Revision Log

Each release of this document supersedes all previously released versions. The revision log lists all significant changes made to the document since its initial release.

Version	Revision Date	Description
1.2	31 March 2017	Updated Section 8 PCI0 Chiplet. Updated Section 9 PCI0 Chiplet PCB Slave. Added Section 10 PCI1 and PCI 2 Chiplet.
1.1	31 January 2017	Updated the Terminology and the Overview. No substantive changes to the register descriptions.
1.0	30 August 2016	Initial release.

About this Document

This document describes the registers used by the IBM® POWER9 processor. To ensure you have the most current version of this document, visit the OpenPOWER Connect website.

Who Should Read this Document

This document is intended for system software and hardware developers and application programmers who are developing products that use the POWER9 registers. It is assumed that the reader understands operating systems, microprocessor system design, basic principles of reduced instruction set computer (RISC) processing, and details of the Power Instruction Set Architecture (ISA).

Organization

This document is divided into three volumes, of approximately equal sizes, organized by address ranges.

Volume	Address Range	Contents
1	0x0000_0000 - 0x050F_FFFF	Chip logic registers Processor bus registers
2	0x0600_0000 - 0x200F_FFFF	X bus chiplet registers[1] OB chiplet registers[1] PCI registers Cache and core registers
3	0x0700_0000 - 0x070F_FFFF	Memory controller registers[1]

1. These registers use indirect addresses in the range 0x8000_0000_0000_0000 - 0x8000_0000_0901143F.

In each volume, the table of contents lists the primary divisions in the document. Address maps at the beginning of each chapter list the registers in each chiplet in alphabetical order by mnemonic. Within each chapter, the registers themselves are arranged by their addresses. A register can have multiple addresses with different addresses for different chiplets.

Bit Significance

In the POWER9 documentation, the smallest bit number represents the most significant bit of a field, and the largest bit number represents the least significant bit of a field.

Representation of Numbers

Numbers are generally shown in decimal format, unless otherwise designated. One of the following conventions is used to indicate the numeral system, where "nn" or "NN" indicates the numerical value:

- Binary values are represented as 0bn, `nn'b, or `n'.
  Examples: 0b01, `01'b, or `01'
- Decimal values are represented as nn or `nn'd.
  Examples: 1 or `1'd
- Hexadecimal values are represented as 0xN, x`N', or `NN'h.
  Examples: 0x000000000204000D, x`000000000204000D', or `000000000204000D'h

Note: A bit value that is immaterial, which is called a “don't care” bit, is represented by an “X” or "x."

Representation of Enumerated Registers

To succinctly describe registers that are identical except for a numeral in the register name and mnemonic, a syntax is used that enables these “enumerated registers” to be described in a single register table.

The registers in the DP16 section are enumerated because there are five instances of the DP16 unit for each DDR PHY port. All five instances are required for each DDR PHY port, and, at the chip level, there are eight DDR PHY ports. Each DDR PHY unit is self-contained and comprises four independent ports that connect to DIMM slots. This unit is replicated twice on the POWER9 system to provide a maximum of eight ports. All of the DP16 registers are documented in one replication. The address is the only difference between the two. The first replication is on 0x0000_0000_0700_0000, and the second replication is on 0x0000_0000_0800_0000.

For example: **IOM0**.DDRPHY_DP16_DATA_BIT_ENABLE0_P0_[n]
800000000**7**01103F (SCOM), +0x0400_0000_0000

IOM1.DDRPHY_DP16_DATA_BIT_ENABLE0_P0_[n]
800000000**8**01103F (SCOM), +0x0400_0000_0000

Register Names

The following syntax is used for enumerated register names:

<register name> [n] (n = m:p) where m and p are integers

For example: TWG Control Register [n] (n = 0:15)

Mnemonic

The following syntax is used for enumerated mnemonics:

<mnemonic>_[n], where n is an integer from the enumerated register name

For example: REG_TWGDATA_[n]
REG[n]_TWGDATA

Address Offset

The following syntax is used for enumerated address offsets so that enumerated registers can be described in a single register table. The stride defines the hexadecimal integer to add to the address for each enumeration.

<address_offset>, +<stride>

For example: 0x80030, +0x10

Register Name	DP16 DQ Enable 0 Register [n] (n=0:4)
Mnemonic	IOM0.DDRPHY_DP16_DQ_BIT_ENABLE0_P0_[n]
Address	800000000701103F (SCOM), +0x0400_0000_0000
Description	A DP16 has 24 possible single-ended data pins that can send or receive data. This register is used to enable and disable each of the 24 pins for data sending or receiving. Any pins on the DP16 that are used as strobes or clocks to capture the data must not be marked as enabled in this register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:63	RW	DATA_BIT_ENABLE_0_15: 1b = Indicates that the DP16 bit is enabled, and is used for sending or receiving data to or from the memory device. This bit is calibrated as a data bit. 0b = Indicates that the DP16 bit is not used to send or receive data. Bit 48 controls MEMINTD00B(n). Bit 49 controls MEMINTD01B(n). Bit 50 controls MEMINTD02B(n). ... Bit 63 controls MEMINTD15B(n). where n is the DP16 instance number.

Power ISA User Instruction Set Architecture - Book I (Version 3.0)
Power ISA Virtual Environment Architecture - Book II (Version 3.0)
Power ISA Operating Environment Architecture (Server Environment) - Book III-S (Version 3.0)

Terminolgy

The following terms are used in volumes 1, 2, or 3 of the *POWER9 Processor Registers Specification*.

Note: Acronyms are not typically expanded in the body of this document.

3DS	Three-dimensional stacking
AADR	Array Access Data Register
AAER	Array Access ECC Register
ABIST	Array built-in self test
ABIST/IOBIST	Array built-in self test / input/output built-in self test
ABUS	**Note:** This is not really an acronym but a name (A bus).
AC	Alternating current
ACK	Acknowledgment or acknowledge. A transmission that is sent as an affirmative response to a data transmission.
ACT	Activate
ACT#	Activate (inverted)
ADC	APSS with analog-to-digital converter
ADDR	Address
ADR	Address
ADU	Alter-display unit
AES	Advanced Encryption Standard
AFSR	Average Frequency Sample Register
AFTR	Average Frequency Threshold Register
AIB	1. ASIC interconnect bus 2. ASIC interface bus
AL	Additive latency. For more information, see the JEDEC DDR3 and DDR4 DRAM specifications.
AMF	Availability management framework
AMux	Analog multiplexer
ANA16	Analog 16 bits
AND write	Current register content is ANDed with write data and the result is stored in the register (access type WO_AND / WOX_AND).
AP	Auto-predischarge. For more information, see the JEDEC DDR3 and DDR4 DRAM specifications.
APB	Advanced peripheral bus
APIN	ADR pin. The logic macro inside DDR units for sending data to the ADR bus.
APSS	Analog power subsystem sweep. Provides real-time power measurements of voltage rails.
ARB	Architecture Review Board
ARE	Address error
ARY	Array
ASB	Advanced system bus

ASBE	Array single-bit error
ASIC	Application-specific integrated circuit
AT	Address translation
ATEST	Analog test pin
ATPG	Advanced test pattern generator
AUE	Array uncorrectable error (UE)
AVP	Architectural verification program. A custom payload used to test a processor or other host hardware or software function.
AVS	Adaptive voltage scaling
Âµ	Micron
Âµs	Microsecond
B	Byte
BA	Bank address
BAR	Base Address Register
BCDE	Block copy download engine
BCE	Block copy engine
BCEBAR	Block Copy Engine Base Address Register
BCECSR	Block Copy Engine Control and Status Register
BCUE	Block copy upload engine
BCW	Buffer control word
BDF	Bus device function
BE	1. Big-endian 2. Branch Trace Enable bit in the MSR (MSRBE) 3. Byte enable
BER	Bit error rate
BG	Bank group
BI	Burn in
BIST	Built-in self test
BL	Bit length
BL8	Burst length 8
BNDY	Boundary I/Os
BSC	Boundary scan cells
BW	Bandwidth
BYPASSN	Bypass low active
c_err_rpt	Common lib error report
CACCR	Core Analog Clock Control Register

CACSR	Core Analog Clocking Status Register
CAL	Calibration
CAM	Content-addressable memory
CAPI	Coherent Accelerator Processor Interface
CAPP	Coherent accelerator processor proxy
CAS	Column-address select
CASN	Column-address select (inverted)
CAW2	An internal pipeline stage designator
CBS	CFAM boot sequencer
CC	1. Clock controller 2. Congruence class
CCB	Change control board
CCFG	Clock control configuration
CCS	Configured command sequencer
CD	Compact disc
CDIMM	Custom dual in-line memory module
CDR	Clock and data recovery
CE	Correctable error. A hardware error that the firmware detects and corrects without impacting the state of the system.
CERR	Common lib error report
CFAM	Common field-replaceable unit (FRU) access macro
CFIR	Chiplet Fault Isolation Register
CGC	Congruence class
checkstop	A severe error inside a processor core that causes a processor core to stop all processing activities. This is the same as a system crash. The operating system is not functional.
chip select	A signal that selects one or more memory modules to respond to a command/address. An exact one-to-one correspondence exists between chip selects and ranks.
CI	1. Cache-inhibited 2. Cast-in
CID	Completer ID. When returning the completion for a transaction, the completer attaches its Bus/Dev/Func to the transaction as a CID. See also RID.
CIDSR	Core IVRM Dropout Sample Register
CK	Clock
CK#	Clock (inverted)
CKE	Clock enable
CKSW	Chicken switch: A programmable mode bit that disables a certain function or changes its behavior.

CL	Column-address select (CAS) latency
CLK	Clock
CMD, cmd	Command
CME	Core management engine
CMOS	Complementary metal-oxide semiconductor
CMSK	Logical built-in self test (LBIST) channel mask
CO	Cast-out
CP	Chip pump
CPB	Coprocessor parameter block
CPI	Cycles per instruction
CPLT	Chiplet
CPLT_CTRL	Chiplet control
CPM	Critical path monitor
CPPM	Core PCB-slave power management macro (PPM)
CPS	Cycle-per-step
CQ	1. Common queue. Refers to the interface to the SMP interconnect. 2. Completion queue
CRC	Cyclic redundancy check
CRESP	Combined response
CS	Chip select
CSID	Chip select ID
CSN	Chip select (inverted)
CTL	Control
CTLE	1. Continuous time linear equalization 2. Continuous time linear equalizer
CTRL	Control
D/A	Display/alter
DAC	Digital-to-analog converter
DACTEST	DAC test
DBG	Debug
DBSR	Debug Status Register
DC	Direct current
DCACHE	Data cache
DCBZ	Data cache block set to zero
DCD	Duty cycle distortion

DCM	Dual-chip module
DCTEST	This is a mode where test operations are executed at very low frequencies.
DDR	Double data rate
DDR3	Double data rate type three
DDR4	Double data rate type four
DDRPHY	Double data rate physical interface
DEC	Decrementer
DERR	Distributed elastic round robin
DFE	1. Decision feedback equalization 2. Decision feedback equalizer
DFI	DDR PHY interface bus
DFT	Design for test
DGEN	Data pattern generator
diag	Diagnostic
DIMM	Dual in-line memory module. A small circuit board with memory-integrated circuits containing signal and power pins on both sides of the board.
DIN	Data in
DL	Downlink
DLDCH	Downlink data channel
DLL	1. Delay-locked loop 2. Dynamic link library
DLL/VREG	Delay-locked loop/voltage regulator
DLL/ZCAL	Delay-locked loop/impedance (Z) calibrator
DMA	1. Direct memory access. A technique for using a special-purpose controller to generate the source and destination addresses for a memory or I/O transfer. 2. Direct memory attach
DP16	Data path 16
DPC	DIMMs per port
DPLL	Digital phase-locked loop
DPLLFREQ	DPLL frequency control
DQ	1. Data 2. Data bit
DQS	Data strobe
DQSCLK	Data strobe clock
DR	1. Data Relocate bit in MSR (MSRDR) 2. Dynamic reconfiguration. The capability of a system to adapt to changes in the hardware/firmware physical or logical configuration, and to be able to use the new configuration, all without having to turn the platform power off or restart the operating system. See the *Power Architecture Platform Requirements (PAPR)* document for more information.

DRAM	Dynamic random-access memory. Storage in which the cells require repetitive application of control signals to retain stored data.
DRTM	Dynamic root of trust for measurement
DSI	Data storage interrupt.
DSM	Digital state machine
DSMP	Distributed symmetric multiprocessing
DTS	Digital thermal sensor
EA	Effective address. An address generated or used by a program to reference memory. A memory-management unit translates an EA to a virtual address (VA), which it then translates to a real address (RA) that accesses real (physical) memory. The maximum size of the effective-address space is 264 bytes.
EAT	1. Effective address translation 2. Event assignment table
ECC	See error correction code
EDAT	Even data
EDI	Elastic differential interface. A bus that consists of high-speed differential I/O links. The memory bus instance of an EDI bus is a “DMI bus,” and the off-module, fabric bus (between processors) instance of an EDI bus is an “A bus.”
EDR	Error Data Register
eDRAM	Embedded dynamic random access memory
EH	Exclusive access hint
EICR	Error Inject Control Register
EIIR	External Interrupt Injection Register
EIMR	External Interrupt Mask Register
EINR	External Interrupt Input Register
EIPR	External Interrupt Polarity Register
EISR	External Interrupt Status Register
EITR	External Interrupt Type Register
ELPR	Error Log Pointer Register
EM	Electron migration
EMC	Extended memory controller
ENOP	End sync/wait step; no operation
EOT	End of transfer
EPS	1. Entry-level power supply 2. Pervasive end points
EQ	Event queue
ERAT	Effective-to-real-address translation, or a buffer or table that contains such translations, or a table entry that contains such a translation.
ERR	Error

error correction code	A code appended to a data block that can detect and correct bit errors within the block.
ERRSUM	Error summary
ERS	Early read start
ETE	Error threshold exceeded
ETU	Express transaction unit
EXT	JTAG EXTEST instruction mode
FARB	Final arbiter. Part of the memory interface command sequencer (scheduler).
FARR	Fast array unload
FBC	Fabric bus connection
FET	Field-effect transistor
FFDC	First failure data capture. A collection of data used upon fail to analyze the root cause of the failure.
FIFO	First in, first out. Refers to one way elements in a queue are processed. It is analogous to “people standing in line.”
FIR	Fault Isolation Register. Register bits that show which piece of hardware failed.
FMAX, fmax	Maximum frequency
FMIN, fmin	Minimum frequency
FMULT	Frequency multiplier
FPGA	Field-programmable gate array
FSAFE	Safe frequency
FSI	1. Flexible service interface. The FSI covers all resources, except FSI slave 0 and slave 1, when addressed from an external service element via the FSI. 2. FRU support interface
FSI2PIB	FRU support/service interface to the pervasive interconnect bus
FSM	Finite state machine
FSP	Flexible service processor. An embedded controller for internal system control tasks in IBM Power Systems™. In addition to the processor core, the following I/O interfaces are integrated into the embedded controller: I²C, JTAG, UART, GPIO, FSI.
FUNC	Functional
FW	Firmware
FWMR	Firmware Mode Register
Gbps	Gigabits per second
GCR	Global control ring
glsmux	Glitchless multiplexer
GND	Ground
GPE	General-purpose engine

GPIO	General-purpose input/output
GPO	Global PHY offset
GPR	General Purpose Register
GPTR	General Purpose Test Register
GZIP	A file format used for file compression and decompression.
H/W	Hardware
HCA	1. Host channel adapter 2. Hot/cold affinity
HID	Hardware implementation dependent
HIRES	High resolution
HLD	High-level design
HMER	Hypervisor Maintenance Exception Register
HMI	Hypervisor maintenance interrupt
HP	High performance
HPC	High-performance computing
HSS	High-speed serial
HTB	Hierarchical test block
HTML	Hypertext Markup Language
HW	Hardware
HWCTRL	Hardware control
HYP	Hypervisor
I/O	Input/output
IAR	Instruction Address Register
IAUE	Intermittent array uncorrectable error
IC	Integrated circuit
ICACHE	Instruction cache
ICE	Intermittent chip error
ICP	Interrupt control presenter
ICRR	Inter-CME Communication Receive Register
ICS	Interrupt controller source
ICSW	Initiate coprocessor store word
ID	Identification
IDCR	IVRM Dropout Configuration Register
IE	Input enable
IEEE	Institute of Electrical and Electronics Engineers

IF	Interface
IFU	Instruction fetch unit
IMA	In-memory accumulate
IMA/PPE/HTM	In-memory accumulate/Power PC® element/hardware trace macro
IMPE	Intermittent mark placed error (MPE)
INIT	Initialization
INOP	Initial sync/wait step; no operation
INT	INTEST instruction support. The INTEST instruction can be triggered through JTAG or through register control.
INTP	Interrupt presenter
INV	JTAG enable inversion macro
IO or I/O	Input/output
IOBIST	Input/output built-in self test
IOOPPE	PPE used for control of I/O macros
IOP	1. I/O processor 2. Internal operation
IOTK	I/O toolkit
IP	1. Interrupt Prefix bit in MSR (MSRIP) 2. Internet protocol
IPL	1. Initial program load. The time between when power is applied to the platform hardware and when the payload is fully functional. 2. Interrupt presenter layer
IPW	Initial pattern write
IR	1. Infrared 2. Instruction Relocate bit in the MSR register (MSRIR)
IRCD	Intermittent register clock driver
IS	Industry standard
ISA	Instruction set architecture
ISU	1. Instruction sequencing unit 2. Interrupt source unit
ITR	Inherent time redundancy
IUE	Intermittent uncorrectable error
IVRM	Internal Voltage Regulation Module
IVRMCR	IVRM Control Register
IVRMDVR	IVRM Data Value Register
JEDEC	Formerly the Joint Electron Device Engineering Council
KHz	Kilohertz
L2SFF	Level 2 (L2) star flip flop
LBIST	Logical built-in self test

LBS	LBIST
LBUS	Local bus
LCB	1. Local clock buffer 2. Logon control block
LEM	Local error macro
LFSR	Linear Feedback Shift Register
LPID	Logical partition identification
LRDIMM	Load-reduced dual in-line memory module
LSB	Least-significant bit or byte
M/S	Master/slave
MA	Memory address
malf	Malfunction alert
MASK	A pattern of bits used to accept or reject bit patterns in another set of data. Hardware interrupts are enabled and disabled by setting or clearing a string of bits, with each interrupt assigned a bit position in a mask register.
MB	1. Mailbox 2. Megabyte
MBA	Memory buffer asynchronous
MBASE	Memory base
Mbps	Megabits per second
MBR	Member
MBS	Memory buffer synchronous
MC	1. Memory channel 2. Memory controller
MCA	The portion of the memory controller that runs synchronously to the memory interface.
MCB	The portion of the memory controller that runs synchronously to the DMI interface.
MCBCM	Memory controller built-in self-test compare mask
MCBCMQ	Memory Controller Built-In Self-Test Compare Mask Register
MCBIST	Memory card built-in self test
MCBIST-RQ	Memory controller built-in self-test to sequencer reorder queue interface
MCBMCAT	Memory controller built-in self-test maintenance current address trap
MCD	Memory coherency directory
MCE	1. Machine check exception 2. Mark corrected error 3. Marked chip correctable error
MCHK	Machine check
MCU	Memory control unit

MDI	Memory directory indicator. The MDI bit specifies the current scope of the data (local versus global).
MEM	Memory
MEMCTL	Memory control
MEMCTLCLKI	Memory controller interface clock
MEMINT	Memory interface
MEMINTCLKO	Memory interface clock
MFSI	Master flexible service interface
MHz	Megahertz
MIB	Memory interface bolt-on. Enables the programmable PowerPC-lite engine (PPE) to access its local memory and pervasive interconnect bus (PIB) interface.
MISO	Master input/slave output
MISR	Multiple Input Shift Register
MMIO	Memory-mapped input/output. Refers to the mapping of the address space required by an I/O device for Load or Store operations into the system's address space.
MOSI	Master output/slave input
MPE	Mark placed error
MPR	Multipurpose Register
MPW	Modify pulse width
MR7	Mode Register 7
MRS	Mode register set
MSB	Most-significant byte
MSGSND	Message send
MSR	Machine State Register
MT/s	Megatransfers per second
MTMSR	Move to Machine State Register instruction
MTSPR	Move to Special Purpose Register instruction
MULT	Multiplier
Multiple ranks	More than one rank of memory modules, where the data buses from each rank are connected to a common data bus of a single port. Data bus connections have multiple drops equal to the number of ranks attached. When more than one rank exists, this memory is depth-expanded memory.
MUX	Multiplexer
N/A	Not applicable
N/M	Memory command throttling mechanism specifying how many (N) commands are allowed to be issued to memory within every M-wide time window.
N/P	N-channel or p-channel transistor type

N1L	The name of a type of latch
NA	Not applicable
NACK	Negative acknowledgment
NBTI	Negative bias temperature instability
NC	Not connected; that is, the data cannot be written or read by that access.
NCE	New correctable error
NCF	NVIDIA® NVLink™ configuration fatal
NCLK	Nest clock
NCU	Noncacheable unit
NCX	Same as NC, but unstable (can be changed functionally)
NFET	Negative field-effect transistor
NHTM	Nest hardware trace macro
NM	See N/M.
NMMU	Nest memory management unit
NOP	No operation. A single-cycle operation that does not affect registers or generate bus activity.
NPU	NVLink processing unit
NVF	NVLink fatal
NVLD	Non-valid read/write data address
NVT	NFET threshold voltage
NX	Nest accelerator
OCB	On-chip controller (OCC) control bridge
OCC	On-chip controller. Provides power and thermal management, power cap enforcement, over-temperature protection, and low-power mode management.
OCCERRPT	OCC Error Reporting Register
OCI	On-chip-controller interface. Interface used by power management.
ODAT	Odd data
ODT	On-die termination
OE	Output enable
OEAR	OCI Error Address Register
OESR	OCI Error Status Register
OF	Open firmware
OHA	On-chiplet hardware assist
OISR	OCC Interrupt Source Register
OITR	OCC Interrupt Type Register

OJCFG	OCC JTAG Configuration Register
OJIC	OCC JTAG Instruction and Control Register
OJSTAT	OCC JTAG Status Register
OJTDI	OCC JTAG TDI Register
OOB	Out-of-band bus
OPB	On-chip peripheral bus
OPCG	On-product clock generator
OPCGGO	On-product clock generator “GO” signal
OR write	Current register content is ORed with write data and the result is stored in the register (access type WO_OR/WOX_OR).
OS	1. Open source 2. Operating system
OSC	Oscillator
OSCSW	Oscillator switch
OTP	One-time programmable
OTPROM	One-time programmable read-only memory
p2s	Parallel-to-serial machine
PBA	1. Pending bit array 2. Per buffer addressability 3. Power management processor bus interface 4. Power bus access (used by power management)
PBAX	PBA messaging
PC	1. Performance counter 2. Personal computer 3. Pervasive core unit 4. PHY control
PCB	1. Pervasive control bus. Processor logic that provides a generic, modular structure for communication between pervasive (glue logic between chiplets) elements. The PCB is used for read and full write access. 2. Printed circuit board
PCBIF	Pervasive control bus interface
PCBMS	PCB multiplexer
PCBSLAVE	Pervasive control bus slave macro
PCI	Peripheral Component Interconnect. An all-encompassing term referring to conventional PCI, PCI-X, and PCI Express.
PCIEX	Peripheral Component Interface Express
PCIS	The synchronous part of the PCI domain
PCLK	Processor clock
PD	1. Power down 2. Presence detect
PDA	Per DRAM addressability

PDR	Power Down Register
PE	1. Parity error 2. Partitionable endpoint. The smallest entity that can be partitioned in endpoint partitioning. 3. Product engineering
PEC	PCI Express controller
PECE	Power-savings exit control enable
PECESR	PECE Sample Register
PERCAL	Periodic calibration
PERV	Pervasive
PF	1. Pad fill keyword 2. Physical function. The physical function of an IOV adapter. For more information, see the PCI-SIG *I/O Virtualization (IOV) Specifications*. 3. Prefetch machine
PFET	Positive field-effect transistor
phase rotator step	Phase rotators are used extensively within the DDR PHY to adjust delays of signals. Each phase rotator has 128 phase-rotator steps in a clock period. Therefore, delay values, or phase-rotator settings, have a granularity of 1/128 of a clock period.
PHB	1. PCIe host bridge. An entity that attaches a PCIe bus to the system. 2. Power Systems host bridge
PHY	Physical layer
PHYP	Power hypervisor
PHYTOP	Physical layer top of hierarchy
PIB	Pervasive interconnect bus. A bus that provides access from masters through external interfaces and internal masters to common PIB attached slaves. The PIB is used for read and full write access.
PIB/LPC	Pervasive interconnect bus/low pin count
PIBMEM	Memory attached to the PIB bus and used by the self-boot engine (SBE)
PID	Process ID
PIG	Programmable interrupt generator
PIN	External C4 chip input pin
PIT	Programmable interval timer
plat	Pipeline staging latch
PLL	Phase-locked loop
PLLREG	Phase-Locked Loop Register
PM	Power management
PMC	1. Performance monitor counter 2. Power management control
PMCR	Power Management Control Register

PMCRS	Power Management Control Register shadow
PMISC	Pervasive miscellaneous
PMU	Performance monitor unit
POR	Power-on reset
port	A memory interface of variable width, consisting of an address/command bus and a data bus, connected to one or more ranks of memory. When multiple ranks are connected to a port, this memory is depth-expanded memory.
PPE	Programmable PowerPC-lite engine
PPM	1. Parts per million 2. PCB-slave power-management component
PPMPIG	PPM programmable interrupt generator
PR	1. Phase rotator 2. Privileged bit in the MSR (MSRPR)
PRBS	Pseudo-random binary sequence
PRD	Processor runtime diagnostic
PRE	Mnemonic for the DDR3 and DDR4 precharge command
PRESP	Processor response
PRPG	Pseudo-random pattern generator
PSC	Parallel-to-serial communication
PSCOM	Parallel-to-serial communication
PSCOMLE	Parallel-to-serial communication light edition
PSCR	Processor Stop Control Register
PSCRS	Processor Stop Control Register shadow
PSI	Processor support interface
PSRO	Performance sort-ring oscillator
PSU	Power supply unit
PUP	Pull-up
PURR	Processor Utilization Resource Register
PVREF	Precision voltage reference
PVT	Process voltage temperature
PVTN	Process voltage temperature N-type field effect transistor
PVTP	Process voltage temperature P-type field effect transistor
PW	Partial write
QACSR	Quad Analog Clock Status Register
QCSR	Quad Configuration Status Register
QFMR	Quad Frequency Measurement Register

QIDSR	Quad/Cache IVRM Dropout Sample Register
QMFR	Quad Frequency Measurement Register
QOS, QoS	Quality of service. This usually relates to a guarantee of minimum bandwidth for streaming applications.
QPMMR	Quad Power Management Mode Register
QPMMR[FSAFE]	A field in the QPMMR register to indicate the safe frequency to drop to in the event a heartbeat is lost.
QPPM	Quad PCB slave power management (cache)
R/W	Read/write
RA	Real address. An address for physical storage, which includes physical memory, local storage, and memory-mapped I/O registers. The maximum size of the real address space is 262 bytes.
RAM	1. Random-access memory 2. Resource allocation management
RAMDBG	A register that provides access to the PPE core's XIR3 debug register
RAMEDR	A register that provides access to the PPE core's XIR4 debug register
RAMGA	A register that provides access to the PPE core's XIR2 debug register
RAMRA	A register that provides access to the PPE core's XIR1 debug register
Rank	One or more memory modules that have a common command/address bus, a common chip select, and separate data bus connections. When more than one memory module exists, this memory is width-expanded memory.
Rank group	Up to four ranks of memory that have nearly identical timing characteristics such that the same DDR PHY delay and configuration values can be used to access all ranks. This configuration allows resources in the DDR PHY to be shared.
RAS	1. Reliability, availability, and serviceability. A combination of design methodologies, system policies, and intrinsic capabilities that, taken together, balance improved hardware availability with the costs required to achieve it. Reliability is the degree to which the hardware remains free of faults. Availability is the ability of the system to continue operating despite predicted or experienced faults. Serviceability is how efficiently and nondisruptively broken hardware can be fixed. 2. Row-address strobe
RASN	Row-address strobe (inverted)
RC	1. Read control 2. Root complex. Connects a PCIe bus into the system.
RCD	Register clock driver
RCD/LRDIM	Register clock driver/load-reduced dual in-line memory module
RCE	Retry CE: A correctable data error (CE) that occurs on the retry of a previous read.
RD	Read
RDATA	Read data
RDCLK	Read clock
RDDACK	Read acknowledgment

RDIMM	Registered dual in-line memory module
RDIV	Reference clock divide
RECR	Read ECC Control Register
REF	Mnemonic used for the DDR3 and DDR4 refresh command.
REFCLK	Reference clock
REG	Register
REGF	Register file
REPR	Array repair
REQ	Request
RFIR	Recoverable FIR
RISC	Reduced instruction set computing
RISCTRACE	A tool used to reconstruct a code flow from a hardware debug trace
RJR	Receiver random jitter
RLDRAM	Reduced latency dynamic random access memory
RLO	Read latency offset
RMW	Read-modify-write
RNG	Random number generator
RO	Read only
ROM	Read-only memory
ROX	Read only but unstable. Can be changed functionally. Hardware can change the value between reads of the register.
RRQ	Read reorder queue
RTL	Register transfer level
RTT	Requester ID (RID) translation table
RTY	Retry
RUN-N, RUNN	Run the engine for N cycles
RUNTIMECTRQ	Runtime counter facility
RW	Readable and writable
RW_WAND	Readable and writable. A write ANDs written data with existing data and stores the result.
RW_WCLEAR	Readable and writable. Any write to the address clears the bits regardless of value.
RW_WOR	Readable and writable. A write ORs written data with existing data and stores the result.
RWITM	Read with intent to modify
RWX	Same as RW, but unstable. Can be changed functionally.
RWX_WAND	Same as RW_WAND, but unstable. Can be changed functionally.

RWX_WCLEAR	Same as RW_WCLEAR, but unstable. Can be changed functionally.
RWX_WCLRPART	Same as RW_WCLRPART, but unstable. Can be changed functionally.
RWX_WOR	Same as RW_WOR, but unstable. Can be changed functionally.
RWX_WSETPART	Same as RW_WSETPART, but unstable. Can be changed functionally.
RX	Receive
RXBIST	Receive built-in self test
RXCTL	Receive control
SAB	Secure access bit
SBASE	SRAM base address in the core management engine (CME), used by the CME block copy engine (BCE)
SBE	1. Self-boot engine. Initializes the processor chip and then loads or invokes the hostboot IPL firmware base image. 2. State bit entry
SC	Store clean (transactional memory value before a speculative store)
SCAN	Refers to shifting groups of latch states internal to a chip to read or write them when functionally not in use.
SCE	Symbol mark corrected error
SCM	Single-chip module
SCOM	Serial communications. SCOM is used for read and full write access.
SCOM1	Serial communications 1. SCOM1 is used for AND write access.
SCOM2	Serial communications 2. SCOM2 is used for OR write access.
SDM	Secure debug mode
SE	1. Scan enable 2. Single-step trace enabled bit in the MSR (MSRSE)
SEC	Single error correction
SEEPROM	Serial electrically erasable programmable read-only memory. An EEPROM memory device that can only be read, but which can be reprogrammed by an external programmer. Note that the hostboot is able to initiate writes to SEEPROMS connected to the circuit board through a serial bus.
SEL	Select
SEQ	Sequencer
SG	Scan gate
SHA	Secure hash algorithm
SIB	Service interface bolt-on. Allows the GPE to communicate with the PIB and the I^2C interface.
SICR	Stop Interface Control Register
Single rank	One rank of memory modules, where all the data bus connections are wired point-to-point to the DDR PHY. The data bus connections include read data, write data, read clocks/strobes, and write clock/strobes.
SIR	Security Isolation Register. Similar to a Fault Isolation Register.

SISR	Stop Interface Status Register
SKEWADJ	Analog clock skew adjust macro
SLB	Segment lookaside buffer. This buffer is used to map an effective address to a virtual address.
SM	State machine
SMDR	Same master rank, different slave rank
SMP	Symmetric multiprocessing
SMT	1. Simultaneous multithreading 2. Surface mount
SN	Snoop machine
SNOE	Scan net optimization enhancement
SNOP	Start sync/wait step; no operation
SOI	Silicon-on-insulator
SP	Service processor
SPATTN	Special attention
SPCIF	Specification
SPI	Serial peripheral interface. Refers to a 4-wire, serial, full-duplex bus with masters and slaves. Commonly used to interface with sensors, control devices, and so on in embedded systems.
SPR	Special-purpose register
SPRD	Special-purpose register data
SPS	1. Steps per sync 2. Sleep Pstate
SPURR	Scaled Processor Utilization Resource Register
SRAM	Static random access memory
SRC	Service reference code
SRQ	Store reorder queue
STEP	Supplier test enablement program
STR	Self time refresh
SUE	Special uncorrectable error
SUE/UE	Special uncorrectable error/uncorrectable error
SW	Software
SYNC	Synchronize
SYS	System
SYSCLK	System clock
TB	Time base
TBD	To be determined

TC	Traffic class. In PCIe, this defines a priority between PCI transactions within a virtual channel (VC).
TCE	1. Translation control entry. Used to translate an I/O address page number to a real page number in system memory. 2. Two-symbol correctable error
TCK	JTAG clock; test clock
TDI	Test data in
TDM	1. Time division multiplexed 2. Time domain multiplexing
TDM command mode	A DDR PHY configuration that supports two ports that share a common address/command bus. The addresses and commands for both ports are time division multiplexed on the common address/command bus. Individual chip selects select which ranks respond to a given address/command. Ranks connected to different ports can be selected to respond to the same command.
TDO	Test data out
TDR	1. Translation control entry (TCE) data random-access memory (RAM) 2. Time-domain reflectometry
TE	Test enable
TFMR	Time Facility Management Register
THD	Thread
TI	Terminate immediately
TID	Thread ID
TLB	Translation lookaside buffer. An on-chip cache that translates virtual addresses (VAs) to real addresses (RAs). A TLB caches page-table entries for the most recently accessed pages, thereby eliminating the necessity to access the page table from memory during load-store operations.
TLBI	Translation lookaside buffer invalidate
TLBIE	Translation lookaside buffer invalidate entry instruction
TM	Transactional memory
TMR	Timer
TMS	Test mode select
TOD	Time of day
TPM	1. Top of peripheral memory 2. Trusted platform module
TPMD	Trusted platform module
tREFI	Refresh interval
TSV	Trans silicon via
TWSM	Table walk state machine
TX	Transmit
TXBIST	Transmit built-in self test

TXCTL	Transmit control
TZ	Tile zone
UDE	Unconditional debug event
UE	Uncorrectable error
UI	1. User interface 2. Unit interval
UL	Uplink
ULCCH	Uplink control channel
ULDCH	Uplink data channel
UMAC	User-mode access control
VAS	Virtual accelerator switchboard
VC	Virtual channel
VCC	Voltage supply
VCO	Voltage controlled oscillator
VCTR	VDM Count Threshold Register
VDCR	VDM Droop Count Register
VDM	Voltage droop monitor
VDSR	VDM Data Sample Register
VECR	VDM Event Count Register
VGA	1. Variable gain amplifier 2. Video graphics array
VHDL	VHSIC hardware description language
VHSIC	Very high speed integrated circuit
VID	Voltage identification
VIO	Voltage I/O
VITL	Vital
VMEAS	Voltage measurement
VMX	Vector multimedia extension
VNCR	VDM Non-Droop Count Register
VPAD	Pad voltage
VPROTH	Voltage protect high
VREF	Voltage reference
VREG	1. Voltage regulator 2. Voltage regulation
VRM	Voltage regulator module
VSU	Vector scalar unit
VT	Voltage control

WAT	Workaround macro
WC	1. Worst case 2. Write control
Wdata, WDATA	Write data
WDF	Designator for the memory controller's read-modify-write data flow and associated control.
WDFCFG	Configuration facilities for the WDF logic.
WECR	Write ECC Control Register
WEN	Write enable
WLO	Write latency offset
WO	Write only
WO_1P	Write only; one pulse length is equal to one register cycle.
WO_AND	Same as RW_WAND, but the bits are write-only.
WO_CLEAR	Same as RW_WCLEAR, but the bits are write-only.
WO_CLRPART	Same as RW_WCLRPART, but the bits are write-only.
WO_n_mP	Write only pulsed. A write of ‘1’ creates a pulse for a minimum of n register clocks and a maximum of m register clocks. A read returns ‘0’.
WO_nP	Write only pulsed. A write of ‘1’ creates a pulse for n register clocks. A read returns ‘0’.
WO_OR	Same as RW_WOR, but the bits are write-only.
WO_SETPART	Same as RW_WSETPART, but the bits are write-only.
WOF	1. Who's on first? 2. Workload optimized frequency
WOX_AND	Same as WO_AND, but unstable. Can be changed functionally.
WOX_CLEAR	Same as WO_CLEAR, but unstable. Can be changed functionally.
WOX_CLRPART	Same as WO_CLRPART, but unstable. Can be changed functionally.
WOX_n_mP	Same as WO_n_mP, but unstable. Can be changed functionally.
WOX_nP	Same as WO_nP, but unstable. Can be changed functionally.
WOX_OR	Same as WO_OR, but unstable. Can be changed functionally.
WOX_SETPART	Same as WO_SETPART, but unstable. Can be changed functionally.
WR	Write
WRCNTL	Write control
WRD	Write data. Designator for the portion of the memory controller's write data flow that generates the outbound memory ECC check bits.
WRQ	Write reorder queue
WRT	Designator for the memory controller's write data flow.
WRTCFG	Configuration facilities for the memory controller's WRT logic.

XBUS	Note: This is not really an acronym but a name (X bus).
XCR	External Control Register
XER	Fixed-Point Exception Register
XFIR	X Fault Isolation Register
XIR	1. External Interface Register 2. External interface to the PPE IR Register
XIVR	External Interrupt Vector Register for the OCC (405)
XOR	Exclusive OR
XSCOM	Extended SCOM. Special, fast SCOM that allows the processor cores to directly SCOM the PIB. Processor buses must be enabled to the slave processor chips for the master processor to XSCOM them.
XSR	External Status Register for PPE
XSTOP	Checkstop
ZCAL	Impedance (Z) calibration
ZCNTLCPURO	Periodic impedance (Z) calibration
ZCONTROL	Impedance (Z) control
ZQ	I/O impedance
ZQCal	I/O impedance calibration

1. POWER9 Processor Overview

The POWER9 processor is a superscalar symmetric multiprocessor designed for use in servers and large-cluster systems. It uses 14 nm technology with 17 metal layers. The POWER9 processor can have up to 24 cores enabled on a single chip. It supports direct-attach memory. It supports a maximum symmetric multiprocessing (SMP) size of two sockets and is targeted for scale-out workloads. Each POWER9 core supports up to four threads using simultaneous multithreading (SMT). The SMT can be dynamically tuned so that each core has one, two, or four threads

This document describes the POWER9 registers and related accessing method.

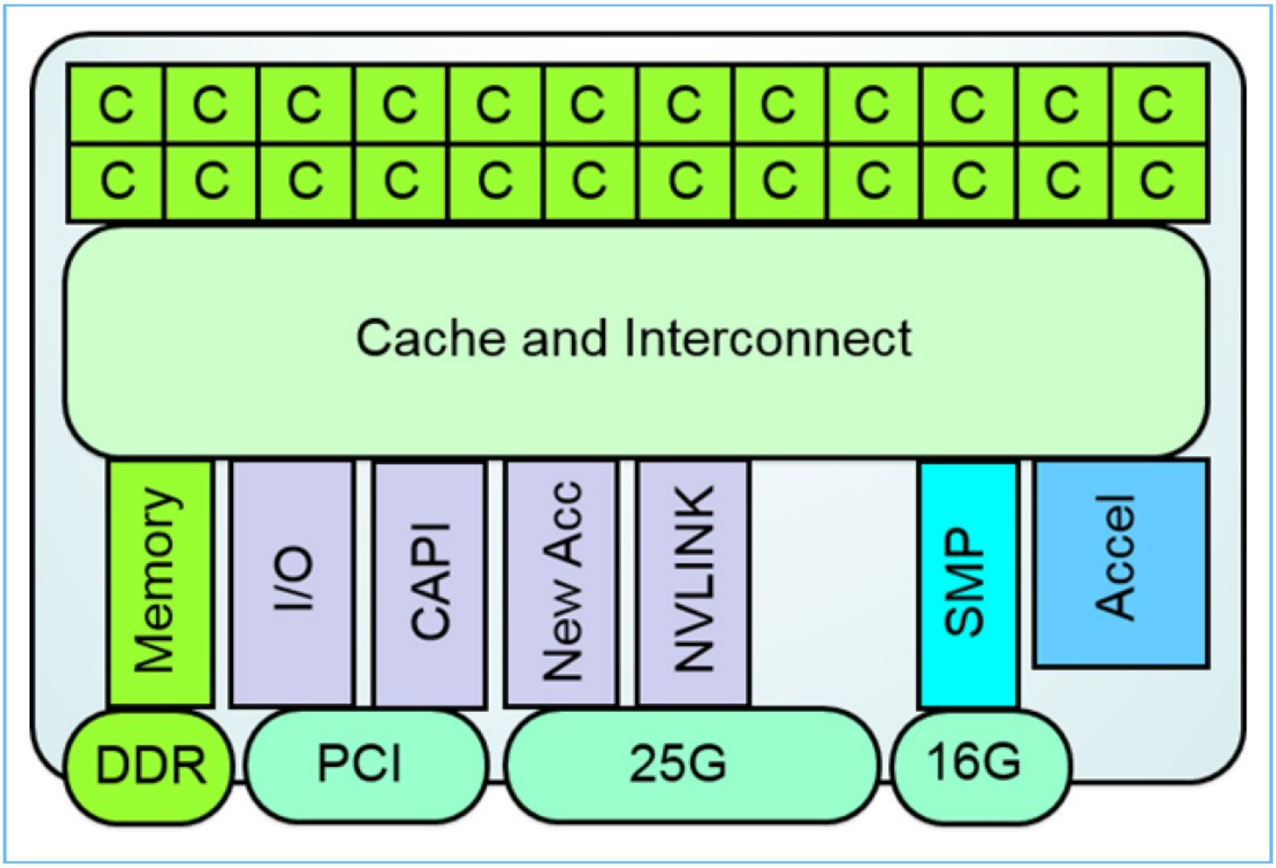
1.1 POWER9 Processor Features

Figure 1 on page 31 shows the POWER9 processor, which supports the following features:

- Twenty-four POWER9 chiplets, which contain one POWER9 core, an L2 cache, and an L3 cache.
  - On-chip accelerators.
  - Coherent Accelerator Processor Interface (CAPI), which enables an FPGA or ASIC to connect coherently to the POWER9 processor SMP interconnect via the PCIe bus.
  - On-chip compression, encryption, and data movement initiated by the hypervisor, GZIP engine, or nest MMU to enable user access to all accelerators.

    - In-core user invocation of encryption using the Advanced Encryption Standard (AES) and the secure hash algorithm (SHA).
- Two memory controllers that support direct-attached DDR4 memory:
    - Support four direct-attach memory buses (DDR 0, 1, 6, and 7).
    - Support ×4 and ×8, 4 - 16 Gb DRAMs and 3D stacked DRAMs.
    - Support registered dual in-line memory modules (RDIMMs) and lad-reduced dual in-line memory modules (LRDIMMs).
- Processor SMP interconnect.
    - Supports one inter-node SMP X bus link.
    - Maximum two-socket SMP.
- Three PCIe controllers (PEC) with 16 lanes of PCI Express Gen 4 I/O.
    - PEC0: one ×16 lanes.
    - PEC1: two ×8 lanes (bifurcation).
    - PEC2: one ×16 lane mode, two ×8 lanes (bifurcation), or one ×8 lane and two ×4 lanes (trifurcation).
    - PEC0 and PEC2 support CAPI 2.0.
- Power management.
- Pervasive interface.

Figure 1: POWER9 Processor General Diagram



1.2 POWER9 Processor Pervasive Structure

Figure 2 on page 33 shows the POWER9 chip from a pervasive-centric point of view. The different colors denote different chiplets from a pervasive perspective. Each chiplet consists of one global clock controller and multiple local clock controllers, which enable a chiplet to service multiple different clock regions. Multiple clock regions can run at the same frequency, but can be turned off independently. The chip contains 24 cores capable of running at different frequencies. The pervasive logic supports these 24 cores.

Figure 2: POWER9 Processor from a Pervasive Point of View

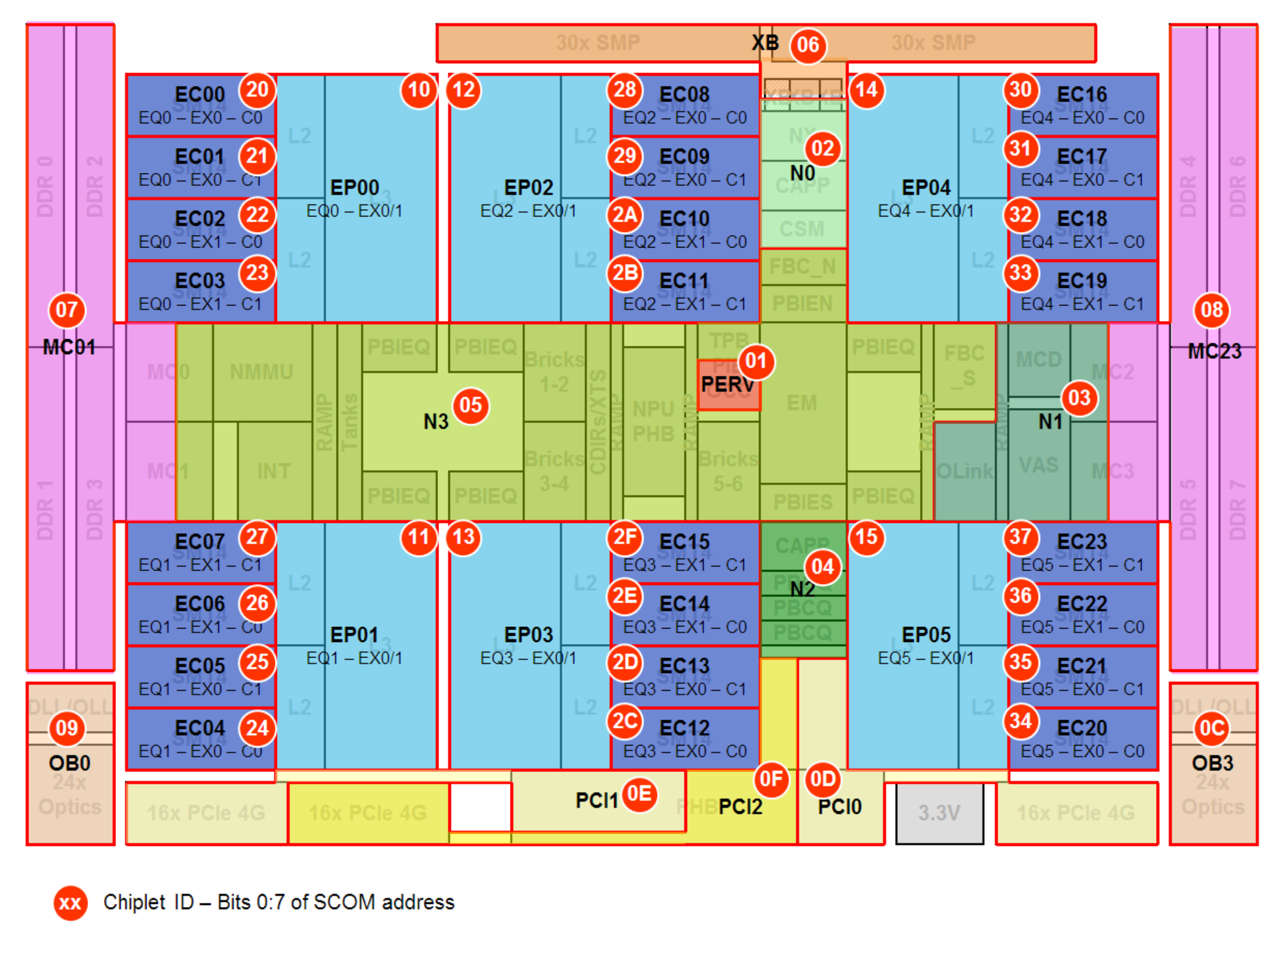


Figure 3 on page 34 lists the chiplets in the design, and their controlling pervasive blocks, by chiplet ID.

Figure 3 POWER9 Chiplets and IDs

ID	Chiplet
0x00	PIB PIB bus (no cplt.)
0x01	PERV Pervasive
0x02	N0 Nest North
0x03	N1 Nest East
0x04	N2 Nest South
0x05	N3 Nest West
0x06	XB XBus
0x07	MC01 Mem. Ctrl. West
0x08	MC23 Mem Ctrl. East
0x09	OB0 OBus 0
0x0A	
0x0B	
0x0C	OB3 OBus 3
0x0D	PCI0 PCIe 0
0x0E	PCI1 PCIe 1
0x0F	PCI2 PCIe 2

ID	Chiplet
0x10	EP00 – Cache EQ0, EX0/1 Virtual EX IDs: EX00: 0x10 EX01: 0x18
0x11	EP01 – Cache EQ1, EX0/1 Virtual EX IDs: EX00: 0x11 EX01: 0x19
0x12	EP02 – Cache EQ2, EX0/1 Virtual EX IDs: EX00: 0x12 EX01: 0x1A
0x13	EP03 – Cache EQ3, EX0/1 Virtual EX IDs: EX00: 0x13 EX01: 0x1B

ID	Chiplet
0x20	EC00 – SMT4 Core EQ0, EX0, C0
0x21	EC01 – SMT4 Core EQ0, EX0, C1
0x22	EC02 – SMT4 Core EQ0, EX1, C0
0x23	EC03 – SMT4 Core EQ0, EX1, C1
0x24	EC04 – SMT4 Core EQ1, EX0, C0
0x25	EC05 – SMT4 Core EQ1, EX0, C1
0x26	EC06 – SMT4 Core EQ1, EX1, C0
0x27	EC07 – SMT4 Core EQ1, EX1, C1

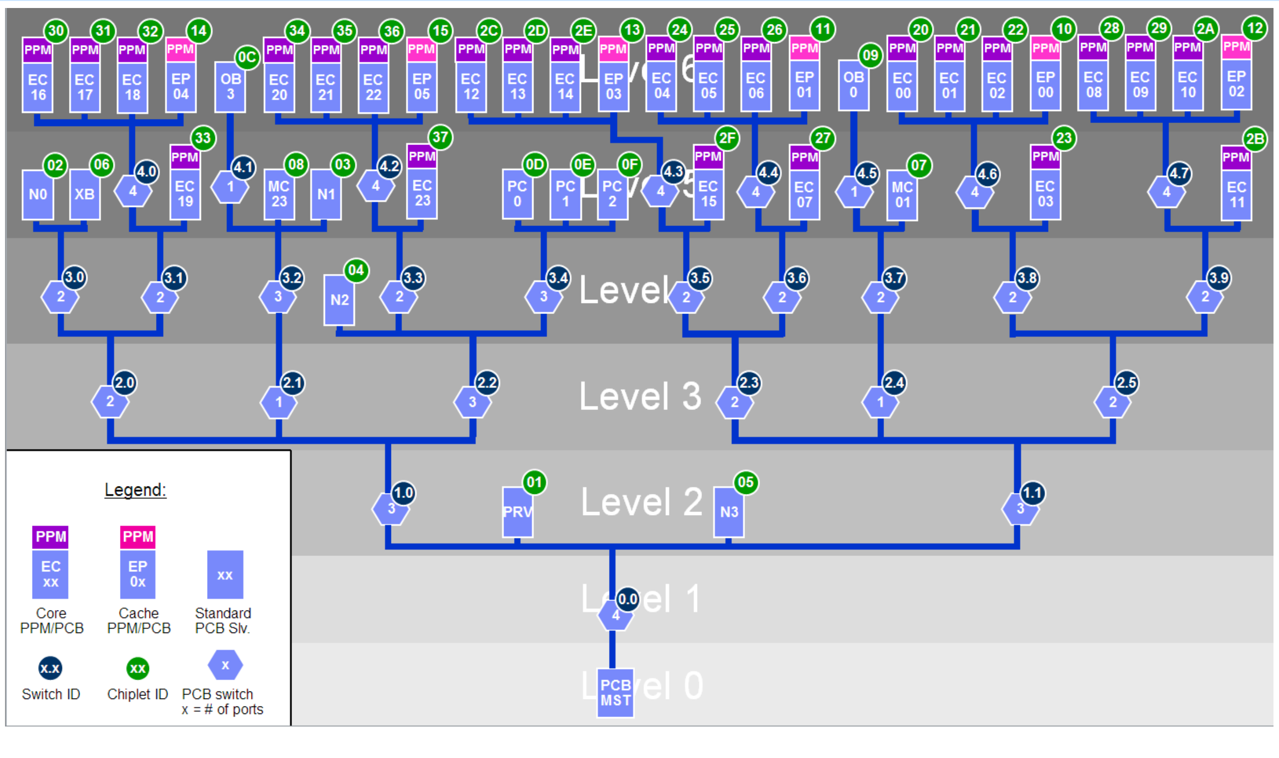
0x37	EC23 – SMT4 Core EQ5, EX1, C1

1.2.1 Pervasive Control Bus and Pervasive Interconnect Bus

The pervasive control bus (PCB) provides a generic, modular structure for communication between the pervasive elements. The PCB provides the POWER9 pervasive unit with an interface to the pervasive functions on the various POWER9 processor chiplets. For this purpose, a PCB master is implemented inside the POWER9 pervasive logic. This master, by means of the PCB interconnect, communicates with the PCB slave located in each chiplet. The PCB master sends commands, such as read and write requests, to the PCB slaves. The slaves, on the other hand, respond to the commands received from the master, and also notify the master of interrupts that occur in the slave's chiplet.

Figure 4 on page 35 shows the PCB structure that services all the chiplets.

Figure 4: Pervasive Control Bus Structure and Chiplets



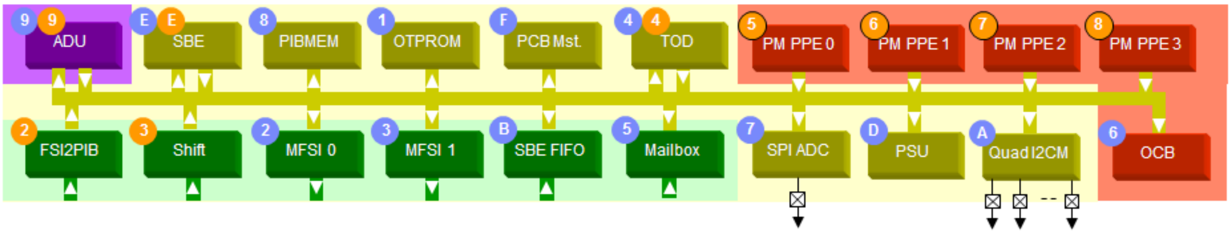
The PCB switch features two independent channels for the PCB topology. The downstream input channel provides a fan-out to the downstream output ports, which are connected either to another switch in a multistage topology or directly to a slave. The upstream output channel is arbitrated between requests from the upstream input ports, which is the case when replying to a multicast operation.

The pervasive interconnect bus (PIB) provides access from the masters via the external interfaces and the internal masters to the common PIB-attached slaves. *Figure 5* on page 36 shows the PIB masters and slaves.

- The external interfaces include the I^2C slave and the flexible service interface (FSI).
- The internal masters include the FSI shift engine, FSI2PIB, and the XSCOM/alter-display unit (ADU).
- The PIB-attached slaves include the PCB master, PIB2OPB, general-purpose register (GPR), I^2C master, and the I^2C slave.

The PIB facilitates transactions between multiple PIB masters and multiple PIB slaves. For each transaction, the PIB arbiter establishes a point-to-point connection between a single requesting master and a single slave uniquely addressed by the master.

Figure 5: PIB Masters and Slaves



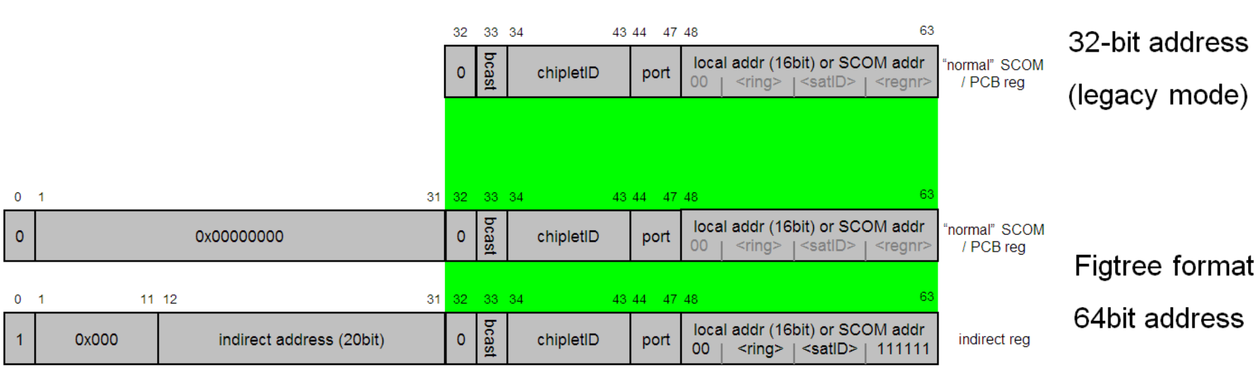
- Pervasive Interconnect Bus (PIB):
  - 9 PIB master (2x CFAM, 4x OCC, 1x Bridge, 2x PIB domain)
  - 13 PIB slaves (4x CFAM, 1x OCC, 1x Bridge, 7x PIB domain)
- Pervasive Connect Bus (PCB):
  - Root in PIB (PCB Master)
  - Provides tree-like switch network to all chiplets
  - 30 Chiplets defined as of now
- PIB & PCB domain run at 465 - 600 MHz (Nest Clock 4:1)
- PIB & PCB domain get initialized (scan0 & clock start) by the pervasive clock controller which is controlled by the new *CFAM Boot Sequencer* (CBS)
- PIB & PCB are trusted domains – no direct access from Service Elements (FSP/BMC) in secured chips

ID #	Master	Domain	Slave	Domain
0x0	LBUS		LBUS	
0x1	free		OTPROM	pib
0x2	FSI2PIB	cfam	FSI Master 0	cfam
0x3	FSISHIFT	cfam	FSI Master 1	cfam
0x4	TOD	pib	TOD	pib
0x5	PM PPE 0	occ	FSI Mailbox	cfam
0x6	PM PPE 1	occ	OCI Bridge	occ
0x7	PM PPE 2	occ	SPI ADC	pib
0x8	PM PPE 3	occ	PIBMEM	pib
0x9	ADU	bridge	ADU	bridge
0xA	free		I2C master	pib
0xB	free		SBE FIFO	cfam
0xC	free		free	
0xD	free		PSU	pib
0xE	SBE	pib	SBE	pib
0xF	CME		PCB Master	pib

1.2.2 PCB Address Space

Figure 6 shows the address format used to access all pervasive facilities. The legacy 32-bit format is shown as well as the translation in the 64-bit format (add 32 zeros as the most-significant bits). The new extended address format that enables access to the large address SCOM satellites (up to 31 bits) is also listed. The most significant bit is '1' in that case.

Figure 6: Common Pervasive Address Map Format

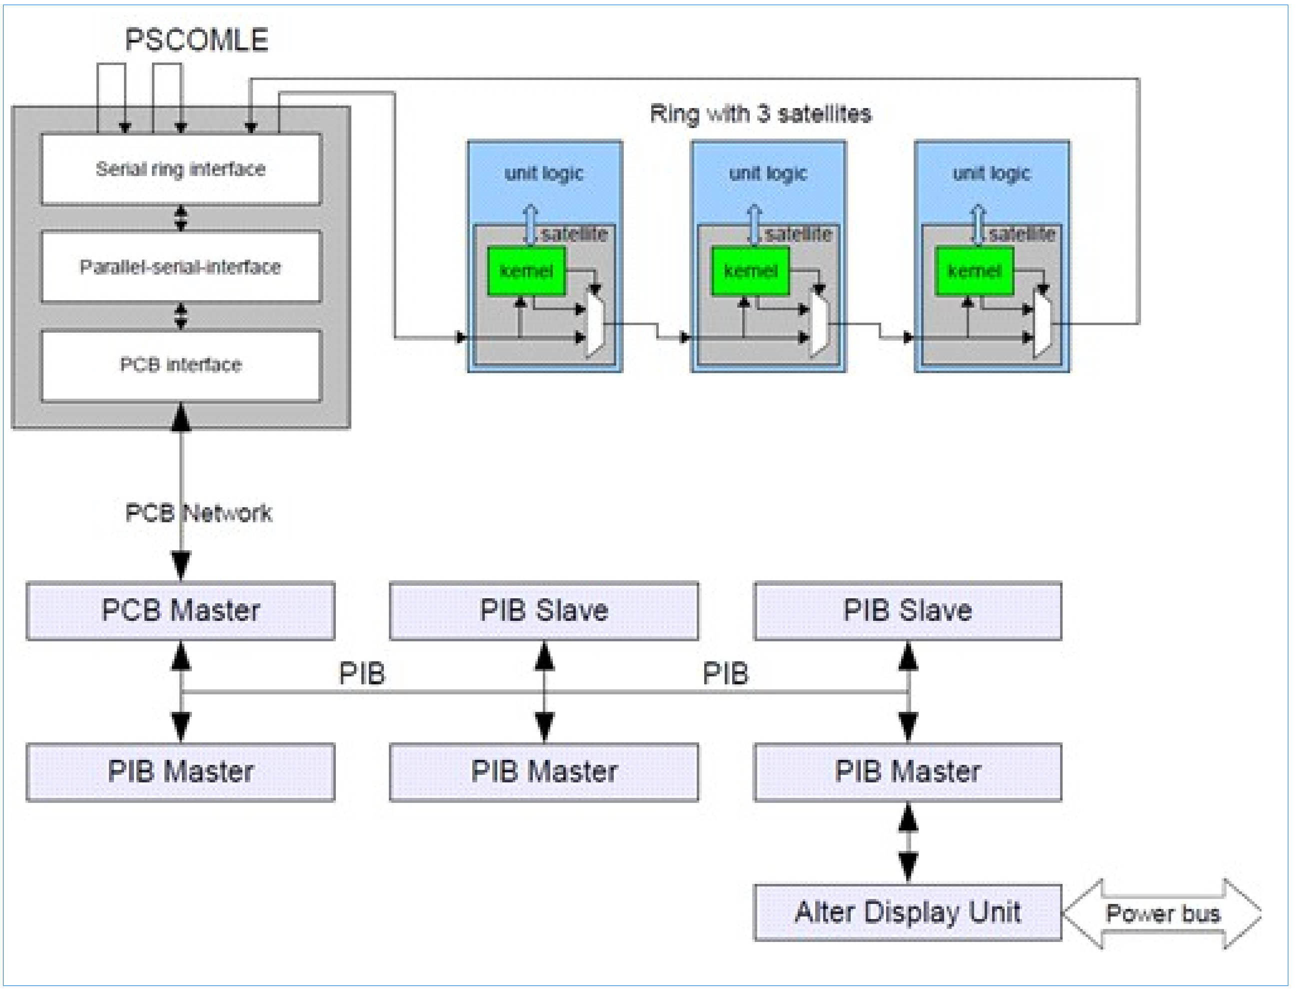


1.2.3 SCOM

SCOM provides a serial communication infrastructure within the pervasive infrastructure. The central control unit is referred to as the parallel-to-serial communication light edition (PSCOMLE). It controls all communication with respect to the serial interface. The end-point nodes are referred to as satellites. A satellite is located in the unit logic. The satellites are connected to the PSCOMLE and each other in a physical ring. The PSCOMLE can support up to 15 rings. Each ring has a local address space that is used to address an individual satellite in a given ring and within the unit logic that uses the satellite with a dedicated register. If this address space is not sufficient, an indirect address can be used to further extend the address range within a satellite.

Figure 7 shows the principal pervasive infrastructure to access the SCOM-enabled registers in a chiplet. A SCOM access can be initiated from the masters connected to the PIB, such as the ADU. SCOM satellites are distributed inside the chiplet and are organized in serial SCOM rings. For each chiplet, there is one instance of the PSCOMLE macro that receives the request from the PCB network.

