT_MASK: Predictive target timeout for writes.
16:63	RO	constant = 0b00000000000000000000000000000000000000000000000000

Register Name	PE CAPP Control Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.PECAPP_CNTL_REG
Address	0000000004011407 (SCOM)
Description	PE CAPP control register.

Bits	SCOM	Field Mnemonic: Description
0	RW	PE_CAPP_EN: Enable CAPP mode of operation.
1	RW	PE_CAPP_P8_MODE: Enable CAPP mode of operation.
2:11	RW	Reserved.
12:15	RW	PE_CAPP_NUM_MSG_ENG: Number of store queue assigned to CAPP for messages. Assigned 15->2 or 7->2 depending on configuration.
16:63	RW	PE_CAPP_APC_ENG: 48 bit vector to assign read queues to CAPP APC engines.

Register Name	PCI Nest FIR Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#0.REGS.NFIR_REG
Address	0000000004011440 (SCOM) 0000000004011441 (SCOM1) 0000000004011442 (SCOM2)
Description	PCI nest FIR register.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:29	RWX	WOX_AND	WOX_OR	NFIRNFIR: PCI nest FIR NFIR.
30:63	RO	RO	RO	constant = 0b00000000000000000000000000000000000000

Register Name	PCI Nest FIR Mask Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#0.REGS.NFIRMASK_REG
Address	0000000004011443 (SCOM) 0000000004011444 (SCOM1) 0000000004011445 (SCOM2)
Description	PCI Nest FIR mask register: 0 = No mask 1 = Mask error

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:29	RW	WO_AND	WO_OR	NFIRMASK: PCI nest FIR mask.
30:63	RO	RO	RO	constant = 0b00000000000000000000000000000000000000

Register Name	PCI Nest FIR Action0 Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#0.REGS.NFIRACTION0_REG
Address	0000000004011446 (SCOM)
Description	PCI nest FIR action0 register.

Bits	SCOM	Field Mnemonic: Description
0:29	RW	NFIRACTION0: Action0 select for corresponding bit in FIR. (Action0,Mask) = Action Select (0,0) = Checkstop error (0,1) = Recoverable error (1,0) = No action (1,1) = Freeze
30:63	RO	constant = 0b00000000000000000000000000000000

Register Name	PCI Nest FIR Action1 Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#0.REGS.NFIRACTION1_REG
Address	0000000004011447 (SCOM)
Description	PCI nest FIR Action1 register.

Bits	SCOM	Field Mnemonic: Description
0:29	RW	NFIRACTION1: Action1 select for corresponding bit in FIR. (Action1,Mask) = Action Select (0,0) = Checkstop error (0,1) = Recoverable error (1,0) = No action (1,1) = Freeze
30:63	RO	constant = 0b00000000000000000000000000000000

Register Name	PCI Nest FIR WOF Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#0.REGS.NFIRWOF_REG
Address	0000000004011448 (SCOM)
Description	PCI nest FIR WOF register.

Bits	SCOM	Field Mnemonic: Description
0:29	RWX_WCLRREG	Reserved.
30:63	RO	constant = 0b00000000000000000000000000000000

Register Name	CERR Report Hold Register 0
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#0.REGS.CERR_RPT0_REG
Address	000000000401144A (SCOM)
Description	CERR report hold register 0.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved.

Register Name	CERR Report Hold Register 1
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#0.REGS.CERR_RPT1_REG
Address	000000000401144B (SCOM)
Description	CERR report hold register 1.

Bits	SCOM	Field Mnemonic: Description
0:16	ROX	Reserved.
17:47	RO	constant = 0b00000000000000000000000000000000

Register Name	PBCQ General Status Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#0.REGS.CQSTAT_REG
Address	000000000401144C (SCOM)
Description	PBCQ general status register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	PE_INBOUND_ACTIVE: Inbound (PCIE->PB) state machines are active.
1	ROX	PE_OUTBOUND_ACTIVE: Outbound (PB->PCIE) state machines are active.
2:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	PBCQ General Status Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#0.REGS.PBCQMODE_REG
Address	000000000401144D (SCOM)
Description	PBCQ general status register.

Bits	SCOM	Field Mnemonic: Description
0	RW	PE_PEER2PEER_MODDE: Enable peer to peer operations.
1	RW	PE_ENHANCED_PEER2PEER_MODDE: Enable enhanced peer to peer operations.
2:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	PE Bus MMIO Base Address Register 0
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#0.REGS.MMIOBAR0_REG
Address	000000000401144E (SCOM)
Description	PE bus MMIO base address register 0.

Bits	SCOM	Field Mnemonic: Description
0:39	RW	PE_MMIO_BAR0: PE bus I/O Base Address Register 0. Bits 8 to 47 of the Base Address range are specified with this IDial. Bits 8 to 47 of a snoop address are compared with this Base Address. after ANDing bits 8 to 47 of the corresponding Mask Register with each. If the compare is TRUE, the snoop address falls within the address range. specified by the BAR/Mask pair.
40:63	RO	constant = 0b0000000000000000000000

Register Name	PE Bus MMIO Base Address Register 0
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#0.REGS.MMIOBAR0_MASK_REG
Address	0000000004011 44F (SCOM)
Description	PE bus MMIO base address register 0.

Bits	SCOM	Field Mnemonic: Description
0:39	RW	PE_MMIO_MASK0: PE bus I/O Base Address Register Mask 0. This LDial specifies the size of the address range which is specified by. this BAR/Mask pair. The range size must be a power of two. Valid range. sizes go from 64KB up to 32PB.
40:63	RO	constant = 0b0000000000000000000000

Register Name	PE Bus MMIO Base Address Register 1
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#0.REGS.MMIOBAR1_REG
Address	0000000004011450 (SCOM)
Description	PE bus MMIO base address register 1.

Bits	SCOM	Field Mnemonic: Description
0:39	RW	PE_MMIO_BAR1: PE bus I/O base address register 1. Bits 8 to 47 of the base address range are specified with this LDial. Bits 8 to 47 of a snoop address are compared with this base address after ANDing bits 8 to 47 of the corresponding mask register with each. If the compare is TRUE, the snoop address falls within the address range specified by the BAR/Mask pair.
40:63	RO	constant = 0b0000000000000000000000

Register Name	PE Bus MMIO Base Address Register 1
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#0.REGS.MMIOBAR1_MASK_REG
Address	0000000004011451 (SCOM)
Description	PE bus MMIO base address register 1.

Bits	SCOM	Field Mnemonic: Description
0:39	RW	PE_MMIO_MASK1: PE bus I/O base address register mask 1. This LDial specifies the size of the address range which is specified by this BAR/Mask pair. The range size must be a power of two. Valid range. sizes go from 64KB up to 32PB.
40:63	RO	constant = 0b0000000000000000000000

Register Name	PE Bus PHB Base Address Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#0.REGS.PHBBAR_REG
Address	0000000004011452 (SCOM)
Description	PE bus PHB base address register.

Bits	SCOM	Field Mnemonic: Description
0:41	RW	PE_PHB_BAR: PE bus PHB base address register. Bits 8 to 49 of the base address range are specified with this LDial. Bits 8 to 49 of a snoop address are compared with this base address. If the compare is TRUE, the snoop address falls within the address range specified by the BAR. This BAR is intended for PHB MMIO space which is fixed at 4K, so there is not a mask.
42:63	RO	constant = 0b00000000000000000000

Register Name	PE Bus Initial Base Address Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#0.REGS.INTBAR_REG
Address	0000000004011453 (SCOM)
Description	PE bus initial base address register.

Bits	SCOM	Field Mnemonic: Description
0:27	RW	PE_INT_BAR: PE bus initial base address register. Bits 8 to 35 of the base address range are specified with this Ldial. Bits 8 to 35 of a snoop address are compared with this base address. If the compare is TRUE, the snoop address falls within the address range specified by the BAR. This BAR is intended for initial space which is fixed at 256M, so there is not a mask.
28:63	RO	constant = 0b000000000000000000000000000000000000

Register Name	PE BAR Enables Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#0.REGS.BARE_REG
Address	0000000004011454 (SCOM)
Description	PE BAR enables register.

Bits	SCOM	Field Mnemonic: Description
0	RW	PE_MMIO_BAR0_EN: PE MMIO base address register 0 enable. Each BAR/Mask set has one enable bit.
1	RW	PE_MMIO_BAR1_EN: PE MMIO base address register 1 enable. Each BAR/Mask set has one enable bit.
2	RW	PE_PHB_BAR_EN: PE PHB base address register enable. Each BAR/Mask set has one enable bit.
3	RW	PE_INT_BAR_EN: PE int Base Address Register Enable. Each BAR/Mask set has one enable bit.
4:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000000000

Register Name	PCI Nest Data Freeze Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#0.REGS.PE_DFREEZE_REG
Address	0000000004011455 (SCOM)
Description	PCI nest data freeze register

Bits	SCOM	Field Mnemonic: Description
0:27	RW	PE_DFREEZE: Dfreeze select for corresponding bit in FIR. (dfreeze,Mask) = Action Select (1) = Data freeze if action0:1=b11 (0) = Data freeze if action0:1=b11 and freeze occurs before data is received
28:63	RO	constant = 0b00000000000000000000000000000000000000

Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#1.REGS.PHBBAR_REG
Address	0000000004011492 (SCOM)
Description	PE bus PHB base address register.

Bits	SCOM	Field Mnemonic: Description
0:41	RW	PE_PHB_BAR: PE bus PHB base address register. Bits 8 to 49 of the base address range are specified with this LDial. Bits 8 to 49 of a snoop address are compared with this base address. If the compare is TRUE, the snoop address falls within the address range specified by the BAR. This BAR is intended for PHB MMIO space which is fixed at 4K, so there is not a mask.
42:63	RO	constant = 0b00000000000000000000

Register Name	PE Bus Initial Base Address Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#1.REGS.INTBAR_REG
Address	0000000004011493 (SCOM)
Description	PE bus initial base address register.

Bits	SCOM	Field Mnemonic: Description
0:27	RW	PE_INT_BAR: PE bus initial base address register. Bits 8 to 35 of the base address range are specified with this LDial. Bits 8 to 35 of a snoop address are compared with this base address. If the compare is TRUE, the snoop address falls within the address range specified by the BAR. This BAR is intended for initial space which is fixed at 256M, so there is not a mask.
28:63	RO	constant = 0b00000000000000000000000000000000000000

Register Name	PE BAR Enables Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#1.REGS.BARE_REG
Address	0000000004011494 (SCOM)
Description	PE BAR enables register,

Bits	SCOM	Field Mnemonic: Description
0	RW	PE_MMIO_BAR0_EN: PE MMIO base address register 0 enable. Each BAR/Mask set has one enable bit.
1	RW	PE_MMIO_BAR1_EN: PE MMIO base address register 1 enable. Each BAR/Mask set has one enable bit.
2	RW	PE_PHB_BAR_EN: PE PHB base address register enable. Each BAR/Mask set has one enable bit.
3	RW	PE_INT_BAR_EN: PE initial base address register enable. Each BAR/Mask set has one enable bit.
4:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	PCI Nest Data Freeze Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#1.REGS.PE_DFREEZE_REG
Address	0000000004011495 (SCOM)
Description	PCI nest data freeze register.

Bits	SCOM	Field Mnemonic: Description
0:27	RW	PE_DFREEZE: Dfreeze select for corresponding bit in FIR. (Dfreeze,Mask) = Action Select (1) = Data freeze if action0:1=b11 (0) = Data freeze if action0:1=b11 and freeze occurs before data is received
28:63	RO	constant = 0b00000000000000000000000000000000000000

Register Name	PCI Nest FIR Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#2.REGS.NFIR_REG
Address	00000000040114C0 (SCOM) 00000000040114C1 (SCOM1) 00000000040114C2 (SCOM2)
Description	PCI nest FIR register.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:29	RWX	WOX_AND	WOX_OR	NFIRNFIR: PCI nest FIR NFIR.
30:63	RO	RO	RO	constant = 0b00000000000000000000000000000000000000

Register Name	PCI Nest FIR Mask Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#2.REGS.NFIRMASK_REG
Address	00000000040114C3 (SCOM) 00000000040114C4 (SCOM1) 00000000040114C5 (SCOM2)
Description	PCI nest FIR mask register: 0 = No mask 1 = Mask error

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:29	RW	WO_AND	WO_OR	NFIRMASK: PCI nest FIR Mask.
30:63	RO	RO	RO	constant = 0b00000000000000000000000000000000

Register Name	PCI Nest FIR Action0 Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#2.REGS.NFIRACTION0_REG
Address	00000000040114C6 (SCOM)
Description	PCI nest FIR action0 register.

Bits	SCOM	Field Mnemonic: Description
0:29	RW	NFIRACTION0: Action0 select for corresponding bit in FIR. (Action0,Mask) = Action Select (0,0) = Checkstop error (0,1) = Recoverable error (1,0) = No action (1,1) = Freeze
30:63	RO	constant = 0b00000000000000000000000000000000

Register Name	PCI Nest FIR Action1 Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#2.REGS.NFIRACTION1_REG
Address	00000000040114C7 (SCOM)
Description	PCI nest FIR action1 register.