Figure 7: Infrastructure to Access SCOM Registers

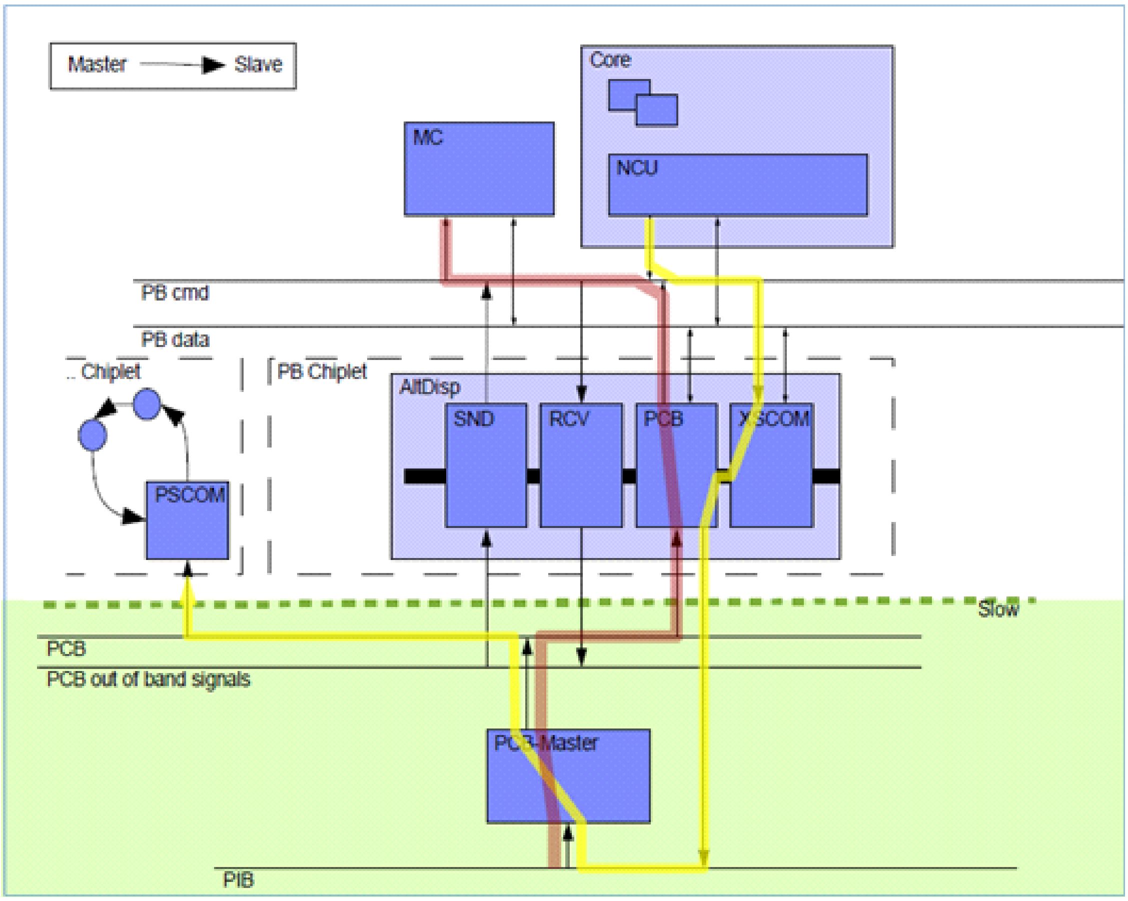


1.2.4 XSCOM

The alter/display unit (ADU) acts as a bridge between the processor bus and the PCB. The ADU enables access to any memory-mapped PIB/PCB register in the system by external SCOM (XSCOM.) The XSCOM is responsible for handling memory-mapped PIB/PCB register access, which originates from the non-pervasive logic of the processor. For example, a read/write operation can originate from a processor core and is presented on the processor bus by the non-cacheable unit (NCU). The alter/display unit XSCOM routes the request through a PIB master to the PIB. The PIB master notifies the ADU when it is complete. For a read operation, the ADU routes the resulting data to the processor bus, which sends the information back to the requester (in the example, the NCU). It then arrives at the core. The XSCOM memory-mapped address range, by default, locates at 0x0003FC0000000000.

Figure 8 shows an example of a read and write to a memory-mapped PCB address space.

Figure 8: Read and Write to Memory-Mapped PCB Address Space



1.3 Register Accessing Type

A register can have multiple addresses, with a different address for different chiplets. The types of access permitted can vary by chiplets. *Table 1* on page 39 summarizes the valid register access types.

Table 1: Register Access Types

Access Type	Description
NC	Not connected; the data cannot be written or read by that access.
NCX	Same as NC, but unstable. Can be changed functionally.
RO	Read only. Only to be used if a bit is tied. Status bits should be ROX.
ROX	Same as RO, but unstable. Can be changed functionally.
ROX_CLRPART	Same as ROX, but a read access clears the bits after they have been accessed.
RW	Readable and writable.
RW_WAND	Readable and writable. A write ANDs written data with existing data and stores the result.
RW_WCLEAR	Readable and writable. A write of a ‘1’ clears the bit. A write of a ‘0’ does nothing.
RW_WCLRPART	Readable and writable. Any write to the address clears the bits regardless of the value.
RW_WOR	Readable and writable. A write ORs written data with existing data and stores the result.
RW_WSETPART	Readable and writable. Any write to the address sets the bits regardless of the value.
RWX	Same as RW, but unstable. Can be changed functionally.
RWX_WAND	Same as RW_WAND, but unstable. Can be changed functionally.
RWX_WCLEAR	Same as RW_WCLEAR, but unstable. Can be changed functionally.
RWX_WCLRPART	Same as RW_WCLRPART, but unstable. Can be changed functionally.
RWX_WOR	Same as RW_WOR, but unstable. Can be changed functionally.
RWX_WSETPART	Same as RW_WSETPART, but unstable. Can be changed functionally.
WO	Same as RW, but bits are write-only.
WO_1P	Write only; one pulse length is equal to one register cycle.
WO_AND	Same as RW_WAND, but bits are write-only.
WO_CLEAR	Same as RW_WCLEAR, but bits are write-only.
WO_CLRPART	Same as RW_WCLRPART, but bits are write-only.
WO_n_mP	Write-only pulsed. A write of ‘1’ creates a pulse for a minimum of n register clocks and a maximum of m register clocks. A read returns ‘0’.
WO_nP	Write-only pulsed. A write of ‘1’ creates a pulse for n register clocks. A read returns ‘0’.
WO_OR	Same as RW_WOR, but bits are write-only.
WO_SETPART	Same as RW_WSETPART, but bits are write-only.
WOX	Same as WO, but unstable. Can be changed functionally.
WOX_AND	Same as WO_AND, but unstable. Can be changed functionally.
WOX_CLEAR	Same as WO_CLEAR, but unstable. Can be changed functionally.
WOX_CLRPART	Same as WO_CLRPART, but unstable. Can be changed functionally.
WOX_n_mP	Same as WO_n_mP, but unstable. Can be changed functionally.
WOX_nP	Same as WO_nP, but unstable. Can be changed functionally.

Access Type	Description
WOX_OR	Same as WO_OR, but unstable. Can be changed functionally.
WOX_SETPART	Same as WO_SETPART, but unstable. Can be changed functionally.

2. XBUS Chiplet

The POWER9 processor registers are listed alphabetically by mnemonic in the following address table.

Mnemonic	Address	Page
IOF1.BUSCTL.SCOM.FIR_ACTION0_REG	0x0000000006011006	92
IOF1.BUSCTL.SCOM.FIR_ACTION1_REG	0x0000000006011007	93
IOF1.BUSCTL.SCOM.FIR_MASK_REG	0x0000000006011003	91
IOF1.BUSCTL.SCOM.FIR_REG	0x0000000006011000	89
IOF1.BUSCTL.SCOM.FIR_WOF_REG	0x0000000006011008	93
IOF1.BUSCTL.SCOM.SCOM_MODE_PB	0x0000000006011020	93
IOF2.BUSCTL.SCOM.FIR_ACTION0_REG	0x0000000006011406	97
IOF2.BUSCTL.SCOM.FIR_ACTION1_REG	0x0000000006011407	97
IOF2.BUSCTL.SCOM.FIR_MASK_REG	0x0000000006011403	95
IOF2.BUSCTL.SCOM.FIR_REG	0x0000000006011400	94
IOF2.BUSCTL.SCOM.FIR_WOF_REG	0x0000000006011408	98

The POWER9 processor registers are listed in the following tables.

Register Name	**Chiplet Control Register 0**
Mnemonic	TP.TCXB.XB.CPLT_CTRL0
Address	0000000006000000 (SCOM) 0000000006000010 (SCOM1) 0000000006000020 (SCOM2)
Description	This register contains the first set of vital chiplet controls.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_OR	WO_CLEAR	CTRL_CC_ABSTCLK_MUXSEL_DC: Select the ABIST clock source for arrays on a chiplet boundary. When set to 1, clocks are used from a chiplet with ABIST.
1	RW	WO_OR	WO_CLEAR	TC_UNIT_SYNCCLK_MUXSEL_DC: Select the synchronous clock for asynchronous latches. (The initial value is 1.)
2	RW	WO_OR	WO_CLEAR	CTRL_CC_FLUSHMODE_INH_DC: Prevent pipeline latches from going into flush mode. (The initial value is 1.)
3	RW	WO_OR	WO_CLEAR	CTRL_CC_FORCE_ALIGN_DC: Force an alignment signal to be sent. (The initial value is 1. Drop before dropping flushmode_inh.)
4	RW	WO_OR	WO_CLEAR	TC_UNIT_ARY_WRT_THRU_DC: Set the array into write-through mode. Used for LBIST.
5	RW	WO_OR	WO_CLEAR	TC_UNIT_AVP_MODE: AVP mode. Switches from refresh pulse to phase counter.
6	RW	WO_OR	WO_CLEAR	FREE_USAGE_6A: Free usage.
7	RW	WO_OR	WO_CLEAR	FREE_USAGE_7A: Free usage.
8	RW	WO_OR	WO_CLEAR	CTRL_CC_ABIST_RECOV_DISABLE_DC: New signal to disable recovery.
9	RW	WO_OR	WO_CLEAR	FREE_USAGE_9A: Free usage.
10	RW	WO_OR	WO_CLEAR	TC_UNIT_IOBIST_TX_WRAP_ENABLE_DC:
11	RW	WO_OR	WO_CLEAR	RESERVED_11A: Reserved.
12	RW	WO_OR	WO_CLEAR	TC_SKIT_MODE_BIST_DC:
13	RW	WO_OR	WO_CLEAR	TC_UNIT_DETERMINISTIC_TEST_ENABLE_DC: Forces login into deterministic test mode. For example, for LBIST.
14	RW	WO_OR	WO_CLEAR	TC_UNIT_CONSTRAIN_SAFESCAN_DC: Safe scan of the N1L latches. Prevent a lock when switching the SE.
15	RW	WO_OR	WO_CLEAR	TC_UNIT_RRFA_TEST_ENABLE_DC:
16	RW	WO_OR	WO_CLEAR	TC_NBTI_HDR_ENABLE_OVR_DC: NBTI.
17	RW	WO_OR	WO_CLEAR	TC_NBTI_PROBE_GATE_DC: NBTI.
18	RW	WO_OR	WO_CLEAR	RESERVED_18A: Reserved.
19	RW	WO_OR	WO_CLEAR	RESERVED_19A: Reserved.
20:27	RW	WO_OR	WO_CLEAR	TC_PSRO_SEL_DC: PSRO select.
28	RW	WO_OR	WO_CLEAR	TC_BSC_WRAPSEL_DC: Wrap select for BSC.
29	RW	WO_OR	WO_CLEAR	TC_BSC_INTMODE_DC: INT mode for BSC.
30	RW	WO_OR	WO_CLEAR	TC_BSC_INV_DC: INV for BSC mode.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
31	RW	WO_OR	WO_CLEAR	TC_BSC_EXTMODE_DC: EXT mode for BSC.
32	RW	WO_OR	WO_CLEAR	TC_REFCLK_DRVR_EN_DC: Reference clock driver enable.
33	RW	WO_OR	WO_CLEAR	RESERVED_33A: Reserved.
34	RW	WO_OR	WO_CLEAR	RESERVED_34A: Reserved.
35	RW	WO_OR	WO_CLEAR	RESERVED_35A: Reserved.
36	RW	WO_OR	WO_CLEAR	TC_OELCC_EDGE_DELAYED_DC: Enables delaying the alignment by one fast cycle. Only used in dual mesh chiplets.
37	RW	WO_OR	WO_CLEAR	TC_OELCC_ALIGN_FLUSH_DC: Forces the alignment and odd/even toggling latch into a flush state. For DFT only.
38	RW	WO_OR	WO_CLEAR	RESERVED_38A: Reserved.
39	RW	WO_OR	WO_CLEAR	RESERVED_39A: Reserved.
40:41	RW	WO_OR	WO_CLEAR	CTRL_MISC_CLKDIV_SEL_DC: Clock divider select. 00 = 1024:1 01 = 64:1 10 = 16:1 11 = 4:1
42	RW	WO_OR	WO_CLEAR	RESERVED_42A: Reserved.
43	RW	WO_OR	WO_CLEAR	RESERVED_43A: Reserved.
44	RW	WO_OR	WO_CLEAR	CTRL_CC_DCTEST_DC: TE = 1 only. Enable DCTEST.
45	RW	WO_OR	WO_CLEAR	CTRL_CC_OTP_PRGMODE_DC: TE = 1 only. OTP ROM program mode
46	RW	WO_OR	WO_CLEAR	CTRL_CC_SSS_CALIBRATE_DC: TE = 1 only. Sensors calibration.
47	RW	WO_OR	WO_CLEAR	CTRL_CC_PIN_LBIST_DC: TE = 1 only. PIN LBIST mode. The LBIST is controlled by the pin, not by the OPCG.
48	RW	WO_OR	WO_CLEAR	FREE_USAGE_48A: Free usage.
49	RW	WO_OR	WO_CLEAR	FREE_USAGE_49A: Free usage.
50	RW	WO_OR	WO_CLEAR	FREE_USAGE_50A: Free usage.
51	RW	WO_OR	WO_CLEAR	FREE_USAGE_51A: Free usage.
52	RW	WO_OR	WO_CLEAR	FREE_USAGE_52A: Free usage.
53	RW	WO_OR	WO_CLEAR	FREE_USAGE_53A: Free usage.
54	RW	WO_OR	WO_CLEAR	FREE_USAGE_54A: Free usage.
55	RW	WO_OR	WO_CLEAR	FREE_USAGE_55A: Free usage.
56	RW	WO_OR	WO_CLEAR	FREE_USAGE_56A: Free usage.
57	RW	WO_OR	WO_CLEAR	FREE_USAGE_57A: Free usage.
58	RW	WO_OR	WO_CLEAR	FREE_USAGE_58A: Free usage.
59	RW	WO_OR	WO_CLEAR	FREE_USAGE_59A: Free usage.
60	RW	WO_OR	WO_CLEAR	FREE_USAGE_60A: Free usage.
61	RW	WO_OR	WO_CLEAR	FREE_USAGE_61A: Free usage.
62	RW	WO_OR	WO_CLEAR	FREE_USAGE_62A: Free usage.
63	RW	WO_OR	WO_CLEAR	FREE_USAGE_63A: Free usage.

Register Name	Chiplet Control Register 1
Mnemonic	TP.TCXB.XB.CPLT_CTRL1
Address	0000000006000001 (SCOM) 0000000006000011 (SCOM1) 0000000006000021 (SCOM2)
Description	This register contains the second set of vital chiplet controls.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_OR	WO_CLEAR	UNUSED_0B: Unused.
1	RW	WO_OR	WO_CLEAR	UNUSED_1B: Unused.
2	RW	WO_OR	WO_CLEAR	UNUSED_2B: Unused.
3	RW	WO_OR	WO_CLEAR	TC_VITL_REGION_FENCE: VITL fence. Protect the VITL region logic from pollution by other regions during LBIST, or when the chiplet is not initialized and running yet.
4	RW	WO_OR	WO_CLEAR	TC_PERV_REGION_FENCE: Fence for the pervasive region.
5	RW	WO_OR	WO_CLEAR	TC_REGION1_FENCE: Fence for regions iox0 - iof.
6	RW	WO_OR	WO_CLEAR	TC_REGION2_FENCE: Fence for regions iox1 - iof.
7	RW	WO_OR	WO_CLEAR	TC_REGION3_FENCE: Fence for regions iox2 - iof.
8	RW	WO_OR	WO_CLEAR	TC_REGION4_FENCE: Fence for regions ioppe - iof.
9	RW	WO_OR	WO_CLEAR	TC_REGION5_FENCE: Fence for regions pbiox0 - pb.
10	RW	WO_OR	WO_CLEAR	TC_REGION6_FENCE: Fence for regions pbiox1 - pb.
11	RW	WO_OR	WO_CLEAR	TC_REGION7_FENCE: Fence for regions pbiox2 - pb.
12	RW	WO_OR	WO_CLEAR	UNUSED_12B: Unused.
13	RW	WO_OR	WO_CLEAR	UNUSED_13B: Unused.
14	RW	WO_OR	WO_CLEAR	UNUSED_14B: Unused.
15	RW	WO_OR	WO_CLEAR	RESERVED: Reserved.
16	RW	WO_OR	WO_CLEAR	TC_UNIT_MULTICYCLE_TEST_FENCE:
17	RW	WO_OR	WO_CLEAR	UNUSED_17B: Unused.
18	RW	WO_OR	WO_CLEAR	UNUSED_18B: Unused.
19	RW	WO_OR	WO_CLEAR	UNUSED_19B: Unused.
20	RW	WO_OR	WO_CLEAR	UNUSED_20B: Unused.
21	RW	WO_OR	WO_CLEAR	UNUSED_21B: Unused.
22	RW	WO_OR	WO_CLEAR	UNUSED_22B: Unused.
23	RW	WO_OR	WO_CLEAR	UNUSED_23B: Unused.
24	RW	WO_OR	WO_CLEAR	UNUSED_24B: Unused.
25	RW	WO_OR	WO_CLEAR	UNUSED_25B: Unused.
26	RW	WO_OR	WO_CLEAR	UNUSED_26B: Unused.
27	RW	WO_OR	WO_CLEAR	UNUSED_27B: Unused.
28	RW	WO_OR	WO_CLEAR	UNUSED_28B: Unused.
29	RW	WO_OR	WO_CLEAR	UNUSED_29B: Unused.
30	RW	WO_OR	WO_CLEAR	UNUSED_30B: Unused.
31	RW	WO_OR	WO_CLEAR	UNUSED_31B: Unused.

Register Name	Chiplet Configuration Register 0
Mnemonic	TP.TCXB.XB.CPLT_CONF0
Address	0000000006000008 (SCOM) 0000000006000018 (SCOM1) 0000000006000028 (SCOM2)
Description	This register contains the first set of vital chiplet configuration functions.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:5	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE0_SEL_DC: Probe 0 select.
6	RW	WO_OR	WO_CLEAR	RESERVED_6C: Reserved.
7	RW	WO_OR	WO_CLEAR	RESERVED_7C: Reserved.
8:13	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE1_SEL_DC: Probe 1 select.
14	RW	WO_OR	WO_CLEAR	RESERVED_14C: Reserved.
15	RW	WO_OR	WO_CLEAR	RESERVED_15C: Reserved.
16:21	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE2_SEL_DC: Probe 2 select.
22	RW	WO_OR	WO_CLEAR	RESERVED_22C: Reserved.
23	RW	WO_OR	WO_CLEAR	RESERVED_23C: Reserved.
24:29	RW	WO_OR	WO_CLEAR	CTRL_MISC_PROBE3_SEL_DC: Probe 3 select.
30	RW	WO_OR	WO_CLEAR	RESERVED_30C: Reserved.
31	RW	WO_OR	WO_CLEAR	RESERVED_31C: Reserved.
32	RW	WO_OR	WO_CLEAR	CTRL_CC_OFLOW_FEH_SEL_DC: ABIST overflow/failure indication select.
33	RW	WO_OR	WO_CLEAR	CTRL_CC_SCAN_PROTECT_DC: Enables scan protection. Enables the scan collision error mechanism.
34	RW	WO_OR	WO_CLEAR	CTRL_CC_SDIS_DC_N: Disables the scan diagnostic scan path.
35	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_35C: Reserved for test control.
36	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_36C: Reserved for test control.
37	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_37C: Reserved for test control.
38	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_38C: Reserved for test control.
39	RW	WO_OR	WO_CLEAR	RESERVED_TEST_CONTROL_39C: Reserved for test control.
40	RW	WO_OR	WO_CLEAR	CTRL_EPS_MASK_VITL_PCB_ERR_DC: Mask VITL PCB errors from CC or CPLT_CTRL.
41	RW	WO_OR	WO_CLEAR	CTRL_CC_MASK_VITL_SCAN_OPCG_ERR_DC: Mask VITL errors in CC that are not PCB related.
42	RW	WO_OR	WO_CLEAR	RESERVED_42C: Reserved.
43	RW	WO_OR	WO_CLEAR	RESERVED_43C: Reserved.
44	RW	WO_OR	WO_CLEAR	FREE_USAGE_44C: Free usage.
45	RW	WO_OR	WO_CLEAR	FREE_USAGE_45C: Free usage.
46	RW	WO_OR	WO_CLEAR	FREE_USAGE_46C: Free usage.
47	RW	WO_OR	WO_CLEAR	FREE_USAGE_47C: Free usage.
48:51	RW	WO_OR	WO_CLEAR	TC_UNIT_GROUP_ID_DC: Group ID.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
52:54	RW	WO_OR	WO_CLEAR	TC_UNIT_CHIP_ID_DC: Chip ID.
55	RW	WO_OR	WO_CLEAR	RESERVED_ID_55C: Reserved ID.
56:60	RW	WO_OR	WO_CLEAR	TC_UNIT_SYS_ID_DC: System ID.
61	RW	WO_OR	WO_CLEAR	RESERVED_ID_61C: Reserved ID.
62	RW	WO_OR	WO_CLEAR	RESERVED_ID_62C: Reserved ID.
63	RW	WO_OR	WO_CLEAR	RESERVED_ID_63C: Reserved ID.

Register Name	Chiplet Configuration Register 1
Mnemonic	TP.TCXB.XB.CPLT_CONF1
Address	0000000006000009 (SCOM) 0000000006000019 (SCOM1) 0000000006000029 (SCOM2)
Description	This register contains the second set of vital chiplet configuration functions.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:2	RW	WO_OR	WO_CLEAR	TC_IOX_MUX_VSEL: Analog multiplexer (AMux) control.
3	RW	WO_OR	WO_CLEAR	UNUSED: Unused.
4	RW	WO_OR	WO_CLEAR	TC_PBE0_IOVALID_DC:
5	RW	WO_OR	WO_CLEAR	TC_PBE1_IOVALID_DC:
6	RW	WO_OR	WO_CLEAR	TC_PBE2_IOVALID_DC:
7	RW	WO_OR	WO_CLEAR	TC_PBE3_IOVALID_DC:
8	RW	WO_OR	WO_CLEAR	TC_PBE4_IOVALID_DC:
9	RW	WO_OR	WO_CLEAR	TC_PBE5_IOVALID_DC:
10	RW	WO_OR	WO_CLEAR	IOVALID_10D:
11	RW	WO_OR	WO_CLEAR	IOVALID_11D:
12	RW	WO_OR	WO_CLEAR	FREE_USAGE_12D: Free usage.
13	RW	WO_OR	WO_CLEAR	FREE_USAGE_13D: Free usage.
14	RW	WO_OR	WO_CLEAR	FREE_USAGE_14D: Free usage.
15	RW	WO_OR	WO_CLEAR	FREE_USAGE_15D: Free usage.
16	RW	WO_OR	WO_CLEAR	FREE_USAGE_16D: Free usage.
17	RW	WO_OR	WO_CLEAR	FREE_USAGE_17D: Free usage.
18	RW	WO_OR	WO_CLEAR	FREE_USAGE_18D: Free usage.
19	RW	WO_OR	WO_CLEAR	FREE_USAGE_19D: Free usage.
20	RW	WO_OR	WO_CLEAR	FREE_USAGE_20D: Free usage.
21	RW	WO_OR	WO_CLEAR	FREE_USAGE_21D: Free usage.
22	RW	WO_OR	WO_CLEAR	FREE_USAGE_22D: Free usage.
23	RW	WO_OR	WO_CLEAR	FREE_USAGE_23D: Free usage.
24	RW	WO_OR	WO_CLEAR	FREE_USAGE_24D: Free usage.
25	RW	WO_OR	WO_CLEAR	FREE_USAGE_25D: Free usage.
26	RW	WO_OR	WO_CLEAR	FREE_USAGE_26D: Free usage.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
27	RW	WO_OR	WO_CLEAR	FREE_USAGE_27D: Free usage.
28	RW	WO_OR	WO_CLEAR	FREE_USAGE_28D: Free usage.
29	RW	WO_OR	WO_CLEAR	FREE_USAGE_29D: Free usage.
30	RW	WO_OR	WO_CLEAR	FREE_USAGE_30D: Free usage.
31	RW	WO_OR	WO_CLEAR	FREE_USAGE_31D: Free usage.

Register Name	Chiplet Status Register
Mnemonic	TP.TCXB.XB.CPLT_STAT0
Address	0000000006000100 (SCOM)
Description	An interrupt is sent out on a bit change if not masked by the Chiplet Mask Register. A mask only masks the interrupt, *not* the status register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	SRAM_ABIST_DONE_DC: SRAM and eDRAM ABIST done.
1	ROX	DRAM_ABIST_DONE_DC: Unused in POWER9 DD1.
2	ROX	RESERVED_2E: Reserved.
3	ROX	RESERVED_3E: Reserved.
4	ROX	TC_DIAG_PORT0_OUT: Diagnostic output port.
5	ROX	TC_DIAG_PORT1_OUT: Diagnostic output port.
6	ROX	RESERVED_6E: Reserved.
7	ROX	PLL_DESTOUT: Reserved.
8	ROX	CC_CTRL_OPCG_DONE_DC: OPCG done. For LBIST, ABIST, or other OPCG runs.
9	ROX	CC_CTRL_CHIPLET_IS_ALIGNED_DC: Indicates that the chiplet is aligned.
10	ROX	FREE_USAGE_10E: Free usage.
11	ROX	FREE_USAGE_11E: Free usage.
12	ROX	FREE_USAGE_12E: Free usage.
13	ROX	FREE_USAGE_13E: Free usage.
14	ROX	FREE_USAGE_14E: Free usage.
15	ROX	FREE_USAGE_15E: Free usage.
16	ROX	FREE_USAGE_16E: Free usage.
17	ROX	FREE_USAGE_17E: Free usage.
18	ROX	FREE_USAGE_18E: Free usage.
19	ROX	FREE_USAGE_19E: Free usage.
20	ROX	FREE_USAGE_20E: Free usage.
21	ROX	FREE_USAGE_21E: Free usage.
22	ROX	FREE_USAGE_22E: Free usage.
23	ROX	FREE_USAGE_23E: Free usage.

Register Name	Chiplet Mask Register
Mnemonic	TP.TCXB.XB.CPLT_MASK0
Address	0000000006000101 (SCOM)
Description	This register masks an interrupt when a bit changes in the Chiplet Status Register. It does *not* mask the status itself.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CPLTMASK0: This field provides bitwise masking of the Chiplet Status Register.

Register Name	Control Protect Mode Register
Mnemonic	TP.TCXB.XB.CTRL_PROTECT_MODE_REG
Address	00000000060003FE (SCOM)
Description	This register enables read and write protection.

Bits	SCOM	Field Mnemonic: Description
0	RW	CTRL_READ_PROTECT_ENABLE: This bit enables read protection.
1	RW	CTRL_WRITE_PROTECT_ENABLE: This bit enables write protection.

Register Name	Atomic Lock Register
Mnemonic	TP.TCXB.XB.CTRL_ATOMIC_LOCK_REG
Address	00000000060003FF (SCOM)
Description	This register enables an atomic lock and an atomic lock counter.

Bits	SCOM	Field Mnemonic: Description
0	RW	CTRL_ATOMIC_LOCK_ENABLE: This bit enables an atomic lock.
1:4	ROX	CTRL_ATOMIC_ID: This field contains the atomic ID.
5:7	RO	constant = 0b000
8:15	ROX	CTRL_ATOMIC_ACTIVITY: This field is an atomic lock counter.

Register Name	PSCOMLE Mode Register
Mnemonic	TP.TCXB.XB.EPS.PSC.PSC.PSCOM_MODE_REG
Address	0000000006010000 (SCOM)
Description	This is the parallel-to-serial communication light edition (PSCOMLE) mode register.

Bits	SCOM	Field Mnemonic: Description
0	RW	ABORT_ON_PCB_ADDR_PARITY_ERROR: Abort on a PCB address parity error.
1	RW	ABORT_ON_PCB_WDATA_PARITY_ERROR: Abort on a PCB write data parity error.
2	RW	UNUSED_2B. Unused.
3	RW	ABORT_ON_DL_RETURN_WDATA_PARITY_ERROR: Abort on a DL return write data parity error.
4	RW	WATCHDOG_ENABLE: Watchdog enable.

Bits	SCOM	Field Mnemonic: Description
5:6	RW	SCOM_HANG_LIMIT: 0b11 = 256 0b10 = 512 0b01 = 768 0b00 = 1023
7	RW	FORCE_ALL_RINGS: This bit is set to a logical 1 if all rings must be enabled independent of the ring address.
8	RW	FSM_SELFRESET_ON_STATEVEC_PARITYERROR_ENABLE: FSM self reset on statevec parity error enable.
9:11	RW	RESERVED_PSCOM_MODE_LT: Reserved.

Register Name	PSCOMLE Error Register
Mnemonic	TP.TCXB.XB.EPS.PSC.PSC.PSCOM_STATUS_ERROR_REG
Address	0000000006010001 (SCOM)
Description	This is the parallel-to-serial communication light edition (PSCOMLE) error register.

Bits	SCOM	Field Mnemonic: Description
0	RWX	ACCUMULATED_PCB_WDATA_PARITY_ERROR: Accumulated PCB write data parity error.
1	RWX	ACCUMULATED_PCB_ADDRESS_PARITY_ERROR: Accumulated PCB address parity error.
2	RWX	ACCUMULATED_DL_RETURN_WDATA_PARITY_ERROR: Accumulated DL return write data parity error.
3	RWX	ACCUMULATED_DL_RETURN_P0_ERROR: Accumulated DL return P0 error.
4	RWX	ACCUMULATED_UL_RDATA_PARITY_ERROR: Accumulated UL read data parity error.
5	RWX	ACCUMULATED_UL_P0_ERROR: Accumulated UL P0 error.
6	RWX	ACCUMULATED_PARITY_ERROR_ON_INTERFACE_MACHINE: Accumulated parity error on interface machine.
7	RWX	ACCUMULATED_PARITY_ERROR_ON_P2S_MACHINE: Accumulated parity error on p2s machine.
8	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Accumulated timeout while waiting for ULCCH.
9	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Accumulated timeout while waiting for DLDCH return.
10	RWX	ACCUMULATED_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Accumulated timeout while waiting for ULDCH.
11	RWX	ACCUMULATED_PSCOM_PARALLEL_WRITE_NVLD: Accumulated PSCOM parallel write NVLD.
12	RWX	ACCUMULATED_PSCOM_PARALLEL_READ_NVLD: Accumulated PSCOM parallel read NVLD.
13	RWX	ACCUMULATED_PSCOM_PARALLEL_ADDR_INVALID: Accumulated PSCOM parallel address invalid.
14	RWX	ACCUMULATED_PCB_COMMAND_PARITY_ERROR: Accumulated PCB command parity error.
15	RWX	ACCUMULATED_GENERAL_TIMEOUT: Accumulated general timeout.
16	RWX	ACCUMULATED_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Accumulated satellite acknowledge access violation.
17	RWX	ACCUMULATED_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Accumulated satellite acknowledge invalid register.
18	RWX	TRAPPED_PCB_WDATA_PARITY_ERROR: Trapped PCB write data parity error.
19	RWX	TRAPPED_PCB_ADDRESS_PARITY_ERROR: Trapped PCB address parity error.

Bits	SCOM	Field Mnemonic: Description
20	RWX	TRAPPED_DL_RETURN_WDATA_PARITY_ERROR: Trapped DL return write data parity error.
21	RWX	TRAPPED_DL_RETURN_P0_ERROR: Trapped DL return P0 error.
22	RWX	TRAPPED_UL_RDATA_PARITY_ERROR: Trapped UL read data parity error.
23	RWX	TRAPPED_UL_P0_ERROR: Trapped UL P0 error.
24	RWX	TRAPPED_PARITY_ERROR_ON_INTERFACE_MACHINE: Trapped parity error on interface machine.
25	RWX	TRAPPED_PARITY_ERROR_ON_P2S_MACHINE: Trapped parity error on p2s machine.
26	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Trapped timeout while waiting for ULCCH.
27	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Trapped timeout while waiting for DLDCH return.
28	RWX	TRAPPED_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Trapped timeout while waiting for ULDCH.
29	RWX	TRAPPED_PSCOM_PARALLEL_WRITE_NVLD: Trapped PSCOM parallel write NVLD.
30	RWX	TRAPPED_PSCOM_PARALLEL_READ_NVLD: Trapped PSCOM parallel read NVLD.
31	RWX	TRAPPED_PSCOM_PARALLEL_ADDR_INVALID: Trapped PSCOM parallel address invalid.
32	RWX	TRAPPED_PCB_COMMAND_PARITY_ERROR: Trapped PCB command parity error.
33	RWX	TRAPPED_GENERAL_TIMEOUT: Trapped general timeout.
34	RWX	TRAPPED_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Trapped satellite acknowledge access violation.
35	RWX	TRAPPED_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Trapped satellite acknowledge invalid register.

Register Name	PSCOMLE Error Mask Register
Mnemonic	TP.TCXB.XB.EPS.PSC.PSC.PSCOM_ERROR_MASK
Address	0000000006010002 (SCOM)
Description	This is the parallel-to-serial communication light edition (PSCOMLE) error mask register.

Bits	SCOM	Field Mnemonic: Description
0	RW	MASK_PCB_WDATA_PARITY_ERROR: Mask PCB write data parity error.
1	RW	MASK_PCB_ADDRESS_PARITY_ERROR: Mask PCB address parity error.
2	RW	MASK_DL_RETURN_WDATA_PARITY_ERROR: Mask DL return write data parity error.
3	RW	MASK_DL_RETURN_P0_ERROR: Mask DL return P0 error.
4	RW	MASK_UL_RDATA_PARITY_ERROR: Mask UL read data parity error.
5	RW	MASK_UL_P0_ERROR: Mask UL P0 error.
6	RW	MASK_PARITY_ERROR_ON_INTERFACE_MACHINE: Mask parity error on the interface machine.
7	RW	MASK_PARITY_ERROR_ON_P2S_MACHINE: Mask parity error on the p2s machine.
8	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_ULCCH: Mask timeout while waiting for ULCCH.
9	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_DLDCH_RETURN: Mask timeout while waiting for DLDCH return.
10	RW	MASK_TIMEOUT_WHILE_WAITING_FOR_ULDCH: Mask timeout while waiting or ULDCH.
11	RW	MASK_PSCOM_PARALLEL_WRITE_NVLD: Mask PSCOM parallel write NVLD.
12	RW	MASK_PSCOM_PARALLEL_READ_NVLD: Mask PSCOM parallel read NVLD.
13	RW	MASK_PSCOM_PARALLEL_ADDR_INVALID: Mask PSCOM parallel address invalid.

Bits	SCOM	Field Mnemonic: Description
14	RW	MASK_PCB_COMMAND_PARITY_ERROR: Mask PCB command parity error.
15	RW	MASK_GENERAL_TIMEOUT: Mask general timeout.
16	RW	MASK_SATELLITE_ACKNOWLEDGE_ACCESS_VIOLATION: Mask satellite acknowledge access violation.
17	RW	MASK_SATELLITE_ACKNOWLEDGE_INVALID_REGISTER: Mask satellite acknowledge invalid register.

Register Name	PSCOMLE Address Trap Register
Mnemonic	TP.TCXB.XB.EPS.PSC.PSC.ADDR_TRAP_REG
Address	0000000006010003 (SCOM)
Description	This is the parallel-to-serial communication light edition (PSCOMLE) address trap register.

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	PCB_ADDRESS_OF_LAST_TRANSACTION_WITH_ERROR: This field contains the PCB address of the last transaction with an error.
16	ROX	PCB_READ_NOTWRITE_OF_LAST_TRANSACTION_WITH_ERROR: PCB read, not write, of the last transaction with an error.
17	ROX	RESERVED_ADDR_LAST_TRAP_LT: Reserved 0.
18:30	ROX	SERIAL2PARALLEL_STATE_MACHINE_AT_TIME_OF_ERROR: Serial2 parallel state machine at the time of the error.
31	ROX	SATELLITE_ACKNOWLEDGE_BIT_RETURN_PARITY: Satellite acknowledge bit: This bit is set to 1 if no parity error is detected in the satellite number or acknowledgment bits.
32	ROX	SATELLITE_ACKNOWLEDGE_BIT_WRITE_PARITY_ERROR: This bit is set if a write parity error is detected by the satellite.
33	ROX	SATELLITE_ACKNOWLEDGE_BIT_ACCESS_VIOLATION: This bit is set if an invalid read or write access is detected by the satellite.
34	ROX	SATELLITE_ACKNOWLEDGE_BIT_INVALID_REGISTER: This bit is set if an invalid register address is detected by the satellite.

Register Name	Ring Lock Enable Register
Mnemonic	TP.TCXB.XB.EPS.PSC.PSC.WRITE_PROTECT_ENABLE_REG
Address	0000000006010005 (SCOM)
Description	This register enables the ring lock.

Bits	SCOM	Field Mnemonic: Description
0	RW	ENABLE_RING_LOCKING: General enable of ring locking upon a write to a specific ring.
1	RW	RESERVED_RING_LOCKING: Reserved.

Register Name	Write Protect Rings Register
Mnemonic	TP.TCXB.XB.EPS.PSC.PSC.WRITE_PROTECT_RINGS_REG
Address	0000000006010006 (SCOM)
Description	This register writes ring protect bit maps.

Bits	SCOM	Field Mnemonic: Description
0:15	RW	WRITE_PROTECT_RINGS: Write protect bit map for each ring.

Register Name	Atomic Lock Mask Register
Mnemonic	TP.TCXB.XB.EPS.PSC.PSC.ATOMIC_LOCK_MASK_LATCH_REG
Address	0000000006010007 (SCOM)
Description	This register provides a bit mask for atomic locking.

Bits	SCOM	Field Mnemonic: Description
0:15	RW	ATOMIC_LOCK_MASK: This field provides a bit mask for atomic locking on a ring-by-ring basis.

Register Name	Ring Fence Enable Mask Register
Mnemonic	TP.TCXB.XB.EPS.PSC.PSC.RING_FENCE_MASK_LATCH_REG
Address	0000000006010008 (SCOM)
Description	This register provides a bit mask for ring fencing.

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1:15	RW	RING_FENCE_ENABLE_MASK: This field provides a bit mask for ring fencing on a ring-by-ring basis.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCXB.XB.TRA0.TR0.TRACE_HI_DATA_REG
Address	0000000006010400 (SCOM)
Description	This register provides the high trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: This field contains trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCXB.XB.TRA0.TR0.TRACE_LO_DATA_REG
Address	0000000006010401 (SCOM)
Description	This register provides the low trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.

Bits	SCOM	Field Mnemonic: Description
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to the last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCXB.XB.TRA0.TR0.TRACE_TRCTRL_CONFIG
Address	0000000006010402 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: This bit enables an unconditional forced write when a trace runs.
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.
10	RW	BANK_MODE: This bit enables bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B. Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: This field contains spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCXB.XB.TRA0.TR0.TRACE_TRDATA_CONFIG_0
Address	0000000006010403 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: This field contains a trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCXB.XB.TRA0.TR0.TRACE_TRDATA_CONFIG_1
Address	0000000006010404 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: This field contains a trace data compare mask for bits 64 – 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCXB.XB.TRA0.TR0.TRACE_TRDATA_CONFIG_2
Address	0000000006010405 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 – 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCXB.XB.TRA0.TR0.TRACE_TRDATA_CONFIG_3
Address	0000000006010406 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 – 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 – 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCXB.XB.TRA0.TR0.TRACE_TRDATA_CONFIG_4
Address	0000000006010407 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCXB.XB.TRA0.TR0.TRACE_TRDATA_CONFIG_5
Address	0000000006010408 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCXB.XB.TRA0.TR0.TRACE_TRDATA_CONFIG_9
Address	0000000006010409 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable trace data compression (store data every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account (care about) changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits(00:23). 0b01 = Debug bus bits(24:47). 0b10 = Debug bus bits(48:71). 0b11 = Debug bus bits(72:87) | 8 zeroes.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits(00:23). 0b01 = Debug bus bits(24:47). 0b10 = Debug bus bits(48:71). 0b11 = Debug bus bits(72:87) | 8 zeroes.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits(00:23). 0b01 = Debug bus bits(24:47). 0b10 = Debug bus bits(48:71). 0b11 = Debug bus bits(72:87) | 8 zeroes.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits(00:23). 0b01 = Debug bus bits(24:47). 0b10 = Debug bus bits(48:71). 0b11 = Debug bus bits(72:87) | 8 zeroes.
10:13	RW	TRIG0_OR_MASK: **Note**: The OR of all selected MATCHes is ORed with the result of TRIG0_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: **Note**: The AND of the following selected MATCHes is ORed with the result of TRIG0_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: **Note**: The OR of all selected MATCHes is ORed with the result of TRIG1_AND. 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: **Note**: The AND of the following selected MATCHes is ORed with the result of TRIG1_OR. 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.

Bits	SCOM	Field Mnemonic: Description
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a TRIGger. 0b1000 inverts MATCHA. 0b0100 inverts MATCHB. 0b0010 inverts MATCHC. 0b0001 inverts MATCHD.
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. This bit must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved field.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCXB.XB.TRA0.TR1.TRACE_HI_DATA_REG
Address	0000000006010440 (SCOM)
Description	This register provides the high trace array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: This field contains trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCXB.XB.TRA0.TR1.TRACE_LO_DATA_REG
Address	0000000006010441 (SCOM)
Description	This register provides the low trace array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to the last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCXB.XB.TRA0.TR1.TRACE_TRCTRL_CONFIG
Address	0000000006010442 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: This bit enables an unconditional forced write when a trace runs.
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.

Bits	SCOM	Field Mnemonic: Description
10	RW	BANK_MODE: This bit enables bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B. Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: This field contains spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCXB.XB.TRA0.TR1.TRACE_TRDATA_CONFIG_0
Address	0000000006010443 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: This field contains a trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCXB.XB.TRA0.TR1.TRACE_TRDATA_CONFIG_1
Address	0000000006010444 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: This field contains a trace data compare mask for bits 64 – 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCXB.XB.TRA0.TR1.TRACE_TRDATA_CONFIG_2
Address	0000000006010445 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 – 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCXB.XB.TRA0.TR1.TRACE_TRDATA_CONFIG_3
Address	0000000006010446 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 – 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 – 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCXB.XB.TRA0.TR1.TRACE_TRDATA_CONFIG_4
Address	0000000006010447 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCXB.XB.TRA0.TR1.TRACE_TRDATA_CONFIG_5
Address	0000000006010448 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCXB.XB.TRA0.TR1.TRACE_TRDATA_CONFIG_9
Address	0000000006010449 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable trace data compression (store data every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account (care about) changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits(00:23). 0b01 = Debug bus bits(24:47). 0b10 = Debug bus bits(48:71). 0b11 = Debug bus bits(72:87) | 8 zeroes.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits(00:23). 0b01 = Debug bus bits(24:47). 0b10 = Debug bus bits(48:71). 0b11 = Debug bus bits(72:87) | 8 zeroes.

Bits	SCOM	Field Mnemonic: Description
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits(00:23). 0b01 = Debug bus bits(24:47). 0b10 = Debug bus bits(48:71). 0b11 = Debug bus bits(72:87) | 8 zeroes.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits(00:23). 0b01 = Debug bus bits(24:47). 0b10 = Debug bus bits(48:71). 0b11 = Debug bus bits(72:87) | 8 zeroes.
10:13	RW	TRIG0_OR_MASK: **Note**: The OR of all selected MATCHes is ORed with result of TRIG0_AND: 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: **Note**: The AND of the following selected MATCHes is ORed with result of TRIG0_OR: 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: **Note**: The OR of all selected MATCHes is ORed with the result of TRIG1_AND: 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: **Note**: The AND of the following selected MATCHes is ORed with the result of TRIG1_OR: 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a TRIGger. 0b1000 inverts MATCHA. 0b0100 inverts MATCHB. 0b0010 inverts MATCHC. 0b0001 inverts MATCHD.
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. This bit must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved field.

Register Name	Trace Array High Data Register
Mnemonic	TP.TCXB.XB.TRA1.TR0.TRACE_HI_DATA_REG
Address	0000000006010480 (SCOM)
Description	This register provides the high trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	TRACE_HI_DATA: This field contains trace array data 0:63.

Register Name	Trace Array Low Data Register
Mnemonic	TP.TCXB.XB.TRA1.TR0.TRACE_LO_DATA_REG
Address	0000000006010481 (SCOM)
Description	This register provides the low trace-array data.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	TRACE_LO_DATA: Trace array data 64:95.
32:41	ROX	TRACE_ADDRESS: Trace address.
42:50	ROX	TRACE_LAST_BANK: Trace last bank.
51	ROX	TRACE_LAST_BANK_VALID: Trace last bank valid.
52	ROX	TRACE_WRITE_ON_RUN: Trace write-on-run indicator.
53	ROX	TRACE_RUNNING: Trace run indicator.
54:63	ROX	TRACE_HOLD_ADDRESS: Trace hold address (pointing to the last entry).

Register Name	Trace Control Configuration Register
Mnemonic	TP.TCXB.XB.TRA1.TR0.TRACE_TRCTRL_CONFIG
Address	0000000006010482 (SCOM)
Description	This register contains trace control configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	STORE_ON_TRIG_MODE: This bit enables store on trigger mode.
1	RW	WRITE_ON_RUN_MODE: This bit enables an unconditional forced write when a trace runs.
2:9	RW	EXTEND_TRIG_MODE: This field contains the counter value for extended trigger mode.
10	RW	BANK_MODE: This bit enables bank mode.
11	RW	ENH_TRACE_MODE: This bit enables enhanced trace mode.
12	RW	LOCAL_CLOCK_GATE_CONTROL: When this bit is set, internal clock gating is disabled. The trace control logic and the trace data pipeline are always clocked.
13	RW	UNUSED_13B. Unused.
14:17	RW	TRACE_SELCT_CONTROL: This field is a selector for two sets of external trace bus multiplexers: tra_mux0_sel(0:1) and tra_mux1_sel(0:1).
18:21	RW	SPARE_CONTROL: This field contains spare control bits.

Register Name	Trace Data Configuration Register 0
Mnemonic	TP.TCXB.XB.TRA1.TR0.TRACE_TRDATA_CONFIG_0
Address	0000000006010483 (SCOM)
Description	This register contains a trace data compare mask for bits 0 – 63.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	CMP_MSK_LT_B_0_TO_63: This field contains a trace data compare mask for bits 0 - 63.

Register Name	Trace Data Configuration Register 1
Mnemonic	TP.TCXB.XB.TRA1.TR0.TRACE_TRDATA_CONFIG_1
Address	0000000006010484 (SCOM)
Description	This register contains a trace data compare mask for bits 64 – 87.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	CMP_MSK_LT_B_64_TO_87: This field contains a trace data compare mask for bits 64 – 87.

Register Name	Trace Data Configuration Register 2
Mnemonic	TP.TCXB.XB.TRA1.TR0.TRACE_TRDATA_CONFIG_2
Address	0000000006010485 (SCOM)
Description	This register contains patterns A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNA: Pattern match for pattern A 0 – 23.
24:47	RW	PATTERNB: Pattern match for pattern B 0 - 23.

Register Name	Trace Data Configuration Register 3
Mnemonic	TP.TCXB.XB.TRA1.TR0.TRACE_TRDATA_CONFIG_3
Address	0000000006010486 (SCOM)
Description	This register contains patterns C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	PATTERNC: Pattern match for pattern C 0 – 23.
24:47	RW	PATTERND: Pattern match for pattern D 0 – 23.

Register Name	Trace Data Configuration Register 4
Mnemonic	TP.TCXB.XB.TRA1.TR0.TRACE_TRDATA_CONFIG_4
Address	0000000006010487 (SCOM)
Description	This register contains masks A and B.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKA: Mask A.
24:47	RW	MASKB: Mask B.

Register Name	Trace Data Configuration Register 5
Mnemonic	TP.TCXB.XB.TRA1.TR0.TRACE_TRDATA_CONFIG_5
Address	0000000006010488 (SCOM)
Description	This register contains masks C and D.

Bits	SCOM	Field Mnemonic: Description
0:23	RW	MASKC: Mask C.
24:47	RW	MASKD: Mask D.

Register Name	Trace Data Configuration Register 9
Mnemonic	TP.TCXB.XB.TRA1.TR0.TRACE_TRDATA_CONFIG_9
Address	0000000006010489 (SCOM)
Description	This register contains trace data configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	DISABLE_COMPRESSION: Disable trace data compression (store data every cycle).
1	RW	ERROR_BIT_COMPRESSION_CARE_MASK: Take into account (care about) changes in the error bit for trace data compression (default = 0).
2:3	RW	MATCHA_MUXSEL: Match PATTERNA against: 0b00 = Debug bus bits(00:23). 0b01 = Debug bus bits(24:47). 0b10 = Debug bus bits(48:71). 0b11 = Debug bus bits(72:87) | 8 zeroes.
4:5	RW	MATCHB_MUXSEL: Match PATTERNB against: 0b00 = Debug bus bits(00:23). 0b01 = Debug bus bits(24:47). 0b10 = Debug bus bits(48:71). 0b11 = Debug bus bits(72:87) | 8 zeroes.
6:7	RW	MATCHC_MUXSEL: Match PATTERNC against: 0b00 = Debug bus bits(00:23). 0b01 = Debug bus bits(24:47). 0b10 = Debug bus bits(48:71). 0b11 = Debug bus bits(72:87) | 8 zeroes.
8:9	RW	MATCHD_MUXSEL: Match PATTERND against: 0b00 = Debug bus bits(00:23). 0b01 = Debug bus bits(24:47). 0b10 = Debug bus bits(48:71). 0b11 = Debug bus bits(72:87) | 8 zeroes.

Bits	SCOM	Field Mnemonic: Description
10:13	RW	TRIG0_OR_MASK: **Note**: The OR of all selected MATCHes is ORed with result of TRIG0_AND: 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes.
14:17	RW	TRIG0_AND_MASK: **Note**: The AND of the following selected MATCHes is ORed with result of TRIG0_OR: 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG0.
18:21	RW	TRIG1_OR_MASK: **Note**: The OR of all selected MATCHes is ORed with the result of TRIG1_AND: 0b1XXX selects MATCHA OR 0bX1XX selects MATCHB OR 0bXX1X selects MATCHC OR 0bXXX1 selects MATCHD OR 0b0000 selects to not OR any MATCHes to form TRIG1.
22:25	RW	TRIG1_AND_MASK: **Note**: The AND of the following selected MATCHes is ORed with the result of TRIG1_OR: 0b1XXX selects MATCHA AND 0bX1XX selects MATCHB AND 0bXX1X selects MATCHC AND 0bXXX1 selects MATCHD AND 0b0000 selects to not AND any MATCHes together to form TRIG1.
26	RW	TRIG0_NOT_MODE: Invert TRIG0 before using it.
27	RW	TRIG1_NOT_MODE: Invert TRIG1 before using it.
28:31	RW	MATCH_NOT_MODE: Invert the match polarity before using it to form a TRIGger. 0b1000 inverts MATCHA. 0b0100 inverts MATCHB. 0b0010 inverts MATCHC. 0b0001 inverts MATCHD.
32:35	RW	Reserved field.
36	RW	DD1_STRETCH_TRIGGER_PULSES: (DD1 workaround) Stretch trigger output pulses to two clocks. This bit must be enabled for MCFAST and L2FAST traces.
37	RW	Reserved field.

Register Name	**Debug Mode Register**
Mnemonic	TP.TCXB.XB.EPS.DBG.DBG_MODE_REG
Address	00000000060107C0 (SCOM)
Description	This is debug macro configuration register 0 for the configuration component.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	GLB_BRCST_MODE: Global broadcast mode (0 - 2): 100 = dbg_trace_run and dbg_trace_freeze. 101 = pc_tcdbg_trace_run_fncd and dbg_trace_freeze. 110 = dbg_triggers_out(0 to 1). 111 = pc_tcdbg_triggers(0 to 1) (from core.)

Bits	SCOM	Field Mnemonic: Description
3:5	RW	TRACE_SEL_MODE: Select source for trace_run and bank: 001 = core trace run and bank. 010 = tp broadcast run and 0. 011 = tc_dbg_inter_brcst latched. 100 = tc_dbg_dbg_sync_brcst_rcv. else: dbg_trace_run and dbg_trace_bank.
6:7	RW	TRIG_SEL_MODE: Select source for tcdbg_trigger(0): 10 = global broadcast. 11 = pc_tcdbg_trigger (from core). else: dbg_triggers_out(0:1).
8	RW	STOP_ON_XSTOP_SELECTION: This bit enables a trace stop on a checkstop.
9	RW	STOP_ON_RECOV_ERR_SELECTION: This bit enables a trace stop on a recoverable error.
10	RW	STOP_ON_SPATTN_SELECTION: This bit enables a trace stop on special attention.
11	RW	FREEZE_SEL_MODE: Select the freeze source: 0 = Local debug freeze. 1 = Via broadcast: tp_tcdbg_glb_brcst(1).
12:13	RW	SYNC_BRCST_MODE: Originally used for synchronous broadcast mode; currently unused because obsolete. See trace_sel_mode.
14	RO	constant = 0b0 sync_brcst_mode
15	RO	constant = 0b0
16:31	ROX	DBG_STATUS: Debug status.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	Debug Instance 1 Condition 1 Register
Mnemonic	TP.TCXB.XB.EPS.DBG.DBG_INST1_COND_REG_1
Address	00000000060107C1 (SCOM)
Description	This is debug macro configuration register 1 for front-end component 1.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	INST1_COND1_SEL_A: Multiplexer for cond1_trig_in(0). 000 select constant 0 001 select constant 1 -- CONDITION FEEDBACK -- 002 select inst1_dbg_cond1. 003 select inst1_dbg_cond2. 004 select inst1_dbg_cond3. 005 select inst1_dbg_cond2timeout. 006 select inst2_dbg_cond1. 007 select inst2_dbg_cond2. 008 select inst2_dbg_cond3. 009 select inst2_dbg_cond2timeout. 010 select inst3_dbg_cond1 - unused, tied down. 011 select inst3_dbg_cond2 - unused, tied down. 012 select inst3_dbg_cond3 - unused, tied down. 013 select inst3_dbg_cond2timeout - unused, tied down. 014 select inst4_dbg_cond1 - unused, tied down. 015 select inst4_dbg_cond2 - unused, tied down. 016 select inst4_dbg_cond3 - unused, tied down. 017 select inst4_dbg_cond2timeout - unused, tied down. 018 select inst1_dbg_trig_sp.

Mnemonic	IOFPPE.PPE.PPE_FIR_WOF_REG
Address	0000000006010848 (SCOM)
Description	This who's on first register indicates which error occurred first. This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:12	RWX_WCLRREG	Reserved field.
13:26	RO	constant = 0b00000000000000

Register Name	PPE Local SRAM Control Register
Mnemonic	IOFPPE.PPE.ARB.ARB.CSCR
Address	000000000601084A (SCOM) 000000000601084B (SCOM1) 000000000601084C (SCOM2)
Description	This register contains PPE local SRAM controls.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RW	WO_CLEAR	WO_OR	CSCR_SRAM_ACCESS_MODE: SRAM access mode.
1	RWX	WOX_CLEAR	WOX_OR	CSCR_SRAM_SCRUB_ENABLE: Enable background scrub (atomic read-write) to periodically check, and if needed correct, the data in the SRAM for bit flips due to alpha particles. This bit is cleared by the hardware when a UE is detected to assist with fault analysis.
2	RW	WO_CLEAR	WO_OR	CSCR_ECC_CORRECT_DIS: Do not correct the data coming out of the array on ECC-detected correctable errors. This causes CEs to report an error back to the PPE in addition to the usual UEs.
3	RW	WO_CLEAR	WO_OR	CSCR_ECC_DETECT_DIS: Do not flag an error back to the PPE for ECC miscompares. Data from the SRAM is always treated as good. **Note:** Errors are always detected and reported to the FIR. They must be masked there independently from this bit.
4	RW	WO_CLEAR	WO_OR	CSCR_ECC_INJECT_TYPE: Used only when ECC_INJECT_ERR is set. When set to 1, this bit causes an ECC error to be reported on every SRAM read. When 0, this bit causes a single ECC error to be indicated on the next SRAM read that occurs because it also clears ECC_INJECT_ERR when that happens.
5	RWX	WOX_CLEAR	WOX_OR	CSCR_ECC_INJECT_ERR: When set, the hardware injects or causes a fake uncorrectable error (UE) to be reported to both the PPE and the FIR on all SRAM reads. The SRAM contents are not modified. The type of error to inject is determined by the previous bit. If ECC_INJECT_TYPE = 1, this bit clears when the first error is injected. **Note:** This bit can also be set by the PPE local register CFMSR.
6:7	RW	WO_CLEAR	WO_OR	CSCR_SPARE_6_7: Implemented but unused.
8:46	RO	RO	RO	constant = 0b000000000000000000000000000000000000000
47:59	RWX	WOX_CLEAR	WOX_OR	CSCR_SRAM_SCRUB_INDEX: 32KB Scrub index. This field is auto-incremented by hardware for every scrub operation. Upon a UE detection, this field is overwritten with the index of the doubleword containing the error. **Note:** SRAM_SCRUB_ENABLE must be set to 0 when writing this field to prevent one cycle window from ignoring this write if a scrub update happens to occur concurrently.
60:63	RO	RO	RO	constant = 0b0000

Register Name	PPE Local SRAM Address Register
Mnemonic	IOFPPE.PPE.ARB.ARB.CSAR
Address	000000000601084D (SCOM)
Description	This register contains the address of an SRAM entry.

Bits	SCOM	Field Mnemonic: Description
0:15	RO	constant = 0b0000000000000000
16:28	RW	CSAR_SRAM_ADDRESS: This field contains the address of an 8-byte SRAM entry in the 32 KB SRAM array.
29:63	RO	constant = 0b00000000000000000000000000000000000

Register Name	PPE Local SRAM Data Register
Mnemonic	IOFPPE.PPE.ARB.ARB.CSDR
Address	000000000601084E (SCOM)
Description	This register contains the data associated with the SRAM entry at the address indicated in the PPE Local SRAM Address Register.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX	CSDR_SRAM_DATA: This field contains the 8-byte SRAM data entry for the address given by the SRAM_ADDRESS. Reads cause this register to be written with data from the local SRAM. Writes cause the local SRAM to be written with the contents of this register.

Register Name	PPE External Interface External Control Register
Mnemonic	IOFPPE.PPE.PPE.PPE.PPE.PPE_XIXCR
Address	0000000006010850 (SCOM)
Description	This register contains the PPE External Control Register command.

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1:3	WOX	PPE_XIXCR_XCR: PPE External Control Register command. 000 = Clear Debug Status. 001 = Halt. 010 = Resume. 011 = Single-step. 100 = Toggle XSR[TRH]. 101 = Soft Reset. 110 = Hard Reset. 111 = Force Halt.
4:63	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000

Register Name	PPE External Interface RAMRA Register
Mnemonic	IOFPPE.PPE.PPE.PPE.PPE.PPE_XIRAMRA
Address	0000000006010851 (SCOM)
Description	This register provides access to the PPE core's XIR1 debug register.

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1:3	WOX	PPE_XIXCR_XCR: PPE External Control Register command. 000 = Clear Debug Status. 001 = Halt. 010 = Resume. 011 = Single-step. 100 = Toggle XSR[TRH]. 101 = Soft Reset. 110 = Hard Reset. 111 = Force Halt.
4:31	RO	constant = 0b0000000000000000000000000000
32:63	WOX	PPE_XIRAMRA_SPRG0: SPRG0 register value. By convention, this field is used by the PPE code to keep status information. SPRG0 is a 32-bit scratch register. SPRG0 can only be written as an XIR when the processor is halted (XSR[HS] = '1').

Register Name	PPE External Interface RAMGA Register
Mnemonic	IOFPPE.PPE.PPE.PPE.PPE.PPE_XIRAMGA
Address	0000000006010852 (SCOM)
Description	This register provides access to the PPE core's XIR2 debug register.

Bits	SCOM	Field Mnemonic: Description
0:31	WOX	PPE_XIRAMGA_IR: PPE Instruction Register. Writes to this field cause a RAM operation. This field can only be written when the processor is halted (XSR[HS] = '1'). This field provides the requested PPE instruction to execute.
32:63	WOX	PPE_XIRAMRA_SPRG0: SPRG0 register value. By convention, this field is used by the PPE code to keep status information. SPRG0 is a 32-bit scratch register. SPRG0 can only be written as an XIR when the processor is halted (XSR[HS] = '1').

Register Name	PPE External Interface RAMDBG Register
Mnemonic	IOFPPE.PPE.PPE.PPE.PPE.PPE_XIRAMDBG
Address	0000000006010853 (SCOM)
Description	This register provides access to the PPE core's XIR3 debug register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field.
1:3	ROX	Reserved field.
4	ROX	Reserved field.
5	ROX	Reserved field.
6	ROX	Reserved field.
7	ROX	Reserved field.
8	ROX	Reserved field.
9:11	ROX	NULL_MSR_SIBRC:
12	ROX	Reserved field.
13	ROX	Reserved field.

Bits	SCOM	Field Mnemonic: Description
14	ROX	NULL_MSR_WE:
15	ROX	Reserved field.
16:19	ROX	Reserved field.
20	ROX	NULL_MSR_LP:
21	ROX	Reserved field.
22:23	RO	constant = 0b00
24	ROX	Reserved field.
25	ROX	Reserved field.
26:27	RO	constant = 0b00
28	ROX	Reserved field.
29:31	ROX	Reserved field.
32:63	RWX	PPE_XIRAMRA_SPRG0: SPRG0 register value. By convention, this field is used by the PPE code to keep status information. SPRG0 is a 32-bit scratch register. SPRG0 can only be written as an XIR when the processor is halted (XSR[HS] = '1').

Register Name	PPE External Interface RAMEDR Register
Mnemonic	IOFPPE.PPE.PPE.PPE.PPE.PPE_XIRAMEDR
Address	0000000006010854 (SCOM)
Description	This register provides access to the PPE core's XIR4 debug register.

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	PPE_XIRAMGA_IR: PPE Instruction Register. Writes to this field cause a RAM operation. This field can only be written when the processor is halted (XSR[HS] = '1'). This field provides the requested PPE instruction to execute.
32:63	ROX	PPE_XIRAMEDR_EDR: Error Data Register. These bits are set on PPE interrupts caused by an error.

Register Name	PPE External Interface DBGPRO Register
Mnemonic	IOFPPE.PPE.PPE.PPE.PPE.PPE_XIDBGPRO
Address	0000000006010855 (SCOM)
Description	PPE External Interface DBGPRO Register.

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field.
1:3	ROX	Reserved field.
4	ROX	Reserved field.
5	ROX	Reserved field.
6	ROX	Reserved field.
7	ROX	Reserved field.
8	ROX	Reserved field.
9:11	ROX	NULL_MSR_SIBRC:
12	ROX	Reserved field.

Bits	SCOM	Field Mnemonic: Description
13	ROX	Reserved field.
14	ROX	NULL_MSR_WE:
15	ROX	Reserved field.
16:19	ROX	Reserved field.
20	ROX	NULL_MSR_LP:
21	ROX	Reserved field.
22:23	RO	constant = 0b00
24	ROX	Reserved field.
25	ROX	Reserved field.
26:27	RO	constant = 0b00
28	ROX	Reserved field.
29:31	ROX	Reserved field.
32:61	RWX	Reserved field.
62:63	RO	constant = 0b00

Register Name	External Interface Memory Information Register
Mnemonic	IOFPPE.PPE.PPE.PPE.MIB.MIB_XIMEM
Address	0000000006010857 (SCOM)
Description	Memory interface bolt-on (MIB) registers enable the programmable PowerPC-lite engine (PPE) to access its local memory and pervasive interconnect bus (PIB) interface. This register accesses memory information.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	MIB_XIMEM_MEM_ADDR: This field contains the byte address of the current or previous transaction in the MEM transaction buffer.
32	ROX	MIB_XIMEM_MEM_R_NW: This bit indicates the transaction type of the current or previous transaction in the MEM transaction buffer. 1 = Read. 0 = Write.
33	ROX	MIB_XIMEM_MEM_BUSY: This bit indicates if the transaction buffer is occupied with an ongoing transaction. “Busy” is cleared when the transaction is completed.
34	ROX	MIB_XIMEM_MEM_IMPRECISE_ERROR_PENDING: This bit indicates that the current or previous transaction had an imprecise error. It is cleared when it is reported back to the PPE. **Note:** The address of the erroneous transaction is copied into the SGB address latches such that the memory interface can continue to service I-fetches.
35:42	ROX	MIB_XIMEM_MEM_BYTE_ENABLE: This field contains byte enables of the current or previous transaction in the MEM transaction buffer.
43	ROX	MIB_XIMEM_MEM_LINE_MODE: This bit indicates the line mode of the current or previous transaction in the MEM transaction buffer. When set to `1', it indicates a 32-byte read request.
44:48	RO	constant = 0b00000
49:51	ROX	MIB_XIMEM_MEM_ERROR: MEM transaction buffer error code. The current or previous transaction got an error on the memory interface when this field is non-zero.
52:61	RO	constant = 0b0000000000

Bits	SCOM	Field Mnemonic: Description
62	ROX	MIB_XIMEM_MEM_IFETCH_PENDING: When set to '1', this bit indicates that an instruction fetch is pending on the MEM interface.
63	ROX	MIB_XIMEM_MEM_DATAOP_PENDING: When set to '1', this bit indicates that a data transaction is pending on the MEM interface.

Register Name	**External Interface Store Gather Buffer Information Register**
Mnemonic	IOFPPE.PPE.PPE.PPE.MIB.MIB_XISGB
Address	0000000006010858 (SCOM)
Description	This register contains store gather buffer (SGB) information.

Bits	SCOM	Field Mnemonic: Description
0:31	ROX	MIB_XISGB_STORE_ADDRESS: This field contains either the SGB address 4-byte tag or the address of an imprecise store error that occurred when performing a previous data transaction.
32:34	RO	constant = 0b000
35	ROX	MIB_XIMEM_MEM_IMPRECISE_ERROR_PENDING: This bit indicates that the current or previous transaction had an imprecise error. It is cleared when it is reported back to the PPE. **Note:** The address of the erroneous transaction is copied into the SGB address latches such that the memory interface can continue to service I-fetches.
36:39	ROX	MIB_XISGB_SGB_BYTE_VALID: This field contains byte valid bits within the 4-byte tag. It is cleared when the SGB contents are committed. This means that they are either flushed to memory or copied into the transaction buffer. **Note:** These bits can never be set if an MEM imprecise error is pending.
40:62	RO	constant = 0b00000000000000000000000
63	ROX	MIB_XISGB_SGB_FLUSH_PENDING: When set to '1'. this bit indicates that a store gather buffer flush to memory is pending on the MEM interface. This can only happen if MEM_BUSY in the MEM transaction buffer is '0'.

Register Name	**External Interface Instruction Cache Information Register**
Mnemonic	IOFPPE.PPE.PPE.PPE.MIB.MIB_XIICAC
Address	0000000006010859 (SCOM)
Description	This register contains instruction cache information.

Bits	SCOM	Field Mnemonic: Description
0:26	ROX	Reserved field.
27:31	RO	constant = 0b00000
32	ROX	Reserved field.
33	RO	constant = 0b0
34	ROX	Reserved field.
35	ROX	MIB_XIMEM_MEM_IFETCH_PENDING: When set to '1', this bit indicates that an instruction fetch is pending on the MEM interface.
36:39	ROX	Reserved field.
40:43	ROX	Reserved field.
44	RO	constant = 0b0

Bits	SCOM	Field Mnemonic: Description
45	ROX	Reserved field.
46	ROX	Reserved field.
47	ROX	Reserved field.
48:63	RO	constant = 0b0000000000000000

Register Name	PPE Miscellaneous Control Register
Mnemonic	IOFPPE.SCOM_PPE_CNTL
Address	0000000006010860 (SCOM)
Description	This register contains miscellaneous PPE controls.

Bits	SCOM	Field Mnemonic: Description
0	RW	SCOM_PPE_IORESET: This bit resets the I/O-specific logic in the PPE macro. (This does not actually reset the PPE or ARB logic.)
1	RW	SCOM_PPE_PDWN: This bit powers down I/O-specific logic in the PPE macro. (This does not actually reset the PPE or ARB logic.)
2	RW	SCOM_PPE_INTERRUPT: This bit manually forces an external interrupt in the PPE.
3	RW	SCOM_PPE_ARB_ECC_INJECT_ERR: This bit forces an ECC error in the memory arbiter.
4:15	RW	SCOM_PPE_SPARES: This field contains PPE miscellaneous control spares.
16:31	RO	constant = 0b0000000000000000

Register Name	PPE Work Register 1
Mnemonic	IOFPPE.SCOM_PPE_WORK_REG1
Address	0000000006010861 (SCOM)
Description	This is the first PPE Work Register.

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	SCOM_PPE_WORK1: PPE Work Register field 1.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	PPE Work Register 2
Mnemonic	IOFPPE.SCOM_PPE_WORK_REG2
Address	0000000006010862 (SCOM)
Description	This is the second PPE Work Register.

Bits	SCOM	Field Mnemonic: Description
0:31	RWX	SCOM_PPE_WORK2: PPE Work Register field 2.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	PPE Flag Register
Mnemonic	IOFPPE.SCOM_PPE_FLAGS
Address	0000000006010863 (SCOM) 0000000006010864 (SCOM1) 0000000006010865 (SCOM2)
Description	This register contains the PPE flags.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:15	RWX	WOX_OR	WOX_CLEAR	SCOM_PPE_FLAGS_FIELD: PPE flags register field.
16:31	RO	RO	RO	constant = 0b0000000000000000

Register Name	Pervasive FIR Register
Mnemonic	IOF1.BUSCTL.SCOM.FIR_REG
Address	0000000006011000 (SCOM) 0000000006011001 (SCOM1) 0000000006011002 (SCOM2)
Description	This is the local Fault Isolation Register (FIR) for the chip pervasive logic.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	FIR_RX_INVALID_STATE_OR_PARITY_ERROR: This bit indicates that a receive state machine parity error or mode register parity error occurred.
1	RWX	WOX_AND	WOX_OR	FIR_TX_INVALID_STATE_OR_PARITY_ERROR: This bit indicates that a transmit state machine parity error or mode register parity error occurred.
2	RWX	WOX_AND	WOX_OR	FIR_GCR_HANG_ERROR: This bit indicates that the per-bus GCR ring hang detector error occurred.
3:7	RWX	WOX_AND	WOX_OR	RESERVED3_7: Reserved.
8	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_TRAINING_ERROR: This bit indicates that an initialization training error occurred on bus 0.
9	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_SPARE_DEPLOYED: This bit indicates that a spare lane was deployed to repair another lane on bus 0.
10	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_MAX_SPARES_EXCEEDED: This bit indicates that the maximum number of spare lanes was exceeded on bus 0. The bus is no longer capable of transferring data.
11	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_RECAL_OR_DYN_REPAIR_ERROR: This bit indicates that a bus recalibration or dynamic repair error occurred on bus 0.
12	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_TOO_MANY_BUS_ERRORS: This bit indicates that a bus experienced too many random lane errors on bus 0.
13:15	RWX	WOX_AND	WOX_OR	RESERVED13_15: Reserved.
16	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_TRAINING_ERROR: This bit indicates that an initialization training error occurred on bus 1.
17	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_SPARE_DEPLOYED: This bit indicates that a spare lane was deployed to repair another lane on bus 1.
18	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_MAX_SPARES_EXCEEDED: This bit indicates that the maximum number of spare lanes was exceeded on bus 1. The bus is no longer capable of transferring data.
19	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_RECAL_OR_DYN_REPAIR_ERROR: This bit indicates that a bus recalibration or dynamic repair error occurred on bus 1.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
20	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_TOO_MANY_BUS_ERRORS: This bit indicates that a bus experienced too many random lane errors on bus 1.
21:23	RWX	WOX_AND	WOX_OR	RESERVED21_23: Reserved.
24	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_TRAINING_ERROR: This bit indicates that an initialization training error occurred on bus 2.
25	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_SPARE_DEPLOYED: This bit indicates that a spare lane was deployed to repair another lane on bus 2.
26	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_MAX_SPARES_EXCEEDED: This bit indicates that the maximum number of spare lanes has been exceeded on bus 2. The bus is no longer capable of transferring data.
27	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_RECAL_OR_DYN_REPAIR_ERROR: This bit indicates that a bus recalibration or dynamic repair error occurred on bus 2.
28	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_TOO_MANY_BUS_ERRORS:This bit indicates that a bus experienced too many random lane errors on bus 2.
29:31	RWX	WOX_AND	WOX_OR	RESERVED29_31: Reserved.
32	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_TRAINING_ERROR: This bit indicates that an initialization training error occurred on bus 3.
33	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_SPARE_DEPLOYED: This bit indicates that a spare lane was deployed to repair another lane on bus 3.
34	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_MAX_SPARES_EXCEEDED: This bit indicates that the maximum number of spare lanes was exceeded on bus 3. The bus is no longer capable of transferring data.
35	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_RECAL_OR_DYN_REPAIR_ERROR: This bit indicates that a bus recalibration or dynamic repair error occurred on bus 3.
36	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_TOO_MANY_BUS_ERRORS: This bit indicates that a bus experienced too many random lane errors on bus 3.
37:39	RWX	WOX_AND	WOX_OR	RESERVED37_39: Reserved.
40	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_TRAINING_ERROR: This bit indicates that an initialization training error occurred on bus 4.
41	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_SPARE_DEPLOYED: This bit indicates that a spare lane was deployed to repair another lane on bus 4.
42	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_MAX_SPARES_EXCEEDED: This bit indicates that the maximum number of spare lanes was exceeded on bus 4. The bus is no longer capable of transferring data.
43	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_RECAL_OR_DYN_REPAIR_ERROR: This bit indicates that a bus recalibration or dynamic repair error has occurred on bus 4.
44	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_TOO_MANY_BUS_ERRORS: This bit indicates that a bus experienced too many random lane errors on bus 4.
45:47	RWX	WOX_AND	WOX_OR	RESERVED45_47: Reserved.
48	RWX	WOX_AND	WOX_OR	FIR_SCOMFIR_ERROR: This bit indicates that a SCOM FSM or FIR register parity error occurred.
49	RWX	WOX_AND	WOX_OR	FIR_SCOMFIR_ERROR_CLONE: This bit indicates that a SCOM FSM or FIR register parity error occurred.
50:63	RO	RO	RO	constant = 0b00000000000000

Register Name	Pervasive FIR Mask Register
Mnemonic	IOF1.BUSCTL.SCOM.FIR_MASK_REG
Address	0000000006011003 (SCOM) 0000000006011004 (SCOM1) 0000000006011005 (SCOM2)
Description	This register provides a bit mask for the Pervasive FIR Register. (Action0,Mask) = Action Select (0,0) = Recoverable Error (0,1) = Masked

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	FIR_RX_INVALID_STATE_OR_PARITY_ERROR_MASK: This bit masks the receive state machine parity error or mode register parity error.
1	RWX	WOX_AND	WOX_OR	FIR_TX_INVALID_STATE_OR_PARITY_ERROR_MASK: This bit masks the transmit state machine parity error or mode register parity error.
2	RWX	WOX_AND	WOX_OR	FIR_GCR_HANG_ERROR_MASK: This bit masks the GCR ring hang detector error.
3:7	RWX	WOX_AND	WOX_OR	RESERVED3_7_MASK: Reserved.
8	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_TRAINING_ERROR_MASK: This bit masks the initialization training error on bus 0.
9	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_SPARE_DEPLOYED_MASK: This bit masks the spare lane has been deployed indication on bus 0.
10	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_MAX_SPARES_EXCEEDED_MASK: This bit masks the maximum number of spare lanes has been exceeded error on bus 0.
11	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_RECAL_OR_DYN_REPAIR_ERROR_MASK: This bit masks the bus recalibration or dynamic repair error on bus 0.
12	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_TOO_MANY_BUS_ERRORS_MASK: This bit masks the too many random lane errors on bus 0.
13:15	RWX	WOX_AND	WOX_OR	RESERVED13_15_MASK: Reserved.
16	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_TRAINING_ERROR_MASK: This bit masks the initialization training error on bus 1.
17	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_SPARE_DEPLOYED_MASK: This bit masks the spare lane has been deployed indication on bus 1.
18	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_MAX_SPARES_EXCEEDED_MASK: This bit masks the maximum number of spare lanes has been exceeded error on bus 1.
19	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_RECAL_OR_DYN_REPAIR_ERROR_MASK: This bit masks the bus recalibration or dynamic repair error on bus 1.
20	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_TOO_MANY_BUS_ERRORS_MASK: This bit masks the too many random lane errors on bus 1.
21:23	RWX	WOX_AND	WOX_OR	RESERVED21_23_MASK: Reserved.
24	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_TRAINING_ERROR_MASK: This bit masks the initialization training error on bus 2.
25	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_SPARE_DEPLOYED_MASK: This bit masks the spare lane has been deployed indication on bus 2.
26	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_MAX_SPARES_EXCEEDED_MASK: This bit masks the maximum number of spare lanes has been exceeded error on bus 2.
27	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_RECAL_OR_DYN_REPAIR_ERROR_MASK: This bit masks the bus recalibration or dynamic repair error on bus 2.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
28	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_TOO_MANY_BUS_ERRORS_MASK: This bit masks the too many random lane errors on bus 2.
29:31	RWX	WOX_AND	WOX_OR	RESERVED29_31_MASK: Reserved.
32	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_TRAINING_ERROR_MASK: This bit masks the initialization training error on bus 3.
33	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_SPARE_DEPLOYED_MASK: This bit masks the spare lane has been deployed indication on bus 3.
34	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_MAX_SPARES_EXCEEDED_MASK: This bit masks the maximum number of spare lanes has been exceeded error on bus 3.
35	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_RECAL_OR_DYN_REPAIR_ERROR_MASK: This bit masks the bus recalibration or dynamic repair error on bus 3.
36	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_TOO_MANY_BUS_ERRORS_MASK: This bit masks the too many random lane errors on bus 3.
37:39	RWX	WOX_AND	WOX_OR	RESERVED37_39_MASK: Reserved.
40	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_TRAINING_ERROR_MASK: This bit masks the initialization training error on bus 4.
41	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_SPARE_DEPLOYED_MASK: This bit masks the spare lane has been deployed indication on bus 4.
42	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_MAX_SPARES_EXCEEDED_MASK: This bit masks the maximum number of spare lanes has been exceeded error on bus 4.
43	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_RECAL_OR_DYN_REPAIR_ERROR_MASK: This bit masks the bus recalibration or dynamic repair error on bus 4.
44	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_TOO_MANY_BUS_ERRORS_MASK: This bit masks the too many random lane errors on bus 4.
45:47	RWX	WOX_AND	WOX_OR	RESERVED45_47_MASK: Reserved.
48	RWX	WOX_AND	WOX_OR	INTERNAL_SCOM_ERROR_MASK: This bit is the internal SCOM error mask.
49	RWX	WOX_AND	WOX_OR	INTERNAL_SCOM_ERROR_MASK_CLONE: This bit is the internal SCOM error mask clone.
50:63	RO	RO	RO	constant = 0b00000000000000

Register Name	Fault Isolation Action0 Register
Mnemonic	IOF1.BUSCTL.SCOM.FIR_ACTION0_REG
Address	0000000006011006 (SCOM)
Description	This is the Fault Isolation Action0 Register.

Bits	SCOM	Field Mnemonic: Description
0:49	RW	FIR_ACTION0: Action 0 for FIR(0:49).
50:63	RO	constant = 0b00000000000000

Register Name	Fault Isolation Action1 Register
Mnemonic	IOF1.BUSCTL.SCOM.FIR_ACTION1_REG
Address	0000000006011007 (SCOM)
Description	This is the Fault Isolation Action1 Register.

Bits	SCOM	Field Mnemonic: Description
0:49	RW	FIR_ACTION1: Action 1 for FIR(0:49).
50:63	RO	constant = 0b00000000000000

Register Name	FIR WOF Register
Mnemonic	IOF1.BUSCTL.SCOM.FIR_WOF_REG
Address	0000000006011008 (SCOM)
Description	This who's on first register indicates which error occurred first.

Bits	SCOM	Field Mnemonic: Description
0:49	RWX_WCLRREG	Reserved field.
50:63	RO	constant = 0b00000000000000

Register Name	Normal SCOM Mode Register
Mnemonic	IOF1.BUSCTL.SCOM.SCOM_MODE_PB
Address	0000000006011020 (SCOM)
Description	This is the normal SCOM mode register.

Bits	SCOM	Field Mnemonic: Description
0	RWX	GCR_TEST_MODE: This bit puts the register logic into GCR test mode, which allows all read/write registers to be read and written by the diagnostic code to verify all register accesses. This mode gates off both logic inputs to the registers and the outputs from the logic. The outputs are gated to their scan flush value.
1	RWX	ENABLE_GCR_OFL_BUFF: This bit enables the second GCR overflow buffer. One buffer is used by default.
2	RWX	IORESET_HARD_BUS0: This bit enables an I/O hard reset per-bus and a GCR reset.
3	RWX	MMIO_PG_REG_ACCESS: MMIO PG register access is blocked by default. Setting this bit high grants MMIO access to the PG registers.
4:7	RWX	SCOM_MODE_PB_SPARES1: This field contains SCOM mode register spares.
8:10	RWX	GCR_HANG_DET_SEL: This field is used to select the GCR hang detect threshold.
11	ROX	GCR_BUFFER_ENABLED_RO_SIGNAL: This flag indicates that the extra GCR buffer is active. If the SCOM GCR enable buffer is off, it means that the hang threshold was reached.
12	RWX	GCR_HANG_ERROR_MASK: This bit is a mask for the GCR hang error when the second buffer is enabled.
13	RWX	GCR_HANG_ERROR_INJ: This bit is an inject for the GCR hang error.
14	RWX	PPE_GCR_MODE: This bit puts the register logic into GCR test mode, which allows all read/write registers to be read and written by the diagnostic code to verify all register accesses. This mode gates off both logic inputs to the registers as well as the outputs from the logic. The outputs are gated to their scan flush value.
15:22	RWX	CHAN_FAIL_MASK: This field is a channel fail mask.
23:30	RWX	SCOM_MODE_PB_SPARES2: This field contains SCOM mode register spares.

Bits	SCOM	Field Mnemonic: Description
31:63	RO	constant = 0b000000000000000000000000000000000

Register Name	Pervasive FIR Register
Mnemonic	IOF2.BUSCTL.SCOM.FIR_REG
Address	0000000006011400 (SCOM) 0000000006011401 (SCOM1) 0000000006011402 (SCOM2)
Description	This is the local Fault Isolation Register (FIR) for the chip pervasive logic.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	FIR_RX_INVALID_STATE_OR_PARITY_ERROR: This bit indicates that a receive state machine parity error or mode register parity error occurred.
1	RWX	WOX_AND	WOX_OR	FIR_TX_INVALID_STATE_OR_PARITY_ERROR: This bit indicates that a transmit state machine parity error or mode register parity error occurred.
2	RWX	WOX_AND	WOX_OR	FIR_GCR_HANG_ERROR: This bit indicates that the per-bus GCR ring hang detector error occurred.
3:7	RWX	WOX_AND	WOX_OR	RESERVED3_7: Reserved.
8	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_TRAINING_ERROR: This bit indicates that an initialization training error occurred on bus 0.
9	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_SPARE_DEPLOYED: This bit indicates that a spare lane was deployed to repair another lane on bus 0.
10	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_MAX_SPARES_EXCEEDED: This bit indicates that the maximum number of spare lanes was exceeded on bus 0. The bus is no longer capable of transferring data.
11	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_RECAL_OR_DYN_REPAIR_ERROR: This bit indicates that a bus recalibration or dynamic repair error occurred on bus 0.
12	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_TOO_MANY_BUS_ERRORS: This bit indicates that a bus experienced too many random lane errors on bus 0.
13:15	RWX	WOX_AND	WOX_OR	RESERVED13_15: Reserved.
16	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_TRAINING_ERROR: This bit indicates that an initialization training error occurred on bus 1.
17	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_SPARE_DEPLOYED: This bit indicates that a spare lane was deployed to repair another lane on bus 1.
18	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_MAX_SPARES_EXCEEDED: This bit indicates that the maximum number of spare lanes was exceeded on bus 1. The bus is no longer capable of transferring data.
19	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_RECAL_OR_DYN_REPAIR_ERROR: This bit indicates that a bus recalibration or dynamic repair error occurred on bus 1.
20	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_TOO_MANY_BUS_ERRORS: This bit indicates that a bus experienced too many random lane errors on bus 1.
21:23	RWX	WOX_AND	WOX_OR	RESERVED21_23: Reserved.
24	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_TRAINING_ERROR: This bit indicates that an initialization training error occurred on bus 2.
25	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_SPARE_DEPLOYED: This bit indicates that a spare lane was deployed to repair another lane on bus 2.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
26	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_MAX_SPARES_EXCEEDED: This bit indicates that the maximum number of spare lanes has been exceeded on bus 2. The bus is no longer capable of transferring data.
27	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_RECAL_OR_DYN_REPAIR_ERROR: This bit indicates that a bus recalibration or dynamic repair error occurred on bus 2.
28	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_TOO_MANY_BUS_ERRORS:This bit indicates that a bus experienced too many random lane errors on bus 2.
29:31	RWX	WOX_AND	WOX_OR	RESERVED29_31: Reserved.
32	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_TRAINING_ERROR: This bit indicates that an initialization training error occurred on bus 3.
33	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_SPARE_DEPLOYED: This bit indicates that a spare lane was deployed to repair another lane on bus 3.
34	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_MAX_SPARES_EXCEEDED: This bit indicates that the maximum number of spare lanes was exceeded on bus 3. The bus is no longer capable of transferring data.
35	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_RECAL_OR_DYN_REPAIR_ERROR: This bit indicates that a bus recalibration or dynamic repair error occurred on bus 3.
36	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_TOO_MANY_BUS_ERRORS: This bit indicates that a bus experienced too many random lane errors on bus 3.
37:39	RWX	WOX_AND	WOX_OR	RESERVED37_39: Reserved.
40	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_TRAINING_ERROR: This bit indicates that an initialization training error occurred on bus 4.
41	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_SPARE_DEPLOYED: This bit indicates that a spare lane was deployed to repair another lane on bus 4.
42	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_MAX_SPARES_EXCEEDED: This bit indicates that the maximum number of spare lanes was exceeded on bus 4. The bus is no longer capable of transferring data.
43	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_RECAL_OR_DYN_REPAIR_ERROR: This bit indicates that a bus recalibration or dynamic repair error occurred on bus 4.
44	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_TOO_MANY_BUS_ERRORS: This bit indicates that a bus experienced too many random lane errors on bus 4.
45:47	RWX	WOX_AND	WOX_OR	RESERVED45_47: Reserved
48	RWX	WOX_AND	WOX_OR	FIR_SCOMFIR_ERROR: This bit indicates that a SCOM FSM or FIR register parity error occurred.
49	RWX	WOX_AND	WOX_OR	FIR_SCOMFIR_ERROR_CLONE: This bit indicates that a SCOM FSM or FIR register parity error occurred.
50:63	RO	RO	RO	constant = 0b00000000000000

Register Name	Pervasive FIR Mask Register
Mnemonic	IOF2.BUSCTL.SCOM.FIR_MASK_REG
Address	0000000006011403 (SCOM) 0000000006011404 (SCOM1) 0000000006011405 (SCOM2)
Description	This register provides a bit mask for the Pervasive FIR Register. (Action0,Mask) = Action Select (0,0) = Recoverable Error (0,1) = Masked

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	FIR_RX_INVALID_STATE_OR_PARITY_ERROR_MASK: This bit masks the receive state machine parity error or mode register parity error.
1	RWX	WOX_AND	WOX_OR	FIR_TX_INVALID_STATE_OR_PARITY_ERROR_MASK: This bit masks the transmit state machine parity error or mode register parity error.
2	RWX	WOX_AND	WOX_OR	FIR_GCR_HANG_ERROR_MASK: This bit masks the GCR ring hang detector error.
3:7	RWX	WOX_AND	WOX_OR	RESERVED3_7_MASK: Reserved.
8	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_TRAINING_ERROR_MASK: This bit masks the initialization training error on bus 0.
9	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_SPARE_DEPLOYED_MASK: This bit masks the spare lane has been deployed indication on bus 0.
10	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_MAX_SPARES_EXCEEDED_MASK: This bit masks the maximum number of spare lanes has been exceeded error on bus 0.
11	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_RECAL_OR_DYN_REPAIR_ERROR_MASK: This bit masks the bus recalibration or dynamic repair error on bus 0.
12	RWX	WOX_AND	WOX_OR	FIR_RX_BUS0_TOO_MANY_BUS_ERRORS_MASK: This bit masks the too many random lane errors on bus 0.
13:15	RWX	WOX_AND	WOX_OR	RESERVED13_15_MASK: Reserved.
16	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_TRAINING_ERROR_MASK: This bit masks the initialization training error on bus 1.
17	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_SPARE_DEPLOYED_MASK: This bit masks the spare lane has been deployed indication on bus 1.
18	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_MAX_SPARES_EXCEEDED_MASK: This bit masks the maximum number of spare lanes has been exceeded error on bus 1.
19	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_RECAL_OR_DYN_REPAIR_ERROR_MASK: This bit masks the bus recalibration or dynamic repair error on bus 1.
20	RWX	WOX_AND	WOX_OR	FIR_RX_BUS1_TOO_MANY_BUS_ERRORS_MASK: This bit masks the too many random lane errors on bus 1.
21:23	RWX	WOX_AND	WOX_OR	RESERVED21_23_MASK: Reserved.
24	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_TRAINING_ERROR_MASK: This bit masks the initialization training error on bus 2.
25	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_SPARE_DEPLOYED_MASK: This bit masks the spare lane has been deployed indication on bus 2.
26	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_MAX_SPARES_EXCEEDED_MASK: This bit masks the maximum number of spare lanes has been exceeded error on bus 2.
27	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_RECAL_OR_DYN_REPAIR_ERROR_MASK: This bit masks the bus recalibration or dynamic repair error on bus 2.
28	RWX	WOX_AND	WOX_OR	FIR_RX_BUS2_TOO_MANY_BUS_ERRORS_MASK: This bit masks the too many random lane errors on bus 2.
29:31	RWX	WOX_AND	WOX_OR	RESERVED29_31_MASK: Reserved.
32	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_TRAINING_ERROR_MASK: This bit masks the initialization training error on bus 3.
33	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_SPARE_DEPLOYED_MASK: This bit masks the spare lane has been deployed indication on bus 3.
34	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_MAX_SPARES_EXCEEDED_MASK: This bit masks the maximum number of spare lanes has been exceeded error on bus 3.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
35	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_RECAL_OR_DYN_REPAIR_ERROR_MASK: This bit masks the bus recalibration or dynamic repair error on bus 3.
36	RWX	WOX_AND	WOX_OR	FIR_RX_BUS3_TOO_MANY_BUS_ERRORS_MASK: This bit masks the too many random lane errors on bus 3.
37:39	RWX	WOX_AND	WOX_OR	RESERVED37_39_MASK: Reserved.
40	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_TRAINING_ERROR_MASK: This bit masks the initialization training error on bus 4.
41	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_SPARE_DEPLOYED_MASK: This bit masks the spare lane has been deployed indication on bus 4.
42	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_MAX_SPARES_EXCEEDED_MASK: This bit masks the maximum number of spare lanes has been exceeded error on bus 4.
43	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_RECAL_OR_DYN_REPAIR_ERROR_MASK: This bit masks the bus recalibration or dynamic repair error on bus 4.
44	RWX	WOX_AND	WOX_OR	FIR_RX_BUS4_TOO_MANY_BUS_ERRORS_MASK: This bit masks the too many random lane errors on bus 4.
45:47	RWX	WOX_AND	WOX_OR	RESERVED45_47_MASK: Reserved.
48	RWX	WOX_AND	WOX_OR	INTERNAL_SCOM_ERROR_MASK: This bit is the internal SCOM error mask.
49	RWX	WOX_AND	WOX_OR	INTERNAL_SCOM_ERROR_MASK_CLONE: This bit is the internal SCOM error mask clone.
50:63	RO	RO	RO	constant = 0b00000000000000

Register Name	Fault Isolation Action0 Register
Mnemonic	IOF2.BUSCTL.SCOM.FIR_ACTION0_REG
Address	0000000006011406 (SCOM)
Description	This is the Fault Isolation Action0 Register.

Bits	SCOM	Field Mnemonic: Description
0:49	RW	FIR_ACTION0: Action 0 for FIR(0:49).
50:63	RO	constant = 0b00000000000000

Register Name	Fault Isolation Action1 Register
Mnemonic	IOF2.BUSCTL.SCOM.FIR_ACTION1_REG
Address	0000000006011407 (SCOM)
Description	This is the Fault Isolation Action1 Register.

Bits	SCOM	Field Mnemonic: Description
0:49	RW	FIR_ACTION1: Action 1 for FIR(0:49).
50:63	RO	constant = 0b00000000000000

Register Name	FIR WOF Register
Mnemonic	IOF2.BUSCTL.SCOM.FIR_WOF_REG
Address	0000000006011408 (SCOM)
Description	This who's on first register indicates which error occurred first.

Bits	SCOM	Field Mnemonic: Description
0:49	RWX_WCLRREG	Reserved field.
50:63	RO	constant = 0b00000000000000

Register Name	Normal SCOM Mode Register
Mnemonic	IOF2.BUSCTL.SCOM.SCOM_MODE_PB
Address	0000000006011420 (SCOM)
Description	This is the normal SCOM mode register.

Bits	SCOM	Field Mnemonic: Description
0	RWX	GCR_TEST_MODE: This bit puts the register logic into GCR test mode, which allows all read/write registers to be read and written by the diagnostic code to verify all register accesses. This mode gates off both logic inputs to the registers and the outputs from the logic. The outputs are gated to their scan flush value.
1	RWX	ENABLE_GCR_OFL_BUFF: This bit enables the second GCR overflow buffer. One buffer is used by default.
2	RWX	IORESET_HARD_BUS0: This bit enables an I/O hard reset per-bus and a GCR reset.
3	RWX	MMIO_PG_REG_ACCESS: MMIO PG register access is blocked by default. Setting this bit high grants MMIO access to the PG registers.
4:7	RWX	SCOM_MODE_PB_SPARES1: This field contains SCOM mode register spares.
8:10	RWX	GCR_HANG_DET_SEL: This field is used to select the GCR hang detect threshold.
11	ROX	GCR_BUFFER_ENABLED_RO_SIGNAL: This flag indicates that the extra GCR buffer is active. If the SCOM GCR enable buffer is off, it means that the hang threshold was reached.
12	RWX	GCR_HANG_ERROR_MASK: This bit is a mask for the GCR hang error when the second buffer is enabled.
13	RWX	GCR_HANG_ERROR_INJ: This bit is an inject for the GCR hang error.
14	RWX	PPE_GCR_MODE: This bit puts the register logic into GCR test mode, which allows all read/write registers to be read and written by the diagnostic code to verify all register accesses. This mode gates off both logic inputs to the registers as well as the outputs from the logic. The outputs are gated to their scan flush value.
15:22	RWX	CHAN_FAIL_MASK: This field is a channel fail mask.
23:30	RWX	SCOM_MODE_PB_SPARES2: This field contains SCOM mode register spares.
31:63	RO	constant = 0b000000000000000000000000000000000

Register Name	ELL FIR Register
Mnemonic	PB.IOE.LL0.IOEL_FIR_REG
Address	0000000006011800 (SCOM) 0000000006011801 (SCOM1) 0000000006011802 (SCOM2)
Description	This is the ELL Fault Isolation Register (FIR).

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	FIR_LINK0_TRAINED: Link 0 trained.
1	RWX	WOX_AND	WOX_OR	FIR_LINK1_TRAINED: Link 1 trained.

18:39	RWX	WOX_AND	WOX_OR	RESERVED.
40	RWX	WOX_AND	WOX_OR	FIR_LINK0_TCOMPLETE_BAD: Link 0 complete bad.
41	RWX	WOX_AND	WOX_OR	FIR_LINK1_TCOMPLETE_BAD: Link 1 complete bad.
42:43	RWX	WOX_AND	WOX_OR	RESERVED.
44	RWX	WOX_AND	WOX_OR	FIR_LINK0_SPARE_DONE: Link 0 spare done.
45	RWX	WOX_AND	WOX_OR	FIR_LINK1_SPARE_DONE: Link 1 spare done.
46	RWX	WOX_AND	WOX_OR	FIR_LINK0_TOO_MANY_CRC_ERRORS: Link 0 too many CRC errors.
47	RWX	WOX_AND	WOX_OR	FIR_LINK1_TOO_MANY_CRC_ERRORS: Link 1 too many CRC errors.
48:50	RWX	WOX_AND	WOX_OR	RESERVED.
51	RWX	WOX_AND	WOX_OR	FIR_PSAVE_INVALID_STATE: Psave invalid state.
52	RWX	WOX_AND	WOX_OR	FIR_LINK0_CORRECTABLE_ARRAY_ERROR: Link 0 correctable array error.
53	RWX	WOX_AND	WOX_OR	FIR_LINK1_CORRECTABLE_ARRAY_ERROR: Link 1 correctable array error.
54	RWX	WOX_AND	WOX_OR	FIR_LINK0_UNCORRECTABLE_ARRAY_ERROR: Link 0 uncorrectable array error.
55	RWX	WOX_AND	WOX_OR	FIR_LINK1_UNCORRECTABLE_ARRAY_ERROR: Link 1 uncorrectable array error.
56	RWX	WOX_AND	WOX_OR	FIR_LINK0_TRAINING_FAILED: Link 0 training failed.
57	RWX	WOX_AND	WOX_OR	FIR_LINK1_TRAINING_FAILED: Link 1 training failed.
58	RWX	WOX_AND	WOX_OR	FIR_LINK0_UNRECOVERABLE_ERROR: Link 0 unrecoverable error.
59	RWX	WOX_AND	WOX_OR	FIR_LINK1_UNRECOVERABLE_ERROR: Link 1 unrecoverable error.
60	RWX	WOX_AND	WOX_OR	FIR_LINK0_INTERNAL_ERROR: Link 0 internal error.
61	RWX	WOX_AND	WOX_OR	FIR_LINK1_INTERNAL_ERROR: Link 1 internal error.
62	RWX	WOX_AND	WOX_OR	FIR_SCOM_ERR_DUP: FIR SCOM error dup.
63	RWX	WOX_AND	WOX_OR	FIR_SCOM_ERR: FIR SCOM error.

Register Name	ELL FIR Mask Register
Mnemonic	PB.IOE.LL0.IOEL_FIR_MASK_REG
Address	0000000006011803 (SCOM) 0000000006011804 (SCOM1) 0000000006011805 (SCOM2)
Description	This register provides a bit mask for the ELL FIR Register.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	FIR_LINK0_TRAINED_MASK: Link 0 trained mask.
1	RWX	WOX_AND	WOX_OR	FIR_LINK1_TRAINED_MASK: Link 1 trained mask.
2:3	RWX	WOX_AND	WOX_OR	RESERVED.
4	RWX	WOX_AND	WOX_OR	FIR_LINK0_REPLAY_THRESHOLD_MASK: Link 0 replay threshold mask.
5	RWX	WOX_AND	WOX_OR	FIR_LINK1_REPLAY_THRESHOLD_MASK: Link 1 replay threshold mask.
6	RWX	WOX_AND	WOX_OR	FIR_LINK0_CRC_ERROR_MASK: Link 0 CRC error mask.
7	RWX	WOX_AND	WOX_OR	FIR_LINK1_CRC_ERROR_MASK: Link 1 CRC error mask.
8	RWX	WOX_AND	WOX_OR	FIR_LINK0_NAK_RECEIVED_MASK: Link 0 NAK received mask.
9	RWX	WOX_AND	WOX_OR	FIR_LINK1_NAK_RECEIVED_MASK: Link 1 NAK received mask.
10	RWX	WOX_AND	WOX_OR	FIR_LINK0_REPLAY_BUFFER_FULL_MASK: Link 0 replay buffer full mask.
11	RWX	WOX_AND	WOX_OR	FIR_LINK1_REPLAY_BUFFER_FULL_MASK: Link 1 replay buffer full mask.
12	RWX	WOX_AND	WOX_OR	FIR_LINK0_SL_ECC_THRESHOLD_MASK: Link 0 SL ECC threshold mask.
13	RWX	WOX_AND	WOX_OR	FIR_LINK1_SL_ECC_THRESHOLD_MASK: Link 1 SL ECC threshold mask.
14	RWX	WOX_AND	WOX_OR	FIR_LINK0_SL_ECC_CORRECTABLE_MASK: Link 0 SL ECC correctable mask.
15	RWX	WOX_AND	WOX_OR	FIR_LINK1_SL_ECC_CORRECTABLE_MASK: Link 1 SL ECC correctable mask.
16	RWX	WOX_AND	WOX_OR	FIR_LINK0_SL_ECC_UE_MASK: Link 0 SL ECC UE mask.
17	RWX	WOX_AND	WOX_OR	FIR_LINK1_SL_ECC_UE_MASK: Link 1 SL ECC UE mask.
18:39	RWX	WOX_AND	WOX_OR	RESERVED.
40	RWX	WOX_AND	WOX_OR	FIR_LINK0_TCOMPLETE_BAD_MASK: Link 0 complete bad mask.
41	RWX	WOX_AND	WOX_OR	FIR_LINK1_TCOMPLETE_BAD_MASK: Link 1 complete bad mask.
42:43	RWX	WOX_AND	WOX_OR	RESERVED.
44	RWX	WOX_AND	WOX_OR	FIR_LINK0_SPARE_DONE_MASK: Link 0 spare done mask.
45	RWX	WOX_AND	WOX_OR	FIR_LINK1_SPARE_DONE_MASK: Link 1 spare done mask.
46	RWX	WOX_AND	WOX_OR	FIR_LINK0_TOO_MANY_CRC_ERRORS_MASK: Link 0 too many CRC errors mask.
47	RWX	WOX_AND	WOX_OR	FIR_LINK1_TOO_MANY_CRC_ERRORS_MASK: Link 1 too many CRC errors mask.
48:50	RWX	WOX_AND	WOX_OR	RESERVED.
51	RWX	WOX_AND	WOX_OR	FIR_PSAVE_INVALID_STATE_MASK: Psave invalid state mask.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
52	RWX	WOX_AND	WOX_OR	FIR_LINK0_CORRECTABLE_ARRAY_ERROR_MASK: Link 0 correctable array error mask.
53	RWX	WOX_AND	WOX_OR	FIR_LINK1_CORRECTABLE_ARRAY_ERROR_MASK: Link 1 correctable array error mask.
54	RWX	WOX_AND	WOX_OR	FIR_LINK0_UNCORRECTABLE_ARRAY_ERROR_MASK: Link 0 uncorrectable array error mask.
55	RWX	WOX_AND	WOX_OR	FIR_LINK1_UNCORRECTABLE_ARRAY_ERROR_MASK: Link 1 uncorrectable array error mask.
56	RWX	WOX_AND	WOX_OR	FIR_LINK0_TRAINING_FAILED_MASK: Link 0 training failed mask.
57	RWX	WOX_AND	WOX_OR	FIR_LINK1_TRAINING_FAILED_MASK: Link 1 training failed mask.
58	RWX	WOX_AND	WOX_OR	FIR_LINK0_UNRECOVERABLE_ERROR_MASK: Link 0 unrecoverable error mask.
59	RWX	WOX_AND	WOX_OR	FIR_LINK1_UNRECOVERABLE_ERROR_MASK: Link 1 unrecoverable error mask.
60	RWX	WOX_AND	WOX_OR	FIR_LINK0_INTERNAL_ERROR_MASK: Link 0 internal error mask.
61	RWX	WOX_AND	WOX_OR	FIR_LINK1_INTERNAL_ERROR_MASK: Link 1 internal error mask.
62	RWX	WOX_AND	WOX_OR	FIR_SCOM_ERR_DUP_MASK: FIR SCOM error dup mask.
63	RWX	WOX_AND	WOX_OR	FIR_SCOM_ERR_MASK: FIR SCOM error mask.

Register Name	**ELL FIR Action 0 Register**
Mnemonic	PB.IOE.LL0.IOEL_FIR_ACTION0_REG
Address	0000000006011806 (SCOM)
Description	This is the ELL Fault Isolation Action 0 Register.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IOEL_FIR_ACTION0: processor bus FIR MSB of action select for corresponding bit in FIR. (Action0,Action1) = Action Select. (0,0) = Checkstop. (0,1) = Recoverable error to service processor. (1,0) = Special attention to service processor. (1,1) = Invalid.

Register Name	**ELL FIR Action 1 Register**
Mnemonic	PB.IOE.LL0.IOEL_FIR_ACTION1_REG
Address	0000000006011807 (SCOM)
Description	This is the ELL Fault Isolation Action 1 Register.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IOEL_FIR_ACTION1: processor bus FIR LSB of action select for corresponding bit in FIR. (Action0,Action1) = Action Select. (0,0) = Checkstop. (0,1) = Recoverable error to service processor. (1,0) = Special attention to service processor. (1,1) = Invalid.

Register Name	FIR WOF Register
Mnemonic	PB.IOE.LL0.IOEL_FIR_WOF_REG
Address	0000000006011808 (SCOM)
Description	This who's on first register indicates which error occurred first.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	IOEL_FIR_WOF: The WOF Register locks on the first error.

Register Name	ELL Configuration Register
Mnemonic	PB.IOE.LL0.IOEL_CONFIG
Address	000000000601180A (SCOM)
Description	This register contains ELL configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_LINK_PAIR: When 1, the two links operate as a pair. When 0, only one link is used or they are independent.
1	RW	CONFIG_DISABLE_SL_ECC: When 1, disable spare lane ECC correction.
2	RW	CONFIG_CRC_LANE_ID: When 1, use lane IDs from CRC for lane sparing.
3	RW	CONFIG_EDPL_LANE_ID: When 1, use lane IDs from EDPL for lane sparing.
4	RW	CONFIG_SL_UE_CRC_ERR: When 1, UEs on the SL ECC cause the packet to be treated as a CRC error.
5	RW	CONFIG_REPORT_SL_CHKBIT_ERR: When 1, SL ECC single-bit errors on check bits are reported to the FIR.
6	RW	CONFIG_BW_SAMPLE_SIZE: When 1, use 256 packets for the sample (instead of 64).
7	RW	CONFIG_BW_WINDOW_SIZE: When 1, shorten the sample window.
8:11	RW	CONFIG_UNUSED1: Spare bits.
12:15	RW	CONFIG_PACKET_DELAY_LIMIT: This field indicates the number of cycles of delay of frame data that are required for the packet to be considered delayed or replayed. (0 is 16 cycles.)
16:19	RW	CONFIG_TDM_DELAY: This field indicates the adjustment factor of delay for entering or exiting TDM mode.
20	RW	CONFIG_AUTO_TDM_TX: When 1, use the transmit bandwidth for automatically entering TDM mode.
21	RW	CONFIG_AUTO_TDM_RX: When 1, use the receive bandwidth for automatically entering TDM mode.
22	RW	CONFIG_AUTO_TDM_AND_NOT_OR: When 1, both the bandwidth and error rate are needed. Otherwise, either the bandwidth or the error rate is needed.
23	RW	CONFIG_UNUSED2: Spare bits.
24:27	RW	CONFIG_AUTO_TDM_BW_DIFF: Bandwidth difference for auto-entry TMD mode.
28:31	RW	CONFIG_AUTO_TDM_ERROR_RATE: This field contains the error rate for the auto-entry TDM mode.
32:47	RW	CONFIG_UNUSED3: Spare bits.
48:51	RWX	CONFIG_TIMEOUT: This field contains the program timeout values, from 1 µs to 65 ms.
52:63	RWX	CONFIG_TIMER_1US: This field contains the program number of cycles in 1 µs.

Register Name	ELL Control Register
Mnemonic	PB.IOE.LL0.IOEL_CONTROL
Address	000000000601180B (SCOM)
Description	This register contains ELL control fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONTROL_UNUSED0A: Spare bits.
1	RW	LINK0_STARTUP: When 1, start initialization/training.
2:7	RW	CONTROL_UNUSED0B: Spare bits.
8:11	RWX	LINK0_ERR_INJ_COMMAND: This field contains the command to perform link error injection.
12:27	RWX	LINK0_ERR_INJ_COMMAND_LANES: This field indicates the lanes for an error-injection command.
28:31	RWX	LINK0_COMMAND: This field contains the command to perform an operation.
32	RW	CONTROL_UNUSED1A: Spare bits.
33	RW	LINK1_STARTUP: When 1, start initialization/training.
34:39	RW	CONTROL_UNUSED1B: Spare bits.
40:43	RWX	LINK1_ERR_INJ_COMMAND: This field contains the command to perform link error injection.
44:59	RWX	LINK1_ERR_INJ_COMMAND_LANES: This field indicates the lanes for an error-injection command.
60:63	RWX	LINK1_COMMAND: This field contains the command to perform an operation.

Register Name	ELL Secondary Configuration Register
Mnemonic	PB.IOE.LL0.IOEL_SEC_CONFIG
Address	000000000601180D (SCOM)
Description	This register contains additional ELL configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_ENABLE_ERR_INJ: When 1, enable error injection (LFSR runs).
1:15	RW	CONFIG_UNUSED4: Spare bits.
16:17	RW	CONFIG_SBE_ERROR_RATE: This field indicates the error-injection SBE rate.
18:23	RW	CONFIG_RAND_ERROR_RATE: This field indicates error-injection rate N (from 1 to 38). Probability is 2^{-N}.
24:47	RW	CONFIG_UNUSED5: Spare bits.
48:63	RW	CONFIG_EDPL_RATE: When 0, disable EDPL. Otherwise, this field indicates the number of packets between EDPL packets.

Register Name	ELL Latency Measurement Register
Mnemonic	PB.IOE.LL0.IOEL_LAT_MEASURE
Address	000000000601180E (SCOM)
Description	This register contains latency measurements.

Bits	SCOM	Field Mnemonic: Description
0	ROX	LINK0_ROUND_TRIP_VALID: When 1, the round-trip value is valid.
1	RO	constant = 0b0

Bits	SCOM	Field Mnemonic: Description
2:11	ROX	LINK0_ROUND_TRIP: This field indicates the round-trip time in cycles.
12	ROX	LINK1_ROUND_TRIP_VALID: When 1, the round-trip value is valid.
13	RO	constant = 0b0
14:23	ROX	LINK1_ROUND_TRIP: This field indicates the round-trip time in cycles.
24	ROX	LOCAL_LATENCY_DIFFERENCE_VALID: When 1, the local latency difference is valid.
25	ROX	LOCAL_LATENCY_LONGER_LINK: When 1, link 1 had the longer latency.
26:28	RO	constant = 0b000
29:35	ROX	LOCAL_LATENCY_DIFFERENCE: This field contains the received difference in latency between the links.
36	ROX	REMOTE_LATENCY_DIFFERENCE_VALID: When 1, the remote latency difference is valid.
37	ROX	REMOTE_LATENCY_LONGER_LINK: When 1, link 1 had the longer latency.
38:40	RO	constant = 0b000
41:47	ROX	REMOTE_LATENCY_DIFFERENCE: This field contains the transmit difference in latency between the links (as received by other side).
48	RO	constant = 0b0
49:55	RWX	LINK0_TOD_LATENCY: This field indicates the latency of TOD pulses for link 0.
56	RO	constant = 0b0
57:63	RWX	LINK1_TOD_LATENCY: This field indicates the latency of TOD pulses for link 1.

Register Name	ELL Link0 Information Register
Mnemonic	PB.IOE.LL0.IOEL_LINK0_INFO
Address	0000000006011814 (SCOM)
Description	This register contains information about link 0.

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	LINK0_MAX_TIMEOUT: This field indicates the maximum value reached by the timeout counter.
16	ROX	LINK0_FRAME_CAP_VALID: When 1, the error capture is valid.
17	ROX	LINK0_FRAME_CAP_INST: Array instance.
18	RO	constant = 0b0
19:23	ROX	LINK0_FRAME_CAP_ADDR: This field contains the array address of the captured error.
24:31	ROX	LINK0_FRAME_CAP_SYN: This field contains the syndrome of the captured error.
32	ROX	LINK0_REPLAY_CAP_VALID: When 1, the error capture is valid.
33	RO	constant = 0b0
34	ROX	LINK0_REPLAY_CAP_INST: Array instance.
35:36	RO	constant = 0b00
37:43	ROX	LINK0_REPLAY_CAP_ADDR: This field contains the array address of the captured error.
44:51	ROX	LINK0_REPLAY_CAP_SYN: This field contains the syndrome of the captured error.
52	ROX	LINK0_ACK_FIFO_CAP_VALID: When 1, the error capture is valid.
53:56	RO	constant = 0b0000
57:63	ROX	LINK0_ACK_FIFO_CAP_ADDR: This field contains the array address of the captured error.

Register Name	ELL Link1 Information Register
Mnemonic	PB.IOE.LL0.IOEL_LINK1_INFO
Address	0000000006011815 (SCOM)
Description	This register contains information about link 1.

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	LINK1_MAX_TIMEOUT: This field indicates the maximum value reached by the timeout counter.
16	ROX	LINK1_FRAME_CAP_VALID: When 1, the error capture is valid.
17	ROX	LINK1_FRAME_CAP_INST: Array instance.
18	RO	constant = 0b0
19:23	ROX	LINK1_FRAME_CAP_ADDR: This field contains the array address of the captured error.
24:31	ROX	LINK1_FRAME_CAP_SYN: This field contains the syndrome of the captured error.
32	ROX	LINK1_REPLAY_CAP_VALID: When 1, the error capture is valid.
33	RO	constant = 0b0
34	ROX	LINK1_REPLAY_CAP_INST: Array instance.
35:36	RO	constant = 0b00
37:43	ROX	LINK1_REPLAY_CAP_ADDR: This field contains the array address of the captured error.
44:51	ROX	LINK1_REPLAY_CAP_SYN: This field contains the syndrome of the captured error.
52	ROX	LINK1_ACK_FIFO_CAP_VALID: When 1, the error capture is valid.
53:56	RO	constant = 0b0000
57:63	ROX	LINK1_ACK_FIFO_CAP_ADDR: This field contains the array address of the captured error.

Register Name	ELL Link 0 Error Status Register
Mnemonic	PB.IOE.LL0.IOEL_LINK0_ERROR_STATUS
Address	0000000006011816 (SCOM)
Description	This register contains link 0 error status information.

Bits	SCOM	Field Mnemonic: Description
0	WOX	LINK0_RESET_KEEPER: Reset keeper for the Link 0 Error Status Register.
1:3	ROX	LINK0_ERROR_STATUS_CE: c_err_rpt for correctable array errors.
4:7	RO	constant = 0b0000
8:9	ROX	LINK0_ERROR_STATUS_UE: c_err_rpt for uncorrectable array errors.
10:15	RO	constant = 0b000000
16:17	ROX	LINK0_ERROR_STATUS_TRAIN: c_err_rpt for training errors.
18:23	RO	constant = 0b000000
24:34	ROX	LINK0_ERROR_STATUS_UNRECOV: c_err_rpt for unrecoverable errors.
35:43	RO	constant = 0b000000000
44:61	ROX	LINK0_ERROR_STATUS_INTERNAL: c_err_rpt for internal errors.
62:63	RO	constant = 0b00

Register Name	ELL Link 1 Error Status Register
Mnemonic	PB.IOE.LL0.IOEL_LINK1_ERROR_STATUS
Address	0000000006011817 (SCOM)
Description	This register contains link 1 error status information.

Bits	SCOM	Field Mnemonic: Description
0	WOX	LINK1_RESET_KEEPER: Reset keeper for the Link 1 Error Status Register.
1:3	ROX	LINK1_ERROR_STATUS_CE: c_err_rpt for correctable array errors.
4:7	RO	constant = 0b0000
8:9	ROX	LINK1_ERROR_STATUS_UE: c_err_rpt for uncorrectable array errors.
10:15	RO	constant = 0b000000
16:17	ROX	LINK1_ERROR_STATUS_TRAIN: c_err_rpt for training errors.
18:23	RO	constant = 0b000000
24:34	ROX	LINK1_ERROR_STATUS_UNRECOV: c_err_rpt for unrecoverable errors.
35:43	RO	constant = 0b000000000
44:61	ROX	LINK1_ERROR_STATUS_INTERNAL: c_err_rpt for internal errors.
62:63	RO	constant = 0b00

Register Name	ELL Replay Threshold Register
Mnemonic	PB.IOE.LL0.IOEL_REPLAY_THRESHOLD
Address	0000000006011818 (SCOM)
Description	This register contains replay threshold controls.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	THRESH_REPLAY_TB_SEL: Replay threshold timebase select.
4:7	RW	THRESH_REPLAY_TAP_SEL: Replay threshold tap select.
8:10	RW	THRESH_REPLAY_ENABLE: Replay threshold error enable.
11:25	RW	THRESH_REPLAY_UNUSED1: Spare bits.
26	RWX	THRESH_REPLAY_LINK0_CLEAR: Replay threshold counter clear.
27	RWX	THRESH_REPLAY_LINK1_CLEAR: Replay threshold counter clear.
28	RW	THRESH_REPLAY_DIS_TB_CLEAR: Threshold disable timebase clear.
29	RW	THRESH_REPLAY_DIS_TAP_CLEAR: Threshold disable tap clear.
30	RW	THRESH_REPLAY_DIS_TAP_STOP: Threshold disable tap stop.
31	RW	THRESH_REPLAY_UNUSED2: Spare bits.
32:47	ROX	THRESH_REPLAY_LINK0_COUNT: Replay threshold count.
48:63	ROX	THRESH_REPLAY_LINK1_COUNT: Replay threshold count.

Register Name	ELL SL ECC Threshold Register
Mnemonic	PB.IOE.LL0.IOEL_SL_ECC_THRESHOLD
Address	0000000006011819 (SCOM)
Description	This register contains SL ECC threshold controls.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	THRESH_SL_ECC_TB_SEL: SL ECC threshold timebase select.
4:7	RW	THRESH_SL_ECC_TAP_SEL: SL ECC threshold tap select.
8:9	RW	THRESH_SL_ECC_ENABLE: SL ECC threshold error enable.
10:25	RW	THRESH_SL_ECC_UNUSED1: Spare bits.
26	RWX	THRESH_SL_ECC_LINK0_CLEAR: SL ECC threshold counter clear.
27	RWX	THRESH_SL_ECC_LINK1_CLEAR: SL ECC threshold counter clear.
28	RW	THRESH_SL_ECC_DIS_TB_CLEAR: Threshold disable timebase clear.
29	RW	THRESH_SL_ECC_DIS_TAP_CLEAR: Threshold disable tap clear.
30	RW	THRESH_SL_ECC_DIS_TAP_STOP: Threshold disable tap stop.
31	RW	THRESH_SL_ECC_UNUSED2: Spare bits.
32:47	ROX	THRESH_SL_ECC_LINK0_COUNT: SL ECC Threshold count.
48:63	ROX	THRESH_SL_ECC_LINK1_COUNT: SL ECC Threshold count.

Register Name	ELL Error Injection LFSR Register
Mnemonic	PB.IOE.LL0.IOEL_ERR_INJ_LFSR
Address	000000000601181B (SCOM)
Description	This is the linear feedback shift register (LFSR) for error injection.

Bits	SCOM	Field Mnemonic: Description
0:60	RWX	ERR_INJ_LFSR: Error injection LFSR.
61:63	RO	constant = 0b000

Register Name	ELL Performance Monitor and Trace Configuration Register
Mnemonic	PB.IOE.LL0.IOEL_PERF_TRACE_CONFIG
Address	000000000601181C (SCOM)
Description	This register monitors and configures the performance counters and traces.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	CONFIG_ENABLE_PERF_0: Performance counter enable.
2:3	RW	CONFIG_ENABLE_PERF_1: Performance counter enable.
4:5	RW	CONFIG_ENABLE_PERF_2: Performance counter enable.
6:7	RW	CONFIG_ENABLE_PERF_3: Performance counter enable.
8:9	RW	CONFIG_ENABLE_PERF_4: Performance counter enable.
10:11	RW	CONFIG_ENABLE_PERF_5: Performance counter enable.

Bits	SCOM	Field Mnemonic: Description
12:13	RW	CONFIG_ENABLE_PERF_6: Performance counter enable.
14:15	RW	CONFIG_ENABLE_PERF_7: Performance counter enable.
16:17	RW	CONFIG_PERF_SIZE_0: Performance counter size.
18:19	RW	CONFIG_PERF_SIZE_1: Performance counter size.
20:21	RW	CONFIG_PERF_SIZE_2: Performance counter size.
22:23	RW	CONFIG_PERF_SIZE_3: Performance counter size.
24:25	RW	CONFIG_PERF_SIZE_4: Performance counter size.
26:27	RW	CONFIG_PERF_SIZE_5: Performance counter size.
28:29	RW	CONFIG_PERF_SIZE_6: Performance counter size.
30:31	RW	CONFIG_PERF_SIZE_7: Performance counter size.
32	RW	CONFIG_PMULET_FREEZE_MODE: PMUlet freeze mode: 0 = Freeze on full. 1 = Free run.
33	RW	CONFIG_COMMON_FREEZE_MODE: Common freeze mode: 0 = Independent per PMUlet. 1 = Any counter full freezes all.
34	RW	CONFIG_PERF_RESET_MODE: PMUlet reset mode: 0 = Reset on read. 1 = Reset on write.
35	RW	CONFIG_PERFTRACE_ENABLE: Performance trace enable. Multiplex performance trace data onto the trace bus.
36	RW	CONFIG_PERFTRACE_FIXED_WINDOW: Performance trace fixed window mode. Take a sample every 255 or 255 x 128 cycles.
37	RW	CONFIG_PERFTRACE_PRESCALE: Performance trace prescale mode, wide-angle view. Performance counts are prescaled by 128.
38:39	RW	CONFIG_PERFTRACE_MODE: Performance trace input selection.
40:51	RW	CONFIG_TRACE_CONFIG_0: Selection for trace bus bits 0:43.
52:63	RW	CONFIG_TRACE_CONFIG_1: Selection for trace bus bits 44:87.

Register Name	ELL Performance Monitor Selection Register
Mnemonic	PB.IOE.LL0.IOEL_PERF_SEL_CONFIG
Address	000000000601181D (SCOM)
Description	This register selects performance counters.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	CONFIG_PERF_SELECT_0: Selection performance counter.
8:15	RW	CONFIG_PERF_SELECT_1: Selection performance counter.
16:23	RW	CONFIG_PERF_SELECT_2: Selection performance counter.
24:31	RW	CONFIG_PERF_SELECT_3: Selection performance counter.
32:39	RW	CONFIG_PERF_SELECT_4: Selection performance counter.
40:47	RW	CONFIG_PERF_SELECT_5: Selection performance counter.
48:55	RW	CONFIG_PERF_SELECT_6: Selection performance counter.

Bits	SCOM	Field Mnemonic: Description
56:63	RW	CONFIG_PERF_SELECT_7: Selection performance counter.

Register Name	ELL Performance Monitor Counter Register 0
Mnemonic	PB.IOE.LL0.IOEL_PERF_COUNTERS_0
Address	000000000601181E (SCOM)
Description	This register contains the 16 MSb of performance monitor counters 0 – 3.

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	PERFMON_COUNTER_0: Performance counter 16 MSb.
16:31	RWX_WCLRREG	PERFMON_COUNTER_1: Performance counter 16 MSb.
32:47	RWX_WCLRREG	PERFMON_COUNTER_2: Performance counter 16 MSb.
48:63	RWX_WCLRREG	PERFMON_COUNTER_3: Performance counter 16 MSb.

Register Name	ELL Performance Monitor Counter Register 1
Mnemonic	PB.IOE.LL0.IOEL_PERF_COUNTERS_1
Address	000000000601181F (SCOM)
Description	This register contains the 16 MSb of performance monitor counters 4 – 7.

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	PERFMON_COUNTER_4: Performance counter 16 MSb.
16:31	RWX_WCLRREG	PERFMON_COUNTER_5: Performance counter 16 MSb.
32:47	RWX_WCLRREG	PERFMON_COUNTER_6: Performance counter 16 MSb.
48:63	RWX_WCLRREG	PERFMON_COUNTER_7: Performance counter 16 MSb.

Register Name	ELL Performance Monitor Counter LSB Register 0
Mnemonic	PB.IOE.LL0.IOEL_PERF_COUNT_LSB_0
Address	0000000006011820 (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	RESERVED.

Register Name	ELL Performance Monitor Counter LSB Register 1
Mnemonic	PB.IOE.LL0.IOEL_PERF_COUNT_LSB_1
Address	0000000006011821 (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	RESERVED.

Register Name	ELL Link 0 Syndrome Capture Register
Mnemonic	PB.IOE.LL0.IOEL_LINK0_SYN_CAPTURE
Address	0000000006011822 (SCOM)
Description	This register contains syndrome information for captured link 0 errors.

Bits	SCOM	Field Mnemonic: Description
0:27	RWX	LINK0_LINK_CAP_CRC_SYN: This field contains the CRC syndrome for a captured link error.
28:35	RWX	LINK0_LINK_CAP_CRC_SYN_UNUSED1: Spare bits.
36:43	RWX	LINK0_LINK_CAP_SLECC_SYN0: This field contains SL ECC syndrome 0 for a captured link error.
44:51	RWX	LINK0_LINK_CAP_SLECC_SYN1: This field contains SL ECC syndrome 1 for a captured link error.
52:54	RWX	LINK0_LINK_CAP_CRC_SYN_UNUSED2: Spare bits.
55	RWX	LINK0_LINK_CAP_VALID: This bit indicates that the captured link error is valid.
56:58	RWX	LINK0_LINK_CAP_CRC_SYN_UNUSED3: Spare bits.
59:63	RWX	LINK0_LINK_CAP_CRC_LANE: This field contains the CRC lane from the syndrome decode.

Register Name	ELL Link 1 Syndrome Capture Register
Mnemonic	PB.IOE.LL0.IOEL_LINK1_SYN_CAPTURE
Address	0000000006011823 (SCOM)
Description	This register contains syndrome information for captured link 1 errors.

Bits	SCOM	Field Mnemonic: Description
0:27	RWX	LINK1_LINK_CAP_CRC_SYN: This field contains the CRC syndrome for a captured link error.
28:35	RWX	LINK1_LINK_CAP_CRC_SYN_UNUSED1: Spare bits.
36:43	RWX	LINK1_LINK_CAP_SLECC_SYN0: This field contains SL ECC syndrome 0 for a captured link error.
44:51	RWX	LINK1_LINK_CAP_SLECC_SYN1: This field contains SL ECC syndrome 1 for a captured link error.
52:54	RWX	LINK1_LINK_CAP_CRC_SYN_UNUSED2: Spare bits.
55	RWX	LINK1_LINK_CAP_VALID: This bit indicates that the captured link error is valid.
56:58	RWX	LINK1_LINK_CAP_CRC_SYN_UNUSED3: Spare bits.
59:63	RWX	LINK1_LINK_CAP_CRC_LANE: This field contains the CRC lane from the syndrome decode.

Register Name	ELL Link 0 EDPL Status Register
Mnemonic	PB.IOE.LL0.IOEL_LINK0_EDPL_STATUS
Address	0000000006011824 (SCOM)
Description	This register contains counts of EDPL errors.

Bits	SCOM	Field Mnemonic: Description
0:3	ROX	LINK0_EDPL_ERROR_COUNT_0: Count of EDPL errors.
4:7	ROX	LINK0_EDPL_ERROR_COUNT_1: Count of EDPL errors.
8:11	ROX	LINK0_EDPL_ERROR_COUNT_2: Count of EDPL errors.

Bits	SCOM	Field Mnemonic: Description
12:15	ROX	LINK0_EDPL_ERROR_COUNT_3: Count of EDPL errors.
16:19	ROX	LINK0_EDPL_ERROR_COUNT_4: Count of EDPL errors.
20:23	ROX	LINK0_EDPL_ERROR_COUNT_5: Count of EDPL errors.
24:27	ROX	LINK0_EDPL_ERROR_COUNT_6: Count of EDPL errors.
28:31	ROX	LINK0_EDPL_ERROR_COUNT_7: Count of EDPL errors.
32:35	ROX	LINK0_EDPL_ERROR_COUNT_8: Count of EDPL errors.
36:39	ROX	LINK0_EDPL_ERROR_COUNT_9: Count of EDPL errors.
40:43	ROX	LINK0_EDPL_ERROR_COUNT_10: Count of EDPL errors.
44:47	ROX	LINK0_EDPL_ERROR_COUNT_11: Count of EDPL errors.
48:63	RO	constant = 0b0000000000000000

Register Name	ELL Link 1 EDPL Status Register
Mnemonic	PB.IOE.LL0.IOEL_LINK1_EDPL_STATUS
Address	0000000006011825 (SCOM)
Description	This register contains counts of EDPL errors.