Bits	SCOM	Field Mnemonic: Description
0:29	RW	NFIRACTION1: Action1 select for corresponding bit in FIR. (Action1,Mask) = Action Select (0,0) = Checkstop error (0,1) = Recoverable error (1,0) = No action (1,1) = Freeze
30:63	RO	constant = 0b00000000000000000000000000000000

Register Name	PCI Nest FIR WOF Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#2.REGS.NFIRWOF_REG
Address	00000000040114C8 (SCOM)
Description	PCI nest FIR WOF register.

Bits	SCOM	Field Mnemonic: Description
0:29	RWX_WCLRREG	Reserved.
30:63	RO	constant = 0b00000000000000000000000000000000

Register Name	CERR Report Hold Register 0
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#2.REGS.CERR_RPT0_REG
Address	00000000040114CA (SCOM)
Description	CERR report hold register 0.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved.

Register Name	CERR Report Hold Register 1
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#2.REGS.CERR_RPT1_REG
Address	00000000040114CB (SCOM)
Description	CERR report hold register 1.

Bits	SCOM	Field Mnemonic: Description
0:16	ROX	Reserved.
17:47	RO	constant = 0b00000000000000000000000000000000

Register Name	PBCQ General Status Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#2.REGS.CQSTAT_REG
Address	00000000040114CC (SCOM)
Description	PBCQ general status register

Bits	SCOM	Field Mnemonic: Description
0	ROX	PE_INBOUND_ACTIVE: Inbound (PCIE →PB) state machines are active.
1	ROX	PE_OUTBOUND_ACTIVE: Outbound (PB →PCIE) state machines are active.
2:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	PBCQ General Status Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#2.REGS.PBCQMODE_REG
Address	00000000040114CD (SCOM)
Description	PBCQ general status register.

Bits	SCOM	Field Mnemonic: Description
0	RW	PE_PEER2PEER_MODDE: Enable peer to peer operations.
1	RW	PE_ENHANCED_PEER2PEER_MODDE: Enable enhanced peer to peer operations.

Bits	SCOM	Field Mnemonic: Description
2:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000000000000000000000

Register Name	PE Bus MMIO Base Address Register 0
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#2.REGS.MMIOBAR0_REG
Address	00000000040114CE (SCOM)
Description	PE bus MMIO base address register 0.

Bits	SCOM	Field Mnemonic: Description
0:39	RW	PE_MMIO_BAR0: PE bus I/O base address register 0. Bits 8 to 47 of the base address range are specified with this Ldial. Bits 8 to 47 of a snoop address are compared with this base address after ANDing bits 8 to 47 of the corresponding mask register with each. If the compare is TRUE, the snoop address falls within the address range specified by the BAR/Mask pair.
40:63	RO	constant = 0b0000000000000000000000000

Register Name	PE Bus MMIO Base Address Register 0
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#2.REGS.MMIOBAR0_MASK_REG
Address	00000000040114CF (SCOM)
Description	PE bus MMIO base address register 0.

Bits	SCOM	Field Mnemonic: Description
0:39	RW	PE_MMIO_MASK0: PE bus I/O base address register mask 0. This LDial specifies the size of the address range which is specified by this BAR/Mask pair. The range size must be a power of two. Valid range sizes go from 64KB up to 32PB.
40:63	RO	constant = 0b0000000000000000000000000

Register Name	PE Bus MMIO Base Address Register 1
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#2.REGS.MMIOBAR1_REG
Address	00000000040114D0 (SCOM)
Description	PE bus MMIO base address register 1.

Bits	SCOM	Field Mnemonic: Description
0:39	RW	PE_MMIO_BAR1: PE bus I/O base address register 1. Bits 8 to 47 of the base address range are specified with this LDial. Bits 8 to 47 of a snoop address are compared with this base address after ANDing bits 8 to 47 of the corresponding mask register with each If the compare is TRUE, the snoop address falls within the address range specified by the BAR/Mask pair.
40:63	RO	constant = 0b0000000000000000000000000

Register Name	PE Bus MMIO Base Address Register 1
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#2.REGS.MMIOBAR1_MASK_REG
Address	00000000040114D1 (SCOM)
Description	PE bus MMIO base address register 1.

Bits	SCOM	Field Mnemonic: Description
0:39	RW	PE_MMIO_MASK1: PE bus I/O base address register mask 1. This LDial specifies the size of the address range which is specified by this BAR/Mask pair. The range size must be a power of two. Valid range sizes go from 64KB up to 32PB.
40:63	RO	constant = 0b0000000000000000000000

Register Name	PE Bus PHB Base Address Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#2.REGS.PHBBAR_REG
Address	00000000040114D2 (SCOM)
Description	PE bus PHB base address register

Bits	SCOM	Field Mnemonic: Description
0:41	RW	PE_PHB_BAR: PE bus PHB base address register. Bits 8 to 49 of the base address range are specified with this LDial. Bits 8 to 49 of a snoop address are compared with this base address. If the compare is TRUE, the snoop address falls within the address range specified by the BAR. This BAR is intended for PHB MMIO space which is fixed at 4K, so there is not a mask.
42:63	RO	constant = 0b00000000000000000000

Register Name	PE Bus Initial Base Address Register
Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#2.REGS.INTBAR_REG
Address	00000000040114D3 (SCOM)
Description	PE bus initial base address register.

Bits	SCOM	Field Mnemonic: Description
0:27	RW	PE_INT_BAR: PE bus initial base address register. Bits 8 to 35 of the base address range are specified with this LDial. Bits 8 to 35 of a snoop address are compared with this base address. If the compare is TRUE, the snoop address falls within the address range specified by the BAR. This BAR is intended for int space which is fixed at 256M, so there is not a mask.

Mnemonic	PE2.PB2.PBCQ.PEPBREGS.STACK#2.REGS.PE_DFREEZE_REG
Address	00000000040114D5 (SCOM)
Description	PCI nest data freeze register.

Bits	SCOM	Field Mnemonic: Description
0:27	RW	PE_DFREEZE: Dfreeze select for corresponding bit in FIR. (dfreeze,Mask) = Action Select (1) = Data freeze if action0:1=b11 (0) = Data freeze if action0:1=b11 and freeze occurs before data is received
28:63	RO	constant = 0b00000000000000000000000000000000000000

Register Name	PSI FIR Register
Mnemonic	PSI.PSI.PSI_MAC.PSI_SCOM.FIR_REG
Address	0000000004011800 (SCOM) 0000000004011801 (SCOM1) 0000000004011802 (SCOM2)
Description	Local FIR register for the PSI logic.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	PSI_FIR_Reserved0: Reserved PSI FIR bit 0.
1	RWX	WOX_AND	WOX_OR	PSI_FIR_Reserved1: Reserved PSI FIR bit 1.
2	RWX	WOX_AND	WOX_OR	PSI_FIR_Reserved2: Reserved PSI FIR bit 2.
3	RWX	WOX_AND	WOX_OR	PSI_FIR_Reserved3: Reserved PSI FIR bit 3.
4	RWX	WOX_AND	WOX_OR	PSI_FIR_Reserved4: Reserved PSI FIR bit 4.
5	RWX	WOX_AND	WOX_OR	INTERNAL_SCOM_ERROR: Internal SCOM error mask.
6	RWX	WOX_AND	WOX_OR	INTERNAL_SCOM_ERROR_CLONE: Internal SCOM error mask clone.
7:63	RO	RO	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	PSI FIR Mask Register
Mnemonic	PSI.PSI.PSI_MAC.PSI_SCOM.FIR_MASK_REG
Address	0000000004011803 (SCOM) 0000000004011804 (SCOM1) 0000000004011805 (SCOM2)
Description	Error mask register (Action0,Mask) = Action Select (0,0) = Recoverable Error (0,1) = Masked

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	PSI_FIR_Reserved0_MASK: Reserved PSI FIR bit 0 mask.
1	RWX	WOX_AND	WOX_OR	PSI_FIR_Reserved1_MASK: Reserved PSI FIR bit 1 mask.
2	RWX	WOX_AND	WOX_OR	PSI_FIR_Reserved2_MASK: Reserved PSI FIR bit 2 mask.
3	RWX	WOX_AND	WOX_OR	PSI_FIR_Reserved3_MASK: Reserved PSI FIR bit 3 mask.
4	RWX	WOX_AND	WOX_OR	PSI_FIR_Reserved4_MASK: Reserved PSI FIR bit 4 mask.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
5	RWX	WOX_AND	WOX_OR	INTERNAL_SCOM_ERROR_MASK: Internal SCOM error mask.
6	RWX	WOX_AND	WOX_OR	INTERNAL_SCOM_ERROR_MASK_CLONE: Internal SCOM error mask clone.
7:63	RO	RO	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	Fault Isolation Action0 Register
Mnemonic	PSI.PSI.PSI_MAC.PSI_SCOM.FIR_ACTION0_REG
Address	0000000004011806 (SCOM)
Description	Fault isolation action0 register.

Bits	SCOM	Field Mnemonic: Description
0:6	RW	FIR_ACTION0: Action 0 for FIR(0:6).
7:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	Fault Isolation Action1 Register
Mnemonic	PSI.PSI.PSI_MAC.PSI_SCOM.FIR_ACTION1_REG
Address	0000000004011807 (SCOM)
Description	Fault isolation action1 register.

Bits	SCOM	Field Mnemonic: Description
0:6	RW	FIR_ACTION1: Action 1 for FIR(0:6).
7:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	FIR WOF Register
Mnemonic	PSI.PSI.PSI_MAC.PSI_SCOM.FIR_WOF_REG
Address	0000000004011808 (SCOM)
Description	FIR WOF register.

Bits	SCOM	Field Mnemonic: Description
0:6	RWX_WCLRREG	Reserved field.
7:63	RO	constant = 0b00000000000000000000000000000000000000000000000000000000000000

Register Name	RX Control Register
Mnemonic	PSI.PSI.PSI_MAC.PSI_SCOM.PSI_SCOM_REGS.RX_PSI_CNTL
Address	0000000004011820 (SCOM)
Description	RX Control register.

Bits	SCOM	Field Mnemonic: Description
0	NCX	Reserved field.
1	RWX	RX_PSI_PATTERN_CHECK_EN: Enables the drive pattern to be tested: DMB. 0b0 = No pattern checking 0b1 = Check for drive pattern
2:3	RWX	RX_PSI_PATTERN_SEL: RX pattern select: DMB. 0b00 = ei4 busy pattern a 0b01 = ei4 busy pattern b 0b10 = 16 bit legacy 0b11 = IE3 busy IAP pattern
4	RWX	RX_PSI_CLK_INVERT: Used to invert the polarity of the clock: DMB. 0b0 = Normal clock polarity (default) 0b1 = Clock inverted
5	RWX	RX_PSI_LANE_INVERT: Used to invert the polarity of the data lane: DMB. 0b0 = Normal data lane polarity (default) 0b1 = Data lane inverted
6	RWX	RX_PSI_PDWN: Used to power down the PSI RX clock and data path: MBS. 0b0 = Operational (default) 0b1 = Clock and data path are powered off
7:13	RWX	RX_PSI_CLK_DLY: Clock delay setting. Default value is 300ps at the fast corner. DMB.
14:20	RWX	RX_PSI_DATA_DLY: Data delay setting. Default value is 300ps at the fast corner. DMB.
21:25	RWX	RX_PSI_DEGLITCH_CLK_DLY: Clock deglitcher delay setting. Default value is 300ps at the fast corner. DMB.
26:30	RWX	RX_PSI_DEGLITCH_DATA_DLY: Data deglitcher match delay setting. To match clock line, default value is 300ps at the fast corner. DMB.
31	RO	constant = 0b0

Register Name	RX Mode Register
Mnemonic	PSI.PSI.PSI_MAC.PSI_SCOM.PSI_SCOM_REGS.RX_PSI_MODE
Address	0000000004011821 (SCOM)
Description	RX mode register.

Bits	SCOM	Field Mnemonic: Description
0:7	RWX	RX_PSI_VREF: VREF SETTING (0-7). Step size is about Vio*5/1100. DMB.
8:11	RO	constant = 0b0000
12	RWX	RX_PSI_TERM_TEST_MODE: Termination segment test mode: MBS. 0b0 = Mission mode enable 0b1 = Termination segment test mode
13:14	RO	constant = 0b00
15:19	RWX	RX_PSI_TERM_MODE_ENC: Slice enable for pfet. fet pairs for termination mode. Bits 0:3 determine how many 1pt2kohm pairs to enable, out of 14. Bit 4 enables a half-strength 2.4kohm pfet. fet pair, and also controls whether that pair is enabled in test mode. MBS.
20:23	RO	constant = 0b0000
24:31	RWX	RX_PSI_MODE_SPARE: Spares. TBD. DMB.

Register Name	RX Status Register
Mnemonic	PSI.PSI.PSI_MAC.PSI_SCOM.PSI_SCOM_REGS.RX_PSI_STATUS
Address	0000000004011822 (SCOM)
Description	RX status register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field.
1	ROX	Reserved field.
2	ROX	Reserved field.
3	RO	constant = 0b0
4:7	RWX	RX_PSI_LD_UNLD_DLY: Current PSI load to unload delay. TBD. DMB.
8	RWX	RX_PSI_OVER_OR_UNDERRUN_ERR: FIFO Overrun or under-run error. TBD. DMB.
9	RWX	RX_PSI_STATUS_CLEAR: Clears pattern check status. DMB.
10:15	RWX	RX_PSI_STATUS_SPARE: Spares. TBD. DMB.
16:31	RO	constant = 0b0000000000000000

Register Name	TX Control Register
Mnemonic	PSI.PSI.PSI_MAC.PSI_SCOM.PSI_SCOM_REGS.TX_PSI_CNTL
Address	0000000004011830 (SCOM)
Description	TX control register.