Bits	SCOM	Field Mnemonic: Description
0:3	ROX	LINK1_EDPL_ERROR_COUNT_0: Count of EDPL errors.
4:7	ROX	LINK1_EDPL_ERROR_COUNT_1: Count of EDPL errors.
8:11	ROX	LINK1_EDPL_ERROR_COUNT_2: Count of EDPL errors.
12:15	ROX	LINK1_EDPL_ERROR_COUNT_3: Count of EDPL errors.
16:19	ROX	LINK1_EDPL_ERROR_COUNT_4: Count of EDPL errors.
20:23	ROX	LINK1_EDPL_ERROR_COUNT_5: Count of EDPL errors.
24:27	ROX	LINK1_EDPL_ERROR_COUNT_6: Count of EDPL errors.
28:31	ROX	LINK1_EDPL_ERROR_COUNT_7: Count of EDPL errors.
32:35	ROX	LINK1_EDPL_ERROR_COUNT_8: Count of EDPL errors.
36:39	ROX	LINK1_EDPL_ERROR_COUNT_9: Count of EDPL errors.
40:43	ROX	LINK1_EDPL_ERROR_COUNT_10: Count of EDPL errors.
44:47	ROX	LINK1_EDPL_ERROR_COUNT_11: Count of EDPL errors.
48:63	RO	constant = 0b0000000000000000

Register Name	ELL Link 0 Link Quality Status Register
Mnemonic	PB.IOE.LL0.IOEL_LINK0_QUALITY
Address	0000000006011826 (SCOM)
Description	This register contains transmit and receive bandwidth and error-rate measurements.

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1:11	ROX	LINK0_TX_BW: Measure of the transmit bandwidth.

Bits	SCOM	Field Mnemonic: Description
12	RO	constant = 0b0
13:23	ROX	LINK0_RX_BW: Measure of the receive bandwidth.
24	RO	constant = 0b0
25:47	ROX	LINK0_ERROR_RATE: Measure of the received error rate.
48:63	RO	constant = 0b0000000000000000

Register Name	ELL Link1 Link Quality Status Register
Mnemonic	PB.IOE.LL0.IOEL_LINK1_QUALITY
Address	0000000006011827 (SCOM)
Description	This register contains transmit and receive bandwidth and error-rate measurements.

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1:11	ROX	LINK1_TX_BW: Measure of the transmit bandwidth.
12	RO	constant = 0b0
13:23	ROX	LINK1_RX_BW: Measure of the receive bandwidth.
24	RO	constant = 0b0
25:47	ROX	LINK1_ERROR_RATE: Measure of the received error rate.
48:63	RO	constant = 0b0000000000000000

Register Name	ELL Status Register
Mnemonic	PB.IOE.LL0.IOEL_DLL_STATUS
Address	0000000006011828 (SCOM)
Description	This register contains status information.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b0000
4:7	ROX	LINK0_CURRENT_STATE: This field indicates the current state of the initialization/training state machine.
8:11	RO	constant = 0b0000
12:15	ROX	LINK0_PRIOR_STATE: This field indicates the prior state of the initialization/training state machine.
16:18	RO	constant = 0b000
19:23	ROX	LINK0_MAX_PKT_TIMER: This field contains the maximum value reached by the packet delay counter.
24:27	RO	constant = 0b0000
28:31	ROX	LINK1_CURRENT_STATE: This field indicates the current state of the initialization/training state machine.
32:35	RO	constant = 0b0000
36:39	ROX	LINK1_PRIOR_STATE: This field indicates the prior state of the initialization/training state machine.
40:42	RO	constant = 0b000
43:47	ROX	LINK1_MAX_PKT_TIMER: This field contains the maximum value reached by the packet delay counter.
48:63	RO	constant = 0b0000000000000000

Register Name	**ELL FIR Register**
Mnemonic	PB.IOE.LL1.IOEL_FIR_REG
Address	0000000006011C00 (SCOM) 0000000006011C01 (SCOM1) 0000000006011C02 (SCOM2)
Description	This is the ELL Fault Isolation Register (FIR).

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	FIR_LINK0_TRAINED: Link 0 trained.
1	RWX	WOX_AND	WOX_OR	FIR_LINK1_TRAINED: Link 1 trained.
2:3	RWX	WOX_AND	WOX_OR	RESERVED.
4	RWX	WOX_AND	WOX_OR	FIR_LINK0_REPLAY_THRESHOLD: Link 0 replay threshold.
5	RWX	WOX_AND	WOX_OR	FIR_LINK1_REPLAY_THRESHOLD: Link 1 replay threshold.
6	RWX	WOX_AND	WOX_OR	FIR_LINK0_CRC_ERROR: Link 0 CRC error.
7	RWX	WOX_AND	WOX_OR	FIR_LINK1_CRC_ERROR: Link 1 CRC error.
8	RWX	WOX_AND	WOX_OR	FIR_LINK0_NAK_RECEIVED: Link 0 NAK received.
9	RWX	WOX_AND	WOX_OR	FIR_LINK1_NAK_RECEIVED: Link 1 NAK received.
10	RWX	WOX_AND	WOX_OR	FIR_LINK0_REPLAY_BUFFER_FULL: Link 0 replay buffer full.
11	RWX	WOX_AND	WOX_OR	FIR_LINK1_REPLAY_BUFFER_FULL: Link 1 replay buffer full.
12	RWX	WOX_AND	WOX_OR	FIR_LINK0_SL_ECC_THRESHOLD: Link 0 SL ECC threshold.
13	RWX	WOX_AND	WOX_OR	FIR_LINK1_SL_ECC_THRESHOLD: Link 1 SL ECC threshold.
14	RWX	WOX_AND	WOX_OR	FIR_LINK0_SL_ECC_CORRECTABLE: Link 0 SL ECC correctable.
15	RWX	WOX_AND	WOX_OR	FIR_LINK1_SL_ECC_CORRECTABLE: Link 1 SL ECC correctable.
16	RWX	WOX_AND	WOX_OR	FIR_LINK0_SL_ECC_UE: Link 0 SL ECC UE.
17	RWX	WOX_AND	WOX_OR	FIR_LINK1_SL_ECC_UE: Link 1 SL ECC UE.
18:39	RWX	WOX_AND	WOX_OR	RESERVED.
40	RWX	WOX_AND	WOX_OR	FIR_LINK0_TCOMPLETE_BAD: Link 0 complete bad.
41	RWX	WOX_AND	WOX_OR	FIR_LINK1_TCOMPLETE_BAD: Link 1 complete bad.
42:43	RWX	WOX_AND	WOX_OR	RESERVED.
44	RWX	WOX_AND	WOX_OR	FIR_LINK0_SPARE_DONE: Link 0 spare done.
45	RWX	WOX_AND	WOX_OR	FIR_LINK1_SPARE_DONE: Link 1 spare done.
46	RWX	WOX_AND	WOX_OR	FIR_LINK0_TOO_MANY_CRC_ERRORS: Link 0 too many CRC errors.
47	RWX	WOX_AND	WOX_OR	FIR_LINK1_TOO_MANY_CRC_ERRORS: Link 1 too many CRC errors.
48:50	RWX	WOX_AND	WOX_OR	RESERVED.
51	RWX	WOX_AND	WOX_OR	FIR_PSAVE_INVALID_STATE: Psave invalid state.
52	RWX	WOX_AND	WOX_OR	FIR_LINK0_CORRECTABLE_ARRAY_ERROR: Link 0 correctable array error.
53	RWX	WOX_AND	WOX_OR	FIR_LINK1_CORRECTABLE_ARRAY_ERROR: Link 1 correctable array error.
54	RWX	WOX_AND	WOX_OR	FIR_LINK0_UNCORRECTABLE_ARRAY_ERROR: Link 0 uncorrectable array error.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
55	RWX	WOX_AND	WOX_OR	FIR_LINK1_UNCORRECTABLE_ARRAY_ERROR: Link 1 uncorrectable array error.
56	RWX	WOX_AND	WOX_OR	FIR_LINK0_TRAINING_FAILED: Link 0 training failed.
57	RWX	WOX_AND	WOX_OR	FIR_LINK1_TRAINING_FAILED: Link 1 training failed.
58	RWX	WOX_AND	WOX_OR	FIR_LINK0_UNRECOVERABLE_ERROR: Link 0 unrecoverable error.
59	RWX	WOX_AND	WOX_OR	FIR_LINK1_UNRECOVERABLE_ERROR: Link 1 unrecoverable error.
60	RWX	WOX_AND	WOX_OR	FIR_LINK0_INTERNAL_ERROR: Link 0 internal error.
61	RWX	WOX_AND	WOX_OR	FIR_LINK1_INTERNAL_ERROR: Link 1 internal error.
62	RWX	WOX_AND	WOX_OR	FIR_SCOM_ERR_DUP: FIR SCOM error dup.
63	RWX	WOX_AND	WOX_OR	FIR_SCOM_ERR: FIR SCOM error.

Register Name	ELL FIR Mask Register
Mnemonic	PB.IOE.LL1.IOEL_FIR_MASK_REG
Address	0000000006011C03 (SCOM) 0000000006011C04 (SCOM1) 0000000006011C05 (SCOM2)
Description	This register provides a bit mask for the ELL FIR Register.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	FIR_LINK0_TRAINED_MASK: Link 0 trained mask.
1	RWX	WOX_AND	WOX_OR	FIR_LINK1_TRAINED_MASK: Link 1 trained mask.
2:3	RWX	WOX_AND	WOX_OR	RESERVED.
4	RWX	WOX_AND	WOX_OR	FIR_LINK0_REPLAY_THRESHOLD_MASK: Link 0 replay threshold mask.
5	RWX	WOX_AND	WOX_OR	FIR_LINK1_REPLAY_THRESHOLD_MASK: Link 1 replay threshold mask.
6	RWX	WOX_AND	WOX_OR	FIR_LINK0_CRC_ERROR_MASK: Link 0 CRC error mask.
7	RWX	WOX_AND	WOX_OR	FIR_LINK1_CRC_ERROR_MASK: Link 1 CRC error mask.
8	RWX	WOX_AND	WOX_OR	FIR_LINK0_NAK_RECEIVED_MASK: Link 0 NAK received mask.
9	RWX	WOX_AND	WOX_OR	FIR_LINK1_NAK_RECEIVED_MASK: Link 1 NAK received mask.
10	RWX	WOX_AND	WOX_OR	FIR_LINK0_REPLAY_BUFFER_FULL_MASK: Link 0 replay buffer full mask.
11	RWX	WOX_AND	WOX_OR	FIR_LINK1_REPLAY_BUFFER_FULL_MASK: Link 1 replay buffer full mask.
12	RWX	WOX_AND	WOX_OR	FIR_LINK0_SL_ECC_THRESHOLD_MASK: Link 0 SL ECC threshold mask.
13	RWX	WOX_AND	WOX_OR	FIR_LINK1_SL_ECC_THRESHOLD_MASK: Link 1 SL ECC threshold mask.
14	RWX	WOX_AND	WOX_OR	FIR_LINK0_SL_ECC_CORRECTABLE_MASK: Link 0 SL ECC correctable mask.
15	RWX	WOX_AND	WOX_OR	FIR_LINK1_SL_ECC_CORRECTABLE_MASK: Link 1 SL ECC correctable mask.
16	RWX	WOX_AND	WOX_OR	FIR_LINK0_SL_ECC_UE_MASK: Link 0 SL ECC UE mask.
17	RWX	WOX_AND	WOX_OR	FIR_LINK1_SL_ECC_UE_MASK: Link 1 SL ECC UE mask.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
18:39	RWX	WOX_AND	WOX_OR	RESERVED.
40	RWX	WOX_AND	WOX_OR	FIR_LINK0_TCOMPLETE_BAD_MASK: Link 0 complete bad mask.
41	RWX	WOX_AND	WOX_OR	FIR_LINK1_TCOMPLETE_BAD_MASK: Link 1 complete bad mask.
42:43	RWX	WOX_AND	WOX_OR	RESERVED.
44	RWX	WOX_AND	WOX_OR	FIR_LINK0_SPARE_DONE_MASK: Link 0 spare done mask.
45	RWX	WOX_AND	WOX_OR	FIR_LINK1_SPARE_DONE_MASK: Link 1 spare done mask.
46	RWX	WOX_AND	WOX_OR	FIR_LINK0_TOO_MANY_CRC_ERRORS_MASK: Link 0 too many CRC errors mask.
47	RWX	WOX_AND	WOX_OR	FIR_LINK1_TOO_MANY_CRC_ERRORS_MASK: Link 1 too many CRC errors mask.
48:50	RWX	WOX_AND	WOX_OR	RESERVED.
51	RWX	WOX_AND	WOX_OR	FIR_PSAVE_INVALID_STATE_MASK: Psave invalid state mask.
52	RWX	WOX_AND	WOX_OR	FIR_LINK0_CORRECTABLE_ARRAY_ERROR_MASK: Link 0 correctable array error mask.
53	RWX	WOX_AND	WOX_OR	FIR_LINK1_CORRECTABLE_ARRAY_ERROR_MASK: Link 1 correctable array error mask.
54	RWX	WOX_AND	WOX_OR	FIR_LINK0_UNCORRECTABLE_ARRAY_ERROR_MASK: Link 0 uncorrectable array error mask.
55	RWX	WOX_AND	WOX_OR	FIR_LINK1_UNCORRECTABLE_ARRAY_ERROR_MASK: Link 1 uncorrectable array error mask.
56	RWX	WOX_AND	WOX_OR	FIR_LINK0_TRAINING_FAILED_MASK: Link 0 training failed mask.
57	RWX	WOX_AND	WOX_OR	FIR_LINK1_TRAINING_FAILED_MASK: Link 1 training failed mask.
58	RWX	WOX_AND	WOX_OR	FIR_LINK0_UNRECOVERABLE_ERROR_MASK: Link 0 unrecoverable error mask.
59	RWX	WOX_AND	WOX_OR	FIR_LINK1_UNRECOVERABLE_ERROR_MASK: Link 1 unrecoverable error mask.
60	RWX	WOX_AND	WOX_OR	FIR_LINK0_INTERNAL_ERROR_MASK: Link 0 internal error mask.
61	RWX	WOX_AND	WOX_OR	FIR_LINK1_INTERNAL_ERROR_MASK: Link 1 internal error mask.
62	RWX	WOX_AND	WOX_OR	FIR_SCOM_ERR_DUP_MASK: FIR SCOM error dup mask.
63	RWX	WOX_AND	WOX_OR	FIR_SCOM_ERR_MASK: FIR SCOM error mask.

Register Name	ELL FIR Action 0 Register
Mnemonic	PB.IOE.LL1.IOEL_FIR_ACTION0_REG
Address	0000000006011C06 (SCOM)
Description	This is the ELL Fault Isolation Action 0 Register.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IOEL_FIR_ACTION0: processor bus FIR MSB of action select for corresponding bit in FIR. (Action0,Action1) = Action Select. (0,0) = Checkstop. (0,1) = Recoverable error to service processor. (1,0) = Special attention to service processor. (1,1) = Invalid.

Register Name	ELL FIR Action 1 Register
Mnemonic	PB.IOE.LL1.IOEL_FIR_ACTION1_REG
Address	0000000006011C07 (SCOM)
Description	This is the ELL Fault Isolation Action0 Register.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IOEL_FIR_ACTION1: processor bus FIR LSB of action select for corresponding bit in FIR. (Action0,Action1) = Action Select. (0,0) = Checkstop. (0,1) = Recoverable error to service processor. (1,0) = Special attention to service processor. (1,1) = Invalid.

Register Name	FIR WOF Register
Mnemonic	PB.IOE.LL1.IOEL_FIR_WOF_REG
Address	0000000006011C08 (SCOM)
Description	This who's on first register indicates which error occurred first.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	IOEL_FIR_WOF: The WOF Register locks on the first error.

Register Name	ELL Configuration Register
Mnemonic	PB.IOE.LL1.IOEL_CONFIG
Address	0000000006011C0A (SCOM)
Description	This register contains ELL configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_LINK_PAIR: When 1, the two links operate as a pair. When 0, only one link is used or they are independent.
1	RW	CONFIG_DISABLE_SL_ECC: When 1, disable spare lane ECC correction.
2	RW	CONFIG_CRC_LANE_ID: When 1, use lane IDs from CRC for lane sparing.
3	RW	CONFIG_EDPL_LANE_ID: When 1, use lane IDs from EDPL for lane sparing.
4	RW	CONFIG_SL_UE_CRC_ERR: When 1, UEs on the SL ECC cause the packet to be treated as a CRC error.
5	RW	CONFIG_REPORT_SL_CHKBIT_ERR: When 1, SL ECC single-bit errors on check bits are reported to the FIR.
6	RW	CONFIG_BW_SAMPLE_SIZE: When 1, use 256 packets for the sample (instead of 64).
7	RW	CONFIG_BW_WINDOW_SIZE: When 1, shorten the sample window.
8:11	RW	CONFIG_UNUSED1: Spare bits.
12:15	RW	CONFIG_PACKET_DELAY_LIMIT: This field indicates the number of cycles of delay of frame data that are required for the packet to be considered delayed or replayed. (0 is 16 cycles.)
16:19	RW	CONFIG_TDM_DELAY: This field indicates the adjustment factor of delay for entering or exiting TDM mode.
20	RW	CONFIG_AUTO_TDM_TX: When 1, use the transmit bandwidth for automatically entering TDM mode.
21	RW	CONFIG_AUTO_TDM_RX: When 1, use the receive bandwidth for automatically entering TDM mode.

Bits	SCOM	Field Mnemonic: Description
22	RW	CONFIG_AUTO_TDM_AND_NOT_OR: When 1, both the bandwidth and error rate are needed. Otherwise, either the bandwidth or the error rate is needed.
23	RW	CONFIG_UNUSED2: Spare bits.
24:27	RW	CONFIG_AUTO_TDM_BW_DIFF: Bandwidth difference for auto-entry TMD mode.
28:31	RW	CONFIG_AUTO_TDM_ERROR_RATE: This field contains the error rate for the auto-entry TDM mode.
32:47	RW	CONFIG_UNUSED3: Spare bits.
48:51	RWX	CONFIG_TIMEOUT: This field contains the program timeout values, from 1 µs to 65 ms.
52:63	RWX	CONFIG_TIMER_1US: This field contains the program number of cycles in 1 µs.

Register Name	ELL Control Register
Mnemonic	PB.IOE.LL1.IOEL_CONTROL
Address	0000000006011C0B (SCOM)
Description	This register contains ELL control fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONTROL_UNUSED0A: Spare bits.
1	RW	LINK0_STARTUP: When 1, start initialization/training.
2:7	RW	CONTROL_UNUSED0B: Spare bits.
8:11	RWX	LINK0_ERR_INJ_COMMAND: This field contains the command to perform link error injection.
12:27	RWX	LINK0_ERR_INJ_COMMAND_LANES: This field indicates the lanes for an error-injection command.
28:31	RWX	LINK0_COMMAND: This field contains the command to perform an operation.
32	RW	CONTROL_UNUSED1A: Spare bits.
33	RW	LINK1_STARTUP: When 1, start initialization/training.
34:39	RW	CONTROL_UNUSED1B: Spare bits.
40:43	RWX	LINK1_ERR_INJ_COMMAND: This field contains the command to perform link error injection.
44:59	RWX	LINK1_ERR_INJ_COMMAND_LANES: This field indicates the lanes for an error-injection command.
60:63	RWX	LINK1_COMMAND: This field contains the command to perform an operation.

Register Name	ELL Secondary Configuration Register
Mnemonic	PB.IOE.LL1.IOEL_SEC_CONFIG
Address	0000000006011C0D (SCOM)
Description	This register contains additional ELL configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_ENABLE_ERR_INJ: When 1, enable error injection (LFSR runs).
1:15	RW	CONFIG_UNUSED4: Spare bits.
16:17	RW	CONFIG_SBE_ERROR_RATE: This field indicates the error-injection SBE rate.
18:23	RW	CONFIG_RAND_ERROR_RATE: This field indicates error-injection rate N (from 1 to 38). Probability is 2^{-N}.
24:47	RW	CONFIG_UNUSED5: Spare bits.

Bits	SCOM	Field Mnemonic: Description
48:63	RW	CONFIG_EDPL_RATE: When 0, disable EDPL. Otherwise, this field indicates the number of packets between EDPL packets.

Register Name	ELL Latency Measurement Register
Mnemonic	PB.IOE.LL1.IOEL_LAT_MEASURE
Address	0000000006011C0E (SCOM)
Description	This register contains latency measurements.

Bits	SCOM	Field Mnemonic: Description
0	ROX	LINK0_ROUND_TRIP_VALID: When 1, the round-trip value is valid.
1	RO	constant = 0b0
2:11	ROX	LINK0_ROUND_TRIP: This field indicates the round-trip time in cycles.
12	ROX	LINK1_ROUND_TRIP_VALID: When 1, the round-trip value is valid.
13	RO	constant = 0b0
14:23	ROX	LINK1_ROUND_TRIP: This field indicates the round-trip time in cycles.
24	ROX	LOCAL_LATENCY_DIFFERENCE_VALID: When 1, the local latency difference is valid.
25	ROX	LOCAL_LATENCY_LONGER_LINK: When 1, link 1 had the longer latency.
26:28	RO	constant = 0b000
29:35	ROX	LOCAL_LATENCY_DIFFERENCE: This field contains the received difference in latency between the links.
36	ROX	REMOTE_LATENCY_DIFFERENCE_VALID: When 1, the remote latency difference is valid.
37	ROX	REMOTE_LATENCY_LONGER_LINK: When 1, link 1 had the longer latency.
38:40	RO	constant = 0b000
41:47	ROX	REMOTE_LATENCY_DIFFERENCE: This field contains the transmit difference in latency between the links (as received by other side).
48	RO	constant = 0b0
49:55	RWX	LINK0_TOD_LATENCY: This field indicates the latency of TOD pulses for link 0.
56	RO	constant = 0b0
57:63	RWX	LINK1_TOD_LATENCY: This field indicates the latency of TOD pulses for link 1.

Register Name	ELL Link0 Information Register
Mnemonic	PB.IOE.LL1.IOEL_LINK0_INFO
Address	0000000006011C14 (SCOM)
Description	This register contains information about link 0.

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	LINK0_MAX_TIMEOUT: This field indicates the maximum value reached by the timeout counter.
16	ROX	LINK0_FRAME_CAP_VALID: When 1, the error capture is valid.
17	ROX	LINK0_FRAME_CAP_INST: Array instance.
18	RO	constant = 0b0
19:23	ROX	LINK0_FRAME_CAP_ADDR: This field contains the array address of the captured error.

Bits	SCOM	Field Mnemonic: Description
24:31	ROX	LINK0_FRAME_CAP_SYN: This field contains the syndrome of the captured error.
32	ROX	LINK0_REPLAY_CAP_VALID: When 1, the error capture is valid.
33	RO	constant = 0b0
34	ROX	LINK0_REPLAY_CAP_INST: Array instance.
35:36	RO	constant = 0b00
37:43	ROX	LINK0_REPLAY_CAP_ADDR: This field contains the array address of the captured error.
44:51	ROX	LINK0_REPLAY_CAP_SYN: This field contains the syndrome of the captured error.
52	ROX	LINK0_ACK_FIFO_CAP_VALID: When 1, the error capture is valid.
53:56	RO	constant = 0b0000
57:63	ROX	LINK0_ACK_FIFO_CAP_ADDR: This field contains the array address of the captured error.

Register Name	ELL Link1 Information Register
Mnemonic	PB.IOE.LL1.IOEL_LINK1_INFO
Address	0000000006011C15 (SCOM)
Description	This register contains information about link 1.

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	LINK1_MAX_TIMEOUT: This field indicates the maximum value reached by the timeout counter.
16	ROX	LINK1_FRAME_CAP_VALID: When 1, the error capture is valid.
17	ROX	LINK1_FRAME_CAP_INST: Array instance.
18	RO	constant = 0b0
19:23	ROX	LINK1_FRAME_CAP_ADDR: This field contains the array address of the captured error.
24:31	ROX	LINK1_FRAME_CAP_SYN: This field contains the syndrome of the captured error.
32	ROX	LINK1_REPLAY_CAP_VALID: When 1, the error capture is valid.
33	RO	constant = 0b0
34	ROX	LINK1_REPLAY_CAP_INST: Array instance.
35:36	RO	constant = 0b00
37:43	ROX	LINK1_REPLAY_CAP_ADDR: This field contains the array address of the captured error.
44:51	ROX	LINK1_REPLAY_CAP_SYN: This field contains the syndrome of the captured error.
52	ROX	LINK1_ACK_FIFO_CAP_VALID: When 1, the error capture is valid.
53:56	RO	constant = 0b0000
57:63	ROX	LINK1_ACK_FIFO_CAP_ADDR: This field contains the array address of the captured error.

Register Name	ELL Link 0 Error Status Register
Mnemonic	PB.IOE.LL1.IOEL_LINK0_ERROR_STATUS
Address	0000000006011C16 (SCOM)
Description	This register contains link 0 error status information.

Bits	SCOM	Field Mnemonic: Description
0	WOX	LINK0_RESET_KEEPER: Reset keeper for the Link 0 Error Status Register.
1:3	ROX	LINK0_ERROR_STATUS_CE: c_err_rpt for correctable array errors.
4:7	RO	constant = 0b0000
8:9	ROX	LINK0_ERROR_STATUS_UE: c_err_rpt for uncorrectable array errors.
10:15	RO	constant = 0b000000
16:17	ROX	LINK0_ERROR_STATUS_TRAIN: c_err_rpt for training errors.
18:23	RO	constant = 0b000000
24:34	ROX	LINK0_ERROR_STATUS_UNRECOV: c_err_rpt for unrecoverable errors.
35:43	RO	constant = 0b000000000
44:61	ROX	LINK0_ERROR_STATUS_INTERNAL: c_err_rpt for internal errors.
62:63	RO	constant = 0b00

Register Name	**ELL Link 1 Error Status Register**
Mnemonic	PB.IOE.LL1.IOEL_LINK1_ERROR_STATUS
Address	0000000006011C17 (SCOM)
Description	This register contains link 1 error status information.

Bits	SCOM	Field Mnemonic: Description
0	WOX	LINK1_RESET_KEEPER: Reset keeper for the Link 1 Error Status Register.
1:3	ROX	LINK1_ERROR_STATUS_CE: c_err_rpt for correctable array errors.
4:7	RO	constant = 0b0000
8:9	ROX	LINK1_ERROR_STATUS_UE: c_err_rpt for uncorrectable array errors.
10:15	RO	constant = 0b000000
16:17	ROX	LINK1_ERROR_STATUS_TRAIN: c_err_rpt for training errors.
18:23	RO	constant = 0b000000
24:34	ROX	LINK1_ERROR_STATUS_UNRECOV: c_err_rpt for unrecoverable errors.
35:43	RO	constant = 0b000000000
44:61	ROX	LINK1_ERROR_STATUS_INTERNAL: c_err_rpt for internal errors.
62:63	RO	constant = 0b00

Register Name	**ELL Replay Threshold Register**
Mnemonic	PB.IOE.LL1.IOEL_REPLAY_THRESHOLD
Address	0000000006011C18 (SCOM)
Description	This register contains replay threshold controls.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	THRESH_REPLAY_TB_SEL: Replay threshold timebase select.
4:7	RW	THRESH_REPLAY_TAP_SEL: Replay threshold tap select.
8:10	RW	THRESH_REPLAY_ENABLE: Replay threshold error enable.

Bits	SCOM	Field Mnemonic: Description
11:25	RW	THRESH_REPLAY_UNUSED1: Spare bits.
26	RWX	THRESH_REPLAY_LINK0_CLEAR: Replay threshold counter clear.
27	RWX	THRESH_REPLAY_LINK1_CLEAR: Replay threshold counter clear.
28	RW	THRESH_REPLAY_DIS_TB_CLEAR: Threshold disable timebase clear.
29	RW	THRESH_REPLAY_DIS_TAP_CLEAR: Threshold disable tap clear.
30	RW	THRESH_REPLAY_DIS_TAP_STOP: Threshold disable tap stop.
31	RW	THRESH_REPLAY_UNUSED2: Spare bits.
32:47	ROX	THRESH_REPLAY_LINK0_COUNT: Replay threshold count.
48:63	ROX	THRESH_REPLAY_LINK1_COUNT: Replay threshold count.

Register Name	ELL SL ECC Threshold Register
Mnemonic	PB.IOE.LL1.IOEL_SL_ECC_THRESHOLD
Address	0000000006011C19 (SCOM)
Description	This register contains SL ECC threshold controls.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	THRESH_SL_ECC_TB_SEL: SL ECC threshold timebase select.
4:7	RW	THRESH_SL_ECC_TAP_SEL: SL ECC threshold tap select.
8:9	RW	THRESH_SL_ECC_ENABLE: SL ECC threshold error enable.
10:25	RW	THRESH_SL_ECC_UNUSED1: Spare bits.
26	RWX	THRESH_SL_ECC_LINK0_CLEAR: SL ECC threshold counter clear.
27	RWX	THRESH_SL_ECC_LINK1_CLEAR: SL ECC threshold counter clear.
28	RW	THRESH_SL_ECC_DIS_TB_CLEAR: Threshold disable timebase clear.
29	RW	THRESH_SL_ECC_DIS_TAP_CLEAR: Threshold disable tap clear.
30	RW	THRESH_SL_ECC_DIS_TAP_STOP: Threshold disable tap stop.
31	RW	THRESH_SL_ECC_UNUSED2: Spare bits.
32:47	ROX	THRESH_SL_ECC_LINK0_COUNT: SL ECC Threshold count.
48:63	ROX	THRESH_SL_ECC_LINK1_COUNT: SL ECC Threshold count.

Register Name	ELL Error Injection LFSR Register
Mnemonic	PB.IOE.LL1.IOEL_ERR_INJ_LFSR
Address	0000000006011C1B (SCOM)
Description	This is the linear feedback shift register (LFSR) for error injection.

Bits	SCOM	Field Mnemonic: Description
0:60	RWX	ERR_INJ_LFSR: Error injection LFSR.
61:63	RO	constant = 0b000

Register Name	ELL Performance Monitor and Trace Configuration Register
Mnemonic	PB.IOE.LL1.IOEL_PERF_TRACE_CONFIG
Address	0000000006011C1C (SCOM)
Description	This register monitors and configures the performance counters and traces.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	CONFIG_ENABLE_PERF_0: Performance counter enable.
2:3	RW	CONFIG_ENABLE_PERF_1: Performance counter enable.
4:5	RW	CONFIG_ENABLE_PERF_2: Performance counter enable.
6:7	RW	CONFIG_ENABLE_PERF_3: Performance counter enable.
8:9	RW	CONFIG_ENABLE_PERF_4: Performance counter enable.
10:11	RW	CONFIG_ENABLE_PERF_5: Performance counter enable.
12:13	RW	CONFIG_ENABLE_PERF_6: Performance counter enable.
14:15	RW	CONFIG_ENABLE_PERF_7: Performance counter enable.
16:17	RW	CONFIG_PERF_SIZE_0: Performance counter size.
18:19	RW	CONFIG_PERF_SIZE_1: Performance counter size.
20:21	RW	CONFIG_PERF_SIZE_2: Performance counter size.
22:23	RW	CONFIG_PERF_SIZE_3: Performance counter size.
24:25	RW	CONFIG_PERF_SIZE_4: Performance counter size.
26:27	RW	CONFIG_PERF_SIZE_5: Performance counter size.
28:29	RW	CONFIG_PERF_SIZE_6: Performance counter size.
30:31	RW	CONFIG_PERF_SIZE_7: Performance counter size.
32	RW	CONFIG_PMULET_FREEZE_MODE: PMUlet freeze mode: 0 = Freeze on full. 1 = Free run.
33	RW	CONFIG_COMMON_FREEZE_MODE: Common freeze mode: 0 = Independent per PMUlet. 1 = Any counter full freezes all.
34	RW	CONFIG_PERF_RESET_MODE: PMUlet reset mode: 0 = Reset on read. 1 = Reset on write.
35	RW	CONFIG_PERFTRACE_ENABLE: Performance trace enable. Multiplex performance trace data onto the trace bus.
36	RW	CONFIG_PERFTRACE_FIXED_WINDOW: Performance trace fixed window mode. Take a sample every 255 or 255 x 128 cycles.
37	RW	CONFIG_PERFTRACE_PRESCALE: Performance trace prescale mode, wide-angle view. Performance counts are prescaled by 128.
38:39	RW	CONFIG_PERFTRACE_MODE: Performance trace input selection.
40:51	RW	CONFIG_TRACE_CONFIG_0: Selection for trace bus bits 0:43.
52:63	RW	CONFIG_TRACE_CONFIG_1: Selection for trace bus bits 44:87.

Register Name	ELL Performance Monitor Selection Register
Mnemonic	PB.IOE.LL1.IOEL_PERF_SEL_CONFIG
Address	0000000006011C1D (SCOM)
Description	This register selects performance counters.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	CONFIG_PERF_SELECT_0: Selection performance counter.
8:15	RW	CONFIG_PERF_SELECT_1: Selection performance counter.
16:23	RW	CONFIG_PERF_SELECT_2: Selection performance counter.
24:31	RW	CONFIG_PERF_SELECT_3: Selection performance counter.
32:39	RW	CONFIG_PERF_SELECT_4: Selection performance counter.
40:47	RW	CONFIG_PERF_SELECT_5: Selection performance counter.
48:55	RW	CONFIG_PERF_SELECT_6: Selection performance counter.
56:63	RW	CONFIG_PERF_SELECT_7: Selection performance counter.

Register Name	ELL Performance Monitor Counter Register 0
Mnemonic	PB.IOE.LL1.IOEL_PERF_COUNTERS_0
Address	0000000006011C1E (SCOM)
Description	This register contains the 16 MSb of performance monitor counters 0 – 3.

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	PERFMON_COUNTER_0: Performance counter 16 MSb.
16:31	RWX_WCLRREG	PERFMON_COUNTER_1: Performance counter 16 MSb.
32:47	RWX_WCLRREG	PERFMON_COUNTER_2: Performance counter 16 MSb.
48:63	RWX_WCLRREG	PERFMON_COUNTER_3: Performance counter 16 MSb.

Register Name	ELL Performance Monitor Counter Register 1
Mnemonic	PB.IOE.LL1.IOEL_PERF_COUNTERS_1
Address	0000000006011C1F (SCOM)
Description	This register contains the 16 MSb of performance monitor counters 4 – 7.

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	PERFMON_COUNTER_4: Performance counter 16 MSb.
16:31	RWX_WCLRREG	PERFMON_COUNTER_5: Performance counter 16 MSb.
32:47	RWX_WCLRREG	PERFMON_COUNTER_6: Performance counter 16 MSb.
48:63	RWX_WCLRREG	PERFMON_COUNTER_7: Performance counter 16 MSb.

Register Name	ELL Performance Monitor Counter LSB Register 0
Mnemonic	PB.IOE.LL1.IOEL_PERF_COUNT_LSB_0
Address	0000000006011C20 (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	RESERVED.

Register Name	ELL Performance Monitor Counter LSB Register 1
Mnemonic	PB.IOE.LL1.IOEL_PERF_COUNT_LSB_1
Address	0000000006011C21 (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	RESERVED.

Register Name	ELL Link 0 Syndrome Capture Register
Mnemonic	PB.IOE.LL1.IOEL_LINK0_SYN_CAPTURE
Address	0000000006011C22 (SCOM)
Description	This register contains syndrome information for captured link 0 errors.

Bits	SCOM	Field Mnemonic: Description
0:27	RWX	LINK0_LINK_CAP_CRC_SYN: This field contains the CRC syndrome for a captured link error.
28:35	RWX	LINK0_LINK_CAP_CRC_SYN_UNUSED1: Spare bits.
36:43	RWX	LINK0_LINK_CAP_SLECC_SYN0: This field contains SL ECC syndrome 0 for a captured link error.
44:51	RWX	LINK0_LINK_CAP_SLECC_SYN1: This field contains SL ECC syndrome 1 for a captured link error.
52:54	RWX	LINK0_LINK_CAP_CRC_SYN_UNUSED2: Spare bits.
55	RWX	LINK0_LINK_CAP_VALID: This bit indicates that the captured link error is valid.
56:58	RWX	LINK0_LINK_CAP_CRC_SYN_UNUSED3: Spare bits.
59:63	RWX	LINK0_LINK_CAP_CRC_LANE: This field contains the CRC lane from the syndrome decode.

Register Name	ELL Link 1 Syndrome Capture Register
Mnemonic	PB.IOE.LL1.IOEL_LINK1_SYN_CAPTURE
Address	0000000006011C23 (SCOM)
Description	This register contains syndrome information for captured link 1 errors.

Bits	SCOM	Field Mnemonic: Description
0:27	RWX	LINK1_LINK_CAP_CRC_SYN: This field contains the CRC syndrome for a captured link error.
28:35	RWX	LINK1_LINK_CAP_CRC_SYN_UNUSED1: Spare bits.
36:43	RWX	LINK1_LINK_CAP_SLECC_SYN0: This field contains SL ECC syndrome 0 for a captured link error.

Bits	SCOM	Field Mnemonic: Description
44:51	RWX	LINK1_LINK_CAP_SLECC_SYN1: This field contains SL ECC syndrome 1 for a captured link error.
52:54	RWX	LINK1_LINK_CAP_CRC_SYN_UNUSED2: Spare bits.
55	RWX	LINK1_LINK_CAP_VALID: This bit indicates that the captured link error is valid.
56:58	RWX	LINK1_LINK_CAP_CRC_SYN_UNUSED3: Spare bits.
59:63	RWX	LINK1_LINK_CAP_CRC_LANE: This field contains the CRC lane from the syndrome decode.

Register Name	**ELL Link 0 EDPL Status Register**
Mnemonic	PB.IOE.LL1.IOEL_LINK0_EDPL_STATUS
Address	0000000006011C24 (SCOM)
Description	This register contains counts of EDPL errors.

Bits	SCOM	Field Mnemonic: Description
0:3	ROX	LINK0_EDPL_ERROR_COUNT_0: Count of EDPL errors.
4:7	ROX	LINK0_EDPL_ERROR_COUNT_1: Count of EDPL errors.
8:11	ROX	LINK0_EDPL_ERROR_COUNT_2: Count of EDPL errors.
12:15	ROX	LINK0_EDPL_ERROR_COUNT_3: Count of EDPL errors.
16:19	ROX	LINK0_EDPL_ERROR_COUNT_4: Count of EDPL errors.
20:23	ROX	LINK0_EDPL_ERROR_COUNT_5: Count of EDPL errors.
24:27	ROX	LINK0_EDPL_ERROR_COUNT_6: Count of EDPL errors.
28:31	ROX	LINK0_EDPL_ERROR_COUNT_7: Count of EDPL errors.
32:35	ROX	LINK0_EDPL_ERROR_COUNT_8: Count of EDPL errors.
36:39	ROX	LINK0_EDPL_ERROR_COUNT_9: Count of EDPL errors.
40:43	ROX	LINK0_EDPL_ERROR_COUNT_10: Count of EDPL errors.
44:47	ROX	LINK0_EDPL_ERROR_COUNT_11: Count of EDPL errors.
48:63	RO	constant = 0b0000000000000000

Register Name	**ELL Link 1 EDPL Status Register**
Mnemonic	PB.IOE.LL1.IOEL_LINK1_EDPL_STATUS
Address	0000000006011C25 (SCOM)
Description	This register contains counts of EDPL errors.

Bits	SCOM	Field Mnemonic: Description
0:3	ROX	LINK1_EDPL_ERROR_COUNT_0: Count of EDPL errors.
4:7	ROX	LINK1_EDPL_ERROR_COUNT_1: Count of EDPL errors.
8:11	ROX	LINK1_EDPL_ERROR_COUNT_2: Count of EDPL errors.
12:15	ROX	LINK1_EDPL_ERROR_COUNT_3: Count of EDPL errors.
16:19	ROX	LINK1_EDPL_ERROR_COUNT_4: Count of EDPL errors.
20:23	ROX	LINK1_EDPL_ERROR_COUNT_5: Count of EDPL errors.
24:27	ROX	LINK1_EDPL_ERROR_COUNT_6: Count of EDPL errors.

Bits	SCOM	Field Mnemonic: Description
28:31	ROX	LINK1_EDPL_ERROR_COUNT_7: Count of EDPL errors.
32:35	ROX	LINK1_EDPL_ERROR_COUNT_8: Count of EDPL errors.
36:39	ROX	LINK1_EDPL_ERROR_COUNT_9: Count of EDPL errors.
40:43	ROX	LINK1_EDPL_ERROR_COUNT_10: Count of EDPL errors.
44:47	ROX	LINK1_EDPL_ERROR_COUNT_11: Count of EDPL errors.
48:63	RO	constant = 0b0000000000000000

Register Name	ELL Link 0 Link Quality Status Register
Mnemonic	PB.IOE.LL1.IOEL_LINK0_QUALITY
Address	0000000006011C26 (SCOM)
Description	This register contains transmit and receive bandwidth and error-rate measurements.

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1:11	ROX	LINK0_TX_BW: Measure of the transmit bandwidth.
12	RO	constant = 0b0
13:23	ROX	LINK0_RX_BW: Measure of the receive bandwidth.
24	RO	constant = 0b0
25:47	ROX	LINK0_ERROR_RATE: Measure of the received error rate.
48:63	RO	constant = 0b0000000000000000

Register Name	ELL Link1 Link Quality Status Register
Mnemonic	PB.IOE.LL1.IOEL_LINK1_QUALITY
Address	0000000006011C27 (SCOM)
Description	This register contains transmit and receive bandwidth and error-rate measurements.

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1:11	ROX	LINK1_TX_BW: Measure of the transmit bandwidth.
12	RO	constant = 0b0
13:23	ROX	LINK1_RX_BW: Measure of the receive bandwidth.
24	RO	constant = 0b0
25:47	ROX	LINK1_ERROR_RATE: Measure of the received error rate.
48:63	RO	constant = 0b0000000000000000

Register Name	ELL Status Register
Mnemonic	PB.IOE.LL1.IOEL_DLL_STATUS
Address	0000000006011C28 (SCOM)
Description	This register contains status information.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b0000
4:7	ROX	LINK0_CURRENT_STATE: This field indicates the current state of the initialization/training state machine.
8:11	RO	constant = 0b0000
12:15	ROX	LINK0_PRIOR_STATE: This field indicates the prior state of the initialization/training state machine.
16:18	RO	constant = 0b000
19:23	ROX	LINK0_MAX_PKT_TIMER: This field contains the maximum value reached by the packet delay counter.
24:27	RO	constant = 0b0000
28:31	ROX	LINK1_CURRENT_STATE: This field indicates the current state of the initialization/training state machine.
32:35	RO	constant = 0b0000
36:39	ROX	LINK1_PRIOR_STATE: This field indicates the prior state of the initialization/training state machine.
40:42	RO	constant = 0b000
43:47	ROX	LINK1_MAX_PKT_TIMER: This field contains the maximum value reached by the packet delay counter.
48:63	RO	constant = 0b0000000000000000

Register Name	ELL FIR Register
Mnemonic	PB.IOE.LL2.IOEL_FIR_REG
Address	0000000006012000 (SCOM) 0000000006012001 (SCOM1) 0000000006012002 (SCOM2)
Description	This is the ELL Fault Isolation Register (FIR).

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	FIR_LINK0_TRAINED: Link 0 trained.
1	RWX	WOX_AND	WOX_OR	FIR_LINK1_TRAINED: Link 1 trained.
2:3	RWX	WOX_AND	WOX_OR	RESERVED.
4	RWX	WOX_AND	WOX_OR	FIR_LINK0_REPLAY_THRESHOLD: Link 0 replay threshold.
5	RWX	WOX_AND	WOX_OR	FIR_LINK1_REPLAY_THRESHOLD: Link 1 replay threshold.
6	RWX	WOX_AND	WOX_OR	FIR_LINK0_CRC_ERROR: Link 0 CRC error.
7	RWX	WOX_AND	WOX_OR	FIR_LINK1_CRC_ERROR: Link 1 CRC error.
8	RWX	WOX_AND	WOX_OR	FIR_LINK0_NAK_RECEIVED: Link 0 NAK received.
9	RWX	WOX_AND	WOX_OR	FIR_LINK1_NAK_RECEIVED: Link 1 NAK received.
10	RWX	WOX_AND	WOX_OR	FIR_LINK0_REPLAY_BUFFER_FULL: Link 0 replay buffer full.
11	RWX	WOX_AND	WOX_OR	FIR_LINK1_REPLAY_BUFFER_FULL: Link 1 replay buffer full.
12	RWX	WOX_AND	WOX_OR	FIR_LINK0_SL_ECC_THRESHOLD: Link 0 SL ECC threshold.
13	RWX	WOX_AND	WOX_OR	FIR_LINK1_SL_ECC_THRESHOLD: Link 1 SL ECC threshold.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
14	RWX	WOX_AND	WOX_OR	FIR_LINK0_SL_ECC_CORRECTABLE: Link 0 SL ECC correctable.
15	RWX	WOX_AND	WOX_OR	FIR_LINK1_SL_ECC_CORRECTABLE: Link 1 SL ECC correctable.
16	RWX	WOX_AND	WOX_OR	FIR_LINK0_SL_ECC_UE: Link 0 SL ECC UE.
17	RWX	WOX_AND	WOX_OR	FIR_LINK1_SL_ECC_UE: Link 1 SL ECC UE.
18:39	RWX	WOX_AND	WOX_OR	RESERVED.
40	RWX	WOX_AND	WOX_OR	FIR_LINK0_TCOMPLETE_BAD: Link 0 complete bad.
41	RWX	WOX_AND	WOX_OR	FIR_LINK1_TCOMPLETE_BAD: Link 1 complete bad.
42:43	RWX	WOX_AND	WOX_OR	RESERVED.
44	RWX	WOX_AND	WOX_OR	FIR_LINK0_SPARE_DONE: Link 0 spare done.
45	RWX	WOX_AND	WOX_OR	FIR_LINK1_SPARE_DONE: Link 1 spare done.
46	RWX	WOX_AND	WOX_OR	FIR_LINK0_TOO_MANY_CRC_ERRORS: Link 0 too many CRC errors.
47	RWX	WOX_AND	WOX_OR	FIR_LINK1_TOO_MANY_CRC_ERRORS: Link 1 too many CRC errors.
48:50	RWX	WOX_AND	WOX_OR	RESERVED.
51	RWX	WOX_AND	WOX_OR	FIR_PSAVE_INVALID_STATE: Psave invalid state.
52	RWX	WOX_AND	WOX_OR	FIR_LINK0_CORRECTABLE_ARRAY_ERROR: Link 0 correctable array error.
53	RWX	WOX_AND	WOX_OR	FIR_LINK1_CORRECTABLE_ARRAY_ERROR: Link 1 correctable array error.
54	RWX	WOX_AND	WOX_OR	FIR_LINK0_UNCORRECTABLE_ARRAY_ERROR: Link 0 uncorrectable array error.
55	RWX	WOX_AND	WOX_OR	FIR_LINK1_UNCORRECTABLE_ARRAY_ERROR: Link 1 uncorrectable array error.
56	RWX	WOX_AND	WOX_OR	FIR_LINK0_TRAINING_FAILED: Link 0 training failed.
57	RWX	WOX_AND	WOX_OR	FIR_LINK1_TRAINING_FAILED: Link 1 training failed.
58	RWX	WOX_AND	WOX_OR	FIR_LINK0_UNRECOVERABLE_ERROR: Link 0 unrecoverable error.
59	RWX	WOX_AND	WOX_OR	FIR_LINK1_UNRECOVERABLE_ERROR: Link 1 unrecoverable error.
60	RWX	WOX_AND	WOX_OR	FIR_LINK0_INTERNAL_ERROR: Link 0 internal error.
61	RWX	WOX_AND	WOX_OR	FIR_LINK1_INTERNAL_ERROR: Link 1 internal error.
62	RWX	WOX_AND	WOX_OR	FIR_SCOM_ERR_DUP: FIR SCOM error dup.
63	RWX	WOX_AND	WOX_OR	FIR_SCOM_ERR: FIR SCOM error.

Register Name	ELL FIR Mask Register
Mnemonic	PB.IOE.LL2.IOEL_FIR_MASK_REG
Address	0000000006012003 (SCOM) 0000000006012004 (SCOM1) 0000000006012005 (SCOM2)
Description	This register provides a bit mask for the ELL FIR Register.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	FIR_LINK0_TRAINED_MASK: Link 0 trained mask.
1	RWX	WOX_AND	WOX_OR	FIR_LINK1_TRAINED_MASK: Link 1 trained mask.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
2:3	RWX	WOX_AND	WOX_OR	RESERVED.
4	RWX	WOX_AND	WOX_OR	FIR_LINK0_REPLAY_THRESHOLD_MASK: Link 0 replay threshold mask.
5	RWX	WOX_AND	WOX_OR	FIR_LINK1_REPLAY_THRESHOLD_MASK: Link 1 replay threshold mask.
6	RWX	WOX_AND	WOX_OR	FIR_LINK0_CRC_ERROR_MASK: Link 0 CRC error mask.
7	RWX	WOX_AND	WOX_OR	FIR_LINK1_CRC_ERROR_MASK: Link 1 CRC error mask.
8	RWX	WOX_AND	WOX_OR	FIR_LINK0_NAK_RECEIVED_MASK: Link 0 NAK received mask.
9	RWX	WOX_AND	WOX_OR	FIR_LINK1_NAK_RECEIVED_MASK: Link 1 NAK received mask.
10	RWX	WOX_AND	WOX_OR	FIR_LINK0_REPLAY_BUFFER_FULL_MASK: Link 0 replay buffer full mask.
11	RWX	WOX_AND	WOX_OR	FIR_LINK1_REPLAY_BUFFER_FULL_MASK: Link 1 replay buffer full mask.
12	RWX	WOX_AND	WOX_OR	FIR_LINK0_SL_ECC_THRESHOLD_MASK: Link 0 SL ECC threshold mask.
13	RWX	WOX_AND	WOX_OR	FIR_LINK1_SL_ECC_THRESHOLD_MASK: Link 1 SL ECC threshold mask.
14	RWX	WOX_AND	WOX_OR	FIR_LINK0_SL_ECC_CORRECTABLE_MASK: Link 0 SL ECC correctable mask.
15	RWX	WOX_AND	WOX_OR	FIR_LINK1_SL_ECC_CORRECTABLE_MASK: Link 1 SL ECC correctable mask.
16	RWX	WOX_AND	WOX_OR	FIR_LINK0_SL_ECC_UE_MASK: Link 0 SL ECC UE mask.
17	RWX	WOX_AND	WOX_OR	FIR_LINK1_SL_ECC_UE_MASK: Link 1 SL ECC UE mask.
18:39	RWX	WOX_AND	WOX_OR	RESERVED.
40	RWX	WOX_AND	WOX_OR	FIR_LINK0_TCOMPLETE_BAD_MASK: Link 0 complete bad mask.
41	RWX	WOX_AND	WOX_OR	FIR_LINK1_TCOMPLETE_BAD_MASK: Link 1 complete bad mask.
42:43	RWX	WOX_AND	WOX_OR	RESERVED.
44	RWX	WOX_AND	WOX_OR	FIR_LINK0_SPARE_DONE_MASK: Link 0 spare done mask.
45	RWX	WOX_AND	WOX_OR	FIR_LINK1_SPARE_DONE_MASK: Link 1 spare done mask.
46	RWX	WOX_AND	WOX_OR	FIR_LINK0_TOO_MANY_CRC_ERRORS_MASK: Link 0 too many CRC errors mask.
47	RWX	WOX_AND	WOX_OR	FIR_LINK1_TOO_MANY_CRC_ERRORS_MASK: Link 1 too many CRC errors mask.
48:50	RWX	WOX_AND	WOX_OR	RESERVED.
51	RWX	WOX_AND	WOX_OR	FIR_PSAVE_INVALID_STATE_MASK: Psave invalid state mask.
52	RWX	WOX_AND	WOX_OR	FIR_LINK0_CORRECTABLE_ARRAY_ERROR_MASK: Link 0 correctable array error mask.
53	RWX	WOX_AND	WOX_OR	FIR_LINK1_CORRECTABLE_ARRAY_ERROR_MASK: Link 1 correctable array error mask.
54	RWX	WOX_AND	WOX_OR	FIR_LINK0_UNCORRECTABLE_ARRAY_ERROR_MASK: Link 0 uncorrectable array error mask.
55	RWX	WOX_AND	WOX_OR	FIR_LINK1_UNCORRECTABLE_ARRAY_ERROR_MASK: Link 1 uncorrectable array error mask.
56	RWX	WOX_AND	WOX_OR	FIR_LINK0_TRAINING_FAILED_MASK: Link 0 training failed mask.
57	RWX	WOX_AND	WOX_OR	FIR_LINK1_TRAINING_FAILED_MASK: Link 1 training failed mask.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
58	RWX	WOX_AND	WOX_OR	FIR_LINK0_UNRECOVERABLE_ERROR_MASK: Link 0 unrecoverable error mask.
59	RWX	WOX_AND	WOX_OR	FIR_LINK1_UNRECOVERABLE_ERROR_MASK: Link 1 unrecoverable error mask.
60	RWX	WOX_AND	WOX_OR	FIR_LINK0_INTERNAL_ERROR_MASK: Link 0 internal error mask.
61	RWX	WOX_AND	WOX_OR	FIR_LINK1_INTERNAL_ERROR_MASK: Link 1 internal error mask.
62	RWX	WOX_AND	WOX_OR	FIR_SCOM_ERR_DUP_MASK: FIR SCOM error dup mask.
63	RWX	WOX_AND	WOX_OR	FIR_SCOM_ERR_MASK: FIR SCOM error mask.

Register Name	ELL FIR Action 0 Register
Mnemonic	PB.IOE.LL2.IOEL_FIR_ACTION0_REG
Address	0000000006012006 (SCOM)
Description	This is the ELL Fault Isolation Action 0 Register.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IOEL_FIR_ACTION0: processor bus FIR MSB of action select for corresponding bit in FIR. (Action0,Action1) = Action Select. (0,0) = Checkstop. (0,1) = Recoverable error to service processor. (1,0) = Special attention to service processor. (1,1) = Invalid.

Register Name	ELL FIR Action 1 Register
Mnemonic	PB.IOE.LL2.IOEL_FIR_ACTION1_REG
Address	0000000006012007 (SCOM)
Description	This is the ELL Fault Isolation Action0 Register.

Bits	SCOM	Field Mnemonic: Description
0:63	RW	IOEL_FIR_ACTION1: processor bus FIR LSB of action select for corresponding bit in FIR. (Action0,Action1) = Action Select. (0,0) = Checkstop. (0,1) = Recoverable error to service processor. (1,0) = Special attention to service processor. (1,1) = Invalid.

Register Name	FIR WOF Register
Mnemonic	PB.IOE.LL2.IOEL_FIR_WOF_REG
Address	0000000006012008 (SCOM)
Description	This who's on first register indicates which error occurred first.

Bits	SCOM	Field Mnemonic: Description
0:63	RWX_WCLRREG	IOEL_FIR_WOF: The WOF Register locks on the first error.

Register Name	ELL Configuration Register
Mnemonic	PB.IOE.LL2.IOEL_CONFIG
Address	000000000601200A (SCOM)
Description	This register contains ELL configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_LINK_PAIR: When 1, the two links operate as a pair. When 0, only one link is used or they are independent.
1	RW	CONFIG_DISABLE_SL_ECC: When 1, disable spare lane ECC correction.
2	RW	CONFIG_CRC_LANE_ID: When 1, use lane IDs from CRC for lane sparing.
3	RW	CONFIG_EDPL_LANE_ID: When 1, use lane IDs from EDPL for lane sparing.
4	RW	CONFIG_SL_UE_CRC_ERR: When 1, UEs on the SL ECC cause the packet to be treated as a CRC error.
5	RW	CONFIG_REPORT_SL_CHKBIT_ERR: When 1, SL ECC single-bit errors on check bits are reported to the FIR.
6	RW	CONFIG_BW_SAMPLE_SIZE: When 1, use 256 packets for the sample (instead of 64).
7	RW	CONFIG_BW_WINDOW_SIZE: When 1, shorten the sample window.
8:11	RW	CONFIG_UNUSED1: Spare bits.
12:15	RW	CONFIG_PACKET_DELAY_LIMIT: This field indicates the number of cycles of delay of frame data that are required for the packet to be considered delayed or replayed. (0 is 16 cycles.)
16:19	RW	CONFIG_TDM_DELAY: This field indicates the adjustment factor of delay for entering or exiting TDM mode.
20	RW	CONFIG_AUTO_TDM_TX: When 1, use the transmit bandwidth for automatically entering TDM mode.
21	RW	CONFIG_AUTO_TDM_RX: When 1, use the receive bandwidth for automatically entering TDM mode.
22	RW	CONFIG_AUTO_TDM_AND_NOT_OR: When 1, both the bandwidth and error rate are needed. Otherwise, either the bandwidth or the error rate is needed.
23	RW	CONFIG_UNUSED2: Spare bits.
24:27	RW	CONFIG_AUTO_TDM_BW_DIFF: Bandwidth difference for auto-entry TMD mode.
28:31	RW	CONFIG_AUTO_TDM_ERROR_RATE: This field contains the error rate for the auto-entry TDM mode.
32:47	RW	CONFIG_UNUSED3: Spare bits.
48:51	RWX	CONFIG_TIMEOUT: This field contains the program timeout values, from 1 µs to 65 ms.
52:63	RWX	CONFIG_TIMER_1US: This field contains the program number of cycles in 1 µs.

Register Name	ELL Control Register
Mnemonic	PB.IOE.LL2.IOEL_CONTROL
Address	000000000601200B (SCOM)
Description	This register contains ELL control fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONTROL_UNUSED0A: Spare bits.
1	RW	LINK0_STARTUP: When 1, start initialization/training.
2:7	RW	CONTROL_UNUSED0B: Spare bits.
8:11	RWX	LINK0_ERR_INJ_COMMAND: This field contains the command to perform link error injection.
12:27	RWX	LINK0_ERR_INJ_COMMAND_LANES: This field indicates the lanes for an error-injection command.

Bits	SCOM	Field Mnemonic: Description
28:31	RWX	LINK0_COMMAND: This field contains the command to perform an operation.
32	RW	CONTROL_UNUSED1A: Spare bits.
33	RW	LINK1_STARTUP: When 1, start initialization/training.
34:39	RW	CONTROL_UNUSED1B: Spare bits.
40:43	RWX	LINK1_ERR_INJ_COMMAND: This field contains the command to perform link error injection.
44:59	RWX	LINK1_ERR_INJ_COMMAND_LANES: This field indicates the lanes for an error-injection command.
60:63	RWX	LINK1_COMMAND: This field contains the command to perform an operation.

Register Name	ELL Secondary Configuration Register
Mnemonic	PB.IOE.LL2.IOEL_SEC_CONFIG
Address	000000000601200D (SCOM)
Description	This register contains additional ELL configuration fields.

Bits	SCOM	Field Mnemonic: Description
0	RW	CONFIG_ENABLE_ERR_INJ: When 1, enable error injection (LFSR runs).
1:15	RW	CONFIG_UNUSED4: Spare bits.
16:17	RW	CONFIG_SBE_ERROR_RATE: This field indicates the error-injection SBE rate.
18:23	RW	CONFIG_RAND_ERROR_RATE: This field indicates error-injection rate N (from 1 to 38). Probability is 2^{-N}.
24:47	RW	CONFIG_UNUSED5: Spare bits.
48:63	RW	CONFIG_EDPL_RATE: When 0, disable EDPL. Otherwise, this field indicates the number of packets between EDPL packets.

Register Name	ELL Latency Measurement Register
Mnemonic	PB.IOE.LL2.IOEL_LAT_MEASURE
Address	000000000601200E (SCOM)
Description	This register contains latency measurements.

Bits	SCOM	Field Mnemonic: Description
0	ROX	LINK0_ROUND_TRIP_VALID: When 1, the round-trip value is valid.
1	RO	constant = 0b0
2:11	ROX	LINK0_ROUND_TRIP: This field indicates the round-trip time in cycles.
12	ROX	LINK1_ROUND_TRIP_VALID: When 1, the round-trip value is valid.
13	RO	constant = 0b0
14:23	ROX	LINK1_ROUND_TRIP: This field indicates the round-trip time in cycles.
24	ROX	LOCAL_LATENCY_DIFFERENCE_VALID: When 1, the local latency difference is valid.
25	ROX	LOCAL_LATENCY_LONGER_LINK: When 1, link 1 had the longer latency.
26:28	RO	constant = 0b000
29:35	ROX	LOCAL_LATENCY_DIFFERENCE: This field contains the received difference in latency between the links.
36	ROX	REMOTE_LATENCY_DIFFERENCE_VALID: When 1, the remote latency difference is valid.

Bits	SCOM	Field Mnemonic: Description
37	ROX	REMOTE_LATENCY_LONGER_LINK: When 1, link 1 had the longer latency.
38:40	RO	constant = 0b000
41:47	ROX	REMOTE_LATENCY_DIFFERENCE: This field contains the transmit difference in latency between the links (as received by other side).
48	RO	constant = 0b0
49:55	RWX	LINK0_TOD_LATENCY: This field indicates the latency of TOD pulses for link 0.
56	RO	constant = 0b0
57:63	RWX	LINK1_TOD_LATENCY: This field indicates the latency of TOD pulses for link 1.

Register Name	ELL Link 0 Information Register
Mnemonic	PB.IOE.LL2.IOEL_LINK0_INFO
Address	0000000006012014 (SCOM)
Description	This register contains information about link 0.

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	LINK0_MAX_TIMEOUT: This field indicates the maximum value reached by the timeout counter.
16	ROX	LINK0_FRAME_CAP_VALID: When 1, the error capture is valid.
17	ROX	LINK0_FRAME_CAP_INST: Array instance.
18	RO	constant = 0b0
19:23	ROX	LINK0_FRAME_CAP_ADDR: This field contains the array address of the captured error.
24:31	ROX	LINK0_FRAME_CAP_SYN: This field contains the syndrome of the captured error.
32	ROX	LINK0_REPLAY_CAP_VALID: When 1, the error capture is valid.
33	RO	constant = 0b0
34	ROX	LINK0_REPLAY_CAP_INST: Array instance.
35:36	RO	constant = 0b00
37:43	ROX	LINK0_REPLAY_CAP_ADDR: This field contains the array address of the captured error.
44:51	ROX	LINK0_REPLAY_CAP_SYN: This field contains the syndrome of the captured error.
52	ROX	LINK0_ACK_FIFO_CAP_VALID: When 1, the error capture is valid.
53:56	RO	constant = 0b0000
57:63	ROX	LINK0_ACK_FIFO_CAP_ADDR: This field contains the array address of the captured error.

Register Name	ELL Link 1 Information Register
Mnemonic	PB.IOE.LL2.IOEL_LINK1_INFO
Address	0000000006012015 (SCOM)
Description	This register contains information about link 1.

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	LINK1_MAX_TIMEOUT: This field indicates the maximum value reached by the timeout counter.
16	ROX	LINK1_FRAME_CAP_VALID: When 1, the error capture is valid.

Bits	SCOM	Field Mnemonic: Description
17	ROX	LINK1_FRAME_CAP_INST: Array instance.
18	RO	constant = 0b0
19:23	ROX	LINK1_FRAME_CAP_ADDR: This field contains the array address of the captured error.
24:31	ROX	LINK1_FRAME_CAP_SYN: This field contains the syndrome of the captured error.
32	ROX	LINK1_REPLAY_CAP_VALID: When 1, the error capture is valid.
33	RO	constant = 0b0
34	ROX	LINK1_REPLAY_CAP_INST: Array instance.
35:36	RO	constant = 0b00
37:43	ROX	LINK1_REPLAY_CAP_ADDR: This field contains the array address of the captured error.
44:51	ROX	LINK1_REPLAY_CAP_SYN: This field contains the syndrome of the captured error.
52	ROX	LINK1_ACK_FIFO_CAP_VALID: When 1, the error capture is valid.
53:56	RO	constant = 0b0000
57:63	ROX	LINK1_ACK_FIFO_CAP_ADDR: This field contains the array address of the captured error.

Register Name	ELL Link 0 Error Status Register
Mnemonic	PB.IOE.LL2.IOEL_LINK0_ERROR_STATUS
Address	0000000006012016 (SCOM)
Description	This register contains link 0 error status information.

Bits	SCOM	Field Mnemonic: Description
0	WOX	LINK0_RESET_KEEPER: Reset keeper for the Link 0 Error Status Register.
1:3	ROX	LINK0_ERROR_STATUS_CE: c_err_rpt for correctable array errors.
4:7	RO	constant = 0b0000
8:9	ROX	LINK0_ERROR_STATUS_UE: c_err_rpt for uncorrectable array errors.
10:15	RO	constant = 0b000000
16:17	ROX	LINK0_ERROR_STATUS_TRAIN: c_err_rpt for training errors.
18:23	RO	constant = 0b000000
24:34	ROX	LINK0_ERROR_STATUS_UNRECOV: c_err_rpt for unrecoverable errors.
35:43	RO	constant = 0b000000000
44:61	ROX	LINK0_ERROR_STATUS_INTERNAL: c_err_rpt for internal errors.
62:63	RO	constant = 0b00

Register Name	ELL Link 1 Error Status Register
Mnemonic	PB.IOE.LL2.IOEL_LINK1_ERROR_STATUS
Address	0000000006012017 (SCOM)
Description	This register contains link 1 error status information.

Bits	SCOM	Field Mnemonic: Description
0	WOX	LINK1_RESET_KEEPER: Reset keeper for the Link 1 Error Status Register.

Bits	SCOM	Field Mnemonic: Description
1:3	ROX	LINK1_ERROR_STATUS_CE: c_err_rpt for correctable array errors.
4:7	RO	constant = 0b0000
8:9	ROX	LINK1_ERROR_STATUS_UE: c_err_rpt for uncorrectable array errors.
10:15	RO	constant = 0b000000
16:17	ROX	LINK1_ERROR_STATUS_TRAIN: c_err_rpt for training errors.
18:23	RO	constant = 0b000000
24:34	ROX	LINK1_ERROR_STATUS_UNRECOV: c_err_rpt for unrecoverable errors.
35:43	RO	constant = 0b000000000
44:61	ROX	LINK1_ERROR_STATUS_INTERNAL: c_err_rpt for internal errors.
62:63	RO	constant = 0b00

Register Name	ELL Replay Threshold Register
Mnemonic	PB.IOE.LL2.IOEL_REPLAY_THRESHOLD
Address	0000000006012018 (SCOM)
Description	This register contains replay threshold controls.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	THRESH_REPLAY_TB_SEL: Replay threshold timebase select.
4:7	RW	THRESH_REPLAY_TAP_SEL: Replay threshold tap select.
8:10	RW	THRESH_REPLAY_ENABLE: Replay threshold error enable.
11:25	RW	THRESH_REPLAY_UNUSED1: Spare bits.
26	RWX	THRESH_REPLAY_LINK0_CLEAR: Replay threshold counter clear.
27	RWX	THRESH_REPLAY_LINK1_CLEAR: Replay threshold counter clear.
28	RW	THRESH_REPLAY_DIS_TB_CLEAR: Threshold disable timebase clear.
29	RW	THRESH_REPLAY_DIS_TAP_CLEAR: Threshold disable tap clear.
30	RW	THRESH_REPLAY_DIS_TAP_STOP: Threshold disable tap stop.
31	RW	THRESH_REPLAY_UNUSED2: Spare bits.
32:47	ROX	THRESH_REPLAY_LINK0_COUNT: Replay threshold count.
48:63	ROX	THRESH_REPLAY_LINK1_COUNT: Replay threshold count.

Register Name	ELL SL ECC Threshold Register
Mnemonic	PB.IOE.LL2.IOEL_SL_ECC_THRESHOLD
Address	0000000006012019 (SCOM)
Description	This register contains SL ECC threshold controls.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	THRESH_SL_ECC_TB_SEL: SL ECC threshold timebase select.
4:7	RW	THRESH_SL_ECC_TAP_SEL: SL ECC threshold tap select.
8:9	RW	THRESH_SL_ECC_ENABLE: SL ECC threshold error enable.

Bits	SCOM	Field Mnemonic: Description
10:25	RW	THRESH_SL_ECC_UNUSED1: Spare bits.
26	RWX	THRESH_SL_ECC_LINK0_CLEAR: SL ECC threshold counter clear.
27	RWX	THRESH_SL_ECC_LINK1_CLEAR: SL ECC threshold counter clear.
28	RW	THRESH_SL_ECC_DIS_TB_CLEAR: Threshold disable timebase clear.
29	RW	THRESH_SL_ECC_DIS_TAP_CLEAR: Threshold disable tap clear.
30	RW	THRESH_SL_ECC_DIS_TAP_STOP: Threshold disable tap stop.
31	RW	THRESH_SL_ECC_UNUSED2: Spare bits.
32:47	ROX	THRESH_SL_ECC_LINK0_COUNT: SL ECC Threshold count.
48:63	ROX	THRESH_SL_ECC_LINK1_COUNT: SL ECC Threshold count.

Register Name	ELL Error Injection LFSR Register
Mnemonic	PB.IOE.LL2.IOEL_ERR_INJ_LFSR
Address	000000000601201B (SCOM)
Description	This is the linear feedback shift register (LFSR) for error injection.

Bits	SCOM	Field Mnemonic: Description
0:60	RWX	ERR_INJ_LFSR: Error injection LFSR.
61:63	RO	constant = 0b000

Register Name	ELL Performance Monitor and Trace Configuration Register
Mnemonic	PB.IOE.LL2.IOEL_PERF_TRACE_CONFIG
Address	000000000601201C (SCOM)
Description	This register monitors and configures the performance counters and traces.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	CONFIG_ENABLE_PERF_0: Performance counter enable.
2:3	RW	CONFIG_ENABLE_PERF_1: Performance counter enable.
4:5	RW	CONFIG_ENABLE_PERF_2: Performance counter enable.
6:7	RW	CONFIG_ENABLE_PERF_3: Performance counter enable.
8:9	RW	CONFIG_ENABLE_PERF_4: Performance counter enable.
10:11	RW	CONFIG_ENABLE_PERF_5: Performance counter enable.
12:13	RW	CONFIG_ENABLE_PERF_6: Performance counter enable.
14:15	RW	CONFIG_ENABLE_PERF_7: Performance counter enable.
16:17	RW	CONFIG_PERF_SIZE_0: Performance counter size.
18:19	RW	CONFIG_PERF_SIZE_1: Performance counter size.
20:21	RW	CONFIG_PERF_SIZE_2: Performance counter size.
22:23	RW	CONFIG_PERF_SIZE_3: Performance counter size.
24:25	RW	CONFIG_PERF_SIZE_4: Performance counter size.
26:27	RW	CONFIG_PERF_SIZE_5: Performance counter size.

Bits	SCOM	Field Mnemonic: Description
28:29	RW	CONFIG_PERF_SIZE_6: Performance counter size.
30:31	RW	CONFIG_PERF_SIZE_7: Performance counter size.
32	RW	CONFIG_PMULET_FREEZE_MODE: PMUlet freeze mode: 0 = Freeze on full. 1 = Free run.
33	RW	CONFIG_COMMON_FREEZE_MODE: Common freeze mode: 0 = Independent per PMUlet. 1 = Any counter full freezes all.
34	RW	CONFIG_PERF_RESET_MODE: PMUlet reset mode: 0 = Reset on read. 1 = Reset on write.
35	RW	CONFIG_PERFTRACE_ENABLE: Performance trace enable. Multiplex performance trace data onto the trace bus.
36	RW	CONFIG_PERFTRACE_FIXED_WINDOW: Performance trace fixed window mode. Take a sample every 255 or 255 x 128 cycles.
37	RW	CONFIG_PERFTRACE_PRESCALE: Performance trace prescale mode, wide-angle view. Performance counts are prescaled by 128.
38:39	RW	CONFIG_PERFTRACE_MODE: Performance trace input selection.
40:51	RW	CONFIG_TRACE_CONFIG_0: Selection for trace bus bits 0:43.
52:63	RW	CONFIG_TRACE_CONFIG_1: Selection for trace bus bits 44:87.

Register Name	**ELL Performance Monitor Selection Register**
Mnemonic	PB.IOE.LL2.IOEL_PERF_SEL_CONFIG
Address	000000000601201D (SCOM)
Description	This register selects performance counters.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	CONFIG_PERF_SELECT_0: Selection performance counter.
8:15	RW	CONFIG_PERF_SELECT_1: Selection performance counter.
16:23	RW	CONFIG_PERF_SELECT_2: Selection performance counter.
24:31	RW	CONFIG_PERF_SELECT_3: Selection performance counter.
32:39	RW	CONFIG_PERF_SELECT_4: Selection performance counter.
40:47	RW	CONFIG_PERF_SELECT_5: Selection performance counter.
48:55	RW	CONFIG_PERF_SELECT_6: Selection performance counter.
56:63	RW	CONFIG_PERF_SELECT_7: Selection performance counter.

Register Name	**ELL Performance Monitor Counter Register 0**
Mnemonic	PB.IOE.LL2.IOEL_PERF_COUNTERS_0
Address	000000000601201E (SCOM)
Description	This register contains the 16 MSb of performance monitor counters 0 – 3.

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	PERFMON_COUNTER_0: Performance counter 16 MSb.
16:31	RWX_WCLRREG	PERFMON_COUNTER_1: Performance counter 16 MSb.
32:47	RWX_WCLRREG	PERFMON_COUNTER_2: Performance counter 16 MSb.
48:63	RWX_WCLRREG	PERFMON_COUNTER_3: Performance counter 16 MSb.

Register Name	ELL Performance Monitor Counter Register 1
Mnemonic	PB.IOE.LL2.IOEL_PERF_COUNTERS_1
Address	000000000601201F (SCOM)
Description	This register contains the 16 MSb of performance monitor counters 4 – 7.

Bits	SCOM	Field Mnemonic: Description
0:15	RWX_WCLRREG	PERFMON_COUNTER_4: Performance counter 16 MSb.
16:31	RWX_WCLRREG	PERFMON_COUNTER_5: Performance counter 16 MSb.
32:47	RWX_WCLRREG	PERFMON_COUNTER_6: Performance counter 16 MSb.
48:63	RWX_WCLRREG	PERFMON_COUNTER_7: Performance counter 16 MSb.

Register Name	ELL Performance Monitor Counter LSB Register 0
Mnemonic	PB.IOE.LL2.IOEL_PERF_COUNT_LSB_0
Address	0000000006012020 (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	RESERVED.

Register Name	ELL Performance Monitor Counter LSB Register 1
Mnemonic	PB.IOE.LL2.IOEL_PERF_COUNT_LSB_1
Address	0000000006012021 (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	RESERVED.

Register Name	ELL Link 0 Syndrome Capture Register
Mnemonic	PB.IOE.LL2.IOEL_LINK0_SYN_CAPTURE
Address	0000000006012022 (SCOM)
Description	This register contains syndrome information for captured link 0 errors. Capture register

Bits	SCOM	Field Mnemonic: Description
0:27	RWX	LINK0_LINK_CAP_CRC_SYN: This field contains the CRC syndrome for a captured link error.

Bits	SCOM	Field Mnemonic: Description
28:35	RWX	LINK0_LINK_CAP_CRC_SYN_UNUSED1: Spare bits.
36:43	RWX	LINK0_LINK_CAP_SLECC_SYN0: This field contains SL ECC syndrome 0 for a captured link error.
44:51	RWX	LINK0_LINK_CAP_SLECC_SYN1: This field contains SL ECC syndrome 1 for a captured link error.
52:54	RWX	LINK0_LINK_CAP_CRC_SYN_UNUSED2: Spare bits.
55	RWX	LINK0_LINK_CAP_VALID: This bit indicates that the captured link error is valid.
56:58	RWX	LINK0_LINK_CAP_CRC_SYN_UNUSED3: Spare bits.
59:63	RWX	LINK0_LINK_CAP_CRC_LANE: This field contains the CRC lane from the syndrome decode.

Register Name	ELL Link 1 Syndrome Capture Register
Mnemonic	PB.IOE.LL2.IOEL_LINK1_SYN_CAPTURE
Address	0000000006012023 (SCOM)
Description	This register contains syndrome information for captured link 1 errors.

Bits	SCOM	Field Mnemonic: Description
0:27	RWX	LINK1_LINK_CAP_CRC_SYN: This field contains the CRC syndrome for a captured link error.
28:35	RWX	LINK1_LINK_CAP_CRC_SYN_UNUSED1: Spare bits.
36:43	RWX	LINK1_LINK_CAP_SLECC_SYN0: This field contains SL ECC syndrome 0 for a captured link error.
44:51	RWX	LINK1_LINK_CAP_SLECC_SYN1: This field contains SL ECC syndrome 1 for a captured link error.
52:54	RWX	LINK1_LINK_CAP_CRC_SYN_UNUSED2: Spare bits.
55	RWX	LINK1_LINK_CAP_VALID: This bit indicates that the captured link error is valid.
56:58	RWX	LINK1_LINK_CAP_CRC_SYN_UNUSED3: Spare bits.
59:63	RWX	LINK1_LINK_CAP_CRC_LANE: This field contains the CRC lane from the syndrome decode.

Register Name	ELL Link 0 EDPL Status Register
Mnemonic	PB.IOE.LL2.IOEL_LINK0_EDPL_STATUS
Address	0000000006012024 (SCOM)
Description	This register contains counts of EDPL errors.

Bits	SCOM	Field Mnemonic: Description
0:3	ROX	LINK0_EDPL_ERROR_COUNT_0: Count of EDPL errors.
4:7	ROX	LINK0_EDPL_ERROR_COUNT_1: Count of EDPL errors.
8:11	ROX	LINK0_EDPL_ERROR_COUNT_2: Count of EDPL errors.
12:15	ROX	LINK0_EDPL_ERROR_COUNT_3: Count of EDPL errors.
16:19	ROX	LINK0_EDPL_ERROR_COUNT_4: Count of EDPL errors.
20:23	ROX	LINK0_EDPL_ERROR_COUNT_5: Count of EDPL errors.
24:27	ROX	LINK0_EDPL_ERROR_COUNT_6: Count of EDPL errors.
28:31	ROX	LINK0_EDPL_ERROR_COUNT_7: Count of EDPL errors.
32:35	ROX	LINK0_EDPL_ERROR_COUNT_8: Count of EDPL errors.
36:39	ROX	LINK0_EDPL_ERROR_COUNT_9: Count of EDPL errors.

Bits	SCOM	Field Mnemonic: Description
40:43	ROX	LINK0_EDPL_ERROR_COUNT_10: Count of EDPL errors.
44:47	ROX	LINK0_EDPL_ERROR_COUNT_11: Count of EDPL errors.
48:63	RO	constant = 0b0000000000000000

Register Name	ELL Link 1 EDPL Status Register
Mnemonic	PB.IOE.LL2.IOEL_LINK1_EDPL_STATUS
Address	0000000006012025 (SCOM)
Description	This register contains counts of EDPL errors.

Bits	SCOM	Field Mnemonic: Description
0:3	ROX	LINK1_EDPL_ERROR_COUNT_0: Count of EDPL errors.
4:7	ROX	LINK1_EDPL_ERROR_COUNT_1: Count of EDPL errors.
8:11	ROX	LINK1_EDPL_ERROR_COUNT_2: Count of EDPL errors.
12:15	ROX	LINK1_EDPL_ERROR_COUNT_3: Count of EDPL errors.
16:19	ROX	LINK1_EDPL_ERROR_COUNT_4: Count of EDPL errors.
20:23	ROX	LINK1_EDPL_ERROR_COUNT_5: Count of EDPL errors.
24:27	ROX	LINK1_EDPL_ERROR_COUNT_6: Count of EDPL errors.
28:31	ROX	LINK1_EDPL_ERROR_COUNT_7: Count of EDPL errors.
32:35	ROX	LINK1_EDPL_ERROR_COUNT_8: Count of EDPL errors.
36:39	ROX	LINK1_EDPL_ERROR_COUNT_9: Count of EDPL errors.
40:43	ROX	LINK1_EDPL_ERROR_COUNT_10: Count of EDPL errors.
44:47	ROX	LINK1_EDPL_ERROR_COUNT_11: Count of EDPL errors.
48:63	RO	constant = 0b0000000000000000

Register Name	ELL Link 0 Link Quality Status Register
Mnemonic	PB.IOE.LL2.IOEL_LINK0_QUALITY
Address	0000000006012026 (SCOM)
Description	This register contains transmit and receive bandwidth and error-rate measurements.

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1:11	ROX	LINK0_TX_BW: Measure of the transmit bandwidth.
12	RO	constant = 0b0
13:23	ROX	LINK0_RX_BW: Measure of the receive bandwidth.
24	RO	constant = 0b0
25:47	ROX	LINK0_ERROR_RATE: Measure of the received error rate.
48:63	RO	constant = 0b0000000000000000

Register Name	ELL Link1 Link Quality Status Register
Mnemonic	PB.IOE.LL2.IOEL_LINK1_QUALITY
Address	0000000006012027 (SCOM)
Description	This register contains transmit and receive bandwidth and error-rate measurements.

Bits	SCOM	Field Mnemonic: Description
0	RO	constant = 0b0
1:11	ROX	LINK1_TX_BW: Measure of the transmit bandwidth.
12	RO	constant = 0b0
13:23	ROX	LINK1_RX_BW: Measure of the receive bandwidth.
24	RO	constant = 0b0
25:47	ROX	LINK1_ERROR_RATE: Measure of the received error rate.
48:63	RO	constant = 0b0000000000000000

Register Name	ELL Status Register
Mnemonic	PB.IOE.LL2.IOEL_DLL_STATUS
Address	0000000006012028 (SCOM)
Description	This register contains status information.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b0000
4:7	ROX	LINK0_CURRENT_STATE: This field indicates the current state of the initialization/training state machine.
8:11	RO	constant = 0b0000
12:15	ROX	LINK0_PRIOR_STATE: This field indicates the prior state of the initialization/training state machine.
16:18	RO	constant = 0b000
19:23	ROX	LINK0_MAX_PKT_TIMER: This field contains the maximum value reached by the packet delay counter.
24:27	RO	constant = 0b0000
28:31	ROX	LINK1_CURRENT_STATE: This field indicates the current state of the initialization/training state machine.
32:35	RO	constant = 0b0000
36:39	ROX	LINK1_PRIOR_STATE: This field indicates the prior state of the initialization/training state machine.
40:42	RO	constant = 0b000
43:47	ROX	LINK1_MAX_PKT_TIMER: This field contains the maximum value reached by the packet delay counter.
48:63	RO	constant = 0b0000000000000000

Register Name	Synchronization Configuration Register
Mnemonic	TP.TCXB.XB.SYNC_CONFIG
Address	0000000006030000 (SCOM)
Description	This register configures the congruence class (CC) counters.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	SYNC_PULSE_DELAY: This field configures the delay of the incoming synchronization pulse. The default is eight latches including asynchronous. Cycles delay of the reset of the phase counter: 0000 = 8. 0001 = 2. 0010 = 3. 0011 = 4. 0100 = 5. 0101 = 6. 0110 = 7. 0111 = 8. 1000 = 9. 1001 = 10. 1010 = 11. 1011 = 12. 1100 = 13. 1101 = 14. 1110 = 15. 1111 = 16.

Bits	SCOM	Field Mnemonic: Description
4	RW	LISTEN_TO_SYNC_PULSE_DIS: This bit disables phase-counter synchronization by the sync_pulse signal. The default is enabled. **Note:** When listen_to_sync is enabled, the chiplet gets corrupted for 200 cycles.
5	RW	SYNC_PULSE_INPUT_SEL: The default is 0. When set to 1, the alternative input of the sync_pulse is used. **Note:** When the input select is toggled, the chiplet gets corrupted for 200 cycles.
6	RW	USE_SYNC_FOR_SCAN: If this bit is set, use OPCG initial alignment for scan requests.
7	RW	CLEAR_CHIPLET_IS_ALIGNED: This bit clears the chiplet_is_aligned bit. For more information, see the Chiplet Status Register on page 51.
8	RW	UNIT_REGION_CLKCMD_ENABLE: This bit enables the unit interface to start or stop one dedicated region. It is used for the POWER9 cache/core.
9	RW	DISABLE_PCB_ITR: This bit disables interrupt generation within the CC. An interrupt is sent on each hld event.
10	RW	ENABLE_VITL_ALIGN_CHECK: This bit enables the vital alignment check to compare the alignment of an incoming synchronization pulse with the 2:1 vital LCB.
11	RW	SYNC_PULSE_OUT_DIS: When set to 1, this bit disables sync_pulse output. The master chiplet does not send synchronization pulses to slave chiplets anymore.
12:19	RW	UNUSED1219: Unused.

Register Name	**OPCG Alignment Register**
Mnemonic	TP.TCXB.XB.OPCG_ALIGN
Address	0000000006030001 (SCOM)
Description	This register is used to align the on-product clock generator (OPCG).

Bits	SCOM	Field Mnemonic: Description
0:3	RW	INOP_ALIGN: INOP phase alignment. (0: none, 1: 2:1, 2: 3:1, 3: 4:1, 4: 6:1, 5: 8:1, 6: 12:1, 7: 16:1, 8: 24:1, 9-15: 48:1).
4:7	RW	SNOP_ALIGN: SNOP phase alignment. (0: none, 1: 2:1, 2: 3:1, 3: 4:1, 4: 6:1, 5: 8:1, 6: 12:1, 7: 16:1, 8: 24:1, 9-15: 48:1).
8:11	RW	ENOP_ALIGN: ENOP phase alignment. (0: none, 1: 2:1, 2: 3:1, 3: 4:1, 4: 6:1, 5: 8:1, 6: 12:1, 7: 16:1, 8: 24:1, 9-15: 48:1).
12:19	RW	INOP_WAIT: INOP cycle delay (0 - 255).
20:31	RW	SNOP_WAIT: SNOP cycle delay (0 - 4095).
32:39	RW	ENOP_WAIT: ENOP cycle delay (0 - 255).
40	RW	INOP_FORCE_SG: INOP: Set the SG high during INOP.
41	RW	SNOP_FORCE_SG: SNOP: Set the SG high during SNOP.
42	RW	ENOP_FORCE_SG: ENOP: Set the SG high during ENOP (including LOOP phase).
43	RW	NO_WAIT_ON_CLK_CMD: 0 = A clock change request first waits the OPCG_WAIT cycles. 1 = A clock change request does not wait, when not in flush.
44:45	RW	ALIGN_SOURCE_SELECT: 0 = Use the INOPA setting from opcg_reg0. 1 = Use the rising edge of the synchronization pulse. 2 = Use the unit0_sync_lvl to align (for AVP refresh0). 3 = Use the unit1_sync_lvl to align (for AVP efresh1).
46	RW	UNUSED46: Unused.

Bits	SCOM	Field Mnemonic: Description
47:51	RW	SCAN_RATIO: This field contains the scan ratio (n = 0 - 15: (n+1):1, 16: 24:1, 17: 32:1, 18: 48:1, 19: 64:1, 20: 128:1). The default is 4:1 = 00011.
52:63	RW	OPCG_WAIT_CYCLES: This field contains the old PAD value. It is the delay at the beginning and end of the OPCG run that allows DC signals to arrive at the right time (0 4095). It must be higher than the pipeline latch depth. The default is 0x020.

Register Name	OPCG Control Register 0
Mnemonic	TP.TCXB.XB.OPCG_REG0
Address	0000000006030002 (SCOM)
Description	This register contains OPCG controls.

Bits	SCOM	Field Mnemonic: Description
0	RW	RUNN_MODE: 0 = BIST-mode is used for the LBIST. 1 = RUNN-mode is used for the ABIST/IOBIST.
1	RWX	OPCG_GO: Start the OPCG. This bit is cleared when the OPCG is done. Poll for opcg_done in the cplt_start register.
2	RWX	RUN_SCAN0: Run scan0. This bit overrides all the BIST mode settings except the scan_ratio. It starts a scan0 run. The bit is cleared when the OPCG is done. Poll for opcg_done in the cplt_start register.
3	RW	SCAN0_MODE: Set the PRPGs in scan0_mode but do not run the automatic scan0 sequence.
4	RWX	OPCG_IN_SLAVE_MODE: When selected, the OPCG waits for the master chiplet to get started. When Keep_MS_Mode is 0, SLAVE_MODE is cleared after an incoming trigger.
5	RWX	OPCG_IN_MASTER_MODE: When selected, the OPCG sends a trigger to all slave chiplets, When Keep_MS_MODE equals 0, MASTER_MODE is cleared after sending out one master trigger.
6	RW	KEEP_MS_MODE: When set to 1, the OPCG in master/slave mode bits are not cleared after one incoming OPCG trigger. The default is clear the master/slave mode bits.
7	RW	TRIGGER_OPCG_ON_UNIT0_SYNC_LVL: The unit pin is used for the AVP can trigger OPCG (unit0_sync_lvl).
8	RW	TRIGGER_OPCG_ON_UNIT1_SYNC_LVL: The unit pin used for the AVP can trigger OPCG (unit1_sync_lvl).
9	RWX	RUN_CHIPLET_SCAN0: Run scan0 on all regions and types. will clear the chiplet at all.
10	RWX	RUN_CHIPLET_SCAN0_NO_PLL: Run scan0 on all regions and types. This clears the chiplet at all exclude PLL regions. The PLL can keep running.
11	RW	RUN_OPCG_ON_UPDATE_DR: Start the OPCG engine when the scan updated signal (update_dr) is received (set pulse). This bit must be set to 1 for a set-pulse WRITE.
12	RW	RUN_OPCG_ON_CAPTURE_DR: Start the OPCG engine when the scan updated (capture_dr) is received (set pulse) This bit must be set to 1 for a set-pulse READ.
13	RW	STOP_RUNN_ON_XSTOP: Run-N mode: This bit stops run-n on a checkstop.
14	RW	OPCG_STARTS_BIST: Run-N mode: The OPCG engine controls start_bist for ABIST or IOBIST. For more information, see the BIST Register on page 151.
15:20	RW	UNUSED1520: Unused.
21:63	RWX	LOOP_COUNT: This field is the loop counter for LBIST and RUNN. When written, it contains the target value. When read, it contains the current counter value. It counts from 0 to the target value.

Register Name	OPCG Control Register 1
Mnemonic	TP.TCXB.XB.OPCG_REG1
Address	0000000006030003 (SCOM)
Description	This register contains OPCG controls.

Bits	SCOM	Field Mnemonic: Description
0:11	RW	SCAN_COUNT: BIST mode: Channel scan count (s = 0 - 4095) runn-mode: start_bist match value(0:11).
12:23	RW	MISR_A_VAL: BIST mode: The a value for the MISR aperture. runn-mode: start_bist match value(12:23).
24:35	RW	MISR_B_VAL: BIST mode: The b value for the MISR aperture. runn-mode: start_bist match value(24:35).
36:47	RW	MISR_INIT_WAIT: BIST mode: The delay MISR aperture. The MISRs become active after this number of loops.
48	RW	OPCG_SUPPRESS_EVEN_CLK: When this bit is set, the OPCG only creates even, not odd, clocks. This bit is used for runn to create only one clock in the fast domain. The default is 0.
49	RW	SCAN_CLK_USE_EVEN: When this bit is set, the OPCG generates a scan clock in even cycles instead of odd. The default is 0 (odd) for a scan.
50:51	RW	UNUSED2: Unused.
52	RW	RTIM_THOLD_FORCE: This bit forces rtim_thold low when not in test_dc mode. (It must be 0 at all times.)
53	RW	DISABLE_ARY_CLK_DURING_FILL: LBIST and SCAN0: This bit prevents the firing of ARY HLD during an NSL-fill.
54	RW	SG_HIGH_DURING_FILL: LBIST and SCAN0: Hold SG high during an NSL-fill.
55:56	RW	LBIST_SKITTER_CTL: BIST mode: 00 = Enable skitter during lbist_ip. 01 = Enable skitter when misr_active. See misr_init_wait. 10 = Skitter OPCG_GO mode. The falling edge = start. The rising edge = stop. 11 = Unused.
57	RW	MISR_MODE: BIST mode: MISR aperture mode. 0 = a-1 to b-1. 1 = Start to a and b to end.
58	RW	INFINITE_MODE: Infinite mode. RUNN and LBIST run forever and ignore the loop count.
59:63	RW	NSL_FILL_COUNT: BIST mode: NSL-fill count (0 - 31).

Register Name	OPCG Control Register 2
Mnemonic	TP.TCXB.XB.OPCG_REG2
Address	0000000006030004 (SCOM)
Description	This register contains OPCG controls.

Bits	SCOM	Field Mnemonic: Description
0	RWX	OPCG_GO2: OPCG go for broadcast sequences (start sequence).
1:3	RW	PRPG_WEIGHTING: prpg_activate: 1/2, 1/4, 1/8, 1/16, 1/2, 3/4, 7/8, 15/16.
4:15	RWX	PRPG_VALUE: This bit is set to 0 for PRPG always on. Else seed.
16:27	RW	PRPG_A_VAL: This field contains the a value for the PRPG aperture.
28:39	RW	PRPG_B_VAL: This field contains the b value for the PRPG aperture.
40	RW	PRPG_MODE: PRPG aperture mode. 0 = a-1 to b-1. 1 = Start to a and b to end.

Bits	SCOM	Field Mnemonic: Description
41:63	RW	UNUSED41_63: unused.

Register Name	Scan Region and Type Register
Mnemonic	TP.TCXB.XB.SCAN_REGION_TYPE
Address	0000000006030005 (SCOM)
Description	This register identifies the scan regions and types.

Bits	SCOM	Field Mnemonic: Description
0	RWX	SYSTEM_FAST_INIT: The default is 0. When this bit is set to 1, the MASK bits in the CMSK chain decide which part is scanned or scan0. MASK = 1 = scan0. MASK = 0 = part or scan chain.
1:2	RO	constant = 0b00
3	NCX	SCAN_REGION_VITL: Scan clock region vitl (vital = clock).
4	RWX	SCAN_REGION_PERV: Scan clock region perv (pervasive).
5	RWX	SCAN_REGION_UNIT1: Scan clock region iox0 - iof.
6	RWX	SCAN_REGION_UNIT2: Scan clock region iox1 - iof.
7	RWX	SCAN_REGION_UNIT3: Scan clock region iox2 - iof.
8	RWX	SCAN_REGION_UNIT4: Scan clock region ioppe - iof.
9	RWX	SCAN_REGION_UNIT5: Scan clock region pbiox0 - pb.
10	RWX	SCAN_REGION_UNIT6: Scan clock region pbiox1 - pb.
11	RWX	SCAN_REGION_UNIT7: Scan clock region pbiox2 - pb.
12	RWX	SCAN_REGION_UNIT8: Scan clock region unused.
13	RWX	SCAN_REGION_UNIT9: Scan clock region unused.
14	RWX	SCAN_REGION_UNIT10: Scan clock region plliox - iof.
15:47	RO	constant = 0b000000000000000000000000000000000
48	RW	SCAN_TYPE_FUNC: Scan chain func (functional).
49	RW	SCAN_TYPE_CFG: Scan chain mode (boot configuration and debug configuration).
50	RW	SCAN_TYPE_CCFG_GPTR: Scan chain CCFG or GPTR (pervasive: CCFG, others: GPTR).
51	RW	SCAN_TYPE_REGF: Scan chain regf (register files).
52	RW	SCAN_TYPE_LBIST: Scan chain lbst (LBIST).
53	RW	SCAN_TYPE_ABIST: Scan chain abst (ABIST).
54	RW	SCAN_TYPE_REPR: Scan chain repr (array repair).
55	RW	SCAN_TYPE_TIME: Scan chain time (array timing).
56	RW	SCAN_TYPE_BNDY: Scan chain bndy (boundary I/Os).
57	RW	SCAN_TYPE_FARR: Scan chain farr (fast array unload).
58	RW	SCAN_TYPE_CMSK: Scan chain cmsk (LBIST channel mask).
59	RW	SCAN_TYPE_INEX: Scan chain idex (c14 ASIC).
60:63	RO	constant = 0b0000

Register Name	Start/Stop Clocks Register
Mnemonic	TP.TCXB.XB.CLK_REGION
Address	0000000006030006 (SCOM)
Description	This register controls clock regions.

Bits	SCOM	Field Mnemonic: Description
0:1	RWX	CLOCK_CMD: This field contains the command for clock control: 00 = NOP 01 = Start 10= Stop 11 = Pulse (one pulse).
2	RWX	SLAVE_MODE: When selected, the clock command waits for the master chiplet to get started. This bit is cleared after an incoming slave trigger and Keep_MS_Mode_after_trigger is set to 0.
3	RWX	MASTER_MODE: When selected, the clock command sends out a trigger to all slave chiplets. This bit is cleared after sending out one master trigger and Keep_MS_Mode_after_trigger is set to 0.
4	RWX	CLOCK_REGION_PERV: For clock region perv (Pervasive).
5	RWX	CLOCK_REGION_UNIT1: For clock region iox0 - iof.
6	RWX	CLOCK_REGION_UNIT2: For clock region iox1 - iof.
7	RWX	CLOCK_REGION_UNIT3: For clock region iox2 - iof.
8	RWX	CLOCK_REGION_UNIT4: For clock region ioppe - iof.
9	RWX	CLOCK_REGION_UNIT5: For clock region pbiox0 - pb.
10	RWX	CLOCK_REGION_UNIT6: For clock region pbiox1 - pb.
11	RWX	CLOCK_REGION_UNIT7: For clock region pbiox2 - pb.
12	RWX	CLOCK_REGION_UNIT8: For clock region unused.
13	RWX	CLOCK_REGION_UNIT9: For clock region unused.
14	RWX	CLOCK_REGION_UNIT10: For clock region plliox - iof.
15:47	RO	constant = 0b000000000000000000000000000000000
48	RWX	SEL_THOLD_SL: Select the SL thresholds.
49	RWX	SEL_THOLD_NSL: Select the NSL thresholds.
50	RWX	SEL_THOLD_ARY: Select the array thresholds.
51	RO	constant = 0b0
52	RW	CLOCK_PULSE_USE_EVEN: For dual mesh support. The default for pulse is the odd phase. When this bit is set, the pulse is applied on the even phase.
53:63	RO	constant = 0b00000000000

Register Name	SL Clock Status Register
Mnemonic	TP.TCXB.XB.CLOCK_STAT_SL
Address	0000000006030008 (SCOM)
Description	This register contains clock status.

Bits	SCOM	Field Mnemonic: Description
0:3	RO	constant = 0b1111

Bits	SCOM	Field Mnemonic: Description
4	ROX	CLOCK_STATUS_PERV_SL: This bit indicates the status of the pervasive SL HLD. 0 = Run. 1 = Stop.
5	ROX	CLOCK_STATUS_UNIT1_SL: This bit indicates the status of iox0 - iof SL HLD. 0 = Run. 1 = Stop.
6	ROX	CLOCK_STATUS_UNIT2_SL: This bit indicates the status of iox1 - iof SL HLD. 0 = Run. 1 = Stop.

Register Name	BIST Register
Mnemonic	TP.TCXB.XB.BIST
Address	000000000603000B (SCOM)
Description	This register provides ABIST and IOBIST controls per region.

Bits	SCOM	Field Mnemonic: Description
0	RW	TC_BIST_START_TEST_DC: Keep this bit 0 during ABIST/IOBIST. It can be used to bypass the RUN-N start. When this bit is set, the BIST_START_TEST goes high immediately without waiting for RUN-N. BIST starts with the first HLD clock cycle.
1	RW	TC_SRAM_ABIST_MODE_DC: This bit selects the ABIST engines for SRAMs.
2	RW	TC_EDRAM_ABIST_MODE_DC: This bit selects the ABIST engines for eDRAMs.
3	RW	TC_IOBIST_MODE_DC: This bit selects the IOBIST engines.
4	RW	BIST_PERV: Pervasive region: 1 = BIST_START_TEST for this region is triggered. 0 = The region does not take part in the ABIST/IOBIST run.
5	RW	BIST_UNIT1: Region iox0 - iof: 1 = BIST_START_TEST for this region is triggered. 0 = The region does not take part in the ABIST/IOBIST run
6	RW	BIST_UNIT2: Region iox1 - iof: 1 = BIST_START_TEST for this region is triggered. 0 = The region does not take part in the ABIST/IOBIST run
7	RW	BIST_UNIT3: Region iox2 - iof: 1 = BIST_START_TEST for this region is triggered. 0 = The region does not take part in the ABIST/IOBIST run

Bits	SCOM	Field Mnemonic: Description
8	RW	BIST_UNIT4: Region ioppe - iof: 1 = BIST_START_TEST for this region is triggered. 0 = The region does not take part in the ABIST/IOBIST run
9	RW	BIST_UNIT5: Region pbiox0 - pb: 1 = BIST_START_TEST for this region is triggered. 0 = The region does not take part in the ABIST/IOBIST run
10	RW	BIST_UNIT6: Region pbiox1 - pb: 1 = BIST_START_TEST for this region is triggered. 0 = The region does not take part in the ABIST/IOBIST run
11	RW	BIST_UNIT7: Region pbiox2 - pb: 1 = BIST_START_TEST for this region is triggered. 0 = The region does not take part in the ABIST/IOBIST run
12	RW	BIST_UNIT8: Region unused: 1 = BIST_START_TEST for this region is triggered. 0 = The region does not take part in the ABIST/IOBIST run
13	RW	BIST_UNIT9: Region unused: 1 = BIST_START_TEST for this region is triggered. 0 = The region does not take part in the ABIST/IOBIST run
14	RW	BIST_UNIT10: Region plliox - iof: 1 = BIST_START_TEST for this region is triggered. 0 = The region does not take part in the ABIST/IOBIST run
15:47	RO	constant = 0b000000000000000000000000000000000
48	RW	BIST_STROBE_WINDOW_EN: This bit enables the strobe window only in TE = 1 mode. The OPCGGO tester pin enables ABIST compare after the ABIST is started. A special setup in the ABIST engine is required. The default is 0. System mode cannot enable this feature.
49:63	RO	constant = 0b000000000000000

Register Name	Checkstop Register 1
Mnemonic	TP.TCXB.XB.XSTOP1
Address	000000000603000C (SCOM)
Description	This register provides checkstop controls per region.

Bits	SCOM	Field Mnemonic: Description
0	RW	XSTOP1_MASK_B: This bit is a mask for a checkstop to clockstop of select regions (see xstop_perv, xstop_unit0..n). 0 = Ignore checkstop. 1 = Stop on checkstop.
1	RW	XSTOP1_UNUSED:
2	RW	TRIGGER_OPCG_ON_XSTOP1: This bit triggers OPCG on a checkstop instead of performing a clockstop.
3	RW	XSTOP1_WAIT_ALLWAYS: When set to 1, a checkstop waits independent from flush. The default is no wait, when flush is not set.
4	RW	XSTOP1_PERV: Region pervasive: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
5	RW	XSTOP1_UNIT1: Region iox0 - iof: 1 = The region is stopped. 0 = The region keeps running on a checkstop.

Bits	SCOM	Field Mnemonic: Description
6	RW	XSTOP1_UNIT2: Region iox1 - iof: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
7	RW	XSTOP1_UNIT3: Region iox2 - iof: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
8	RW	XSTOP1_UNIT4: Region ioppe - iof: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
9	RW	XSTOP1_UNIT5: Region pbiox0 - pb: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
10	RW	XSTOP1_UNIT6: Region pbiox1 - pb: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
11	RW	XSTOP1_UNIT7: Region pbiox2 - pb: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
12	RW	XSTOP1_UNIT8: Region unused: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
13	RW	XSTOP1_UNIT9: Region unused: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
14	RW	XSTOP1_UNIT10: Region plliox - iof: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
15:47	RO	constant = 0b000000000000000000000000000000000
48:59	RW	XSTOP1_WAIT_CYCLES: This field defines how many cycle a checkstop waits, after dropping flush, before thresholds are dropped. Between 0 - 4095 cycles are possible.
60:63	RO	constant = 0b0000

Register Name	Checkstop Register 2
Mnemonic	TP.TCXB.XB.XSTOP2
Address	000000000603000D (SCOM)
Description	This register provides checkstop controls per region.

Bits	SCOM	Field Mnemonic: Description
0	RW	XSTOP2_MASK_B: This bit is a mask for a checkstop to clockstop of select regions (see xstop_perv, xstop_unit0..n). 0 = Ignore checkstop. 1 = Stop on checkstop.
1	RW	XSTOP2_UNUSED: Unused.
2	RW	TRIGGER_OPCG_ON_XSTOP2: This bit triggers OPCG on a checkstop instead of performing a clockstop.
3	RW	XSTOP2_WAIT_ALLWAYS: When set to 1, a checkstop waits independent from flush. The default is no wait, when flush is not set.

Bits	SCOM	Field Mnemonic: Description
4	RW	XSTOP2_PERV: Region pervasive: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
5	RW	XSTOP2_UNIT1: Region iox0 - iof: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
6	RW	XSTOP2_UNIT2: Region iox1 - iof: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
7	RW	XSTOP2_UNIT3: Region iox2 - iof: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
8	RW	XSTOP2_UNIT4: Region ioppe - iof: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
9	RW	XSTOP2_UNIT5: Region pbiox0 - pb: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
10	RW	XSTOP2_UNIT6: Region pbiox1 - pb: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
11	RW	XSTOP2_UNIT7: Region pbiox2 - pb: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
12	RW	XSTOP2_UNIT8: Region unused: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
13	RW	XSTOP2_UNIT9: Region unused: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
14	RW	XSTOP2_UNIT10: Region plliox - iof: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
15:47	RO	constant = 0b000000000000000000000000000000000
48:59	RW	XSTOP2_WAIT_CYCLES: This field defines how many cycle a checkstop waits, after dropping flush, before thresholds are dropped. Between 0 - 4095 cycles are possible.
60:63	RO	constant = 0b0000

Register Name	Checkstop Register 3
Mnemonic	TP.TCXB.XB.XSTOP3
Address	000000000603000E (SCOM)
Description	This register provides checkstop controls per region.

Bits	SCOM	Field Mnemonic: Description
0	RW	XSTOP3_MASK_B: This bit is a mask for a checkstop to clockstop of select regions (see xstop_perv, xstop_unit0..n). 0 = Ignore checkstop. 1 = Stop on checkstop.

Bits	SCOM	Field Mnemonic: Description
1	RW	XSTOP3_UNUSED: Unused.
2	RW	TRIGGER_OPCG_ON_XSTOP3: This bit triggers OPCG on a checkstop instead of performing a clockstop.
3	RW	XSTOP3_WAIT_ALLWAYS: When set to 1, a checkstop waits independent from flush. The default is no wait, when flush is not set.
4	RW	XSTOP3_PERV: Region pervasive: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
5	RW	XSTOP3_UNIT1: Region iox0 - iof: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
6	RW	XSTOP3_UNIT2: Region iox1 - iof: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
7	RW	XSTOP3_UNIT3: Region iox2 - iof: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
8	RW	XSTOP3_UNIT4: Region ioppe - iof: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
9	RW	XSTOP3_UNIT5: Region pbiox0 - pb: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
10	RW	XSTOP3_UNIT6: Region pbiox1 - pb: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
11	RW	XSTOP3_UNIT7: Region pbiox2 - pb: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
12	RW	XSTOP3_UNIT8: Region unused: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
13	RW	XSTOP3_UNIT9: Region unused: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
14	RW	XSTOP3_UNIT10: Region plliox - iof: 1 = The region is stopped. 0 = The region keeps running on a checkstop.
15:47	RO	constant = 0b000000000000000000000000000000000
48:59	RW	XSTOP3_WAIT_CYCLES: This field defines how many cycle a checkstop waits, after dropping flush, before thresholds are dropped. Between 0 - 4095 cycles are possible.
60:63	RO	constant = 0b0000

Register Name	Error Status Register
Mnemonic	TP.TCXB.XB.ERROR_STATUS
Address	000000000603000F (SCOM)
Description	This register contains the clock-controller (CC) error status bits.

Bits	SCOM	Field Mnemonic: Description
0	RWX	PCB_WRITE_NOT_ALLOWED_ERR: This bit indicates a write on a read-only register.
1	RWX	PCB_READ_NOT_ALLOWED_ERR: This bit indicates a read not allowed, maybe a write-only register.
2	RWX	PCB_PARITY_ON_CMD_ERR: This bit indicates a parity error on a command.
3	RWX	PCB_ADDRESS_NOT_VALID_ERR: This bit indicates an invalid address.
4	RWX	PCB_PARITY_ON_ADDR_ERR: This bit indicates a parity error on an address.
5	RWX	PCB_PARITY_ON_DATA_ERR: This bit indicates a parity error on data.
6	RWX	PCB_PROTECTED_ACCESS_INVALID_ERR: This bit indicates a protection violation.
7	RWX	PCB_PARITY_ON_SPCIF_ERR: This bit indicates a parity error on SPCIF.
8	RWX	PCB_WRITE_AND_OPCG_IP_ERR: This bit indicates a PCB write while the OPCG is running.
9	RWX	SCAN_READ_AND_OPCG_IP_ERR: This bit indicates a scan read when the OPCG is running.
10	RWX	CLOCK_CMD_CONFLICT_ERR:This bit indicates a clock command is in progress.
11	RWX	SCAN_COLLISION_ERR: This bit indicates a scan region selected of running region.
12	RWX	PREVENTED_SCAN_COLLISION_ERR: This bit indicates a PCB request to set a scan region that is running.
13	RWX	OPCG_TRIGGER_ERR: This bit indicates a OPCG gets triggered while the OPCG is running.

Bits	SCOM	Field Mnemonic: Description
14	RWX	PHASE_CNT_CORRUPTION_ERR: This bit indicates that phase counters inside the chiplet are out of sync.
15	RWX	CLOCK_CMD_PREVENTED_ERR: This bit indicates a security or scan collision prevented a clock start.
16	RWX	PARITY_ON_OPCG_SM_ERR: This bit indicates a parity error on the OPCG state machine.
17	RWX	PARITY_ON_CLOCK_MUX_REG_ERR: This bit indicates a parity error on the scan, clock region, type, or clock status register.
18	RWX	PARITY_ON_OPCG_REG_ERR: This bit indicates a parity error on the OPCG registers.
19	RWX	PARITY_ON_SYNC_CONFIG_REG_ERR: This bit indicates a parity error on the sync configuration register.
20	RWX	PARITY_ON_XSTOP_REG_ERR: This bit indicates a parity error on the checkstop register.
21	RWX	PARITY_ON_GPIO_REG_ERR: This bit indicates a parity error on the GP0, 4, 5, or 6 registers.
22	RWX	CLKCMD_REQUEST_ERR: This bit indicates a region clock command has one request pending but gets a second one.
23	RWX	CBS_PROTOCOL_ERR: This bit indicates a CBS protocol error. The REQ/ACK sequence is wrong.
24	RWX	VITL_ALIGN_ERR: This bit indicates the VITL alignment is out of sync to the sync pulse.
25	RWX	UNIT_SYNC_LVL_ERR: This bit indicates that the Unit0 and Unit1 sync level pulse are not in sync. The AVP is broken.
26	RWX	PARITY_ON_SELFBOOT_CMD_STATE_ERR: This bit indicates a parity error on the self-boot command state.
27	RWX	UNUSED_ERROR27: Unused.
28	RWX	UNUSED_ERROR28: Unused.
29	RWX	UNUSED_ERROR29: Unused.
30	RWX	UNUSED_ERROR30: Unused.
31	RWX	UNUSED_ERROR31: Unused.

Register Name	OPCG Control Capture Register 1
Mnemonic	TP.TCXB.XB.OPCG_CAPT1
Address	0000000006030010 (SCOM)
Description	This register contains information about sequence cycles.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	COUNT: 0000 = 12 cycles 0001 – 1100 = Cycles 1 – 12. 1101 – 1111 = 24 normal, no fast.
4:8	RW	SEQ_01: Sequence cycle 1 for normal/slow region (sl, nsl, ary, se, fce).
9:13	RW	SEQ_02: Sequence cycle 2 for normal/slow region (sl, nsl, ary, se, fce).
14:18	RW	SEQ_03: Sequence cycle 3 for normal/slow region (sl, nsl, ary, se, fce).
19:23	RW	SEQ_04: Sequence cycle 4 for normal/slow region (sl, nsl, ary, se, fce).
24:28	RW	SEQ_05: Sequence cycle 5 for normal/slow region (sl, nsl, ary, se, fce).
29:33	RW	SEQ_06: Sequence cycle 6 for normal/slow region (sl, nsl, ary, se, fce).
34:38	RW	SEQ_07: Sequence cycle 7 for normal/slow region (sl, nsl, ary, se, fce).

Bits	SCOM	Field Mnemonic: Description
39:43	RW	SEQ_08: Sequence cycle 8 for normal/slow region (sl, nsl, ary, se, fce).
44:48	RW	SEQ_09: Sequence cycle 9 for normal/slow region (sl, nsl, ary, se, fce).
49:53	RW	SEQ_10: Sequence cycle 10 for normal/slow region (sl, nsl, ary, se, fce).
54:58	RW	SEQ_11: Sequence cycle 11 for normal/slow region (sl, nsl, ary, se, fce).
59:63	RW	SEQ_12: Sequence cycle 12 for normal/slow region (sl, nsl, ary, se, fce).

Register Name	OPCG Control Capture Register 2
Mnemonic	TP.TCXB.XB.OPCG_CAPT2
Address	0000000006030011 (SCOM)
Description	This register contains information about sequence cycles.

Bits	SCOM	Field Mnemonic: Description
0:3	RW	UNUSED_CAPT2:
4:8	RW	SEQ_13_01EVEN: Sequence cycle 1. Even, for fast region, or cycle 13, for normal region (sl, nsl, ary, se, fce).
9:13	RW	SEQ_14_01ODD: Sequence cycle 1. Odd, for fast region, or cycle 14, for normal region (sl, nsl, ary, se, fce).
14:18	RW	SEQ_15_02EVEN: Sequence cycle 2. Even, for fast region, or cycle 15, for normal region (sl, nsl, ary, se, fce).
19:23	RW	SEQ_16_02ODD: Sequence cycle 2. Odd, for fast region, or cycle 16, for normal region (sl, nsl, ary, se, fce).

49:53	RW	SEQ_11ODD: Sequence cycle 11. Odd, for fast region (sl, nsl, ary, se, fce).
54:58	RW	SEQ_12EVEN: Sequence cycle 12. Even, for fast region (sl, nsl, ary, se, fce).
59:63	RW	SEQ_12ODD: Sequence cycle 12. Odd, for fast region (sl, nsl, ary, se, fce).

Register Name	Debug CBS CC Register
Mnemonic	TP.TCXB.XB.DBG_CBS_CC
Address	0000000006030013 (SCOM)
Description	This register is used for debugging.

Bits	SCOM	Field Mnemonic: Description
0	ROX	DBG_RESET_EP: Reset the endpoint. Are the CC and CTRL in a reset state?
1	ROX	DBG_OPCG_IP: OPCG in progress, not idle.
2	ROX	DBG_VITL_CLKOFF: VITL HLD stopped, when enabled. Need pipeline-latch-depth cycles to switch this latch.
3	ROX	DBG_TEST_ENABLE: Test enable.
4	ROX	DBG_CBS_REQ: CBS interface: request (latched).
5:7	ROX	DBG_CBS_CMD: CBS interface: command (latched).
8:12	ROX	DBG_CBS_STATE: CBS command state machine. 00000 = Idle.
13	ROX	DBG_SECURITY_DEBUG_MODE: Status of the security mode bit.
14	ROX	DBG_CBS_PROTOCOL_ERROR: CBS protocol error. A REQ is raised, although the state machine is not in IDLE. Need reset_ep to clear this bit. There is no impact on the IPL.
15	ROX	DBG_PCB_IDLE: The PCB interface is in the IDLE state.

Bits	SCOM	Field Mnemonic: Description
16:19	ROX	DBG_CURRENT_OPCG_MODE: This field contains the current or latest OPCG mode. 0 = NOP. 1 = LBIST. 2 = ABIST. 3 = RUNN. 4 = SCAN0. 5 = SCAN. 6 = SCAN rotate. 7 = SCAN with UpdateDR. 8 = SCAN with CaptureDR. 9 = CLK Change Request. 0 – 15 = Unused.
20:23	ROX	DBG_LAST_OPCG_MODE: Previous OPCG mode.
24	ROX	DBG_PCB_ERROR: PCB interface error. Read the CC Error Register or set CBS_CMD = 001 to switch FSI CBS debug information to the CC Error Register.
25	ROX	DBG_PARITY_ERROR: Any parity error or non-PCB parity. Read the CC Error Register or set CBS_CMD = 001 to switch FSI CBS Debug Information to the CC Error Register.
26	ROX	DBG_CC_ERROR: Any other CC error. Read the CC Error Register or set CBS_CMD = 001 to switch FSI CBS debug information to the CC Error Register.
27	ROX	DBG_CHIPLET_IS_ALIGNED: This bit 1 when the a valid align pulse was send out.
28	ROX	DBG_PCB_REQUEST_SINCE_RESET: Reset clears this bit. The first PCB request sets it.
29	ROX	DBG_PARANOIA_TEST_ENABLE_CHANGE: The rising or falling edge on test enable, after reset. Need reset_ep to clear. There is no impact on IPL.
30	ROX	DBG_PARANOIA_VITL_CLKOFF_CHANGE: Rising or falling edge on vitl_clkoff, after reset. Need reset_ep to clear. There is no impact on IPL.
31	ROX	TP_TPFSI_CBS_ACK: Only representation of the CC ACK signal going to the FSI.

Register Name	CC Protect Mode Register
Mnemonic	TP.TCXB.XB.CC_PROTECT_MODE_REG
Address	00000000060303FE (SCOM)
Description	This register enables read and write protection.

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_READ_PROTECT_ENABLE: Enable read protection.
1	RW	CC_WRITE_PROTECT_ENABLE: Enable write protection.

Register Name	Atomic Lock Register
Mnemonic	TP.TCXB.XB.CC_ATOMIC_LOCK_REG
Address	00000000060303FF (SCOM)
Description	This register enables an atomic lock.

Bits	SCOM	Field Mnemonic: Description
0	RW	CC_ATOMIC_LOCK_ENABLE: This bit enables an atomic lock.
1:4	ROX	CC_ATOMIC_ID: This field contains the atomic ID.
5:7	RO	constant = 0b000

Bits	SCOM	Field Mnemonic: Description
8:15	ROX	CC_ATOMIC_ACTIVITY: This field is the atomic lock counter.

Register Name	Global Checkstop FIR
Mnemonic	TP.TCXB.XB.XFIR
Address	0000000006040000 (SCOM)
Description	This is a fault-isolation register for global FIRs.

Bits	SCOM	Field Mnemonic: Description
0	RWX	XFIR_IN0: Summary bit (any checkstop).
1	RWX	XFIR_IN1: Checkstop broadcast over the OOB.
2	RWX	XFIR_IN2: Unused.
3	RWX	XFIR_IN3: Checkstop from the pervasive unit.
4	RWX	XFIR_IN4: Checkstop from PBIOX0.
5	RWX	XFIR_IN5: Checkstop from PBIOX1.
6	RWX	XFIR_IN6: Checkstop from PBIOX2 FIR.
7	RWX	XFIR_IN7: Unused.
8	RWX	XFIR_IN8: Checkstop from IOX0 FIR.
9	RWX	XFIR_IN9: Checkstop from IOX1 FIRP.
10	RWX	XFIR_IN10: Checkstop from IOX2 FIR.
11	RWX	XFIR_IN11: Checkstop from IOPPE FIR.
12:25	RWX	XFIR_IN12: Unused.
26	RWX	XFIR_IN26: Checkstop on the debug trigger.

Register Name	Global Recoverable FIR
Mnemonic	TP.TCXB.XB.RFIR
Address	0000000006040001 (SCOM)
Description	This is a fault-isolation register for global recoverable errors.

Bits	SCOM	Field Mnemonic: Description
0	ROX	RFIR_IN0: Local checkstop from PBIOX0, PBIOX1, PBIOX2, IOPPE.
1	ROX	LFIR_RECOV_ERR: Recoverable error from the pervasive unit.
2	ROX	RFIR_IN4: Recoverable error from PBIOX0.
3	ROX	RFIR_IN5: Recoverable error from PBIOX1.
4	ROX	RFIR_IN6: Recoverable error from PBIOX2.
5	ROX	RFIR_IN7: unused.
6	ROX	RFIR_IN8: Recoverable error from IOX0 FIR.
7	ROX	RFIR_IN9: Recoverable error from IOX1 FIR.
8	ROX	RFIR_IN10: Recoverable error from IOX2 FIR.
9	ROX	RFIR_IN11: Recoverable error from IOPPE FIR.

Bits	SCOM	Field Mnemonic: Description
10:23	ROX	RFIR_IN12: Unused.

Register Name	FIR Mask Register
Mnemonic	TP.TCXB.XB.FIR_MASK
Address	0000000006040002 (SCOM)
Description	This is a FIR mask register.

Bits	SCOM	Field Mnemonic: Description
0	RW	FIR_MASK_IN0: Mask for the XFIR summary bit (any checkstop).
1	RW	FIR_MASK_IN1: Mask for the XFIR from other chiplets.
2	RW	FIR_MASK_IN2: unused.
3	RW	FIR_MASK_IN3: Mask for the XFIR from the pervasive unit.
4	RW	FIR_MASK_IN4: Mask for PBIOX0 XFIR and RFIR.
5	RW	FIR_MASK_IN5: Mask for PBIOX1 XFIR and RFIR.
6	RW	FIR_MASK_IN6: Mask for PBIOX2 XFIR and RFIR.
7	RW	FIR_MASK_IN7: Unused.
8	RW	FIR_MASK_IN8: Mask for IOX0 XFIR and RFIR.
9	RW	FIR_MASK_IN9: Mask for IOX1 XFIR and RFIR.
10	RW	FIR_MASK_IN10: Mask for IOX2 XFIR and RFIR.
11	RW	FIR_MASK_IN11: Mask for IOPPE XFIR and RFIR.
12:25	RW	FIR_MASK_IN12: Unused.
26	RW	FIR_MASK_IN26: Mask for debug trigger and local checkstop to recoverable error.

Register Name	Special Attention Register
Mnemonic	TP.TCXB.XB.SPATTN
Address	0000000006040004 (SCOM) 0000000006040005 (SCOM1) 0000000006040006 (SCOM2)
Description	This register contains special attention fields.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	ROX	NCX	NCX	SPATTN_IN0: Special attention from PBIOx0.
1	ROX	NCX	NCX	SPATTN_IN1: Special attention from PBIOx1.
2	ROX	NCX	NCX	SPATTN_IN2: Special attention from PBIOx2.
3	ROX	NCX	NCX	SPATTN_IN3: Unused.
4	ROX	NCX	NCX	SPATTN_IN4: Special attention from IOx0.
5	ROX	NCX	NCX	SPATTN_IN5: Special attention from IOx1.
6	ROX	NCX	NCX	SPATTN_IN6: Special attention from IOx2.
7	ROX	NCX	NCX	SPATTN_IN7: Special attention from IOPPE.
8	ROX	NCX	NCX	SPATTN_IN8: Unused special attentions.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
9	ROX	NCX	NCX	SPATTN_IN9: Unused special attentions.

Register Name	Special Attention Mask Register
Mnemonic	TP.TCXB.XB.SPA_MASK
Address	0000000006040007 (SCOM)
Description	This register provides a special attention mask.

Bits	SCOM	Field Mnemonic: Description
0:9	RW	SPA_MASK_IN: Special attention mask.

Register Name	Mode Register
Mnemonic	TP.TCXB.XB.EPS.FIR.MODE_REG
Address	0000000006040008 (SCOM)
Description	This register contains mode bits.

Bits	SCOM	Field Mnemonic: Description
0	RW	MODE_IN0: Unused.
1	RW	MODE_IN1: Unused.
2	RW	MODE_IN2: Unused.
3	RW	MODE_IN3: Unused.
4	RW	MODE_IN4: Stop chip TOD on checkstop (unused in POWER9).
5	RW	MODE_IN5: Stop chip TOD on recoverable (unused in POWER9).
6	RW	MODE_IN6: Disable the propagation of checkstops to other chips.
7	RW	MODE_IN7: Unused.
8	RW	MODE_IN8: Enable checkstop on special attention.
9	RW	MODE_IN9: Mask direct/local error.
10	RW	MODE_IN10: Unused.
11	RW	MODE_IN11: Unused.
12:15	RW	MODE_IN: Unused.

Register Name	Host Attention Register
Mnemonic	TP.TCXB.XB.HOSTATTN
Address	0000000006040009 (SCOM)
Description	This register contains host attention bits.

Bits	SCOM	Field Mnemonic: Description
0	ROX	HOSTATTN_IN0: Host Attention Summary Bit.
1	ROX	HOSTATTN_IN1: Unused.
2	ROX	HOSTATTN_IN2: Unused.

Bits	SCOM	Field Mnemonic: Description
3	ROX	HOSTATTN_IN3: Unused.
4	ROX	HOSTATTN_IN4: Unused.
5	ROX	HOSTATTN_IN5: Unused.
6	ROX	HOSTATTN_IN6: Unused.
7	ROX	HOSTATTN_IN7: Unused.
8	ROX	HOSTATTN_IN8: Unused.
9	ROX	HOSTATTN_IN9: Unused.
10	ROX	HOSTATTN_IN10: Unused.
11	ROX	HOSTATTN_IN11: Unused.
12	ROX	HOSTATTN_IN12: Unused.
13	ROX	HOSTATTN_IN13: Unused.
14	ROX	HOSTATTN_IN14: Unused.
15	ROX	HOSTATTN_IN15: Unused.
16	ROX	HOSTATTN_IN16: Unused.
17	ROX	HOSTATTN_IN17: Unused.
18	ROX	HOSTATTN_IN18: Unused.
19	ROX	HOSTATTN_IN19: Unused.
20	ROX	HOSTATTN_IN20: Unused.
21	ROX	HOSTATTN_IN21: Unused.
22	ROX	HOSTATTN_IN22: Unused.

Register Name	Local FIR
Mnemonic	TP.TCXB.XB.LOCAL_FIR
Address	000000000604000A (SCOM) 000000000604000B (SCOM1) 000000000604000C (SCOM2)
Description	This is a fault-isolation register for local errors.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	WOX_AND	WOX_OR	FIR_IN0: CFIR internal parity error.
1	RWX	WOX_AND	WOX_OR	FIR_IN1: Local errors from GPIO (PCB error).
2	RWX	WOX_AND	WOX_OR	FIR_IN2: Local errors from CC (PCB error).
3	RWX	WOX_AND	WOX_OR	FIR_IN3: Local errors from CC (OPCG, parity, scan collision, and so on).
4	RWX	WOX_AND	WOX_OR	FIR_IN4: Local errors from PSC (PCB error).
5	RWX	WOX_AND	WOX_OR	FIR_IN5: Local errors from PSC (parity error).
6	RWX	WOX_AND	WOX_OR	FIR_IN6: Local errors from Thermal (parity error).
7	RWX	WOX_AND	WOX_OR	FIR_IN7: Local errors from Thermal (PCB error).
8	RWX	WOX_AND	WOX_OR	FIR_IN8: Local errors from Thermal (Trip error critical).
9	RWX	WOX_AND	WOX_OR	FIR_IN9: Local errors from Thermal (Trip error fatal).
10	RWX	WOX_AND	WOX_OR	FIR_IN10: Thermal voltage trip error.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
11	RWX	WOX_AND	WOX_OR	FIR_IN11: Local errors from Debug (error).
12	RWX	WOX_AND	WOX_OR	FIR_IN12: Local errors from Trace Array 0 (SCOM error).
13	RWX	WOX_AND	WOX_OR	FIR_IN13: Local errors from Trace Array 0.
14	RWX	WOX_AND	WOX_OR	FIR_IN14: Local errors from Trace Array 1 (SCOM error).
15	RWX	WOX_AND	WOX_OR	FIR_IN15: Local errors from Trace Array 1.
16	RWX	WOX_AND	WOX_OR	FIR_IN16: Unused.
17	RWX	WOX_AND	WOX_OR	FIR_IN17: Unused.
18	RWX	WOX_AND	WOX_OR	FIR_IN18: Unused.
19	RWX	WOX_AND	WOX_OR	FIR_IN19: Unused.
20	RWX	WOX_AND	WOX_OR	FIR_IN20: Unused.
21	RWX	WOX_AND	WOX_OR	FIR_IN21: Unused.
22	RWX	WOX_AND	WOX_OR	FIR_IN22: Unused.
23	RWX	WOX_AND	WOX_OR	FIR_IN23: Unused.
24	RWX	WOX_AND	WOX_OR	FIR_IN24: Unused.
25	RWX	WOX_AND	WOX_OR	FIR_IN25: Unused.
26	RWX	WOX_AND	WOX_OR	FIR_IN26: Unused.
27	RWX	WOX_AND	WOX_OR	FIR_IN27: Unused.
28	RWX	WOX_AND	WOX_OR	FIR_IN28: Unused.
29	RWX	WOX_AND	WOX_OR	FIR_IN29: Unused.
30	RWX	WOX_AND	WOX_OR	FIR_IN30: Unused.
31	RWX	WOX_AND	WOX_OR	FIR_IN31: Unused.
32	RWX	WOX_AND	WOX_OR	FIR_IN32: Unused.
33	RWX	WOX_AND	WOX_OR	FIR_IN33: Unused.
34	RWX	WOX_AND	WOX_OR	FIR_IN34: Unused.
35	RWX	WOX_AND	WOX_OR	FIR_IN35: Unused.
36	RWX	WOX_AND	WOX_OR	FIR_IN36: Unused.
37	RWX	WOX_AND	WOX_OR	FIR_IN37: Unused.
38	RWX	WOX_AND	WOX_OR	FIR_IN38: Unused.
39	RWX	WOX_AND	WOX_OR	FIR_IN39: Unused.
40	RWX	WOX_AND	WOX_OR	FIR_IN40: Unused.
41	RWX	WOX_AND	WOX_OR	FIR_IN41: Malfunction alert broadcast via the OOB.