Bits	SCOM	Field Mnemonic: Description
0	NCX	Reserved field.
1	RWX	TX_PSI_DRV_PATTERN_EN: Enables the drive pattern to be driven: DMB. 0b0 = No pattern driven 0b1 = Drive pattern
2:3	RWX	TX_PSI_PATTERN_SEL: TX pattern select: DMB. 0b00 = ei4 busy pattern a 0b01 = ei4 busy pattern b 0b10 = 16 bit legacy 0b11 = IE3 busy IAP pattern
4:5	RWX	TX_PSI_CLK_QUIESCE_P: Used to force the output of the CLK P lane to a particular value: DMB. 0b00 = Functional clock (default) 0b01 = Quiesce clock to a static 0 value 0b10 = Quiesce clock to a static 1 value 0b11 = Tri-state clock output
6:7	RWX	TX_PSI_CLK_QUIESCE_N: Used to force the output of the CLK N lane to a particular value: DMB. 0b00 = Functional clock (default) 0b01 = Quiesce clock to a static 0 value 0b10 = Quiesce clock to a static 1 value 0b11 = Tri-state clock output
8:9	RWX	TX_PSI_LANE_QUIESCE: Used to force the output of the data lane to a particular value: DMB. 0b00 = Functional data (default) 0b01 = Quiesce lane to a static 0 value 0b10 = Quiesce lane to a static 1 value 0b11 = Tri-State lane output

Bits	SCOM	Field Mnemonic: Description
10	RWX	TX_PSI_CLK_INVERT: Used to invert the polarity of the clock: DMB. 0b0 = Normal clock polarity (default) 0b1 = Clock inverted
11	RWX	TX_PSI_LANE_INVERT: Used to invert the polarity of the data lane: DMB. 0b0 = Normal data lane polarity (default). 0b1 = Data lane inverted.
12	RWX	TX_PSI_PDWN: Used to power down the PSI TX clock and data path: MBS. 0b0 = Operational (default) 0b1 = Clock and data path are powered off
13	RWX	TX_PSI_BIST_EN: Used to run TX BIST: JGR. 0b0 = TX BIST disabled 0b1 = TX BIST enabled
14:23	RO	constant = 0b0000000000
24:31	RWX	TX_PSI_CNTL_SPARE: Spares. TBD. DMB.

Register Name	TX Mode Register
Mnemonic	PSI.PSI.PSI_MAC.PSI_SCOM.PSI_SCOM_REGS.TX_PSI_MODE
Address	0000000004011831 (SCOM)
Description	TX mode register

Bits	SCOM	Field Mnemonic: Description
0	RWX	TX_PSI_PC_TEST_MODE: Driver segment test mode: MBS. 0b0 = Mission mode enable. 0b1 = Driver output test mode.
1:3	RO	constant = 0b000
4:7	RWX	TX_PSI_MAIN_SLICE_EN_ENC: 240ohm main slice enable (binary code 0000 is zero slices and 0110 is maximum slices). MBS.
8:11	RO	constant = 0b0000
12:15	RWX	TX_PSI_PC_SLICE_EN_ENC: 240ohm precompensation slice enable (binary code 0000 is zero slices and 1110 is maximum slices). MBS.
16:19	RWX	TX_PSI_SLEWCTL: Driver slew control. Bits 2 and 3 are reserved. MBS. 0b0000 = 80ps nominal rate 0b0100 = 110ps nominal rate 0b1000 = 140ps nominal rate 0b1100 = 170ps nominal rate
20:23	RO	constant = 0b0000
24:25	RWX	TX_PSI_PVTNL_ENC: PVT NFET enables for all driver slices: MBS. 0b00 = No PVT NFET enabled 0b01 = Minimum PVT NFET enabled in parallel 0b10 = Maximum PVT NFET enabled in parallel 0b11 = Both PVT NFETs enabled in parallel
26:27	RO	constant = 0b00
28:29	RWX	TX_PSI_PVTPL_ENC: PVT PFET enables for all driver slices: MBS. 0b00 = No PVT PFET enable 0b01 = Minimum PVT PFET enabled in parallel 0b10 = Maximum PVT PFET enabled in parallel 0b11 = Both PVT PFETs enabled in parallel
30:31	RO	constant = 0b00

Register Name	TX Status Register
Mnemonic	PSI.PSI.PSI_MAC.PSI_SCOM.PSI_SCOM_REGS.TX_PSI_STATUS
Address	0000000004011832 (SCOM)
Description	TX status register.

Bits	SCOM	Field Mnemonic: Description
0:3	RWX	TX_PSI_STATUS_SPARE: TX status spared. TBD. DMB.
4:6	RWX	TX_PSI_BIST_ERROR: Indicates a TXBIST clock side error occurred: JGR. 0b000 = No errors 0b001 = An error has been found on clkn side 0b010 = An error has been found on clkp side 0b011 = Errors have been found on both clkp and clkn 0b100 = An error has been found in data path 0b101 = Errors have been found in data and clkn paths 0b110 = Errors have been found in data and clkp paths 0b111 = Errors have been found in data, clkp, and clkn paths
7:9	ROX	Reserved field.
10:31	RO	constant = 0b00000000000000000000

Register Name	Configuration of CC Counters Register
Mnemonic	TP.TCN2.N2.SYNC_CONFIG
Address	0000000004030000 (SCOM)
Description	Configuration of CC counters register.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	SYNC_PULSE_DELAY: Delay incoming synchronous pulse. Default are 8 latches including asynchronous. The following values delay the reset of the phase counter: 0000=8 0001=2 0010=3 0011=4 0100=5 0101=6 0110=7 0111=8 1000=9 1001=10 1010=11 1011=12 1100=13 1101=14 1110=15 1111=16
4	RW	LISTEN_TO_SYNC_PULSE_DIS: Disable phase counter synchronization by sync_pulse signal (default is enabled) ATTENTION: When ENABLE listen_to_sync, chiplet gets corrupted for 200 cycles.
5	RW	SYNC_PULSE_INPUT_SEL: Default is 0, when set to 1, the alternative input of the sync_pulse will be used ATTENTION: When toggle the input selected, chiplet gets corrupted for 200 cycles.
6	RW	USE_SYNC_FOR_SCAN: If set, use OPCG initial alignment for scan requests.
7	RW	CLEAR_CHIPLET_IS_ALIGNED: This bit clears the chiplet_is_aligned bit. See cplt_stat register.

Bits	SCOM	Field Mnemonic: Description
8	RW	UNIT_REGION_CLKCMD_ENABLE: Enable the unit interface to start/stop one dedicate region. Used for POWER9 cache/core.
9	RW	DISABLE_PCB_ITR: Disable interrupt generation within CC. Interrupt sent on each hold event.
10	RW	ENABLE_VITL_ALIGN_CHECK: Enable the vital align check to compare alignment of incoming synchronous pulse with 2:1 vital LCB.
11	RW	SYNC_PULSE_OUT_DIS: Disable sync_pulse output when set to 1, master chiplet will not sending synchronous pulses to slave chiplets anymore.
12:19	RW	Unused1219: Unused.

Register Name	OPCG Align Register
Mnemonic	TP.TCN2.N2.OPCG_ALIGN
Address	0000000004030001 (SCOM)
Description	OPCG align register.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	INOP_ALIGN: INOP phase alignment (0: none, 1: 2:1, 2: 3:1, 3: 4:1, 4: 6:1, 5: 8:1, 6: 12:1, 7: 16:1, 8: 24:1, 9-15: 48:1).
4:7	RW	SNOP_ALIGN: SNOP phase alignment (0: none, 1: 2:1, 2: 3:1, 3: 4:1, 4: 6:1, 5: 8:1, 6: 12:1, 7: 16:1, 8: 24:1, 9-15: 48:1).
8:11	RW	ENOP_ALIGN: ENOP phase alignment (0: none, 1: 2:1, 2: 3:1, 3: 4:1, 4: 6:1, 5: 8:1, 6: 12:1, 7: 16:1, 8: 24:1, 9-15: 48:1).
12:19	RW	INOP_WAIT: INOP cycle delay (0 - 255).
20:31	RW	SNOP_WAIT: SNOP cycle delay (0 - 4095).
32:39	RW	ENOP_WAIT: ENOP cycle delay (0 - 255).
40	RW	INOP_FORCE_SG: INOP: Set SG high during INOP.
41	RW	SNOP_FORCE_SG: SNOP: Set SG high during SNOP.
42	RW	ENOP_FORCE_SG: ENOP: Set SG high during ENOP (including LOOP phase).
43	RW	NO_WAIT_ON_CLK_CMD: 0: A clock change request will first wait the OPCG_WAIT cycles. 1 = A clock change request will not wait, when not in flush.
44:45	RW	ALIGN_SOURCE_SELECT: Values: 0 = Use INOPA setting from opcg_reg0 1 = Use rising edge of synchronous pulse 2 = Use unit0_sync_lvl to align (for AVP, refresh0) 3 = Use unit1_sync_lvl to align (for AVP, refresh1)
46	RW	Unused46: Unused.
47:51	RW	SCAN_RATIO: Scan ratio (n=0-15: (n+1):1, 16: 24:1, 17: 32:1, 18: 48:1, 19: 64:1, 20: 128:1) - Default 4:1=00011.
52:63	RW	OPCG_WAIT_CYCLES: Old PAD value, delay at the begin and end of the OPCG run to allow DC signals to be there at the right time (0 4095). Needs to be higher than plat depth. Default = 0x020.

Register Name	OPCG Control Register 0
Mnemonic	TP.TCN2.N2.OPCG_REG0
Address	0000000004030002 (SCOM)
Description	OPCG control register 0.

Bits	SCOM	Field Mnemonic: Description
0	RW	RUNN_MODE: Values: 0 = BIST (mode used for LBIST) 1 = RUNN (mode used for ABIST/IOBIST)
1	RWX	OPCG_GO: OPCG go (start OPCG). Bit is cleared when OPCG is done. Poll for opcg_done in cplt_start reg.
2	RWX	RUN_SCAN0: Run scan0 (overrides all BIST mode settings but the scan_ratio). Starts a scan0 run, bit gets cleared when OPCG is done . Poll for opcg_done in cplt_start reg.
3	RW	SCAN0_MODE: Set PRPGs in scan0_mode, but do not run automatic scan0 sequence.
4	RWX	OPCG_IN_SLAVE_MODE: When selected, OPCG waits for master chiplet to get started. When Keep_MS_Mode is 0, SLAVE_MODE is cleared after incoming trigger.
5	RWX	OPCG_IN_MASTER_MODE: When selected, OPCG sends out trigger to all slave chiplets. When Keep_MS_MODE is 0, MASTER_MODE gets cleared after sending out one master trigger.
6	RW	KEEP_MS_MODE: When set to 1, OPCG in M/S mode bits will not be cleared after one incoming OPCG trigger. Default is clear M/S mode bits.
7	RW	TRIGGER_OPCG_ON_UNIT0_SYNC_LVL: Unit pin used for AVP can trigger OPCG (unit0_sync_lvl).
8	RW	TRIGGER_OPCG_ON_UNIT1_SYNC_LVL: Unit pin used for AVP can trigger OPCG (unit1_sync_lvl).
9	RWX	RUN_CHIPLET_SCAN0: Run scan0 on all regions and types, clears all the chiplets.
10	RWX	RUN_CHIPLET_SCAN0_NO_PLL: Run scan0 on all regions and types, clears the all chiplets, excluding PLL region, PLL can keep running.
11	RW	RUN_OPCG_ON_UPDATE_DR: Start OPCG engine when scan updated (update_dr) received (set pulse). Cronus requires this bit be set to 1 for a setpulse WRITE.
12	RW	RUN_OPCG_ON_CAPTURE_DR: Start OPCG engine when scan updated (capture_dr) received (set pulse). Cronus requires this bit be set to 1 for a setpulse READ.
13	RW	STOP_RUNN_ON_XSTOP: RUNN mode. Stop run-n on checkstop.
14	RW	OPCG_STARTS_BIST: RUNN mode. OPCG engine controls start_bist for ABIST or IOBIST. See BIST register.
15:20	RW	Unused1520: Unused.
21:63	RWX	LOOP_COUNT: Loop counter for LBIST and RUNN. Write = target value. Read = current counter value. Counts from 0 to target value.

Register Name	OPCG Control Register 1
Mnemonic	TP.TCN2.N2.OPCG_REG1
Address	0000000004030003 (SCOM)
Description	OPCG control register 1.

Bits	SCOM	Field Mnemonic: Description
0:11	RW	SCAN_COUNT: BIST mode: Channel scan count (s = 0 – 4095). RUNN mode: start_bist match value(0:11).
12:23	RW	MISR_A_VAL: BIST mode: a value for MISR aperture. RUNN mode: start_bist match value(12:23).
24:35	RW	MISR_B_VAL: BIST mode: b value for MISR aperture. RUNN mode: start_bist match value(24:35).