Register Name	Local FIR Mask Register
Mnemonic	TP.TCXB.XB.EPS.FIR.LOCAL_FIR_MASK
Address	000000000604000D (SCOM) 000000000604000E (SCOM1) 000000000604000F (SCOM2)
Description	This register masks the local FIR bits.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0:41	RW	WO_AND	WO_OR	LFIR_MASK_IN: Mask for the LEM error collection vector.

Register Name	Local FIR Action0 Register
Mnemonic	TP.TCXB.XB.EPS.FIR.LOCAL_FIR_ACTION0
Address	0000000006040010 (SCOM)
Description	Local FIR Action0

Bits	SCOM	Field Mnemonic: Description
0:41	RW	FIR_ACTION0_IN: Action0 mask.

Register Name	Local FIR Action1 Register
Mnemonic	TP.TCXB.XB.EPS.FIR.LOCAL_FIR_ACTION1
Address	0000000006040011 (SCOM)
Description	Local FIR Action1

Bits	SCOM	Field Mnemonic: Description
0:41	RW	FIR_ACTION1_IN: Action1 mask.

Register Name	Group Checkstop Mask Register
Mnemonic	TP.TCXB.XB.EPS.FIR.GXSTOP_TRIG_REG
Address	0000000006040013 (SCOM)
Description	This register masks group checkstops.

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP_TRIG_IN0: Mask bit for a system checkstop.
1	RW	GXSTP_TRIG_IN1: Mask bit for a recoverable error.
2	RW	GXSTP_TRIG_IN2: Mask bit for a special attention.
3	RW	GXSTP_TRIG_IN3: Mask bit for a local checkstop.
4	RW	GXSTP_TRIG_IN4: Mask bit for a type 4 error (host attention).
5	RW	GXSTP_TRIG_IN5: Mask bit for an OOB sys_checkstop input (0).
6	RW	GXSTP_TRIG_IN6: Mask bit for an OOB sys_checkstop input (1).
7	RW	GXSTP_TRIG_IN7: Mask bit for a group checkstop input (0).
8	RW	GXSTP_TRIG_IN8: Mask bit for a group checkstop input (1).
9	RW	GXSTP_TRIG_IN9: Mask bit for a debug checkstop on a trigger.
10	RW	GXSTP_TRIG_IN10: Unused.
11	RW	GXSTP_TRIG_IN11: Unused.

Register Name	Group0 Checkstop Mask Register
Mnemonic	TP.TCXB.XB.EPS.FIR.GXSTOP0_MASK_REG
Address	0000000006040014 (SCOM)
Description	This register masks group 0 checkstops.

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP0_TRIG_IN0: Mask bit for system checkstop.
1	RW	GXSTP0_TRIG_IN1: Mask bit for a recoverable error.
2	RW	GXSTP0_TRIG_IN2: Mask bit for a special attention.
3	RW	GXSTP0_TRIG_IN3: Mask bit for a local checkstop.
4	RW	GXSTP0_TRIG_IN4: Mask bit for a type 4 error (host attention).
5	RW	GXSTP0_TRIG_IN5: Mask bit for an OOB sys_checkstop input (0).
6	RW	GXSTP0_TRIG_IN6: Mask bit for an OOB sys_checkstop input (1).
7	RW	GXSTP0_TRIG_IN7: Mask bit for a group checkstop input (0).
8	RW	GXSTP0_TRIG_IN8: Mask bit for a group checkstop input (1).
9	RW	GXSTP0_TRIG_IN9: Mask bit for a debug checkstop on a trigger.
10	RW	GXSTP0_TRIG_IN10: Unused.
11	RW	GXSTP0_TRIG_IN11: Unused.

Register Name	Group1 Checkstop Mask Register
Mnemonic	TP.TCXB.XB.EPS.FIR.GXSTOP1_MASK_REG
Address	0000000006040015 (SCOM)
Description	This register masks group 1 checkstops.

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP1_TRIG_IN0: Mask bit for a system checkstop.
1	RW	GXSTP1_TRIG_IN1: Mask bit for a recoverable error.
2	RW	GXSTP1_TRIG_IN2: Mask bit for a special attention.
3	RW	GXSTP1_TRIG_IN3: Mask bit for a local checkstop.
4	RW	GXSTP1_TRIG_IN4: Mask bit for a type 4 error (host attention).
5	RW	GXSTP1_TRIG_IN5: Mask bit for an OOB sys_checkstop input (0).
6	RW	GXSTP1_TRIG_IN6: Mask bit for an OOB sys_checkstop input (1).
7	RW	GXSTP1_TRIG_IN7: Mask bit for a group checkstop input (0).
8	RW	GXSTP1_TRIG_IN8: Mask bit for a group checkstop input (1).
9	RW	GXSTP1_TRIG_IN9: Mask bit for a debug checkstop on a trigger.
10	RW	GXSTP1_TRIG_IN10: Unused.
11	RW	GXSTP1_TRIG_IN11: Unused.

Register Name	Group2 Checkstop Mask Register
Mnemonic	TP.TCXB.XB.EPS.FIR.GXSTOP2_MASK_REG
Address	0000000006040016 (SCOM)
Description	This register masks group 2 checkstops.

Bits	SCOM	Field Mnemonic: Description
0	RW	GXSTP2_TRIG_IN0: Mask bit for a system checkstop.
1	RW	GXSTP2_TRIG_IN1: Mask bit for a recoverable error.
2	RW	GXSTP2_TRIG_IN2: Mask bit for a special attention.
3	RW	GXSTP2_TRIG_IN3: Mask bit for a local checkstop.
4	RW	GXSTP2_TRIG_IN4: Mask bit for a type 4 error (host attention).
5	RW	GXSTP2_TRIG_IN5: Mask bit for an OOB sys_checkstop input (0).
6	RW	GXSTP2_TRIG_IN6: Mask bit for an OOB sys_checkstop input (1).
7	RW	GXSTP2_TRIG_IN7: Mask bit for a group checkstop input (0).
8	RW	GXSTP2_TRIG_IN8: Mask bit for a group checkstop input (1).
9	RW	GXSTP2_TRIG_IN9: Mask bit for a debug checkstop on a trigger.
10	RW	GXSTP2_TRIG_IN10: Unused.
11	RW	GXSTP2_TRIG_IN11: Unused.

Register Name	Summary Mask Register
Mnemonic	TP.TCXB.XB.EPS.FIR.SUM_MASK_REG
Address	0000000006040017 (SCOM)
Description	This register contains summary bits.

Bits	SCOM	Field Mnemonic: Description
0	RW	SMASK_IN0: System checkstop summary bit.
1	RW	SMASK_IN1: Recoverable summary bit.
2	RW	SMASK_IN2: Special attention summary bit.
3	RW	SMASK_IN3: Local checkstop summary bit.
4	RW	SMASK_IN4: Type4 host attention summary bit.

Register Name	Local Checkstop Register
Mnemonic	TP.TCXB.XB.LOCAL_XSTOP_ERR
Address	0000000006040018 (SCOM)
Description	This register contains local checkstop bits.

Bits	SCOM	Field Mnemonic: Description
0	ROX	LOCAL_XSTOP_IN0: Local checkstop summary bit 0.
1	ROX	LOCAL_XSTOP_IN1: Local checkstop from pbiox0 bit 0.
2	ROX	LOCAL_XSTOP_IN2: Local checkstop from pbiox1 bit 0.

Bits	SCOM	Field Mnemonic: Description
3	ROX	LOCAL_XSTOP_IN3: Local checkstop from pbiox2 bit 0.
4	ROX	LOCAL_XSTOP_IN4: Unused.
5	ROX	LOCAL_XSTOP_IN5: Local checkstop from iox0.
6	ROX	LOCAL_XSTOP_IN6: Local checkstop from iox1.
7	ROX	LOCAL_XSTOP_IN7: Local checkstop from iox2.
8	ROX	LOCAL_XSTOP_IN8: Local checkstop from ppe.
9	ROX	LOCAL_XSTOP_IN9: Unused.
10	ROX	LOCAL_XSTOP_IN10: Unused.
11	ROX	LOCAL_XSTOP_IN11: Unused.
12	ROX	LOCAL_XSTOP_IN12: Unused.
13	ROX	LOCAL_XSTOP_IN13: Unused.
14	ROX	LOCAL_XSTOP_IN14: Unused.
15	ROX	LOCAL_XSTOP_IN15: Unused.
16	ROX	LOCAL_XSTOP_IN16: Unused.
17	ROX	LOCAL_XSTOP_IN17: Unused.
18	ROX	LOCAL_XSTOP_IN18: Unused.
19	ROX	LOCAL_XSTOP_IN19: Unused.
20	ROX	LOCAL_XSTOP_IN20: Unused.
21	ROX	LOCAL_XSTOP_IN21: Unused.
22	ROX	LOCAL_XSTOP_IN22: Unused.

Register Name	Local Checkstop Mask Register
Mnemonic	TP.TCXB.XB.LOCAL_XSTOP_MASK
Address	0000000006040019 (SCOM)
Description	This register masks local checkstops.

Bits	SCOM	Field Mnemonic: Description
0:21	RW	LOCAL_XSTOP_MASK_IN: Local checkstop mask.

Register Name	Host Attention Mask Register
Mnemonic	TP.TCXB.XB.HOSTATTN_MASK
Address	000000000604001A (SCOM)
Description	This register masks host attention.

Bits	SCOM	Field Mnemonic: Description
0:21	RW	HOSTATTN_MASK_IN: Host attention mask.

Register Name	DTS Loop1 Results Register
Mnemonic	TP.TCXB.XB.EPS.THERM.DTS_RESULT0
Address	0000000006050000 (SCOM)
Description	This register contains digital thermal sensor (DTS) results.

Bits	SCOM	Field Mnemonic: Description
0:15	ROX	DTS_0_RESULT: Calibrated DTS result of the sensor with ID 0.
16:31	ROX	DTS_1_RESULT: Calibrated DTS result of the sensor with ID 1.
32:63	RO	constant = 0b00000000000000000000000000000000

Register Name	DTS Trace Results Register
Mnemonic	TP.TCXB.XB.EPS.THERM.DTS_TRC_RESULT
Address	0000000006050003 (SCOM)
Description	This register contains DTS trace results.

Bits	SCOM	Field Mnemonic: Description
0:43	ROX	TIMESTAMP_COUNTER_VALUE: Time stamp counter value during DTS trace mode.
44	ROX	TIMESTAMP_COUNTER_OVERFLOW_ERR: Overflow error bit of the time stamp counter value during DTS trace mode.
45:47	RO	constant = 0b000
48:63	ROX	DTS_1_RESULT: Calibrated DTS result of the sensor with ID 1.

Register Name	CPM and DTS Enables and Controls Register
Mnemonic	TP.TCXB.XB.EPS.THERM.THERM_MODE_REG
Address	000000000605000F (SCOM)
Description	This register is used to enable and control the critical path monitor (CPM) and digital thermal sensor (DTS).

Bits	SCOM	Field Mnemonic: Description
0	RW	THERM_DIS_CPM_BUBBLE_CORR: Critical path result bubble correction active.
1	RW	THERM_FORCE_THRES_ACT: This bit forces tpc_therm_thres_mac clock gating off and activates the clocks.
2:4	RW	THERM_THRES_TRIP_ENA: therm_thres_trip compare enables. 1xx = trip0 – warning. x1x = trip1 – critical. xx1 = trip2 – fatal.
5	RW	THERM_DTS_SAMPLE_ENA: 0 = No DTS sampling. 1 = DTS sampling is enabled and a below counter compare match can occur.

Bits	SCOM	Field Mnemonic: Description
6:9	RW	THERM_SAMPLE_PULSE_CNT: A 16 MHz sample pulse is fed into an 18-bit counter. With the therm_sample_pulse_cnt it is possible to select a high-order bit of the counter to enable resolutions of sampling DTSs between 2.5 µs and 80 ms. An edge-detection circuit detects the rising edge of the selected counter bit, and this triggers a DTS sample. 0000 = 16 ms 0001 = 8 ms 0010 = 4 ms 0011 = 2 ms 0100 = 1 ms 0101 = 0.5 ms 0110 = 250 µs 0111 = 125 µs 1000 = 62 .5 µs 1001 = 31.3 µs 1010 = 15.6 µs 1011 = 7.8 µs 1100 = 3.9 µs 1101 = 2 µs 1110 = 1 µs 1111 = 0.5 µs
10:11	RW	THERM_THRES_MODE_ENA: Forces maximum or minimum mode in the threshold unit: 00 = Is off. 11 = Is legal. 10 = Maximum mode. 01 = Minimum mode.
12	RW	DTS_TRIGGER_MODE: Unused.
13	RW	DTS_TRIGGER_SEL: Unused.
14	RW	THERM_THRES_OVERFLOW_MASK: 0 = therm_overflow_err is enabled. 1 = therm_overflow_err is disabled.
15	RW	THERM_MODE_UNUSED: Unused.
16:19	RW	THERM_DTS_READ_SEL: Selects which DTS result is provided with PCB read addr_v(4): 0000 = DTS 0 0001 = DTS 1 0010 = DTS 2 0100 = DTS 4 1111 = Worst-case sensor
20:21	RW	THERM_DTS_ENABLE_L1: Loop1 DTS enables: 1x = DTS 0 available. x1 = DTS 1 available.
22:34	RO	constant = 0b0000000000000
35:36	RW	Reserved field.

Register Name	Skitter Control Register
Mnemonic	TP.TCXB.XB.EPS.THERM.SKITTER_MODE_REG
Address	0000000006050010 (SCOM)
Description	This register controls skitter.

Bits	SCOM	Field Mnemonic: Description
0	RW	SKITTER_HOLD_SAMPLE: Forces skitter to hold the current sample.

Bits	SCOM	Field Mnemonic: Description
1	RW	DISABLE_SKITTER_STICKINESS: If '0', accumulation mode. A '1' samples a new value each cycle and resets the sticky value.
2:3	RW	SKITTER_MODE_UNUSED1: Unused.
4:5	RW	SKITTER_HOLD_DBGTRIG_SEL: bit0 = hold_on_trigger0 bit1 = hold_on_trigger1
6:7	RW	SKITTER_RESET_TRIG_SEL: bit0 = reset_sticky_on_trigger0 bit1 = reset_sticky_on_trigger1
8:9	RW	SKITTER_SAMPLE_GUTS: Selects the guts to measure: 00 = guts1. 01 = guts2. 10 = guts3. 11 = guts4.
10:43	RO	constant = 0b0000000000000000000000000000000000
44	ROX	SKITTER_HOLD_SAMPLE_WITH_TRIGGER: Forces skitter to hold the current sample on the DBG trigger. This has the highest priority.
45	ROX	SKITTER_DATA_V_LT:If '1', the data requested by a skitter force read register has finished and data is present in the skitter data register in the collector macro. The data can be read by any combination of V25/V26/V27 PCB reads.

Register Name	Error Injection Control Register
Mnemonic	TP.TCXB.XB.EPS.THERM.INJECT_REG
Address	0000000006050011 (SCOM)
Description	This register controls error injection.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	THERM_INJECT_TRIP: 00 = No injection. 01 = Warning trip-level injection. 10 = Critical trip-level injection. 11 = Fatal trip-level injection.
2:3	RW	THERM_INJECT_MODE: 00 = No injection. 01 = Injection on the next DTS sample. 10 = Solid injection for the next DTS samples until the bit setting changes. 11 = Not used.

Register Name	Control/Force Reset Register
Mnemonic	TP.TCXB.XB.EPS.THERM.CONTROL_REG
Address	0000000006050012 (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0	WO_1P	Reserved field.
1	WO_1P	Reserved field.

Bits	SCOM	Field Mnemonic: Description
2	WO_1P	Reserved field.
3	WO_1P	Reserved field.
4	WO_1P	Reserved field.
5	WO_1P	Reserved field.
6	WO_1P	Reserved field.
7	WO_1P	Reserved field.
8	WO_1P	Reserved field.
9	WO_1P	Reserved field.
10	WO_1P	Reserved field.
11	WO_1P	Reserved field.
12	WO_1P	Reserved field.

Register Name	Thermal Error Status Register
Mnemonic	TP.TCXB.XB.EPS.THERM.ERR_STATUS_REG
Address	0000000006050013 (SCOM)
Description	This register contains error masks.

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field.
1	ROX	Reserved field.
2	ROX	Reserved field.
3	ROX	Reserved field.
4	ROX	Reserved field.
5	ROX	Reserved field.
6	ROX	Reserved field.
7	ROX	Reserved field.
8	ROX	Reserved field.
9	ROX	Reserved field.
10	ROX	Reserved field.
11	ROX	Reserved field.
12	ROX	Reserved field.
13	ROX	Reserved field.
14	ROX	Reserved field.
15	ROX	Reserved field.
16	ROX	SERIAL_SHIFTCNT_MODEREG_PARITY_ERR_MASK: Serial shift-count parity error mask.
17	ROX	THERM_MODEREG_PARITY_ERR_MASK: Thermal-mode register parity error mask.
18	ROX	SKITTER_MODEREG_PARITY_ERR_MASK: Skitter-mode register parity error mask.
19	ROX	SKITTER_FORCEREG_PARITY_ERR_MASK: Skitter force register parity error mask.
20	ROX	SCAN_INIT_VERSION_REG_PARITY_ERR_MASK: Scan init version register parity error mask.

Bits	SCOM	Field Mnemonic: Description
21	ROX	VOLT_MODEREG_PARITY_ERR_MASK: Volt mode register parity error mask.
22	RO	constant = 0b0
23	ROX	COUNT_STATE_ERR_MASK: Count state machine error mask.
24	ROX	RUN_STATE_ERR_MASK: Run state machine error mask.
25	ROX	THRES_STATE_ERR_MASK: Threshold state machine error mask.
26	ROX	OVERFLOW_ERR_MASK: DTS calibration calculation overflow error mask.
27	ROX	SHIFTER_PARITY_ERR_MASK: Shifter parity error mask.
28	ROX	SHIFTER_VALID_ERR_MASK: Shifter valid error mask.
29	ROX	TIMEOUT_ERR_MASK: Timeout error mask.
30	ROX	F_SKITTER_READ_ERR_MASK: Force skitter read one hot error mask.
31	ROX	PCB_ERR_MASK: Pervasive control bus error mask.
32:39	RO	constant = 0b00000000
40:43	ROX	Reserved field.
44:46	ROX	Reserved field.
47	ROX	Reserved field.
48	ROX	Reserved field.
49:50	ROX	Reserved field.
51:54	ROX	Reserved field.
55	ROX	Reserved field.
56	ROX	Reserved field.
57	ROX	Reserved field.
58	ROX	Reserved field.
59	ROX	Reserved field.
60:63	RO	constant = 0b0000

Register Name	Skitter Force Read Register
Mnemonic	TP.TCXB.XB.EPS.THERM.SKITTER_FORCE_REG
Address	0000000006050014 (SCOM)
Description	This register forces a skitter read.

Bits	SCOM	Field Mnemonic: Description
0	RW	F_SKITTER_READ: Forces the read of that particular skitter.

Register Name	Skitter Clock SRC Control Register
Mnemonic	TP.TCXB.XB.EPS.THERM.SKITTER_CLKSRC_REG
Address	0000000006050016 (SCOM)
Description	This register contains skitter controls.

Bits	SCOM	Field Mnemonic: Description
0:2	RW	SKITTER0_CLKSRC: Selects the clock to measure: 000 = Local mesh clock 001 = External pin skitter_c1_1_in 010 = Local d1clk only if d_mode = 1 011 = External pin skitter_c1_2_in 100 = Local lclk only if d_mode = 1 101 = External pin skitter_c1_3_in 110 = Unused 111 = External pin skitter_c1_4_in
3:35	RO	constant = 0b000000000000000000000000000000000
36:37	RW	SKITTER0_DELAY_SELECT: Selects the delay to be added between the clock source multiplexer and the inverter chain of skitter0. (The base line delay is 12.2 psec.) 00 = No delay 01 = 0.6 psec 10 = 1.8 psec 11 = 5 psec

Register Name	Skitter Data Register Read Bits 0:63
Mnemonic	TP.TCXB.XB.EPS.THERM.SKITTER_DATA0
Address	0000000006050019 (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	RESERVED.

Register Name	Skitter Data Register Read Bits 32:95
Mnemonic	TP.TCXB.XB.EPS.THERM.SKITTER_DATA1
Address	000000000605001A (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	RESERVED.

Register Name	Skitter Data Register Read Bits 64:127
Mnemonic	TP.TCXB.XB.EPS.THERM.SKITTER_DATA2
Address	000000000605001B (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:63	ROX	RESERVED.

Register Name	Time Stamp Counter Read Register
Mnemonic	TP.TCXB.XB.EPS.THERM.TIMESTAMP_COUNTER_READ
Address	000000000605001C (SCOM)
Description	This register contains the time-stamp counter value during DTS trace mode and an overflow error bit.

Bits	SCOM	Field Mnemonic: Description
0:43	ROX	TIMESTAMP_COUNTER_VALUE: Time-stamp counter value during DTS trace mode.
44	ROX	TIMESTAMP_COUNTER_OVERFLOW_ERR: Overflow error bit of the time stamp counter value during DTS trace mode.

3. XBUS Chiplet PCB Slave

The POWER9 processor registers are listed alphabetically by mnemonic in the following address table.

Mnemonic	Address	Page
TP.TPCHIP.NET.PCBSLXB.ASSIST_INTERRUPT_REG	0x00000000060F0011	180
TP.TPCHIP.NET.PCBSLXB.ATOMIC_LOCK_REG	0x00000000060F03FF	187
TP.TPCHIP.NET.PCBSLXB.ATTN_INTERRUPT_REG	0x00000000060F001A	181
TP.TPCHIP.NET.PCBSLXB.EDRAM_STATUS	0x00000000060F0029	185
TP.TPCHIP.NET.PCBSLXB.ERROR_REG	0x00000000060F001F	182
TP.TPCHIP.NET.PCBSLXB.HANG_PULSE_0_REG	0x00000000060F0020	183
TP.TPCHIP.NET.PCBSLXB.HANG_PULSE_1_REG	0x00000000060F0021	183
TP.TPCHIP.NET.PCBSLXB.HANG_PULSE_2_REG	0x00000000060F0022	183
TP.TPCHIP.NET.PCBSLXB.HANG_PULSE_3_REG	0x00000000060F0023	184
TP.TPCHIP.NET.PCBSLXB.HANG_PULSE_4_REG	0x00000000060F0024	184
TP.TPCHIP.NET.PCBSLXB.HANG_PULSE_5_REG	0x00000000060F0025	184

TP.TPCHIP.NET.PCBSLXB.TIMEOUT_REG	0x00000000060F0010	180
TP.TPCHIP.NET.PCBSLXB.VITAL_SCAN_OUT	0x00000000060F0017	180
TP.TPCHIP.NET.PCBSLXB.XSTOP_INTERRUPT_REG	0x00000000060F001C	181

The POWER9 processor registers are listed in the following tables.

Register Name	Primary PCB Slave Address Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.PRIMARY_ADDRESS_REG
Address	00000000060F0000 (SCOM)
Description	This register contains the PCB slave's primary address.

Bits	SCOM	Field Mnemonic: Description
0:5	RO	Reserved.

Register Name	Multicast Group 1 Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.MULTICAST_GROUP_1
Address	00000000060F0001 (SCOM)
Description	Multicast Group Registers 1 – 4 are used to are used to assign chiplets to a specific multicast group within the pervasive connect bus (PCB). Multicast groups make it possible to address more than a single chiplet at a time. They are used to read or write the same resource in multiple chiplets at the same time. **Note:** Multicast groups are initially set up at IPL, but they can be modified at any time by firmware or power management code.

Bits	SCOM	Field Mnemonic: Description
0:2	RO	constant = 111
3:5	RW	MULTICAST1_GROUP: Multicast group1 setting. Set this field to a multicast group that this chiplet should be a member of. The chiplet can be assigned to up to four multicast groups by setting this field in the four multicast group registers to the corresponding multicast group numbers. If the chiplet is member of less than four multicast groups, set this field to 0b111 in the multicast group register that is not required. The 0b111 setting indicates multicast group 7; all chiplets are members of multicast group 7 regardless of any multicast register being set to 0b111. 000: Multicast group 0. 001: Multicast group 1. 010: Multicast group 2. 011: Multicast group 3. 100: Multicast group 4 – unused. 101: Multicast group 5 – unused. 110: Multicast group 6 – unused. 111: Multicast group 7.

Register Name	Multicast Group 2 Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.MULTICAST_GROUP_2
Address	00000000060F0002 (SCOM)
Description	Multicast Group Registers 1 – 4 are used to are used to assign chiplets to a specific multicast group within the pervasive connect bus (PCB). Multicast groups make it possible to address more than a single chiplet at a time. They are used to read or write the same resource in multiple chiplets at the same time. **Note:** Multicast groups are initially set up at IPL, but they can be modified at any time by firmware or power management code.

Bits	SCOM	Field Mnemonic: Description
0:2	RO	constant = 111

Bits	SCOM	Field Mnemonic: Description
3:5	RW	MULTICAST2_GROUP: Multicast group2 setting. Set this field to a multicast group that this chiplet should be a member of. The chiplet can be assigned to up to four multicast groups by setting this field in the four multicast group registers to the corresponding multicast group numbers. If the chiplet is member of less than four multicast groups, set this field to 0b111 in the multicast group register that is not required. The 0b111 setting indicates multicast group 7; all chiplets are members of multicast group 7 regardless of any multicast register being set to 0b111. 000: Multicast group 0. 001: Multicast group 1. 010: Multicast group 2. 011: Multicast group 3. 100: Multicast group 4 – unused. 101: Multicast group 5 – unused. 110: Multicast group 6 – unused. 111: Multicast group 7.

Register Name	Multicast Group 3 Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.MULTICAST_GROUP_3
Address	00000000060F0003 (SCOM)
Description	Multicast Group Registers 1 – 4 are used to are used to assign chiplets to a specific multicast group within the pervasive connect bus (PCB). Multicast groups make it possible to address more than a single chiplet at a time. They are used to read or write the same resource in multiple chiplets at the same time. **Note:** Multicast groups are initially set up at IPL, but they can be modified at any time by firmware or power management code.

Bits	SCOM	Field Mnemonic: Description
0:2	RO	constant = 111
3:5	RW	MULTICAST3_GROUP: Multicast group3 setting. Set this field to a multicast group that this chiplet should be a member of. The chiplet can be assigned to up to four multicast groups by setting this field in the four multicast group registers to the corresponding multicast group numbers. If the chiplet is member of less than four multicast groups, set this field to 0b111 in the multicast group register that is not required. The 0b111 setting indicates multicast group 7; all chiplets are members of multicast group 7 regardless of any multicast register being set to 0b111. 000: Multicast group 0. 001: Multicast group 1. 010: Multicast group 2. 011: Multicast group 3. 100: Multicast group 4 – unused. 101: Multicast group 5 – unused. 110: Multicast group 6 – unused. 111: Multicast group 7.

Register Name	Multicast Group 4 Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.MULTICAST_GROUP_4
Address	00000000060F0004 (SCOM)
Description	Multicast Group Registers 1 – 4 are used to are used to assign chiplets to a specific multicast group within the pervasive connect bus (PCB). Multicast groups make it possible to address more than a single chiplet at a time. They are used to read or write the same resource in multiple chiplets at the same time. **Note:** Multicast groups are initially set up at IPL, but they can be modified at any time by firmware or power management code.

Bits	SCOM	Field Mnemonic: Description
0:2	RO	constant = 111
3:5	RW	MULTICAST4_GROUP: Multicast group4 setting. Set this field to a multicast group that this chiplet should be a member of. The chiplet can be assigned to up to four multicast groups by setting this field in the four multicast group registers to the corresponding multicast group numbers. If the chiplet is member of less than four multicast groups, set this field to 0b111 in the multicast group register that is not required. The 0b111 setting indicates multicast group 7; all chiplets are members of multicast group 7 regardless of any multicast register being set to 0b111. 000: Multicast group 0. 001: Multicast group 1. 010: Multicast group 2. 011: Multicast group 3. 100: Multicast group 4 – unused. 101: Multicast group 5 – unused. 110: Multicast group 6 – unused. 111: Multicast group 7.

Register Name	Timeout Select Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.TIMEOUT_REG
Address	00000000060F0010 (SCOM)
Description	This register contains the int_timeout setting.

Bits	SCOM	Field Mnemonic: Description
0:1	RW	Reserved field.

Register Name	Assist Interrupt Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.ASSIST_INTERRUPT_REG
Address	00000000060F0011 (SCOM)
Description	This register contains the attn, recov, and xstop (checkstop) settings.

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved.
1	ROX	Reserved.
2	ROX	Reserved.

Register Name	Vital Scan Out Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.VITAL_SCAN_OUT
Address	00000000060F0017 (SCOM)
Description	This register contains the vital scan out settings.

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved.

Register Name	Chiplet Heartbeat Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.HEARTBEAT_REG
Address	00000000060F0018 (SCOM)
Description	This register indicates whether a chiplet heartbeat is detected.

Bits	SCOM	Field Mnemonic: Description
0	ROX	HEARTBEAT_DEAD: A chiplet heartbeat is not detected.

Register Name	PLL Lock Indications Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.PLL_LOCK_REG
Address	00000000060F0019 (SCOM)
Description	This register contains lock indications from the PLLs,

Bits	SCOM	Field Mnemonic: Description
0:3	ROX	Reserved.

Register Name	Attention Interrupt Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.ATTN_INTERRUPT_REG
Address	00000000060F001A (SCOM)
Description	This register contains the attn setting.

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved.

Register Name	Recovery Interrupt Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.RECOV_INTERRUPT_REG
Address	00000000060F001B (SCOM)
Description	This register contains the recoverable interrupt setting.

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field.

Register Name	Checkstop Interrupt Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.XSTOP_INTERRUPT_REG
Address	00000000060F001C (SCOM)
Description	This register contains the checkstop interrupt setting.

Bits	SCOM	Field Mnemonic: Description
0	ROX	Reserved field.

Register Name	Slave Configuration Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.SLAVE_CONFIG_REG
Address	00000000060F001E (SCOM)
Description	This is the slave configuration register.

Bits	SCOM	Field Mnemonic: Description
0	RW	CFG_DISABLE_PERV_THOLD_CHECK: This bit disables the pervasive threshold check.
1	RW	CFG_DISABLE_MALF_PULSE_GEN: This bit disables pulse generation for a malfunction alert. Switch back to level.
2	RW	CFG_STOP_HANG_CNT_SYS_XSTP: This bit disables the hang counter stop for a system checkstop.
3	RW	CFG_DISABLE_CL_ATOMIC_LOCK: This bit disables the atomic lock for the chiplet accesses.
4	RW	CFG_DISABLE_HEARTBEAT: This bit disables the check for voltage and gridclock in the chiplet.
5	RW	CFG_DISABLE_FORCE_TO_ZERO: This bit disables the force to zero for error cases.
6	RW	CFG_PM_DISABLE: This bit disables the power management set/reset interface for net_ctrl registers.
7	RW	CFG_PM_MUX_DISABLE: This bit disables the power-management multiplex request signal.
8:13	RW	ERROR_MASK: These are mask bits for slave error reporting.
14:15	RW	RESERVED.

Register Name	Error Capture Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.ERROR_REG
Address	00000000060F001F (SCOM)
Description	This register is used to capture errors.

Bits	SCOM	Field Mnemonic: Description
0	RWX_WCLEAR	CE_ERROR: Correctable error on the PCB bus.
1:3	RWX_WCLEAR	CHIPLET_ERRORS: Errors reported by chiplet. 000 = No error. 001 = XSCOM command blocked due to pending errors. 010 = Chiplet offline. 011 = Partial good. 100 = Invalid address, address error, or bad access type. 101 = Clock error. 110 = Parity error, received unexpected packet, or wrong packet number. 111 = Timeout. This register is for debug purposes only. It only holds meaningful data if it is cleared after each error.
4	RWX_WCLEAR	PARITY_ERROR: Parity error on the PCB interface.
5	RWX_WCLEAR	DATA_BUFFER_ERROR: Parity error in the data buffer.
6	RWX_WCLEAR	ADDR_BUFFER_ERROR: Parity error in the address buffer.
7	RWX_WCLEAR	PCB_FSM_ERROR: Invalid state error in the PCB FSM.
8	RWX_WCLEAR	CL_FSM_ERROR: Invalid state error in the chiplet FSM.
9	RWX_WCLEAR	INT_RX_FSM_ERROR: Invalid state error in the interrupt RX FSM.
10	RWX_WCLEAR	INT_TX_FSM_ERROR: Invalid state error in the interrupt TX FSM.
11	RWX_WCLEAR	INT_TYPE_ERROR: Invalid interrupt type.
12	RWX_WCLEAR	CL_DATA_ERROR: Parity error on the chiplet interface.

Bits	SCOM	Field Mnemonic: Description
13	RWX_WCLEAR	INFO_ERROR: Parity error on the chiplet information lines.
14	RWX_WCLEAR	UNUSED_0:
15	RWX_WCLEAR	CHIPLET_ATOMIC_LOCK_ERROR: Chiplet atomic lock error.
16	RWX_WCLEAR	PCB_INTERFACE_ERROR: Error on the PCB interface component for the internal endpoint.
17	RWX_WCLEAR	CHIPLET_OFFLINE: A heartbeat check indicated that the chiplet is offline.
18	RWX_WCLEAR	EDRAM_SEQUENCE_ERR: Error in eDRAM power-up sequence.
19	RWX_WCLEAR	CTRL_REG_PARITY_ERROR: The control register parity is bad.
20	RWX_WCLEAR	ADDRESS_REG_PARITY_ERROR: The address register parity is bad.
21	RWX_WCLEAR	TIMEOUT_REG_PARITY_ERROR: The timeout select register parity is bad.
22	RWX_WCLEAR	CONFIG_REG_PARITY_ERROR: The slave configuration register parity is bad.
23	RWX_WCLEAR	UNUSED_1:
24	RWX_WCLEAR	DIV_REG_PARITY_ERROR: The divider register parity is bad.
25:28	RWX_WCLEAR	PLL_UNLOCK_ERROR: Unlock from the chiplet PLL.

Register Name	Hang Pulse Generation Register 0
Mnemonic	TP.TPCHIP.NET.PCBSLXB.HANG_PULSE_0_REG
Address	00000000060F0020 (SCOM)
Description	This register contains hang pulse 0 information.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_0: Value of hang pulse 0. Time period = 2^{value} x (precounter_reg + 1) / pcb_freq. 34 ≥ value > 0.
6	RW	SUPPRESS_HANG_0: If set to '1', hang pulses are suppressed in case of a checkstop.

Register Name	Hang Pulse Generation Register 1
Mnemonic	TP.TPCHIP.NET.PCBSLXB.HANG_PULSE_1_REG
Address	00000000060F0021 (SCOM)
Description	This register contains hang pulse 1 information.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_1: This field contains the value of hang pulse 1. The time period equals 2^{value} x (precounter_reg + 1) / pcb_freq. The range of valid values is 34 – 0.
6	RW	SUPPRESS_HANG_1: If set to '1', hang pulses are suppressed in case of a checkstop.

Register Name	Hang Pulse Generation Register 2
Mnemonic	TP.TPCHIP.NET.PCBSLXB.HANG_PULSE_2_REG
Address	00000000060F0022 (SCOM)
Description	This register contains hang pulse 2 information.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_2: This field contains the value of hang pulse 2. The time period equals 2^{value} x (precounter_reg + 1) / pcb_freq. The range of valid values is 34 – 0.
6	RW	SUPPRESS_HANG_2: If set to '1', hang pulses are suppressed in case of a checkstop.

Register Name	Hang Pulse Generation Register 3
Mnemonic	TP.TPCHIP.NET.PCBSLXB.HANG_PULSE_3_REG
Address	00000000060F0023 (SCOM)
Description	This register contains hang pulse 3 information.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_3: This field contains the value of hang pulse 3. The time period equals 2^{value} x (precounter_reg + 1) / pcb_freq. The range of valid values is 34 – 0.
6	RW	SUPPRESS_HANG_3: If set to '1', hang pulses are suppressed in case of a checkstop.

Register Name	Hang Pulse Generation Register 4
Mnemonic	TP.TPCHIP.NET.PCBSLXB.HANG_PULSE_4_REG
Address	00000000060F0024 (SCOM)
Description	This register contains hang pulse 4 information.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_4: This field contains the value of hang pulse 4. The time period equals 2^{value} x (precounter_reg + 1) / pcb_freq. The range of valid values is 34 – 0.
6	RW	SUPPRESS_HANG_4: If set to '1', hang pulses are suppressed in case of a checkstop.

Register Name	Hang Pulse Generation Register 5
Mnemonic	TP.TPCHIP.NET.PCBSLXB.HANG_PULSE_5_REG
Address	00000000060F0025 (SCOM)
Description	This register contains hang pulse 5 information. This hang counter is exclusively used to generate the malfunction alert pulse.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_5: This field contains the value of hang pulse 5. The time period equals 2^{value} x (precounter_reg + 1) / pcb_freq. The range of valid values is 34 – 0.
6	RW	SUPPRESS_HANG_5: If set to '1', hang pulses are suppressed in case of a checkstop.

Register Name	Hang Pulse Generation Register 6
Mnemonic	TP.TPCHIP.NET.PCBSLXB.HANG_PULSE_6_REG
Address	00000000060F0026 (SCOM)
Description	This register contains hang pulse 6 information. This hang counter is exclusively used for heartbeat generation.

Bits	SCOM	Field Mnemonic: Description
0:5	RW	HANG_PULSE_REG_6: This field contains the value of hang pulse 6. The time period equals 2^{value} x (precounter_reg + 1) / pcb_freq. The range of valid values is 34 – 0.
6	RW	SUPPRESS_HANG_6: If set to '1', hang pulses are suppressed in case of a checkstop.

Register Name	Hang Counter Clock Divider Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.PRE_COUNTER_REG
Address	00000000060F0028 (SCOM)
Description	This register is the divider for the hang counter clock.

Bits	SCOM	Field Mnemonic: Description
0:7	RW	PRE_COUNTER: This field is the divider for the hang counter clock. It divides the clock by n + 1. (The default is n = 0).

Register Name	eDRAM Control Status Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.EDRAM_STATUS
Address	00000000060F0029 (SCOM)
Description	This register contains the eDRAM control status.

Bits	SCOM	Field Mnemonic: Description
0:3	ROX	EDRAM_STAT: This field contains the eDRAM control status.

Register Name	NET CTRL0 Register (NA in PERV CPLT)
Mnemonic	TP.TPCHIP.NET.PCBSLXB.NET_CTRL0
Address	00000000060F0040 (SCOM) 00000000060F0041 (SCOM1) 00000000060F0042 (SCOM2)
Description	NET CTRL0 Register (NA in PERV CPLT)

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	RWX_WAND	RWX_WOR	CHIPLET_ENABLE: This bit is set if the chiplet is good.
1	RWX	RWX_WAND	RWX_WOR	PCB_EP_RESET: The output is ORed to the global EP reset.
2	RWX	RWX_WAND	RWX_WOR	CLK_ASYNC_RESET: POWER9 cache chiplet: EQ skew adjust reset. POWER9 core chiplet: Core duty cycle adjust reset. POWER9 memory chiplet: Memory glitchless multiplexer asynchronous reset.
3	RWX	RWX_WAND	RWX_WOR	PLL_TEST_EN: Test enable for chiplet PLL.
4	RWX	RWX_WAND	RWX_WOR	PLL_RESET: Reset for the chiplet PLL.
5	RWX	RWX_WAND	RWX_WOR	PLL_BYPASS: Enable bypass for the chiplet PLL.
6	RWX	RWX_WAND	RWX_WOR	VITAL_SCAN: Scan control for the chiplet vital domain.
7	RWX	RWX_WAND	RWX_WOR	VITAL_SCAN_IN: Scan in for the chiplet vital domain.
8	RWX	RWX_WAND	RWX_WOR	VITAL_PHASE: Phase for the vital domain.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
9	RWX	RWX_WAND	RWX_WOR	FLUSH_ALIGN_OVR: When set to 1, this mechanism overrides automatic control by the clock controller of the flush, flush_nto1, and align signals in the chiplet.
10	RWX	RWX_WAND	RWX_WOR	VITAL_AL: Align for vital domain.
11	RWX	RWX_WAND	RWX_WOR	ACT_DIS: ACT disable control for LCBs in the vital logic.
12	RWX	RWX_WAND	RWX_WOR	MPW1: Modify pulse width 1 (MPW1) control for LCBs in the vital logic.
13	RWX	RWX_WAND	RWX_WOR	MPW2: Modify pulse width 2 (MPW2) control for LCBs in the vital logic.
14	RWX	RWX_WAND	RWX_WOR	MPW3: Modify pulse width 3 (MPW3) control for LCBs in the vital logic.
15	RWX	RWX_WAND	RWX_WOR	DELAY_LCLKR: LCB control signal for vital logic.
16	RWX	RWX_WAND	RWX_WOR	VITAL_THOLD: Threshold for the chiplet vital domain.
17	RWX	RWX_WAND	RWX_WOR	FLUSH_SCAN_N: Flush scan control.
18	RWX	RWX_WAND	RWX_WOR	FENCE_EN: Fencing signal for chiplet.
19	RWX	RWX_WAND	RWX_WOR	CPLT_RCTRL: Chiplet receiver enable.
20	RWX	RWX_WAND	RWX_WOR	CPLT_DCTRL: Chiplet driver enable.
21	RWX	RWX_WAND	RWX_WOR	Reserved.
22	RWX	RWX_WAND	RWX_WOR	ADJ_FUNC_CLKSEL: POWER9 cache chiplet: Clock select for the skew adjust/duty cycle adjust logic. POWER9 core chiplet: Skew sense to skew adjust fencing.
23:24	RWX	RWX_WAND	RWX_WOR	Reserved.
25	RWX	RWX_WAND	RWX_WOR	TP_FENCE_PCB: Fence the chiplet from the PCB bus. If set, the PCB slave reports “Chiplet Offline.”
26	RWX	RWX_WAND	RWX_WOR	LVLTRANS_FENCE: Fence control for the level translators.
27	RWX	RWX_WAND	RWX_WOR	ARRAY_WRITE_ASSIST_EN: Array write assist.
28	RWX	RWX_WAND	RWX_WOR	HTB_INTEST: HTB intest mode.
29	RWX	RWX_WAND	RWX_WOR	HTB_EXTEST: HTB intest mode.
30	RWX	RWX_WAND	RWX_WOR	Reserved.
31	RWX	RWX_WAND	RWX_WOR	PLLFORCE_OUT_EN: PLL force out enable.

Register Name	NET CTRL1 Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.NET_CTRL1
Address	00000000060F0044 (SCOM) 00000000060F0045 (SCOM1) 00000000060F0046 (SCOM2)
Description	This register contains NET controls. It is not applicable to the pervasive chiplet.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
0	RWX	RWX_WAND	RWX_WOR	PLL_CLKIN_SEL: PLL clkin select.
1	RWX	RWX_WAND	RWX_WOR	CLK_DCC_BYPASS_EN: POWER9 cache chiplet: L2-0, L2-1, L3 duty cycle control bypass. POWER9 core chiplet: Core duty cycle control bypass. POWER9 memory chiplet: Memory duty cycle control bypass.

Bits	SCOM	SCOM1	SCOM2	Field Mnemonic: Description
2	RWX	RWX_WAND	RWX_WOR	CLK_PDLY_BYPASS_EN: POWER9 cache chiplet: L2-0, L2-1, L3 programmable delay bypass. POWER9 core chiplet: Core programmable delay bypass. POWER9 memory chiplet: Memory programmable delay bypass.
3	RWX	RWX_WAND	RWX_WOR	CLK_DIV_BYPASS_EN: Enable clock divider bypass.
4	RWX	RWX_WAND	RWX_WOR	REFCLK_CLKMUX0_SEL: Select for reference clock mux0.
5	RWX	RWX_WAND	RWX_WOR	REFCLK_CLKMUX1_SEL: Select for reference clock mux1.
6	RWX	RWX_WAND	RWX_WOR	PLL_BNDY_BYPASS_EN: Bypass for IOP PLL.
7	RWX	RWX_WAND	RWX_WOR	Reserved.
8:15	RWX	RWX_WAND	RWX_WOR	DPLL_TEST_SEL: DPLL testout MUXing.
16:19	RWX	RWX_WAND	RWX_WOR	SB_STRENGTH: Sector buffer driver strength.
20	RWX	RWX_WAND	RWX_WOR	ASYNC_TYPE: This is a control signal for testing latches with asynchronous set and reset capabilities.
21	RWX	RWX_WAND	RWX_WOR	ASYNC_OBS: This is a control signal for testing latches with asynchronous set and reset capabilities.
22	RWX	RWX_WAND	RWX_WOR	CPM_CAL_SET: CPM calibrate.
23	RWX	RWX_WAND	RWX_WOR	SENSEADJ_RESET0: POWER9 cache chiplet: L2-0 duty cycle adjust reset.
24	RWX	RWX_WAND	RWX_WOR	SENSEADJ_RESET1: POWER9 cache chiplet: L2-1 duty cycle adjust reset.
25	RWX	RWX_WAND	RWX_WOR	CLK_PULSE_EN: Clock pulse mode enable.
26:27	RWX	RWX_WAND	RWX_WOR	CLK_PULSE_MODE: Clock pulse mode setting.
28:31	RWX	RWX_WAND	RWX_WOR	Reserved.

Register Name	Protect Mode Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.PROTECT_MODE_REG
Address	00000000060F03FE (SCOM)
Description	This register is used to enable read and write protection.

Bits	SCOM	Field Mnemonic: Description
0	RW	READ_PROTECT_ENABLE: Enable read protection.
1	RW	WRITE_PROTECT_ENABLE: Enable write protection.

Register Name	Atomic Lock Register
Mnemonic	TP.TPCHIP.NET.PCBSLXB.ATOMIC_LOCK_REG
Address	00000000060F03FF (SCOM)
Description	This register contains atomic lock information.

Bits	SCOM	Field Mnemonic: Description
0	RW	ATOMIC_LOCK_ENABLE: Enable the atomic lock.
1:4	ROX	ATOMIC_ID: This field contains the atomic ID.
5:7	RO	constant = 000

Bits	SCOM	Field Mnemonic: Description
8:15	ROX	ATOMIC_ACTIVITY: This is the atomic lock counter.

4. XBUS Chiplet Indirect

The POWER9 processor registers are listed alphabetically by mnemonic in the following address table.

Mnemonic	Address	Page
IOF2.BUSCTL.BUS_REG_IF.BUS_CTL_REGS.RX_FIR_ERROR_INJECT_PB	0x800F98000601143F	1180

The POWER9 processor registers are listed in the following tables.

Register Name	**Receive Data DAC Spare Mode Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DATA_DAC_SPARE_MODE_PL
Address	800000000601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_DATA_DAC_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_DATA_DAC_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_DATA_DAC_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_DATA_DAC_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_DATA_DAC_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_DATA_DAC_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_DATA_DAC_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_DATA_DAC_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	**Receive Data DAC Spare Mode Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RX_DAC_REGS.RX_DAC_REGS.RX_DATA_DAC_SPARE_MODE_PL
Address	800000010601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48	RWX	RX_PL_DATA_DAC_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_DATA_DAC_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_DATA_DAC_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_DATA_DAC_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_DATA_DAC_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_DATA_DAC_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_DATA_DAC_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_DATA_DAC_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Data DAC Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DATA_DAC_SPARE_MODE_PL
Address	800000020601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_DATA_DAC_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_DATA_DAC_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_DATA_DAC_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_DATA_DAC_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_DATA_DAC_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_DATA_DAC_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_DATA_DAC_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_DATA_DAC_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Data DAC Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DATA_DAC_SPARE_MODE_PL
Address	800000030601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DATA_DAC_SPARE_MODE_PL
Address	800000050601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_DATA_DAC_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_DATA_DAC_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_DATA_DAC_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_DATA_DAC_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_DATA_DAC_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_DATA_DAC_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_DATA_DAC_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_DATA_DAC_SPARE_MODE_7: Per-lane spare mode latch.

Bits	SCOM	Field Mnemonic: Description
56:63	RO	constant = 0b00000000

Register Name	Receive Data DAC Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DATA_DAC_SPARE_MODE_PL
Address	800000060601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_DATA_DAC_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_DATA_DAC_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_DATA_DAC_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_DATA_DAC_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_DATA_DAC_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_DATA_DAC_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_DATA_DAC_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_DATA_DAC_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Data DAC Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DATA_DAC_SPARE_MODE_PL
Address	800000070601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_DATA_DAC_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_DATA_DAC_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_DATA_DAC_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_DATA_DAC_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_DATA_DAC_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_DATA_DAC_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_DATA_DAC_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_DATA_DAC_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Data DAC Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DATA_DAC_SPARE_MODE_PL
Address	800000080601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_DATA_DAC_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_DATA_DAC_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_DATA_DAC_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_DATA_DAC_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_DATA_DAC_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_DATA_DAC_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_DATA_DAC_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_DATA_DAC_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Data DAC Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DATA_DAC_SPARE_MODE_PL
Address	800000090601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_DATA_DAC_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_DATA_DAC_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_DATA_DAC_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_DATA_DAC_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_DATA_DAC_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_DATA_DAC_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_DATA_DAC_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_DATA_DAC_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Data DAC Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DATA_DAC_SPARE_MODE_PL
Address	8000000A0601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

54	RWX	RX_LANE_ANA_PDWN: This bit controls the lane power down of analog and custom circuits.
55:57	RWX	RX_PRBS_TEST_DATA: This field contains PRBS test data.
58:63	RO	constant = 0b000000

Register Name	Receive DAC Control 1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_EO_PL
Address	800008060601143F (SCOM)
Description	This register contains the first set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PDWN_LITE_CONTROLS: This field controls the power-down pins. Bit 0 = CML2CMOS. Bit 1 = CTLE. Bit 2 = DAC. Bit 3 = Deserializer. Bit 4 = Integrator. Bit 5 = Phase rotator.
54	RWX	RX_LANE_ANA_PDWN: This bit controls the lane power down of analog and custom circuits.
55:57	RWX	RX_PRBS_TEST_DATA: This field contains PRBS test data.
58:63	RO	constant = 0b000000

Register Name	Receive DAC Control 1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_EO_PL
Address	800008070601143F (SCOM)
Description	This register contains the first set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:53	RWX	RX_PDWN_LITE_CONTROLS: This field controls the power-down pins. Bit 0 = CML2CMOS. Bit 1 = CTLE. Bit 2 = DAC. Bit 3 = Deserializer. Bit 4 = Integrator. Bit 5 = Phase rotator.
54	RWX	RX_LANE_ANA_PDWN: This bit controls the lane power down of analog and custom circuits.
55:57	RWX	RX_PRBS_TEST_DATA: This field contains PRBS test data.
58:63	RO	constant = 0b000000

Register Name	Receive DAC Control 1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_EO_PL
Address	800008080601143F (SCOM)
Description	This register contains the first set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PDWN_LITE_CONTROLS: This field controls the power-down pins. Bit 0 = CML2CMOS. Bit 1 = CTLE. Bit 2 = DAC. Bit 3 = Deserializer. Bit 4 = Integrator. Bit 5 = Phase rotator.
54	RWX	RX_LANE_ANA_PDWN: This bit controls the lane power down of analog and custom circuits.
55:57	RWX	RX_PRBS_TEST_DATA: This field contains PRBS test data.
58:63	RO	constant = 0b000000

Register Name	Receive DAC Control 1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_EO_PL
Address	800008090601143F (SCOM)
Description	This register contains the first set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:53	RWX	RX_PDWN_LITE_CONTROLS: This field controls the power-down pins. Bit 0 = CML2CMOS. Bit 1 = CTLE. Bit 2 = DAC. Bit 3 = Deserializer. Bit 4 = Integrator. Bit 5 = Phase rotator.
54	RWX	RX_LANE_ANA_PDWN: This bit controls the lane power down of analog and custom circuits.
55:57	RWX	RX_PRBS_TEST_DATA: This field contains PRBS test data.
58:63	RO	constant = 0b000000

Register Name	Receive DAC Control 1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_EO_PL
Address	8000080A0601143F (SCOM)
Description	This register contains the first set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Description	This register contains the first set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:53	RWX	RX_PDWN_LITE_CONTROLS: This field controls the power-down pins. Bit 0 = CML2CMOS. Bit 1 = CTLE. Bit 2 = DAC. Bit 3 = Deserializer. Bit 4 = Integrator. Bit 5 = Phase rotator.
54	RWX	RX_LANE_ANA_PDWN: This bit controls the lane power down of analog and custom circuits.
55:57	RWX	RX_PRBS_TEST_DATA: This field contains PRBS test data.
58:63	RO	constant = 0b000000

Register Name	Receive DAC Control 1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_EO_PL
Address	8000082C0601143F (SCOM)
Description	This register contains the first set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PDWN_LITE_CONTROLS: This field controls the power-down pins. Bit 0 = CML2CMOS. Bit 1 = CTLE. Bit 2 = DAC. Bit 3 = Deserializer. Bit 4 = Integrator. Bit 5 = Phase rotator.
54	RWX	RX_LANE_ANA_PDWN: This bit controls the lane power down of analog and custom circuits.
55:57	RWX	RX_PRBS_TEST_DATA: This field contains PRBS test data.
58:63	RO	constant = 0b000000

Register Name	Receive DAC Control 1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_EO_PL
Address	8000082D0601143F (SCOM)
Description	This register contains the first set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:53	RWX	RX_PDWN_LITE_CONTROLS: This field controls the power-down pins. Bit 0 = CML2CMOS. Bit 1 = CTLE. Bit 2 = DAC. Bit 3 = Deserializer. Bit 4 = Integrator. Bit 5 = Phase rotator.
54	RWX	RX_LANE_ANA_PDWN: This bit controls the lane power down of analog and custom circuits.
55:57	RWX	RX_PRBS_TEST_DATA: This field contains PRBS test data.
58:63	RO	constant = 0b000000

Register Name	Receive DAC Control 1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_EO_PL
Address	8000082E0601143F (SCOM)
Description	This register contains the first set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PDWN_LITE_CONTROLS: This field controls the power-down pins. Bit 0 = CML2CMOS. Bit 1 = CTLE. Bit 2 = DAC. Bit 3 = Deserializer. Bit 4 = Integrator. Bit 5 = Phase rotator.
54	RWX	RX_LANE_ANA_PDWN: This bit controls the lane power down of analog and custom circuits.
55:57	RWX	RX_PRBS_TEST_DATA: This field contains PRBS test data.
58:63	RO	constant = 0b000000

Register Name	Receive DAC Control 1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_EO_PL
Address	8000082F0601143F (SCOM)
Description	This register contains the first set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:53	RWX	RX_PDWN_LITE_CONTROLS: This field controls the power-down pins. Bit 0 = CML2CMOS. Bit 1 = CTLE. Bit 2 = DAC. Bit 3 = Deserializer. Bit 4 = Integrator. Bit 5 = Phase rotator.
54	RWX	RX_LANE_ANA_PDWN: This bit controls the lane power down of analog and custom circuits.
55:57	RWX	RX_PRBS_TEST_DATA: This field contains PRBS test data.
58:63	RO	constant = 0b000000

Register Name	Receive DAC Control 1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#5.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_EO_PL
Address	800008300601143F (SCOM)
Description	This register contains the first set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PDWN_LITE_CONTROLS: This field controls the power-down pins. Bit 0 = CML2CMOS. Bit 1 = CTLE. Bit 2 = DAC. Bit 3 = Deserializer. Bit 4 = Integrator. Bit 5 = Phase rotator.
54	RWX	RX_LANE_ANA_PDWN: This bit controls the lane power down of analog and custom circuits.
55:57	RWX	RX_PRBS_TEST_DATA: This field contains PRBS test data.
58:63	RO	constant = 0b000000

Register Name	Receive DAC Control 1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_EO_PL
Address	800008310601143F (SCOM)
Description	This register contains the first set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:53	RWX	RX_PDWN_LITE_CONTROLS: This field controls the power-down pins. Bit 0 = CML2CMOS. Bit 1 = CTLE. Bit 2 = DAC. Bit 3 = Deserializer. Bit 4 = Integrator. Bit 5 = Phase rotator.
54	RWX	RX_LANE_ANA_PDWN: This bit controls the lane power down of analog and custom circuits.
55:57	RWX	RX_PRBS_TEST_DATA: This field contains PRBS test data.
58:63	RO	constant = 0b000000

Register Name	**Receive DAC Control 2 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL2_EO_PL
Address	800010000601143F (SCOM)
Description	This register contains the second set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_CONTROLS: Bit 0 = DFE H1 speculation mux select override enables speculation. Bit 1 = DFE H1 speculation mux select override. Bit 2 = When set, this bit puts this lane's front end into offset cancellation mode. It is also needed for common- mode calibration. Bit 3 = This bit enables the amp DAC for measurements in this bank. Bit 4 = This bit enables the fence for initloff. Bit 5 = When set, this bit disables all the H-DACs. CPG.
54:56	RWX	RX_CM_CNTL: Bit 0 = This bit enables integrator common mode cal, which is used in conjunction with integrator cal enable. Bit 1 = This is the polarity bit. Bit 2 = When 1, this bit enables common mode even. When 0, this bit enables common mode odd. CPG.
57:63	RO	constant = 0b0000000

Register Name	**Receive DAC Control 2 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL2_EO_PL
Address	800010010601143F (SCOM)
Description	This register contains the second set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:53	RWX	RX_A_CONTROLS: Bit 0 = DFE H1 speculation mux select override enables speculation. Bit 1 = DFE H1 speculation mux select override. Bit 2 = When set, this bit puts this lane's front end into offset cancellation mode. It is also needed for common- mode calibration. Bit 3 = This bit enables the amp DAC for measurements in this bank. Bit 4 = This bit enables the fence for initloff. Bit 5 = When set, this bit disables all the H-DACs. CPG.
54:56	RWX	RX_CM_CNTL: Bit 0 = This bit enables integrator common mode cal, which is used in conjunction with integrator cal enable. Bit 1 = This is the polarity bit. Bit 2 = When 1, this bit enables common mode even. When 0, this bit enables common mode odd. CPG.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL2_EO_PL
Address	800010020601143F (SCOM)
Description	This register contains the second set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_CONTROLS: Bit 0 = DFE H1 speculation mux select override enables speculation. Bit 1 = DFE H1 speculation mux select override. Bit 2 = When set, this bit puts this lane's front end into offset cancellation mode. It is also needed for common- mode calibration. Bit 3 = This bit enables the amp DAC for measurements in this bank. Bit 4 = This bit enables the fence for initloff. Bit 5 = When set, this bit disables all the H-DACs. CPG.
54:56	RWX	RX_CM_CNTL: Bit 0 = This bit enables integrator common mode cal, which is used in conjunction with integrator cal enable. Bit 1 = This is the polarity bit. Bit 2 = When 1, this bit enables common mode even. When 0, this bit enables common mode odd. CPG.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL2_EO_PL
Address	800010030601143F (SCOM)
Description	This register contains the second set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:53	RWX	RX_A_CONTROLS: Bit 0 = DFE H1 speculation mux select override enables speculation. Bit 1 = DFE H1 speculation mux select override. Bit 2 = When set, this bit puts this lane's front end into offset cancellation mode. It is also needed for common- mode calibration. Bit 3 = This bit enables the amp DAC for measurements in this bank. Bit 4 = This bit enables the fence for initloff. Bit 5 = When set, this bit disables all the H-DACs. CPG.

Bit 2 = When set, this bit puts this lane's front end into offset cancellation mode. It is also needed for common- mode calibration. Bit 3 = This bit enables the amp DAC for measurements in this bank. Bit 4 = This bit enables the fence for initloff. Bit 5 = When set, this bit disables all the H-DACs. CPG.
54:56	RWX	RX_CM_CNTL: Bit 0 = This bit enables integrator common mode cal, which is used in conjunction with integrator cal enable. Bit 1 = This is the polarity bit. Bit 2 = When 1, this bit enables common mode even. When 0, this bit enables common mode odd. CPG.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL2_EO_PL
Address	8000102F0601143F (SCOM)
Description	This register contains the second set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:53	RWX	RX_A_CONTROLS: Bit 0 = DFE H1 speculation mux select override enables speculation. Bit 1 = DFE H1 speculation mux select override. 48:54	RWX	RX_A_OFFSET_E0: This is the vertical offset of the even low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_E1: This is the vertical offset of the even high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_EO_PL
Address	800018260601143F (SCOM)
Description	This register contains the third set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_E0: This is the vertical offset of the even low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_E1: This is the vertical offset of the even high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_EO_PL
Address	800018270601143F (SCOM)
Description	This register contains the third set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_E0: This is the vertical offset of the even low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_E1: This is the vertical offset of the even high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_EO_PL
Address	800018280601143F (SCOM)
Description	This register contains the third set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_E0: This is the vertical offset of the even low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_E1: This is the vertical offset of the even high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_EO_PL
Address	800018290601143F (SCOM)
Description	This register contains the third set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_E0: This is the vertical offset of the even low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_E1: This is the vertical offset of the even high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_EO_PL
Address	8000182A0601143F (SCOM)
Description	This register contains the third set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_E0: This is the vertical offset of the even low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_E1: This is the vertical offset of the even high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_EO_PL
Address	8000182B0601143F (SCOM)
Description	This register contains the third set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_E0: This is the vertical offset of the even low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_E1: This is the vertical offset of the even high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_EO_PL
Address	8000182C0601143F (SCOM)
Description	This register contains the third set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_E0: This is the vertical offset of the even low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_E1: This is the vertical offset of the even high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_EO_PL
Address	8000182D0601143F (SCOM)
Description	This register contains the third set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_E0: This is the vertical offset of the even low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_E1: This is the vertical offset of the even high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_EO_PL
Address	8000182E0601143F (SCOM)
Description	This register contains the third set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_E0: This is the vertical offset of the even low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_E1: This is the vertical offset of the even high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_EO_PL
Address	8000182F0601143F (SCOM)
Description	This register contains the third set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_E0: This is the vertical offset of the even low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_E1: This is the vertical offset of the even high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#5.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_EO_PL
Address	800018300601143F (SCOM)
Description	This register contains the third set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_E0: This is the vertical offset of the even low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_E1: This is the vertical offset of the even high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_EO_PL
Address	800018310601143F (SCOM)
Description	This register contains the third set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_E0: This is the vertical offset of the even low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_E1: This is the vertical offset of the even high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020000601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020010601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020020601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020030601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020040601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020110601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020200601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020210601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020220601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020230601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020240601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	**Receive DAC Control 4 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020250601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	**Receive DAC Control 4 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020260601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	**Receive DAC Control 4 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020270601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020280601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020290601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	8000202A0601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	8000202B0601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	8000202C0601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	8000202D0601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	8000202E0601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	8000202F0601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#5.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020300601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL4_EO_PL
Address	800020310601143F (SCOM)
Description	This register contains the fourth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_OFFSET_O0: This is the vertical offset of the odd low-threshold sampling latch.
55	RO	constant = 0b0
56:62	RWX	RX_A_OFFSET_O1: This is the vertical offset of the odd high-threshold sampling latch.
63	RO	constant = 0b0

Register Name	Receive DAC Control 5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	800028000601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_A_INTEG_COARSE_GAIN: This is the integrator coarse-gain control used in making common mode adjustments.
52:56	RWX	RX_A_EVEN_INTEG_FINE_GAIN: This is the even integrator fine-gain control used in making common mode adjustments.
57:61	RWX	RX_A_ODD_INTEG_FINE_GAIN: This is the odd integrator fine-gain control used in making common mode adjustments.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	800028010601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_A_INTEG_COARSE_GAIN: This is the integrator coarse-gain control used in making common mode adjustments.
52:56	RWX	RX_A_EVEN_INTEG_FINE_GAIN: This is the even integrator fine-gain control used in making common mode adjustments.
57:61	RWX	RX_A_ODD_INTEG_FINE_GAIN: This is the odd integrator fine-gain control used in making common mode adjustments.
62:63	RO	constant = 0b00

Register Name	**Receive DAC Control 5 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	800028020601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_A_INTEG_COARSE_GAIN: This is the integrator coarse-gain control used in making common mode adjustments.
52:56	RWX	RX_A_EVEN_INTEG_FINE_GAIN: This is the even integrator fine-gain control used in making common mode adjustments.
57:61	RWX	RX_A_ODD_INTEG_FINE_GAIN: This is the odd integrator fine-gain control used in making common mode adjustments.
62:63	RO	constant = 0b00

Register Name	**Receive DAC Control 5 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	800028030601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

57:61	RWX	RX_A_ODD_INTEG_FINE_GAIN: This is the odd integrator fine-gain control used in making common mode adjustments.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	800028080601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_A_INTEG_COARSE_GAIN: This is the integrator coarse-gain control used in making common mode adjustments.
52:56	RWX	RX_A_EVEN_INTEG_FINE_GAIN: This is the even integrator fine-gain control used in making common mode adjustments.
57:61	RWX	RX_A_ODD_INTEG_FINE_GAIN: This is the odd integrator fine-gain control used in making common mode adjustments.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	800028090601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_A_INTEG_COARSE_GAIN: This is the integrator coarse-gain control used in making common mode adjustments.
52:56	RWX	RX_A_EVEN_INTEG_FINE_GAIN: This is the even integrator fine-gain control used in making common mode adjustments.
57:61	RWX	RX_A_ODD_INTEG_FINE_GAIN: This is the odd integrator fine-gain control used in making common mode adjustments.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	8000280A0601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_A_INTEG_COARSE_GAIN: This is the integrator coarse-gain control used in making common mode adjustments.
52:56	RWX	RX_A_EVEN_INTEG_FINE_GAIN: This is the even integrator fine-gain control used in making common mode adjustments.
57:61	RWX	RX_A_ODD_INTEG_FINE_GAIN: This is the odd integrator fine-gain control used in making common mode adjustments.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	8000280B0601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_A_INTEG_COARSE_GAIN: This is the integrator coarse-gain control used in making common mode adjustments.
52:56	RWX	RX_A_EVEN_INTEG_FINE_GAIN: This is the even integrator fine-gain control used in making common mode adjustments.
57:61	RWX	RX_A_ODD_INTEG_FINE_GAIN: This is the odd integrator fine-gain control used in making common mode adjustments.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	8000280C0601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_A_INTEG_COARSE_GAIN: This is the integrator coarse-gain control used in making common mode adjustments.
52:56	RWX	RX_A_EVEN_INTEG_FINE_GAIN: This is the even integrator fine-gain control used in making common mode adjustments.

Bits	SCOM	Field Mnemonic: Description
57:61	RWX	RX_A_ODD_INTEG_FINE_GAIN: This is the odd integrator fine-gain control used in making common mode adjustments.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	8000280D0601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_A_INTEG_COARSE_GAIN: This is the integrator coarse-gain control used in making common mode adjustments.
52:56	RWX	RX_A_EVEN_INTEG_FINE_GAIN: This is the even integrator fine-gain control used in making common mode adjustments.
57:61	RWX	RX_A_ODD_INTEG_FINE_GAIN: This is the odd integrator fine-gain control used in making common mode adjustments.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	8000280E0601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_A_INTEG_COARSE_GAIN: This is the integrator coarse-gain control used in making common mode adjustments.
52:56	RWX	RX_A_EVEN_INTEG_FINE_GAIN: This is the even integrator fine-gain control used in making common mode adjustments.
57:61	RWX	RX_A_ODD_INTEG_FINE_GAIN: This is the odd integrator fine-gain control used in making common mode adjustments.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	8000280F0601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_A_INTEG_COARSE_GAIN: This is the integrator coarse-gain control used in making common mode adjustments.
52:56	RWX	RX_A_EVEN_INTEG_FINE_GAIN: This is the even integrator fine-gain control used in making common mode adjustments.
57:61	RWX	RX_A_ODD_INTEG_FINE_GAIN: This is the odd integrator fine-gain control used in making common mode adjustments.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	800028100601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_A_INTEG_COARSE_GAIN: This is the integrator coarse-gain control used in making common mode adjustments.
52:56	RWX	RX_A_EVEN_INTEG_FINE_GAIN: This is the even integrator fine-gain control used in making common mode adjustments.
57:61	RWX	RX_A_ODD_INTEG_FINE_GAIN: This is the odd integrator fine-gain control used in making common mode adjustments.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	800028110601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_A_INTEG_COARSE_GAIN: This is the integrator coarse-gain control used in making common mode adjustments.
52:56	RWX	RX_A_EVEN_INTEG_FINE_GAIN: This is the even integrator fine-gain control used in making common mode adjustments.
57:61	RWX	RX_A_ODD_INTEG_FINE_GAIN: This is the odd integrator fine-gain control used in making common mode adjustments.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	800028200601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

62:63	RO	constant = 0b00

Register Name	Receive DAC Control 5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	8000282F0601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_A_INTEG_COARSE_GAIN: This is the integrator coarse-gain control used in making common mode adjustments.
52:56	RWX	RX_A_EVEN_INTEG_FINE_GAIN: This is the even integrator fine-gain control used in making common mode adjustments.
57:61	RWX	RX_A_ODD_INTEG_FINE_GAIN: This is the odd integrator fine-gain control used in making common mode adjustments.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#5.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	800028300601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_A_INTEG_COARSE_GAIN: This is the integrator coarse-gain control used in making common mode adjustments.
52:56	RWX	RX_A_EVEN_INTEG_FINE_GAIN: This is the even integrator fine-gain control used in making common mode adjustments.
57:61	RWX	RX_A_ODD_INTEG_FINE_GAIN: This is the odd integrator fine-gain control used in making common mode adjustments.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_EO_PL
Address	800028310601143F (SCOM)
Description	This register contains the fifth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_A_INTEG_COARSE_GAIN: This is the integrator coarse-gain control used in making common mode adjustments.
52:56	RWX	RX_A_EVEN_INTEG_FINE_GAIN: This is the even integrator fine-gain control used in making common mode adjustments.
57:61	RWX	RX_A_ODD_INTEG_FINE_GAIN: This is the odd integrator fine-gain control used in making common mode adjustments.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 6 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_EO_PL
Address	800030000601143F (SCOM)
Description	This register contains the sixth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_CTLE_PEAK: This is the CTLE coarse peak value. Only 4 bits are currently used.
53:56	RWX	RX_A_CTLE_GAIN: This is the CTLE gain setting.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 6 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_EO_PL
Address	800030010601143F (SCOM)
Description	This register contains the sixth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_CTLE_PEAK: This is the CTLE coarse peak value. Only 4 bits are currently used.
53:56	RWX	RX_A_CTLE_GAIN: This is the CTLE gain setting.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 6 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_EO_PL
Address	800030020601143F (SCOM)
Description	This register contains the sixth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_CTLE_PEAK: This is the CTLE coarse peak value. Only 4 bits are currently used.
53:56	RWX	RX_A_CTLE_GAIN: This is the CTLE gain setting.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 6 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_EO_PL
Address	800030030601143F (SCOM)
Description	This register contains the sixth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_CTLE_PEAK: This is the CTLE coarse peak value. Only 4 bits are currently used.
53:56	RWX	RX_A_CTLE_GAIN: This is the CTLE gain setting.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 6 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_EO_PL
Address	800030040601143F (SCOM)
Description	This register contains the sixth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_CTLE_PEAK: This is the CTLE coarse peak value. Only 4 bits are currently used.
53:56	RWX	RX_A_CTLE_GAIN: This is the CTLE gain setting.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 6 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_EO_PL
Address	800030050601143F (SCOM)
Description	This register contains the sixth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_CTLE_PEAK: This is the CTLE coarse peak value. Only 4 bits are currently used.
53:56	RWX	RX_A_CTLE_GAIN: This is the CTLE gain setting.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 6 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_EO_PL
Address	800030060601143F (SCOM)
Description	This register contains the sixth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_CTLE_PEAK: This is the CTLE coarse peak value. Only 4 bits are currently used.
53:56	RWX	RX_A_CTLE_GAIN: This is the CTLE gain setting.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 6 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_EO_PL
Address	800030070601143F (SCOM)
Description	This register contains the sixth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_CTLE_PEAK: This is the CTLE coarse peak value. Only 4 bits are currently used.
53:56	RWX	RX_A_CTLE_GAIN: This is the CTLE gain setting.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 6 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_EO_PL
Address	800030080601143F (SCOM)
Description	This register contains the sixth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_CTLE_PEAK: This is the CTLE coarse peak value. Only 4 bits are currently used.
53:56	RWX	RX_A_CTLE_GAIN: This is the CTLE gain setting.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 6 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_EO_PL
Address	800030090601143F (SCOM)
Description	This register contains the sixth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_CTLE_PEAK: This is the CTLE coarse peak value. Only 4 bits are currently used.

57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 6 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_EO_PL
Address	800030280601143F (SCOM)
Description	This register contains the sixth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_CTLE_PEAK: This is the CTLE coarse peak value. Only 4 bits are currently used.
53:56	RWX	RX_A_CTLE_GAIN: This is the CTLE gain setting.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 6 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_EO_PL
Address	800030290601143F (SCOM)
Description	This register contains the sixth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_CTLE_PEAK: This is the CTLE coarse peak value. Only 4 bits are currently used.
53:56	RWX	RX_A_CTLE_GAIN: This is the CTLE gain setting.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 6 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_EO_PL
Address	8000302A0601143F (SCOM)
Description	This register contains the sixth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_CTLE_PEAK: This is the CTLE coarse peak value. Only 4 bits are currently used.
53:56	RWX	RX_A_CTLE_GAIN: This is the CTLE gain setting.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 6 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_EO_PL
Address	8000302B0601143F (SCOM)
Description	This register contains the sixth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_CTLE_PEAK: This is the CTLE coarse peak value. Only 4 bits are currently used.
53:56	RWX	RX_A_CTLE_GAIN: This is the CTLE gain setting.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 6 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_EO_PL
Address	8000302C0601143F (SCOM)
Description	This register contains the sixth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_CTLE_PEAK: This is the CTLE coarse peak value. Only 4 bits are currently used.
53:56	RWX	RX_A_CTLE_GAIN: This is the CTLE gain setting.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 6 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_EO_PL
Address	8000302D0601143F (SCOM)
Description	This register contains the sixth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_CTLE_PEAK: This is the CTLE coarse peak value. Only 4 bits are currently used.
53:56	RWX	RX_A_CTLE_GAIN: This is the CTLE gain setting.
57:63	RO	constant = 0b0000000

Register Name	Receive DAC Control 6 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_EO_PL
Address	8000302E0601143F (SCOM)
Description	This register contains the sixth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

63	RO	constant = 0b0

Register Name	Receive DAC Control 7 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL7_EO_PL
Address	800038210601143F (SCOM)
Description	This register contains the seventh set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1E_VAL: This field contains the DFE H1 value for even samplers.
55	RO	constant = 0b0
56:62	RWX	RX_A_H1O_VAL: This field contains the DFE H1 value for odd samplers.
63	RO	constant = 0b0

Register Name	Receive DAC Control 7 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL7_EO_PL
Address	800038220601143F (SCOM)
Description	This register contains the seventh set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1E_VAL: This field contains the DFE H1 value for even samplers.
55	RO	constant = 0b0
56:62	RWX	RX_A_H1O_VAL: This field contains the DFE H1 value for odd samplers.
63	RO	constant = 0b0

Register Name	Receive DAC Control 7 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL7_EO_PL
Address	800038230601143F (SCOM)
Description	This register contains the seventh set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1E_VAL: This field contains the DFE H1 value for even samplers.
55	RO	constant = 0b0
56:62	RWX	RX_A_H1O_VAL: This field contains the DFE H1 value for odd samplers.
63	RO	constant = 0b0

Register Name	Receive DAC Control 7 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL7_EO_PL
Address	800038240601143F (SCOM)
Description	This register contains the seventh set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1E_VAL: This field contains the DFE H1 value for even samplers.
55	RO	constant = 0b0
56:62	RWX	RX_A_H1O_VAL: This field contains the DFE H1 value for odd samplers.
63	RO	constant = 0b0

Register Name	Receive DAC Control 7 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL7_EO_PL
Address	800038250601143F (SCOM)
Description	This register contains the seventh set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1E_VAL: This field contains the DFE H1 value for even samplers.
55	RO	constant = 0b0
56:62	RWX	RX_A_H1O_VAL: This field contains the DFE H1 value for odd samplers.
63	RO	constant = 0b0

Register Name	Receive DAC Control 7 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL7_EO_PL
Address	800038260601143F (SCOM)
Description	This register contains the seventh set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 8 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	8000400E0601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.

Bits	SCOM	Field Mnemonic: Description
56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 8 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	8000400F0601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 8 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	800040100601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 8 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	800040110601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 8 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	800040200601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 8 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	800040210601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 8 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	800040220601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 8 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	800040230601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	**Receive DAC Control 8 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	800040240601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	**Receive DAC Control 8 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	800040250601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	**Receive DAC Control 8 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	800040260601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	**Receive DAC Control 8 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	800040270601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.

Bits	SCOM	Field Mnemonic: Description
56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 8 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	800040280601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 8 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	800040290601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 8 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	8000402A0601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 8 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	8000402B0601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 8 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	8000402D0601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 8 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	8000402E0601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 8 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	8000402F0601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 8 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#5.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	800040300601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 8 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_EO_PL
Address	800040310601143F (SCOM)
Description	This register contains the eighth set of EO DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:55	RWX	RX_AMP_VAL: This field contains the receive AmpDAC value stored as sign magnitude.
56:63	RO	constant = 0b00000000

Register Name	Receive DAC Control 1 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_E_PL
Address	800080000601143F (SCOM)
Description	This register contains the first set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_H2E_VAL: This field contains the DFE H1 value for even sampler 1.

Bits	SCOM	Field Mnemonic: Description
54:55	RO	constant = 0b00
56:61	RWX	RX_A_H2O_VAL: This field contains the DFE H1 value for even sampler 0.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 1 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_E_PL
Address	800080010601143F (SCOM)
Description	This register contains the first set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_H2E_VAL: This field contains the DFE H1 value for even sampler 1.
54:55	RO	constant = 0b00
56:61	RWX	RX_A_H2O_VAL: This field contains the DFE H1 value for even sampler 0.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 1 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_E_PL
Address	800080020601143F (SCOM)
Description	This register contains the first set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_E_PL
Address	800080090601143F (SCOM)
Description	This register contains the first set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_H2E_VAL: This field contains the DFE H1 value for even sampler 1.
54:55	RO	constant = 0b00
56:61	RWX	RX_A_H2O_VAL: This field contains the DFE H1 value for even sampler 0.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 1 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_E_PL
Address	8000800A0601143F (SCOM)
Description	This register contains the first set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_H2E_VAL: This field contains the DFE H1 value for even sampler 1.
54:55	RO	constant = 0b00
56:61	RWX	RX_A_H2O_VAL: This field contains the DFE H1 value for even sampler 0.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 1 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_E_PL
Address	8000800B0601143F (SCOM)
Description	This register contains the first set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_H2E_VAL: This field contains the DFE H1 value for even sampler 1.
54:55	RO	constant = 0b00
56:61	RWX	RX_A_H2O_VAL: This field contains the DFE H1 value for even sampler 0.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 1 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_E_PL
Address	8000800C0601143F (SCOM)
Description	This register contains the first set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_H2E_VAL: This field contains the DFE H1 value for even sampler 1.
54:55	RO	constant = 0b00
56:61	RWX	RX_A_H2O_VAL: This field contains the DFE H1 value for even sampler 0.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 1 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_E_PL
Address	8000800D0601143F (SCOM)
Description	This register contains the first set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_H2E_VAL: This field contains the DFE H1 value for even sampler 1.
54:55	RO	constant = 0b00
56:61	RWX	RX_A_H2O_VAL: This field contains the DFE H1 value for even sampler 0.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 1 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_E_PL
Address	8000800E0601143F (SCOM)
Description	This register contains the first set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_H2E_VAL: This field contains the DFE H1 value for even sampler 1.
54:55	RO	constant = 0b00
56:61	RWX	RX_A_H2O_VAL: This field contains the DFE H1 value for even sampler 0.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 1 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_E_PL
Address	8000800F0601143F (SCOM)
Description	This register contains the first set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_H2E_VAL: This field contains the DFE H1 value for even sampler 1.
54:55	RO	constant = 0b00
56:61	RWX	RX_A_H2O_VAL: This field contains the DFE H1 value for even sampler 0.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 1 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_E_PL
Address	800080100601143F (SCOM)
Description	This register contains the first set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_H2E_VAL: This field contains the DFE H1 value for even sampler 1.
54:55	RO	constant = 0b00
56:61	RWX	RX_A_H2O_VAL: This field contains the DFE H1 value for even sampler 0.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 1 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_E_PL
Address	800080110601143F (SCOM)
Description	This register contains the first set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_H2E_VAL: This field contains the DFE H1 value for even sampler 1.
54:55	RO	constant = 0b00
56:61	RWX	RX_A_H2O_VAL: This field contains the DFE H1 value for even sampler 0.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 1 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_E_PL
Address	800080200601143F (SCOM)
Description	This register contains the first set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_H2E_VAL: This field contains the DFE H1 value for even sampler 1.
54:55	RO	constant = 0b00
56:61	RWX	RX_A_H2O_VAL: This field contains the DFE H1 value for even sampler 0.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 1 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_E_PL
Address	800080210601143F (SCOM)
Description	This register contains the first set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_H2E_VAL: This field contains the DFE H1 value for even sampler 1.
54:55	RO	constant = 0b00
56:61	RWX	RX_A_H2O_VAL: This field contains the DFE H1 value for even sampler 0.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 1 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL1_E_PL
Address	800080220601143F (SCOM)
Description	This register contains the first set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Register Name	Receive DAC Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL2_E_PL
Address	8000882A0601143F (SCOM)
Description	This register contains the second set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H3E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H3O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL2_E_PL
Address	8000882B0601143F (SCOM)
Description	This register contains the second set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H3E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H3O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL2_E_PL
Address	8000882C0601143F (SCOM)
Description	This register contains the second set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H3E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H3O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL2_E_PL
Address	8000882D0601143F (SCOM)
Description	This register contains the second set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H3E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H3O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL2_E_PL
Address	8000882E0601143F (SCOM)
Description	This register contains the second set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H3E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H3O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL2_E_PL
Address	8000882F0601143F (SCOM)
Description	This register contains the second set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H3E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H3O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#5.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL2_E_PL
Address	800088300601143F (SCOM)
Description	This register contains the second set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H3E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H3O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL2_E_PL
Address	800088310601143F (SCOM)
Description	This register contains the second set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H3E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H3O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 3 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_E_PL
Address	800090000601143F (SCOM)
Description	This register contains the third set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H4E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H4O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 3 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_E_PL
Address	800090010601143F (SCOM)
Description	This register contains the third set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H4E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H4O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 3 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_E_PL
Address	800090020601143F (SCOM)
Description	This register contains the third set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H4E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H4O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 3 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_E_PL
Address	800090030601143F (SCOM)
Description	This register contains the third set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H4E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H4O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 3 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_E_PL
Address	800090220601143F (SCOM)
Description	This register contains the third set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H4E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H4O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 3 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_E_PL
Address	800090230601143F (SCOM)
Description	This register contains the third set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H4E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H4O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 3 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_E_PL
Address	800090240601143F (SCOM)
Description	This register contains the third set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H4E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H4O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 3 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_E_PL
Address	800090250601143F (SCOM)
Description	This register contains the third set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H4E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H4O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 3 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_E_PL
Address	800090260601143F (SCOM)
Description	This register contains the third set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H4E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H4O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 3 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_E_PL
Address	800090270601143F (SCOM)
Description	This register contains the third set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H4E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H4O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 3 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_E_PL
Address	800090280601143F (SCOM)
Description	This register contains the third set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H4E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H4O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 3 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_E_PL
Address	800090290601143F (SCOM)
Description	This register contains the third set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H4E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H4O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 3 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_E_PL
Address	8000902A0601143F (SCOM)
Description	This register contains the third set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H4E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H4O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 3 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_E_PL
Address	8000902B0601143F (SCOM)
Description	This register contains the third set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H4E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H4O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 3 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_E_PL
Address	8000902C0601143F (SCOM)
Description	This register contains the third set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H4E_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H4O_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 3 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL3_E_PL
Address	8000902D0601143F (SCOM)
Description	This register contains the third set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 5 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A0030601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 5 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A0040601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 5 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A0050601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 5 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A0060601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 5 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A0070601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 5 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A0080601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 5 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A0090601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 5 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A00A0601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 5 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A00B0601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 5 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A00C0601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	**Receive DAC Control 5 E Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A00D0601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	**Receive DAC Control 5 E Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A00E0601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	**Receive DAC Control 5 E Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A00F0601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description

61:63	RO	constant = 0b000

Register Name	Receive DAC Control 5 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A02C0601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 5 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A02D0601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 5 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A02E0601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 5 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A02F0601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 5 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#5.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A0300601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 5 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL5_E_PL
Address	8000A0310601143F (SCOM)
Description	This register contains the fifth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H6_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H7_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 6 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_E_PL
Address	8000A8000601143F (SCOM)
Description	This register contains the sixth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H8_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H9_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 6 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL6_E_PL
Address	8000A8010601143F (SCOM)
Description	This register contains the sixth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

61:63	RO	constant = 0b000

Register Name	Receive DAC Control 7 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL7_E_PL
Address	8000B00D0601143F (SCOM)
Description	This register contains the seventh set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H10_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H11_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 7 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL7_E_PL
Address	8000B00E0601143F (SCOM)
Description	This register contains the seventh set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H10_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H11_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 7 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL7_E_PL
Address	8000B00F0601143F (SCOM)
Description	This register contains the seventh set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H10_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H11_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 7 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL7_E_PL
Address	8000B0100601143F (SCOM)
Description	This register contains the seventh set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H10_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H11_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 7 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL7_E_PL
Address	8000B0110601143F (SCOM)
Description	This register contains the seventh set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H10_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H11_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 7 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL7_E_PL
Address	8000B0200601143F (SCOM)
Description	This register contains the seventh set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H10_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H11_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 7 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL7_E_PL
Address	8000B0210601143F (SCOM)
Description	This register contains the seventh set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H10_VAL: This field contains the DFE H1 value for even sampler 1.
53:55	RO	constant = 0b000
56:60	RWX	RX_A_H11_VAL: This field contains the DFE H1 value for even sampler 0.
61:63	RO	constant = 0b000

Register Name	Receive DAC Control 7 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL7_E_PL
Address	8000B0220601143F (SCOM)
Description	This register contains the seventh set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Address	8000B8050601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 8 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_E_PL
Address	8000B8060601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 8 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_E_PL
Address	8000B8070601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 8 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_E_PL
Address	8000B8080601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 8 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_E_PL
Address	8000B8090601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 8 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_E_PL
Address	8000B80A0601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 8 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_E_PL
Address	8000B80B0601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 8 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_E_PL
Address	8000B80C0601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 8 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_E_PL
Address	8000B80D0601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 8 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_E_PL
Address	8000B80E0601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 8 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_E_PL
Address	8000B80F0601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.

Bits	SCOM	Field Mnemonic: Description
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 8 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_E_PL
Address	8000B8100601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 8 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_E_PL
Address	8000B8110601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 8 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_E_PL
Address	8000B8200601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 8 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_E_PL
Address	8000B8210601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.

48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 8 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_E_PL
Address	8000B82F0601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 8 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#5.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_E_PL
Address	8000B8300601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 8 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL8_E_PL
Address	8000B8310601143F (SCOM)
Description	This register contains the eighth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	RWX	RX_A_H12_VAL: This field contains the DFE H1 value for even sampler 0.
53:63	RO	constant = 0b00000000000

Register Name	Receive DAC Control 9 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C0000601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 9 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C0010601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 9 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C0020601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 9 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C0030601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 9 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C0040601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 9 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C0050601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 9 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C0060601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	**Receive DAC Control 9 E Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C0070601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	**SCOM**	**Field Mnemonic: Description**
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	**Receive DAC Control 9 E Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C0080601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	**SCOM**	**Field Mnemonic: Description**
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	**Receive DAC Control 9 E Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C0090601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	**SCOM**	**Field Mnemonic: Description**
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.

Bits	SCOM	Field Mnemonic: Description
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 9 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C00A0601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 9 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C00B0601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 9 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C00C0601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.

Bits	SCOM	Field Mnemonic: Description
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 9 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C00D0601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 9 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C00E0601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 9 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C0270601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 9 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#0.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C0280601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.

Bits	SCOM	Field Mnemonic: Description
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 9 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#2.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C0290601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 9 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#1.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C02A0601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:54	RWX	RX_A_H1ARATIO_VAL: This field feeds the DAC that is used to make the H1 DAC and offset DAC match the rest of the DACs.
55:60	RWX	RX_A_H1CAL_VAL: This field feeds the DAC that is used to make the H1 DAC match a precision reference current.
61	RWX	RX_A_H1CAL_EN: This field goes to the analog to set its circuits in a mode for calibrating the H1 DAC.
62:63	RO	constant = 0b00

Register Name	Receive DAC Control 9 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#3.RX_DAC_REGS.RX_DAC_REGS.RX_DAC_CNTL9_E_PL
Address	8000C02B0601143F (SCOM)
Description	This register contains the ninth set of E DAC controls.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

56:63	RO	constant = 0b00000000

Register Name	Receive Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_SPARE_MODE_PL
Address	8002000B0601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_SPARE_MODE_PL
Address	8002000C0601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	**Receive Spare Mode Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_SPARE_MODE_PL
Address	8002000D0601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	**Receive Spare Mode Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_SPARE_MODE_PL
Address	8002000E0601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	**Receive Spare Mode Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_SPARE_MODE_PL
Address	8002000F0601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_SPARE_MODE_PL
Address	800200100601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_SPARE_MODE_PL
Address	800200110601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_SPARE_MODE_3: Per-lane spare mode latch.

Bits	SCOM	Field Mnemonic: Description
52	RWX	RX_PL_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_SPARE_MODE_PL
Address	800200200601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

49	RWX	RX_PL_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_SPARE_MODE_PL
Address	8002002D0601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_SPARE_MODE_3: Per-lane spare mode latch.

Bits	SCOM	Field Mnemonic: Description
52	RWX	RX_PL_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_SPARE_MODE_PL
Address	8002002E0601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#4.RD.RX_BIT_REGS.RX_SPARE_MODE_PL
Address	8002002F0601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#5.RD.RX_BIT_REGS.RX_SPARE_MODE_PL
Address	800200300601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_SPARE_MODE_PL
Address	800200310601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RD.RX_BIT_REGS.RX_FIR_PL
Address	800208000601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	ROX	Reserved field.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RD.RX_BIT_REGS.RX_FIR_PL
Address	800208010601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	ROX	Reserved field.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_FIR_PL
Address	800208020601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	ROX	Reserved field.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_FIR_PL
Address	800208030601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	ROX	Reserved field.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_FIR_PL
Address	800208040601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	ROX	Reserved field.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_FIR_PL
Address	800208050601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	ROX	Reserved field.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_FIR_PL
Address	800208060601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	ROX	Reserved field.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_FIR_PL
Address	800208070601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	ROX	Reserved field.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_FIR_PL
Address	800208080601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	ROX	Reserved field.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_FIR_PL
Address	800208090601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_FIR_PL
Address	8002082A0601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	ROX	Reserved field.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_FIR_PL
Address	8002082B0601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	ROX	Reserved field.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_FIR_PL
Address	8002082C0601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	ROX	Reserved field.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_FIR_PL
Address	8002082D0601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	ROX	Reserved field.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_FIR_PL
Address	8002082E0601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	ROX	Reserved field.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#4.RD.RX_BIT_REGS.RX_FIR_PL
Address	8002082F0601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	ROX	Reserved field.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#5.RD.RX_BIT_REGS.RX_FIR_PL
Address	800208300601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	ROX	Reserved field.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_FIR_PL
Address	800208310601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	ROX	Reserved field.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Mask Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RD.RX_BIT_REGS.RX_FIR_MASK_PL
Address	800210000601143F (SCOM)
Description	This register masks receive FIR per-lane errors.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_PL_FIR_ERRS_MASK: IOTK ALIAS: This field is a FIR mask for rx_fir_pl errors.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Mask Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RD.RX_BIT_REGS.RX_FIR_MASK_PL
Address	800210010601143F (SCOM)
Description	This register masks receive FIR per-lane errors.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_PL_FIR_ERRS_MASK: IOTK ALIAS: This field is a FIR mask for rx_fir_pl errors.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Mask Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_FIR_MASK_PL
Address	800210020601143F (SCOM)
Description	This register masks receive FIR per-lane errors.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_PL_FIR_ERRS_MASK: IOTK ALIAS: This field is a FIR mask for rx_fir_pl errors.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Mask Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_FIR_MASK_PL
Address	800210030601143F (SCOM)
Description	This register masks receive FIR per-lane errors.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_PL_FIR_ERRS_MASK: IOTK ALIAS: This field is a FIR mask for rx_fir_pl errors.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Mask Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_FIR_MASK_PL
Address	800210040601143F (SCOM)
Description	This register masks receive FIR per-lane errors.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_PL_FIR_ERRS_MASK: IOTK ALIAS: This field is a FIR mask for rx_fir_pl errors.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Mask Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_FIR_MASK_PL
Address	800210050601143F (SCOM)
Description	This register masks receive FIR per-lane errors.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_PL_FIR_ERRS_MASK: IOTK ALIAS: This field is a FIR mask for rx_fir_pl errors.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Mask Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_FIR_MASK_PL
Address	800210060601143F (SCOM)
Description	This register masks receive FIR per-lane errors.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_PL_FIR_ERRS_MASK: IOTK ALIAS: This field is a FIR mask for rx_fir_pl errors.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Mask Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_FIR_MASK_PL
Address	800210070601143F (SCOM)
Description	This register masks receive FIR per-lane errors.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_PL_FIR_ERRS_MASK: IOTK ALIAS: This field is a FIR mask for rx_fir_pl errors.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Mask Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_FIR_MASK_PL
Address	800210080601143F (SCOM)
Description	This register masks receive FIR per-lane errors.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_PL_FIR_ERRS_MASK: IOTK ALIAS: This field is a FIR mask for rx_fir_pl errors.
51:63	RO	constant = 0b0000000000000

Register Name	Receive FIR Mask Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_FIR_MASK_PL
Address	800210090601143F (SCOM)
Description	This register masks receive FIR per-lane errors.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_LANE_DIG_PDWN: This bit is used to power down the digital logic for a lane.
49	RWX	RX_BER_DPIPE_MUX_SEL: Diag BER data pipe mux select. When this bit is set to 1, the XOR of the main and alt data is multiplexed onto the main data path feeding the data pipe.
50:51	RO	constant = 0b00
52	RWX	RX_LANE_SCRAMBLE_DISABLE: This bit is used to disable the receive descrambler on a specific lane, or all lanes, by using a per-lane/per-group global write.
53:55	RO	constant = 0b000
56:57	RWX	RX_PRBS_SCRAMBLE_MODE: This field selects the PRBS scramble sequence length. 0b00 = PRBS 23 (default). 0b01 = PRBS 7 (used by RX BIST). 0b10 = PRBS 11. 0b11 = PRBS 15.
58	RWX	RX_FIFO_HALF_WIDTH_MODE: This bit selects half-width mode for the receive FIFO for slower frequency connections.
59	RO	constant = 0b0
60	RWX	RX_PRBS_SYNC_MODE: This bit selects the PRBS synchronization sequence length.
61	RWX	RX_PRBS_RXBIST_MODE: This bit forces prbs_en on for running edi+ rx_bist.
62:63	RO	constant = 0b00

Register Name	Receive Bit Mode 1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE1_EO_PL
Address	800220080601143F (SCOM)
Description	This register contains the first set of EO mode bits.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_LANE_DIG_PDWN: This bit is used to power down the digital logic for a lane.
49	RWX	RX_BER_DPIPE_MUX_SEL: Diag BER data pipe mux select. When this bit is set to 1, the XOR of the main and alt data is multiplexed onto the main data path feeding the data pipe.
50:51	RO	constant = 0b00
52	RWX	RX_LANE_SCRAMBLE_DISABLE: This bit is used to disable the receive descrambler on a specific lane, or all lanes, by using a per-lane/per-group global write.
53:55	RO	constant = 0b000
56:57	RWX	RX_PRBS_SCRAMBLE_MODE: This field selects the PRBS scramble sequence length. 0b00 = PRBS 23 (default). 0b01 = PRBS 7 (used by RX BIST). 0b10 = PRBS 11. 0b11 = PRBS 15.
58	RWX	RX_FIFO_HALF_WIDTH_MODE: This bit selects half-width mode for the receive FIFO for slower frequency connections.
59	RO	constant = 0b0
60	RWX	RX_PRBS_SYNC_MODE: This bit selects the PRBS synchronization sequence length.
61	RWX	RX_PRBS_RXBIST_MODE: This bit forces prbs_en on for running edi+ rx_bist.

Bits	SCOM	Field Mnemonic: Description
62:63	RO	constant = 0b00

Register Name	Receive Bit Mode 1 EO Per-Lane Register

Description	This register contains the first set of EO mode bits.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_LANE_DIG_PDWN: This bit is used to power down the digital logic for a lane.
49	RWX	RX_BER_DPIPE_MUX_SEL: Diag BER data pipe mux select. When this bit is set to 1, the XOR of the main and alt data is multiplexed onto the main data path feeding the data pipe.
50:51	RO	constant = 0b00
52	RWX	RX_LANE_SCRAMBLE_DISABLE: This bit is used to disable the receive descrambler on a specific lane, or all lanes, by using a per-lane/per-group global write.
53:55	RO	constant = 0b000
56:57	RWX	RX_PRBS_SCRAMBLE_MODE: This field selects the PRBS scramble sequence length. 0b00 = PRBS 23 (default). 0b01 = PRBS 7 (used by RX BIST). 0b10 = PRBS 11. 0b11 = PRBS 15.
58	RWX	RX_FIFO_HALF_WIDTH_MODE: This bit selects half-width mode for the receive FIFO for slower frequency connections.
59	RO	constant = 0b0
60	RWX	RX_PRBS_SYNC_MODE: This bit selects the PRBS synchronization sequence length.
61	RWX	RX_PRBS_RXBIST_MODE: This bit forces prbs_en on for running edi+ rx_bist.
62:63	RO	constant = 0b00

Register Name	Receive Bit Mode 1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE1_EO_PL
Address	800220240601143F (SCOM)
Description	This register contains the first set of EO mode bits.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_LANE_DIG_PDWN: This bit is used to power down the digital logic for a lane.
49	RWX	RX_BER_DPIPE_MUX_SEL: Diag BER data pipe mux select. When this bit is set to 1, the XOR of the main and alt data is multiplexed onto the main data path feeding the data pipe.
50:51	RO	constant = 0b00
52	RWX	RX_LANE_SCRAMBLE_DISABLE: This bit is used to disable the receive descrambler on a specific lane, or all lanes, by using a per-lane/per-group global write.
53:55	RO	constant = 0b000
56:57	RWX	RX_PRBS_SCRAMBLE_MODE: This field selects the PRBS scramble sequence length. 0b00 = PRBS 23 (default). 0b01 = PRBS 7 (used by RX BIST). 0b10 = PRBS 11. 0b11 = PRBS 15.
58	RWX	RX_FIFO_HALF_WIDTH_MODE: This bit selects half-width mode for the receive FIFO for slower frequency connections.
59	RO	constant = 0b0
60	RWX	RX_PRBS_SYNC_MODE: This bit selects the PRBS synchronization sequence length.
61	RWX	RX_PRBS_RXBIST_MODE: This bit forces prbs_en on for running edi+ rx_bist.
62:63	RO	constant = 0b00

Register Name	Receive Bit Mode 1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_MODE1_EO_PL
Address	800220250601143F (SCOM)
Description	This register contains the first set of EO mode bits.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_LANE_DIG_PDWN: This bit is used to power down the digital logic for a lane.
49	RWX	RX_BER_DPIPE_MUX_SEL: Diag BER data pipe mux select. When this bit is set to 1, the XOR of the main and alt data is multiplexed onto the main data path feeding the data pipe.
50:51	RO	constant = 0b00
52	RWX	RX_LANE_SCRAMBLE_DISABLE: This bit is used to disable the receive descrambler on a specific lane, or all lanes, by using a per-lane/per-group global write.
53:55	RO	constant = 0b000
56:57	RWX	RX_PRBS_SCRAMBLE_MODE: This field selects the PRBS scramble sequence length. 0b00 = PRBS 23 (default). 0b01 = PRBS 7 (used by RX BIST). 0b10 = PRBS 11. 0b11 = PRBS 15.
58	RWX	RX_FIFO_HALF_WIDTH_MODE: This bit selects half-width mode for the receive FIFO for slower frequency connections.
59	RO	constant = 0b0
60	RWX	RX_PRBS_SYNC_MODE: This bit selects the PRBS synchronization sequence length.
61	RWX	RX_PRBS_RXBIST_MODE: This bit forces prbs_en on for running edi+ rx_bist.

Bits	SCOM	Field Mnemonic: Description
62:63	RO	constant = 0b00

Register Name	Receive Bit Mode 1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_MODE1_EO_PL
Address	800220260601143F (SCOM)
Description	This register contains the first set of EO mode bits.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_LANE_DIG_PDWN: This bit is used to power down the digital logic for a lane.

Description	This register contains the first set of EO mode bits.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_LANE_DIG_PDWN: This bit is used to power down the digital logic for a lane.
49	RWX	RX_BER_DPIPE_MUX_SEL: Diag BER data pipe mux select. When this bit is set to 1, the XOR of the main and alt data is multiplexed onto the main data path feeding the data pipe.
50:51	RO	constant = 0b00
52	RWX	RX_LANE_SCRAMBLE_DISABLE: This bit is used to disable the receive descrambler on a specific lane, or all lanes, by using a per-lane/per-group global write.
53:55	RO	constant = 0b000

Bits	SCOM	Field Mnemonic: Description
56:57	RWX	RX_PRBS_SCRAMBLE_MODE: This field selects the PRBS scramble sequence length. 0b00 = PRBS 23 (default). 0b01 = PRBS 7 (used by RX BIST). 0b10 = PRBS 11. 0b11 = PRBS 15.
58	RWX	RX_FIFO_HALF_WIDTH_MODE: This bit selects half-width mode for the receive FIFO for slower frequency connections.
59	RO	constant = 0b0
60	RWX	RX_PRBS_SYNC_MODE: This bit selects the PRBS synchronization sequence length.
61	RWX	RX_PRBS_RXBIST_MODE: This bit forces prbs_en on for running edi+ rx_bist.
62:63	RO	constant = 0b00

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228000601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228010601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228020601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228030601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228040601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228050601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228060601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228070601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228080601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228090601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	8002280A0601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	8002280B0601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	8002280C0601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	8002280D0601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	8002280E0601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	8002280F0601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228100601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228110601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228200601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228210601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228220601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228230601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228240601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228250601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228260601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228270601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228280601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228290601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	8002282A0601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	8002282B0601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	8002282C0601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	8002282D0601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	8002282E0601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#4.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	8002282F0601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#5.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228300601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE2_EO_PL
Address	800228310601143F (SCOM)
Description	This register contains the second set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:59	RO	constant = 0b000000000000000000000000000000000000000000000000000000000000
60:63	RWX	RX_PR_PHASE_STEP: This field contains the amount to be added to or subtracted from the phase rotator accumulator on each shift left or right. The value 0000 is decoded as b10000 in logic. Therefore, the PR updates every four shifts. Other values update with every 4 x (16/phase_step) shifts.

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230000601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230010601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230020601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230030601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230040601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230050601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230060601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230070601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230080601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230090601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	8002300A0601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	8002300B0601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	8002300C0601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	8002300D0601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	8002300E0601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	8002300F0601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230100601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230110601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230200601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230210601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230220601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230230601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230240601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230250601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230260601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230270601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230280601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230290601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	8002302A0601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	8002302B0601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	8002302C0601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	8002302D0601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	8002302E0601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#4.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	8002302F0601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#5.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230300601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit Mode 3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_MODE3_EO_PL
Address	800230310601143F (SCOM)
Description	This register contains the third set of EO mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RWX	RX_BER_CFG: This register controls the bit-error-rate threshold used for DDC.
51:52	RWX	RX_FIFO_DLY_CFG: This register controls how many parallel clock cycles we wait after every change to the phase rotator before we begin using the data again.
53:54	RWX	RX_DDC_CFG: This register controls how many parallel clock cycles we wait while looking for errors as we progress further into the edge.
55:63	RO	constant = 0b000000000

Register Name	Receive Bit CNTLX1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RD.RX_BIT_REGS.RX_BIT_CNTLX1_EO_PL
Address	800240000601143F (SCOM)
Description	This is the receive bit CNTLX1 EO per-lane register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_CAL_LANE_SEL: This bit selects which lane to recalibrate.
49	RWX	RX_LANE_INVERT: This bit inverts the receive lane data.
50	RWX	RX_LANE_INVALID: This bit marks this receive slice as invalid and fences other operations. Use this bit, for example, to broadcast a setting to all good lanes but not bad or disabled ones.
51	RWX	RX_PIPE_SEL: This bit selects what to multiplex onto the data pipe bus going to the calibration logic. 0b0 = Data. 0b1 = Descrambler output.
52	RO	constant = 0b0
53	RWX	RX_PDWN_LITE: When set, this bit partially powers down unused spare lanes when not being recalibrated.
54	RWX	RX_PRBS_CHECK_SYNC: This bit enables checking for the 12/24 UI scramble synchronization pulse in the descramble PRBS block. 0b0 = Disable checking (forces prbs_sync_done to 0). 0b1 = Enable checking (prbs_sync_done may go to 1 after identifying the sync pulse).
55	RWX	RX_PRBS_SEED_DDC: Set this bit to enable seeding of the DDC PRBS block from the data pipe output (either the data stream or the descramble PRBS block depending on the value of rx_pipe_sel).
56	RWX	RX_PRBS_SEED_DFE: Set this bit to enable seeding of the DFE PRBS block. Related to this is rx_dfe_force_load_seed, which loads from the incoming data stream when 0 or from the rx_prbs_seed_value_* when 1.
57	RWX	RX_DFE_FORCE_LOAD_SEED: Set this bit to force rx_prbs_seed_value_0_15 and rx_prbs_seed_value_16_22 to load directly into the DFE history vector in the analog front-end for this lane. **Note:** The rx_prbs_seed_value_* bits are extended by 1 bit and shifted by a fixed value to match the pipeline delays between the analog front end and the receive PRBS descrambler. To set the DFE history vector to a specific value, the user must reverse that transformation to determine the value to write to the rx_prbs_seed_value_* to get the desired result in the vector.
58	RWX	RX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
59:60	RWX	RX_IOCLK_SLIP: This field provides software control of the receive slice deserializer IOCLK slip control. Use this to slip the deserilizer by 2N beats.
61	RWX	RX_IOCLK_SLIP_STROBE: This bit provides software control to execute IOCLK slip control.
62	RWX	RX_HISTORY_PRBS_POWER_UP: This bit forces the power up of the additional analog history latches used for PRBS generation when performing H2 - 12 calibration.
63	RWX	RX_PSAVE_RESYNC_DISABLE: This bit disables the resynchronize machine for this physical lane without disabling psave mode entirely.

Register Name	**Receive Bit CNTLX1 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RD.RX_BIT_REGS.RX_BIT_CNTLX1_EO_PL
Address	800240010601143F (SCOM)
Description	This is the receive bit CNTLX1 EO per-lane register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_CAL_LANE_SEL: This bit selects which lane to recalibrate.
49	RWX	RX_LANE_INVERT: This bit inverts the receive lane data.
50	RWX	RX_LANE_INVALID: This bit marks this receive slice as invalid and fences other operations. Use this bit, for example, to broadcast a setting to all good lanes but not bad or disabled ones.

Bits	SCOM	Field Mnemonic: Description
51	RWX	RX_PIPE_SEL: This bit selects what to multiplex onto the data pipe bus going to the calibration logic. 0b0 = Data. 0b1 = Descrambler output.
52	RO	constant = 0b0
53	RWX	RX_PDWN_LITE: When set, this bit partially powers down unused spare lanes when not being recalibrated.
54	RWX	RX_PRBS_CHECK_SYNC: This bit enables checking for the 12/24 UI scramble synchronization pulse in the descramble PRBS block. 0b0 = Disable checking (forces prbs_sync_done to 0). 0b1 = Enable checking (prbs_sync_done may go to 1 after identifying the sync pulse).
55	RWX	RX_PRBS_SEED_DDC: Set this bit to enable seeding of the DDC PRBS block from the data pipe output (either the data stream or the descramble PRBS block depending on the value of rx_pipe_sel).
56	RWX	RX_PRBS_SEED_DFE: Set this bit to enable seeding of the DFE PRBS block. Related to this is rx_dfe_force_load_seed, which loads from the incoming data stream when 0 or from the rx_prbs_seed_value_* when 1.
57	RWX	RX_DFE_FORCE_LOAD_SEED: Set this bit to force rx_prbs_seed_value_0_15 and rx_prbs_seed_value_16_22 to load directly into the DFE history vector in the analog front-end for this lane. **Note:** The rx_prbs_seed_value_* bits are extended by 1 bit and shifted by a fixed value to match the pipeline delays between the analog front end and the receive PRBS descrambler. To set the DFE history vector to a specific value, the user must reverse that transformation to determine the value to write to the rx_prbs_seed_value_* to get the desired result in the vector.
58	RWX	RX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
59:60	RWX	RX_IOCLK_SLIP: This field provides software control of the receive slice deserializer IOCLK slip control. Use this to slip the deserilizer by 2N beats.
61	RWX	RX_IOCLK_SLIP_STROBE: This bit provides software control to execute IOCLK slip control.
62	RWX	RX_HISTORY_PRBS_POWER_UP: This bit forces the power up of the additional analog history latches used for PRBS generation when performing H2 - 12 calibration.
63	RWX	RX_PSAVE_RESYNC_DISABLE: This bit disables the resynchronize machine for this physical lane without disabling psave mode entirely.

Register Name	Receive Bit CNTLX1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTLX1_EO_PL
Address	800240020601143F (SCOM)
Description	This is the receive bit CNTLX1 EO per-lane register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_CAL_LANE_SEL: This bit selects which lane to recalibrate.
49	RWX	RX_LANE_INVERT: This bit inverts the receive lane data.
50	RWX	RX_LANE_INVALID: This bit marks this receive slice as invalid and fences other operations. Use this bit, for example, to broadcast a setting to all good lanes but not bad or disabled ones.
51	RWX	RX_PIPE_SEL: This bit selects what to multiplex onto the data pipe bus going to the calibration logic. 0b0 = Data. 0b1 = Descrambler output.
52	RO	constant = 0b0
53	RWX	RX_PDWN_LITE: When set, this bit partially powers down unused spare lanes when not being recalibrated.

Bits	SCOM	Field Mnemonic: Description
54	RWX	RX_PRBS_CHECK_SYNC: This bit enables checking for the 12/24 UI scramble synchronization pulse in the descramble PRBS block. 0b0 = Disable checking (forces prbs_sync_done to 0). 0b1 = Enable checking (prbs_sync_done may go to 1 after identifying the sync pulse).
55	RWX	RX_PRBS_SEED_DDC: Set this bit to enable seeding of the DDC PRBS block from the data pipe output (either the data stream or the descramble PRBS block depending on the value of rx_pipe_sel).
56	RWX	RX_PRBS_SEED_DFE: Set this bit to enable seeding of the DFE PRBS block. Related to this is rx_dfe_force_load_seed, which loads from the incoming data stream when 0 or from the rx_prbs_seed_value_* when 1.
57	RWX	RX_DFE_FORCE_LOAD_SEED: Set this bit to force rx_prbs_seed_value_0_15 and rx_prbs_seed_value_16_22 to load directly into the DFE history vector in the analog front-end for this lane. **Note:** The rx_prbs_seed_value_* bits are extended by 1 bit and shifted by a fixed value to match the pipeline delays between the analog front end and the receive PRBS descrambler. To set the DFE history vector to a specific value, the user must reverse that transformation to determine the value to write to the rx_prbs_seed_value_* to get the desired result in the vector.
58	RWX	RX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
59:60	RWX	RX_IOCLK_SLIP: This field provides software control of the receive slice deserializer IOCLK slip control. Use this to slip the deserilizer by 2N beats.
61	RWX	RX_IOCLK_SLIP_STROBE: This bit provides software control to execute IOCLK slip control.
62	RWX	RX_HISTORY_PRBS_POWER_UP: This bit forces the power up of the additional analog history latches used for PRBS generation when performing H2 - 12 calibration.
63	RWX	RX_PSAVE_RESYNC_DISABLE: This bit disables the resynchronize machine for this physical lane without disabling psave mode entirely.

Register Name	**Receive Bit CNTLX1 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTLX1_EO_PL
Address	800240030601143F (SCOM)
Description	This is the receive bit CNTLX1 EO per-lane register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_CAL_LANE_SEL: This bit selects which lane to recalibrate.
49	RWX	RX_LANE_INVERT: This bit inverts the receive lane data.
50	RWX	RX_LANE_INVALID: This bit marks this receive slice as invalid and fences other operations. Use this bit, for example, to broadcast a setting to all good lanes but not bad or disabled ones.
51	RWX	RX_PIPE_SEL: This bit selects what to multiplex onto the data pipe bus going to the calibration logic. 0b0 = Data. 0b1 = Descrambler output.
52	RO	constant = 0b0
53	RWX	RX_PDWN_LITE: When set, this bit partially powers down unused spare lanes when not being recalibrated.
54	RWX	RX_PRBS_CHECK_SYNC: This bit enables checking for the 12/24 UI scramble synchronization pulse in the descramble PRBS block. 0b0 = Disable checking (forces prbs_sync_done to 0). 0b1 = Enable checking (prbs_sync_done may go to 1 after identifying the sync pulse).
55	RWX	RX_PRBS_SEED_DDC: Set this bit to enable seeding of the DDC PRBS block from the data pipe output (either the data stream or the descramble PRBS block depending on the value of rx_pipe_sel).

Bits	SCOM	Field Mnemonic: Description
56	RWX	RX_PRBS_SEED_DFE: Set this bit to enable seeding of the DFE PRBS block. Related to this is rx_dfe_force_load_seed, which loads from the incoming data stream when 0 or from the rx_prbs_seed_value_* when 1.
57	RWX	RX_DFE_FORCE_LOAD_SEED: Set this bit to force rx_prbs_seed_value_0_15 and rx_prbs_seed_value_16_22 to load directly into the DFE history vector in the analog front-end for this lane. **Note:** The rx_prbs_seed_value_* bits are extended by 1 bit and shifted by a fixed value to match the pipeline delays between the analog front end and the receive PRBS descrambler. To set the DFE history vector to a specific value, the user must reverse that transformation to determine the value to write to the rx_prbs_seed_value_* to get the desired result in the vector.
58	RWX	RX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
59:60	RWX	RX_IOCLK_SLIP: This field provides software control of the receive slice deserializer IOCLK slip control. Use this to slip the deserilizer by 2N beats.
61	RWX	RX_IOCLK_SLIP_STROBE: This bit provides software control to execute IOCLK slip control.
62	RWX	RX_HISTORY_PRBS_POWER_UP: This bit forces the power up of the additional analog history latches used for PRBS generation when performing H2 - 12 calibration.
63	RWX	RX_PSAVE_RESYNC_DISABLE: This bit disables the resynchronize machine for this physical lane without disabling psave mode entirely.

Register Name	**Receive Bit CNTLX1 EO Per-Lane Register**

Address	8002400A0601143F (SCOM)
Description	This is the receive bit CNTLX1 EO per-lane register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_CAL_LANE_SEL: This bit selects which lane to recalibrate.
49	RWX	RX_LANE_INVERT: This bit inverts the receive lane data.
50	RWX	RX_LANE_INVALID: This bit marks this receive slice as invalid and fences other operations. Use this bit, for example, to broadcast a setting to all good lanes but not bad or disabled ones.

Bits	SCOM	Field Mnemonic: Description
51	RWX	RX_PIPE_SEL: This bit selects what to multiplex onto the data pipe bus going to the calibration logic. 0b0 = Data. 0b1 = Descrambler output.
52	RO	constant = 0b0
53	RWX	RX_PDWN_LITE: When set, this bit partially powers down unused spare lanes when not being recalibrated.
54	RWX	RX_PRBS_CHECK_SYNC: This bit enables checking for the 12/24 UI scramble synchronization pulse in the descramble PRBS block. 0b0 = Disable checking (forces prbs_sync_done to 0). 0b1 = Enable checking (prbs_sync_done may go to 1 after identifying the sync pulse).
55	RWX	RX_PRBS_SEED_DDC: Set this bit to enable seeding of the DDC PRBS block from the data pipe output (either the data stream or the descramble PRBS block depending on the value of rx_pipe_sel).
56	RWX	RX_PRBS_SEED_DFE: Set this bit to enable seeding of the DFE PRBS block. Related to this is rx_dfe_force_load_seed, which loads from the incoming data stream when 0 or from the rx_prbs_seed_value_* when 1.
57	RWX	RX_DFE_FORCE_LOAD_SEED: Set this bit to force rx_prbs_seed_value_0_15 and rx_prbs_seed_value_16_22 to load directly into the DFE history vector in the analog front-end for this lane. **Note:** The rx_prbs_seed_value_* bits are extended by 1 bit and shifted by a fixed value to match the pipeline delays between the analog front end and the receive PRBS descrambler. To set the DFE history vector to a specific value, the user must reverse that transformation to determine the value to write to the rx_prbs_seed_value_* to get the desired result in the vector.
58	RWX	RX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
59:60	RWX	RX_IOCLK_SLIP: This field provides software control of the receive slice deserializer IOCLK slip control. Use this to slip the deserilizer by 2N beats.
61	RWX	RX_IOCLK_SLIP_STROBE: This bit provides software control to execute IOCLK slip control.
62	RWX	RX_HISTORY_PRBS_POWER_UP: This bit forces the power up of the additional analog history latches used for PRBS generation when performing H2 - 12 calibration.
63	RWX	RX_PSAVE_RESYNC_DISABLE: This bit disables the resynchronize machine for this physical lane without disabling psave mode entirely.

Register Name	**Receive Bit CNTLX1 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTLX1_EO_PL
Address	8002400B0601143F (SCOM)
Description	This is the receive bit CNTLX1 EO per-lane register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_CAL_LANE_SEL: This bit selects which lane to recalibrate.
49	RWX	RX_LANE_INVERT: This bit inverts the receive lane data.
50	RWX	RX_LANE_INVALID: This bit marks this receive slice as invalid and fences other operations. Use this bit, for example, to broadcast a setting to all good lanes but not bad or disabled ones.
51	RWX	RX_PIPE_SEL: This bit selects what to multiplex onto the data pipe bus going to the calibration logic. 0b0 = Data. 0b1 = Descrambler output.
52	RO	constant = 0b0
53	RWX	RX_PDWN_LITE: When set, this bit partially powers down unused spare lanes when not being recalibrated.

Bits	SCOM	Field Mnemonic: Description
54	RWX	RX_PRBS_CHECK_SYNC: This bit enables checking for the 12/24 UI scramble synchronization pulse in the descramble PRBS block. 0b0 = Disable checking (forces prbs_sync_done to 0). 0b1 = Enable checking (prbs_sync_done may go to 1 after identifying the sync pulse).
55	RWX	RX_PRBS_SEED_DDC: Set this bit to enable seeding of the DDC PRBS block from the data pipe output (either the data stream or the descramble PRBS block depending on the value of rx_pipe_sel).
56	RWX	RX_PRBS_SEED_DFE: Set this bit to enable seeding of the DFE PRBS block. Related to this is rx_dfe_force_load_seed, which loads from the incoming data stream when 0 or from the rx_prbs_seed_value_* when 1.
57	RWX	RX_DFE_FORCE_LOAD_SEED: Set this bit to force rx_prbs_seed_value_0_15 and rx_prbs_seed_value_16_22 to load directly into the DFE history vector in the analog front-end for this lane. **Note:** The rx_prbs_seed_value_* bits are extended by 1 bit and shifted by a fixed value to match the pipeline delays between the analog front end and the receive PRBS descrambler. To set the DFE history vector to a specific value, the user must reverse that transformation to determine the value to write to the rx_prbs_seed_value_* to get the desired result in the vector.
58	RWX	RX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
59:60	RWX	RX_IOCLK_SLIP: This field provides software control of the receive slice deserializer IOCLK slip control. Use this to slip the deserilizer by 2N beats.
61	RWX	RX_IOCLK_SLIP_STROBE: This bit provides software control to execute IOCLK slip control.
62	RWX	RX_HISTORY_PRBS_POWER_UP: This bit forces the power up of the additional analog history latches used for PRBS generation when performing H2 - 12 calibration.
63	RWX	RX_PSAVE_RESYNC_DISABLE: This bit disables the resynchronize machine for this physical lane without disabling psave mode entirely.

53	RWX	RX_PDWN_LITE: When set, this bit partially powers down unused spare lanes when not being recalibrated.
54	RWX	RX_PRBS_CHECK_SYNC: This bit enables checking for the 12/24 UI scramble synchronization pulse in the descramble PRBS block. 0b0 = Disable checking (forces prbs_sync_done to 0). 0b1 = Enable checking (prbs_sync_done may go to 1 after identifying the sync pulse).
55	RWX	RX_PRBS_SEED_DDC: Set this bit to enable seeding of the DDC PRBS block from the data pipe output (either the data stream or the descramble PRBS block depending on the value of rx_pipe_sel).
56	RWX	RX_PRBS_SEED_DFE: Set this bit to enable seeding of the DFE PRBS block. Related to this is rx_dfe_force_load_seed, which loads from the incoming data stream when 0 or from the rx_prbs_seed_value_* when 1.
57	RWX	RX_DFE_FORCE_LOAD_SEED: Set this bit to force rx_prbs_seed_value_0_15 and rx_prbs_seed_value_16_22 to load directly into the DFE history vector in the analog front-end for this lane. **Note:** The rx_prbs_seed_value_* bits are extended by 1 bit and shifted by a fixed value to match the pipeline delays between the analog front end and the receive PRBS descrambler. To set the DFE history vector to a specific value, the user must reverse that transformation to determine the value to write to the rx_prbs_seed_value_* to get the desired result in the vector.
58	RWX	RX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
59:60	RWX	RX_IOCLK_SLIP: This field provides software control of the receive slice deserializer IOCLK slip control. Use this to slip the deserilizer by 2N beats.
61	RWX	RX_IOCLK_SLIP_STROBE: This bit provides software control to execute IOCLK slip control.
62	RWX	RX_HISTORY_PRBS_POWER_UP: This bit forces the power up of the additional analog history latches used for PRBS generation when performing H2 - 12 calibration.
63	RWX	RX_PSAVE_RESYNC_DISABLE: This bit disables the resynchronize machine for this physical lane without disabling psave mode entirely.

Register Name	Receive Bit CNTLX1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTLX1_EO_PL
Address	800240200601143F (SCOM)
Description	This is the receive bit CNTLX1 EO per-lane register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_CAL_LANE_SEL: This bit selects which lane to recalibrate.
49	RWX	RX_LANE_INVERT: This bit inverts the receive lane data.
50	RWX	RX_LANE_INVALID: This bit marks this receive slice as invalid and fences other operations. Use this bit, for example, to broadcast a setting to all good lanes but not bad or disabled ones.
51	RWX	RX_PIPE_SEL: This bit selects what to multiplex onto the data pipe bus going to the calibration logic. 0b0 = Data. 0b1 = Descrambler output.
52	RO	constant = 0b0
53	RWX	RX_PDWN_LITE: When set, this bit partially powers down unused spare lanes when not being recalibrated.
54	RWX	RX_PRBS_CHECK_SYNC: This bit enables checking for the 12/24 UI scramble synchronization pulse in the descramble PRBS block. 0b0 = Disable checking (forces prbs_sync_done to 0). 0b1 = Enable checking (prbs_sync_done may go to 1 after identifying the sync pulse).
55	RWX	RX_PRBS_SEED_DDC: Set this bit to enable seeding of the DDC PRBS block from the data pipe output (either the data stream or the descramble PRBS block depending on the value of rx_pipe_sel).
56	RWX	RX_PRBS_SEED_DFE: Set this bit to enable seeding of the DFE PRBS block. Related to this is rx_dfe_force_load_seed, which loads from the incoming data stream when 0 or from the rx_prbs_seed_value_* when 1.
57	RWX	RX_DFE_FORCE_LOAD_SEED: Set this bit to force rx_prbs_seed_value_0_15 and rx_prbs_seed_value_16_22 to load directly into the DFE history vector in the analog front-end for this lane. **Note:** The rx_prbs_seed_value_* bits are extended by 1 bit and shifted by a fixed value to match the pipeline delays between the analog front end and the receive PRBS descrambler. To set the DFE history vector to a specific value, the user must reverse that transformation to determine the value to write to the rx_prbs_seed_value_* to get the desired result in the vector.
58	RWX	RX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
59:60	RWX	RX_IOCLK_SLIP: This field provides software control of the receive slice deserializer IOCLK slip control. Use this to slip the deserilizer by 2N beats.
61	RWX	RX_IOCLK_SLIP_STROBE: This bit provides software control to execute IOCLK slip control.
62	RWX	RX_HISTORY_PRBS_POWER_UP: This bit forces the power up of the additional analog history latches used for PRBS generation when performing H2 - 12 calibration.
63	RWX	RX_PSAVE_RESYNC_DISABLE: This bit disables the resynchronize machine for this physical lane without disabling psave mode entirely.

Register Name	**Receive Bit CNTLX1 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTLX1_EO_PL
Address	800240210601143F (SCOM)
Description	This is the receive bit CNTLX1 EO per-lane register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_CAL_LANE_SEL: This bit selects which lane to recalibrate.
49	RWX	RX_LANE_INVERT: This bit inverts the receive lane data.
50	RWX	RX_LANE_INVALID: This bit marks this receive slice as invalid and fences other operations. Use this bit, for example, to broadcast a setting to all good lanes but not bad or disabled ones.

Bits	SCOM	Field Mnemonic: Description
51	RWX	RX_PIPE_SEL: This bit selects what to multiplex onto the data pipe bus going to the calibration logic. 0b0 = Data. 0b1 = Descrambler output.
52	RO	constant = 0b0
53	RWX	RX_PDWN_LITE: When set, this bit partially powers down unused spare lanes when not being recalibrated.
54	RWX	RX_PRBS_CHECK_SYNC: This bit enables checking for the 12/24 UI scramble synchronization pulse in the descramble PRBS block. 0b0 = Disable checking (forces prbs_sync_done to 0). 0b1 = Enable checking (prbs_sync_done may go to 1 after identifying the sync pulse).
55	RWX	RX_PRBS_SEED_DDC: Set this bit to enable seeding of the DDC PRBS block from the data pipe output (either the data stream or the descramble PRBS block depending on the value of rx_pipe_sel).
56	RWX	RX_PRBS_SEED_DFE: Set this bit to enable seeding of the DFE PRBS block. Related to this is rx_dfe_force_load_seed, which loads from the incoming data stream when 0 or from the rx_prbs_seed_value_* when 1.
57	RWX	RX_DFE_FORCE_LOAD_SEED: Set this bit to force rx_prbs_seed_value_0_15 and rx_prbs_seed_value_16_22 to load directly into the DFE history vector in the analog front-end for this lane. **Note:** The rx_prbs_seed_value_* bits are extended by 1 bit and shifted by a fixed value to match the pipeline delays between the analog front end and the receive PRBS descrambler. To set the DFE history vector to a specific value, the user must reverse that transformation to determine the value to write to the rx_prbs_seed_value_* to get the desired result in the vector.
58	RWX	RX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
59:60	RWX	RX_IOCLK_SLIP: This field provides software control of the receive slice deserializer IOCLK slip control. Use this to slip the deserilizer by 2N beats.
61	RWX	RX_IOCLK_SLIP_STROBE: This bit provides software control to execute IOCLK slip control.
62	RWX	RX_HISTORY_PRBS_POWER_UP: This bit forces the power up of the additional analog history latches used for PRBS generation when performing H2 - 12 calibration.
63	RWX	RX_PSAVE_RESYNC_DISABLE: This bit disables the resynchronize machine for this physical lane without disabling psave mode entirely.

Register Name	**Receive Bit CNTLX1 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTLX1_EO_PL
Address	800240220601143F (SCOM)
Description	This is the receive bit CNTLX1 EO per-lane register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_CAL_LANE_SEL: This bit selects which lane to recalibrate.
49	RWX	RX_LANE_INVERT: This bit inverts the receive lane data.
50	RWX	RX_LANE_INVALID: This bit marks this receive slice as invalid and fences other operations. Use this bit, for example, to broadcast a setting to all good lanes but not bad or disabled ones.
51	RWX	RX_PIPE_SEL: This bit selects what to multiplex onto the data pipe bus going to the calibration logic. 0b0 = Data. 0b1 = Descrambler output.
52	RO	constant = 0b0
53	RWX	RX_PDWN_LITE: When set, this bit partially powers down unused spare lanes when not being recalibrated.