Bits	SCOM	Field Mnemonic: Description
36:47	RW	MISR_INIT_WAIT: BIST mode: delay MISR aperture. MISRs get active after this number of loops.
48	RW	OPCG_SUPPRESS_EVEN_CLK: OPCG only creates even and not odd clocks. Used for RUNN to create only one clock in fast domain. Default is 0.
49	RW	SCAN_CLK_USE_EVEN: Generate scan clock in even cycle instead of odd. Default is 0 = odd for scan.
50:51	RW	Unused2: Unused.
52	RW	RTIM_THOLD_FORCE: Force rtim_thold low when not in test_dc mode (must be 0 at all time).
53	RW	DISABLE_ARY_CLK_DURING_FILL: LBIST and SCAN0: prevent fire of ARY HLD during NSL-fill.
54	RW	SG_HIGH_DURING_FILL: LBIST and SCAN0: Hold SG high during NSL-fill.
55:56	RW	LBIST_SKITTER_CTL: BIST mode: 00 = Enable skitter during lbist_ip 01 = Enable skitter when misr_active (see misr_init_wait) 10 = Skitter OPCG_GO mode: Falling edge = start, Rising edge = stop 11 = Unused
57	RW	MISR_MODE: BIST mode: MISR aperture mode (0 = a-1 to b-1, 1 = start to a and b to end).
58	RW	INFINITE_MODE: Infinite mode. RUNN and LBIST will run forever and ignore the loop count.
59:63	RW	NSL_FILL_COUNT: BIST mode: NSL-fill count (0-31).

Register Name	**OPCG Control Register 2**
Mnemonic	TP.TCN2.N2.OPCG_REG2
Address	0000000004030004 (SCOM)
Description	OPCG control register 2.

Bits	SCOM	Field Mnemonic: Description
0	RWX	OPCG_GO2: OPCG go for broadcast sequences (start sequence).
1:3	RW	PRPG_WEIGHTING: prpg_activate: 1/2, 1/4, 1/8, 1/16, 1/2, 3/4, 7/8, 15/16.
4:15	RWX	PRPG_VALUE: Set to 0 for PRPG always on, else seed.
16:27	RW	PRPG_A_VAL: a value for PRPG aperture.
28:39	RW	PRPG_B_VAL: b value for PRPG aperture.
40	RW	PRPG_MODE: PRPG aperture mode (0 = a-1 to b-1, 1 = start to a and b to end).
41:63	RW	Unused41_63: Unused.

Register Name	**Scan Region and Type Register**
Mnemonic	TP.TCN2.N2.SCAN_REGION_TYPE
Address	0000000004030005 (SCOM)
Description	Scan region and type register.

Bits	SCOM	Field Mnemonic: Description
0	RWX	SYSTEM_FAST_INIT: Default is 0. When set to 1, the MASK bits in the CMSK chain decide which part is scanned or scan0. MASK=1=scan0, MASK=0 (part of scan chain).
1:2	RO	constant = 0b00
3	NCX	SCAN_REGION_VITL: Scan clock region vitl (vital = clock).

Bits	SCOM	Field Mnemonic: Description
4	RWX	SCAN_REGION_PERV: Scan clock region perv (Pervasive).
5	RWX	SCAN_REGION_UNIT1: Scan clock region CXA1 - CAPP.
6	RWX	SCAN_REGION_UNIT2: Scan clock region PCIS0 - PCI.
7	RWX	SCAN_REGION_UNIT3: Scan clock region PCIS1 - PCI .
8	RWX	SCAN_REGION_UNIT4: Scan clock region PCIS2 - PCI .
9	RWX	SCAN_REGION_UNIT5: Scan clock region IOPSI- IOPSI.
10	RWX	SCAN_REGION_UNIT6: Scan clock region unused.
11	RWX	SCAN_REGION_UNIT7: Scan clock region unused.
12	RWX	SCAN_REGION_UNIT8: Scan clock region unused.
13	RWX	SCAN_REGION_UNIT9: Scan clock region unused.
14	RWX	SCAN_REGION_UNIT10: Scan clock region reserved.
15:47	RO	constant = 0b00000000000000000000000000000000
48	RW	SCAN_TYPE_FUNC: Scan chain func (functional).
49	RW	SCAN_TYPE_CFG: Scan chain mode (boot configuration and debug configuration).
50	RW	SCAN_TYPE_CCFG_GPTR: Scan chain CCFG / GPTR (Pervasive = CC configuration, Others = GPTR).
51	RW	SCAN_TYPE_REGF: Scan chain REGF (register files).
52	RW	SCAN_TYPE_LBIST: Scan chain LBST.
53	RW	SCAN_TYPE_ABIST: Scan chain ABST.
54	RW	SCAN_TYPE_REPR: Scan chain REPR (array repair).
55	RW	SCAN_TYPE_TIME: Scan chain time (array timing).
56	RW	SCAN_TYPE_BNDY: Scan chain BNDY (boundary I/Os).
57	RW	SCAN_TYPE_FARR: Scan chain FARRr (fast array unload).
58	RW	SCAN_TYPE_CMSK: Scan chain CMSK (LBIST channel mask).
59	RW	SCAN_TYPE_INEX: Scan chain IDEX (c14 ASIC).
60:63	RO	constant = 0b0000

Register Name	Start/Stop of Clocks Register
Mnemonic	TP.TCN2.N2.CLK_REGION
Address	0000000004030006 (SCOM)
Description	Start/stop of clocks register.

Bits	SCOM	Field Mnemonic: Description
0:1	RWX	CLOCK_CMD: Command for clock control: 00 = NOP 01 = Start 10 = Stop 11 = Pulse (one pulse)
2	RWX	SLAVE_MODE: When selected, clock command waits for master chiplet to get started. Bit gets cleared after incoming slave trigger and Keep_MS_Mode_after_trigger is set to 0.
3	RWX	MASTER_MODE: When selected, clock command sends out trigger to all slave chiplets. Bit gets cleared after sending out one master trigger and Keep_MS_Mode_after_trigger is set to 0.

Bits	SCOM	Field Mnemonic: Description
4	RWX	CLOCK_REGION_PERV: for clock region perv (Pervasive).
5	RWX	CLOCK_REGION_UNIT1: for clock region CXA1 - CAPP.
6	RWX	CLOCK_REGION_UNIT2: for clock region PCIS0 - PCI .
7	RWX	CLOCK_REGION_UNIT3: for clock region PCIS1 - PCI .
8	RWX	CLOCK_REGION_UNIT4: for clock region PCIS2 - PCI .
9	RWX	CLOCK_REGION_UNIT5: for clock region IOPSI- IOPSI .
10	RWX	CLOCK_REGION_UNIT6: for clock region unused.
11	RWX	CLOCK_REGION_UNIT7: for clock region unused.
12	RWX	CLOCK_REGION_UNIT8: for clock region unused.
13	RWX	CLOCK_REGION_UNIT9: for clock region unused.
14	RWX	CLOCK_REGION_UNIT10: for clock region reserved.
15:47	RO	constant = 0b00000000000000000000000000000000
48	RWX	SEL_THOLD_SL: Select SL thresholds.
49	RWX	SEL_THOLD_NSL: Select NSL thresholds.
50	RWX	SEL_THOLD_ARY: Select array threshold.
51	RO	constant = 0b0
52	RW	CLOCK_PULSE_USE_EVEN: For dual mesh support, default for pulse is ODD phase. When this bit is set, pulse is by applied on even phase.
53:63	RO	constant = 0b00000000000

Register Name	Clocks Running SL Register
Mnemonic	TP.TCN2.N2.CLOCK_STAT_SL
Address	0000000004030008 (SCOM)
Description	Clocks running SL register.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b1111
4	ROX	CLOCK_STATUS_PERV_SL: Status of PERV SL hold: 0=run, 1=stop.
5	ROX	CLOCK_STATUS_UNIT1_SL: Status of CXA1 - CAPP SL hold: 0=run, 1=stop.
6	ROX	CLOCK_STATUS_UNIT2_SL:Status of PCIS0 - PCI SL hold: 0=run, 1=stop.
7	ROX	CLOCK_STATUS_UNIT3_SL: Status of PCIS1 - PCI SL hold: 0=run, 1=stop.
8	ROX	CLOCK_STATUS_UNIT4_SL: Status of PCIS2 - PCI i SL hold: 0=run, 1=stop.
9	ROX	CLOCK_STATUS_UNIT5_SL: Status of IOPSI- IOPSI SL hold: 0=run, 1=stop.
10	ROX	CLOCK_STATUS_UNIT6_SL: Status of unused SL hold: 0=run, 1=stop.
11	ROX	CLOCK_STATUS_UNIT7_SL: Status of unused SL hold: 0=run, 1=stop.
12	ROX	CLOCK_STATUS_UNIT8_SL: Status of unused SL hold: 0=run, 1=stop.
13	ROX	CLOCK_STATUS_UNIT9_SL: Status of unused SL hold: 0=run, 1=stop.
14	ROX	CLOCK_STATUS_UNIT10_SL: Status of reserved SL hold: 0=run, 1=stop.
15:63	RO	constant = 0b111111111111111111111111111111111111111111111111111

Register Name	Clocks Running NSL Register
Mnemonic	TP.TCN2.N2.CLOCK_STAT_NSL
Address	0000000004030009 (SCOM)
Description	Clocks running NSL register.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b1111
4	ROX	CLOCK_STATUS_PERV_NSL: Status of PERV NSL hold: 0=run, 1=stop.
5	ROX	CLOCK_STATUS_UNIT1_NSL: Status of CXA1 - CAPP NSL hold: 0=run, 1=stop.
6	ROX	CLOCK_STATUS_UNIT2_NSL: Status of PCIS0 - PCI NSL hold: 0=run, 1=stop.
7	ROX	CLOCK_STATUS_UNIT3_NSL: Status of PCIS1 - PCI NSL hold: 0=run, 1=stop.
8	ROX	CLOCK_STATUS_UNIT4_NSL: Status of PCIS0 - PCI NSL hold: 0=run, 1=stop.
9	ROX	CLOCK_STATUS_UNIT5_NSL: Status of IOPSI- IOPSI NSL hold: 0=run, 1=stop.
10	ROX	CLOCK_STATUS_UNIT6_NSL: Status of unused NSL hold: 0=run, 1=stop.
11	ROX	CLOCK_STATUS_UNIT7_NSL: Status of unused NSL hold: 0=run, 1=stop.
12	ROX	CLOCK_STATUS_UNIT8_NSL: Status of unused NSL hold: 0=run, 1=stop.
13	ROX	CLOCK_STATUS_UNIT9_NSL: Status of unused NSL hold: 0=run, 1=stop.
14	ROX	CLOCK_STATUS_UNIT10_NSL: Status of reserved NSL hold: 0=run, 1=stop.
15:63	RO	constant = 0b11111111111111111111111111111111111111111111111111111

Register Name	Clocks Running ARY Register
Mnemonic	TP.TCN2.N2.CLOCK_STAT_ARY
Address	000000000403000A (SCOM)
Description	Clocks running ARY register.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b1111
4	ROX	CLOCK_STATUS_PERV_ARY: Status of PERV ARY hold: 0=run, 1=stop.
5	ROX	CLOCK_STATUS_UNIT1_ARY: Status of CXA1 - CAPP ARY hold: 0=run, 1=stop.
6	ROX	CLOCK_STATUS_UNIT2_ARY: Status of PCIS0 - PCI ARY hold: 0=run, 1=stop.
7	ROX	CLOCK_STATUS_UNIT3_ARY: Status of PCIS1 - PCI ARY hold: 0=run, 1=stop.
8	ROX	CLOCK_STATUS_UNIT4_ARY: Status of PCIS0 - PCI ARY hold: 0=run, 1=stop.
9	ROX	CLOCK_STATUS_UNIT5_ARY: Status of IOPSI- IOPSI ARY hold: 0=run, 1=stop.
10	ROX	CLOCK_STATUS_UNIT6_ARY: Status of unused ARY hold: 0=run, 1=stop.
11	ROX	CLOCK_STATUS_UNIT7_ARY: Status of unused ARY hold: 0=run, 1=stop.

Register Name	ABIST and IOBIST Per Region Register
Mnemonic	TP.TCN2.N2.BIST
Address	000000000403000B (SCOM)
Description	ABIST and IOBIST per region register.

Bits	SCOM	Field Mnemonic: Description
0	RW	TC_BIST_START_TEST_DC: Keep this 0 during ABIST/IOBIST. It could be used to bypass the RUNN start. When this bit is set, the BIST_START_TEST will go high immediately without waiting for RUNN. BIST will start with the first held clock cycle.
1	RW	TC_SRAM_ABIST_MODE_DC: Select the ABIST engines for SRAMs.
2	RW	TC_EDRAM_ABIST_MODE_DC: Select the ABIST engines for eDRAMs.
3	RW	TC_IOBIST_MODE_DC: Select the IOBIST engines.
4	RW	BIST_PERV: Region PERV: 1 = BIST_START_TEST for this region will be triggered 0 = The region will take not part of the ABIST/IOBIST run
5	RW	BIST_UNIT1: Region CXA1 - CAPP: 1 = BIST_START_TEST for this region will be triggered 0 = The region will take not part of the ABIST/IOBIST run
6	RW	BIST_UNIT2: Region PCIS0 - PCI: 1 = BIST_START_TEST for this region will be triggered 0 = The region will take not part of the ABIST/IOBIST run
7	RW	BIST_UNIT3:Region PCIS1 - PCI: 1 = BIST_START_TEST for this region will be triggered 0 = The region will take not part of the ABIST/IOBIST run
8	RW	BIST_UNIT4: Region PCIS2 - PCI: 1 = BIST_START_TEST for this region will be triggered 0 = The region will take not part of the ABIST/IOBIST run
9	RW	BIST_UNIT5: Region IOPSI- IOPSI: 1 = BIST_START_TEST for this region will be triggered 0 = The region will take not part of the ABIST/IOBIST run
10	RW	BIST_UNIT6: Region unused: 1 = BIST_START_TEST for this region will be triggered 0 = The region will take not part of the ABIST/IOBIST run
11	RW	BIST_UNIT7: Region unused: 1 = BIST_START_TEST for this region will be triggered 0 = The region will take not part of the ABIST/IOBIST run
12	RW	BIST_UNIT8: Region unused: 1 = BIST_START_TEST for this region will be triggered 0 = The region will take not part of the ABIST/IOBIST run
13	RW	BIST_UNIT9: region unused: 1 = BIST_START_TEST for this region will be triggered 0 = The region will take not part of the ABIST/IOBIST run
14	RW	BIST_UNIT10: Region reserved: 1 = BIST_START_TEST for this region will be triggered 0 = The region will take not part of the ABIST/IOBIST run
15:47	RO	constant = 0b00000000000000000000000000000000
48	RW	BIST_STROBE_WINDOW_EN: Enable strobe window only in TE=1 mode. OPCGGO tester pin is enabling ABIST compare, once ABIST has been started. Special setup in ABIST engine is required. Default is 0. System mode can not enable this feature.
49:63	RO	constant = 0b0000000000000000

Register Name	Checkstop Per Region Register
Mnemonic	TP.TCN2.N2.XSTOP1
Address	000000000403000C (SCOM)
Description	Checkstop per region register.

Bits	SCOM	Field Mnemonic: Description
0	RW	XSTOP1_MASK_B: Mask for checkstop to clockstop of select regions (see xstop_perv,xstop_unit0..n): 0 = Ignore checkstop 1 = Stop on checkstop
1	RW	XSTOP1_Unused: Unused.
2	RW	TRIGGER_OPCG_ON_XSTOP1: Trigger OPCG on checkstop instead of performing clockstop.
3	RW	XSTOP1_WAIT_ALLWAYS: When set to 1, checkstop will wait independent from flush. Default is no wait, when flush is not set.
4	RW	XSTOP1_PERV: Region PERV: 1 = Region will be stopped 0 = Region will keep running on checkstop
5	RW	XSTOP1_UNIT1: Region CXA1 - CAPP: 1 = Region will be stopped 0 = Region will keep running on checkstop
6	RW	XSTOP1_UNIT2: Region PCIS0 - PCI : 1 = Region will be stopped 0 = Region will keep running on checkstop
7	RW	XSTOP1_UNIT3: Region PCIS1- PCI: 1 = Region will be stopped 0 = Region will keep running on checkstop
8	RW	XSTOP1_UNIT4: Region PCIS2- PCI: 1 = Region will be stopped 0 = Region will keep running on checkstop
9	RW	XSTOP1_UNIT5: Region IOPSI - IOPSI: 1 = Region will be stopped 0 = Region will keep running on checkstop
10	RW	XSTOP1_UNIT6: Region unused: 1 = Region will be stopped 0 = Region will keep running on checkstop
11	RW	XSTOP1_UNIT7: Region unused: 1 = Region will be stopped 0 = Region will keep running on checkstop
12	RW	XSTOP1_UNIT8: Region unused: 1 = Region will be stopped 0 = Region will keep running on checkstop
13	RW	XSTOP1_UNIT9: Region unused: 1 = Region will be stopped 0 = Region will keep running on checkstop
14	RW	XSTOP1_UNIT10: Region reserved: 1 = Region will be stopped 0 = Region will keep running on checkstop
15:47	RO	constant = 0b00000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:59	RW	XSTOP1_WAIT_CYCLES: Defines how many cycles XSRTOP will wait after dropping flush, before thresholds get dropped. 0 - 4095 cycles are possible.
60:63	RO	constant = 0b0000

Register Name	Checkstop Per Region Register
Mnemonic	TP.TCN2.N2.XSTOP2
Address	000000000403000D (SCOM)
Description	Checkstop per region

Bits	SCOM	Field Mnemonic: Description
0	RW	XSTOP2_MASK_B: Mask for checkstop to clockstop of select regions (see xstop_perv,xstop_unit0..n): 0 = Ignore checkstop 1 = Stop on checkstop
1	RW	XSTOP2_Unused: Unused.
2	RW	TRIGGER_OPCG_ON_XSTOP2: Trigger OPCG on checkstop instead of performing clockstop.
3	RW	XSTOP2_WAIT_ALLWAYS: When set to 1, checkstop will wait independent from flush. Default is no wait, when flush is not set.
4	RW	XSTOP2_PERV: Region PERV: 1 = Region will be stopped 0 = Region will keep running on checkstop
5	RW	XSTOP2_UNIT1: Region CXA1 - CAPP: 1 = Region will be stopped 0 = Region will keep running on checkstop
6	RW	XSTOP2_UNIT2: Region PCIS0 - PCI: 1 = Region will be stopped 0 = Region will keep running on checkstop
7	RW	XSTOP2_UNIT3: Region PCIS1 - PCI: 1 = Region will be stopped 0 = Region will keep running on checkstop
8	RW	XSTOP2_UNIT4: Region PCIS2 - PCI: 1 = Region will be stopped 0 = Region will keep running on checkstop
9	RW	XSTOP2_UNIT5: Region IOPSI - IOPSI: 1 = Region will be stopped 0 = Region will keep running on checkstop
10	RW	XSTOP2_UNIT6: Region unused: 1 = Region will be stopped 0 = Region will keep running on checkstop
11	RW	XSTOP2_UNIT7: Region unused: 1 = Region will be stopped 0 = Region will keep running on checkstop
12	RW	XSTOP2_UNIT8: Region unused: 1 = Region will be stopped 0 = Region will keep running on checkstop
13	RW	XSTOP2_UNIT9: Region unused: 1 = Region will be stopped 0 = Region will keep running on checkstop

Bits	SCOM	Field Mnemonic: Description
14	RW	XSTOP2_UNIT10: Region reserved: 1 = Region will be stopped 0 = Region will keep running on checkstop
15:47	RO	constant = 0b00000000000000000000000000000000
48:59	RW	XSTOP2_WAIT_CYCLES: Defines how many cycles checkstop waits after dropping flush, before thresholds get dropped. 0 - 4095 cycles are possible.
60:63	RO	constant = 0b0000

Register Name	Checkstop Per Region Register
Mnemonic	TP.TCN2.N2.XSTOP3
Address	000000000403000E (SCOM)
Description	Checkstop per region register.

Bits	SCOM	Field Mnemonic: Description
0	RW	XSTOP3_MASK_B: Mask for checkstop to clockstop of select regions (see xstop_perv,xstop_unit0..n): 0 = Ignore checkstop 1 = Stop on checkstop
1	RW	XSTOP3_Unused: Unused.
2	RW	TRIGGER_OPCG_ON_XSTOP3: Trigger OPCG on checkstop instead of performing clockstop.
3	RW	XSTOP3_WAIT_ALLWAYS: When set to 1, checkstop will wait independent from flush. Default is no wait, when flush is not set.
4	RW	XSTOP3_PERV: Region PERV: 1 = Region will be stopped 0 = Region will keep running on checkstop
5	RW	XSTOP3_UNIT1: Region CXA1 - CAPP: 1 = Region will be stopped 0 = Region will keep running on checkstop
6	RW	XSTOP3_UNIT2: Region PCIS0 - PCI: 1 = Region will be stopped 0 = Region will keep running on checkstop
7	RW	XSTOP3_UNIT3: Region PCIS1 - PCI: 1 = Region will be stopped 0 = Region will keep running on checkstop
8	RW	XSTOP3_UNIT4: Region PCIS2 - PCI: 1 = Region will be stopped 0 = Region will keep running on checkstop
9	RW	XSTOP3_UNIT5: Region IOPSI - IOPSI: 1 = Region will be stopped 0 = Region will keep running on checkstop
10	RW	XSTOP3_UNIT6: Region unused: 1 = Region will be stopped 0 = Region will keep running on checkstop
11	RW	XSTOP3_UNIT7: Region unused: 1 = Region will be stopped 0 = Region will keep running on checkstop
12	RW	XSTOP3_UNIT8: Region unused: 1 = Region will be stopped 0 = Region will keep running on checkstop

Bits	SCOM	Field Mnemonic: Description
13	RW	XSTOP3_UNIT9: Region unused: 1 = Region will be stopped 0 = Region will keep running on checkstop
14	RW	XSTOP3_UNIT10: Region reserved: 1 = Region will be stopped 0 = Region will keep running on checkstop
15:47	RO	constant = 0b00000000000000000000000000000000
48:59	RW	XSTOP3_WAIT_CYCLES: Defines how many cycles checkstop will wait after dropping flush before thresholds get dropped. 0 - 4095 cycles are possible.
60:63	RO	constant = 0b0000

Register Name	Error Status of CC Register
Mnemonic	TP.TCN2.N2.ERROR_STATUS
Address	000000000403000F (SCOM)
Description	Error status of CC register.

Bits	SCOM	Field Mnemonic: Description
0	RWX	PCB_WRITE_NOT_ALLOWED_ERR: Write on read only register.
1	RWX	PCB_READ_NOT_ALLOWED_ERR: Read not allowed, maybe write only register.
2	RWX	PCB_PARITY_ON_CMD_ERR: Parity error on command.
3	RWX	PCB_ADDRESS_NOT_VALID_ERR: Invalid address.
4	RWX	PCB_PARITY_ON_ADDR_ERR: Parity error on address.
5	RWX	PCB_PARITY_ON_DATA_ERR: Parity error on data.
6	RWX	PCB_PROTECTED_ACCESS_INVALID_ERR: Protection violation.
7	RWX	PCB_PARITY_ON_SPCIF_ERR: Parity error on SPCIF.
8	RWX	PCB_WRITE_AND_OPCG_IP_ERR: PCB write while OPCG is running.
9	RWX	SCAN_READ_AND_OPCG_IP_ERR: Scan read when OPCG is running.
10	RWX	CLOCK_CMD_CONFLICT_ERR: Clock command in progress.
11	RWX	SCAN_COLLISION_ERR: Scan region selected of running region.
12	RWX	PREVENTED_SCAN_COLLISION_ERR: PCB request to set scan region which is running.
13	RWX	OPCG_TRIGGER_ERR: OPCG gets triggered while OPCG is running.
14	RWX	PHASE_CNT_CORRUPTION_ERR: Phase counters inside chiplet out of sync.
15	RWX	CLOCK_CMD_PREVENTED_ERR: Security or scan collision prevented a clock start.
16	RWX	PARITY_ON_OPCG_SM_ERR: Parity error on OPCG state machine.
17	RWX	PARITY_ON_CLOCK_MUX_REG_ERR: Parity error on scan/clock region/type or clock status register.
18	RWX	PARITY_ON_OPCG_REG_ERR: Parity error on OPCG registers.
19	RWX	PARITY_ON_SYNC_CONFIG_REG_ERR: Parity error on synchronous configuration register.
20	RWX	PARITY_ON_XSTOP_REG_ERR: Parity error on checkstop register.
21	RWX	PARITY_ON_GPIO_REG_ERR: Parity error on GP0, 4, 5, and 6 registers.
22	RWX	CLKCMD_REQUEST_ERR: Region clock command has one request pending but gets a second one.
23	RWX	CBS_PROTOCOL_ERR: CBS protocol error, REQ/ACK sequence wrong.

Bits	SCOM	Field Mnemonic: Description
24	RWX	VITL_ALIGN_ERR: VITL alignment is out of sync to sync pulse.
25	RWX	UNIT_SYNC_LVL_ERR: Unit0 and Unit1 sync level pulses are not in sync, AVP broken.
26	RWX	PARITY_ON_SELFBOOT_CMD_STATE_ERR: Parity error on self boot command state.
27	RWX	Unused_ERROR27: Unused.
28	RWX	Unused_ERROR28: Unused.
29	RWX	Unused_ERROR29: Unused.
30	RWX	Unused_ERROR30: Unused.
31	RWX	Unused_ERROR31: Unused.