Bits	SCOM	Field Mnemonic: Description
54	RWX	RX_PRBS_CHECK_SYNC: This bit enables checking for the 12/24 UI scramble synchronization pulse in the descramble PRBS block. 0b0 = Disable checking (forces prbs_sync_done to 0). 0b1 = Enable checking (prbs_sync_done may go to 1 after identifying the sync pulse).
55	RWX	RX_PRBS_SEED_DDC: Set this bit to enable seeding of the DDC PRBS block from the data pipe output (either the data stream or the descramble PRBS block depending on the value of rx_pipe_sel).
56	RWX	RX_PRBS_SEED_DFE: Set this bit to enable seeding of the DFE PRBS block. Related to this is rx_dfe_force_load_seed, which loads from the incoming data stream when 0 or from the rx_prbs_seed_value_* when 1.
57	RWX	RX_DFE_FORCE_LOAD_SEED: Set this bit to force rx_prbs_seed_value_0_15 and rx_prbs_seed_value_16_22 to load directly into the DFE history vector in the analog front-end for this lane. **Note:** The rx_prbs_seed_value_* bits are extended by 1 bit and shifted by a fixed value to match the pipeline delays between the analog front end and the receive PRBS descrambler. To set the DFE history vector to a specific value, the user must reverse that transformation to determine the value to write to the rx_prbs_seed_value_* to get the desired result in the vector.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_CAL_LANE_SEL: This bit selects which lane to recalibrate.
49	RWX	RX_LANE_INVERT: This bit inverts the receive lane data.
50	RWX	RX_LANE_INVALID: This bit marks this receive slice as invalid and fences other operations. Use this bit, for example, to broadcast a setting to all good lanes but not bad or disabled ones.
51	RWX	RX_PIPE_SEL: This bit selects what to multiplex onto the data pipe bus going to the calibration logic. 0b0 = Data. 0b1 = Descrambler output.
52	RO	constant = 0b0
53	RWX	RX_PDWN_LITE: When set, this bit partially powers down unused spare lanes when not being recalibrated.
54	RWX	RX_PRBS_CHECK_SYNC: This bit enables checking for the 12/24 UI scramble synchronization pulse in the descramble PRBS block. 0b0 = Disable checking (forces prbs_sync_done to 0). 0b1 = Enable checking (prbs_sync_done may go to 1 after identifying the sync pulse).
55	RWX	RX_PRBS_SEED_DDC: Set this bit to enable seeding of the DDC PRBS block from the data pipe output (either the data stream or the descramble PRBS block depending on the value of rx_pipe_sel).
56	RWX	RX_PRBS_SEED_DFE: Set this bit to enable seeding of the DFE PRBS block. Related to this is rx_dfe_force_load_seed, which loads from the incoming data stream when 0 or from the rx_prbs_seed_value_* when 1.
57	RWX	RX_DFE_FORCE_LOAD_SEED: Set this bit to force rx_prbs_seed_value_0_15 and rx_prbs_seed_value_16_22 to load directly into the DFE history vector in the analog front-end for this lane. **Note:** The rx_prbs_seed_value_* bits are extended by 1 bit and shifted by a fixed value to match the pipeline delays between the analog front end and the receive PRBS descrambler. To set the DFE history vector to a specific value, the user must reverse that transformation to determine the value to write to the rx_prbs_seed_value_* to get the desired result in the vector.
58	RWX	RX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
59:60	RWX	RX_IOCLK_SLIP: This field provides software control of the receive slice deserializer IOCLK slip control. Use this to slip the deserilizer by 2N beats.
61	RWX	RX_IOCLK_SLIP_STROBE: This bit provides software control to execute IOCLK slip control.

Bits	SCOM	Field Mnemonic: Description
62	RWX	RX_HISTORY_PRBS_POWER_UP: This bit forces the power up of the additional analog history latches used for PRBS generation when performing H2 - 12 calibration.
63	RWX	RX_PSAVE_RESYNC_DISABLE: This bit disables the resynchronize machine for this physical lane without disabling psave mode entirely.

Register Name	Receive Bit CNTLX1 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTLX1_EO_PL
Address	8002402A0601143F (SCOM)
Description	This is the receive bit CNTLX1 EO per-lane register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_CAL_LANE_SEL: This bit selects which lane to recalibrate.
49	RWX	RX_LANE_INVERT: This bit inverts the receive lane data.
50	RWX	RX_LANE_INVALID: This bit marks this receive slice as invalid and fences other operations. Use this bit, for example, to broadcast a setting to all good lanes but not bad or disabled ones.
51	RWX	RX_PIPE_SEL: This bit selects what to multiplex onto the data pipe bus going to the calibration logic. 0b0 = Data. 0b1 = Descrambler output.
52	RO	constant = 0b0
53	RWX	RX_PDWN_LITE: When set, this bit partially powers down unused spare lanes when not being recalibrated.
54	RWX	RX_PRBS_CHECK_SYNC: This bit enables checking for the 12/24 UI scramble synchronization pulse in the descramble PRBS block. 0b0 = Disable checking (forces prbs_sync_done to 0). 0b1 = Enable checking (prbs_sync_done may go to 1 after identifying the sync pulse).
55	RWX	RX_PRBS_SEED_DDC: Set this bit to enable seeding of the DDC PRBS block from the data pipe output (either the data stream or the descramble PRBS block depending on the value of rx_pipe_sel).
56	RWX	RX_PRBS_SEED_DFE: Set this bit to enable seeding of the DFE PRBS block. Related to this is rx_dfe_force_load_seed, which loads from the incoming data stream when 0 or from the rx_prbs_seed_value_* when 1.
57	RWX	RX_DFE_FORCE_LOAD_SEED: Set this bit to force rx_prbs_seed_value_0_15 and rx_prbs_seed_value_16_22 to load directly into the DFE history vector in the analog front-end for this lane. **Note:** The rx_prbs_seed_value_* bits are extended by 1 bit and shifted by a fixed value to match the pipeline delays between the analog front end and the receive PRBS descrambler. To set the DFE history vector to a specific value, the user must reverse that transformation to determine the value to write to the rx_prbs_seed_value_* to get the desired result in the vector.
58	RWX	RX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
59:60	RWX	RX_IOCLK_SLIP: This field provides software control of the receive slice deserializer IOCLK slip control. Use this to slip the deserilizer by 2N beats.
61	RWX	RX_IOCLK_SLIP_STROBE: This bit provides software control to execute IOCLK slip control.
62	RWX	RX_HISTORY_PRBS_POWER_UP: This bit forces the power up of the additional analog history latches used for PRBS generation when performing H2 - 12 calibration.
63	RWX	RX_PSAVE_RESYNC_DISABLE: This bit disables the resynchronize machine for this physical lane without disabling psave mode entirely.

Register Name	Receive Bit CNTLX1 EO Per-Lane Register

53	RWX	RX_PDWN_LITE: When set, this bit partially powers down unused spare lanes when not being recalibrated.
54	RWX	RX_PRBS_CHECK_SYNC: This bit enables checking for the 12/24 UI scramble synchronization pulse in the descramble PRBS block. 0b0 = Disable checking (forces prbs_sync_done to 0). 0b1 = Enable checking (prbs_sync_done may go to 1 after identifying the sync pulse).
55	RWX	RX_PRBS_SEED_DDC: Set this bit to enable seeding of the DDC PRBS block from the data pipe output (either the data stream or the descramble PRBS block depending on the value of rx_pipe_sel).
56	RWX	RX_PRBS_SEED_DFE: Set this bit to enable seeding of the DFE PRBS block. Related to this is rx_dfe_force_load_seed, which loads from the incoming data stream when 0 or from the rx_prbs_seed_value_* when 1.
57	RWX	RX_DFE_FORCE_LOAD_SEED: Set this bit to force rx_prbs_seed_value_0_15 and rx_prbs_seed_value_16_22 to load directly into the DFE history vector in the analog front-end for this lane. **Note:** The rx_prbs_seed_value_* bits are extended by 1 bit and shifted by a fixed value to match the pipeline delays between the analog front end and the receive PRBS descrambler. To set the DFE history vector to a specific value, the user must reverse that transformation to determine the value to write to the rx_prbs_seed_value_* to get the desired result in the vector.
58	RWX	RX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
59:60	RWX	RX_IOCLK_SLIP: This field provides software control of the receive slice deserializer IOCLK slip control. Use this to slip the deserilizer by 2N beats.
61	RWX	RX_IOCLK_SLIP_STROBE: This bit provides software control to execute IOCLK slip control.
62	RWX	RX_HISTORY_PRBS_POWER_UP: This bit forces the power up of the additional analog history latches used for PRBS generation when performing H2 - 12 calibration.
63	RWX	RX_PSAVE_RESYNC_DISABLE: This bit disables the resynchronize machine for this physical lane without disabling psave mode entirely.

Register Name	Receive Bit CNTL2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RD.RX_BIT_REGS.RX_BIT_CNTL2_EO_PL
Address	800248000601143F (SCOM)
Description	This register contains the second set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:49	RWX	RX_PR_EDGE_TRACK_CNTL: This field runs edge tracking on the selected bank. 00 = No edge tracking. 01 = Tracks against A data. 10 = Tracks against B data. 11 = Unused.
50	RWX	RX_PR_WOBBLE_A: This bit wobbles the PR position for PR A for the offset function. This is done by first shifting 1 UI away in one direction, and then back and forth 2 UIs to cover the entire range of PR values. When de-asserted, the PR returns to the original value.
51:52	RO	constant = 0b00
53	RWX	RX_PR_DDC_A: This bit enables the DDC state machine to go through its DDC routine on PR A. It works by shifting to the left and right looking for errors to find the edges. Then, it adds an offset that centers the data between the two edges.
54	RO	constant = 0b0
55	RWX	RX_PR_BUMP_TO_EDGE_A: This bit bumps PR A position to the edge => +(16 - clkadj).
56	RWX	RX_PR_BUMP_TO_CENTER: This bumps PR A position to the center => -(16 - clkadj).
57	RWX	RX_PR_BUMP_SL_1UI: This bit bumps the PR position of all PRs to the next eye by shifting 32 steps. (Not supported).
58	RWX	RX_PR_BUMP_SR_1UI: This bit bumps the PR position to the previous eye by shifting 32 steps. (Not supported).
59:60	RO	constant = 0b00
61	RWX	RX_PR_USE_DFE_CLOCK_A: RX Use the A-bank DFE (h1/Ap-adjusted clock). RJRDMB.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RD.RX_BIT_REGS.RX_BIT_CNTL2_EO_PL
Address	800248010601143F (SCOM)
Description	This register contains the second set of EO control fields.

Bits	SCOM	Field Mnemonic: Description

0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:49	RWX	RX_PR_EDGE_TRACK_CNTL: This field runs edge tracking on the selected bank. 00 = No edge tracking. 01 = Tracks against A data. 10 = Tracks against B data. 11 = Unused.
50	RWX	RX_PR_WOBBLE_A: This bit wobbles the PR position for PR A for the offset function. This is done by first shifting 1 UI away in one direction, and then back and forth 2 UIs to cover the entire range of PR values. When de-asserted, the PR returns to the original value.
51:52	RO	constant = 0b00
53	RWX	RX_PR_DDC_A: This bit enables the DDC state machine to go through its DDC routine on PR A. It works by shifting to the left and right looking for errors to find the edges. Then, it adds an offset that centers the data between the two edges.
54	RO	constant = 0b0
55	RWX	RX_PR_BUMP_TO_EDGE_A: This bit bumps PR A position to the edge => +(16 - clkadj).
56	RWX	RX_PR_BUMP_TO_CENTER: This bumps PR A position to the center => -(16 - clkadj).
57	RWX	RX_PR_BUMP_SL_1UI: This bit bumps the PR position of all PRs to the next eye by shifting 32 steps. (Not supported).
58	RWX	RX_PR_BUMP_SR_1UI: This bit bumps the PR position to the previous eye by shifting 32 steps. (Not supported).
59:60	RO	constant = 0b00
61	RWX	RX_PR_USE_DFE_CLOCK_A: RX Use the A-bank DFE (h1/Ap-adjusted clock). RJRDMB.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	800250000601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	800250010601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	800250020601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.

Bits	SCOM	Field Mnemonic: Description
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	800250030601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	800250040601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	800250240601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	800250250601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	800250260601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.

Bits	SCOM	Field Mnemonic: Description
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	800250270601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	800250280601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	800250290601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000

Bits	SCOM	Field Mnemonic: Description
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	8002502A0601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	8002502B0601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	8002502C0601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	8002502D0601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	8002502E0601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#4.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	8002502F0601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#5.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	800250300601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL3_EO_PL
Address	800250310601143F (SCOM)
Description	This register contains the third set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_PR_DATA_A_OFFSET: This field contains the offset value applied to PR A.
54:59	RO	constant = 0b000000
60	RWX	RX_PR_BIT_LOCK_DONE: This bit indicates that the bit lock is done. It is used to gate the invalid lock in the CDR logic.
61	RWX	RX_PR_INVALID_LOCK_FILTER_EN: This bit enables the filtered invalid-lock, phase-rotator shift right. The default is ON.

Bits	SCOM	Field Mnemonic: Description
62:63	RWX	RX_PR_INVALID_LOCK_BUMP_SIZE: This field sets the size of the invalid_lock_bump.

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258000601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258010601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258020601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258030601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258040601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258050601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258060601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.

Bits	SCOM	Field Mnemonic: Description
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258070601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258080601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258090601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	8002580A0601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	8002580B0601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	8002580C0601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	8002580D0601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.

Bits	SCOM	Field Mnemonic: Description
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	8002580E0601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	8002580F0601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258100601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258110601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258200601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258210601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258220601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.

Bits	SCOM	Field Mnemonic: Description
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258230601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258240601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258250601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258260601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258270601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258280601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258290601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.

Bits	SCOM	Field Mnemonic: Description
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	8002582A0601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	8002582B0601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	8002582C0601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	8002582D0601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	8002582E0601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#4.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	8002582F0601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	Receive Bit CNTL4 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#5.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258300601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.

Bits	SCOM	Field Mnemonic: Description
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	**Receive Bit CNTL4 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL4_EO_PL
Address	800258310601143F (SCOM)
Description	This register contains the fourth set of EO control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PR_TRACE_DDC_STOP: This bit enables the trace debug DDC state to stop the state machines.
49:53	RWX	RX_PR_TRACE_DDC_SM: This bit determines when to stop the state machine for trace debug.
54	RWX	RX_PR_TRACE_WOBBLE_STOP: This bit enables the trace debug wobble state to stop the state machines.
55:57	RWX	RX_PR_TRACE_WOBBLE_SM: This field determines when to stop the state machine for trace debug.
58	RWX	RX_DDC_DFE_OFFSET_SWITCH_STOP: This bit enables the trace debug DDC-DFE offset switch state to stop the state machines.
59:61	RWX	RX_DDC_DFE_OFFSET_SWITCH_SM: This field determines when to stop the state machine for trace debug.
62:63	RO	constant = 0b00

Register Name	**Receive Bit CNTL5 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RD.RX_BIT_REGS.RX_BIT_CNTL5_EO_PL
Address	800260000601143F (SCOM)
Description	This is a reserved register.

Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	NCX	Reserved field.
49	NCX	Reserved field.
50:63	RO	constant = 0b00000000000000

Register Name	Receive Bit CNTL5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL5_EO_PL
Address	800260110601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	NCX	Reserved field.
49	NCX	Reserved field.
50:63	RO	constant = 0b00000000000000

Register Name	Receive Bit CNTL5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL5_EO_PL
Address	800260200601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	NCX	Reserved field.
49	NCX	Reserved field.
50:63	RO	constant = 0b00000000000000

Register Name	Receive Bit CNTL5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL5_EO_PL
Address	800260210601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	NCX	Reserved field.
49	NCX	Reserved field.
50:63	RO	constant = 0b00000000000000

Register Name	Receive Bit CNTL5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL5_EO_PL
Address	800260220601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	NCX	Reserved field.
49	NCX	Reserved field.
50:63	RO	constant = 0b00000000000000

Register Name	Receive Bit CNTL5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL5_EO_PL
Address	800260230601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	NCX	Reserved field.
49	NCX	Reserved field.
50:63	RO	constant = 0b00000000000000

Register Name	Receive Bit CNTL5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL5_EO_PL
Address	800260240601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48	NCX	Reserved field.
49	NCX	Reserved field.
50:63	RO	constant = 0b00000000000000

Register Name	Receive Bit CNTL5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL5_EO_PL
Address	800260250601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	NCX	Reserved field.
49	NCX	Reserved field.
50:63	RO	constant = 0b00000000000000

Register Name	Receive Bit CNTL5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL5_EO_PL
Address	800260260601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	NCX	Reserved field.
49	NCX	Reserved field.
50:63	RO	constant = 0b00000000000000

Register Name	Receive Bit CNTL5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL5_EO_PL
Address	800260270601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	NCX	Reserved field.
49	NCX	Reserved field.
50:63	RO	constant = 0b00000000000000

Register Name	Receive Bit CNTL5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL5_EO_PL
Address	800260280601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	NCX	Reserved field.
49	NCX	Reserved field.
50:63	RO	constant = 0b00000000000000

Register Name	Receive Bit CNTL5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL5_EO_PL
Address	800260290601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	NCX	Reserved field.
49	NCX	Reserved field.
50:63	RO	constant = 0b00000000000000

Register Name	Receive Bit CNTL5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL5_EO_PL
Address	8002602A0601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	NCX	Reserved field.
49	NCX	Reserved field.
50:63	RO	constant = 0b00000000000000

Register Name	Receive Bit CNTL5 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL5_EO_PL
Address	8002602B0601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48	NCX	Reserved field.
49	NCX	Reserved field.
50:63	RO	constant = 0b00000000000000

Register Name	**Receive Bit CNTL5 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL5_EO_PL
Address	8002602C0601143F (SCOM)
Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

57	ROX	Reserved field.
58	ROX	Reserved field.
59	ROX	Reserved field.
60:63	RO	constant = 0b0000

Register Name	**Receive Bit STAT3 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#4.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278000601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278010601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278020601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278030601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278040601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278050601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278060601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278070601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278080601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278090601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	8002780A0601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	8002780B0601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	8002780C0601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	8002780D0601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	8002780E0601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	8002780F0601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278100601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278110601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278200601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278210601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278220601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#0.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278230601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278240601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278250601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278260601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#1.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278270601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	ROX	Reserved field.
54:59	ROX	Reserved field.
60:63	RWX	RX_A_PR_DFE_CLKADJ: This field contains the tweak value, in phase rotator steps, for the bank A clock offset when performing a DFE calibration.

Register Name	Receive Bit STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_STAT3_EO_PL
Address	800278280601143F (SCOM)
Description	This register contains the third set of EO status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

48:63	RW	RX_PRBS_SEED_VALUE_0_15: Receive per-lane PRBS seed value. This field is used to specify the loading value of the PRBS scramble pattern when the synchronous pattern is detected. This setting must be set consistent with tx_prbs_seed_value. When connected to legacy POWER8 memory buffer parts, the seed must load such that it matches the sequence of those legacy parts. The patterns listed here match that, including variants required to seed in 12-bit or 24-bit synchronous mode. 0b0001000000000000 = 24-bit PRBS tap point A. 0b1111000000111110 = 24-bit PRBS tap point B. 0b0000011110111100 = 24-bit PRBS tap point C. 0b0000011111000111 = 24-bit PRBS tap point D. 0b0000001111101111 = 24-bit PRBS tap point E. 0b0001111100001111 = 24-bit PRBS tap point F. 0b0001100000000000 = 24-bit PRBS tap point G. 0b1001110000000000 = 24-bit PRBS tap point H. 0b1000010000000000 = 12-bit PRBS tap point A. 0b0111110000000000 = 12-bit PRBS tap point B. 0b0000000000001111 = 12-bit PRBS tap point C. 0b1100000000001111 = 12-bit PRBS tap point D. 0b1000000000000111 = 12-bit PRBS tap point E. 0b1000000000111111 = 12-bit PRBS tap point F. 0b0000011000000000 = 12-bit PRBS tap point G. 0b0000011100000000 = 12-bit PRBS tap point H.

Address	800308000601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	**Receive Bit Control 2 E Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#5.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	800308010601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	**Receive Bit Control 2 E Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	800308020601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	800308030601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	800308040601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#3.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	800308050601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	800308060601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	800308070601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#2.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	800308080601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	800308090601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	8003080A0601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	8003080B0601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#1.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	8003080C0601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	8003080D0601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX0.RXPACKS#0.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	8003080E0601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	800308290601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	8003082A0601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	8003082B0601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#1.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	8003082C0601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#2.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	8003082D0601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#0.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	8003082E0601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#4.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	8003082F0601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#3.RXPACK.RD.SLICE#5.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	800308300601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:51	RWX	RX_FIFO_L2U_DLY: Receive FIFO load-to-unload delay. This field is initialized during FIFO initialization. It is modified thereafter by the deskew machine. For setting X, the latency is 4 x X to 4 x X + 4 UI. The default is 20 - 24 UI.
52:63	RO	constant = 0b000000000000

Register Name	Receive Bit Control 2 E Per-Lane Register
Mnemonic	IOF2.RX.RX1.RXPACKS#2.RXPACK.RD.SLICE#3.RD.RX_BIT_REGS.RX_BIT_CNTL2_E_PL
Address	800308310601143F (SCOM)
Description	This register contains the second set of E control fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

55	RWX	RX_PL_DATA_WORK_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Data Work Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#8.RX_WORK_REGS.RX_DATA_WORK_SPARE_MODE_PL
Address	800380070601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_DATA_WORK_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_DATA_WORK_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_DATA_WORK_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_DATA_WORK_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_DATA_WORK_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_DATA_WORK_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_DATA_WORK_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_DATA_WORK_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Data Work Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#11.RX_WORK_REGS.RX_DATA_WORK_SPARE_MODE_PL
Address	800380080601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_DATA_WORK_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_DATA_WORK_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_DATA_WORK_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_DATA_WORK_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_DATA_WORK_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_DATA_WORK_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_DATA_WORK_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_DATA_WORK_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Data Work Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#5.RX_WORK_REGS.RX_DATA_WORK_SPARE_MODE_PL
Address	800380090601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_DATA_WORK_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_DATA_WORK_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_DATA_WORK_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_DATA_WORK_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_DATA_WORK_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_DATA_WORK_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_DATA_WORK_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_DATA_WORK_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Data Work Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#7.RX_WORK_REGS.RX_DATA_WORK_SPARE_MODE_PL
Address	8003800A0601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_DATA_WORK_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_DATA_WORK_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_DATA_WORK_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_DATA_WORK_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_DATA_WORK_SPARE_MODE_4: Per-lane spare mode latch.

56:63	RO	constant = 0b00000000

Register Name	Receive Data Work Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#0.RX_WORK_REGS.RX_DATA_WORK_SPARE_MODE_PL
Address	800380210601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_DATA_WORK_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_DATA_WORK_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_DATA_WORK_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_DATA_WORK_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_DATA_WORK_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_DATA_WORK_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_DATA_WORK_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_DATA_WORK_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Data Work Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#3.RX_WORK_REGS.RX_DATA_WORK_SPARE_MODE_PL
Address	800380220601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_DATA_WORK_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_DATA_WORK_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_DATA_WORK_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_DATA_WORK_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_DATA_WORK_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_DATA_WORK_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_DATA_WORK_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_DATA_WORK_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Data Work Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#1.RX_WORK_REGS.RX_DATA_WORK_SPARE_MODE_PL
Address	800380230601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_PL_DATA_WORK_SPARE_MODE_0: Per-lane spare mode latch.
49	RWX	RX_PL_DATA_WORK_SPARE_MODE_1: Per-lane spare mode latch.
50	RWX	RX_PL_DATA_WORK_SPARE_MODE_2: Per-lane spare mode latch.
51	RWX	RX_PL_DATA_WORK_SPARE_MODE_3: Per-lane spare mode latch.
52	RWX	RX_PL_DATA_WORK_SPARE_MODE_4: Per-lane spare mode latch.
53	RWX	RX_PL_DATA_WORK_SPARE_MODE_5: Per-lane spare mode latch.
54	RWX	RX_PL_DATA_WORK_SPARE_MODE_6: Per-lane spare mode latch.
55	RWX	RX_PL_DATA_WORK_SPARE_MODE_7: Per-lane spare mode latch.
56:63	RO	constant = 0b00000000

Register Name	Receive Data Work Spare Mode Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#7.RX_WORK_REGS.RX_DATA_WORK_SPARE_MODE_PL
Address	800380240601143F (SCOM)
Description	This register contains per-lane spare mode latches.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Register Name	**Receive Work STAT1 EO Per-Lane Register**
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#23.RX_WORK_REGS.RX_WORK_STAT1_EO_PL
Address	800388170601143F (SCOM)
Description	This register contains the first set of EO status information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_BAD_EYE_OPT_BER: The eye-optimization step failed the BER test. The lane is marked bad.
49	RWX	RX_BAD_EYE_OPT_WIDTH: The eye-optimization step failed the width test. The lane is marked bad.
50	RWX	RX_BAD_EYE_OPT_HEIGHT: The eye-optimization step failed the height test. The lane is marked bad.
51	RO	constant = 0b0
52	RWX	RX_WT_LANE_DISABLED: The wire test disabled this lane.
53	RO	constant = 0b0

Bits	SCOM	Field Mnemonic: Description
54:56	RWX	RX_WT_LANE_BAD_CODE: Wire test lane bad code. Concatenate rx_wt_lane_inverted with rx_wt_lane_bad_code to get a full status: \n0000 = GOOD LANE; not inverted (EDI and EI-4). \n0001 = BAD LANE; N leg stuck at 1; not inverted (EDI-only). \n0010 = BAD LANE; N leg stuck at 0; not inverted (EDI-only). \n0011 = BAD LANE; P leg stuck at 1; not inverted (EDI-only). \n0100 = BAD LANE; P leg stuck at 0; not inverted (EDI-only). \n0101 = BAD LANE; N/(P) leg floating if (NOT) inverted (EDI-only). \n0110 = BAD LANE; P/(N) leg floating if (NOT) inverted (EDI-only). \n0111 = BAD LANE; P and N legs stuck at same value, 0 or 1 (EDI only). \n1000 = GOOD LANE; inverted (EDI and EI-4). \n1001 = BAD LANE; N leg stuck at 1; inverted (EDI only). \n1010 = BAD LANE; N leg stuck at 0; inverted (EDI only). \n1011 = BAD LANE; P leg stuck at 1; inverted (EDI only). \n1100 = BAD LANE; P leg stuck at 0; inverted (EDI only). \n1101 = BAD LANE; P leg stuck at 0; N leg stuck at 1 (EDI and EI-4). \n1110 = BAD LANE; P leg stuck at 1; N leg stuck at 0 (EDI and EI-4). \n1111 = BAD LANE; Unknown reason; inversion undetermined (EDI and EI-4).
57	RWX	RX_BAD_BLOCK_LOCK: The deskew step block lock was not established. The lane is marked bad.
58	RWX	RX_BAD_SKEW: The deskew step skew value was not detected. The lane is marked bad.
59	RWX	RX_BAD_DESKEW: This bit contains the deskew step deskew value.
60:62	RO	constant = 0b000
63	RWX	RX_BIST_ERR: This bit indicates that RXBIST did not find two data eyes of sufficient width. 0b0 = No error. 0b1 = An error occurred during RXBIST.

Description	This register contains eye-optimization status information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_A_BAD_DFE_CONV: The eye-optimization step failed DFD convergence on bank A. Not less than rx_ap110_ap010_delta_max.
49	RO	constant = 0b0
50	RWX	RX_A_H1AP_AT_LIMIT: The eye-optimization H1/Ap ratio limit hit bank A. This limit is used instead of the kH1/Ap value.
51	RO	constant = 0b0
52:59	RWX	RX_A_AP: This field contains the eye-optimization stored Ap value.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#13.RX_WORK_REGS.RX_WORK_STAT2_EO_PL
Address	800390020601143F (SCOM)
Description	This register contains eye-optimization status information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_A_BAD_DFE_CONV: The eye-optimization step failed DFD convergence on bank A. Not less than rx_ap110_ap010_delta_max.
49	RO	constant = 0b0
50	RWX	RX_A_H1AP_AT_LIMIT: The eye-optimization H1/Ap ratio limit hit bank A. This limit is used instead of the kH1/Ap value.
51	RO	constant = 0b0
52:59	RWX	RX_A_AP: This field contains the eye-optimization stored Ap value.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#15.RX_WORK_REGS.RX_WORK_STAT2_EO_PL
Address	800390030601143F (SCOM)
Description	This register contains eye-optimization status information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_A_BAD_DFE_CONV: The eye-optimization step failed DFD convergence on bank A. Not less than rx_ap110_ap010_delta_max.
49	RO	constant = 0b0
50	RWX	RX_A_H1AP_AT_LIMIT: The eye-optimization H1/Ap ratio limit hit bank A. This limit is used instead of the kH1/Ap value.
51	RO	constant = 0b0
52:59	RWX	RX_A_AP: This field contains the eye-optimization stored Ap value.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT2 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#12.RX_WORK_REGS.RX_WORK_STAT2_EO_PL
Address	800390040601143F (SCOM)
Description	This register contains eye-optimization status information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	RX_A_BAD_DFE_CONV: The eye-optimization step failed DFD convergence on bank A. Not less than rx_ap110_ap010_delta_max.
49	RO	constant = 0b0
50	RWX	RX_A_H1AP_AT_LIMIT: The eye-optimization H1/Ap ratio limit hit bank A. This limit is used instead of the kH1/Ap value.
51	RO	constant = 0b0
52:59	RWX	RX_A_AP: This field contains the eye-optimization stored Ap value.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#16.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398000601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#17.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398010601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#13.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398020601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#15.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398030601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#12.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398040601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#14.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398050601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#10.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398060601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#8.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398070601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#11.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398080601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#5.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398090601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#7.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	8003980A0601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#4.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	8003980B0601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#6.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	8003980C0601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#0.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	8003980D0601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX0.RX_WORK_REGS_MAC.SLICE#2.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	8003980E0601143F (SCOM)
Description	This register contains eye-optimization information.

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#6.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398260601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#4.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398270601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#8.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398280601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#10.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398290601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#9.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	8003982A0601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#15.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	8003982B0601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#13.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	8003982C0601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#14.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	8003982D0601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#12.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	8003982E0601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#16.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	8003982F0601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#17.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398300601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#11.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398310601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#18.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398320601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#19.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398330601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#20.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398340601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#21.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398350601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#22.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398360601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Receive Work STAT3 EO Per-Lane Register
Mnemonic	IOF2.RX.RX1.RX_WORK_REGS_MAC.SLICE#23.RX_WORK_REGS.RX_WORK_STAT3_EO_PL
Address	800398370601143F (SCOM)
Description	This register contains eye-optimization information.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:53	RWX	RX_A_PATH_OFF_EVEN: This field contains the eye-optimization A bank even path offset.
54:59	RWX	RX_A_PATH_OFF_ODD: This field contains the eye-optimization A bank odd path offset.
60:63	RO	constant = 0b0000

Register Name	Transmit Mode 1 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#0.TXPACK.DD.SLICE#0.DD.TX_BIT_REGS.TX_MODE1_PL
Address	800404000601143F (SCOM)
Description	This register contains the first set of transmit mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	TX_LANE_PDWN: This bit is used to drive inhibit (tristate) and fully power down a lane independent of the logical lane disable. 0b0 = Lane powered up. 0b1 = Lane drive inhibited (tristated) and powered down (default).
49	RWX	TX_LANE_INVERT: This bit is used to invert the polarity of a lane. 0b0 = Normal lane polarity (default). 0b1 = Lane inverted.
50:51	RWX	TX_LANE_QUIESCE: This field is This field is used to force the output of a lane to a particular logical value. 0b00 = Functional data (default). 0b01 = Quiesce lane to a static 0 value. 0b10 = Quiesce lane to a static 1 value. 0b11 = Tri-state lane output.
52:53	RO	constant = 0b00
54	RWX	TX_LANE_SCRAMBLE_DISABLE: This bit is used to disable the transmit scrambler on a specific lane or all lanes by using a per-lane/per-group global write.
55	RWX	TX_ERR_INJ_A_ENABLE: This bit enables the random bit error-injection pattern A for this lane (default). 0b0 = Pattern A error injection is masked for this lane. 0b1 = Pattern A error injection is enabled for this lane.
56	RWX	TX_ERR_INJ_B_ENABLE: This bit enables the random bit error-injection pattern B for this lane (default). 0b0 = Pattern B error injection is masked for this lane. 0b1 = Pattern B error injection is enabled for this lane.
57	RWX	TX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
58:59	RO	constant = 0b00
60	RWX	TX_PL_SPARE_MODE_0: Per-lane spare mode latch.
61	RWX	TX_PL_SPARE_MODE_1: Per-lane spare mode latch.
62	RWX	TX_PL_SPARE_MODE_2: Per-lane spare mode latch.
63	RWX	TX_PL_SPARE_MODE_3: Per-lane spare mode latch.

Register Name	Transmit Mode 1 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#0.TXPACK.DD.SLICE#1.DD.TX_BIT_REGS.TX_MODE1_PL
Address	800404010601143F (SCOM)
Description	This register contains the first set of transmit mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	TX_LANE_PDWN: This bit is used to drive inhibit (tristate) and fully power down a lane independent of the logical lane disable. 0b0 = Lane powered up. 0b1 = Lane drive inhibited (tristated) and powered down (default).
49	RWX	TX_LANE_INVERT: This bit is used to invert the polarity of a lane. 0b0 = Normal lane polarity (default). 0b1 = Lane inverted.
50:51	RWX	TX_LANE_QUIESCE: This field is This field is used to force the output of a lane to a particular logical value. 0b00 = Functional data (default). 0b01 = Quiesce lane to a static 0 value. 0b10 = Quiesce lane to a static 1 value. 0b11 = Tri-state lane output.
52:53	RO	constant = 0b00
54	RWX	TX_LANE_SCRAMBLE_DISABLE: This bit is used to disable the transmit scrambler on a specific lane or all lanes by using a per-lane/per-group global write.
55	RWX	TX_ERR_INJ_A_ENABLE: This bit enables the random bit error-injection pattern A for this lane (default). 0b0 = Pattern A error injection is masked for this lane. 0b1 = Pattern A error injection is enabled for this lane.
56	RWX	TX_ERR_INJ_B_ENABLE: This bit enables the random bit error-injection pattern B for this lane (default). 0b0 = Pattern B error injection is masked for this lane. 0b1 = Pattern B error injection is enabled for this lane.
57	RWX	TX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
58:59	RO	constant = 0b00
60	RWX	TX_PL_SPARE_MODE_0: Per-lane spare mode latch.
61	RWX	TX_PL_SPARE_MODE_1: Per-lane spare mode latch.
62	RWX	TX_PL_SPARE_MODE_2: Per-lane spare mode latch.
63	RWX	TX_PL_SPARE_MODE_3: Per-lane spare mode latch.

Register Name	Transmit Mode 1 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#0.TXPACK.DD.SLICE#2.DD.TX_BIT_REGS.TX_MODE1_PL
Address	800404020601143F (SCOM)
Description	This register contains the first set of transmit mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

54	RWX	TX_LANE_SCRAMBLE_DISABLE: This bit is used to disable the transmit scrambler on a specific lane or all lanes by using a per-lane/per-group global write.

Bits	SCOM	Field Mnemonic: Description
55	RWX	TX_ERR_INJ_A_ENABLE: This bit enables the random bit error-injection pattern A for this lane (default). 0b0 = Pattern A error injection is masked for this lane. 0b1 = Pattern A error injection is enabled for this lane.
56	RWX	TX_ERR_INJ_B_ENABLE: This bit enables the random bit error-injection pattern B for this lane (default). 0b0 = Pattern B error injection is masked for this lane. 0b1 = Pattern B error injection is enabled for this lane.
57	RWX	TX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
58:59	RO	constant = 0b00
60	RWX	TX_PL_SPARE_MODE_0: Per-lane spare mode latch.
61	RWX	TX_PL_SPARE_MODE_1: Per-lane spare mode latch.
62	RWX	TX_PL_SPARE_MODE_2: Per-lane spare mode latch.
63	RWX	TX_PL_SPARE_MODE_3: Per-lane spare mode latch.

Register Name	Transmit Mode 1 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#1.TXPACK.DD.SLICE#1.DD.TX_BIT_REGS.TX_MODE1_PL
Address	800404050601143F (SCOM)
Description	This register contains the first set of transmit mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	TX_LANE_PDWN: This bit is used to drive inhibit (tristate) and fully power down a lane independent of the logical lane disable. 0b0 = Lane powered up. 0b1 = Lane drive inhibited (tristated) and powered down (default).
49	RWX	TX_LANE_INVERT: This bit is used to invert the polarity of a lane. 0b0 = Normal lane polarity (default). 0b1 = Lane inverted.
50:51	RWX	TX_LANE_QUIESCE: This field is This field is used to force the output of a lane to a particular logical value. 0b00 = Functional data (default). 0b01 = Quiesce lane to a static 0 value. 0b10 = Quiesce lane to a static 1 value. 0b11 = Tri-state lane output.
52:53	RO	constant = 0b00
54	RWX	TX_LANE_SCRAMBLE_DISABLE: This bit is used to disable the transmit scrambler on a specific lane or all lanes by using a per-lane/per-group global write.
55	RWX	TX_ERR_INJ_A_ENABLE: This bit enables the random bit error-injection pattern A for this lane (default). 0b0 = Pattern A error injection is masked for this lane. 0b1 = Pattern A error injection is enabled for this lane.
56	RWX	TX_ERR_INJ_B_ENABLE: This bit enables the random bit error-injection pattern B for this lane (default). 0b0 = Pattern B error injection is masked for this lane. 0b1 = Pattern B error injection is enabled for this lane.
57	RWX	TX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
58:59	RO	constant = 0b00
60	RWX	TX_PL_SPARE_MODE_0: Per-lane spare mode latch.
61	RWX	TX_PL_SPARE_MODE_1: Per-lane spare mode latch.

Bits	SCOM	Field Mnemonic: Description
62	RWX	TX_PL_SPARE_MODE_2: Per-lane spare mode latch.
63	RWX	TX_PL_SPARE_MODE_3: Per-lane spare mode latch.

Register Name	Transmit Mode 1 Per-Lane Register

Description	This register contains the first set of transmit mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	TX_LANE_PDWN: This bit is used to drive inhibit (tristate) and fully power down a lane independent of the logical lane disable. 0b0 = Lane powered up. 0b1 = Lane drive inhibited (tristated) and powered down (default).
49	RWX	TX_LANE_INVERT: This bit is used to invert the polarity of a lane. 0b0 = Normal lane polarity (default). 0b1 = Lane inverted.
50:51	RWX	TX_LANE_QUIESCE: This field is This field is used to force the output of a lane to a particular logical value. 0b00 = Functional data (default). 0b01 = Quiesce lane to a static 0 value. 0b10 = Quiesce lane to a static 1 value. 0b11 = Tri-state lane output.
52:53	RO	constant = 0b00
54	RWX	TX_LANE_SCRAMBLE_DISABLE: This bit is used to disable the transmit scrambler on a specific lane or all lanes by using a per-lane/per-group global write.
55	RWX	TX_ERR_INJ_A_ENABLE: This bit enables the random bit error-injection pattern A for this lane (default). 0b0 = Pattern A error injection is masked for this lane. 0b1 = Pattern A error injection is enabled for this lane.
56	RWX	TX_ERR_INJ_B_ENABLE: This bit enables the random bit error-injection pattern B for this lane (default). 0b0 = Pattern B error injection is masked for this lane. 0b1 = Pattern B error injection is enabled for this lane.
57	RWX	TX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
58:59	RO	constant = 0b00
60	RWX	TX_PL_SPARE_MODE_0: Per-lane spare mode latch.
61	RWX	TX_PL_SPARE_MODE_1: Per-lane spare mode latch.
62	RWX	TX_PL_SPARE_MODE_2: Per-lane spare mode latch.
63	RWX	TX_PL_SPARE_MODE_3: Per-lane spare mode latch.

Register Name	Transmit Mode 1 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX1.TXPACKS#2.TXPACK.DD.SLICE#2.DD.TX_BIT_REGS.TX_MODE1_PL
Address	8004042A0601143F (SCOM)
Description	This register contains the first set of transmit mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	TX_LANE_PDWN: This bit is used to drive inhibit (tristate) and fully power down a lane independent of the logical lane disable. 0b0 = Lane powered up. 0b1 = Lane drive inhibited (tristated) and powered down (default).
49	RWX	TX_LANE_INVERT: This bit is used to invert the polarity of a lane. 0b0 = Normal lane polarity (default). 0b1 = Lane inverted.
50:51	RWX	TX_LANE_QUIESCE: This field is This field is used to force the output of a lane to a particular logical value. 0b00 = Functional data (default). 0b01 = Quiesce lane to a static 0 value. 0b10 = Quiesce lane to a static 1 value. 0b11 = Tri-state lane output.
52:53	RO	constant = 0b00
54	RWX	TX_LANE_SCRAMBLE_DISABLE: This bit is used to disable the transmit scrambler on a specific lane or all lanes by using a per-lane/per-group global write.
55	RWX	TX_ERR_INJ_A_ENABLE: This bit enables the random bit error-injection pattern A for this lane (default). 0b0 = Pattern A error injection is masked for this lane. 0b1 = Pattern A error injection is enabled for this lane.
56	RWX	TX_ERR_INJ_B_ENABLE: This bit enables the random bit error-injection pattern B for this lane (default). 0b0 = Pattern B error injection is masked for this lane. 0b1 = Pattern B error injection is enabled for this lane.
57	RWX	TX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
58:59	RO	constant = 0b00
60	RWX	TX_PL_SPARE_MODE_0: Per-lane spare mode latch.
61	RWX	TX_PL_SPARE_MODE_1: Per-lane spare mode latch.
62	RWX	TX_PL_SPARE_MODE_2: Per-lane spare mode latch.
63	RWX	TX_PL_SPARE_MODE_3: Per-lane spare mode latch.

Register Name	Transmit Mode 1 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX1.TXPACKS#2.TXPACK.DD.SLICE#3.DD.TX_BIT_REGS.TX_MODE1_PL
Address	8004042B0601143F (SCOM)
Description	This register contains the first set of transmit mode fields.

49	RWX	TX_LANE_INVERT: This bit is used to invert the polarity of a lane. 0b0 = Normal lane polarity (default). 0b1 = Lane inverted.

Bits	SCOM	Field Mnemonic: Description
50:51	RWX	TX_LANE_QUIESCE: This field is This field is used to force the output of a lane to a particular logical value. 0b00 = Functional data (default). 0b01 = Quiesce lane to a static 0 value. 0b10 = Quiesce lane to a static 1 value. 0b11 = Tri-state lane output.
52:53	RO	constant = 0b00
54	RWX	TX_LANE_SCRAMBLE_DISABLE: This bit is used to disable the transmit scrambler on a specific lane or all lanes by using a per-lane/per-group global write.
55	RWX	TX_ERR_INJ_A_ENABLE: This bit enables the random bit error-injection pattern A for this lane (default). 0b0 = Pattern A error injection is masked for this lane. 0b1 = Pattern A error injection is enabled for this lane.
56	RWX	TX_ERR_INJ_B_ENABLE: This bit enables the random bit error-injection pattern B for this lane (default). 0b0 = Pattern B error injection is masked for this lane. 0b1 = Pattern B error injection is enabled for this lane.
57	RWX	TX_PSAVE_MODE_DISABLE: This bit disables psave mode for this physical lane.
58:59	RO	constant = 0b00
60	RWX	TX_PL_SPARE_MODE_0: Per-lane spare mode latch.
61	RWX	TX_PL_SPARE_MODE_1: Per-lane spare mode latch.
62	RWX	TX_PL_SPARE_MODE_2: Per-lane spare mode latch.
63	RWX	TX_PL_SPARE_MODE_3: Per-lane spare mode latch.

Register Name	Transmit Mode 2 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#0.TXPACK.DD.SLICE#0.DD.TX_BIT_REGS.TX_MODE2_PL
Address	80040C000601143F (SCOM)
Description	This register contains the second set of transmit mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RW	TX_FIFO_L2U_DLY: This field is used to read or set the TX FIFO load to unload delay as follows: 0b000 = 0 to 2 UI. 0b001 = 4 to 6 UI (default). 0b010 = 8 to 10 UI. 0b011 = 12 to 14 UI. 0b100 = 16 to 18 UI. 0b101 = 20 to 22 UI. 0b110 = 24 to 26 UI. 0b111 = 28 to 30 UI.
51:52	RO	constant = 0b00
53	RWX	TX_NEXT_CAL_LANE_SEL: When set, this bit negates the action of tx_pdwn_lite in a similar way to tx_cal_lane_sel. This enables the driver ahead of SLS shadowing.
54:55	RW	TX_PRBS_SCRAMBLE_MODE: This field selects the PRBS scramble sequence length. 0b00 = PRBS 23 (default). 0b01 = PRBS 7 (used by TX BIST). 0b10 = PRBS 11. 0b11 = PRBS 15.
56	RWX	TX_UNLOAD_CLK_DISABLE: This bit is set to 0 to enable synchronization of the TX custom serializer via the tx_fifo_init register. It is set to 1 to clock off the synchronization logic and save power.

Bits	SCOM	Field Mnemonic: Description
57	RO	constant = 0b0
58:60	RWX	TX_UNLOAD_SEL: This field controls the preset value of the TX slice unload counter, which effectively gives it subcycle control of the offset of the TX unload clock from the grid clock.
61	RWX	TX_PDWN_LITE: When set, this bit gates the TX data path (post FIFO) to zeros on unused spare lanes when not being recalibrated.
62	RWX	TX_CAL_LANE_SEL: SLS commands and recalibration.
63	RWX	TX_FIFO_HALF_WIDTH_MODE: This bit selects half-width mode for the transmit FIFO for slower frequency connections.

Register Name	Transmit Mode 2 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#0.TXPACK.DD.SLICE#1.DD.TX_BIT_REGS.TX_MODE2_PL
Address	80040C010601143F (SCOM)
Description	This register contains the second set of transmit mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

51:52	RO	constant = 0b00
53	RWX	TX_NEXT_CAL_LANE_SEL: When set, this bit negates the action of tx_pdwn_lite in a similar way to tx_cal_lane_sel. This enables the driver ahead of SLS shadowing.
54:55	RW	TX_PRBS_SCRAMBLE_MODE: This field selects the PRBS scramble sequence length. 0b00 = PRBS 23 (default). 0b01 = PRBS 7 (used by TX BIST). 0b10 = PRBS 11. 0b11 = PRBS 15.
56	RWX	TX_UNLOAD_CLK_DISABLE: This bit is set to 0 to enable synchronization of the TX custom serializer via the tx_fifo_init register. It is set to 1 to clock off the synchronization logic and save power.
57	RO	constant = 0b0
58:60	RWX	TX_UNLOAD_SEL: This field controls the preset value of the TX slice unload counter, which effectively gives it subcycle control of the offset of the TX unload clock from the grid clock.
61	RWX	TX_PDWN_LITE: When set, this bit gates the TX data path (post FIFO) to zeros on unused spare lanes when not being recalibrated.
62	RWX	TX_CAL_LANE_SEL: SLS commands and recalibration.
63	RWX	TX_FIFO_HALF_WIDTH_MODE: This bit selects half-width mode for the transmit FIFO for slower frequency connections.

Register Name	Transmit Mode 2 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#0.TXPACK.DD.SLICE#3.DD.TX_BIT_REGS.TX_MODE2_PL
Address	80040C030601143F (SCOM)
Description	This register contains the second set of transmit mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:50	RW	TX_FIFO_L2U_DLY: This field is used to read or set the TX FIFO load to unload delay as follows: 0b000 = 0 to 2 UI. 0b001 = 4 to 6 UI (default). 0b010 = 8 to 10 UI. 0b011 = 12 to 14 UI. 0b100 = 16 to 18 UI. 0b101 = 20 to 22 UI. 0b110 = 24 to 26 UI. 0b111 = 28 to 30 UI.
51:52	RO	constant = 0b00
53	RWX	TX_NEXT_CAL_LANE_SEL: When set, this bit negates the action of tx_pdwn_lite in a similar way to tx_cal_lane_sel. This enables the driver ahead of SLS shadowing.
54:55	RW	TX_PRBS_SCRAMBLE_MODE: This field selects the PRBS scramble sequence length. 0b00 = PRBS 23 (default). 0b01 = PRBS 7 (used by TX BIST). 0b10 = PRBS 11. 0b11 = PRBS 15.
56	RWX	TX_UNLOAD_CLK_DISABLE: This bit is set to 0 to enable synchronization of the TX custom serializer via the tx_fifo_init register. It is set to 1 to clock off the synchronization logic and save power.
57	RO	constant = 0b0
58:60	RWX	TX_UNLOAD_SEL: This field controls the preset value of the TX slice unload counter, which effectively gives it subcycle control of the offset of the TX unload clock from the grid clock.
61	RWX	TX_PDWN_LITE: When set, this bit gates the TX data path (post FIFO) to zeros on unused spare lanes when not being recalibrated.
62	RWX	TX_CAL_LANE_SEL: SLS commands and recalibration.
63	RWX	TX_FIFO_HALF_WIDTH_MODE: This bit selects half-width mode for the transmit FIFO for slower frequency connections.

Register Name	Transmit Mode 2 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#1.TXPACK.DD.SLICE#0.DD.TX_BIT_REGS.TX_MODE2_PL
Address	80040C040601143F (SCOM)
Description	This register contains the second set of transmit mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RW	TX_FIFO_L2U_DLY: This field is used to read or set the TX FIFO load to unload delay as follows: 0b000 = 0 to 2 UI. 0b001 = 4 to 6 UI (default). 0b010 = 8 to 10 UI. 0b011 = 12 to 14 UI. 0b100 = 16 to 18 UI. 0b101 = 20 to 22 UI. 0b110 = 24 to 26 UI. 0b111 = 28 to 30 UI.
51:52	RO	constant = 0b00
53	RWX	TX_NEXT_CAL_LANE_SEL: When set, this bit negates the action of tx_pdwn_lite in a similar way to tx_cal_lane_sel. This enables the driver ahead of SLS shadowing.

Bits	SCOM	Field Mnemonic: Description
54:55	RW	TX_PRBS_SCRAMBLE_MODE: This field selects the PRBS scramble sequence length. 0b00 = PRBS 23 (default). 0b01 = PRBS 7 (used by TX BIST). 0b10 = PRBS 11. 0b11 = PRBS 15.
56	RWX	TX_UNLOAD_CLK_DISABLE: This bit is set to 0 to enable synchronization of the TX custom serializer via the tx_fifo_init register. It is set to 1 to clock off the synchronization logic and save power.
57	RO	constant = 0b0
58:60	RWX	TX_UNLOAD_SEL: This field controls the preset value of the TX slice unload counter, which effectively gives it subcycle control of the offset of the TX unload clock from the grid clock.
61	RWX	TX_PDWN_LITE: When set, this bit gates the TX data path (post FIFO) to zeros on unused spare lanes when not being recalibrated.
62	RWX	TX_CAL_LANE_SEL: SLS commands and recalibration.
63	RWX	TX_FIFO_HALF_WIDTH_MODE: This bit selects half-width mode for the transmit FIFO for slower frequency connections.

Register Name	**Transmit Mode 2 Per-Lane Register**
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#1.TXPACK.DD.SLICE#1.DD.TX_BIT_REGS.TX_MODE2_PL
Address	80040C050601143F (SCOM)
Description	This register contains the second set of transmit mode fields.

Description	This register contains the second set of transmit mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RW	TX_FIFO_L2U_DLY: This field is used to read or set the TX FIFO load to unload delay as follows: 0b000 = 0 to 2 UI. 0b001 = 4 to 6 UI (default). 0b010 = 8 to 10 UI. 0b011 = 12 to 14 UI. 0b100 = 16 to 18 UI. 0b101 = 20 to 22 UI. 0b110 = 24 to 26 UI. 0b111 = 28 to 30 UI.
51:52	RO	constant = 0b00
53	RWX	TX_NEXT_CAL_LANE_SEL: When set, this bit negates the action of tx_pdwn_lite in a similar way to tx_cal_lane_sel. This enables the driver ahead of SLS shadowing.
54:55	RW	TX_PRBS_SCRAMBLE_MODE: This field selects the PRBS scramble sequence length. 0b00 = PRBS 23 (default). 0b01 = PRBS 7 (used by TX BIST). 0b10 = PRBS 11. 0b11 = PRBS 15.
56	RWX	TX_UNLOAD_CLK_DISABLE: This bit is set to 0 to enable synchronization of the TX custom serializer via the tx_fifo_init register. It is set to 1 to clock off the synchronization logic and save power.
57	RO	constant = 0b0
58:60	RWX	TX_UNLOAD_SEL: This field controls the preset value of the TX slice unload counter, which effectively gives it subcycle control of the offset of the TX unload clock from the grid clock.
61	RWX	TX_PDWN_LITE: When set, this bit gates the TX data path (post FIFO) to zeros on unused spare lanes when not being recalibrated.
62	RWX	TX_CAL_LANE_SEL: SLS commands and recalibration.
63	RWX	TX_FIFO_HALF_WIDTH_MODE: This bit selects half-width mode for the transmit FIFO for slower frequency connections.

Register Name	Transmit Mode 2 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#3.TXPACK.DD.SLICE#3.DD.TX_BIT_REGS.TX_MODE2_PL
Address	80040C0F0601143F (SCOM)
Description	This register contains the second set of transmit mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48:50	RW	TX_FIFO_L2U_DLY: This field is used to read or set the TX FIFO load to unload delay as follows: 0b000 = 0 to 2 UI. 0b001 = 4 to 6 UI (default). 0b010 = 8 to 10 UI. 0b011 = 12 to 14 UI. 0b100 = 16 to 18 UI. 0b101 = 20 to 22 UI. 0b110 = 24 to 26 UI. 0b111 = 28 to 30 UI.
51:52	RO	constant = 0b00
53	RWX	TX_NEXT_CAL_LANE_SEL: When set, this bit negates the action of tx_pdwn_lite in a similar way to tx_cal_lane_sel. This enables the driver ahead of SLS shadowing.
54:55	RW	TX_PRBS_SCRAMBLE_MODE: This field selects the PRBS scramble sequence length. 0b00 = PRBS 23 (default). 0b01 = PRBS 7 (used by TX BIST). 0b10 = PRBS 11. 0b11 = PRBS 15.
56	RWX	TX_UNLOAD_CLK_DISABLE: This bit is set to 0 to enable synchronization of the TX custom serializer via the tx_fifo_init register. It is set to 1 to clock off the synchronization logic and save power.
57	RO	constant = 0b0
58:60	RWX	TX_UNLOAD_SEL: This field controls the preset value of the TX slice unload counter, which effectively gives it subcycle control of the offset of the TX unload clock from the grid clock.
61	RWX	TX_PDWN_LITE: When set, this bit gates the TX data path (post FIFO) to zeros on unused spare lanes when not being recalibrated.
62	RWX	TX_CAL_LANE_SEL: SLS commands and recalibration.
63	RWX	TX_FIFO_HALF_WIDTH_MODE: This bit selects half-width mode for the transmit FIFO for slower frequency connections.

Register Name	Transmit Mode 2 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#3.TXPACK.DD.SLICE#4.DD.TX_BIT_REGS.TX_MODE2_PL
Address	80040C100601143F (SCOM)
Description	This register contains the second set of transmit mode fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:50	RW	TX_FIFO_L2U_DLY: This field is used to read or set the TX FIFO load to unload delay as follows: 0b000 = 0 to 2 UI. 0b001 = 4 to 6 UI (default). 0b010 = 8 to 10 UI. 0b011 = 12 to 14 UI. 0b100 = 16 to 18 UI. 0b101 = 20 to 22 UI. 0b110 = 24 to 26 UI. 0b111 = 28 to 30 UI.
51:52	RO	constant = 0b00
53	RWX	TX_NEXT_CAL_LANE_SEL: When set, this bit negates the action of tx_pdwn_lite in a similar way to tx_cal_lane_sel. This enables the driver ahead of SLS shadowing.

Bits	SCOM	Field Mnemonic: Description
54:55	RW	TX_PRBS_SCRAMBLE_MODE: This field selects the PRBS scramble sequence length. 0b00 = PRBS 23 (default). 0b01 = PRBS 7 (used by TX BIST). 0b10 = PRBS 11. 0b11 = PRBS 15.
56	RWX	TX_UNLOAD_CLK_DISABLE: This bit is set to 0 to enable synchronization of the TX custom serializer via the tx_fifo_init register. It is set to 1 to clock off the synchronization logic and save power.
57	RO	constant = 0b0
58:60	RWX	TX_UNLOAD_SEL: This field controls the preset value of the TX slice unload counter, which effectively gives it subcycle control of the offset of the TX unload clock from the grid clock.

Description	This is a reserved register.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48:52	NCX	Reserved field.
53	NCX	Reserved field.
54	NCX	Reserved field.
55	NCX	Reserved field.
56	NCX	Reserved field.
57	NCX	Reserved field.
58	NCX	Reserved field.
59	NCX	Reserved field.
60:63	RO	constant = 0b0000

Register Name	Transmit STAT1 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#0.TXPACK.DD.SLICE#0.DD.TX_BIT_REGS.TX_STAT1_PL
Address	80041C000601143F (SCOM)
Description	This register contains the first set of transmit status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	TX_LANE_BIST_ERR: This bit indicates whether TXBIST found an error. 0b0 = No error. 0b1 = An error was found during TXBIST.
49	RWX	TX_LANE_BIST_ACTVITY_DET: This bit indicates whether activity was detected in the PRBS checker. 0b0 = No activity. 0b1 = Activity was found during TXBIST.

Bits	SCOM	Field Mnemonic: Description
50:51	RWX	TX_SEG_TEST_STATUS: This field contains the driver segment test result. Bit 0 is used for PAD P. Bit 1 is used for PAD N.
52:62	RO	constant = 0b00000000000
63	ROX	Reserved field.

Register Name	Transmit STAT1 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#0.TXPACK.DD.SLICE#1.DD.TX_BIT_REGS.TX_STAT1_PL
Address	80041C010601143F (SCOM)
Description	This register contains the first set of transmit status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	TX_LANE_BIST_ERR: This bit indicates whether TXBIST found an error. 0b0 = No error. 0b1 = An error was found during TXBIST.
49	RWX	TX_LANE_BIST_ACTVITY_DET: This bit indicates whether activity was detected in the PRBS checker. 0b0 = No activity. 0b1 = Activity was found during TXBIST.
50:51	RWX	TX_SEG_TEST_STATUS: This field contains the driver segment test result. Bit 0 is used for PAD P. Bit 1 is used for PAD N.
52:62	RO	constant = 0b00000000000
63	ROX	Reserved field.

Register Name	Transmit STAT1 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#0.TXPACK.DD.SLICE#2.DD.TX_BIT_REGS.TX_STAT1_PL
Address	80041C020601143F (SCOM)
Description	This register contains the first set of transmit status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	TX_LANE_BIST_ERR: This bit indicates whether TXBIST found an error. 0b0 = No error. 0b1 = An error was found during TXBIST.
49	RWX	TX_LANE_BIST_ACTVITY_DET: This bit indicates whether activity was detected in the PRBS checker. 0b0 = No activity. 0b1 = Activity was found during TXBIST.
50:51	RWX	TX_SEG_TEST_STATUS: This field contains the driver segment test result. Bit 0 is used for PAD P. Bit 1 is used for PAD N.
52:62	RO	constant = 0b00000000000
63	ROX	Reserved field.

Register Name	Transmit STAT1 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#0.TXPACK.DD.SLICE#3.DD.TX_BIT_REGS.TX_STAT1_PL
Address	80041C030601143F (SCOM)
Description	This register contains the first set of transmit status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	TX_LANE_BIST_ERR: This bit indicates whether TXBIST found an error. 0b0 = No error. 0b1 = An error was found during TXBIST.
49	RWX	TX_LANE_BIST_ACTVITY_DET: This bit indicates whether activity was detected in the PRBS checker. 0b0 = No activity. 0b1 = Activity was found during TXBIST.
50:51	RWX	TX_SEG_TEST_STATUS: This field contains the driver segment test result. Bit 0 is used for PAD P. Bit 1 is used for PAD N.
52:62	RO	constant = 0b00000000000
63	ROX	Reserved field.

Register Name	Transmit STAT1 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#1.TXPACK.DD.SLICE#0.DD.TX_BIT_REGS.TX_STAT1_PL
Address	80041C040601143F (SCOM)
Description	This register contains the first set of transmit status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	TX_LANE_BIST_ERR: This bit indicates whether TXBIST found an error. 0b0 = No error. 0b1 = An error was found during TXBIST.
49	RWX	TX_LANE_BIST_ACTVITY_DET: This bit indicates whether activity was detected in the PRBS checker. 0b0 = No activity. 0b1 = Activity was found during TXBIST.
50:51	RWX	TX_SEG_TEST_STATUS: This field contains the driver segment test result. Bit 0 is used for PAD P. Bit 1 is used for PAD N.
52:62	RO	constant = 0b00000000000
63	ROX	Reserved field.

Register Name	Transmit STAT1 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#1.TXPACK.DD.SLICE#1.DD.TX_BIT_REGS.TX_STAT1_PL
Address	80041C050601143F (SCOM)
Description	This register contains the first set of transmit status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000

Bits	SCOM	Field Mnemonic: Description
48	RWX	TX_LANE_BIST_ERR: This bit indicates whether TXBIST found an error. 0b0 = No error. 0b1 = An error was found during TXBIST.
49	RWX	TX_LANE_BIST_ACTVITY_DET: This bit indicates whether activity was detected in the PRBS checker. 0b0 = No activity. 0b1 = Activity was found during TXBIST.
50:51	RWX	TX_SEG_TEST_STATUS: This field contains the driver segment test result. Bit 0 is used for PAD P. Bit 1 is used for PAD N.
52:62	RO	constant = 0b00000000000
63	ROX	Reserved field.

Register Name	Transmit STAT1 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#1.TXPACK.DD.SLICE#2.DD.TX_BIT_REGS.TX_STAT1_PL
Address	80041C060601143F (SCOM)
Description	This register contains the first set of transmit status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	TX_LANE_BIST_ERR: This bit indicates whether TXBIST found an error. 0b0 = No error. 0b1 = An error was found during TXBIST.
49	RWX	TX_LANE_BIST_ACTVITY_DET: This bit indicates whether activity was detected in the PRBS checker. 0b0 = No activity. 0b1 = Activity was found during TXBIST.
50:51	RWX	TX_SEG_TEST_STATUS: This field contains the driver segment test result. Bit 0 is used for PAD P. Bit 1 is used for PAD N.
52:62	RO	constant = 0b00000000000
63	ROX	Reserved field.

Register Name	Transmit STAT1 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#1.TXPACK.DD.SLICE#3.DD.TX_BIT_REGS.TX_STAT1_PL
Address	80041C070601143F (SCOM)
Description	This register contains the first set of transmit status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	TX_LANE_BIST_ERR: This bit indicates whether TXBIST found an error. 0b0 = No error. 0b1 = An error was found during TXBIST.
49	RWX	TX_LANE_BIST_ACTVITY_DET: This bit indicates whether activity was detected in the PRBS checker. 0b0 = No activity. 0b1 = Activity was found during TXBIST.
50:51	RWX	TX_SEG_TEST_STATUS: This field contains the driver segment test result. Bit 0 is used for PAD P. Bit 1 is used for PAD N.

Bits	SCOM	Field Mnemonic: Description
52:62	RO	constant = 0b00000000000
63	ROX	Reserved field.

Register Name	Transmit STAT1 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#2.TXPACK.DD.SLICE#0.DD.TX_BIT_REGS.TX_STAT1_PL
Address	80041C080601143F (SCOM)
Description	This register contains the first set of transmit status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	TX_LANE_BIST_ERR: This bit indicates whether TXBIST found an error. 0b0 = No error. 0b1 = An error was found during TXBIST.
49	RWX	TX_LANE_BIST_ACTVITY_DET: This bit indicates whether activity was detected in the PRBS checker. 0b0 = No activity. 0b1 = Activity was found during TXBIST.
50:51	RWX	TX_SEG_TEST_STATUS: This field contains the driver segment test result. Bit 0 is used for PAD P. Bit 1 is used for PAD N.
52:62	RO	constant = 0b00000000000
63	ROX	Reserved field.

Register Name	Transmit STAT1 Per-Lane Register
Mnemonic	IOF2.TX_WRAP.TX0.TXPACKS#2.TXPACK.DD.SLICE#1.DD.TX_BIT_REGS.TX_STAT1_PL
Address	80041C090601143F (SCOM)
Description	This register contains the first set of transmit status fields.

Bits	SCOM	Field Mnemonic: Description
0:47	RO	constant = 0b000000000000000000000000000000000000000000000000
48	RWX	TX_LANE_BIST_ERR: This bit indicates whether TXBIST found an error. 0b0 = No error. 0b1 = An error was found during TXBIST.
49	RWX	TX_LANE_BIST_ACTVITY_DET: This bit indicates whether activity was detected in the PRBS checker. 0b0 = No activity. 0b1 = Activity was found during TXBIST.