Register Name	OPCG Control Register Capture 1 Register
Mnemonic	TP.TCN2.N2.OPCG_CAPT1
Address	0000000004030010 (SCOM)
Description	OPCG control register capture 1 register.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	COUNT: 0000=12 cycle 0001 - 1100= cycle 1-12 1101-1111=24 normal, no fast.
4:8	RW	SEQ_01: Sequence cycle 1 for normal/slow region (SL, NSL, ARY, SE, and FCE).
9:13	RW	SEQ_02: Sequence cycle 2 for normal/slow region (SL, NSL, ARY, SE, and FCE).
14:18	RW	SEQ_03: Sequence cycle 3 for normal/slow region (SL, NSL, ARY, SE, and FCE).
19:23	RW	SEQ_04: Sequence cycle 4 for normal/slow region (SL, NSL, ARY, SE, and FCE).
24:28	RW	SEQ_05: Sequence cycle 5 for normal/slow region (SL, NSL, ARY, SE, and FCE).
29:33	RW	SEQ_06: Sequence cycle 6 for normal/slow region (SL, NSL, ARY, SE, and FCE).
34:38	RW	SEQ_07: Sequence cycle 7 for normal/slow region (SL, NSL, ARY, SE, and FCE).
39:43	RW	SEQ_08: Sequence cycle 8 for normal/slow region (SL, NSL, ARY, SE, and FCE).
44:48	RW	SEQ_09: Sequence cycle 9 for normal/slow region (SL, NSL, ARY, SE, and FCE).
49:53	RW	SEQ_10: Sequence cycle 10 for normal/slow region (SL, NSL, ARY, SE, and FCE).
54:58	RW	SEQ_11: Sequence cycle 11 for normal/slow region (SL, NSL, ARY, SE, and FCE).
59:63	RW	SEQ_12: Sequence cycle 12 for normal/slow region (SL, NSL, ARY, SE, and FCE).

Register Name	OPCG Control Register Capture 2 Register
Mnemonic	TP.TCN2.N2.OPCG_CAPT2
Address	0000000004030011 (SCOM)
Description	OPCG control register capture 2.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	Unused_CAPT2: Unused.
4:8	RW	SEQ_13_01EVEN: Sequence cycle 1 even for fast region or cycle 13 for normal region (SL, NSL, ARY, SE, and FCE).
9:13	RW	SEQ_14_01ODD: Sequence cycle 1 odd for fast region or cycle 14 for normal region (SL, NSL, ARY, SE, and FCE).

Bits	SCOM	Field Mnemonic: Description
14:18	RW	(SL, NSL, ARY, SE, and FCE).(SL, NSL, ARY, SE, and FCE).
19:23	RW	SEQ_16_02ODD: Sequence cycle 2 odd for fast region or cycle 16 for normal region (SL, NSL, ARY, SE, and FCE).
24:28	RW	SEQ_17_03EVEN: Sequence cycle 3 even for fast region or cycle 17 for normal region (SL, NSL, ARY, SE, and FCE).
29:33	RW	SEQ_18_03ODD: Sequence cycle 3 odd for fast region or cycle 18 for normal region (SL, NSL, ARY, SE, and FCE).
34:38	RW	SEQ_19_04EVEN: Sequence cycle 4 even for fast region or cycle 19 for normal region (SL, NSL, ARY, SE, and FCE).
39:43	RW	SEQ_20_04ODD: Sequence cycle 4 odd for fast region or cycle 20 for normal region (SL, NSL, ARY, SE, and FCE).
44:48	RW	SEQ_21_05EVEN: Sequence cycle 5 eve- for fast region or cycle 21 for normal region (SL, NSL, ARY, SE, and FCE).
49:53	RW	SEQ_22_05ODD: Sequence cycle 5 odd for fast region or cycle 22 for normal region (SL, NSL, ARY, SE, and FCE).
54:58	RW	SEQ_23_06EVEN: Sequence cycle 6 even for fast region or cycle 23 for normal region (SL, NSL, ARY, SE, and FCE).
59:63	RW	SEQ_24_06ODD: Sequence cycle 6 odd for fast region or cycle 24 for normal region (SL, NSL, ARY, SE, and FCE).

Register Name	**OPCG Control Register Capture 3 Register**
Mnemonic	TP.TCN2.N2.OPCG_CAPT3
Address	0000000004030012 (SCOM)
Description	OPCG control register capture 3.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	Unused_CAPT3:
4:8	RW	SEQ_07EVEN: Sequence cycle 7 even for fast region (SL, NSL, ARY, SE, and FCE).
9:13	RW	SEQ_07ODD: Sequence cycle 7 odd for fast region (SL, NSL, ARY, SE, and FCE).
14:18	RW	SEQ_08EVEN: Sequence cycle 8 even for fast region (SL, NSL, ARY, SE, and FCE).
19:23	RW	SEQ_08ODD: Sequence cycle 8 odd for fast region (SL, NSL, ARY, SE, and FCE).
24:28	RW	SEQ_09EVEN: Sequence cycle 9 eve- for fast region (SL, NSL, ARY, SE, and FCE).
29:33	RW	SEQ_09ODD: Sequence cycle 9 odd for fast region (SL, NSL, ARY, SE, and FCE).
34:38	RW	SEQ_10EVEN: Sequence cycle 10 even for fast region (SL, NSL, ARY, SE, and FCE).
39:43	RW	SEQ_10ODD: Sequence cycle 10 odd for fast region (SL, NSL, ARY, SE, and FCE).
44:48	RW	SEQ_11EVEN: Sequence cycle 11 even for fast region (SL, NSL, ARY, SE, and FCE).
49:53	RW	SEQ_11ODD: Sequence cycle 11 odd for fast region (SL, NSL, ARY, SE, and FCE).
54:58	RW	SEQ_12EVEN: Sequence cycle 12 even for fast region (SL, NSL, ARY, SE, and FCE).
59:63	RW	SEQ_12ODD: Sequence cycle 12 odd for fast region (SL, NSL, ARY, SE, and FCE).

Register Name	Debug CBS CC Register
Mnemonic	TP.TCN2.N2.DBG_CBS_CC
Address	0000000004030013 (SCOM)
Description	Debug CBS CC register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	DBG_RESET_EP: Reset endpoint. Is the CC and CTRL in reset state.
1	ROX	DBG_OPCG_IP: OPCG in progress, not in idle.
2	ROX	DBG_VITL_CLKOFF: VITL HLD stopped, when enabled, need plat-depth cycles to switch this latch.
3	ROX	DBG_TEST_ENABLE: Test enable.
4	ROX	DBG_CBS_REQ: CBS Interface - Request (Latched).
5:7	ROX	DBG_CBS_CMD: CBS Interface - Command (Latched).
8:12	ROX	DBG_CBS_STATE: CBS command state machine 00000=Idle.
13	ROX	DBG_SECURITY_DEBUG_MODE: Status of the security mode bit.
14	ROX	DBG_CBS_PROTOCOL_ERROR: CBS protocol error. REQ raised, although state machine is not in idle. Need reset_ep to clear this bit. No impact on IPL.
15	ROX	DBG_PCB_IDLE: PCB interface in idle state.
16:19	ROX	DBG_CURRENT_OPCG_MODE: Current/latest OPCG mode: 0 = NOP 1 = LBIST 2 = ABIST 3 = RUNN 4 = SCAN0 5 = SCAN 6 = SCAN rotate 7 = SCAN with UpdateDR 8 = SCAN with CaptureDR 9 = Clock change request 10 – 15 = Unused
20:23	ROX	DBG_LAST_OPCG_MODE: previous OPCG MODE.
24	ROX	DBG_PCB_ERROR: PCB interface error. Read CC error register or set CBS_CMD = 001 to switch FSI CBS debug information to CC error register.
25	ROX	DBG_PARITY_ERROR: Any parity error, non PCB parity. Read CC error register or set CBS_CMD = 001 to switch FSI CBS debug information to CC error register.
26	ROX	DBG_CC_ERROR: Any other CC error. Read CC error register or set CBS_CMD = 001 to switch FSI CBS debug information to CC error register.
27	ROX	DBG_CHIPLET_IS_ALIGNED: Is 1 when the a valid align pulse was send out.
28	ROX	DBG_PCB_REQUEST_SINCE_RESET: Reset will clear that bit, the first PCB request will set it.
29	ROX	DBG_PARANOIA_TEST_ENABLE_CHANGE: Rising or falling edge on test enable after reset. Need reset_ep to clear, no impact on IPL.
30	ROX	DBG_PARANOIA_VITL_CLKOFF_CHANGE: Rising or falling edge on vitl_clkoff after reset. Need reset_ep to clear, no impact on IPL.
31	ROX	TP_TPFSI_CBS_ACK: Only representation of CC acknowledgment signal going to FSI.

Register Name	CC Protect Mode Register
Mnemonic	TP.TCN2.N2.CC_PROTECT_MODE_REG
Address	00000000040303FE (SCOM)
Description	CC protect mode register.

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_READ_PROTECT_ENABLE: Enable read protection.
1	RW	CC_WRITE_PROTECT_ENABLE: Enable write protection.

Register Name	Atomic Lock Register
Mnemonic	TP.TCN2.N2.CC_ATOMIC_LOCK_REG
Address	00000000040303FF (SCOM)
Description	Atomic lock register.

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_ATOMIC_LOCK_ENABLE: Enable atomic lock.
1:4	ROX	CC_ATOMIC_ID: Atomic ID.
5:7	RO	constant = 0b000
8:15	ROX	CC_ATOMIC_ACTIVITY: Atomic lock counter.

Register Name	Global Checkstop FIR Register
Mnemonic	TP.TCN2.N2.XFIR
Address	0000000004040000 (SCOM)
Description	Global checkstop FIR register.

Bits	SCOM	Field Mnemonic: Description
0	RWX	XFIR_IN0: Summary bit (any checkstop).
1	RWX	XFIR_IN1: Checkstop broadcast via OOB.
2	RWX	XFIR_IN2: Unused.
3	RWX	XFIR_IN3: Checkstop from pervasive unit.
4	RWX	XFIR_IN4: Checkstop from CXA1.
5	RWX	XFIR_IN5: Checkstop from PCIS0 FIR.
6	RWX	XFIR_IN6: Checkstop from PCIS1 FIR.
7	RWX	XFIR_IN7: Checkstop from PCIS2 FIR.
8	RWX	XFIR_IN8: Checkstop from IOPSI FIR.
9	RWX	XFIR_IN9: Checkstop from PCIS2 FIR_1.
10	RWX	XFIR_IN10: Checkstop from PCIS2 FIR_2.
11	RWX	XFIR_IN11: Checkstop from IOPSI FIR unstaged.
12:25	RWX	XFIR_IN12: Unused.
26	RWX	XFIR_IN26: Checkstop on debug trigger.

Register Name	Global Recoverable FIR Register
Mnemonic	TP.TCN2.N2.RFIR
Address	0000000004040001 (SCOM)
Description	Global recoverable FIR register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	RFIR_IN0: Local checkstop from CXA1.
1	ROX	LFIR_RECOV_ERR: Recoverable error from pervasive unit.
2	ROX	RFIR_IN4: Recover from CXA1.
3	ROX	RFIR_IN5: Recover from PCIS0.
4	ROX	RFIR_IN6: Recover from PCIS1 FIR.
5	ROX	RFIR_IN7: Recover from PCIS2 FIR.
6	ROX	RFIR_IN8: Recover from IOPSI FIR.
7	ROX	RFIR_IN9: Recover from PCIS2 FIR_1.
8	ROX	RFIR_IN10: Recover from PCIS2 FIR_2.
9	ROX	RFIR_IN11: Recover from IOPSI FIR unstaged.
10:23	ROX	RFIR_IN12: Unused.

Register Name	FIR Mask Register
Mnemonic	TP.TCN2.N2.FIR_MASK
Address	0000000004040002 (SCOM)
Description	FIR mask register

Bits	SCOM	Field Mnemonic: Description
0	RW	FIR_MASK_IN0: Mask for XFIR/RFIR summary bit.
1	RW	FIR_MASK_IN1: Mask for XFIR bit received via OOB broadcast.
2	RW	FIR_MASK_IN2: Unused.
3	RW	FIR_MASK_IN3: Mask for XFIR from pervasive unit.
4	RW	FIR_MASK_IN4: Mask for CXA1 XFIR and RFIR.
5	RW	FIR_MASK_IN5: Mask for PCIS0 XFIR and RFIR.
6	RW	FIR_MASK_IN6: Mask for PCIS1 XFIR and RFIR.
7	RW	FIR_MASK_IN7: Mask for PCIS2 XFIR and RFIR.
8	RW	FIR_MASK_IN8: Mask for IOPSI XFIR and RFIR.
9	RW	FIR_MASK_IN9: Mask for IOPSI XFIR and RFIR.
10	RW	FIR_MASK_IN10: Mask for IOPSI XFIR and RFIR.
11	RW	FIR_MASK_IN11: Mask for IOPSI XFIR and RFIR.
12:25	RW	FIR_MASK_IN12: Unused.
26	RW	FIR_MASK_IN26: Mask for debug trigger and local checkstop to recoverable error.

Register Name	Special Attention Register
Mnemonic	TP.TCN2.N2.SPATTN
Address	0000000004040004 (SCOM) 0000000004040005 (SCOM1) 0000000004040006 (SCOM2)
Description	Special attention register.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:9	ROX	NCX	NCX	SPATTN_IN: Unused special attentions.

Register Name	Special Attention Mask Register
Mnemonic	TP.TCN2.N2.SPA_MASK
Address	0000000004040007 (SCOM)
Description	Special attention mask register.

Bits	SCOM	Field Mnemonic: Description
0:9	RW	SPA_MASK_IN: Special attention mask.

Register Name	Mode Register
Mnemonic	TP.TCN2.N2.EPS.FIR.MODE_REG
Address	0000000004040008 (SCOM)
Description	Mode register.

Bits	SCOM	Field Mnemonic: Description
0	RW	MODE_IN0: Unused.
1	RW	MODE_IN1: Unused.
2	RW	MODE_IN2: Unused.
3	RW	MODE_IN3: Unused.
4	RW	MODE_IN4: Stop chip TOD on checkstop (Unused in POWER9).
5	RW	MODE_IN5: Stop chip TOD on recoverable (Unused in POWER9).
6	RW	MODE_IN6: Disable propagation of checkstop to other chips.
7	RW	MODE_IN7: Unused.
8	RW	MODE_IN8: Enable checkstop on special attention.
9	RW	MODE_IN9: Mask direct/local error.
10	RW	MODE_IN10: Unused.
11	RW	MODE_IN11: Unused.
12:15	RW	MODE_IN: Unused.

Register Name	Host Attention Register
Mnemonic	TP.TCN2.N2.HOSTATTN
Address	0000000004040009 (SCOM)
Description	Host attention register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	HOSTATTN_IN0: Host attention summary bit.
1	ROX	HOSTATTN_IN1: Unused.
2	ROX	HOSTATTN_IN2: Unused.
3	ROX	HOSTATTN_IN3: Unused.
4	ROX	HOSTATTN_IN4: Unused.
5	ROX	HOSTATTN_IN5: Unused.
6	ROX	HOSTATTN_IN6: Unused.
7	ROX	HOSTATTN_IN7: Unused.
8	ROX	HOSTATTN_IN8: Unused.
9	ROX	HOSTATTN_IN9: Unused.
10	ROX	HOSTATTN_IN10: Unused.
11	ROX	HOSTATTN_IN11: Unused.
12	ROX	HOSTATTN_IN12: Unused.
13	ROX	HOSTATTN_IN13: Unused.
14	ROX	HOSTATTN_IN14: Unused.
15	ROX	HOSTATTN_IN15: Unused.
16	ROX	HOSTATTN_IN16: Unused.
17	ROX	HOSTATTN_IN17: Unused.
18	ROX	HOSTATTN_IN18: Unused.
19	ROX	HOSTATTN_IN19: Unused.
20	ROX	HOSTATTN_IN20: Unused.
21	ROX	HOSTATTN_IN21: Unused.
22	ROX	HOSTATTN_IN22: Unused.

Register Name	Local FIR Register
Mnemonic	TP.TCN2.N2.LOCAL_FIR
Address	000000000404000A (SCOM) 000000000404000B (SCOM1) 000000000404000C (SCOM2)
Description	Local FIR register.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	FIR_IN0: CFIR internal parity error.
1	RWX	WOX_AND	WOX_OR	FIR_IN1: Local errors from GPIO (PCB error).
2	RWX	WOX_AND	WOX_OR	FIR_IN2: Local errors from CC (PCB error).

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
3	RWX	WOX_AND	WOX_OR	FIR_IN3: Local errors from CC (OPCG, parity, scan collision, ...).
4	RWX	WOX_AND	WOX_OR	FIR_IN4: Local errors from PSC (PCB error).
5	RWX	WOX_AND	WOX_OR	FIR_IN5: Local errors from PSC (parity error).
6	RWX	WOX_AND	WOX_OR	FIR_IN6: Local errors from Thermal (parity error).
7	RWX	WOX_AND	WOX_OR	FIR_IN7: Local errors from Thermal (PCB error).
8	RWX	WOX_AND	WOX_OR	FIR_IN8: Local errors from Thermal (trip error critical).
9	RWX	WOX_AND	WOX_OR	FIR_IN9: Local errors from Thermal (trip error fatal).
10	RWX	WOX_AND	WOX_OR	FIR_IN10: Thermal volt trip error.
11	RWX	WOX_AND	WOX_OR	FIR_IN11: Local errors from debug (error).
12	RWX	WOX_AND	WOX_OR	FIR_IN12: Local errors from trace array0 (SCOM error).
13	RWX	WOX_AND	WOX_OR	FIR_IN13: Local errors from trace array0.
14	RWX	WOX_AND	WOX_OR	FIR_IN14: Unused.
15	RWX	WOX_AND	WOX_OR	FIR_IN15: Unused.
16	RWX	WOX_AND	WOX_OR	FIR_IN16: Unused.
17	RWX	WOX_AND	WOX_OR	FIR_IN17: Unused.
18	RWX	WOX_AND	WOX_OR	FIR_IN18: Unused.
19	RWX	WOX_AND	WOX_OR	FIR_IN19: Unused.
20	RWX	WOX_AND	WOX_OR	FIR_IN20: Unused.
21	RWX	WOX_AND	WOX_OR	FIR_IN21: Unused.
22	RWX	WOX_AND	WOX_OR	FIR_IN22: Unused.
23	RWX	WOX_AND	WOX_OR	FIR_IN23: Unused.
24	RWX	WOX_AND	WOX_OR	FIR_IN24: Errors from Bsense I/O.
25	RWX	WOX_AND	WOX_OR	FIR_IN25: Unused.
26	RWX	WOX_AND	WOX_OR	FIR_IN26: Unused.
27	RWX	WOX_AND	WOX_OR	FIR_IN27: Unused.
28	RWX	WOX_AND	WOX_OR	FIR_IN28: Unused.
29	RWX	WOX_AND	WOX_OR	FIR_IN29: Unused.
30	RWX	WOX_AND	WOX_OR	FIR_IN30: Unused.
31	RWX	WOX_AND	WOX_OR	FIR_IN31: Unused.
32	RWX	WOX_AND	WOX_OR	FIR_IN32: Unused.
33	RWX	WOX_AND	WOX_OR	FIR_IN33: Unused.
34	RWX	WOX_AND	WOX_OR	FIR_IN34: Unused.
35	RWX	WOX_AND	WOX_OR	FIR_IN35: Unused.
36	RWX	WOX_AND	WOX_OR	FIR_IN36: Unused.
37	RWX	WOX_AND	WOX_OR	FIR_IN37: Unused.
38	RWX	WOX_AND	WOX_OR	FIR_IN38: Unused.
39	RWX	WOX_AND	WOX_OR	FIR_IN39: Unused.
40	RWX	WOX_AND	WOX_OR	FIR_IN40: Unused.
41	RWX	WOX_AND	WOX_OR	FIR_IN41: Malfunction alert broadcast via OOB.

Register Name	Local FIR Mask Register
Mnemonic	TP.TCN2.N2.EPS.FIR.LOCAL_FIR_MASK
Address	000000000404000D (SCOM) 000000000404000E (SCOM1) 000000000404000F (SCOM2)
Description	Local FIR mask register.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:41	RW	WO_AND	WO_OR	LFIR_MASK_IN: Mask for LEM error collection vector.

Register Name	Local FIR Action0 Register
Mnemonic	TP.TCN2.N2.EPS.FIR.LOCAL_FIR_ACTION0
Address	0000000004040010 (SCOM)
Description	Local FIR action0 register.

Bits	SCOM	Field Mnemonic: Description
0:41	RW	FIR_ACTION0_IN: Action0 mask.

Register Name	Local FIR Action1 Register
Mnemonic	TP.TCN2.N2.EPS.FIR.LOCAL_FIR_ACTION1
Address	0000000004040011 (SCOM)
Description	Local FIR action1 register.

Bits	SCOM	Field Mnemonic: Description
0:41	RW	FIR_ACTION1_IN: Action1 mask.

Register Name	Group Checkstop Mask Register
Mnemonic	TP.TCN2.N2.EPS.FIR.GXSTOP_TRIG_REG
Address	0000000004040013 (SCOM)
Description	Group checkstop mask register.

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP_TRIG_IN0: Mask bit for system checkstop.
1	RW	GXSTP_TRIG_IN1: Mask bit for recoverable error.
2	RW	GXSTP_TRIG_IN2: Mask bit for special attention.
3	RW	GXSTP_TRIG_IN3: Mask bit for local checkstop.
4	RW	GXSTP_TRIG_IN4: Mask bit for type 4 error (host attention).
5	RW	GXSTP_TRIG_IN5: Mask bit for OOB sys_checkstop Input (0).
6	RW	GXSTP_TRIG_IN6: Mask bit for OOB sys_checkstop Input (1).
7	RW	GXSTP_TRIG_IN7: Mask bit for group checkstop input (0).

Bits	SCOM	Field Mnemonic: Description
8	RW	GXSTP_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP_TRIG_IN9: Mask bit for debug checkstop on trigger.
10	RW	GXSTP_TRIG_IN10: Unused.
11	RW	GXSTP_TRIG_IN11: Unused.

Register Name	Group0 Checkstop Mask Register
Mnemonic	TP.TCN2.N2.EPS.FIR.GXSTOP0_MASK_REG
Address	0000000004040014 (SCOM)
Description	Group0 checkstop mask register.

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP0_TRIG_IN0: Mask bit for system checkstop.
1	RW	GXSTP0_TRIG_IN1: Mask bit for recoverable error.
2	RW	GXSTP0_TRIG_IN2: Mask bit for special attention.
3	RW	GXSTP0_TRIG_IN3: Mask bit for local checkstop.
4	RW	GXSTP0_TRIG_IN4: Mask bit for type 4 error (host attention).
5	RW	GXSTP0_TRIG_IN5: Mask bit for OOB sys_checkstop Input (0).
6	RW	GXSTP0_TRIG_IN6: Mask bit for OOB sys_checkstop Input (1).
7	RW	GXSTP0_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP0_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP0_TRIG_IN9: Mask bit for debug checkstop on trigger.
10	RW	GXSTP0_TRIG_IN10: Unused.
11	RW	GXSTP0_TRIG_IN11: Unused.

Register Name	Group1 Checkstop Mask Register
Mnemonic	TP.TCN2.N2.EPS.FIR.GXSTOP1_MASK_REG
Address	0000000004040015 (SCOM)
Description	Group1 checkstop mask register.

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP1_TRIG_IN0: Mask bit for system checkstop.
1	RW	GXSTP1_TRIG_IN1: Mask bit for recoverable error.
2	RW	GXSTP1_TRIG_IN2: Mask bit for special attention.
3	RW	GXSTP1_TRIG_IN3: Mask bit for local checkstop.
4	RW	GXSTP1_TRIG_IN4: Mask bit for type 4 error (host attention).
5	RW	GXSTP1_TRIG_IN5: Mask bit for OOB sys_checkstop Input (0).
6	RW	GXSTP1_TRIG_IN6: Mask bit for OOB sys_checkstop Input (1).
7	RW	GXSTP1_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP1_TRIG_IN8: Mask bit for group checkstop input (1).

Bits	SCOM	Field Mnemonic: Description
9	RW	GXSTP1_TRIG_IN9: Mask bit for debug checkstop on trigger.
10	RW	GXSTP1_TRIG_IN10: Unused.
11	RW	GXSTP1_TRIG_IN11: Unused.

Register Name	Group2 Checkstop Mask Register
Mnemonic	TP.TCN2.N2.EPS.FIR.GXSTOP2_MASK_REG
Address	0000000004040016 (SCOM)
Description	Group2 checkstop mask register.

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP2_TRIG_IN0: Mask bit for system checkstop.
1	RW	GXSTP2_TRIG_IN1: Mask bit for recoverable error.
2	RW	GXSTP2_TRIG_IN2: Mask bit for special attention.
3	RW	GXSTP2_TRIG_IN3: Mask bit for local checkstop.
4	RW	GXSTP2_TRIG_IN4: Mask bit for type 4 error (host attention).
5	RW	GXSTP2_TRIG_IN5: Mask bit for OOB sys_checkstop input (0).
6	RW	GXSTP2_TRIG_IN6: Mask bit for OOB sys_checkstop input (1).
7	RW	GXSTP2_TRIG_IN7: Mask bit for group checkstop input (0).
8	RW	GXSTP2_TRIG_IN8: Mask bit for group checkstop input (1).
9	RW	GXSTP2_TRIG_IN9: Mask bit for debug checkstop on trigger.
10	RW	GXSTP2_TRIG_IN10: Unused.
11	RW	GXSTP2_TRIG_IN11: Unused.

Register Name	Summary Mask Register
Mnemonic	TP.TCN2.N2.EPS.FIR.SUM_MASK_REG
Address	0000000004040017 (SCOM)
Description	Summary mask register.

Bits	SCOM	Field Mnemonic: Description
0	RW	SMASK_IN0: System checkstop summary bit.
1	RW	SMASK_IN1: Recoverable summary bit.
2	RW	SMASK_IN2: Special attention summary bit.
3	RW	SMASK_IN3: Local checkstop summary bit.
4	RW	SMASK_IN4: Type4 (host attention) summary bit.

Register Name	Local Checkstop Register
Mnemonic	TP.TCN2.N2.LOCAL_XSTOP_ERR
Address	0000000004040018 (SCOM)
Description	Local checkstop register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	LOCAL_XSTOP_IN0: Local checkstop from CXA1, bit 0.
1	ROX	LOCAL_XSTOP_IN1: Local checkstop from CXA1, bit 0.
2	ROX	LOCAL_XSTOP_IN2: Unused.
3	ROX	LOCAL_XSTOP_IN3: Unused.
4	ROX	LOCAL_XSTOP_IN4: Unused.
5	ROX	LOCAL_XSTOP_IN5: Unused.
6	ROX	LOCAL_XSTOP_IN6: Unused.
7	ROX	LOCAL_XSTOP_IN7: Unused.
8	ROX	LOCAL_XSTOP_IN8: Unused.
9	ROX	LOCAL_XSTOP_IN9: Unused.
10	ROX	LOCAL_XSTOP_IN10: Unused.
11	ROX	LOCAL_XSTOP_IN11: Unused.
12	ROX	LOCAL_XSTOP_IN12: Unused.
13	ROX	LOCAL_XSTOP_IN13: Unused.
14	ROX	LOCAL_XSTOP_IN14: Unused.
15	ROX	LOCAL_XSTOP_IN15: Unused.
16	ROX	LOCAL_XSTOP_IN16: Unused.
17	ROX	LOCAL_XSTOP_IN17: Unused.
18	ROX	LOCAL_XSTOP_IN18: Unused.
19	ROX	LOCAL_XSTOP_IN19: Unused.
20	ROX	LOCAL_XSTOP_IN20: Unused.
21	ROX	LOCAL_XSTOP_IN21: Unused.
22	ROX	LOCAL_XSTOP_IN22: Unused.

Register Name	Local Checkstop Mask Register
Mnemonic	TP.TCN2.N2.LOCAL_XSTOP_MASK
Address	0000000004040019 (SCOM)
Description	Local checkstop mask register.

Bits	SCOM	Field Mnemonic: Description
0:21	RW	LOCAL_XSTOP_MASK_IN: Local checkstop mask.

Register Name	Host Attention Mask Register
Mnemonic	TP.TCN2.N2.HOSTATTN_MASK
Address	000000000404001A (SCOM)
Description	Host attention mask register.

Bits	SCOM	Field Mnemonic: Description
0:21	RW	HOSTATTN_MASK_IN: Host attention mask.

Register Name	DTS Thermal Sensor loop1 Results Register
Mnemonic	TP.TCN2.N2.EPS.THERM.DTS_RESULT0
Address	0000000004050000 (SCOM)
Description	DTS thermal sensor loop1 results.

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	DTS_0_RESULT: Calibrated DTS result of sensor with ID 0.
16:31	ROX	DTS_1_RESULT: Calibrated DTS result of sensor with ID 1.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	DTS Trace Results Register
Mnemonic	TP.TCN2.N2.EPS.THERM.DTS_TRC_RESULT
Address	0000000004050003 (SCOM)
Description	DTS trace results register.

Bits	SCOM	Field Mnemonic: Description
0:43	ROX	TIMESTAMP_COUNTER_VALUE: Time stamp counter value during DTS trace mode.
44	ROX	TIMESTAMP_COUNTER_OVERFLOW_ERR: Overflow error bit of the time stamp counter value during DTS trace mode.
45:47	RO	constant = 0b000
48:63	ROX	DTS_1_RESULT: Calibrated DTS result of sensor with ID 1.

Register Name	CPM and DTS Enables and Controls Register
Mnemonic	TP.TCN2.N2.EPS.THERM.THERM_MODE_REG
Address	000000000405000F (SCOM)
Description	CPM and DTS enables and controls register.

Bits	SCOM	Field Mnemonic: Description
0	RW	THERM_DIS_CPM_BUBBLE_CORR: Critical path result bubble correction active.
1	RW	THERM_FORCE_THRES_ACT: Force tpc_therm_thres_mac clock gating off and activates clocks.
2:4	RW	THERM_THRES_TRIP_ENA: therm_thres_trip compare enables: 1xx = trip0 - warning x1x =trip1 - critical xx1 =trip2 - fatal

Bits	SCOM	Field Mnemonic: Description
5	RW	THERM_DTS_SAMPLE_ENA: 0: No DTS sampling, 1 = DTS sampling is enabled and below counter compare match can occur.
6:9	RW	THERM_SAMPLE_PULSE_CNT: A 16 MHz sample pulse is feed into an 18 bit counter. With the therm_sample_pulse_cnt it is possible to select a high order bit of the counter to enable a resolutions of sampling DTSs between 2.5 us and 80 ms. An edge detection circuit detects the rising edge of the selected counter bit and this triggers a DTS sample. 0000 = 16 ms 0001 = 8 ms 0010 = 4 ms 0011 = 2 ms 0100 = 1 ms 0101 = 0.5 ms 0110 = 250 us 0111 = 125 us 1000 = 62 .5us 1001 = 31.3 us 1010 = 15.6 us 1011 = 7.8 us 1100 = 3.9 us 1101 = 2 us 1110 = 1 us 1111 = 0.5 us
10:11	RW	THERM_THRES_MODE_ENA: Forces maximum or minimum mode in threshold unit: 00 = Off 11 = Illegal 10 = Maximum mode 01 = Minimum mode
12	RW	DTS_TRIGGER_MODE: Unused.
13	RW	DTS_TRIGGER_SEL: Unused.
14	RW	THERM_THRES_OVERFLOW_MASK: Values: 0 = therm_overflow_err will be enabled 1 = therm_overflow_err will be disabled
15	RW	THERM_MODE_Unused: Unused.
16:19	RW	THERM_DTS_READ_SEL: Selects which DTS result will be provided with PCB read addr_v(4): 0000 = DTS 0 0001 = DTS 1 0010 = DTS 2 0100 = DTS 4 1111 = Worst case sensor
20:21	RW	THERM_DTS_ENABLE_L1: Loop1 DTS enables: 1x = DTS 0 available x1 = DTS 1 available
22:34	RO	constant = 0b0000000000000
35:36	RW	Reserved field.

Register Name	Skitter Control Register
Mnemonic	TP.TCN2.N2.EPS.THERM.SKITTER_MODE_REG
Address	0000000004050010 (SCOM)
Description	Skitter control register.

Bits	SCOM	Field Mnemonic: Description
0	RW	SKITTER_HOLD_SAMPLE: Forces skitter to hold current sample.
1	RW	DISABLE_SKITTER_STICKINESS: If '0' accumulation mode, '1' samples new value each cycle and resets sticky value.
2:3	RW	SKITTER_MODE_Unused1: Unused.
4:5	RW	SKITTER_HOLD_DBGTRIG_SEL: bit0 = hold_on_trigger0, bit1 = _on_trigger1.
6:7	RW	SKITTER_RESET_TRIG_SEL: bit0 = reset_sticky_on_trigger0, bit1 = reset_sticky_on_trigger1.
8:9	RW	SKITTER_SAMPLE_GUTS: Selects guts to measure: 00 = guts1 01 = guts2 10 = guts3 11 = guts4
10:43	RO	constant = 0b00000000000000000000000000000000
44	ROX	SKITTER_HOLD_SAMPLE_WITH_TRIGGER: Forces skitter to hold current sample on DBG trigger, this has highest priority.
45	ROX	SKITTER_DATA_V_LT: If '1' the data requested by a skitter force read register has finished and data is present in skitter data register in the collector macro. The data can be read by any combination of V25/V26/V27 PCB reads.

Register Name	Error Injection Control Register
Mnemonic	TP.TCN2.N2.EPS.THERM.INJECT_REG
Address	0000000004050011 (SCOM)
Description	Error injection control register.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	THERM_INJECT_TRIP: Values: 00 = No injection 01 = Warning trip level injection 10 = Critical trip level injection 11 = Fatal trip level injection
2:3	RW	THERM_INJECT_MODE: Values: 00 = No injection 01 = Injection on the next DTS sample 10 = Solid injection for the next DTS samples until bit setting changes 11 = Not used

Register Name	Control/Force Reset Register
Mnemonic	TP.TCN2.N2.EPS.THERM.CONTROL_REG
Address	0000000004050012 (SCOM)
Description	Control/force reset register.

Bits	SCOM	Field Mnemonic: Description
0	WO_1P	Reserved field.
1	WO_1P	Reserved field.
2	WO_1P	Reserved field.
3	WO_1P	Reserved field.

Bits	SCOM	Field Mnemonic: Description
4	WO_1P	Reserved field.
5	WO_1P	Reserved field.
6	WO_1P	Reserved field.
7	WO_1P	Reserved field.
8	WO_1P	Reserved field.
9	WO_1P	Reserved field.
10	WO_1P	Reserved field.
11	WO_1P	Reserved field.
12	WO_1P	Reserved field.

Register Name	Thermal Error Status Register
Mnemonic	TP.TCN2.N2.EPS.THERM.ERR_STATUS_REG
Address	0000000004050013 (SCOM)
Description	Thermal error status register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field.
1	ROX	Reserved field.
2	ROX	Reserved field.
3	ROX	Reserved field.
4	ROX	Reserved field.
5	ROX	Reserved field.
6	ROX	Reserved field.
7	ROX	Reserved field.
8	ROX	Reserved field.
9	ROX	Reserved field.
10	ROX	Reserved field.
11	ROX	Reserved field.
12	ROX	Reserved field.
13	ROX	Reserved field.
14	ROX	Reserved field.
15	ROX	Reserved field.
16	ROX	SERIAL_SHIFTCNT_MODEREG_PARITY_ERR_MASK: Serial shift count parity error mask.
17	ROX	THERM_MODEREG_PARITY_ERR_MASK: Thermal mode register parity error mask.
18	ROX	SKITTER_MODEREG_PARITY_ERR_MASK: Skitter mode register parity error mask.
19	ROX	SKITTER_FORCEREG_PARITY_ERR_MASK: Skitter force register parity error mask.
20	ROX	SCAN_INIT_VERSION_REG_PARITY_ERR_MASK: Scan initial version register parity error mask.
21	ROX	VOLT_MODEREG_PARITY_ERR_MASK: Volt mode register parity error mask.
22	RO	constant = 0b0

Bits	SCOM	Field Mnemonic: Description
23	ROX	COUNT_STATE_ERR_MASK: Count state machine error mask.
24	ROX	RUN_STATE_ERR_MASK: Run state machine error mask.
25	ROX	THRES_STATE_ERR_MASK: Threshold state machine error mask.
26	ROX	OVERFLOW_ERR_MASK: DTS calibration calculation overflow error mask.
27	ROX	SHIFTER_PARITY_ERR_MASK: Shifter parity error mask.
28	ROX	SHIFTER_VALID_ERR_MASK: Shifter valid error mask.
29	ROX	TIMEOUT_ERR_MASK: Timeout error mask.
30	ROX	F_SKITTER_READ_ERR_MASK: Force skitter read one hot error mask.
31	ROX	PCB_ERR_MASK: Pervasive control bus error mask.
32:39	RO	constant = 0b00000000
40:43	ROX	Reserved field.
44:46	ROX	Reserved field.
47	ROX	Reserved field.
48	ROX	Reserved field.
49:50	ROX	Reserved field.
51:54	ROX	Reserved field.
55	ROX	Reserved field.
56	ROX	Reserved field.
57	ROX	Reserved field.
58	ROX	Reserved field.
59	ROX	Reserved field.
60:63	RO	constant = 0b0000

Register Name	Skitter Force Read Register
Mnemonic	TP.TCN2.N2.EPS.THERM.SKITTER_FORCE_REG
Address	0000000004050014 (SCOM)
Description	Skitter force read register.

Bits	SCOM	Field Mnemonic: Description
0	RW	F_SKITTER_READ: Forces the read of that particular skitter.

Register Name	Skitter Clock Source Control Register
Mnemonic	TP.TCN2.N2.EPS.THERM.SKITTER_CLKSRC_REG
Address	0000000004050016 (SCOM)
Description	Skitter clock source control register.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	SKITTER0_CLKSRC: Selects clock to measure: 000 = Local mesh clock 001 = External pin skitter_c1_1_in 010 = Local d1clk only if d_mode = 1 011 = External pin skitter_c1_2_in 100 = Local lclk only if d_mode = 1 101 = External pin skitter_c1_3_in 110 = Unused 111 = External pin skitter_c1_4_in
3:35	RO	constant = 0b00000000000000000000000000000000
36:37	RW	SKITTER0_DELAY_SELECT: To select delay to be added between clock source MUX inverter chain (base line delay is 12.2 psec) of skitter 0: 00 = No delay 01 = 0.6psec 10 = 1.8 psec 11 = 5 psec

Register Name	Skitter Data Register Read Bit 0:63
Mnemonic	TP.TCN2.N2.EPS.THERM.SKITTER_DATA0
Address	0000000004050019 (SCOM)
Description	Skitter data register read bit 0:63.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved.

Register Name	Skitter Data Register Read Bit 32:95
Mnemonic	TP.TCN2.N2.EPS.THERM.SKITTER_DATA1
Address	000000000405001A (SCOM)
Description	Skitter data register read bit 32:95.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved.

Register Name	Skitter Data Register Read Bit 64:127
Mnemonic	TP.TCN2.N2.EPS.THERM.SKITTER_DATA2
Address	000000000405001B (SCOM)
Description	Skitter data register read bit 64:127.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	Reserved.

Register Name	Timestamp Counter Read
Mnemonic	TP.TCN2.N2.EPS.THERM.TIMESTAMP_COUNTER_READ
Address	000000000405001C (SCOM)
Description	Timestamp counter read.

Bits	SCOM	Field Mnemonic: Description
0:43	ROX	TIMESTAMP_COUNTER_VALUE: Time stamp counter value during DTS trace mode.
44	ROX	TIMESTAMP_COUNTER_OVERFLOW_ERR: Overflow error bit of the time stamp counter value during DTS trace mode.

8. PB Chiplet (Nest Chiplet 3)

The POWER9 processor registers are listed alphabetically by mnemonic in the following address table.

Mnemonic	Address	Page
BRIDGE.HCA.EHHCA_FIR_ACTION0_REG	0x0000000005012986	1980
